In Japan, the social system has been disturbing by abrupt and arbitrary criminal punishment in the field of political conduct, business behavior and medical treat-

senses that capture only one component of identity: a consciously articulated sense of one’s location within the available classification system that cannot cap-

ture the implicit, situational, and interactive component of identity. What strate-

gies are available to researchers wishing to avoid the pitfalls of the ‘groupness’ that state-based classification schemes imply?

This paper explores one methodological solution to this dilemma, using the ex-

ample of research conducted with an NGO in London, which was commissioned by the government to study the financial inclusion of ageing ‘Black and minority ethnic’ (BMEs). Our method draws on analytical techniques developed by Ger-

man sociologists for operationalizing Mannheim’s notion of ‘documentary mean-

ing’. Instead of asking subjects who they ‘were‘ or ‘were not’ in relation to the 

official category that they were recruited to represent, we implicitly explored what it ‘meant’ to be an aging BME by observing how subjects engaged in political com-

munication at a deliberative assembly on matters central to being a member of a 

political community. At the core of this technique is an intersectional impulse 

wherein identity markers are seen as emergent through practices, relationships, 

and interactions and thereby deeply enmeshed with other identity markers: in 

this case, generation, citizenship and class. The deliberative context also created 

a critical distance between participants and researchers that enabled the former 

to challenge directly the empirical and analytical validity of state-based practices 

of classification, such as statistics.

Diversity Ideology, Alienation and Social Exclusion in the Post U.S.-

Civil Rights Era

This paper explores alienation and social exclusion in major transnational cor-

porations. Specifically, it is interested in the ways that inequality is embedded in 

the business world through both ideological and structural processes that help 

to exclude women and minorities while creating opportunities for the majority 

through “white male bonding.” The result in many corporate settings is a business 

climate that is hostile to women and minorities. Such a climate is socially isolating 

for the few women and minorities who work in middle management or higher po-

sitions. However, under the guise of diversity and inclusion, corporations are able to 

mask the inequities in the workplace while maintaining the status quo. Women 

and minorities in such extreme social situations find themselves not only having 

to maneuver an uphill battle to keep their jobs or get promoted, they have to do 

so often while socially, politically, racially, and gender isolated.

Collective Action As an Instrument of Control? the Case of Employment-Focused Movements in Morrocco

Contentious action in coercive settings has been given different explanations. The level of repression, the stock of legitimacy of authorities and the prospects of efficacy have been mobilized as explicative variables. In this paper, we will pro-

pose an alternative framework in order to understand some of the contentious 

action in North Africa. Our framework is built around the possibility for collective 

action in terms of geographical setting (the first one is national, while the second is re-

gional), but they deploy an analogous discourse towards government authorities. Both cases differ also in terms of efficacy. Since the mobilization of the unem-

ployed graduates appears more efficient than the OCP one (in terms of obtained jobs), this difference allows us to test our assumption about the “regulation in-

strument” status of contentious action.

This research is based on ethnographic observation and semi-structured inter-

The Mobilization for Dignified Housing in Spain: A Case Study of the PAH

Since 2008, there has been a sharp increase in the number of house evictions in Spain and mobilizations in favor of “dignified housing” (vivienda digna) have multiplied. They are mostly based on unemployed home owners facing down-

ward mobility that depart from the traditional profile of radical youths active in the squatters’ movement (okupa) or the global justice movement. These home owners are middle-class and working-class people that benefited from easy ac-

cess to housing credit in the 2000s during the real estate bubble. When the bub-

gle burst and they lost their job, they became unable to pay their mortgage and faced eviction threats from the banks.

In order to explain the multiplication of mobilizations in favor of “dignified housing”, we focus on a particular organization created in 2009 in Barcelona and which has become the most visible and influential actor of this movement: the “Platform of people affected by mortgages” (Plataforma de los Afectedos por la Hipoteca, PAH).

We argue that the growth of the PAH is not a mere side-effect of the crisis. Many other categories of people are affected by the crisis but do not mobilize in the same way. We claim that its relative success stems from two processes. First, the PAH has managed to reframe the housing crisis in terms of fraud and deception rather than personal responsibility and as a systemic rather than individual issue. Second, the horizontal structure of the PAH is highly inclusive, allows for multiple types and degrees of involvement, and feeds the development of a sense of be-

longing that helps sustain the mobilization over time.

Our research is based on semi-structured interviews as well as participant and ethnographic observation in Barcelona in 2013.

Gender-Based Violence in Disasters: An Action Research Agenda

Does gender-based violence increase after disasters? While the question is still un-

asked, international studies have documented this social fact while taking into account significant contextual differences and measurement challenges. This essential baseline research supports the new global planning resources now available in the “good practice” tool kit of contemporary humanitarian relief work. Some proactive training, preparedness, and mitigation steps are also apparent from service providers, feminist activists, and anti-violence advocates, generally in terms of specific disaster events.

Based on the author’s prior research and on critical review of English-language work in the field, this presentation will synthesize and challenge the main inter-
national lines of research, analysis, and action to date. Four specific issues will be considered, each grounded in the assumption that gender-based violence can and must be prevented in disaster contexts: (1) the distinguishing features of gender-based violence in disaster contexts; (2) persistent gaps in evidence and analysis; (3) research designs supportive of the most pressing research questions; and (4) prospects for using our expanding knowledge in this area to better protect fundamental human rights in disasters.

The presentation will also situate the Japanese experience in broader context, and potentially help launch a proposed international research collaborative for understanding and addressing gender-based violence in disasters.

The Pyramid Model of Legal System Toward Responsive Law

In Japan, the social system has been disturbing by abrupt and arbitrary criminal punishment in the field of political conduct, business behavior and medical treat-
ment. Apart from the natural and traditional crime, criminal sanction should not be used or should be limited to extremely heavy legal violation.

In order to develop the economical social system or to prevent the injury and restore the damage, preventive administrative system should be formulated, civil procedure should be strengthened and soft-law should be put to practical use in administrative organs, various parties and business groups.

In Japan, old criminal system has been carried out in the every field. For example, here has been the heavy grilling without recording in the detention center for long term, and no complete criminal discovery system. "Beyond a reasonable doubt" principle has not been observed on the adjudication of the court. Criminal punishment to the politicians, enterprisers, doctors, accountants and lawyers gave the serious bad effect. On the other hand, Japanese police didn't prevent abduction by North Korea and other heavy traditional crimes.

Japan should massively use the power for preventing the violent crimes, and depend on other new system for defending the technology, the freedom and the health.

Japan should proceed to responsive legal society from repressive law or autonomous law that I originally present by the 4 steps pyramid model of legal system as follows:
1. Criminal Penalty, final sanction to violent crime
2. Civil Trial Relief, compensation to damage, restoration to original state
3. Administrative Prevention, hard-law, soft-law
4. Self Governing, soft-law, self-rule

Depressive Love: A Contemporary Form of Self-Alienation

Both love and depression are central concepts in science, art and everyday life. They are frequently used to capture the fundamental needs of human beings: love is seen as the result of the recognition or satisfaction of those needs, whereas depression is seen as the result of the recognition or violation of those needs.

Love and depression are key elements in the cultural script of emotions or affectual life within contemporary Western society.

In this paper, I will decode the different ethos that store window mannequins portray. My empirical material consists of over one thousand pictures of shopping windows in downtown areas in different cities in Sweden, whereas the historical material from 1930-1970 belong to a large collection of pictures from MIA (Militär Ekpäringens Aktiebolaget).

Systemic Gender Discrimination or Psychopathic Gangs? Media Representations of Femicide in Guatemala

The objective of this paper is to analyze the way that murders of women are represented in Guatemalan newspapers and how that representation has changed in response to women's organizations' efforts to bring a gendered analysis to the issue. For several decades women's organizations have argued that newspaper reports of murdered women use language that blames the victim, minimizes the problem, and deflects attention away from systemic gender violence within the family and other institutions by suggesting that the majority of murders are carried out by psychopathic youth gangs. In order to combat this representation of the problem they have conducted studies of violence against women, held press conferences reporting those results, worked on changing and introducing laws, and held workshops with the media in order to sensitize them about how they report these crimes.

For this analysis I use reports of murdered women, feature articles on gendered crimes, and articles reporting on the activities of women's organizations for the last five years from the two Guatemalan newspapers with the largest circulation. I analyze the way that victims and perpetrators are represented, theories of causation offered by different social actors, how feminist language is used by these different actors and by the journalists, and the overall "moral of the story" that is being presented to the Guatemalan public. I compare this to the points of view of women's organizations and human rights groups gleaned from their publications and interviews with key members. I argue that while there is more inclusion of feminist language and points of view in media reports, these are dwarfed by the daily barrage of murder reports that, with bare minimum descriptions and very little follow up, leave the Guatemalan public to fill in the blanks with their own interpretations of what is "really" going on.

New Practices, Old Debates : Ambivalence and Conflict in Identity Politics

Identity-based social movements face a well-studied and basic contradiction: using their difference to achieve equality reinforces their differentiation. Tensions between difference and equality have permeated activist discourses at least since the 60s shaping various activist positions that range from assimilationist to radicalism.

In the current Spanish LGBT movement the tension between assimilation and radicalism has produced an "official" LGBT activism (hosted by the FELGTB) and a "crítica" LGBT that have been battling for the recognition of LGBT rights and the City Council with the support from the "officialist" LGBT associations.

The importance of tourism as a source of income, identities as business, the spectacularization of the claims and the idea of consumption as the backbone of identities all mark the present and seem to mark the imaginable future of LGBT in our country. This 'gapatilista' (Shangay Lily) Pride is presented as opposed to 'authentic' conceptions of vindication.

In this scenario, it is urgent to overcome old antagonisms and find new ways to represent and visualize vindications, new 'practices' that aspire to the articulation of the 'inevitable' (reification, commodification and exposure of identities) with the defense of rights and claims.

We aim to analyze the strategies for the present and the future in this field through content analysis of in-depth interviews with businesswomen, politicians and activist leaders ("officialist" and critics) and various digital media (blogs, comments on news and websites).

ENJUTO MARTINEZ, REGINA* (London School Economics & Political Science, R.Enjuto-Martinez@lse.ac.uk)
Beyond Empowerment or Consent: Labor Law, Legal Action NGOs and Workers’ Negative Capabilities

Since the mid 1990s, accompanying the development of legal frameworks that regulate the Chinese labor regime, there has been the upsurge of non-governmental organizations (NGOs) that pursue the protection and promotion of peasant-workers’ (nongmin) rights. These labor-legal action NGOs play a multifaceted role: reproducing and maintaining capitalist arrangements and structures embedded in the labor laws; diffusing the legal discourse; and, providing a support structure for workers’ legal actions when experiencing an industrial dispute. The purpose of this paper is to examine the interplay between labor laws, legal action NGOs and workers’ actions. It illustrates how structural conditions reach workers through a double channel - the legal system and legal action NGOs-. Unsurprisingly, the convention is that both the simple existence of labor laws and workers’ contact with NGOs have an empowering effect on workers as they have been endowed with rights. They acquire legal knowledge, raise their rights awareness and are enabled to pursue legal action. The critique or counter-argument would sustain that this legal structure obtains workers’ consent to the capitalist labor regime and contains their actions within the borders of legality.

However, in line with Roberto Unger’s (2004) false necessity theory, there are subtle spaces for peasant-workers’ negative capabilities or self-empowerment and action both within and outside the structural constraints posed by the law and legal action NGOs. This paper will illustrate through ethnographic material gathered during fieldwork in three NGOs in China throughout 2012 and 2013 that it is in fact workers’ self-empowerment -comprehension of their structural constraints and their contact with legal action NGOs that many of their negative capabilities are developed, stimulating their actions to go beyond the predetermined by law.

ENJUTO MARTINEZ, REGINA* (London School Economics & Political Science, R.Enjuto-Martinez@lse.ac.uk)

Framing Disputes: Labour Law and Legal Aid NGOs in China

In the year 2008 a significant legal reform was introduced into China’s labor regime with the enactment of new laws, the Labor Contract Law and the Labor Disputes Mediation and Arbitration Law amongst them. Since then, labor disputes brought to the legal channels –which had steadily grown throughout the 1990s and early 2000s- experienced an exponential rise: a 98% increase between 2007 and 2008.

Official statistics on labor legal disputes evidence a greater readiness to use the established legal channels to resolve conflict. Key in inducing this readiness has been the role of legal aid NGOs that provide legal services to peasant-workers (nongmin), the bulk of Chinese labor force in industrial areas. These civil society actors -legal aid centers, labor NGOs and lawyers- provide free legal services, legal consultation, and legal training. On behalf of peasant-workers, they advocate for the protection of their legitimate rights, claiming for better enforcement and compliance of the laws, hence contributing to the development of the legal system. Moreover, they elicit the rise of workers’ rights consciousness and kindle their dispute behavior into legal action.

Through an analysis of the aforementioned labor laws and through qualitative material collected during ethnographic research in China during 2012-2013, this paper argues that the labor laws and the support structure of legal aid centers, NGOs and lawyers intends to relieve the increasing levels of industrial conflict in China by framing the nature of labor conflict and dispute behavior: the definition of what constitutes a legitimate dispute in labor relations and its procedures for resolution (including a specific idea of legal justice) is pre-determined by law. This way labor conflict is contained, and by avoiding its spread and radicalization, the government of the Chinese Communist Party maintains the necessary and desired social order for its economic development model.

ENOCH, YAEL* (Open University of Israel, yaelen@openu.ac.il)

Equality of Opportunity in Higher Education

Equality of Opportunity in Higher Education: The Contribution of an Open University

An issue that has concerned sociologists, who have studied the expansion of higher education, is the consequence of this process in terms of social stratification. Does the increase in the number of universities and colleges ensure growing access to higher education for disadvantaged social strata? This question tends to persist, because potential students from the more advantaged groups tend to utilize the growing opportunities better than those from lower social strata.

Previous studies that have examined the expansion of higher education and its effect on educational inequality have usually discussed the contribution of all educational frameworks taken as a whole and have not distinguished between various types of educational institutions. These studies which have been carried out in a large number of developed countries (see summary in Boliver, 2010) tend to agree in their conclusions: Expansion in higher education does not necessarily reduce inequality.

The present paper examines the contribution of a special type of educational framework, an open access distance teaching university – as exemplified by the Open University of Israel (OUI). Does this type of university provide a unique contribution to the increase of equality by eliminating several barriers that have previously prevented equality of opportunity in higher education?

Data relating to the OUI and characterizing its student body at two different points in time show that also in this educational framework, students from a higher status background tend to choose the more prestigious fields of studies, whereas students who hail from a lower status background are usually registered in less prestigious subject areas. This noticeable report of the university’s openness is a generalization of findings regarding the entire open access learning. The general signification of this finding will be discussed.

ENOMOTO, MIYOKO* (Tokyo International University, enomoto@tiu.ac.jp)

The Japanese Way of Coping with Vulnerability: Divisions Among Lay-People after the Great East Japan Earthquake

In Japanese society, in the discourses on ecological risks and health risks, we are all included in the terms mankind, global citizens, the nation, and consumers, all of whom bear responsibility for the earth or body in the future. There are tacit premises such as ecological science being rational and objective, and that we should obey these premises. We are expected to be good citizens. However, there is also the risk that discourse will lead to divisions among lay-people. By clarifying how the Japanese judge risk and make decisions when facing their fears in everyday life, we can see the divisions that emerged. This study involved a qualitative investigation based on interviews with various groups such as mother activists who aim to protect their children from radioactivity, volunteers who evacuated people from Fukushima, people who collect and dispense scientific information through SNS, people who are disinterested, and so on. Risk was what primarily divided my respondents. For example, some people reported that they could not speak of their fears of things such as radioactivity because they wanted to maintain good relationships with others. Additionally, many people do not trust mass media reports and government announcement and thus they must decide for themselves what to do or whom to trust. For these respondents, preference was an important factor when they needed to judge which scientific discourse is correct. We can find many divisions related to many decisions and judgments, such as what or whom to trust, what media to use, what to eat, and where to live. By discussing why and how people are divided, and what drives people’s emotional connections to each other, I suggest ways to resolve these divisions.

RC22-397.2

ENSTEDT, DANIEL* (University of Gothenburg, daniel.enstedt@dlr.gu.se)

This paper will examine the impact religious memories have on collective and individual identity formation in the context of religious disaffiliation. Through a series of apostasy and deconversion narratives from former Muslims, I will examine how religion – in this case Islam – is remembered, and the influence of such individual and collective religious memories in apostasy and deconversion processes, and what role plays religious memories for religious defectors?

This paper tackles questions about how Islam is understood and represented in apostasy and deconversion narratives by making use of contemporary theories about collective and cultural memory. From such a point of view, religious disaffiliation is not primarily about religious amnesia. It could rather be understood as a, more or less far-reaching, reformulation of religious memories. I will discuss theories about ‘emblematic’ and ‘loose’ memories, as well as concepts of power and authority, especially when focusing on how hegemonic memories are at work in the exclusion, erasure and silencing of non-hegemonic memories.
wealth distribution, women are forced to work and leave their traditional roles out of necessity. This paper will focus on findings of surveys done by Social Weather Stations (SWS), a non-stock, non-profit research institution based in the Philippines. Since 1991, SWS has been annually implementing the International Social Survey Programme (ISSP) module in its national surveys, with the module on family and gender roles being implemented in 1994, 2002 and 2012, thus allowing for comparison with fellow ISSP member countries such as China, India, Japan, Taiwan and South Korea. In particular, this will look into Filipino society's view and acceptance of the multitude of roles portrayed by Filipino working mothers through time. In addition, the survey findings will show if these views and attitudes are changing or are being reinforced in relation to traditional gender roles.

RC06-123.7

ENTOMA, CHRISTIAN MICHAEL* (Social Weather Stations, mike.entoma@sws.org.ph)

Attributes on Gay Parenting Across Countries

In recent years, Lesbians, Gays, Bisexual and Transgender (LGBT) groups in the Philippines have been actively advocating for equal rights as citizens of the Philippines. These groups even formed their own political party list groups that joined the political race in 2010 and 2013 elections, but unfortunately did not win any Congressional seats because Filipinos were not yet ready for LGBT leaders. Therefore, it would not be surprising if attitudes towards gay parenting would not be so favorable.

Social Weather Stations (SWS), a non-stock, non-profit research institution, conducted the International Social Survey Programme (ISSP) module that asked about, among other things, attitudes towards marriage and alternative family norms – which includes gay parenting – in its 2012 November nationwide survey. The survey found out that opinion is split towards the idea of a same sex female couple raising a child, with no differences in opinion among males and females. Plurality is not in favor of a same sex male couple raising a child, with this opinion being also true among females. This paper will also compare findings with 47 other ISSP member countries to see the level of acceptance of these alternative parenting setups.

Suspended Space: Ambivalence and the Making of Chinatowns in Japan and Korea

In the course of Japanese expansionism in Asia, Cold War politics, and the post-war state-building projects, an assertion of national belonging remains highly contested for the overseas Chinese communities residing in Japan and South Korea. Looking at Chinatowns as suspended spaces of their in-between lives, this paper explores how the built environments of Chinatowns have become laboratories for the Chinese immigrants to negotiate their fluid identities in the two host societies. In so doing, this paper questions the notion of dwelling related to their ambivalent belongings not only to their native homelands but also to their adopted places of residence. The paper analyzes the growth of the Chinatown community in Yokohama (Japan) and Incheon (Korea), the largest Chinatowns in their respective countries, this paper investigates the built environments of the Chinatowns which have reflected such endeavors of the overseas Chinese with their ambivalent identities located in the center of their lives. Although outside visitors may view the Chinatowns merely as a variation of Disney-like theme parks, the very ambivalence of the urban spaces has transformed into major tourist destinations in the postwar state-building projects, an assertion of national belonging remains highly contested for the overseas Chinese communities residing in Japan and South Korea.

RC18-315.3

ERANTI, VEIKKO* (University of Helsinki, veikko.eranti@helsinki.fi)

Organization of a Networked Presidential Campaign in Social Media

Even though participation in traditional party politics is in decline, novel campaigning approaches can create momentous movements and mobilize people on a significantly larger scale than ever before. In the wake of the Arab Spring and the Arab world uprisings, we have observed a surge of political campaigning that goes beyond traditional party politics, and beyond party systems. This paper explores how traditional party structures can use social media and campaigning tactics that are traditionally more suited to different types of social organizations.

Mr. Haavisto comes from a small party with a lousy track record on previous presidential elections and a lackluster funding. Although Haavisto ultimately lost the election, the campaign is an important example of how social media, and more specifically Facebook, can contribute.

“Once upon a Time We Had the Commons” the Change on Small Peasantry: The Case of Kocaoba, İzmir, Turkey

Especially after the post-80s, the rural Anatolia has been under rapid change due to the neoliberal policies. Capitalist penetration into rural, crystalized through the Structural Adjustment Policies, have provided radical consequences for the small peasantry, which is still the dominant category in agriculture. However, despite having experienced intensively the process of commodification, the land acquisition by international/companies is not a common phenomenon yet.
Unlike many countries of the South, the land has newly become a commodity itself in Turkey. The case of Kocaaoba could be seen as one of the exceptional examples in this manner. The company of AGROBAY, has bought 150 hectares of land recently, with the purpose of establishing a large-scale greenhouse. Yet, the land occupied by the company has previously been used as pasture by the peasants, whose livelihoods depended mainly on husbandry. However AGROBAY have started production and marketing to European countries successfully. The other companies have also started to come to the area.

In this study, the main socio-economic consequences of land grabbing as such would be investigated on local community level. Could the change of the ownership of the land be counted as a beginning of a new phase in the process of commodification? If so, what would be the response given by the peasants, how do they deal with the new situation in their daily life? In the light of the discussion on commodification/proletarianization of peasants, the strategies of the villagers would be included to understand the main dynamics underlying the re-formation of the households. In this context, the ongoing field research will be extended on the village of Kocaaoba; in-depth interviews and focus groups are planned to be conducted with the villagers.

“Ottomania” and “Cool Japan” in Comparative Perspective

Japan and Turkey have comparable histories of modernization, with both countries experiencing the epiphenomenon of their westernization in the nineteenth century, at the end of their imperial eras. Both produced modernities that are considered a mix of “eastern” and “western.” Over the last decades, both have had to face their histories of modernization, pondering the question of what comes after modernity, and how to preserve versions of authentic and exportable modernity. This presentation discusses two symptoms of this process. Ottomania refers to the increasing cultural consumption of Turkey’s imperial past in Turkey and neighboring countries. Cool Japan is a government-sponsored project, emphasizing popular products in entertainment, fashion, youth culture, and computer, and intending to shift Japan’s image into a “cool” place. The collapse of traditional hierarchies in Japan and the erosion of the trope of modernity in Turkey have paved the way for the promotion and export of new identity claims rooted in imperial cool.

Internal and external representations of Ottomania and cool Japan differ: 1) Internally, Japanomania and Ottomania are fragmented. The meaning of cool is perishable in Japanese popular culture while different interpretations of Ottomania are a matter of debate in Turkey. 2) Externally, cool Japan and Ottomania are linked to international “soft power” through TV dramas and other exported cultural forms, and offer alternative and accessible forms of modernity to their former imperial hinterland—China and Korea for Japan, and the Middle East and the Balkans for Turkey. The main difference is that, Ottomania corresponds to declining government intervention in popular culture whereas “cool Japan” represents an explicit attempt to shape Japan’s image.

Results: The results will be presented as statistics, discourse analysis, case depictions, and multiple interpretations.

Disciplined Masculinity: Self-Conceptions of Young Immigrant Boxers

The social inclusion of young male first or second generation migrants in Germany is often perceived as precarious. They are considered as a peculiar problematic group with a high risk of being excluded or marginalized in the education system and the labour market. Commonly the main reason for this precarity is seen in their orientational dilemma between traditional family life on the one hand and aspirations to proficiency and individual fulfillment on the other hand. In this situation semantics of honor and respect can be held as guidelines. They are found in the peer group of the migrants which are filled with practical substance due to the distance from mainstream society.

In our presentation we assume, that sports can provide a field to avert this problematic condition and enable social inclusion. We show how young males develop particular patterns of orientation and life conduct that are approved by the mainstream society. Based on qualitative interviews we analyze how they train them during their practice and even borrow them for their daily life. Coach function as role models, give orientation and stress the acknowledged value of proficiency and self-discipline.

The presentation takes boxing as a sportive discipline that provides the possibility of social inclusion and identity work for males from immigrant families. On the basis of qualitative interviews we reconstruct self-conceptions of young immigrant boxers and discuss the hypothesis that boxing introduces the possibility to embody a socially acknowledged form of masculinity characterized by discipline.

The presentation refers to qualitative interviews that were conducted within the framework of a research project titled “Worldviews in precarious conditions of life”. They were evaluated by using the hermeneutic procedure of sequential analyses.

Policy and Practice Of Dementia Care - Comparing Japan and Sweden/Norway

Background: The trend towards aging populations is worldwide. Japan has the oldest population in the world, the Nordic countries have almost the same figures. Increased rate of dementia goes along with expanded life span, and dementia diseases are predicted to be one of the most prominent future public health threats. In this session, results from an ongoing study on dementia care will be presented. Findings so far indicate for instance that dementia care in both countries is highly person-centered, but also with differences in emotional nearness between users and staff.

Aim: To compare policy and practice of dementia care in Japan and Sweden/Norway from macro/national and micro level perspectives, using mixed methods.

Method: Comparative study on macro/national level concerning: 1) Historical background, 2) Statistics on dementia prevalence and distribution, 3) Legislation, 4) Health and care organization, 5) Economics, 6) Ideological base (emphasizing medical vs social aspects), and methods of scrutiny/diagnosis. Official statistics and national documents will be analysed, the latter through comparative discourse analysis. In addition, personal interviews with experts and central politicians will complement and deepen the data material. Comparative studies on micro level will be designed as case-studies in 4 settings of dementia care: special housing, long-term hospitals, day care activities and group homes. Prominent aspects of comparison will be 1) physical conditions, 2) staff parameters, 3) content of daily activities, 4) relations between users and staff, and 5) the professional atmosphere. Data will be collected through interviews and observations, and analysed via comparative case study method and qualitative content analysis.

Results: The results will be presented as statistics, discourse analysis, case descriptions and qualitative content analysis. Comparison between Japan and Sweden/Norway, and comparison of macro and micro level will be four integrated aspects of the result presentation.

Comparing Post-Stratification and Propensity Score Nonresponse Adjustment: Bias Correction and Precision Loss – a Case Study with the Swiss ESS 2012 Data

Nonresponse bias is a well-studied issue. Some techniques to reduce this source of errors are applied during data collection (e.g., targeted fieldwork) and some post-survey. Depending on the available paradata, nonresponse adjustments can be calculated to hopefully correct for bias. The problem, especially with low response rates, is the loss in precision that it causes. If adjustment weights vary highly, the confidence intervals become larger. The increase in standard errors can in some cases counter-balance the decrease in bias. Moreover, a good nonresponse adjustment is based on variables that highly correlate with the response propensities; such variables are rarely available. For this reason the choice of a nonresponse adjustment technique and variables used have to be thought of carefully.

We will study two nonresponse adjustments for the ESS 2012 survey in Switzerland. The first will be based on socio-demographical variables from the population register from which the sample is drawn. Such data are commonly used in post-survey adjustment, as they are often the only data available. But they are known to have low correlations with response propensities and with many key variables. In a second step, data from the nonresponse survey that was conducted shortly after the main ESS 2012 will also be used to construct post-survey adjustment. The nonresponse survey is designed to collect information that correlates highly with the propensity to answer and should lead to an efficient nonresponse adjustment. The expected decrease in bias could be safely neutralized by the possibly substantial effect on precision of such a weighting scheme. A second shortcoming is that the core of the nonrespondents that did not participate to either survey cannot be corrected for. Our aim is to compare these two methods, assessing the effect on estimates, nonresponse bias and on the precision of these estimates by applying a bootstrapping.

Parental Unemployment, Socioeconomic Status and Economic Recession

We study the intergenerational impact of parental unemployment on the socioeconomic status of the children. We compare the Finnish children facing parental unemployment during the rapid economic growth of the late 1980s and the recession of the early 1990s at the age of 12-18, taking into account the length of parental unemployment spell. The recession was one of the worst in the OECD history and in Finland far more severe than the recession of the 1930s. The ISEI status of the children was observed when they were 30 years old in the mid-2000s, after a decade of growing economic prosperity.

We use propensity score matching to analyse high quality Finnish register data, including 15991 children. We match each individual experiencing parental unemployment in childhood to a pair with similar parental background according to matching variables and calculate the average treatment effect (ATE) to measure differences in ISEI. The matching variables include the occupational class status and educational background of both parents, whether the parents were divorced or separated and household income during the examined period.

The results indicate that parental unemployment has a statistically significant negative effect on the socioeconomic status of the children only during economic growth. Only when the spell is longer than three years the unemployment also has a negative effect during depression. In the further analyses we consider the gender differences and the unemployment of both or only one of the parents.

The results suggest that the negative effect of parental unemployment is largely related to non-economic factors, such as lost social capital or stronger negative stigmatization. They also indicate that the economic depression may level off the negative intergenerational effects otherwise associated with parental unemployment.

A Sociological Examination of Property Inheritance System in Esan Land of Edo State Nigeria

This paper examined Property Inheritance system in Esan land which constitutes Central Senatorial District of Edo State, Nigeria. The study examined variants of inheritance system as they affect the women folk and the coping strategies adopted by the women in living with inheritance pattern. Qualitative research method was adopted. We discovered there is strong desire for male preference for the purpose of inheritance amongst the women folk. To sustain this hegemony of male preference for inheritance purposes, women were further manipulated consciously or unconsciously, through various socio-cultural constraints, to give credence and legitimacy to these variants of inheritance system. From the study population, a marriage without a male child was deemed not be a successful one. Three major strategies were identified to have been employed by women to cope and live with the inheritance systems: The first involved those that resigned to fate and accepted the system. The second are those who have also accepted the inheritance system but devised a means of creating their own wealth; and thirdly, those who stressed the need for women empowerment and education of the girl child. However, there appears to be some windows of change opening up in relation to the issue of Property inheritance systems in Esan land. In order to squarely address the problem of Property Inheritance in Esan land some recommendations were suggested.

New Players, Old Game: The Chinese-Brazilian Relations

Spokesmen of countries in the global South frequently use the rhetoric of South-South cooperation. At the same time many of these countries integrate themselves all the more closely into the international free trade regime as it was installed during the height of Western hegemony. This paper analyzes the relations between China and Brazil as a case example of South-South cooperation that has intensified rapidly in recent years. Based on qualitative interviews with scholars and policy advisors realized in 2011/12 in both countries and backed by a review of secondary literature, it focuses on the question of whether developments in the South remain guided by thinking in Western categories and worldviews or whether they actually present new approaches to international cooperation.

Politicians from both countries often speak about equality, mutual benefit, and the rejection of hegemony. This implies a rejection of the disproportionately strong position of Western states in global economic affairs and a struggle for self-determined development. The argument of this paper is, however, that this does not necessarily imply a rejection of Western norms and values. Development models in the South – be they free market or state-led – first of all aim at growth and competitiveness. Both China and Brazil benefit from their mutual economic exchange within the liberalized global economy. They benefit, however, in terms of national economic growth, while connected problems like social inequality are considered as issues for national social policies. Accordingly, reform-proposals of the global economic order basically aim at changing the power balance between states rather than the underlying principles of cooperation. Therefore, the question is determined as whether the rise of and cooperation among the South represents an alternative globalization or whether it merely reproduces material and power imbalances and their epistemological justifications, not only between but also within these countries.

Designing Technology-Mediated Democracy: Case Citizen Participation in Urban Planning through Mobile Apps

How can technology improve local democracy? Governments around the world seek to engage citizens in matters of public policy through a variety of technology-mediated tools. The tools are intended to contribute to democratic ideals such as transparency and inclusiveness, but how these ideals can be met in practice is not clear. In this paper, we examine this question through the case of citizen participation in urban planning through smartphone apps, or mobile participation.

Smartphones are seen as tools to engage a broad audience in urban planning, in particular youth and young adults who do not participate in traditional public meetings. By reviewing a broad range of relevant literature in urban sociology, democracy theory, and interaction design, we examine the conditions, requirements and design principles that must be met for this objective to become possible.

The findings of the review show that building technologies for participation requires taking into account a broad range of factors, such as social norms, trust and reputation, motivation, opportunity, feedback and dialogue. Participation on-the-go from a specific location also raises the question of who owns a tool with which to participate as well as issues of privacy in a public setting. I conclude that citizen participation needs to move past present shortcomings and become a sustainable process grounded in democratic principles.

Post-Crisis Technocratic Vigilantism: New Unconventional Roles of Central Bankers

Since the 2007 financial crisis central bankers in all major capitalist economies have introduced what they themselves call “unconventional monetary policies” to prevent a catastrophic collapse of financial markets and restore economic normality. Bernanke in the US, Darighi in the euro zone, King and then his successor Carney in the UK, and Kuroda in Japan have almost become household names. Participation of central banks in all major capitalist economies.

Hypothesis Testing: The Role Of Intersubjective Constructions In The Development Of Spanish As A Foreign Language At Entry Level In Japan

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The present study deploys a socio-genetic notion of hypothesis testing based on activity theory and Bernstein’s theory of codes. It analyses hypothesis testing in different pedagogical settings, from grammar to communication courses at entry level in Japan. In light of the results, it is suggested that the hypothesis-testing processes carried out by students are specific activities closely linked to the pedagogical objectives set by the teacher and not easily transferable to other settings. In other words, in grammar tasks that have as object the learning of the formal system, students will see severely limited their capacity to test hypotheses in the field of pragmatics or explore the communicative potential of language. In contrast, during a communicative class, students will see limited their capacity to explicitly test hypotheses concerned with formal aspects of language. The apparent integration of a programme does no ensure hypothesis testing (or L2 development). Instruction should be subsumed under developmental targets and not the other way around. It is concluded that structural instructional tasks represent a bridge between theory and practice and an opportunity for students to test their hypotheses, as they are given more control over instructional tasks.

Making Home in Helsinki: Indian Skilled Migrants and Housing

How have Indian skilled migrants settled in the Finnish built environment? This paper discusses the issue by analysing the housing experiences of Indian skilled migrants living in the Helsinki metropolitan area, Finland. The study’s background is in urban geography and housing studies, and it employs both structuralist and feminist views in order to tackle this multifaceted research problem. Immigration to Finland is a relatively new phenomenon. As a receiving country, Finland offers rather homogeneous housing alternatives. Furthermore, India and Finland differ greatly in climate and culture. What are the home-making practices of Indian migrants in this challenging environment? How do they choose their dwellings and what are the important aspects of housing for them? Do they feel at home in their neighbourhoods and in relation to native population? How do they construct their social life in the frame of the build environment?

The data consists of semi-structured interviews with Indian skilled migrants who have migrated to Finland to work and all of the interviewees were highly educated and worked in knowledge-intensive positions in research and business fields. The results of this study offer insight to the home-making practices of this migrant group and can be utilized in shaping the housing policy of the diversifying country.

Children and Intimate Partner’s Violence Against Women. Quantification and Mother’s Perceptions

Over the last years, a growing number of authors have been raising the necessary inquiries into factors that may curb the study of violence against women by an intimate partner. Such incorporation can provide not only a lower level of invisibility and vulnerability of exposed children, but also a better understanding of the characteristics and dynamics of the violence itself. Based on these considerations, we have developed a secondary analysis of the data obtained by the Spanish Center of Sociological Research (CIS for its acronym in Spanish) through the last national survey on gender violence (2011). Despite the fact that the main objective of this survey is not the analysis of children, relevant information can be gathered about the presence of boys and girls in the context of gender violence and about the possible relationships between this presence and women’s perceptions of aggressors’ parental role and the decision of reporting the aggression.

ESSACK, SHAHEEDA* (Nat Dept Higher Education & Training, essack.s@dhet.gov.za)
An Assessment of Intervention Programmes Aimed at Addressing the High Failure RATE of Students at Universities in South Africa (SA)

Since the early 1990s, the failure rate among students and especially first year students enrolled at South African (SA) universities has been exceptionally high. In 2008, Higher Education South Africa(HESA), the vice-chancellors’ association representing the country’s 23 public universities reported that the student drop-out rate had grown alarmingly and had hit 35% at some universities, with the bulk of those leaving being first year students (Makonyi, 2008). Specific to the SA context is the political and moral imperative of access, equity and success – forces playing themselves out in a society undergoing massive and rapid transformation. Needless to say, the literature provides extensive explanations and reasons for this high failure rate ranging from poverty, lack of funding, poor student housing to academic under-preparedness. Most of the reasons are neither new nor specific to the SA context. Parallels can be drawn with universities in diverse and heterogenous societies. Universities have responded in several ways through the implementation of programmes ranging from supplemental instruction to staff development programmes.

The aim of this paper is to provide an assessment of the type and nature of interventions that have been targeted across all 23 universities in SA with a focus on its objectives, the intended outcomes and the sector it targets. The method used for gathering information is based mainly on documents and official publications of the institution which may be combined with a few interviews.

ESTEINOU, ROSARIO* (CIESAS, esteinou@ciesas.edu.mx)
Intimacy in Mexican Society over the XX Century

Intimacy is a relatively recent theme in international literature. It is also a difficult area of sociological research since it relates to affection, emotions, feelings and subjective interactions, all of which are difficult to grasp. This paper aims to analyse intimacy in Mexican society throughout the 20th century, specifically in family settings. My aim is to explore two aspects of the ideas developed by Giddens and Jamieson regarding the Western debate: on the one hand, to identify the features of 20th century Mexican society that point towards different types of intimacy, taking as a criterion for classification the balance between the bonds of family obligation and freedom of choice when making those bonds, and on the other hand, to consider whether over the course of the century there was a trend towards increased democratization when building intimacy. In other words, what kinds of intimate citizenships – to use Plummer’s term – developed during that century. I accept as a starting point the argument of Jamieson that all societies develop some sort of intimacy grounded on close association and privileged knowledge. Mexican society and family life can be therefore analysed from this perspective.
ed their narratives of national identity by practicing a pre-modern repertoire to shape a modern identity, and by knitting together their collective, multiple visions of the land. Israelis and Palestinians have used space as a temporal-spatial tool to practice the remembering of lost land and to elaborate an imaginative geography. In an intractable conflict like the Israeli-Palestinian one, a culture of conflict and a psychological repertoire of conflict have developed. This repertoire includes ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict. My purpose is to focus attention on both narratives adopting Bar-Tal’s view: “Israeli society represents a mirror image of the Arab societies, particularly high levels of public scrutiny. Finally, they matter greatly to the appealing party, because the legal residence status mediates all other aspects of life for immigrants. Based on ethnographic observations of court sessions in Germany and interviews with all agents involved (migrants, their lawyers, immigration officials, judges), this presentation will show how all courtroom interactions engage on these three levels: the actual case, the symbolic-integrative, and the political. As a result, informal interactions and side remarks between legal agents play a crucial role, especially if they are outside of official court transcripts. Specifically judges and attorneys are the specific channel with an immediate and go out of their way to either include immigrants into the proceedings or to show their impartiality by completely ignoring the precarious situation of the appealing party.

Bridge the Silos: Curriculum Development As a Tool for Crossing Disciplines in the Arts, Sciences and Humanities

Investigators in the 21st century are finding that there are tools, information and points of view from other disciplines than their own that can answer the problem they are studying. However, higher education becomes more restrictive as a student moves from general education courses into graduate school, where a single department awards degree based on a usually narrow set of course requirements and a thesis or dissertation. Little is known about the kinds of cross-disciplinary courses that are currently being offered, the mechanisms that employed to foster these collaboration, and the effectiveness of these curriculums. A necessary first step is to research current cross-disciplinary offerings in higher education on an international basis in order to understand the modes of development of such curricula. We present an analysis of a compendium of arts-science-humanities cross-disciplinary courses created through several Calls for Contributions (2009 to 2013). A web site was created and submissions were posted at http://www.utsouthdallas.edu/atec/cdash. Permissions and updates were received for over 100 courses, along with additional material. The data (from courses) was analyzed as to the nature of the cross-disciplines, level of offering (graduate vs. undergraduate), geographical location, level of collaboration (number of instructors) and department(s) offering the course. A comprehensive re-visioning of curricular structure to encourage collaborative and cooperative teaching of integrative courses and programs is needed. Suggested actions include specific ideas to enhance networking and visibility, asset mapping, sharing of syllabi and course materials, and a research effort to demonstrate the cost-effectiveness of cross-disciplinary humanities courses. This preliminary study points the way towards further efforts in curricular design and research that will be required for cross-disciplinary courses to be integrated into college curriculum.

This project was initiated for a SEAD white paper, developed in collaboration with the Leonardo Education and Art Forum (LEAF), and supported by the National Science Foundation under Grant No.1142510.

Alternative Visions Of Work In a Neoliberal World: An Impossible Dream Or a Project Under Construction?

“we give people jobs” is the capitalists’ prime legitimation for monopolizing political and economic power. The reality behind this ideology is that the role of capitalists is to make sure that the supply of jobs is inadequate and to degrade those jobs that remain. Yet, the idea that supporting the dominance of capital is the only route will enable people to exercise their productive capabilities and receive livelihoods in return remains one of the most powerful elements of neoliberal “commonsense.” Replacing this “commonsense” with an alternative vision for organizing social production that is credible and compelling in the context of the current global political economy is a central challenges in the production of counter-hegemonic knowledge. The centuries old history of frustrated efforts to escape the imposition of inhumane and counterproductive modes of organizing work notwithstanding, it remains a project that must be resurrected anew in every era. This paper will combine an effort to systematize an analytic counter-argument to the current common consensus together with an exploration of existing efforts to formulate alternative strategies for expanding productive livelihoods and implementing alternative organizational forms for securing those livelihoods in practice, within the hostile environment of global neoliberal capitalism.

EVANS, PETER B.* (University of California-Berkeley, pevans@berkeley.edu)

National Terrains and Transnational Articulations: Global Labor’s Evolving Architecture Under Late Neoliberalism

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The neoliberal era has undermined worker's rights and labor's power at the national level, but there have been some positive developments in the transnational articulation of national labor movements. The growth of global corporate empires has expanded opportunities to use connections among national labor movements for “reverse whipsawing” — applying labor's strength in one national terrain to increase the power of labor in another national context where it is weaker. Extreme adversity at the national level has pushed U.S. unions toward a new transnationalism. Brazil shows how the more important global economic role of major countries in the South, when combined with a strong national labor movement, can create fruitful opportunities for transnational alliances. The growth of Global Union Federations, which has outpaced the growth national unions, and the development of new governance instruments like Global Framework Agreements, have also created opportunities for articulating the efforts of national labor movements and strengthening labor's ability to mobilize globally. These demands will be balanced against global labor's inability to find effective ways of supporting the ablest insurgen workers to become a political force in the world of the world's largest national working class and the likely future hegemon – China. Assessing both recent advances in the architecture of the global labor movement and its future prospects as positions in international hierarchy of nations shift is an essential task for global labor studies.

The UPR protest resembles past actions like the Battle of Seattle in 1999 and anti-private in response to increasing privatization and economic austerity measures.

The project has two main objectives: the first one consists in producing a detailed ethnography of a clinical partnership for teacher preparation involving a college of education and P-12 to prepare teachers for improved student learning. Using qualitative and quantitative data, this project examines the implementation of a clinical partnership for teacher preparation involving a college of education at a Midwestern research university and one large urban public middle school in the local district. The partnership builds on the previously established collaboration among educators in the district, the college, and the university, to offer a more authentic, comprehensive, and systemic approach to clinical teacher preparation. The project addresses two goals:

1. To determine the extent to which the clinical model in this middle school develops toward “integrated” on the Continuum of Partnership Development for Clinically Based Teacher Preparation (Howell, 2013; NCATE, 2010).
2. To document, assess, and track improvement of teacher candidate performance and related outcomes of a clinical partnership.

Project findings inform the development and implementation of model of teacher preparation and provide direction for educators who are establishing or refining clinical partnerships. The transformation of teacher education through clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing development of teachers who effectively enhance student learning in all contexts.

An extensive study of 10 nursing homes in England aiming to identify the determinants of poor sleep incorporated a collection of quantitative and qualitative data from 183 residents aged 65-100 and 40 members of staff. One of the key findings from the study was related to sleep disruption caused by regular, physical checking of the bedclothes to establish if they needed changing. A recommendation from the study was to enhance person-centred care at night by the use of technology, e.g., sensors in the mattress. In this instance the use of sensors in a mattress can for example indicate whether the bed is wet or dry and when the resident is more restless, implying that they are not in a deep sleep phase. Care supported by technology can be provided when it is needed and suits the individual sleep pattern of residents. Consequently restorative sleep can be achieved and dignity maintained. Thus the evidence based knowledge and understanding related to a determinant of poor sleep is transferred to the development of care giving procedures involving the use of technology. This process can be seen to improve care delivery and result in an outcome which acknowledges the individual's night time sleep and enables their personal dignity to be maintained.

The research was supported by the New Dynamics of Ageing initiative, a multi-disciplinary research programme funded by AHRC, BBSRC, EPSRC, ESRC and MRC (RES-339-25-0009).

The association “Pole Bio” has created a multi-tenant project called “Melbio” to support organic agriculture in the Massif Central region, France. Pole bio is intending to manage this project for a three years period (2011-2014) to improve knowledge sharing in the organic farming field. And this focus group is specifically interested in meadows composed of a variety of flora or forage crops. It brings together a group of heterogeneous actors: researchers in biology, computer sciences, Chamber of agriculture officials, trainers, agricultural experts, farmers’ associations. The project is funded by the region and aims to find new techniques to tackle the climate change.

The project has two main objectives: the first one consists in producing a decision-making model to assist seeding. This decision-making model will be embedded within an online platform to assist farmers to calculate the ideal mix for seeding flora in meadows. The ideal-type process is the following: farmers will have to enter local data into the software (such as location, soil type, weather conditions), and will get back advices for seeding recipes. The second objective is related to the creation of a wiki-based knowledge platform to articulate both expert and lay knowledge to improve the collective expertise of the organic farming community in that region.

The research was supported by a New Dynamics of Ageing initiative, a multi-disciplinary research programme funded by AHRC, BBSRC, EPSRC, ESRC and MRC (RES-339-25-0009).

The research project informs the development and implementation of a model of teacher preparation and provides direction for educators who are establishing or refining clinical partnerships. The transformation of teacher education through clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing development of teachers who effectively enhance student learning in all contexts.

Dutch-Japanese Encounters: Gendered Experiences Of The Japanese Occupation Of The Netherlands East Indies

This paper examines the stories of women who transgressed national and racial boundaries by entering a relationship with the ‘enemy’ during the Pacific War: Indo-European women (with Dutch citizenship) who conceived a child with a Japanese man during the Japanese occupation of the Netherlands East Indies (1942-45). To date, their actions remain highly controversial in the Netherlands, as they apparently willingly engaged with an enemy that even now evokes strong emotions for subjecting large parts of the Dutch civilian population to three years of internment. Unlike Comfort Women, they have not received recognition for their wartime experience in form of pensions for war victims, as they were considered as collaborators, opportunists and prostitutes. The treatment they suffered by their own families and communities left deep scars in the lives of women and their children, and evokes memories that are often too painful to articulate even in private. The persisting silence surrounding the origins of their children constitutes an important starting point to investigate the political and social processes that have defined the ‘truth’ and memory of the war and women’s experiences of the occupation. Their stories reveal that their actions not only contradicted the wartime enemy image, but also the prevailing ideologies of women’s expected relationship to the nation and its men. Based on Japanese and Dutch archival documents, including interrogation reports and accounts of mothers themselves, and 21 life history interviews with children born of these unions, I reconstruct the wartime experiences of these mothers from the perspective of their children. Their stories not only shed light on women’s agency and their gendered experience of life and survival during the Japanese occupation, but also a family and community discourse, that continues to marginalize and silence women and children within the history and memory of the Japanese occupation.

Sex and Witchcraft: Performing and Transforming the Gendered Body

Eighty people dance naked around a large bonfire during an all night ritual at Fauna, a Pagan festival in Australia. This paper examines how these ritual performances transform embodied forms of gender inequality for women and men. Women with poor body image find self confidence and pleasure in their somatic performance. Men discover new ways of relating to the feminine sides of themselves. Both men and women explore same-sex interactions, such as kissing someone of the same gender, and as a consequence become more comfortable with homoerotic desire. The paper argues that many forms of gender inequality are located in emotional and somatic self-understandings and that ritual performances allow these to be countered and transformed.

The Museification of Military Coup and the Years of Dictatorship in Chile: the Construction of Post-Conflict Visual Imaginations at the Memory and Human Rights Museum of Santiago

Through the example of the Memory and Human Rights Museum of Santiago (MMHR), this paper analyses the display of different images and objects associated with the military coup (September 11, 1973) and the years of dictatorship in Chile (1973-1989). Inaugurated in 2010 under the government of Michelle Bachelet (2006-2010), the MMHR constitutes a major architectural and curatorial project created in order to “never forget” the traumatic past of the country. Since the last five years, different forms of images of this past have been publicly reproduced and exposed, especially by television. This text explores the hypothesis that the emergence of the Memory and Human Rights Museum constitutes a powerful signal of re-definition of national memory that seems to “leave behind” all social conflicts and political divisions in Chilean society. Are the visual strategies of collective remembrance contributing to a process of consensus? What is the relationship between the museification of images and the re-definition of the national memory? These questions are explored by following the MMHR visitors in their interaction with architecture as well as by the analysis of the formation of collections and the display of museum images.

Edgework: A Modern Phenomenon Or a Discourse Symbolising An Innate Human Quest?

The paper explores if edgework is rooted in a human quest for excitement and challenge and if contemporary edgework can be compared with historical explorative expeditions, where humans and equipment endured extreme challenges. Hunter Thompson (1971, 1979) defined edgework as a voluntary risk activity requiring extraordinary knowledge, mental and physical skills, which is different from voluntary risk taking actions where no skills above everyday knowledge are required. More recently, Lyng (1990) explores the edgework discourse in analysing skydiving and Fletcher’s (2008) risky behaviour and practices within elite and professional sport. Activates based on a perception of having control of a situation, such as gambling, might also relate to edgework (Fabiansson 2010). The paper argues from Bourdieu’s (1978, 1984) habitus discourse the influence of the social and cultural environment on human action and perception of societal place, that contemporary edgework activities and historical expeditions have common grounds in symbolising an innate human quest to challenge the everyday, but differs in presentation of the achievements in the private and public spheres. Where historical expeditions are placed in the public sphere for the explorer to gain public acknowledgement, while modern edgework is practiced in the private sphere or within a close knit group of likeminded edgework followers.
Young People Feeling Valued and Safe In Mono- and Multi-Ethnic Australian Communities

The paper explores if young people growing up in mono-ethnic regional or in multi-ethnic urban communities present different experiences in feeling valued and safe in their community. The paper argues from Bourdieu's (1978, 1984) habitus discourse that the social and cultural environment influence the community setting and young people's feelings of being supported by friends, their social networks, and trust in people. The mono-ethnic young people live in regional communities dominated by generations of Anglo-Australian heritage and traditions. While the young people living in multi-ethnic urban communities lived ethnically diverse urban communities in Western and South Western Sydney with its intermix of young people from Arabic and Middle Eastern, Pacific Island and Asian heritage. The young people in the mono-and multi-ethnic communities are all aged between 13 and 21 years and live with their families. The research shows that the urban young people living in multi-ethnic urban communities feel more supported by friends and have more positive experiences about community living. They feel more supported by friends, but also by their extended family, a contributing circumstance for them to feel more secure in the community, then what the mono-ethnic regional young people expressed.

Neo-Traditionalism, One or Many? Structure of Gender Roles at Individual and Country Levels

Transformation of gender roles is regarded as one of the key dimensions of modernization. Notions of gender, as hardly any other set of beliefs, possess universal relevance and pervade everyday life. Not surprisingly, the gender issue has become one of the key themes in rhetoric and sources of mass mobilization for neo-traditionalism. As a result of the polarization of positions in global public debate, most gender role expectations are easily recognized as belonging to either a liberal or a neo-traditionalist value set. What remains less clear, however, is the variability of modernization patterns for different gender norms. Do all role expectations form a one-dimensional factor, or are there several autonomous dimensions of notions about gender, each with its own liberal versus neo-traditionalist extreme? Can these dimensions be used to compare gender role expectations at individual and country levels? To answer these questions, we analyzed the integrated database of the European Values Survey and World Values Survey by means of multilevel structural equations modeling. The formulations of relevant items, as well as the current theoretical agenda, suggested their possible division of gender roles into those describing behavior in work and family settings. The results, however, revealed a division along different lines: the first factor comprises duties, both in public and private spheres, while the second factor includes hedonist gender role expectations, related to self-fulfillment and enjoyment. At the country level, the first factor proved to be non-existent, while the second was reproduced with almost the same structure as at the individual level. Thus, gender roles are both horizontally and vertically differentiated, and form different dimensions of neo-traditionalism. To account for these differences, we compare sets of predictors for the two factors, with special regard to cross-level interactions.

Envisioning a Real Utopia in Iran

The Real Utopia scholarship is overwhelmingly focused on cases that take place in liberal democratic political systems. It remains unclear however, how real utopias can be envisioned and realized in the absence of a vibrant public sphere. In this paper I present original research on a utopian project in Iran, an initiative called Sustainable Living which is a cooperative that embraces an alternative lifestyle and whose aim is to create Iran's first eco-village. Through an analysis of this initiative I elucidate how a real utopian vision becomes desired and acted upon in Iranian society. I demonstrate the channels through which utopian visions are circulated and are adapted to local context in Iran, and ultimately I seek to broaden our understanding of the realization of emancipatory social science. Hence, I not only show how utopias are envisioned in Iran but I examine the groundbreaking struggle of people to make them real in a restrictive political environment.

The Political Economy of Religiosity: Development and Inequality Reconsidered

Existing studies present economic development and income inequality as two key determinants of cross-national differences in religiosity, and of changes in religiosity over time. But the case for both explanatory variables remains uncertain. First, some studies claim that religiosity has not been declining over time, if so, rising incomes cannot have had any impact. Second, there is as much reason to think religiosity is a cause and a consequence of development and inequality.

Third, the mechanisms linking inequality to religiosity remain unknown. Addressing each of these limitations, this paper tests more robustly whether and potentially how development and income inequality shape religiosity. I find, first, that inequality, though not development, correlates with religiosity over time. Second, using an instrument to rule out reverse-causality, historically rooted differences in both inequality and development have powerfully shaped countries’ current levels of religiosity. Third, deference to authority correlates with both inequality and religiosity, suggesting it is a key mechanism linking the two. In recent decades, then, the increasing inequality experienced by many countries appears to be one reason for the relatively modest decline in religiosity.
Does inequality discourage political engagement? Previous studies have noted that people are less politically engaged in societies with higher income inequality. This cross-sectional association has been taken as evidence of a causal relationship, with inequality discouraging engagement by leading all but the wealthiest people to conclude that politics is not about them or their concerns. If correct, this interpretation suggests that the increasing inequality seen in many countries in recent decades has been driving down engagement, with potentially serious implications for the quality of democracy. Yet the association could be spurious, or due to reverse-causality. The very reason scholars care about political engagement is that they believe it has consequences for democracy and distribution; rather than inequality discouraging engagement, disengagement could foster inequality. Using multilevel models fitted to two measures of engagement from all five waves of the World/European Values Surveys, this paper re-assesses the thesis of a causal relationship running from inequality to disengagement, in two ways. First, I investigated whether the relationship holds not just cross-sectionally but also longitudinally. Second, I use an instrument for inequality to test whether the correlation between inequality and engagement holds even when ruling out reverse-causality. I find mixed evidence for a relationship over time, but a clear correlation when instrumenting for inequality. At least over the long run, then, it seems that unequal societies tend to develop less participatory politics.

Media Literacy As an Educative Tool Against Inequality: The Results of the Programme “Preventing in Madrid”

Most analysis on the effects of Media and new Technologies on children and teenagers focussed risks (or the social risks (concerning inequality, social stereotypes, violence or substance abuse behaviours that may be increased by the patterns shown by Media) either on the positive opportunities that Media may bring (regarding new chances of learning and development). Based on the integration of both sort of studies, this research underlines the use of Media Literacy as a tool to be used in prevention programmes with children and teenagers, in order both to reduce social risks and to increase opportunities of freedom and equality. As an example, we propose the results of Preventing in Madrid (Universitat Complutense de Madrid), a prevention programme against violence and social discrimination that has been developed in schools of Madrid since 2002.

FAN, GANG-HUA* (Shih-Hsin University, ganghua.fan@gmail.com)

Gender Differences in Religious Influence on Subjective Well-Being: Evidence from Japan, South Korea and Taiwan

Research has consistently shown that women tend to be more religious than men. The structural location theory proposes that, due to disadvantageous social positions, women are more likely than men to regard religion as an alternative source of social support. The relative importance of religiosity versus socioeconomic status on subjective well-being is thus expected to be more salient among women. Nevertheless, empirical verifications of this thesis, especially under East Asian contexts, are relatively few. To address this gap, this article uses data drawn from AsiaBarometer 2006 survey to examine gender differences in religious influence on subjective well-being (measured with happiness and life satisfaction) in three East Asian societies: Japan, South Korea, and Taiwan. The three hypotheses proposed in this research are: 1) the association between religiosity and subjective well-being is stronger among women; 2) the relative importance of religiosity compared to socioeconomic status on subjective well-being is greater among women; 3) gender differences in religious influence on subjective well-being are more salient in societies with greater gender stratification. Results of analyses provide certain support for the above three hypotheses. In these three East Asian societies, the influences of religiosity on subjective well-being are more significant among women in both absolute and relative measure. Also, gender differences in the association between religiosity and subjective well-being appear to be more salient in South Korea, where gender stratification in terms of education and occupational status is greater than that in Japan and Taiwan.
Higher education is increasingly desired by families because it is seen as an important mechanism of social mobility that allows students to achieve better living standards. However, access to higher education appears consistently correlated with student socioeconomic status. The lack of prior opportunity to study a curricular program that provides both the quality and content required to proceed to higher education is suggested as the most important barrier. It is worse, then, that some low-income, high-performing students who expect to continue to higher education choose programs with lower-level content or quality.

This study utilizes the case of Chile to explore whether choice between vocational and academic education at secondary level (VESL and AESL respectively) could help to the reproduction of inequality throughout the diversion of high-performing low-income students from the academic to the vocational track. This study approaches a causal analysis combining propensity score matching and robustness check strategies. It also uses an ad hoc survey and a rich panel of census data that follows students from eighth grade to higher education.

The findings show that socioeconomic status, culture, the environment, and self-perception are correlated with enrollment in VESL. In addition, there is an important gap in the national entrance test to higher education between comparable VESL and AESL students (0.2 – 0.5 SD). Results also show that high-performing, low-income VESL students are less likely to go to a bachelor degree program and more likely to enter a vocational program at tertiary level than a comparable AESL student. Finally, VESL students tend to have a lower persistence at vocational tertiary education than AESL students. Hence, VESL could be distracting and preventing some low-income, high-performing students from obtaining better income, employability, and social status, ultimately reducing their social mobility. In this way, choice could be contributing to the reproduction of inequality.

Children in the City: The Children in Focus

Research indicates that children have spent more time in institutionalised places than in public spaces (WARD, 1978; RASMUSSEN, SMIDT, 2003; TONUCCI, 1996). However, the same studies show the ability of these children in breaking the charged routines, transforming spaces planned for them in their places. Thus, the claim that urban children experience fewer public spaces is not universal but may vary from city to city, neighborhood to neighborhood depending on the social groups that live there. The present work aims to study specifically how four five-year-old children, two girls and two boys, who live in Brasilia/Distrito Federal/ Brazil, perceive the city. Thus, from the recognition of children as social agents, producing meaning and that regardless of their size interact with the physical environment (CHRISTENSEN; O'BRIEN, 2003), we propose this research. The methodology of the study considers the child as a primary informant and seeks to involve them in the process of the research. The child, using the city map, was invited to build a city map with blocks of wood and artifacts in miniature, like cars and trees. Later, presenting the picture of the city map construction, it was possible to conduct a photo-elicitation exercise (CLARK-IBÁÑEZ, 2004; BANKS, 2009). The methodology helped to increase the involvement of children in discussing aspects related to their urban experiences.

Women's Local Social Movements

This study aims to understand whether the phenomenon of rural women's collective action in Dasun, Kediri can be interpreted as a social movements, and related to the issues, actors and the setting, how's that social movements can be categorized and have an implication to social justice, and can improve the inequality of women's life. Based on this, this study aims (1) to explore and interpret the phenomenon of collective action undertaken by women in Dasun, if indeed a social movement and (2) the implications of social movements to improve inequality of women's life and to develop a social justice.

This study is a qualitative research with an ethnographic approach, which a plural method include observation, participation, analysis of records, and interviews. The subjects of this study included some Dasun's women activist and outsiders who were involved in the growth of the local social movements. Based on the results of field research and theoretical analysis led to some the conclusion, an important finding of this study, show that a women leader is the product of the movements. The ability to produce a leaders, as far as the author know, is the specific notion that can not be found on collective action in other places. Collective action in Dasun can be interpreted as a social movements, with the fulfillment of the element of collectivity, shared goals, a loose organization, leadership, and moving beyond the villages' authority. The implications of the achievement of social movements in family life is shown by the involvement of women in decision-making and financial control lies in the female. In society, women have begun to participate in the socio-cultural, political, economic and environmental fields which can improve inequality of women's life and to develop a social justice.

Perspective on Skilled Migration

This paper weds field theory to critical race theory to conceptualize the inter-ethnic competition among actors in the multinaional field of corporate employment in China's most global city Shanghai. In sum, the field of corporate work is constituted as a field of relationships and activities in which ethnic social, cultural and symbolic capital serve as field-relevant resources. In this field highly skilled workers are embedded in each type of social capital. We examine how embeddedness in family, school, or neighborhood networks affects conventional and unconventional behavior. Data were gathered as part of a longitudinal study of families (N=699), friendships, and adolescent development in Buffalo, New York. We first compare networks of black and white adolescents, along with the degree to which they are embedded in family, school-based, or neighborhood networks. Second, we examine the effects of embeddedness in each type of network on conventional and unconventional behavior. The larger the percent of network members seen in a context, the more embedded in that context. Finally, we examine whether effects vary by race. On average, black adolescents' networks are smaller than whites, but they include a much larger percentage of family members (i.e., blacks are more embedded in family networks). Whites are more embedded in school-based networks. Both groups are equally embedded in neighborhood networks. The more embedded adolescents are in family networks, the higher their GPAs, and the less likely they are to smoke marijuana, get drunk, commit acts of major deviance, or have multiple sex partners. Interaction effects show stronger effects of family embeddedness for black adolescents on multiple sexual partners, and whites on marijuana use. Regardless of race, the more embedded in school-based networks, the higher their GPAs, the less likely they are to smoke cigarettes, and the fewer sex partners they have had. The more embedded adolescents are in neighborhood networks, the more likely they are to smoke cigarettes, use marijuana, and commit major acts of deviance, such as robbery, assault, or gang fighting.
ethnographic study with over three hundred in-depth interviews, this approach provides an account of the changing position of the foreign skilled migrant in the corporate labor force in Shanghai from the 1980s to the 2010s, a period in during which expatriation transition from a dominant field position as incumbents who defined the “rules of the game” for employment, to challengers who must defend a marginal position within a much expanded field.

FARRO, ANTIMO LUIGI* (Università di Roma La Sapienza, antimolugi.farro@uniroma1.it)

Subjective Struggles and Collective Movements

Movements are constitutive parts of contemporary global realities, buttressed forward by online communicational flows. They present a counterpart to broad systemic powers which aim to condition and control individuality, thereby deconstructing social life. Financial forces are increasingly constituted through informational platforms, which take place outside the real economy. Moreover these movements increasingly underscore the differentiation between themselves and systemic actors. Movements underscore for us the separation between systemic forces and real life as expressions of the fragmentation of social life. Individual subjects become participants in the construction of collective movements to affirm themselves in the face of systemic domination as well as to engage in experiments around new living constructs as an alternative sociability to fragmentation. Communication by physical and online networks enables individuals to establish a common cultural framework. The result of this is a new political re-democratization and sociability confronting the contemporary context of global reality.

Narrowing The Pipeline? Assessing Female Participation in STEM Fields

The underrepresentation of female science, Technology, Engineering, and Mathematics (STEM) faculty members at teaching institutions leaves few role models for young female students, particularly racial/ethnic minorities, interested in pursuing careers in STEM academic fields. A shortage in the number of professional women in STEM narrows the pipeline for future progress in every STEM discipline. The underrepresentation of women STEM faculty members everywhere, but most notably at small, primarily teaching institutions parallels the national statistics, which indicate numbers disproportionate to student and community demographics at institutions of higher education.

We intend to examine and evaluate the specific needs and practices regarding advancement of women in STEM fields at a small, southern, rural, primarily teaching university and similar regional teaching institutions, and formulate specific sustainable strategies and goals toward increasing representation of women for the success of female scientists, our institution, and the future of scientific innovation.

A variety of measurable quantitative data and qualitative information will be systematically gathered from female STEM faculty and from a comparison group of male STEM faculty to determine causal factors influencing the underrepresentation of women in STEM. All baseline data gathered on female STEM faculty will be compared to results obtained from male STEM faculty. The data will be analyzed in order to assess needs and methods for implementing policies and conditions favorable for achieving positive change in the number of and professional advancement of STEM female faculty at this institution and to contribute to the existing body of knowledge regarding the underrepresentation of women STEM faculty.

FARRUGIA, CLAIRE* (Macquarie University, cfarruge@gmail.com)

Sharing to Belong: African Women in Sydney and Practices of Social Solidarity

Nestled inside a 1980s-style arcade in the Western Suburbs of Sydney, the African Village Market is a meeting place, social enterprise and a site of recognition. The market was established as a means through which African women in Sydney could sell their own products, provide African foods that were otherwise hard to get and foster a sense of community across African groups in Sydney. Drawing on ethnographic research conducted at the African Village Market in late 2013-early 2014, this paper will explore how women at the market experience and give meaning to solidarity. While the market holds a particular resonance for the Kenyan community in Sydney, it also functions as a meeting place for other African communities. It is a particular site where solidarity is practised in the everyday through the act of sharing; the sharing of space, friendship, knowledge and support. By asking why people choose to share with each other, what they choose to share and who they choose to share with, this research will explore the complex ways that solidarity functions across various axes of difference. In the context of a steady decline in funding for ethnic group organisations, it is necessary to understand why these spaces play as sites of difference that foster a sense of social solidarity within and across communities.

FARRUGIA, DAVID* (University of Ballarat, d.farrugia@ballarat.edu.au)

Geographies of Reflexivity: The Spatio-Temporality of Contemporary Youth Subjectivities

This paper approaches the spatio-temporality of contemporary youth subjectivities through a discussion of the spatial dimensions of individualisation. The paper argues for a renewed focus on the reflexive practices of young people in relation to the way that local social conditions are shaped and reshaped as part of broader processes of social change taking place across the western world. Emerging debates about the meaning and significance of reflexivity are situated within geographical theories that emphasise the construction of space as a meeting point of temporality, as well as the relationship between place, identity, and social practice. In order to provide a located and spatialised understanding of the consequences of social change for young people’s identities, the reflexive practices and biographies of young people in different spatial contexts are situated within this theoretical context. The paper argues that reflexivity is a spatialised phenomenon: young people mobilise reflexive practices in relation to local structural conditions, themselves embedded within the spatial dynamics of globalisation and individualisation. The paper concludes by calling for a spatialised understanding of the consequences of social change for young people’s identities.

FARSAKOGLU, EDA HATICE* (Lund University, eda.farsakoglu@soc.lu.se)

Place, Rural Youth Identities, and Social Change

This paper responds to emerging critiques of the metacentric and placeless focus of contemporary youth studies with a located, emplaced analysis of youth identities in rural and regional Australia. While theories of social change currently influential in youth studies depict a homogeneous and placeless modernity, nevertheless the processes these theories describe have reshaped young lives differently across urban and rural environments. Drawing on a research project ongoing in western Victoria, this paper analyses young people’s identities and biographical narratives in relation to arguments about social change, including arguments about globalisation, individualisation, reflexivity and the meaning of place in late modernity. Narratives and biographical imaginings of rural and regional young people articulate identities constructed across geographical scales, as well as providing a located understanding of the genesis of reflexivity and its relationship to locality and local inequalities. Discussing the contemporary significance of place, mobility, and changing geographical inequalities, this paper moves towards a spatialised and comparative analysis of youth identities in a changing world.
Everyday Boundaries and "Queer" Experiences in the Transit Migratory Space of Turkey

Looking at the everyday as a crucial site for being and becoming as well as for (re)shaping belonging(s) of marginalized social groups (Manalansan, 2003), this paper seeks to examine everyday worlds of Iranian queer refugees in Turkey. The paper draws on findings from a doctoral dissertation project, which is based on 11-months of fieldwork consisting of key-informant interviews as well as on ethnographic data and narratives collected through in-depth interviews with 43 Iranian sexual refugees living in different "refugee" cities in Turkey. Turkey is a transit locality for non-European refugee communities due to its 'geographical' limitation to the 1951 Geneva Convention. Among other irregular migrants and transit refugees, Turkey hosts many Iranian queer subjects, who are seeking asylum based on sexual orientation and gender identity persecution and waiting for resettlement to a third country in the global North. Time they spend between their 'departure' and 'final destination' affects and inflects their everyday life struggles and experiences as they shift across multiple boundaries and hierarchical axes of difference within the conditions of cross-border mobility as well as of asylum seeking while living in the transit migratory space of Turkey. In that sense, the main aim of the paper is to go beyond a panoramic snapshot of what the mundane activities of Iranian sexual refugee population in transit in Turkey looks like, toward a sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of migrating Iranian sexual dissidents.

RC31-524.2

FASSAKOGLU, EDA HATICE*(Lund University, eda.fassakoglu@soc.lu.se)

Identities, Migrations, and Asylum: Thinking through the Experiences of Queer Refugees

Since the early 2000’s Turkey has become a prominent transit destination for Iranian queer subjects who are seeking asylum based on sexual orientation and gender identity persecution. However, to date, there has been little research focusing on this growing component of queer/asylum mobiles. In line with the larger literature on international forced migration, much of the existing literature has avoided asking questions about these queer subjects’ understanding of self in relation to their (neo)national, as well as concerning their choices and motivations for departure. Often, this lack of academic coverage is due to so-called protection-related ethical dilemmas which many researchers are facing. Paradoxically, however, to avoid asking such questions in our researches strengthens the victimization-related ethical dilemmas which many researchers are facing. Therefore, to draw on key understandings and theoretical approaches in sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of migrating Iranian sexual dissidents.

KEATING, NORAH (University of Alberta)

Caregiving and Employment in the Canadian Context

According to Statistics Canada, in 2012 more than 8M Canadians had provided care to a family member or friend with a long-term health condition, disability or aging-related needs during the previous year. The largest proportion (44%) were age 45-64—that is, baby boomers in peak earning years. Moreover, the number of boomer caregivers increased by 20% between 2007 and 2012. As in most developed countries, most Canadian caregivers are employed and many report care-related employment consequences. Many also report psychological, emotional and physical health consequences, many of which are serious enough to result in a visit to the doctor. Gender differences are narrowing: a slim majority (54%) of caregivers were women in 2012, but women still spend more time on care tasks, do more high demand tasks (personal and medical care), and experience more health and economic consequences.

Demand for care will continue to grow in Canada, as in most parts of the world. But Canada’s public caregiver support infrastructure is under-developed compared with many other countries. And despite growing awareness of the negative impacts of caregiving, there is relatively little research on the impact of caregiving on labour force attachment, commitment and productivity. Canadian employers remain largely uncommitted to supportive workplace practices for caregivers.

In this paper we report results from further analysis of Statistics Canada's 2012 General Social Survey on Caregiving and Care Receiving examining incidence and predictors of care-related health and employment consequences for caregivers, as well as estimates of monetary costs that accrue to caregivers’ employers as a result. These findings will be interpreted against the backdrop of the Canadian public and private policy context and implications for future policy and practice in the health and continuing care and labour domains discussed.

FATTORE, TOBIA* (Macquarie University, tobia.fattore@mq.edu.au)

Children’s Health and Well-Being: Making Sense of the Health Conundrum

Lifestyle related morbidities affecting children have attracted attention from national and international policy makers. One response to these public health concerns is to inform children and their parents of health promoting behaviours so as to establish lifelong habits for good health. However, epidemiological trends suggest that the prevalence of childhood morbidities is increasing. This suggests that health promotion programs appear to be struggling in effecting change in response to a complex set of factors driving this trend.

This paper attempts to make a small contribution to understanding this problem by presenting some research on children’s understandings of health and wellbeing. The study used a participatory methodology involving a research study with 123 children aged 8-15 years, focussed on children’s understandings of ‘well-being’. While a significant amount of research draws upon the sociology fusion and demoralization in challenge and euphoria. In the second, participation to the reality show it is only a realistic strategy. They use imaginary to be able to live an “ordinary” life that is now made impervious by social conditions. It is the project of life that is configured, today, for them, as “microutopia”. As a result, the audition replaces the “social proof” and the Big Brother house becomes a space suspended between imagination and reality having the appearance of a melancholy therapy to survive.
of health to understand children's perspectives of their illness, less common is research that obtains children's perspectives of what health or well-being means.

Our findings show that when children discuss their health they invoke themes from health promotion campaigns, which share many of the features of 'healthism' (Crawford 1980). However, children also call upon different and more broad-ranging meanings of well-being which problematise these healthism discourses. These include locating health as one dimension of well-being that prioritisises agency, security and a positive sense of self; as promoting the body as a functional entity; and of health as generated intersubjectively which reproduce patterns of moral anxiety among carers. The findings suggest that children's understandings of well-being provide important clues as to the limits of health promotion campaigns and a set of considerations policy-makers need to take into account to effectively respond to the health conundrum.

**FAWAZ, JULIA** (Universidad del Bio-Bio, Chile, m.fawaz@ubiobio.cl)

**New Roles in Rural Contexts. Women, Work and Family in Chile Today**

Globalization, modernization and neoliberal policies have significantly contributed to the transformation of traditional rural life in Chile in the last decades. A more heterogeneous and modernized rural world has emerged, although still strong gender and social inequalities remain. Within these changes, the visibility of women in public spaces highlights, in particular in the educational sphere and in labor market, even though Chile still has a low rate of female labor participation compared to other Latin American and OECD countries. These new reality implies that the traditional sexual division of labor is being transformed and questioned, since women incorporation to higher educational levels and to labor markets implies for them geographical mobility, new social and economic networks and new perceptions and images about their roles in society. Therefore, the new productive roles in women's empowerment at personal, family and local levels, having accordingly an impact in family life and men's role.

From a perspective that combines quantitative and qualitative methods, this paper analyzes the effects of the new productive role of rural women in the re-structuring and current dynamics of families, in the intra-family relationships, negotiations and processes of reconciliation between work and family, and explores the implications of these changes at local and community levels and for society as well. The paper is part of a broader study held in the province of Ñuble, Central Chile, concerning with female work in different social and geographic spaces and the effects of paid female work at personal and family levels and in local and national development (Proyecto DIUBB 133324 2/R).

**Famine Meets with Conflicts in West African Sahel Region: A Retrospective Study**

The Sahel constitutes the eco-climatic and bio-geographic zone of transition, in Africa, between the Sahara desert to the north and the Sudanese Savanna to the south. It covers parts of (from west to east) the Gambia, Senegal, southern Mauritania, central Mali, Burkina Faso, southern Algeria and Niger, northern Nigeria and Cameroon, central Chad, southern Sudan, northern South Sudan and Eritrea. Famine has been a perennial problem in the Sahel region of West Africa and some parts of Senegal, Mauritania, Mali, Niger, Chad and Sudan are hard hit. One of the area's worst droughts occurred in 1914, but the increased rainfall throughout the 1960s made the drier areas more sustainable. The highly visible famines occurred between 1968 and 1974, 2005 and 2007 and 2010. And these recorded the presence of international humanitarian assistance. In the West African Sahel, majority of people survive by producing crops such as groundnuts, grains and in addition rearing of animal. Man-made problems also complicated the issues of famine, such as its attendant consequences particularly the political instability of several countries where the locust had infested their crops could not receive adequate treatment. For examples conflicts in Mali and Niger forced over 300,000 people from various households with many escaping to refugee camps in neighbouring countries. Traditional animal grazing routes have been cut off with worldwide markets were close, leading to the conflicts, which have far reaching consequences for West Africa sub-regional food security. The paper discusses the historical antecedents of famine and conflicts in the Sahel region of West Africa, analyses the effectiveness of the World Food Programme, the governments of the various affected countries and other international humanitarian assistance in the quest for food security in the region. Consequently, the paper recommends plausible solutions to both famine and conflicts in the region.

**The Influence of the Organizational Performance on Psychosocial Health at Work**

At the present time there is a domination of cost-effectiveness criteria in the practices of modern businesses which are more attracted by the economic and management activities that can allow the company to prosper and achieve efficient financial results. Nonetheless, statistics show a steady growth in the numbers of workers who are victims of disease such as addiction to alcohol, drugs, mental disorders and insomnia, the difference caused by excessive stress due to adverse methods of work organization and interpersonal relations in the workplace. Downsizing, layoffs, retirement, overtime work and forced leave without pay have a significant disruptive impact on workers, their physical, social and psychological wellbeing. Thus, there is underestimated the social aspect of a negative impact of the organization's economic activities on psychosocial health at work. The given research deals with the issue of social pollution, expressed in reducing the level of welfare and deterioration of physical and psychosocial health of workers caused by the economic activities of the company. The theoretical study has allowed us to formulate hypotheses about the toxic management practices and their negative impact on people's psychosocial health. An empirical study conducted by the authors in comparison between Russian and Italian companies has permitted to verify the given hypotheses: to examine in detail the nature of social pollution of the intra-organizational environment and to identify toxic elements of the socio-labour relations in the company. An important feature of the current research is studying the social pollution phenomenon from the point of view of employees, employers and trade unions.

**Russian Universities in the Neo-Liberal Reforms**

In Russia, for two decades, neo-liberal reforms have been carried out in all spheres of social life: economy, politics, culture, and education. The higher education reforms (universities in particular) dismantle the previous Soviet national education system trying to substitute it by a new pattern based on the Western model “for the purpose of being fully integrated into the global community”. The process of transplanting Western education patterns on Russian ground resulted in the fact that education no longer performs its most important social functions of integration and differentiation.
The integration function implies the system of education that is supposed to reproduce a set of core values reflecting the spiritual priorities of society and uniting people in a common social, historical and cultural community. It is known far and wide that every society does its best to preserve national identity, socio-cultural and mental characteristics of the population. Therefore, in order not to lose national identity communities try to transmit (and reinforce) their most important values through education systems.

The differentiation function implies preparing people of the younger generation for “embedding” them into cells of the social structure, bringing social and occupational structure of society into the right track; preparing the right number of specialists of different skill levels and different specialties for the country, according to the strategy of its development.

But the paradox of contemporary Russian situation is that neither twenty years ago, when the construction of the neo-liberal capitalism was just at the beginning, nor now – nobody elaborated or formulated the development strategy. There was too much that was obscure: there wasn’t ordered a priority system in the development of certain sectors in the economy, science, and social services. People were unaware of the economic model and the model of society they would create through liberal reforms.

**Pathways For Prevention: Disentangling Causal Relationships Of Preventable Mortality and Forced Migration In Post-Colonial Africa**

If humanity consensually agrees that innocent children should be spared the ravages of violence, political murder is not a reasonable means of debate, and that no person should be led to starvation at gunpoint, then we must also agree that humanity has failed modern Africa. This research summary points to a volume of historical evidence linking a host of independent factors that consistently predict higher rates of preventable mortality from violence, starvation, and disease across sub-Saharan nations. A wide-angle view of dictatorship and resource exploitation in the independence era (1957–1980) set in motion the foundation for modern conflicts that continue to brutalize millions of Africans. Sadly, violence, starvation, disease and other preventable mortality causes are easily predictable, yet continuously occur across many parts of Africa. A second function of this research summary is to highlight causal pathways between extant social, geographical, economic, and agricultural indicators and the increased likelihood of forced migrations and preventable fatalities. If scholars can disentangle the cause and effect relationships that have resulted in millions of lost African lives decade after decade, local and global society will be best prepared to prevent similar catastrophes in the future.

**Science of Selection: Developing Social Technology in Educational and Vocational Field 1920–1940, Norway**

This paper explores how creating the applied science psychotechnics redefined societies’ views on abilities and disabilities during the early twentieth century. The main empirical sources are textbooks, articles and political documents. It studies the making of applied psychology as two interrelated processes: first, the early experimental laboratory developments of scientific knowledge and the new understanding of the relationship between body and mind, and second, the introduction of new-qual workers in the French entertainment industry (intermittents) to a region that is undergoing profound transformations. This approximation lies on the border between scientific disciplines and concepts and its interdisciplinary approach. SAHWA explores norms, social values and the role of youth culture in the SEM countries. The data and insights produced by the research and the prospective foresight exercise will provide the basis for new policy approaches to a region that is undergoing profound transformations. This approximation lies on the border between scientific disciplines and concepts and its interdisciplinary approach. SAHWA explores norms, social values and the role of youth culture in the SEM in a comparative and critical perspective. Its intent is to build upon previous research, employing an innovative, pro-active approach that views youth’s political participation as a potential tool for the exercise of agency by different youth groups.

When Men Kill Women and When Women Kill Men: The Aspects of Gender and Social Class in Legal Discourse at Homicide Trials

This work investigates how aspects of gender relations permeate the system of justice, giving rise to practices that corroborate relations of dominance and reproduction of inequalities in the trial by Jury. It analyzed the discourses of the prosecutors and public defenders who acted in the trial by Jury in the city of Porto Alegre, in the State of Rio Grande do Sul, Brazil, from October 2008 until November 2010 only in cases involving men who killed women and women who

**When Men Kill Women and When Women Kill Men: The Aspects of Gender and Social Class in Legal Discourse at Homicide Trials**

This work investigates how aspects of gender relations permeate the system of justice, giving rise to practices that corroborate relations of dominance and reproduction of inequalities in the trial by Jury. It analyzed the discourses of the prosecutors and public defenders who acted in the trial by Jury in the city of Porto Alegre, in the State of Rio Grande do Sul, Brazil, from October 2008 until November 2010 only in cases involving men who killed women and women who
killed men. A total of 26 sessions where observed and systematically registered
in field diaries. The study identified aspects related to gender and social classes
being mobilized in the discourse of those agents in the legal field to consubstan-
tiate their thesis for both accusation and defense. It is possible to perceive that
these aspects are summoned in representations elaborated in the discourse as
an strategy undertaken by the agents for a differentiation of the cases submitted
to the trial as being either “crimes of passion” or “drug trafficking crimes”. Accord-
ing to the findings of this research, the resort to this strategy makes evident a
discursive violence in relation to aspects of gender and social class yielding the
idea of defendants (female or male), victims (female or male) or crime committed
being “more accepted” or “more tolerated” than others.

Globalization, Market Transition, and Variety of Developmental Models: The Case of the Chinese Car Industry

The Chinese automobile industry has been experiencing some profound changes
during the recent market transition and globalization of the Chinese economy.
Regarding to the ownership structure and technological upgrading strategies,
there have been emerging four major developmental models among the
domestic assemblers. Three major theoretical perspectives are then em-
ploved including the Schumpeter’s hypothesis, the approach of global value
chain, and the developmental state argument; however all have major limitations
to provide a good explanation.

This paper proposed to apply an institutionalist approach to understand such
a variety of developmental models in the Chinese automobile industry. Four rep-
resentative cases including FAW, SAIC Group, Chery and Geely were sampled for
a systematic comparison in the empirical analysis. The major argument is that the
divergent paths among these Chinese car makers were historically rooted in the
pre-reform era of the planned economy, from where the local political structure,
developmental ideas and related agencies took on different looks in the market
transition and together contributed to a local social construction over the local
automobile sector.

Image of Occupational Stratification in China

Based on the traditional social stratification theories, this research focused on
the image of occupational stratification in China. According to different principles,
such as income, prestige, power, the population can be divided into different oc-
cupational groups. From the perspective of academic study, this research firstly
set up a serious of occupation titles, then exam how and why the interviewers
divide the occupational titles into groups. As a consequence, the principles which
be used most frequently is the key factor to distinguish the occupational stratifi-
cation including some special influences such as household registration and the
property of the working units. Hence, an image of occupational stratification can
be constructed and be test by using survey data.

Bringing the State(s) Back in: From Lula’s Bolsa Familia to Dilma’s Sem Miséria

Since Brazil’s former President Lula Ignacio da Silva launched his successful na-
tional conditional cash transfer program (CCT) known as Bolsa Familia (BF) in 2003,
academics and development practitioners have been fixated on—who gets it,
how are the beneficiaries identified, where does the money come from and how
is it delivered, and what are the program’s impacts—usually, does it reduce po-
verty. Judged upon these variables, BF has been quite successful and has been wide-
ly diffusion throughout Latin America. It has however, been criticized for being a
rather narrow form of social protection. This paper argues that BF and like-CCTs
should not be considered as ends in themselves, but rather as a means towards
consolidating a broader poverty alleviation strategy that includes complementa-
ry social investment initiatives such as labour activation policies and vocational
training. Within Sem Miséria, new supply-side initiatives are being grafted onto
the otherwise stable framework of BF. By tracing the timing and sequencing of
Brazil’s poverty alleviation initiatives over three presidents, this paper will demon-
strate that Dilma’s Sem Miséria is an institutionally feasible next step in expanding
Brazil’s social investment strategy beyond CCTs, a strategy that is dependent both
here and elsewhere on cross-sectorial and intergovernmental collaboration.

Civilizational Basis of Russian Modernization

Every country participating in the global modern age contest, has its own
unique modernization profile, which is based on the country’s civilizational fea-
tures. Speed and specifics of every country’s traditional societies evolution into
the modern ones and further, are still subject to close analysis with a view to dis-
cover efficient methods, reasons, mechanisms, recipes and secrets of “progressive”
and “accelerated” modernization development.

Russian modernization determinants are of a special interest because they hold
back progressive, sustainable and effective growth. For over three centuries
they have been recurring repeatedly, with great persistency and literacy, and the
modernization processes have been of inorganic, catching-up, tardy, mobilization,
relapsing and recurrent nature. Their implementation procedure includes initia-
tion not by society but by government using force. These processes are deeply
rooted in Russian civilizational history and culture, as well as character and psy-
chyology; they are enormously powerful and no matter how much the government
or population want it, they cannot easily “adjust” them.

These features of Russian modernization obstruct the transfer from tradition
to modernity, and disable long-term and productive Russian modernization on
a Western model, which would result in actual democracy, corruption level de-
crease, rule of law, and thereupon, in economic, environmental, cultural and
technological achievements. Individual reforms and “modernization leaps” initi-
ated “from the top-down”, can only lead to temporary and relative results. Spe-
cific version of traditional society based on recurrent waves and de-moderniza-
tion elements of the largest modernization projects, keeps prevailing. There is
“balancing” between the imminence of “catching-up” copying of certain elements
from Western modernity, and “national peculiarity” as inability to implement this
assimilation, as well as floating influence by increase of one factor after another
without a resulting vector.

The Multi-Culinary City: Transforming Traditions

Multi-cultural/multi-ethnic/multi-culinary : these dimensions of gastronomic
spaces complement even as they counter each other. The proliferation of restaura-
ants of all sorts and the consequent profusion of culinary choices endow the
city with a cornucopia of gastronomic spaces. Yet, all gastronomic spaces are not
equal. Horizontal differentiation conflicts with vertical distinctions: The premium
placed on creativity relegates the reproduction of tradition lesser status than pro-
duction of the new, the untoward, the heretofore unknown. In the exceptionally
competitive dining world of New York City, culinary identity builds, not on prod-
utcs or people or places, but from the infusion and transformation of a broad
range of traditions.

Perception of Discriminatory Practices Among Brits’ Countries: Brazil and South Africa

This paper addresses the question of whether individual perception of discrimination is affected by occupational segregation by race and job status. We use data from Brazilian 2000 Census, Belo Horizonte Area Survey (2005) and Cape Area Survey (2005) conducted by the Federal University of Minas Gerais and Cape Town University. These surveys were designed to have comparable socioeconomic measures of many kinds of both cities. Processes of opening and closing of the labor market due to racial discriminatory practices are well-established topics among social stratification literature.

Perceptions of discrimination in South Africa and in Brazil are unique phenomena. In South Africa, up to 1994 discriminatory practices based on race were straightforward and safeguarded by national constitution. African, Coloured and Indian inhabitants were denied the right to vote and forced to reside in peripheral townships. Interracial sex or marriage was formally prohibited. In Brazil, in another hand, there is no clearly distinct cultural boundary that separates blacks from whites. Both groups have the same mother tongue and most identify themselves with the same icons of Brazilian nationality. The commonalities among Brazilian ethnic groups led to the establishment of a myth of racial democracy, that despite being contested with evidences, still seems to prevail in some sectors of society, whereas racial discriminatory practices linger as a tacit social agreement. We found evidences in both countries that point to a higher perception of social discriminatory practices when the socioeconomic and cultural status of the under-privileged group is higher. We can imply that more access to material and symbolic goods of the dominant group – as information, earnings and culture – could increase, instead of diminish, the perception of the minority groups of their conditions of prejudice and discrimination in the society.

Changes in the Health System of the B’laan Indigenous Community– Its Factors and Effects

The influences on the changes of the health system within a B’laan indigenous community in Southern Philippines deserve a deeper sociological analysis to create a community on the move and engage with other communities avoiding the different agendas. Of particular interest is their effort to avoid stereotypes, order to cope with they daily experiences while in Mexico when trying to conceal these activities, we go through the production and relations of power within the groups when compared to their referent majority population. Beneath the force of the dominant group – as information, earnings and culture – could increase, instead of diminish, the perception of the minority groups of their conditions of prejudice and discrimination in the society.

More than ever before student mobility is playing an important role to fulfill the idea behind “becoming a global citizen”. Whether private or public, universities all over the world are incuding in their mission statements the commitment of attaining global citizenship by their students. US universities have a long tradition of sending students abroad (Hoffa 2007), in Europe they have developed a similar structure as a result of the Bolongna Process. The vast majority of students involved in mobility are non-degree students who spend a year, semester or a few weeks abroad. Being abroad involves a complex process in which several agendas intersect, the university sending the student, the host university, the student’s family, the host communities with all their cohorts and the student. From each side, several discourses and concerns arise: global citizenship, campus internationalization, cultural awareness, safety and security and the student personal, and often times, not clearly formulated agenda. Having received US students regularly in Merida, Mexico for over a period of twenty years, in this session I explore the narratives of travel and experiences that they have created/constructed in order to cope with they daily experiences while in Mexico when trying to conceal the different agendas. Of particular interest is their effort to avoid stereotypes, create a community on the move and engage with other communities avoiding academic tourism and the tourist gaze.

A Comparison Between Time-Use Data Collected By Smartphones and a Paper Diary

Smartphones and “apps” allows time-use research to be set up in a completely different way, such as for example a time-use app. Smartphone users have (almost) permanently access to this device, so respondents can report (more easily) their activities at multiple times per day, instead of using a paper diary in traditional time-use research. Additionally, smartphones enable to collect complement data, such as exact location, such as GPS, how people feel at random moments during the day (i.e. experience sampling), what short-term activities they do throughout the day (by pop-up questions such as about social media use), etc.

The Netherlands Institute for Social Research | SCP and CentERdata jointly conducted experiments to collect time-use data by smartphones. An app was specifically designed for this purpose (following HETUS-guidelines) and tested (N= 150). The pilot study was evaluated positively regarding the technical software development and tests, as well as the willingness of respondents to participate, their response quality and the ease with which even inexperienced persons were able to use the smartphone app. Therefore the smartphone app is implemented in a larger survey. Data are collected from a random selection of the LISS-panel, which is representative for the Dutch public aged 16 years and older. People without a smartphone can borrow one, in this way everyone is able to participate. In order to be as similar as possible to the data collected by the traditional time use survey in the Netherlands (2011/12), data are collected for an entire year (2012/13).

This paper will compare the smartphone data collection with the traditional Dutch time use surveys using a paper diary, both based on the HETUS guidelines.
Economic and Labour Market Outsiderness Among Young People in the EU

This paper analyses economic and labour market outsiderness for young people across different European countries and welfare regime models. We define ‘outsiders’ as those people who are either unemployed, in temporary contracts or have an income below 60% of the median. By using cross-sectional data from the European Union Statistics on Income and Living Conditions (EU-SILC, 2006) we find: (1) a considerable variation in rates of youth outsiderness across EU member states; (2) the youth outsiderness – measured observing the duration of the spell of outsiderness – is higher in Mediterranean countries than in liberal, Continental and Scandinavian countries; (2) that the depth of youth outsiderness is influenced by different types of skills possessed by young people. However, the strength of the effect varies across different welfare regimes.

Global Environmental Change: Environmental Policies in China with Reference to Brazil

Abstract

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proved to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century. Both Brazil and China still have many challenges to be addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investig-ate the different European countries and welfare regime models by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two global spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research project is precisely the analysis of the environmental discourses established by the Brazilian and Chinese policies. In this sense, the results of this analysis of investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

Key words: global environmental change, climate change, environmental pol-icy, Brazil, China.

Climate and People in a Region of Tension Between High Urbanization and High Biodiversity: Social and Ecological Dimensions of Climate Change

Single policies adopted at a global scale are unlikely to cope with risks, impacts and uncertainties associated to climate change (Ostrom, 2009). Stakeholders of science, police and civil society recognize that dealing with environmental global change requires a multilevel and interdisciplinary approach to identify gaps and promote collective action. While climate change will expose regions to similar impacts, the extent of those impacts and effective response at the local level will be determined not only by the location’s sensitivity and vulnera-blety but also by local groups and individuals’ capacity, including their institutional links, social networks and motivation to actions. Considering this perspective, a research project is undertaken on São Paulo Coast, Brazil, a region of tension between high urbanization and high biodiversity. The São Paulo Coast exhibits the socio-ecological dilemmas of contemporary economic development. The combined pressures of tourism, industry, oil extraction transport, and sustain-able development are increasingly difficult to resolve. The prospect of climate change intensifies this problem. Drawing on an empirical research on this area, our study aimed to set groundwork research on the environmental consequences of climate change along the coast of São Paulo, including the investigation of how solutions may require better understanding of local and regional government stakeholders’ knowledge, concerns and actions related to climate change. Our results points out that are different arenas and conflicts around the local envi-ronmental issues. The identified arenas are characterized by different interests and aims, and asymmetric capacities to mobilize resources. The results highlight how local stakeholders and residents perceive climate change risks, indicating that the social and economic context and government support are determinants in the way people responded to risk threats. Our results also indicate how climate change issues are being framed by local governments in terms of policy strategies and instruments.

The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and con-structed as the greatest challenges to the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empiri-cally recent objects of the contemporary societies, in order to deal with the super complexification of social dynamics in a polycentric and polyphonic world. Con-sidering this perspective, recent studies on conflicts demands a robust intellectu-al substantum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different restrictions and arbitrages, such as: (i) le-gal issues, related to the use or appropriation of natural resources; (ii) scarcity re-lated to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to review and analyze the state of play on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.

Different Viewpoints of Contemporary African Intra-state Small Wars

ABSTRACT
Africa has always been affected by external influences such as Western colonial rule and processes of independence of most states since the 1960s. The changing nature of African post-colonial politics led to increasing conflicts in most states because of power devolution and violent regime changes by military coups. Historical causes of intra-state small wars are mostly due to belligerents and non-state actors having congruent and grievance issues, power struggles, resource wars, ethnic and religious differences, a lack of western norms and values which are not part of cultural ideas of development and also a lack of democratic principles, as these are not yet instituted in most countries. The default action is always to fall back on violence when belligerents are dissatisfied with current governments and breaking of peace accords by either of them. Changing sides in Africa is a normal occurrence, because alliances can change overnight. Enduring conflicts such as those in the Democratic Republic of Congo (DRC) and Sudan lead to economic hardships and social problems through the internal displacement of thousands of people in their home countries, as well as those of political refugees. Consequently, two-thirds of global conflict is currently in Africa and the majority of United Nations (UN) peace missions are hosted in these conflict-ridden African states. Reference to South African peacekeeping contributions in these states will be made briefly.

Family Money Management Arrangements: Using the 2010 Statistics on Income and Living Conditions Survey to Study the Portuguese Case

In the last three decades, economists and sociologists have been interested in understanding intra-household money management arrangements among couples, its determinants and its implications on marital power, on intra-household inequalities and on the individual well-being within the family. One important contribution to the field has been the work of Jan Pahl and Carolyn Vogler (1993), who defined an useful, yet not free of criticisms and limitations, typology of money management systems, which has been applied in different cultures and contexts, mainly in the Western countries.

This research field has received limited attention in the Portuguese context, specific for its socio-demographic, labor-market, cultural, religious, and familialistic particularities, in the context of Mediterranean organic communities emphasizing strong interpersonal interdependent relationships and close family ties within extended kinship relations. This research area may benefit from transcultural comparisons, as such international survey family micro-databases, as the 2002 International Social Survey Program, has been used in the recent years. Also the 2010 Statistics on Income and Living Conditions (EU-SILC) is an international survey whose data enables cross-national comparison. Nevertheless, it has never been used before with this purpose.

In this study, we apply Pahl’s typology to the Portuguese case drawing on Portuguese 2010 EU-SILC data, enlightening the Portuguese intra-household money management patterns and its determinants. Of the 5182 households which participated in the Portuguese EU-SILC survey, 3331 composed by at least one heterosexual couple completed the study criteria and were included in our sample. Consistencies and inconsistencies, comparing to previous research, were found. Limitations in the applicability of Pahl’s typology to the Portuguese case, and other difficulties in marrying up data collected at the individual and household level were also found, and its implications for the adaptation and refinement of this typology, as well as the particularities of the Portuguese case, are discussed.

Social Risks, the Nordic Welfare State and Institutional Trust – Do Migrants “Go Native”?

In modern Western societies, the welfare state became a source of security against social risks. In general, social risks are often characterized by high uncertainty and vulnerability, e.g. concerning old age or unemployment. By granting a certain insurance against social risks the welfare state, conversely, provides the individuals with a certain “basis” for coping with social risks. However, what are the mechanisms that “translate” this basis into the individuals’ perceptions and understandings? Concerning this aspect, the role of institutional trust has been emphasized and characterized as both important for the individuals to handle social risks (i.e. “translation”) and the welfare state to gain and reproduce support by the citizens. The Nordic welfare states, characterized in general by a high social protection, universal, predominantly tax-financed welfare state arrangements, and comprehensive work/family policies, seem to do pretty well when it comes to trust concerning generalized social trust and institutional trust.

In this context, migrants in the Nordic countries constitute an interesting case – as newcomers to a high-trust country and thus its welfare state, how do they “adapt” concerning questions of how to handle social risks, the welfare state and institutional trust? Our empirical material consists of qualitative interviews with migrants in Denmark that contain e.g. topics like the migrants’ experiences with the Danish welfare state, their perception of it, how and if their perceptions on certain issues related to social risks have changed since their arrival in Denmark and how institutional trust is playing a role here. This gives us the possibility to shed light on mechanisms of (potential) institutional trust-building in the context of the Nordic welfare state.

The rise of sociology during the Nineteenth century represented not only the strengthening of new ways of understanding the reality of social problems. In this historical process, it is also possible to see the rise of new ways of comprehending the scientific knowledge, specially the problem of objectivity in social science fields in connection with the objectivity foundations of natural sciences. The sociological "discourses" have been observed and understood throughout the classic period as a proto-reflexive critical concern about the logical development of the scientific reasoning, both in natural and human sciences (Geisteswissenschaften). As a result of the classical sociological analysis of the scientific method as a way of constructing the epistemic roots of social sciences reasoning, the sociology developed during the XIX century an important and unique capacity of comprehending "science through the scientific method". Thus, in this paper we aim to develop a historical analysis of the rise of the critic and "reflexive vocation" of classic sociology as an important epistemic condition to the strengthening of the modern sociological conception of science in different fields of sociology like sociology of knowledge, sociology of science and sociology of scientific knowledge. In a first moment, the classics of sociology pointed out the "problem of knowledge" as an internal challenge to the development of a sociology as a scientific way of thinking; in a second moment, the contemporary sociology pointed out the "problem of knowledge" as a general difficulty to the whole scientific conception of reality, promoting a crisis in the logical demarcation of science in face of a real "social demarcation of knowledge".

Russian In Israel: Group Competition and Language Status

A linguistic situation in Israel has been charged with conflicts since the formation of the state. The primacy of Hebrew was the ideological cornerstone of Zionism. Political and economic interests had been primarily used in religious practices had to compete with the flourishing languages of the Jewish Diaspora: Yiddish, Ladino, Judeo-Arabic and others, as well as with the European languages such as Polish, German, Rumanian and so on. Irrespective of the size of immigrant waves, all groups either voluntarily or by coercion rejected the language of their homeland in favor of Hebrew. The first immigrant group that showed determination to preserve its language and promote its status was Ex-Soviets immigrants of the 1990s. Today, Israel has two state languages, Hebrew and Arabic. Despite English functions as an official language, has high status and is essential for so

A New Tsunami: The South African Anti-Nuclear Movement in the Wake of Fukushima

South Africa's government has made clear its plans to order a fleet of six nuclear reactors, providing an additional output of 9 600 megawatts. It also aims to reactivable other elements of the nuclear fuel chain such as the construction of an enrichment plant, a fuel fabrication plant, a nuclear recharge slurmeret, President Zuma has taken over from his deputy the chairing of the National Nuclear Energy Executive Co-ordination Committee, the intra-governmental body that is charged with overseeing the project. The overnight costs of the reactors alone are likely to amount to between US$60 – 100 billion, by far the biggest infrastructural purchase made by democratic South Africa in its 20-year history.

Seemingly the impact of Fukushima has not had repercussions among the responsible decision makers. Instead they have swept and gained approval from the International Atomic Energy Agency for the expanded nuclear programme.

However, civil society continues to challenge the plans as a fait accompli. Whilst the nuclear threat in the and the country has been extensively discussed, its environmental NGO sector, new formations and new sectoral opposition is notable. Significant disquiet has been voiced by the trade union movement (in political alliance with government, but not on this issue), faith-based communities, academic energy researchers and civil society energy lobbyists, the consortium of large-scale electricity using companies, communities situated close to the construction of nuclear facilities, and even the government's National Planning Commission.

The paper seeks to understand the systems of government indifference to Fukushima, and the stress on Fukushima by opposing social movements, who have adopted TSUNAMI as the name of their coalition (The SouthAfrican United National AntiNuclear Mobilising Initiative).

Shale Gas in South Africa: Regulating a Resource Grab

A number of transnational oil companies have recently been given the go ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier moratorium in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism depend, and a substantial part of the Karoo’s heritage.

In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa’s land surface. 

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The country's mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry's activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned by civil society, pointing to shale gas as typifying the 'resource curse'.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the new South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

Inscribing Dance: From Embodiment to Digital Media

Inscribing dance: from embodiment to digital media

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It's matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanence.

Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, though video recording contributes to preserve intangible cultural heritage through the documentation of the interpretation of dance works, it cannot be taken for the work itself (as is the text of a 'body technique', 'Mauss', and 'body'). In addition, we found that there is an imbalance between the framework used; methodological approach; researcher's academic field; and the interpretative analysis, we selected 53 articles that referenced the term 'body technique'.

Of these, 45 related to body techniques, 46 to Mauss, and 1,700 to body. Of the 728 articles were found in sociology journals, of which two referred to body. The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It's matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanence.

Using specific examples of traditional and contemporary dance practices - the body as the first site of inscription of kinesthetic knowledge, text-based documents, audio and visual recording - this paper will attempt to shed light onto the different methods of inscribing and documenting dance, taking into account the sensory distribution of the different mediums. What is lost? What remains? And how does this sensorial translatability, from cells to pixels, generate alternative propositions to the documenting and/or re-encoding of dancing/choreographic works?

DE QUEIROZ E SILVA, THAIS* (University of Brasilia - Brazil, g.thais@gmail.com)

Is There a Sociology of the Body Itself in Brazil?

The sociology of the body can be understood as a fruitful research field, whose goal is to understand human embodiment (Csordas, 2008). By defining three research fields, Le Breton (1992) aimed to instigate reflections on how the phenomenon of embodiment is understood in the context of the social sciences and to build some sort of disciplinary matrix by mentioning many authors who are devoted to the study of the topic within the sociological field. Our work aims to answer whether there is a sociology of the body itself in Brazil by performing a bibliographical study of the period between 2000 and 2012. We used the journals A1, A2, and B1, classified by Qualis/Capes, from the fields of sociology and physical education. The keywords were: body technique; Mauss; and body. A total of 728 articles were found in sociology journals, of which two referred to body techniques, 36 to Mauss, and 690 to body. Of the total, 220 articles were selected (30%). With respect to physical education journals, a total of 1,791 articles were found. Of these, 456 referred to body techniques, 280 to Mauss, and 1,700 to body. Of the total, 199 were selected (11%). Considering the range of works for the interpretative analysis, we selected 53 articles that referenced the term 'body technique' coined by Marcel Mauss. We aimed to identify: object of study; theoretical framework used; methodological approach; researcher's academic field; and the field correspondence to the journals. We found that there are scientific publications in Brazil, mostly from the social sciences and physical education, using the terms 'body technique', 'Mauss', and 'body'. In addition, we found that there is an important theoretical-methodological effort for establishing a sociology of the body itself.

The Dances and Their Meanings in the Kalunga Quilombola Community in Goiás/Brasil

Paraphrasing Almeida and Saussuna (2010, p. 59), the stories and social relations that constitute the group are revived during the dances and, while dancing, people recreate their place in society, revealing the identities of the people and mechanisms of resistance or acceptance regarding new cultural patterns. Based on this understanding, this work intends to comprehend the meaning of dances for young people belonging to the Kalunga community of Teresina de Goiás (located in the State of Goiás, Brazil). We sought to analyze the transitional processes that have been taking place in the daily life of the Kalunga community in relation to the reception of the dances (values and practices) between the generations of older adults and young people. An ethnographic research using interviews and direct observation as techniques was carried out in the community. The interpretation of the information took place on the grounds of authors who discuss the topic in the field of social science in dialogue with physical education. As a conclusion, we can affirm that the bodies intertwine in the feasts and dances and promote dialogues established between generations. The ritual system, constituted by means of feasts and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults' dance - sussa) and modernity (youth's dance – forró), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

"Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective"

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivities of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the policy as well. An institutionalized labour movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration; even when they have adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course unions do not act to influence policy or organise migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organising efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

A State/Society Approach to Labor Standards Enforcement

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be passed and then push state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can become directly involved in the operational aspects of enforcement. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can become directly involved in the operational aspects of enforcement. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can become directly involved in the operational aspects of enforcement. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can become directly involved in the enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the notion that getting legislation passed and then pushing the state to enforce them using its own capacities is the best strategy. Instead, it suggests that unions and other labor organizations become involved in supporting voice, not only in the workplace but in the policy as well. An institutionalized labour movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration; even when they have adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. **Intergenerational Dependencies: Challenges for Theory, Research and Policy**

This paper examines recent developments in the theory of intergenerational solidarity and dependency, drawing on a review of key sociological studies and policy documents. Despite the rejection of the generational conflict hypothesis in the sociology of ageing, prominent public authors such as Fishman (2010) continue to give popular support to the perspective of demographic determinism and apocalyptic demography. As well as helping to refute such views, attention to the theory of intergenerational dependencies is argued, has the capacity to reinvigorate research on the sociology of ageing and to provide new research perspectives on policy in the epoch of longevity.

**Comparing Two “Banglatowns” – Reflections on the Use and Transformation of the Streets in Rome and London**

The paper aims at comparing how two different “Banglatowns” were built-up in London and Rome. In both cases the “street” played a core role in urban transformation.

In London, the Spitalfields’ case will be analysed. Here, a typical inner city has become in the last 40 years one of the biggest Bangladeshi enclaves in Europe. Since the end of the 1990s, its marketing as London’s Banglatown was a product of an alliance between Bangladeshi political and commercial elites that represent the majority in the local Council. A number of area-based initiatives played a core role in this process.

In Rome, the Torpignattara case will be considered. This is an Italian “periphery” that started to receive foreign immigrants, in particular from Bangladesh, since the 1990s. Here it was the absence of this place in the policy agenda, and some consequent intensive uses of the streets by the immigrants’ population that led to its labelling as a Banglatown.

Based on an idea of “diversity” that considers multiple axes of differentiation (e.g. national origin, class, gender), the paper will explore how these places’ transformation led to a reconfiguration of the streets’ uses that included new groups, excluding others.

The comparison between the two cases will focus on some core issues:

- With reference to the debate between formal vs. informal, policy vs. practice, citizenship right vs. urbanity right, was the presence/absence of a public policy where the immigrants played a core role a minus or a plus in these places?
- Is the street a privileged space for the cohabitation of differences?
- What kind of diversity is produced in the space of the street?
- With reference to the Bangla-towns image, what kind of “authenticity” was produced? Is authenticity a meaningful issue for the social construction of spaces?

**Distrust and Law-Evasion In Iran (Case study: Tehran city)**

Distrust and law-evasion in Iran. Case study: Tehran city.

Social capital is basis of development and stability in every society. Trust is one of the most important social capital indicators. Distrust is signe of erosion of social capital in every society. Erosion of social capital is named as Weak Intergroup objective and subjective relations in society, can issue disorder or law evasion in society. Therefore distrust to other (people and the authorities) about law-obligation can inhibit law-evasion in society. So this article explains distrust effect on law-evasion. In this research is used Putnam and fukuyama theory to analyzes social capital erosion. This method is survey research the study population of this study of women and men over 24 years in Tehran. And the data collected by questionnaire from a sample of size 384 people in Tehran. Method of sampling is Multi-stage sampling. After data collecting, research hypothesizes examined in two inferential and descriptive levels by Amos and Sppss package. Law evasion is divided in two dimensions: objective law-evasion (behavior) and subjective law-evasion (orientation). In contextual variables, it is seen meaningful relation among gender, marriage position, type of job, age, education, economic position with two dimensions of law-evasion. Basic variables in this research with their total effect on dependent variable consist of, civil distrust (0/44), generalized distrust (0/21), disobelieve to law (0/26). Generally, these independent variables with subjective law-evasion explain 43% of the dependent variable variance (objective law-evasion).Whereas these variables explain 14% of subjective law-evasion variance. So social capital erosion has more effect on subjective law-evasion (orientation) into objective law-evasion (behavior), hence to support inter group social capital in society can issue revial of law orientations and hence obey the law in society.

Keywords: Distrust, subjective law-evasion, objective law-evasion, disobelieve to law,

**Race and Class Differences In Urban Environmental Participation: Investigating How School Gardens Connect Students and Families To Communities**

How are race and class related to environmental forms of civic participation? This project disentangles the differences in participation in environmental activities by race and class in one urban setting by studying the ways that students, families, and communities are/are not getting involved in their local school gardens. Building on the fact that there are few studies that specifically focus on non-White civic engagement, and even fewer that hold constant social class, compare across race, and look at environmental activities, this project is designed to fill these gaps by studying race and class differences in environmental engagement. Moreover, this study examines how student participation through a state-supported school garden program is related to environmental engagement, science aptitude, and nutritional knowledge of the students and parents of the children who are enrolled in the program. The project integrates pre-existing data on academic achievement, with survey and interview data collected through the three components of the project to understand the impacts the school gardens are having on students, their families and their communities. We find that there are significant differences in environmental engagement by race and class and we discuss how to understand them in detail.

**Comparative Ethnic Exclusion Of Immigrants In The Western Hemisphere, 1790-2010**

This paper calls into question the widely held view that in the long run democracy and racism cannot coexist. It shows that democracies were the first countries in the Americas to admit immigrants according to racial criteria, and underdemocratic states the first to outlaw discrimination. Through analysis of legal records from twenty-two countries between 1790 and 2010, it explains a critical history of the rise and fall of racial selection in the Western Hemisphere.

The United States led the way in using legal means to exclude “inferior” ethnic groups. Starting in 1790, Congress began passing nationality and immigration laws that prevented Africans and Asians from becoming citizens, on the grounds that they were inherently incapable of self-government. Similar policies were soon adopted by the self-governing colonies and dominions of the British Empire, eventually spreading across Latin America as well.

Undemocratic regimes in Chile, Uruguay, Paraguay, and Cuba reversed their discriminatory laws in the 1930s and 40s, decades ahead of the United States and Canada. The conventional claim that racism and democracy are antithetical-because democracy depends on ideals of equality and fairness, which are incompatible with the notion of racial inferiority—cannot explain why liberal democracies were leaders in promoting racist policies and laggards in eliminating them. Ultimately, the changed racial geopolitics of World War II and the Cold War was necessary to convince North American countries to reform their immigration and citizenship laws.
The Blinders of the Movement for Justice, Truth and Reconciliation

Emotions and the Self's Past and Future

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one's identity and morality. Many of his examples make it difficult to distinguish them from particular reasons for this kind of feeling. A British sociologist, Margaret Archer, proposed that in our inner conversations about our future commitments, our memory of our past experiences and of the emotions that accompanied them contribute to the very process of decision-making about the future. Also in this case emotions seem to help process meaning and self-definition.

In the ongoing debate on changing family models as a result of the decline of the male breadwinner family model, the main focus has generally been placed on the repercussions caused by the disappearance of the breadwinner. In a recent process, fed by the housing bubble that exploded in the financial crises of 2007-08, this work discusses the similarities and differences of the impact of financial globalization in such different social structures, as are the Brazilian and the American systems.

This paper is based on research on the theme done during our masters and PhD in the fields of Urbanism, Sociology and Economics.

Emotions and the Self's Past and Future

In the present contribution, in the framework of a research project under way on father involvement in the care of children, we are trying to explore the characteristics and profiles of these families with a special emphasis on the changing role of fathers, in an institutional context where new social policies of fatherhood are being developed in the last decade. Using data from ECVHP 2011, a regional social survey whose basic structure has recently been harmonized with EU-SILC, the paper examines the extent to which soaring male unemployment rates, in connection with other social and economic factors, are shaping new patterns of allocation of time involving a more equitable sharing of childcare and of domestic tasks between partners. What can be the long term consequences of these new developments for gender balance and for the relationships between fathers and children? Are these new arrangements here to stay as emerging new opportunities for fathers or will they fade away as soon as there is an economic recovery?

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns. Some of these effects are divided into two perspectives: on the one hand, the effects of the analysis of the individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Pettit and Hook, 2005). However, very few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the family life course in different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Robinson, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FPI research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to move from a qualitative perspective to an objective view of how women's education partly explains differential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and the role of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

Indicators for the Institutionalization of the Social Sciences and humanities

We will present an interim report of work done in the EU funded INTERCO-SSH project, which deals with the institutionalisation and development of the social sciences and the humanities (SSH) in Europe. We will suggest a concise set of indicators which is being established for a comparative analysis of the development of the SSH in different national contexts. Preliminary data will focus on SSH disciplines in Germany, France and the UK from 1945 to the present. We will ask how these indicators can be used for the history of the SSH and what developments they are able to depict. The sources used are of qualitative and quantitative nature: interviews, statistical and bibliometric data, academic texts and archival records are gathered and combined for this purpose.

The objectives of this work is to identify national patterns of institutionalization which might explain the relative isolation of national traditions in the SSH and to assess the importance of the disciplinary division of labor within the SSH in order to reflect upon the historically changing power relations between branches of study, processes of professionalization of new disciplines, the reshaping of traditional forms of scholarship and the potentialities of new mechanisms of intellec-
International Mobility of German Diplomats and Their Families: Direct and Cross-over Effects on Quality of Life, Family and Partnership Outcomes

International work assignments are often found to be stressful and to affect employees' and their accompanying partners' well-being. However, whether this applies also to diplomatic personnel who are relocated regularly is unclear. The study surveyed the health-related quality of life, the reconciliation of work and family life, and the partnership satisfaction of German diplomats. Potential risk factors are the duration of international mobility (years spent in the diplomatic rotation scheme; number of postings abroad), perceived stress, and employee's attitudes towards working/in diplomatic rotation. Potential protective factors include cognitive coping, internal control beliefs, self-efficacy, preoccupation with the host country's culture, and social support. As a key aspect, crossover effects between employees and accompanying partners are analyzed. N=2,433 active diplomats in the German Foreign Service were assessed using self-rated online questionnaires. Corresponding assessments were obtained from N=321 accompanying partners. While perceived stress had negative effects on all three outcomes, the number of years passed in diplomatic service and the number of postings had no effect. Diplomats who saw more advantages over disadvantages of diplomatic rotation reported better health, easier reconciliation of work and family life, and better partnership satisfaction. Cognitive coping, self-efficacy and social support had several positive effects on the outcomes. Additionally, cognitive coping moderated the effects of stress on health. Crossover effects revealed that accompanying partners' stress levels and their attitudes towards living in diplomatic rotation are among the determinants of expatriates' quality of life, family, and partnership outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employer's prevention strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

‘cultures of Sick Leave’: Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden

In line with what has been described as a ‘cultural turn’ in the social sciences over the last decade, ‘cultures of sick leave’ has become an important concept in Swedish social insurance studies as well as in political debates. ‘Culture’ has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining how the concept of culture works to negotiate the institutional category ‘sick absentee’ in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a ‘culture’ anyway, and what can be done about it? As a methodological approach, the paper suggests ethnographologism, a rigorous methodological framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctor, and the state official administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the sick absentee are co-constructed and negotiated: how ‘cultures of sick leave’ are done in the fine details of interaction.

Building Back a Better Nation: Disaster Rehabilitation and Recovery in the Philippines

The paper explores the operationalization of Disaster Rehabilitation and Recovery in the Philippines context. It is divided into four sections. The first section discusses the origins and development of Disaster Rehabilitation and Recovery as a thematic area. It highlights the paradigm shift in the Philippine Disaster Risk Reduction and Management System which was brought about by the enactment...
Buddhism and Critical Social Science on the Causes of Suffering: Towards a Dialogue

In order to demonstrate the possibilities of building a philosophically and empirically informed framework for the study and alleviation of suffering, this paper compares the Buddhist tradition and critical social science from the perspective of their understanding of the nature and causes of suffering. Though both traditions are driven by the wish to combat suffering, their understanding of the causing of suffering differs. There may be, however, a productive complementarity in this difference; and yet frictions between the two traditions are real enough. Furthermore, neither tradition exists in a social or ideological vacuum. Thus, establishing a dialogue between these and other traditions calls also for reflexivity, critique and self-critique.

Frontier Societies: Culture and Social Institutions

The paper presents a cross-cultural study of contemporary frontier societies, based on analysis of World Values Survey data from the USA, the Russian Federation, Canada, Australia, Argentina, and Brazil. Consistent with Turner's "frontier thesis", we find that frontier societies carry a common syndrome of socio-cultural attributes, ranging from higher levels of membership in voluntary associations and civic activism, to greater libertarianism and skepticism of government. The "how rights actors view the long-term consequences of certain policies?". On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the European region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Re-Thinking Cautious Urban Renewal. the IBA (Berlin, 1984/87) As an Early Test for a Politicized Strategy for a Sustainable City

Apart from the fact that the sustainable city today form the basis of a neo-liberal urban, mainly environmental policy, the main question remains whether the strategy and initial potential of some of the key concepts. The International Building Exhibition (IBA) in Berlin in 1984/87 with its two areas IBA Alt and IBA Neu, and the two strategies of a critical reconstruction and a cautious urban renewal, seen as a paradigmatic case study in light of the specific situation in Germany in the 1980s, especially the conditions in West Berlin, by linking urban rehabilitation with social and ecological objectives produced alternative, but ultimately normative models of urban regeneration, not only with regard to European urban planning, but of global interest. This paper analyzes, to what extent primarily the IBA Alt - as a paradigmatic concept of development in response to the policy of redevelopment by demolition and reconstruction of the 1960s and the common squatting practice, with its impact on procedures of advocacy, participation, and self-building for the socially engaged and responsible restoration and maintenance of old tenements, new forms of responsibility and ownership, the provision of green spaces and social infrastructure – at first promised a politicization and democratization of urban renewal and everyday life. Since the IBA, funded by federal and state agencies, is called back to mind for its projects and protagonists with various research, exhibition and publication projects to mark its 25th anniversary, I will discuss the function of cautious urban renewal, both its positive achievements and uttered criticisms. In revisiting the IBA, I intend to provide a historically argued contribution to the current debate on sustainability and the city, by not only by highlighting planning processes, but by challenging the dimensions of the ecological and the social.

The Cosmopolitan Future: A Feminist Approach

Our study questions the approach according to which world society is shaped by the clash of civilizations”. For that purpose, referring to Beck and Sznider (2010), we analyze what we call the cosmopolitanization of feminism, i.e. this pro-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Social Cohesion in Multi-Ethnic Community

Social cohesion in multi-ethnic communities is crucial for the well-being and stability of societies. This paper explores how social cohesion is maintained in multi-ethnic communities, focusing on the role of community ties. It argues that strong community ties provide social support, foster social relations, and facilitate social cohesion. The research methodology used in this study is described, along with the results obtained from the analysis of data collected from various communities.

When Symbolic Violence Changes: The Example of the Educational Reform of Vichy

This paper aims to show how intellectuals can contribute to the imposition and the justification of a particular social order through their participation in the construction of a public policy. From the example of the educational reform of Vichy, the paper shows how intellectuals influenced the school reform in the early 1940s, and how this reform was justified by the dominant representations of the society.

Social Innovation and Societal Change: Role and Impact of Clinical Sociology

For over twenty years, a wide range of research processes and activities have been developed in response to demands brought forth by representatives from local initiatives working toward social innovation specifically by means of social transformation. Among the main organizations that embarked on this undertaking are the Service aux collectivités (SAC) of the Université du Québec à Montréal (UQAM), the Alliance de recherche universités-communautés en économie sociale et participative (ARUCÉS), and the Centre de recherche sur les innovations sociales (CRESIS) and the Incubateur universitaire Parole d’excluEs (IUPE). In this context, collaborations were formed with labour representatives (to counteract plant closures and mass layoffs), with local development initiatives (similar to those involved in the revitalization of the Angus brownfield in Montreal), and with a research method based on national, regional or transnational NGOs’ data or on data provided by the Inter-parliamentary Union, UNFEM and U.N.-Women.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
al), with community organizations (working to provide social housing in the fight against poverty and social exclusion) as well as with the social economy and solidarity-based economy (through Quebec government support for the new social economy).

With this historical backdrop, we present a summary of our reflections on the capacity of such initiatives to impact social change. When evaluating initiatives, we proceed in three steps. To begin, we examine the extent to which an initiative is able to respond to social or socio-economic emergencies, thereby testing its reformist capacity. We then look at its institutional impact on the production of societal frameworks, namely through its ability to contribute to the determination of new path dependencies. In the third step, we identify the conditions that would allow it to increase its reformist or restorative capacity as well as its potential to act as an agent of change within the societal framework.

FONTAR, BARBARA* (Université Rennes 2, CREAD, Marsouin, barbara.fonter@uhr.fr)
LE MENTEC, MICKAEL* (Université Rennes 2, CREAD, ESO, mickael.lemetec@uhr.fr)

Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales

Si les inégalités numériques s’intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques off et on line (Granjon, 2009 ; Cassili, 2010 ; Fontar, 2010). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

Le Mentece (2010 et ANR INEDUC) interrogera l’articulation institutions/usages en montrant en quoi les institutions d’aide à l’insertion renforcent les phénomènes d’exclusion à travers la mise en place de dispositifs techniques présumant des savoir-faire chez les usagers. Plus largement, la relation d’aide proposée s’établit sur un rapport dominant-dominateur créant une forme d’inégalité qui touche les capacités d’actions des personnes.

Fontar (2010 et ANR INEDUC) questionnera le rapport représentations/usages en montrant que la tyrannie de la majorité (Pasquier, 2005) crée une norme sociale pouvant générer des difficultés d’appropriation chez les adolescents. La pression sociale à « devoir y être » ne sous-entend pas nécessairement des compétences développées ni des usages variés. Elle s’attaquera à déconstruire le mythe du « Digital Natives » (Prensky, 2001) qui présuppose implicitement une unité des pratiques et voile le rôle des apprentissages.

Ainsi, cette proposition de communication contribue à relativiser les visions enchântées du numérique (notamment ces bienfaits émanicipatoires) en en montrant son pouvoir de renforcement des inégalités sociales.

Consumption and the Social Organization of the Illusion

CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION

Isleide A. Fontenelle

Associate Professor - Fundação Getulio Vargas- Brazil
idefontenelle@uol.com.br

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. The analysis adopts the Marxist approach with regard to consumption’s place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a consumer as a new form of subjectivity within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a consumer as a new form of subjectivity.

In this paper, the analysis of the ‘Digital Natives’ generation is an attempt to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the “enclosure of the commons”.

SANTOS, ANA CRISTINA (Centre for Social Studies - University of Coimbra - Portugal)

Disabled Women and Sexual Violence in Portugal

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning disabilities, either living in institutions or with their families (OMP, 2002; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in Portugal.

As a result of the Social Model of Disability and drawing on the research project “Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal” (funded by the Portuguese Foundation for Science and Technology - reference PPhM/GC/0005/2008) and on my post-doctoral research on disability hate crimes in Portugal (funded by FCT – Reference SFHBP/B/8059/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage, and original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

What’s New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People’s Movement

Until the 1960s, social movements were comprised mainly of workers’ movements, focused on class and economic issues, highly organised in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social movements that arose in opposition to the welfare-state, particularly in Europe and in the United States, and the subsequent emergence of numerous social movements around new ‘post-material’ issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society’s key location, as its key territory, organised in non-hierarchical structures and networks and embracing direct action and protest.

As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled “for equality and participation on an equal footing with other citizens” (Driedger, 1989: 1). This action was made possible by the creation of the Disabled People’s Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People’s Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People’s Movement in Portugal (completed at the University of Leeds – UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People’s Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people’s movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

Violence Against Female International Students and the Need for ‘Gender Security’

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than one in three women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research and public discussion to present a case for female international students and the need for gender security. The study uses intersectional research strategies to examine the prevalence and nature of gender-based violence against female international students. Findings indicate that female international students are far more likely to be victims of violence than male international students. It is also suggested that low reporting of gender-based violence is exacerbated within the international student cohort. The findings of this paper will be of value to female international students and their families, wider communities including in particular women from diverse backgrounds, practitioners and scholars concerned with the issue of violence against women, the international education sector, and host education institutions and nations.

Personalized Engagement in the Current ‘New’ Wave of Anti-Mafia Grassroots Mobilization

This paper discusses the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully encourage a growing number of entrepreneurs and shopkeepers to refuse to pay racketeers to local mobs in the city of Palermo, Italy. By using communication technologies that enable personalized public engagement as part of a new interpretative framework that has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students and the staff of the University of Palermo – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by organizing itself locally as well as globally, and via Internet. Data for the analysis came from several sources of information, such as interviews with the activists themselves, participant observation, media analysis and a unique dataset reporting the answers given to a structured questionnaire with more than 70 closed questions, distributed in 2011 to 277 entrepreneurs who had joined the mobilization campaign entitled ‘Change your shopping habits to fight the pizzo’ at various points in time.

FORD, FRANCESCA* (University of Bergamo, francesca.forno@unibg.it)

United We Buy: Re-Embedding the Economy into Society for a Sustainable World

It is increasingly argued that the environmental and social problems that afflict industrialized societies cannot be resolved without a change in citizens’ lifestyles and consumption practices. In recent years, the inability (or unwillingness) of institutions in promoting solutions and implement policies to address these issues has stimulated the development of new social movements that, while increasing general awareness on the social effects of consumption practices, have favored the emergence and spread of forms of procurement based on the direct relational and solidarity between consumers and producers. The paper focuses on some new grassroots initiatives promoting alternative forms of consumption as a way to protect the environment and the right of workers, which have been very successful in Italy in the latest decade. Born in 1994 “Solidarity-based Purchase Groups” (or “Gruppi di Acquisto Solidale”) count today more than 900 groups. These grassroots initiatives and solidarity, both amongst group members and with the producers. Nevertheless, such criteria are interpreted and appropriated on a strictly local basis. From many points of view, GAS are an important case study for understanding the mechanisms and decisional processes through which citizens can enter into a cooperative relationship amongst themselves and with individual producers or networks of producers, aiming for reciprocal benefit on a concrete basis, namely modifying the production processes towards a higher sustainability. The paper presents the results of two online questionnaires, filled out by 204 members of GAS in Lombardy and by 1558 families belonging to the same groups and reflects on the mechanisms that have fostered the spread of these forms of collective action, exploring both the reasons that have encouraged individuals to take part in these experiences as well as the internal organization and strategies of GAS.

dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the 'global age', new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly been becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Contest in Western Europe

Activation policies became the means of choice to address typically post-industrial unemployment rates in a context of "permanent austerity" (Pierson 1996). However, comparatively little is known about how these "novel" policy instruments influence the political contest and the coalition formation mechanisms in this policy domain.

First, in line with the debate on multidimensional modernising reforms (Bonoli and Natali 2012; Häusermann 2010; Classen and Clegg 2011) this paper investigates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite’s preferences pertain to more than one dimension.

Second, the analyses address the political elite’s coalition patterns by focusing in particular on the political left testing the hypothesis whether social democratic parties address rather insider or outsiders’ interests (Rueda 2007, Schwaner 2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e. parties, state bodies, unions, employers’ and social movement organisations in three dualising (France, Germany, Italy) and in two flexicurity-oriented countries (Denmark, Switzerland). The analytical strategy relies on factor and cluster analyses of preference measures weighted by the respective issue salience (cf. Kriesi et al. 2000).

The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite’s preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a redistributive and on an activation dimension. Interestingly, the most salient and controversial issues related to policies which constitute the constitutional repertoire of the labour market regime at stake. Finally, the results support scholars arguing that mainstream left parties support the interests of both insiders and outsiders (Schwaner 2012), however, it results that the precise nature of coalitions is regime specific.

'Belonging' in the Land Down-Under: Insights from Three Methodologies

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodological among different populations. Results from face to face interviews plus a photovoice exercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and post-national identities. Membership Categorisation Analysis is used to interrogate the presumptions included in the prompts used to generate the data (interview questions, themes for photographs, and images for focus group discussion). The range of parameters of belonging from the political (civic and ethnic belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.
layers of understanding that question the very meaning of land rights. Land is not always congruent with the inherent meaning of ownership. In this paper, we call attention to the politics of suffering and scholars’ participation in the construction of what constitutes “legitimate” distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of “sufferers.” We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists’ adoption of psychological and psychiatric vocabulary of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.

Contested Landscapes: Film Narratives and the Meaning of Land Rights

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline of ownership. This trend has many causes, including intimidation, force, access to capital and information, and the legal nature of many African-American landholdings.

Alongside the legal battles and political movements that have come to define land ownership, however, are lived experiences and personal relationships that are inseparably tied to landscapes. Using ethnographic film to document and present images of land and stories from rural African-Americans who claim land rights, my research examines the complex and overlapping interactions between humans and land. Land is more than an economic and political asset; for many rural African-Americans land holds meaning and memories and creates a sense of place and identity. These stories reveal that the best legal option for retaining land is not always congruent with the inherent meaning of ownership. In this paper, I use interdisciplinary modes of inquiry to examine the structure of historic and contemporary African-American land ownership and land loss and to demonstrate how personal stories and oral histories often reveal symbolic and temporal layers of understanding that question the very meaning of land rights.

(Im)Mobile Youth?: Globalisation, Leisure and Social Change in Scotland and Hong Kong

In recent years, the ‘global’ question has become central to debate in the social sciences. For some, processes of globalisation have increased mobility of people, culture and technology; for others, access to ‘global’ culture remains sharply stratified by access to resources, with those at the margins rendered increasingly immobile, both spatially and socially. At the same time, however, the globalisation of ‘mobile’ technology has opened up corridors of dialogue and interaction between disparate cultures and communities in ways that are both emergent and inchoate. These new ‘geographies of mobility’ strike at the heart of debates surrounding the lived experiences of globalisation: the tension between ‘spaces of place’ and ‘spaces of flows’. These debates have a particular resonance for young people, whose lives are lived at the precarious frontier of the global economy, and the leading-edge of global consumer culture.

This paper will engage with these debates through reflection on emergent findings from an ongoing comparative study of youth leisure, funded by the ESRC, in two geographically and culturally diverse research sites: Scotland and Hong Kong. The study adopts a historical and cross-cultural comparative design, building on landmark research carried out in both study locations by the pioneering sociologist Pearl Jephcott; involving concurrent fieldwork and data-collection in communities in both locales - including ethnographic observations, stakeholder interviews, focus group discussions, oral history interviews, and on-line data-collection. While methodologically rooted in these ‘spaces of place’, the paper will engage with the new configurations of identity and identity thrown up by the emergent ‘spaces of flows’ that compose the lived experience of youthful global modernities.

A Tale of Two Sorrows: Hurricane Katrina, Parenting Trouble, and the Politics of Suffering

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars’ participation in the construction of what constitutes “legitimate” distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of “sufferers.” We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists’ adoption of psychological and psychiatric vocabulary of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.
Sustainable Credit Guarantee Associations

Purpose of the paper
This research analyses credit guarantee associations and their contribution to financial solutions for local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

Research method
Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (ÖNKGF), in Sweden.

Research Findings
Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that ÖNKGF creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. They get advantage to attract new members by emphasising democratic management and members’ sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members’ participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

Main Contribution
The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of ÖNKGF. We recommend managers to develop networks with members and other stakeholders to promote cooperative collateral financial activities in the local economy to legitimate and sustain their business in the local society.

Social Memories In South America: Generational Narratives In Times Of Political Youth Activism

Social memories in South America: generational narratives in times of political youth activism
Raimundo Frei (PhD Candidate)
Humboldt Universität zu Berlin

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries of those born after the dictatorships in the Southern Cone. Against this background, the main research questions are whether and how generational narratives have emerged in the context of political democratization.

Generational narratives link life course sequences with experiences of collective events. This connection must not be regarded in terms of Mannheim’s idea of ‘participation in the same destiny’. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives are attempts to bestow coherence and connect biography and history.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilization in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country’s undemocratic past.

Consumidores Críticos, Pacientes Informados y Pacientes Tradicionales: Visiones y Prácticas De Cuidado De La Salud Entre Usuarios y No Usuarios De Medicinas Alternativas En Buenos Aires

Unos de los rasgos de las sociedades occidentales es el énfasis en la responsabilidad individual en el cuidado integral de la salud. Conservar y mejorar la salud se ha convertido en una medida del logro personal en un contexto epide- miológico en el que se han incrementado la mortalidad y morbilidad debido a la transmisión tanto de enfermedades crónicas como del consumo de medicamentos se contraponen, o acomodan de manera complementaria, los de las medicinas alternativas que destacan su capacidad curativa, el bienestar psicofísico y espiritual, y el rol activo del individuo en la salud holística. Basándonos en el análisis cualitativo de 8 grupos focalizados con varones y mujeres de clase media de entre 20 y 50 años de edad realizados en el Área Metropolitana de Buenos Aires en el 2013, analizamos sus concepciones de salud y riesgo, la credibilidad otorgada a los distintos sistemas expertos y saberes populares, y las autoimágenes emergentes en torno a las prácticas de cuidado. Entre estas imágenes identificamos, la del consumidor crítico frente a la “moda de la vida saludable” y la creciente comercialización de productos y servicios bajo esta rúbrica, así como respecto del uso de fármacos; la del paciente informado que a partir de la experiencia personal y de terceros, la información disponible en Internet, los medios masivos de comunicación, y la literatura de divulgación, opta por distintas alternativas de cuidado —y confunde la complementariedad terapéutica— o bien descarta la opción de recurrir a medicinas alternativas; y la del paciente tradicional que se siente bien cuidado por los especialistas de la biomedicina y que participa de redes familiares y sociales en las que no se cuestiona el paradigma biomédico.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory institutions appear as one of the greatest innovations occurred in Brazilian democracy since the 1980’s, and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to examine how the participatory process was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting’s minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide equalitarian conditions for the representation of participants in the Watershed Committee of the Upper Tietê in drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

Transparent Patients: Addressing Risk in Health Information Exchanges

In the United States (US), Health Information Exchanges (HIEs) are emergent initiatives designed to pool the personal health information of individual patients in order to facilitate care. Proponents also hope that HIEs will support diverse secondary uses of health information (e.g. biomedical research, public health...
surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIEs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content-and-discourse-analysis), this paper considers how HIEs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIEs in the US.

Solidarity (and alternative) Economy and Its Anarchist Grammar

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a ‘grammar’ to articulate the normative macro-elements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19th century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Proudhon in the 19th and movement protagonists in the 20th century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammatical lens, but also how the movement can lose its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-optation of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

Solidarity Regimes and Individualization: Institutional Change In Social Security Schemes

Since the 1990s so-called mature and upcoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic and cultural changes, and are at the same time highly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to liberal, post-evangelical to neo-charismatic. It is often described as a “convergence” in that its followers question and criticize existing religious traditions and orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere. This paper discusses the ECM as a manifestation of the rejection of neoliberalized religious organizations in the United States in the 21st century. It presents empirical examples of emerging church practices from the American Midwest and implement. It addresses the question of whether the ECM is able to leave neoliberalized religion behind at all on its search for ‘genuine’ ways of practicing their faith in authentic faith communities.

The Emerging Church Movement in the USA As a Critical Response to the Neoliberalization of Religious Organizations

The unprecedented decline in formal religious adherence and sharp increase of religiously unaffiliated Americans at the turn of the 21st century have led to critical assessments of the ways in which neoliberalized religious organizations respond to the spiritual needs of society in the 21st century, leading the question of whether the ECM is able to leave neoliberalized religion behind at all on its search for ‘genuine’ ways of practicing their faith in authentic faith communities.

Understanding Mobile Childhoods: Children of Migrations from the Philippines to Europe

Contemporary parental migrations have resulted in the rise of many transnational families characterized by solidarity despite family separation across geographical distance. Children of these families have attracted scientific attention for the last twenty-five years, which reflects the existing social concern about their well-being as they grow up separated from one or both of their parents. When family reunification takes place in the receiving country of the migrant parents, children themselves become migrants. Such mobile childhood is considered atypical in both the children’s society of origin and in their destination. How to capture the diversity of childhood experiences of these children migrants? In what way do their experiences present scientific challenges to the study of migrant children and their mobile childhoods? In this presentation, we explore these questions by focusing on the childhood experiences of Filipino migrants’ children who grew up partly in the Philippines and partly in Europe, the US, and in Italy. Here, we examine their experiences in terms of mobility to unlock their subjectivities and agency. The results of our ethnographic fieldwork among children of Filipino immigrants in France and in Italy demonstrate the different forms of mobility of young migrants throughout the migration process. Using mobility as an analytical lens, we attempt to move beyond nation-state borders by considering carefully the context and temporalities of mobile children’s childhoods.

The Emerging Church Movement: A New Form of Religious Organization?

The last 30 years have seen an unprecedented decline in formal religious adherence in the United States. A range of religious organizations that has affected the institutional base of religious organizations. As a result, institutionalized religion has undergone heavy scrutiny regarding its ability to respond to the spiritual needs of society in postmodernity. With the deterioration of grand narratives and absolute truths, institutionalized religion is rapidly losing its monopoly on interpreting the faith and prescribing the ways in which it is to be practiced. Instead, local religious communities that claim the right to redefine what it means to lead a faithfully Christian life in their individual contexts.

The widespread criticism of institutionalized religion has resulted in the surge of religious movements in the United States and elsewhere: the Emerging Church Movement (ECM). The ECM has no institutional structure or unified beliefs, instead spanning across a range of religious orientations from conservative to liberal, post-evangelical to neo-charismatic. It is often described as a “conversato” in that its followers question and criticize existing religious traditions and theologies and experiment with alternative ways of practicing their faith. They seek to overcome polarizing labels and preconceptions and the institutional and
At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

At the leading edge – Does gender still matter? A qualitative study on successful coping strategies and prevailing obstacles in academia. Analysing female careers in Austria

Although academic science in Austria is still male-dominated to a great extent, recent development evidences changes especially in higher positions. Statistics on the Austrian setting show that the share of female scientists at upper levels of the career ladder is shifting slightly but steadily. This article deals with explanations for this development and analyses crucial biographical phases of female academic careers in leading positions. For this reason, the paper focuses on three key research questions: Which obstacles hinder successful female careers? How do successful female scientists overcome these obstacles and which long-term strategies are used to acquire or hold leading positions? The findings are based on eleven qualitative interviews with the most successful female scholars in Austria (i.e. rectors and vice-rectors). The findings are arranged in three sections: (1) The results emphasise obstacles impeding female scientific careers. The analysis reveals that informal encounters, (male-dominated) social networks and the requirement both to be geographical mobile and to handle family issues at the same time are important obstacles. (2) The analysis concentrates on the underlying mechanisms in terms of how successfully female scientists manage to overcome these obstacles. With regard to informal encounters, it appears to be important to keep the distance from one's environment, while pursuit of change can be seen as a crucial mechanism in terms of coping with the negative effects of (male-dominated) networks. Planning and organisational skills are decisive in conciliating geographic mobility and family obligations. (3) Finally, this paper elaborates on different long-term strategies applied by women in order to achieve leading positions.

Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the gender rates of low-paid workers are quite similar (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrast, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation. Against this background we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

At the Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

Voluntary Work in Denmark 2004-2012 - in General and within the Field of Social Policy

In recent years political interest has bee intensive concerning the possibilities for civil society and voluntary work to relieve the strained governemnt services for primary health care providers in the community.

Against this background we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

Using Canonical Correlation for Index Construction with Aggregated Data

Indices constructed by aggregated data are frequently used for macro data or multilevel studies. There are several statistical approaches to construct such macro indices (as has been done by World Bank econometricians or psychometricians who deal with cross-country research questions).

For measuring multi-facet phenomena on the macro level (such as happiness, corruption or freedom), one would consider indices based on sub components which refer to the same phenomenon. Specifically, for convergent validity it seems important that the sub components measure different aspects of the same phenomenon but ideally nothing else (convergent validity). Statistical methods applied for index construction usually regard for convergent validity. This implies that most traditional indices are constructed with high reliability. For preserving validity completely, one should also consider differences in measurement to other constructs or phenomena (discriminant validity). This is typically not under consideration in econometricians’ way of procedures when indices are constructed. It is also often stated regarding by psychometric attempts of index construction.

As a method that allows for both reliability and validity, e.g. for warranting discriminant validity, we suggest canonical correlation as a procedure of macro index construction.

We show the advantages of canonical correlation for macro indices construction by referring to the seldom scrutinized social phenomenon of personal freedom. One of canonical correlation analysis mostly used application is the reduction of dimensionality (Anderson 1984) which is a crucial matter in index construction when sub components are also concerned.

The construction process is compared to factor analysis results (e.g. the role of eigenvalues in both procedures, Burt 1948). It is shown that both methods do not necessarily end up with the same results. In sum, canonical correlation is a more flexible tool that comes with stricter assumptions but with a clearer concept of what should be excluded from the index.

Housing Market and the Activities of Land Banks in Socioeconomically Distressed Neighborhoods in Cleveland, Ohio, the United States

Abandoned and vacant properties are a serious urban issue as blight induces further blight. Real estate prices are nominal in some parcels in blighted neighborhoods. Also, subprime lending hit low-income neighborhoods the hardest. Moreover, foreclosure sales sometimes malfunction due to speculators.

Cleveland, Ohio has lost more than 50% of its population from the peak. In case of Cleveland, distressed neighborhoods are found in the east of Cuyahoga River, especially areas bisected by Cleveland’s primary corridor that connects Downtown and University Circle. Draft Cleveland Sustainable Development Pattern guides development and housing to high-priority zones. The map shows development horizon of short term, medium term and long term. Ordinary as well as distressed neighborhoods tend to be left “blank” or at best categorized as long term.

Land bank is an effective tool to repurpose blighted properties to productive use. Cleveland has a unique two-strata land bank system. The City of Cleveland Land Bank, a city government program, has existed since 1976 and now owns over 11,000 lots on conditions that such lots have no structure. Cuyahoga County Land Reutilization Corporation, an innovative land bank established in 2009, acquires properties including with structures from various sources: tax foreclosure, national mortgagors, REOs and deed-in-lieu. The two land banks work in partnership.

This paper quantitatively clarifies the situations of Cleveland’s highly distressed neighborhoods and discusses how to tackle the issue of distress. Analyzed are private real estate transaction, foreclosure flings, Sheriff’s sales and acquisition/sales by land banks as well as socioeconomic indicators including income, poverty and vacancy. The historical perspective, year 2000, 2006 (pre-housing crisis) and 2012, is of an emphasis. Stabilization of neighborhood and (re)creation of property and vacancy. The historical perspective, year 2000, 2006 (pre-housing crisis) and 2012, is put an emphasis. Stabilization of neighborhood and (re)creation of

Environmental Destruction and the Social Impacts of the Fukushima Nuclear Disaster

The Fukushima nuclear disaster is sometimes called as the worst environmental pollution in Japan. However, the social impact of the Fukushima nuclear disaster has particular features different from other previous environmental pollution cases such as Minamata disease. In this paper I’d like to point out the problems of the refugees from the highly radiation-contaminated area in Fukushima from the perspective on the social structure of pollution victims based on the sociological study of the cases of the ‘kogai’ or the industrial pollution in Japan.

In most cases of kogai, although it took many years for a human damage to be identified as a pollution related disease, the seriousness of the human damage was perceived. Whereas in case of the low dose exposure in the Fukushima disaster, it’s impacts to human health have not been clarified yet and still controversial. At this point, in Fukushima prefecture, more than 150 thousand of people were forced to evacuate from their community soon after the accidents. Recently the national government is trying to shift a focusing point to return and rebuild the communities.

In comparison with the study of victims of the past ‘kogai’, I will discuss this connection and their anxiety of being neglected their damages.

FUJIKAWA, KEN* (Meiji Gakuin University, fujikawa@soc.meijigakuin.ac.jp)

Social Movements in Solution Process of Environmental Problems: From Case Studies of the Anti-Pollution Movements in Japan

In Japan, many environmental social movements arose against industrial pollution called ‘kogai’ in 1960s. However, most of them are dissolved in solution process of the current issues in 1970s. The decrease of social interests in pollution problems have been a cause of recurrences of similar problems. We can see same situations in Asian countries where the residents around the construction site for chemical factory do not know about the previous pollution problems such as Bhopal case.

In this paper I will start with two case studies of environmental movements which are related with ‘kogai’ and have continued.

Itai-itai disease (or ‘ouch-ouch’ disease, cadmium poisoning) is the first pollution related disease certified by national government in 1968. The grass-root movements Itai-itai disease have continued to work for more than forty years. They have also affected the cadmium regulation policy in Japan and have support the residential movements occurred in other cadmium contamination area. And they have enforced the environmental measures of the mining company which was a defendant of the trial filed by the victims of Itai-itai disease in 1968. Recently they have succeeded to reduce the cadmium emission to nearly zero level. The long-term corporate measures between the residents and the company have attracted considerable attention from some East Asian Countries.

There are some movements to inform Asian people of the experiences of pollution problems in Japan. Asia Arsenic Network (AAN) organized after the settlement of Toroku Arsenic Poisoning low suit in 1991 is one of the most important groups in this respect. AAN supports the people who are suffering from arsenic pollution caused by natural water flow, mainly in Bangladesh.

At the final section of this paper I’ll consider the meaning of these movements, referring to the grass-roots movements moving Love Canal case in the USA.

FUJIMOTO, AKIRA* (Nagoya University, afujimoto@usa.net)

Do Increasing Attorneys Mean Increasing Poor Attorneys?

In this paper, I will analyze the income distribution of active attorneys in Japan using the decennial income survey data from 1980 to 2010 collected by the Japan Federation of Bar Associations and the Civil Association of the 62nd Legal Apprenticeship Cohort (registered in 2009) conducted in 2010 and early 2014 by myself and other legal sociologists as well as the yearly tax statistics compiled by the National Tax Agency Japan. The number of Japanese attorneys is rapidly increasing, especially since Japanese style of law school was inaugurated in 2004. Not only this time, but also whenever an agenda to increase the number of attor-
neys was at stake, critics argued that the larger number of attorneys would have too much competition and yield many poor attorneys, and in turn debase the quality of legal services provided. Indeed media have repeatedly reported some new attorneys are so poor. I found that the income distribution of attorneys has not changed so much as critics argued even in the latest data available, controlling for the age and gender compositions of attorneys. However, the percentage of lower middle income attorneys are slightly larger in the 2010 survey compared to previous data. Based on these analyses, I will argue that current sentiment shared by many attorneys, like “the more lawyers are, the poorer they are,” is not strongly supported by the fact but it would be a necessary sentiment of the transitional period from the age of the litigation lawyer to that of socially permitted lawyer.

Work Motivation and Social Networking Development in Professional’s Job Change Behavior: A Comparison Between the U.S. and Japan

As professionals’ work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough.

In the U.S. on the other hand, professionals in Silicon Valley, California found ventures one another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new idea. They are also looking for colleagues with whom to collaborate to realize such idea.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed. These differences in the social environment surrounding profession- als have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition/alliance—namely “coalition work” (Staggenborg 1986), “mesomobilization” (Gerhards & Rucht 1992), and “resource dependence perspective” (from the sociology of the organization)—are comparatively examined and tested in a case study. This paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources, and benefit sharing, and biosafety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations worked together; (2) nongovernmental organizations’ (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/ COP 10) in Nagoya city during 2010, in which there was coalition building between environmental NGOs, grassroots groups, consumer organizations, and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.
Bangladesh is described as the “Next 11” or “Frontier 5” and it is expected that it will grow to be a key player in the world economy. Macro-economic dates, such as GDP growth rate which keeps as high as 6% since 2000’s, are indicators for the potential of Bangladesh’s economy. The Ready-Made Garment (RMG) sector is the country’s most dominant industry as well as its leading industry to earn foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4th place behind China, Hong Kong, and Korea in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account: when evaluating the real circumstance surrounding RMG sector; (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) RMG, which is divided into two categories, woven and knit, can only sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh’s competitive advantage is found largely in lower wages among than other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Sourcing countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

PR or Social Movement? : Against Climate Change Campaigns in Japan
This presentation examines the national campaign against climate change in Japan through the “frame alignment process” with from the state to the public based on the frame analysis in the social movement research.
State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it into matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted.
Thus, I investigated one of the national campaigns against climate change, Team Minus 6% (2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and values and strategies that had been adopted. The results showed an overall preference for “frame bridging” and “frame amplification” in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through “All Japan.”
In particular,
1. They focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.
2. They presented the value of “individual environmentalism” in which the efforts of every individual adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.
3. They adopted a “personal interest strategy,” whereas individual interests and climate change issues are connected.

The Changing Gender Relations in Marriage and Fertility in Japan
The trend toward later marriage and growth in the proportion of men and women who never marry is a major cause of the Japan’s low fertility rate. Similar to some countries in East Asia, Japan is a country where traditional gender role expectations, i.e. a husband works outside home and a wife stays at home for household tasks and childrearing, have been firmly rooted in the society, despite of the high level of women’s enrollment to tertiary education. Previous studies often pointed out that the gap between women’s increasing demand or potentials for market labor and the norms of the traditional gender role attitudes leads to women’s retreat from marriage, thus causing the expansion of the non-marriage population in Japan. However, more recent studies began to show a reversed relationship between women’s socio-economic standings and marriage and fertility behaviors. For example, studies using the latest and largest panel survey which covers the first decade of the 2000s show that women with more income or higher education are more likely to marry than their less or lower counterparts in the era of 2000s. Other study also shows that married women who have a full-time standard job or who are entitled to childcare leave are as likely as women without a job to have the first and second births. How can we interpret these changes? This study first introduces some of the old and new findings regarding to the relationship between women’s socio-economic characteristics and family and fertility transitions. Thereafter, the study seeks for the socio-demographic explanations behind the change and discusses the possible implications for the future trends of family and fertility in Japan.

Uses of the Future: The Problem of Theodicy in Nagasaki
How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focuses on the religious mode of theodicy which can be seen among the Catholic community on one hand, and “tragic mode of theodicy” (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Park on the other, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for Catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a “burnt offering” by providence. Although the Catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also creates semantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the Catholic community, narratives of suffering with collective suffering in contemporary public arena. The atomic bombing was not giving any meaning based on religious worldview. Rather, it makes a way to deal with contingency of the suffering potentially in the future by realization of the ideal of the “world peace” and “abolition of nuclear weapons.” 68 years after the attack, the latter mode of theodicy is predominant in the public commemorations of the Nagasaki atomic bomb attack. It is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

Social Inequality of Immigrants in Old Age: Exploring Multiple Dimensions of Social Network and Resource Flow during the Great Recession
This is a qualitative research project whose data comes from 10-month ethnographic field work at two senior centers in Phoenix, Arizona that respectively cater to non-poor, predominantly Asian senior and poor, predominantly African American senior. The focus of this study is to understand how the current sociopolitical context in Arizona affects their social networks which are shaped by their living arrangements, relationships with younger generations in family/household, participation in community activities and in the labor market, and access to social welfare and services. The project tries to capture various ways in which immigrants in old age navigate their everyday lives when faced with economic and physiological obstacles as well as opportunities, and by doing so, it seeks to understand how they not only access and utilize but also contribute to the pool of resources. The secondary goal is to understand the life course impacts of quality and quantity of social and economic resources that are available to immigrants—individually as well as collectively in their ethnic community. The project examines the factors that encourage the expansion of social networks and reciprocity throughout a life course as they impact well-being in old age. It also explores how individual experiences may cumulatively contribute to well-being of the members who share the social networks. With these goals in mind, the project seeks to identify probable factors that are associated with persistence of social inequality in old age at community level which may be further impacted by the sociopolitical context of Arizona.

On the Potential of the Classic Japanese Theories of Sociology of Law
After the end of the Cold War, since early 1990s, the structure of the world society has been greatly changing under the pressure of globalization. The world society is now politically multi-polarized, economically covered with the global market and the law becomes complex and hybrid on the global level. Every national society becomes multi-lingual and multi-cultural. Worldwide information

Emerging Child Care Services in France and Japan: Public, Private Discuss about the conditions for quality child care. At last we will of good practices in education and care system provided by the associative sector historical development of the ECEC system in both countries and compare the this change? How shall this change influence on the quality of ECEC system? tive sector are growing instead of the public sector. What are the factors of so on. Looking at the child care providers, the private sector and the associa- care center, on-site day care center, family day care, small day care, pa- residential areas, 3) “Empathy” between the two communities can be seen when (not covered up) in both communities, although some of them are usually seen in particular, I will look at the emplacement of murals in order to assess the positioning of each image in community. The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities. 2) Remembering the dark side of the history of their communities is considered to be expressed (not covered up) in both communities, although some of them are usually seen in residential areas, 3) “Empathy” between the two communities can be seen when they deal with the experience of sufferings under the authority. Emerging Child Care Services in France and Japan: Public, Private or Associative? Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many cases, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, pa- rental day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associ- ative sector are growing instead of the public sector. What are the factors of this change? How shall this change influence on the quality of ECEC system? I selected two countries for comparison: France and Japan. First I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second I will show some examples of good practices in education and care system provided by the associative sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.

From Field To Theory and Back – The Biographical (re-) Construction Of An Unconventional Family Through a Multi- Variant Range Of Data

By use of the case-related reconstructive method, I will show how various types of data can be integrated in the research process. The topic of interest is an unconventional family, whereby unconventional means the absence of the bi-ological parents. Instead of the conventional family structure, the parental role is fulfilled by a homosexual female couple, who realised their wish for children with the help of a sperm donation. The central method of data collection is the family-historical interview as a core component of the ethnographical access to the worlds from that, other methods of data collection need to ensure that every case is incorporated in the analysis from various angles. This approach is based on the following principle: case reconstructions are not fulfilled in their entirety if only the transcribed interviews of the family history are considered. The set of data also consists of observational data (e.g. the constitution of interactions concerning of welcoming gestures, the seating arrangements, door bell nameplates), but also family indicative documents such as family photographs. Furthermore, data is obtained concerning the family of origin and the life course. This data is collected in a genogram, which is sort of a genealogical tree displaying the network in a generational context. This approach to the investigation of the “biography as a life context of the milieu” (Richard Grathoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of the related case, I will also discuss in my lecture the interpretation of the results in the context of theory development.

Network Diversity and Educational Inequality: A Case Study Of China

Following the line of James Coleman, this paper focuses on how network diver- sity influences educational inequality. Social capital is positively related to one’s academic performance. One way to gain more social capital is having a diverse social network as we can access to various kinds of social capital from network within the community. However, different social backgrounds result in different networks tend to have a less diverse social network. However, if students from a disadvantaged group have a less diverse educational support network, then why would some of them still be able to achieve academic success, such as attending an elite university? This study examines the case of students from both disadvantaged and advantaged groups in China as an example to answer the above question. In the summer of 2008, we conducted in-depth interviews with 30 undergrad- uate students from two of the most prestigious universities in China – Peking University and Tsinghua University. Twenty were rural students, and the other 10 urban. By comparing the educational support networks of these two groups we discovered that the educational support network of rural students is gener- ally larger than that of urban students. This is because rural students face more barriers than urban students and their network members are less able to provide them with resources, so they need more supporters than urban students in their journey to elite college. This indicates that rural students do not get enough help from the state and therefore have to rely on their own resources to achieve aca- demic mobility.

Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many cases, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parental day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associative sector are growing instead of the public sector. What are the factors of this change? How shall this change influence on the quality of ECEC system? I selected two countries for comparison: France and Japan. First I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second I will show some examples of good practices in education and care system provided by the associative sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.
In this paper we use the concept of the nervous system to analyze the manner through which media conjoins people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing through how specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

FUNKE, PETER N.* (University of South Florida, pfunke@gmail.com)
Rhizomatic Resistance: Social Movement Politics from Porto Alegre to Tunis and Frankfurt

The last three decades have seen massive protests and mobilizations. From the Zapatista uprising in Chiapas in the 1990s to mass demonstrations against war and protests at virtually all gatherings of world leaders to struggles in North Africa and most recently Occupy Wall Street and anti-austerity type mobilizations, protests and social movements organizing have taken place across the globe against rising inequality, war, the dispossession of rights and entitlements, democratic deficits and austerity politics.

This paper examines this arch of movement-based politics. Situating it within former forms of social movement organizing and relating it to shifting dynamics of capitalism, I argue that contemporary movement-based politics is relying on and enacting a distinct and novel movement logic. Different from the so-called “Old Left” of mass unions and parties and the more identitarian politics of the “New Left”, contemporary movement formations are based on what I suggest to call a “Rhizomatic Logic,” forging linkages and synergies across the fractured landscape of “old” and “new” left. Thriving on multiplicity and thus lacking a dominant core or main axis, the rhizomatic logic emphasizes multi-connectivity and heterogeneity of political struggles, which has no central actor, issue, strategy, or ideology beyond opposition to neoliberalism and thus a subsequent need for thicker community-oriented processes. While this paper is written from the perspectives of the authors, others may try to follow experts’ bidding. Such bidding is condemned by authors, whereas leaders of the political parties may have significant influence in the markets. Their status is earned by their contribution to the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

Norms, Hierarchy, and Market Order: A Study of Closed Auction Markets for Antiques and Secondhand Goods

This study explores how market order emerges in Japanese closed auction markets for antiques and secondhand goods. Most auction markets for antiques and secondhand goods are exclusive to dealers in Japan. The Antique Business Act (Kobutsu Eigyo Ho) states that participants in auction markets must have a secondhand goods dealer license. Participants also need to obtain a reference from an existing member to enter the markets. Dealers belong to auction markets and associate with other members who also deal in antiques. The auctions are either in pure markets, although the members compete to acquire articles at the auctions. This paper presents the norms and hierarchical relationships in closed auctions that bring order to the markets.

In norms in markets are beliefs about the expected behavior of market participants. The norms alone are not sufficient to engender market order; enforcement mechanisms are necessary. A hierarchy is a typical enforcement mechanism. Authorities observe members and then sanction those who deviate from the norms. Although markets and hierarchies have been regarded as opposing governance mechanisms, hierarchical relations emerge in markets as well as in groups. Market participants in the same marketplace differ in terms of status and power.

The norms in Japanese auction markets require participants to bid based on their own evaluation of items. Buyers who do not have much expertise on auctioned articles may try to follow experts’ bidding. Such bidding is condemned by authors, whereas leaders of the political parties may have significant influence in the markets. Their status is earned by their contribution to the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

Youth Justice Programs in New York City

Youth justice programs have been part of the fabric of urban landscapes since Civil Rights. During the 1960s and 70s such programs were explicit in helping young people, particularly young people of color, fight oppression and participate in democratic processes. Today, some argue that the sociopolitical aims of such programs are falling by the wayside due to the focus on “youth development” which emphasizes the growth of individual young people, rather than the growth and health of urban communities (Ginwright & Cammarota, 2002). Not only can we not expect young people to lead healthy, productive lives when growing up under abhorrent conditions, we believe young people can be a part of the solution for transforming their environments. Youth justice programs engage young people as active agents of change in their own lives. While the outcomes of youth justice programs have been examined (e.g., Austria, 2006; Ginwright and Cammarota, 2002; Hill, 2004), there has been a lack of analyses of the processes critical to determining how they work, how they are implemented, or why such processes are effective. The purpose of this research was to examine such processes by examining how youth workers conceptualize the inequities facing urban youth today and how those conceptions translate into practice (e.g., into methods for engaging young people in social justice). We wanted to understand the key inequities staff identify as critical in the lives of urban youth and how young people are engaged in understanding and responding to such inequities (what processes are used). We interviewed key staff from youth justice programs in the Northeast of the United States in order to obtain rich qualitative data for addressing the research questions.

Probability and Timing of Having a Second Child in Japan: Does Gender and Characteristics of the First-Born Matter?

This study examines whether gender and characteristics of the first-born child predict the probability and timing of a second birth among Japanese parents. I examine two explanations. Daughter preference has become common among Japanese couples since the mid-1980s (National Institute of Population and Social Security Research, 2011). In 2011, 69% of couples had a daughter if they were to have only one child. Past research reveals that having a child of the preferred gender is associated with a higher probability of a subsequent birth and a shorter birth interval if they choose to have an additional child (e.g., Larsen et al., 1998). Therefore, given wide-
spread daughter preference, I investigate whether Japanese parents with a first-born son tend to not only have a second child but also have one sooner. Previous research shows that having a first child with socioemotional and behavioral traits that make parenting easier is associated with a second birth (e.g. Jokela, 2010). It is commonly known that young male children are more difficult to raise than females because they are more prone to illness and injury. Also, boys are considered more physically active and require parental attention. Then, parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21st Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explanations. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how gender of the first-born child and measures of parenting difficulty (i.e. occurrence of illness/injuries/accidents, perceived parenting burden/anxiety) as well as other characteristics affect parity progression. Interactions between gender and parenting difficulty on parity progression will also be considered.

Child Trafficking in the EU

The paper presents findings from an empirical study of the trafficking of Roma children into the UK, involving the establishment of the first EU wide police joint Investigative Team (JIT) to investigate the illegal movement of humans in Europe. The paper draws on 12 months of UK-based research and four research visits to Romania and Bulgaria yielding more that 100 hours of interview data collected from interviews with senior actors within policing and justice agencies, Roma advocacy NGOs, and child protection organisations in the UK, Romania and Bulgaria. This paper is an attempt to interrogate the problems of policing and protecting marginalised populations across different jurisdictions and how vulnerabilities are exacerbated by the diverse and often conflicting remits of the various agencies involved. The paper discusses how the impact of structural issues such as poverty and exclusion, and the resulting conflation of the criminalisation and victimisation of the Roma, has not only limited the effectiveness of available resources to child trafficking, but has also served to aggravate the increasingly adverse conditions faced by Europe’s favourite scapegoat. The paper additionally seeks to progress a theoretical space by linking such analysis to sociologies of mobility, marginalisation and the pluralised rendering of criminalised and victimised ‘others’. Key here are the myriad ways in which (national and organisational) borders are imagined, governed and responded to by diverse groups of criminals, victims, criminal justice and social services agencies.

FUSSEY, PETE* (University of Essex, p fussey@essex.ac.uk)
Security, Surveillance and Space: Contested Topologies of Anticipatory Urban Counter-Terrorist Surveillance

Drawing on data generated from ethnographic research and two years of interviews with counter-terrorism practitioners this paper analyses practices and arrangements of domestic security surveillance operations in two empirical case studies: the London Olympic security programme and, also, urban counter-terrorism surveillance measures in a British city. Particular emphasis is placed on the anticipatory turn in security practice and how collapsing distinctions between internal and external security draw multiple new actors and agencies into the dis-patch of counter-terrorism and attendant surveillance practices. With them come diverse practices, orthodoxies, values, techniques, weightings of risk and ambitions for security and surveillance. The paper argues that topological approaches informed by Foucauldian notions of ‘security’ (2007) and biopolitics (2008) provide particular utility for understanding of these heterogeneous configurations, techniques and practice of surveillance. Such approaches not only provide conceptual tools to articulate the diversity, plurality, conflict and cohesion within CT practice but, also, capture how power simultaneously operates at different scales and for varying (sometimes competing) purposes. Moreover, the paper argues that such conceptualisations of security represent a move beyond territorial control to the management of circulations, where subjects are left in situ, but their mobilities are monitored, delineated and assessed and, ultimately, claims elements of Foucauldian surveillance-focused debate from the shadow of panoptic analyses.

Parental Leave Policies in the French Work Family Regime: Innovative Formulation, Disappearing Implementation

Theoretically, this proposal hinges its analysis around the concept of Work Family Regime - which at the same time draws from the knowledge acquired from large European comparative studies and from those which come from the feminist critique of these works. It then makes a study of the French Work Family Regime through family policies and, in particular, the formulation and implementation of parental leave.

France has formulated parental leave that is neutral and very innovative in its formulation but which does not fundamentally question, in its implementation, the unequal position of men and women in employment and within the family. Consequently, despite the fact it is very innovative and well founded from the point of view of a better hinge point between Family and Work, the use of the device remains almost exclusively female, puts the employment of women at a disadvantage and reinforces gender inequalities. The world economic crisis, by making available employment and the means of the social investment more scarce, has only reinforced such a dynamic.

In fact, the real sociological question is less to understand how the crisis is putting the brakes on (or even destroying) acquired experience in terms of reconciling working life/family life than to measure the growing discrepancies between social practices and normative frameworks that cause dysfunction and inconsistency phenomena within most contemporary societies. The discrepancy between standards and practices are reinforced against three contradictory phenomena: one that refers to the process of homogenising employment ratios between men and women; a second that refers to the permanence of a sexual allocation of productive and reproductive activities (sexual division of social activities); and a third which expresses the desire of women and men to be able to be reconciled without wearing down their working life and their family life.

Further Development in Study of Dispute Patterns in Central Eastern Europe

As the research on dispute patterns in popular legal culture in Poland is developing the further research results are presented. The 2013 results of field interviews in bi-ethnic area will be presented checking the hypothesized similarity of disputing patterns amongst Polish and Ukrainian population in Poland as well as the initial 2014 data on large urban population in Eastern Ukraine as compared with Polish population in Poland. The reasoning behind is that though different in their identity the two societies had enough similar past that they should display the same basic features to the willingness to dispute, the use courts or to settle disputes informally. The methodology of further study concerning the use of courts within such comparison will be presented. Variety of types of disputes is under study ranging from traffic disputes through business disputes to family disputes.

FUWA, MAIKO* (Tokyo Metropolitan University, fuwa@tmu.ac.jp)
Gender Inequality: Work and Family Conflict in Contemporary Japan

The number of dual-earner households has increased during the last several decades in Japan. Nevertheless, women still perform most of the housework, despite being employed full time. The issue of work and family conflict—particularly for female workers—has drawn the attention of policy makers, because it has often been associated with the issues of low marriage and fertility rates. Thus, in order to create family-friendly work environment, many Japanese companies have recently begun implementing policies such as overtime work restriction for employees with young children, enhancement of employees’ discretion over the pace and schedule of work, and introduction of various work-life balance measures. On one hand, these policies are expected to facilitate the continuous employment of women. On the other hand, their effects on household management—how spouses divide housework and communication with each other—are uncertain, because these policies are often created taking into account women's responsibilities at home and aim to reduce women’s work and family conflict. Gender biases may affect the way spouses divide the housework and communicate with each other. This paper examines the impact of family-friendly work environment on (1) the division of housework between spouses and (2) the frequency of communication (conversation and having meals together) between spouses. The Japanese Life Course Panel Survey (LPS), a national longitudinal survey of the youth and middle-aged in Japan (i.e., individuals from 20 to 40 years old), was used in this research.
As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first, this seems to be a reversal of the secularization that has intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular manga and anime stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storytories. While some scholars view this as the further commercialization and secularization of “traditional” religio-cultural practices, these practices reveal how both “modern cultural forms” – i.e., religion and the popular culture forms of anime/manga – in fact share overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that “anime pilgrimage” reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical sociality and self-advancement. This further calls into question conventional views of distinctions between “traditional” and “popular” cultural forms by revealing how new technologies and pop culture media can be reshaped into augmenting and intensifying previous cultural practices of pilgrimage, self-advancement, and sociality.
her friends to join a tent protest in Tel-Aviv on “14thJuly,” an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protestors -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Schechter, 2012). Public support was 91% (July 2011 Peas in Israel). Israeli mainstream media - printed, online and electronic - supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activists, journalists, new and mainstream media audiences; through a combined methodology: offline and online ethnography and netnography; in-depth interviews with activists and journalists; and quantitative and qualitative text analyses.

The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa metropolitan area. Our research questions are: did areas’ organizational resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have considerably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establishments for social services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over others. The economic crisis not only undermined the capabilities of the household sector, it also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent variable is a composite measure of social disorganization: crime (homicides), poverty rates, school dropout rates, and overweight births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent variables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

The Politics of Research on ‘popular’ Culture in Japan

At the beginning of the new millennium, Japan, then still the second largest economy in the world, was suffering from a decade of recession and watching as geopolitical interests shifted to east Asian neighbors. At the same time, Japanese games, cartoons and comics were circulating around the world, and business and government leaders rushed to support the creative industries. The subsequent strategy to win the hearts and minds of the youth of the world through mega-popular franchises such as Pokemon was dubbed “Cool Japan.” While the success of this strategy has been widely debated, and drawn its share of criticism, in June 2013, Japan’s Upper House sent out a statement that they were redoubling their Cool Japan efforts, giving the go ahead to the Ministry of Economy, Trade and Industry to earmark ¥50 billion for promoting the cause over the next 20 years. With Tokyo gearing up to host the Olympics 2020, many expect the charm offensive to continue into the future. However, with increasing interest and investment in branded popular culture, local geek subculture has become an issue of national concern. What is “cool” about Japan, and who decides? How do gamers, comic-book nerds and animation aficionados fit into that image? Is it cool to include such people in projects focused on “Japan”? What sort of research is acceptable, popular and cool within this paradigm? What research is “uncool”? What is the role of the Japan researcher in negotiating all of this during a “crisis” in the field, which is to say declining opportunities for funding and employment? This paper seeks to unpack the politics of popular culture in Japan through the case study of Akihabara, an area in Tokyo that some think is geeky and gross, and others position at the center of Cool Japan.

Missing Bodies? the Visual Landscape of Home and Its Meanings to Solo-Living People

Not only presence of other bodies, but also the absence of bodies of others has a significant effect on the contemporary experience of domesticity and belonging. In her classical study on home as a tyranny, anthropologist Mary Douglas (1991) addresses solo-living only once, mentioning that conflict between persons is just transformed into conflict of wants within one person. In that sense, the normativity of home in terms of routines created via the relations of its various members is produced by the single member who has to discipline him- or herself. Goffman-esque “backstage” of home becomes a highly important “onstage” via internalized social norms or aesthetics. In our research we focused on home-centred and home-consumption practices performed by the occupants themselves, or between the occupants and the materiality of their dwellings and other non-human players (e.g., things, animals). In this paper, we will present the photo essay based both on 1) visual diaries, where photographs and texts were taken and written by participating dwellers focusing on mundane routines and everyday situations (of “doing nothing”) as well as on the moments of significant ruptures and changes, and 2) on visual material collected by participating researchers during the research events using go-along ethnography in the dwellings. Both are then interpreted in relation to other written or oral narratives produced within different phases of home-generated practices aimed at producing and maintaining meaningful and meaningful home environments.

The Spatial Capital of Urban and Suburban Families: The Effects of Place on Children’s Activities and Parental Satisfaction

Families’ life chances are affected by where they live as well as by their financial, social, and cultural capital. That’s because their residence affects the likelihood of accessing organizational resources (Wilson, 1987). The latter include employment, education, health care, and food as well as entertainment, religion, and culture. Logan (2012) characterized this “unequal access or exposure by different population groups” spatial inequality. The concept of spatial capital reconceptualizes spatial inequality in network terms and sheds light on how an area’s transportation network can reduce/extend residential inequality. This concept focuses attention on the different abilities of households to access diverse elements in the context of the urban design (Logan, 2010). Families’ access to organizational resources is measured using network analytic techniques, i.e., how many supermarkets, doctors’ offices, parks, schools, sports clubs, etc. can families reach through the transportation grid in a reasonable amount of time. This will depend on how transportation networks are designed, where establishments are located in the network, the family’s location, and the family’s transportation and communication technologies, e.g., cars, bikes, smart phones, GPS devices, etc.

We use data from surveys of families in 2003 and 2013 in the Phoenix-Mesa urbanized area and spatial data that we collected on a variety of establishments that provide services and activities for children for these same years. We hypothesize that availability of families using and evaluating establishments the more likely the children will be to function of how many establishments are accessible to them through the transportation network. The more choices a family has, the more likely they will take advantage of them and the happier they will be. We used an analytical framework that we define the set of establishments accessible to them.

The Perception of LeisurE By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?

Family, education and work in later life, care for grandchildren as well as the imperative of “active” and “healthy” ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e. “the stress generated within in a person to which the person cannot comply or has difficulty coping with the expectations of a role or a set of roles” (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project “Role overload: grandparents in the era of active ageing”, the perception of various and dynamic roles performed by the elderly will be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available resources and the interpretation of the grandparent’s role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

Knowing the Body and Embodying Knowledge - the Practice of Complementary and Alternative Medicine

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of ‘embodied knowledge’. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to theories of spatial/bodily boundaries and timescales in practice.

While health professionals of all types have been traditionally viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counterbalance to the focus on the knowledge of the bodies of ‘others’. The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be ‘energetic’, ‘emotional’, or ‘spiritual’ bodies. The ‘disease’ of biomedicine becomes instead framed as ‘dis-ease’, an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/bodily boundaries are not necessarily relevant. Touch can be ‘energetic’ rather than physical, and the focus of the subjective therapeutic illness, and the experience that can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of ‘embodied knowledge’ is vital to our understanding of the knowledge base of healing practices internationally.

Post-Nationalist or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India

This paper is a case study on the possibilities of personal transformation through transnational experiences based on the narratives of Australian students and volunteers working in India. It examines the possibilities of change through transnational experiences with a focus on Australia young people and their experiences of India and challenges to commonly held ideas and understandings of the Other. The research is based on a methodology of participants telling personal stories of experiences across national borders. The paper contrasts the many different narratives exploring what contributes to a transformative experience and the circumstances that contribute to what can be identified as post-nationalist, or an ethic of transnationalism. The paper is part of a project supported by the Australia India Council that focuses on the relationship between Australia and India through Australians involved in aid and development projects in India. The project particularly focuses non-Government aid organizations and Australian students and volunteers who have been visiting and working as volunteers in India over the past 25 years.

National Educational Systems and Academic Profession: Portuguese and Spanish Cases

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to positions themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale’s calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the educational agendas in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professional competences of professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the way a is a professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

The Invisible Spring*: Internet and Political Practices in Colombian and Brazilian Mobilization

When it comes to social movements like the ‘Arab Spring’, Occupy Wall Street and the Indignados in Spain, there is widespread uncertainty about the extent of their international dimensions. But we do know that these movements penetrated borders to gain support from other contexts, where the use of Internet and social networks (especially Facebook) involved the configuration of a particular mode of protest and mobilization. What is the relationship between these events and the mobilizations in other contexts?

Two cases concern us: the MANE (Mesa Amplia Nacional Estudiantil) in Colombia, which deployed an unprecedented student movement in the last 40 years of national history, whose founding charter explicitly refers to the events in Tunisia, Egypt, Spain and Brazil, and ACAMPA SAMPA SAMPA from the Occupy movement in Sao Paulo, born of the global call to install camps in different cities in October 2011.

This paper shows, in a transnational perspective, how the emergence of new forms of communication in the Latin American context involves a reconfiguration of political action and denotes a new politicity process. The « Invisible Spring » is the metaphor of the origin and deployment of the new movements, their actions against invisibility, and the new online collective actions and protest mobilizations.

This paper will expose the invisibility notion concerning three dimensions: the international mass media, the political character of these mobilizations, and the connections between these movements and the three international movements (Arab Spring, Indignados, and Occupy). The analysis concerning the Latin American cases presents two foci: the motivations and discourses and the actions and organisational forms.

Overall, the Framework is a PhD research project oriented to analyse the transformations of political practices of the young people in Latin America through the use of Internet (Colombia and Brazil cases).

This paper can be presented in spanish.

Publicar o Pecerar El Desafío Para Una Ética De La Investigación Científica

El mundo actual se ha caracterizado por grandes avances científicos y tecnológicos y, al mismo tiempo, por una creciente brecha de desigualdad y una crisis que amenaza la sobrevivencia del género humano en la Tierra. En este...
context, se hace imprescindible que los investigadores mantengan una postura ética manifiesta, entre otros valores, en la búsqueda incansable por el verdad y el trabajo en colaboración, que les permita generar nuevos conocimientos y aplicarlos a los problemas complejos del mundo actual. Contrariamente al espíritu ético que tendría que guiar este quehacer científico, en los últimos años se ha incrementado el plagio académico, como una práctica no ética de los investigadores. En tanto que esta práctica fraudulenta se ha evidenciado a partir de las publicaciones, el presente trabajo busca analizar este fenómeno en tres niveles. El primero versa sobre la normatividad y políticas institucionales para promover la producción y la evaluación cuantitativas en la promoción de carrera y la obtención de mayores niveles de remuneración. El segundo se centrará en la filosofía de publicar o percer (publish or perish philosophy) y los valores del sistema de producción académica. El tercero busca concretarlo en estudios de caso. Con estos tres niveles de análisis, se propone hacer un acercamiento a este problema de pérdida de valores en la producción académica, así como sus implicaciones en la formación de investigadores y en la generación del conocimiento necesario para la comprensión y la solución a los problemas de nuestro tiempo.

**The Rise of Privatization in Tertiary Education, and Its Implications for Teaching and Research in Universities**

Increasing privatization in tertiary education is a world-wide phenomenon. In many countries around the world, developed and developing, this takes the form of an expanding private university sector. In the U.S., expanded privatization occurs in the form of sub-baccalaureate for-profit institutions, on-line degree-granting institutions, and the privatization of many functions in public institutions. What do these changes mean for the future of teaching and research in universities? This paper identifies distinctive forms of privatization and discusses the implications of each. An expanded private sector is likely to increase inequality of access to prestigious universities but does not threaten their standing. Moreover, the net effect of privatization on access depends not only on whether families are able to meet tuition demands, but also on whether privatization leads to a general expansion of the tertiary sector, which could increase access overall. Privatization in the form of on-line institutions and for-profit sub-baccalaureate institutions may challenge the ability of universities to maintain their place, but quality distinctions are likely to override the challenges. Privatization within public institutions
constitutes a more insidious challenge and may shift the balance of resources within universities so as to threaten their ability to provide a well-rounded liberal education.

Elections and Territorial Inequalities in Post-Revolutionary Tunisia

Elections and territorial inequalities in post-revolutionary Tunisia. By giving a comfortable advance to the Islamist party of Ennahdha (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the social and socio-territorial bases of major Tunisian parties through combining quantitative analyses at different scales and field surveys in specific localities. Although most interpretations have focused on the cultural modernist vs. conservative vanguards, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

The Reputation Economy: Knowledge Workers and Freelance Networks

A decade after Richard Florida's 'creative class' manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determinant element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

Placemaking: Inequality By Accident or By Design

Placemaking: Inequality by Accident or by Design

This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the ‘neighborhood effect’ in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines all three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS technology beyond its traditional borders, in part through the popularization of tourism and professional relocation services that make use of maps, labels and index numbers to facilitate the evaluation of cities and neighborhoods in terms of characteristics commonly understood as amenities, opportunities and risks. The assessment of educational systems at the level of schools, walkability within user-determined boundaries, public safety or “dangerousness” on the basis of levels of exposure to crime, and motor vehicle accidents or pollution are just a few of the indicators to be described.

On the basis of this background review, this paper will shift its focus to the consequences for inequality that are inherent in the uses of spatial analysis as aids to public participation in the planning of neighborhood and community change, especially as they relate to an emphasis on public transportation as a feature of so-called “smart growth” initiatives.

(Mis)Recognition, Ressentiment, and Dualism: Challenges for a New Sittlichkeit

In this presentation I shall argue that the category of 'recognition' (Hegel, Honneth) and its approach to social justice can be enriched if we address two major issues: a) the first problem posed for any theory of recognition is to forge a theory of social institutions embedding social justice. Following Axel Honneth's recent shift towards the work of Durkheim and Parsons, I shall defend this pattern arguing that a new theory of Sittlichkeit is indeed pressing for an adequate approach to social justice through the lens of recognition. Yet, and this is issue (b), Honneth's theory leaves largely unaddressed the issue of ressentiment, a powerful index of misrecognition and disrespect. I shall thus attempt to fill this void in Honneth drawing on Max Scheler's configuration of ressentiment. It seems that ressentiment is pertinent to a theory of just social institutions in many ways. For instance, I shall address Parsons' inclusion of 'sour grapes' pathology in his theory of modern society.34 If this proposed reconstruction is plausible, then ressentiment is important because he locates, perhaps unwittingly, a space in society where ressentiment can be cultivated. This is no other that the inelastic binary code which sets a social system's self-definition in motion. Rigid, and systemically coded, dualisms give rise to feelings of ressentiment between categories ('left-right', 'progressives'-'conservatives', 'public-private', 'pro-globalization-anti-globalization' advocates) and shipwreck important reforms that would mitigate injustice and would improve patterns of intersubjective recognition. Augmenting the category of 'misrecognition' to include the ressentiment problematic can help social theorists to theorize better significant empirical findings (e.g. Wilkinson and Pickett, The Spirit Level) that bear on the issue of contemporary social institutions and their approach to social justice.

GANGAS, SPIROS* (Deree-the American College of Greece, sgangas@acg.edu)

Human Rights and Agency: Sociological Opportunities in the Capabilities Approach

In this article I shall argue that Amartya Sen's capability approach offers a promising renewal of sociological approaches to human rights. Sociology has only recently turned towards the capabilities approach. I shall suggest that, on the one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program's central categories have a precedent among many social theorists. Seeing this affinity as an opportunity for creative theory-building in sociology, and drawing on sociology's accomplishments, I argue that normative components of Sen's ideas have been prefigured primarily by Parsons and to a lesser extent by Giddens. The capability approach mediates, I shall suggest, the formal aspects of Parsons' idea of 'capacity' with Giddens' idea of 'capability' in the context of the latter's theory of structuration. On the other hand, many theories of agency in sociology are normatively wanting. If configured along the tracks of capabilities, sociological categories, like agency, can signal a progressive shift in sociology attentive to human rights, a core component of Sen's research program. Compounded with capabilities, a new notion of agency can offer the appropriate normative justification to the 'public sociology' paradigm which re-introduces normative considerations in sociological discourses. If this proposed reconstruction is plausible, then it can contribute to regenerating the capabilities approach sociologically, reconfiguring its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

The Study of Hindu Woman Problems in Morden Society

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes-form women in the village, middle class women in the cities, government women in New Del-hi women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India, a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relations and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for wid-owhood, they are related to changing times and the impact of the globalisation.

A new digital revolution is coming, this time not only in management of cultural practices but also in the administration systems of cultural organizations and institutions. Digitization of cultural management and administration will allow cultural managers and administrators to develop and manage real/physical cultural events on demand, wherever and whenever they need them in Info-Communica-tion globalization. This paper examines and analyses the cultural events and ac-tivities in recent cultural and economic crisis. It examines cultural management as a very important issue of organising cultural events and activities both locally and globally. It focuses on cloud computing, digitization of cultural activities, cultural strategies and crisis management. It explores digitalisation of cultural adminis-tration structures and proposes a new dynamic model, the “Dynamic Perception of Cultural Activities” (CDP).

Energy-Related Consumption in France: Policy Influence, Socio-Technical Structure and the Role of Practices

The issue of the public policies related to sustainable consumption changes has been recently raised in France, emphasized by the “Grenelle of the Environ-ment”. However, since the 70s, France has faced the matter of behavioural changes in energy consumption. That is why we propose to treat the ques-tion of the behavioural changes impelled by the energy policies in France. This analysis will be embedded in the history of the public policies (energy and other domains of consumption) and their effects on the behavioural changes. Nowadays, the energy issue returns in top of the agenda, after having known eclipses at the end of the 70s. It is built in a context of the Euro-pean energy market deregulation. The resulting policies highlight the impor-tance of the individual behavioural change through the “consumer” representation (energy savings, smart grids, market choice of appliances, supply choice according to the sources of energy production, etc.). The mar-ket tools are privileged, but the French State remains the dominating actor. Within this framework, isn’t the notion of the individual behaviour partly rhet-oric? Indeed, other upstream factors encourage in a decisive way the levels of households’ energy consumption (e.g. offer construction, infrastructure choices, thermal regulation, at the French and European level). Moreover, the succession in the heterogeneity of the policy devices that have partly opposite objectives may lead to conflicts in norms and contradictions in the energy practices. Our analysis will be developed through examples related to “sustainable lifestyles”, such as: energy label, low consumption bulbs, carbon tax, choice of the means of transport, waste sorting and water consumption.

Ongoing Disaster: Fukushima, Complex Technological Systems and Uncertainties

Catastrophes such as that which struck Japan early 2011, as a result of the accident in the Fukushima nuclear power plant, the most serious accident ever in the history of nuclear power plants after Chernobyl, demolish claims to extremely small risk probabilities for complex systems and upend the delicate balance between costs and benefits argued by safety experts. The Fukushima disaster demonstrated that in contemporary societies, vulnerabilities and threats are difficult to locate or predict, being both incalculable and impossible to offset. The natural tsunami that ravaged Japan was also a technological tsunami with ecological, social, economic, and political consequences. The Fukushima disaster may be thought of not just as a disaster for Japan, but for the technological order. Our analysis of the March 11th disaster begins with a simple narrative showing how a natural disaster in a country at the forefront of technological development precipitated an accident in a nuclear power plant that in turn led to a chain of calamities at multiple levels. How did we become constructors of a world with such catastrophic potential? Section two responds by considering how the nuclear threat is played down as a result of the euphoric notion that human vulnerability can gradually be overcome by the increasing ability of science, technology and probability analysis to control and predict events. The final section retrieves the idea of "forsightlessness" as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technological systems, in order to illuminate our choices and decisions. When faced with calamities and damages that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightlessness emerges as a response both rational and virtuous, however difficult.

Fighting Social Injustice in Spanish Cities: Social Innovation Practices Against Housing Evictions As a Response to the Current Housing Crisis

This paper analyses the aftermath of the bursting of the housing bubble in Spain, which has left thousands of families without homes and indebted for life. In the first of two parts we look at contextually specific interactions between state regulation and market-oriented projects in Spain. This country is a salient case in which increased economic recession and a debt crisis follow upon a long period of growth characterized by a housing bubble and a particular urban growth model. In this part we argue that central government has played a key role in framing fiscal incentives for housing ownership, and local and regional administrations have engaged in short-term forms of inter-spatial competition for public and private resources, place marketing and regulatory under-cutting in order to attract investment. In the second part, the paper examines the urban social movement "Platform in support of the evicted" (Plataforma Afectados por la Hipoteca – PAH) that, after starting in Barcelona, has spread to many other cities. The movement has created innovative strategies for housing accessibility and public and private governance in the housing market. These strategies include innovations at the local level and at national and European institutional levels. In this part we argue that social movements like the one we study are socially innovative when they aim at responding to social needs not met by the market and the state institutions. At the same time with their activism they transform the debate in the public sphere while prompting institutions to introduce new governance mechanisms and policy outcomes. The paper is the result of a research conducted under the umbrella of the COST Action IS 1102 (European Union RTD Framework Programme) during 2012 and 2013.

The Construction of "US": The Experience of Love in the Sensible Proximity

According to Norbert Elias, the loving relationship between two people is, at the same time, subjective and objective. It is so because the relationship is related to three different yet overlapped dimensions, namely: the experience of love from the ‘Y’ in relation to another person; the experience generated in the ‘US’ which implies observation and bonding of the loving relation; and the ‘THEM’ experience regarding the observation, experience and bonding of ‘others’ with those who are in the loving relationship.

In the first part of the paper, we will develop the "US" dimension of love relationships in heterosexual couples. The aforementioned dimension implies not only a discursive story, but also a story of experiences. Experience here relates to a mutually created process that involves the existence of two or more embodied psycic systems which “grow old together” (Schutz, 1932) and persistently irritate each other (Luhmann, 1984).

The observation of a particular ‘US’ story is thus made possible through the exploration of the three conditions that the ‘US’ is in a continuous present which includes social discourse (power, gender, class), relational moulding or what Goffman studied as ‘interaction’, and synchrony between what the mind/bodies create whilst together.

In the second part of the paper, we will observe the “US” dimension through the interaction process (Goffmann, 1983) using a finer level of analysis: sensible proximity (Simmel, 1908). Our starting point is that in interaction with others and specifically in the ‘sensible proximity’, bodies produce Sinn which is mutually interpreted (Sabido, 2012). We will develop this through the example of the loving interaction in a heterosexual couple. The presentation will finish with some examples that illustrate this sensible process.

GARCIA CASTRO, JORGE FRANCISCO* (University of Guadalajara, boll@garcia@hotmail.com)

A Different Path for Public Demands and Their Effects on the Processes of Democratization

En clave de la Teoría de Sistemas de Niklas Luhmann, ésta investigación planteará una explicación acerca del proceso mediante el cual la demanda histórica sobre la democratización de medios en México, retomada en mayo de 2012 por el movimiento #YoSoy132, logró instalarse en la agenda legislativa para su posterior aprobación como Reforma de ley en materia de telecomunicaciones en junio de 2013. Esto es: identificar la articulación y evolución de una demanda pública propagada principalmente por Twitter, su consolidación en el ámbito mediático y la evocación a nuevas actores, la formulación de múltiples variantes y su consecuente aprobación e implementación como política pública.

Así, la relación e irritación intersistémica que se pone en análisis permite explicar y asociar la operabilidad de diversos sistemas (político, jurídico, mediático, científico, y los movimientos de protesta), en su participación sobre dicha demanda y como fuentes de influencia y de tensión social a lo largo del proceso de decisión del Estado.

Para ello se realiza un estudio longitudinal de corte cualitativo que incorpora principalmente recursos audiovisuales de YouTube, documentos oficiales alojados en internet, y notas de periódicos digitales. De esta manera mediante un análisis documental fundamentado en la Teoría de Sistemas, el estudio permite la observación de la interacción sistémica y sus efectos en el aparato estatal al momento de tomar una decisión de vinculación colectiva.

En este sentido, la hipótesis que rige ésta investigación parte del supuesto de que gracias a la viralización y mediatación de las demandas a través de las redes sociales y de los medios masivos de comunicación, a la participación de actores especializados y a la respuesta de un grueso de la población, se aumentó la presión sobre el Estado lo cual dio paso a un acoplamiento estructural orientado por el cúmulo de irritaciones provenientes de su entorno.

Secularization in Mexico City. a Wrong Paradigm?

The political situation of the world and the complicated relation of the West with Islamic countries have provided evidence that the most significant mistake in the theories of secularization is the conviction that modernization inevitably leads to the loss of importance of religion. Thus the proposition of Berger (2001) replacing this paradigm with an analysis of the interaction between the forces of the secularization and a counter secularization is pertinent.

In a similar way, it can be said that globalization reminds us that the relationship between religion and politics as established in the Western world, that is to say the passage of the religious to the sphere of the private life, is rather an exception.

Religion in the history of Mexico is a key element in understanding the cultural reality of the country and there exist a collective memory linked to the Catholic experience regarding the observation, experience and bonding of ‘others’ with those who are in the loving relationship.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

Brazilian Long-Term Migrant Women in Japan. Work, Family and Subjectivities

This paper aims to present the first results of research initiated in January 2013 about Brazilian women migrant in Japan. Japan has accepted Brazilians of Japanese filiation and their spouses as labor force for over twenty years. The Brazilian community in Japan remains the third largest foreign community (population of just over 210,000 in 2012) in that country. If studies of the Brazilian community in Japan tend to focus on both causes and consequences of the phenomenon, alternative analysis of gender relations in migration context is still incipient. Women's role in the migration process is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women's stories, married or single, breaking with the classical view of the history of migrations that has been male centered (Rogerat, 1996; Morokvasic, 2005). Thus, we would like to show women's agency in migration process in Brazilian women's case. What is the objective and the subjective reasons to leave the country? Secondly, once in the country, what are the specific issues that those women face daily as immigrants, in the public and private spheres? How gender arrangements are done in terms of domestic work and child education? How they organize their everyday life as well as their emotional aspects as (foreign) workers, wives and mothers, specially when their residence in the foreign country became durable (contrary to their initial project)? Our analysis will be based mainly on qualitative research conducted with six Brazilian women, of Japanese origin or not, who live in Japan in a long-term period (about twenty years).

Academic Language Barriers: Professional Stigma or Recognition and Success?

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic problems that may place both academics and students at stakes with linguistic and extra-linguistic uses of codes unknown to them and their English teachers. This practice surpasses their real conditions of coping with those matters in a short term period, which triggers ill practices that place them in face threatening situations that later may become a barrier for achieving this institutional goal. Within this context, English holds the status of the language of academic and professional communication. In this sense, it has become a privileged language in the academic and professional realm, where academic production and activities in other languages are stigmatized. We analyze implicit and explicit language policies in macro and micro school practices where language status places individuals in asymmetric relationships, and see how these agents have become critical or not to their state of alienation, commodization and consecration. We also analyze their cultural trajectories, cultural fields and cultural capital in order to see how they resignify their habits.

This paper presents how the position of English as a professional language has brought “natural academic practices” that disfavor researchers, teachers and students in carrying out their daily academic activities and in attaining academic recognition and success and favor those who respect the doxa (Bourdieu, 2001).

Something is Changing: Italian Young People Between Religious Indifference and New Form of Believing

Several studies on youth and religion stress how only a very small proportion of the youth population has anything to do with organized religion. There has been, on the one hand, a growth of interest in alternative forms of spirituality and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario. Are we looking at an Italian version of religious modernity which, on one hand, the historical crisis of capitalism.

In the short term, I described how union workers and other groups resisted the massive layoffs of 30,000 workers, a policy implemented by the Government in 2009. Both governmental resistance and mass layoffs led to an unemployment rate of 16.9% in 2010. Employment rate decreased to 33% in 2011. In the medium term, the massive layoffs and resistance struggles held in 2009 were analyzed in the conjunctural context of the economic, political and social crisis from 1968/1972 to the present (Wallerstein, 2004). Considering the experience of the people and groups who participated in these resistance struggles, six challenges are discussed for unions and other groups. The potency of these and other groups to become anti-systemic movements is discussed. These movements can contribute to create new principles and politics for work and life. These principles and politics will be discussed supporting a new world-system beyond capitalism, the long term temporality presented across the research.

Resistance Struggles and Movements in Puerto Rico: Towards a New Politics for Life and Work

This paper is a product of research conducted between 2008 and 2012. The research centers on the analyses of the resistance struggles in Puerto Rico during 2009 to confront the layoff of 30,000 public employees. As a result of these layoffs, the union movement confronted six challenges. I discuss the potential insurgent role that unions and other social movements can perform.

The year 2009, and the first strike at the University of Puerto Rico in 2010, integrated the most active and prolonged struggles in our country for the last decade. In these struggles participated unions, economists, political and religious groups, feminists, students and professors. As in other important struggles, union were among the most important protagonists.

The objectives of this paper are: 1) Explain two significant events that took place in this period: the peoples’ assembly and the one day general work stoppage, 2) Discuss proposals of diverse groups to deal with the crisis, 3) To present a brief historical background of the fragmentation in regards to the local union movement, 4) To evaluate the main challenges and potential insurgency for union and other social movements. Among these challenges are: 1) The continuous dialogue on the meaning of work and the role of workers in this systemic crisis, 2) The importance of diversifying the activities of resistance, 3) Unions and other resistance groups should be aware and oppose the attempt of the state to criminalize their struggle. Finally, the integration of struggles and movements in South Korea, South Africa and Latin-America poses the need for new ways for international alliances between formal and informal workers. These alliances can confront the precarization of labor creating new principles and politics for life and work.

Double Estrangement, Embodiment and Reflexive Habitus: The Experience of Minority Group Boys in Three Inner City Primary Schools in Dublin, Ireland

This paper introduces the concept of 'double estrangement' which is based within a somatic Bourdieusian framework and draws from DuBois concept of 'double consciousness' and the work of Abdelmalek Sayad. Drawing on a large qualitative dataset I will argue that migrant group boys in Dublin's north inner city tend to experience their body image with unease, as somewhat problematic 'shameful bodies', through which they suffer from a break with their embodied selves and a disruption of their internal time as they are pushed between habitual and reflexive action. The dual elements of 'double estrangement' will be outlined, firstly, it will be contended that visible difference and dispositions of the body mark migrant boys out as not belonging and this provokes a tendency for them to feel constantly on display and judged through their bodies. Secondly, I will argue that this has the effect of heightening a boy's self-consciousness of their body as an object of value within peer interactions and this reflection estranges them from their habitual embodied being. This paper will conclude by illustrating how double estrangement acts as a form of symbolic violence within the 'child world' of the school, spaces in which the attention of children is on their peers instead of authority figures (Hill 1997). I will argue the development of a 'reflective habitus' or habitual disposition to reflect on one's body, estranges migrant origin boys from the embodied orthodoxy of the child world field and this is used to justify inequalities between boys and disguise racism within encounters.

Embodying The Least Adult Role: Reflections On Youth Research

The aim of this paper is to emphasize the embodied root of reflexivity, fieldwork and intellectual activity within the youth studies field. This paper will begin by arguing that academic research is not a separate form of action, placing the researcher in a position of epistemological privilege, but is an embodied capacity developed through practical activity. The particular importance of this for youth research will be explored through an exploration of qualitative ‘least-adult’ (Mandel 1988) research with children, which this author engaged in for a longitudinal ethnography, which explored the inter-ethnic relations between primary school children in the academic years of 2007/2008 and 2008/2009. Through a description of the research process and challenges, conventional notions of reflexivity within youth research will be highlighted and the desirability of reflection in its intellectualist definition will be questioned. Taking Allison James (2000) contention that any account of children or childhood must be rooted in an embodied perspective, as the process of growing up places the body at the heart of a child's identity, this paper will argue that ethical research with children must acknowledge the somatic process of research or fall into a Cartesian trap that reflective research exists as something other than an embodied manner of being. This paper will conclude by arguing that 'intellectual activity' is ultimately critical and engaged and that reflexivity within the youth studies field is better understood as a 'reflective habitus' developed through practical activity within the fields of research, academic literature and the embodied linguistic schema of the habitus.
What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Spanish region of Andalucia (Andalusians, Cebreros, Galicians), in the Ukrainian region of Kharkov (Russians and Ukrainians, Belorussians, Jews), and in the Siberian region of Khent (Russians, Ukrainians, Caucasians, Tartars). To each sample the attitudes towards Europe and its meanings were requested. The main meaning is the attitude towards Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a common family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of all these meanings between the macro-regions, between ethnic groups, and between minorities and majorities. The present the meanings among the different regions, and inside each region between minorities and majorities. Besides at the same level of macro-region also the structure of the meaning is very different. For example, the more important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in Vojvodina the first factor is more complex. In the Kharkov region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea); so as the most important factor (first) is simple for the groups of the Tjumen region, but the structure of the meanings of Europe is composed of West and vague idea.

**Comparing Latin American Migration in Different Urban Settings: Theoretical and Epistemological Issues**

This paper offers a epistemological reflection on comparing Latin American migration in different urban settings. We provide a framework of analysis that is at the same time theoretical and epistemological. Migrants are simultaneously emigrants (thus coming from a certain “society of origin”) and immigrants (that are bound to their initial resources in terms of material, cultural and symbolic legitimacy). The emphasis among partner-organizations within transnational advocacy networks can evolve from collaboration. What I define as “theory of engaged collaboration” emphasizes an alternative route to the campaign. I define these routes as follows: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (2) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (3) Route 3 wherein former partners remain in the spirit of the campaign: to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networks to overcome inequalities among partners.

**Abeyance Structures for an Environmental Social Movement: The Case of the US Bases Cleanup Campaign in the Philippines**

This paper aims to extend the concept of abeyance structures to the case of the US bases cleanup campaign in the Philippines and US. Abeyance structures refer to various organizational arrangements that absorb the spillover of activists after a social movement declines. In this paper, I outline four routes by which former partners took after the decline of the campaign. I use in-depth interviews (n=31), secondary data, and internet archives in drawing themes on the routes taken by core activists of the disbanded campaign. I define these routes as follows: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (2) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (3) Route 3 wherein former partners remain in the spirit of the campaign: to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networks to overcome inequalities among partners.

**Latin American Migrants in Bilingual Cities: A Comparison Between Barcelona and Brussels**

This paper analyzes comparatively the language use of Latin American migrants in two bilingual cities: Barcelona (Spain) and Brussels (Belgium). Both cities share some similarities but also have different dimensions. Bilingualism in Barcelona is based on two cooficial languages Spanish and Catalan. While Spanish is the official language for all Spain, Catalan is only the official language in Catalonia (the region). Latin American migrants from most countries (with the notable exception of Brazil) are already Spanish speakers and therefore have little incentives to learn Catalan. However, nationalistic policies in Catalonia and Barcelona encourage use of Catalan and give preference to those who can speak Catalan in the labour market. On the other hand, Brussels is the capital city of a country strongly divided amongst linguistic lines. In Belgium only Brussels is bilingual while the regions of Wallonia (French) and Flanders (Dutch) are monolingual. Migration policies depend on municipality, meaning that in Flemish speaking municipalities Dutch prevails while French is dominant in the French speaking. Latin American migrants in Brussels, native speakers of Spanish or Portuguese (brazilians) do not speak any of the two as mother tongue and have to learn. Choice of language learnt is related to the process of settlement and social networks. The paper concludes with a reflection on the features of Latin Americans and the likely outcome of the migrant integration in the two cities.

**GATA, MA. LARISSA LELU** (University of the Philippines, mllcp.gata@gmail.com)

**Theory of Engaged Collaboration Across Borders: Alternative Perspective on Transnational Advocacy Networks**

This paper proposes a theory of engaged collaboration across borders to explain the process by which local environmental campaign initiated in a Third World setting transforms into a transnational advocacy network. I use grounded theory as tool for analysis in examining archival documents and interviews (n=31) followed by content analysis of the transnational advocacy network for the environmental cleanup campaign on the toxic contamination in the former US military bases in the Philippines. To invoke international support, this campaign develops a tactical repertoire which includes networking, information-sharing, participatory and direct action, legal engagement, and engaged collaboration. I define as “theory of engaged collaboration” an alternative route to the campaign. I theorize that the nature of relationships among partner-organizations within transnational advocacy networks can evolve from formal information sharing into a more engaged collaboration and on various dimensions salient to the ongoing processes in the network. The emphasis lies on how domestic NGO organizes a TAN so that external advocates become in-
volved in the lives of the community being advocated on. In the case study, three prominent dimensions of engaged collaboration are present. The technical/legal dimension comprises the strategic decisions on information sharing, policy advocacy, research, and litigation aspects of activism. The ethical dimension covers the moral and affective aspects of the campaign using victimization frame. Finally, the ethnic dimension caters to the collective identity of the campaign anchored on Filipino nationalist identity and the underlying colonial past that created it. Thus, this theory on engaged collaboration enriches the literature because it takes into account how the external advocates deepen their involvement in domestic affairs not only with their partner-organizations and the targeted states, but more importantly with the community of victims.

Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well known fact that India is mostly an Agrarian country and even today 70% of its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevails only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes deferent layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnicity and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalist mode of production coupled with an unstable returns due to change in climatic conditions resuling the farmers entering into debt traps which leads to help less condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of globalisation. This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

Telangana Movement: A Study of Problems and Prospects

Telangana movement for separate statehood is historically well known all over the world. One of the reasons for its popularity is that its peasant revolt with arms during (1946-48) under the leadership of Communists against the Nizams autocratic rule. However the Telangana region of Hyderabad state was merged in Andhra Pradesh on 1st November 1956. But Telangana people wanted to have their own state in view distinct geographical, socio-economic, political and cultural identity. Telangana people were discriminated in every sphere by the See-manhood. This process has created lot of inequalities and uneven development among the three regions of the state. Telangana natural resources like land, water, forest, mines were extracted unabatedly since the formation of Andhra Pradesh. Against this discrimination and exploitation separate Telangana movement under the leadership of Dr.M.Chenna Reddy was organized in the year 1969. About 400 students and youths were killed during the movement. Due to political betrayal of the parties in the power the moment was subsided. However, in the year 2001 separate Telangana Movement again started under the leadership of K. Chandra Shaker Rao who is a shrewd politician. During the last 12 years of the Movement, about 10000 students and youth sacrificed their lives. In view of the above background this paper mainly aims at to understand the unethical political stands and manipulations of various political parties in the state and at the center in decision making process of the formation of Telangana state. The other objective of the study is to present how people’s cause and political aspirations of Telangana region manipulated and marginalized for the selfish ends of Seemandhra.

Political Parties and Community Organising in an Era of Membership Decline

At a time when formal party memberships are declining across advanced industrial democracies, political parties are experimenting with new ways to re-engage members and reach out to party supporters. Adapted from the experience of American party organisations and campaigns, political parties in the United Kingdom have adopted community organising techniques as a means to address the resource and linkage implications of declining party memberships and to engage supporters (and not just party members) in the community. This paper analyses the character of and motivation for these techniques, how they have been implemented by the Labour Party, the Liberal Democrats and the Conserva

The research of young intellectuals takes on special significance in the conditions of Russia's transition to the information-oriented society. Attention concentrates on the cultural characteristics of the observable social group because of the "cultural lag" which takes place in the most part of Russian province cities. The main role in cultural reproduction and translation plays the young university tutors as the most active and mobile group. They were considering as either main subjects of the cultural work in the social space of region. It is necessary to find out their cultural needs and general condition of incorporated cultural capital because of their influence on young people's values and aims.

The empirical base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project "Professional potential of young tutors in Russian province". The analysis contains information about basic components of young academics incorporated capital: leisure structure and the place of cultural practices within, the art forms and styles which prefers the researched group, the perception of province cities' cultural infrastructure, opinions about necessity of higher art education preservation.

The results of research let us tell about hypernationality in the behavior of young academics, which concentrates on their professional responsibilities and forget about cultural self-development. They constrict their functions to the information translation and don't feel themselves as the active subjects of social changes. The main respondents don't think of themselves as a "cultural class" and don't regard their lifestyle as different from life of the majority. Unstable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

The Idea of Age-Friendly Cities and Communities As the Answer for Global Trends of Aging Societies

The aging process is great and unheard of in the past, challenge for governments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life and mobility.

Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create new ethical understanding and practice of health care to modern public hospitals. It brought a new ethical understanding and practice of health care to modern public hospitals based on an idea of a global patient, multidisciplinary work combining social and medical work, networking, and recognition of the social and cultural determinants of health. However, it faces the dominant idea and practices of health care, which rely on evidence-based medicine, technical health care, and profitability.

This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by public hospitals in France through the analysis of the PASS.
classrooms. In this sense, becoming a member of hizmet also means acquiring specific cultural, social and symbolic capital, which is used in the students’ stories to explain their own place in hizmet and in society.

GELIS FILHO, ANTONIO* (FGV-EAESP, antonio.gelis@gmail.com)

Geopolitical Southwest? The Decoupling Between Latin America and East Asia In The World-System

For the last couple of decades, since the collapse of the Soviet Bloc, much of the debate about south-south relations was captured by the idea that there was a “Geopolitical South” which, if heterogeneous from many perspectives, could be envisioned as being composed by countries equally positioned inside the capitalist world-system, as semi-peripheral areas with shared interests in their relations with core countries. In this paper, I challenge such assumption by showing that Latin America and East Asia have drifted apart inside the architecture of the world-system. In order to do that, I present qualitative and quantitative data to sustain three main lines of reasoning:

First, I show that while Latin America has remained basically a provider of commodities and consumers to core areas, East Asia has become a main provider of manufactured products even to those areas situated in the core of the system.

Secondly, I demonstrate how Latin America and East Asia economic relation has changed from a relatively unimportant one to an intense but asymmetric relation with all characteristics of core-semiperiphery relations: while Latin America keeps being mainly a provider of commodities to East Asia, it has also become an importer of Asian manufactured products. Not only that: the amount of foreign direct investment from East Asia to Latin America has been intensely increasing, while investment in the opposite direction is tiny.

Finally, I analyze specific cases inside the geopolitical framework of the world-system that are good examples of how such transformation took place: China-Brazil economic relations, Chinese investment in South America’s natural resources and the evolution of the BRICS group.

I conclude by sustaining that the expression “Geopolitical South” must be redefined, if it is to keep being meaningful. What we have today is a ‘Geopolitical Southwest’ that is increasingly positioning itself as a ‘double semi-periphery’.

GERBAUDO, PAOLO* (King’s College London, paolo.gerbaudo@kcl.ac.uk)

Liquid Organising and Soft Leadership in the Popular Protest Wave

In activist and academic discourse it is often claimed that contemporary protest movements, including the Arab Spring, the indignados and Occupy Wall Street are ‘leaderless’ or ‘horizontal’ movements (see for example Castells, 2012). However, looking at their internal doings and at their communications it becomes soon evident that far from being leaderless, these movements are characterised by forms of both personal and collective leadership, in which activist clusters often numbering no more than a dozen people come to acquire much influence in the direction of social movements. What we are witnessing to is thus not the end of leadership, but the emergence of a new form of leadership which attempts to harness the communicative ecology of contemporary social movements.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book Tweets and the Streets (2012) I describe contemporary leadership as ‘soft leadership’. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006).

Leadership comes to revolve around community management and facilitation, rather than outright ‘direction’ of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and ‘liquid’ practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing social movements, it also means acquiring new social structures and in society.

The need for assessing women’s unpaid work and reproductive activity has long been discussed by economists within the context of estimation of a country’s economic growth rates, as well as by sociologists within the inequality studies. The world statistical practice has acknowledged that working time budget surveys remain to be the most relevant tool to obtain reliable information on unaccounted work because such surveys allow estimating the ratio of time spent by women and men on labour market employment and on unpaid work in households.

The proposed paper is devoted to presentation of the results of a special sociological survey on assessment of women’s unaccounted work realized in Ukraine. The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

In this paper, I present a discussion about gender issues in the context of inequality analysis and their relationship to the policies of redistribution.

Secondly, I demonstrate how Latin America and East Asia economic relation has changed from a relatively unimportant one to an intense but asymmetric relation with all characteristics of core-semiperiphery relations: while Latin America keeps being mainly a provider of commodities to East Asia, it has also become an importer of Asian manufactured products. Not only that: the amount of foreign direct investment from East Asia to Latin America has been intensely increasing, while investment in the opposite direction is tiny.

Women’s Unaccounted Work and Contribution: A Case of Ukraine

For the last couple of decades, since the collapse of the Soviet Bloc, much of the debate about south-south relations was captured by the idea that there was a “Geopolitical South” which, if heterogeneous from many perspectives, could be envisioned as being composed by countries equally positioned inside the capitalist world-system, as semi-peripheral areas with shared interests in their relations with core countries. In this paper, I challenge such assumption by showing that Latin America and East Asia have drifted apart inside the architecture of the world-system. In order to do that, I present qualitative and quantitative data to sustain three main lines of reasoning:

The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

In this paper, I present a discussion about gender issues in the context of inequality analysis and their relationship to the policies of redistribution.

Secondly, I demonstrate how Latin America and East Asia economic relation has changed from a relatively unimportant one to an intense but asymmetric relation with all characteristics of core-semiperiphery relations: while Latin America keeps being mainly a provider of commodities to East Asia, it has also become an importer of Asian manufactured products. Not only that: the amount of foreign direct investment from East Asia to Latin America has been intensely increasing, while investment in the opposite direction is tiny.

Women’s Unaccounted Work and Contribution: A Case of Ukraine

For the last couple of decades, since the collapse of the Soviet Bloc, much of the debate about south-south relations was captured by the idea that there was a “Geopolitical South” which, if heterogeneous from many perspectives, could be envisioned as being composed by countries equally positioned inside the capitalist world-system, as semi-peripheral areas with shared interests in their relations with core countries. In this paper, I challenge such assumption by showing that Latin America and East Asia have drifted apart inside the architecture of the world-system. In order to do that, I present qualitative and quantitative data to sustain three main lines of reasoning:

First, I show that while Latin America has remained basically a provider of commodities and consumers to core areas, East Asia has become a main provider of manufactured products even to those areas situated in the core of the system.

Secondly, I demonstrate how Latin America and East Asia economic relation has changed from a relatively unimportant one to an intense but asymmetric relation with all characteristics of core-semiperiphery relations: while Latin America keeps being mainly a provider of commodities to East Asia, it has also become an importer of Asian manufactured products. Not only that: the amount of foreign direct investment from East Asia to Latin America has been intensely increasing, while investment in the opposite direction is tiny.

Finally, I analyze specific cases inside the geopolitical framework of the world-system that are good examples of how such transformation took place: China-Brazil economic relations, Chinese investment in South America’s natural resources and the evolution of the BRICS group.

I conclude by sustaining that the expression “Geopolitical South” must be redefined, if it is to keep being meaningful. What we have today is a ‘Geopolitical Southwest’ that is increasingly positioning itself as a ‘double semi-periphery’.
Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs revenues’ from different sources have multiplied over the past decades. Today’s football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team’s success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club’s overall market value, the easier it is for them to improve their success. 2) The increasing multinationality of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multinationality can also have positive effects on their performance because players from different countries can bring new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team’s market value has a very strong positive influence on their success rate – indeed, ‘money scores goals’. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of some players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from many different nationalities – multinationality, then, influences a team’s chances of success negatively.

Transnational Linguistic Capital. Explaining Multilingualism and English Proficiency in 27 European Countries

Since the second half of the twentieth century, the extent, frequency, and speed of exchange and interconnectedness between different nation states and different world regions have increased enormously, a process described in the literature as globalisation. As the world system consists of multiple nation state containers and as most nation states have different official languages participation in globalisation is among other things dependent on people’s ability to speak the languages of others. Those who only speak their native language are, in contrast, tied to their home country and can only take slight advantage of the perks of a globalised world. Transnational linguistic capital therefore might become a new measure of social inequality in today’s increasingly globalised world.

The question central to our study is to what degree citizens in different countries possess transnational linguistic capital and how to explain the differences in multilingualism both between and within the countries. Using a survey conducted in the 27 member countries of the European Union we analyse the respondents’ proficiencies in foreign languages.

We present a general explanatory model for foreign language proficiency, create hypotheses from this model and test them empirically by using multilevel techniques. We find that the size of a country, the prevalence of a respondent’s native language, the linguistic difference between one’s mother tongue and the foreign language affect foreign language acquisition negatively, whereas a country’s level of education has a positive influence. Using Bourdieu’s theory of social class, we show that besides other factors a respondent’s social class position and the level of education are important micro-level factors that help to increase a person’s transnational linguistic capital.

After the Insurgency: Changing Strategies for Countering Political Inequalities in Bangladesh

To what extent so-called minority populations gain access to decision-making processes in national government structures is one of the crucial questions for understanding the causes and consequences of ethnic conflict. Especially when nation-building processes are determined by the nationalist projects of majority populations, the demand for autonomy has emerged as a form of “exit”, replacing “voice”. This paper argues that the strategies for tackling such political inequalities have changed recently, which goes also to the credit of more efficient transnational and global networks. Based on empirical findings from Bangladesh, it argues that “voice” has become a matter of strategic concession, which has not only caused by shifting power-relations and expressions of solidarity within the region and globally, but which is also related to social transformations within the conflict region itself: the rise of a new generation with quite diverse individual and

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities: migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

Towards a New Security Culture 2030

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges?

The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

Theoretical and conceptual framework

Theoretically we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Bechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren’t objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of “security culture” (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

Methodology

The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

Results

The results address the above stated questions and will be displayed as statistical numbers and figures.

Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the revalorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transiting towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.
The incorporation principle is the common belief that the food ingesting by humans, transforming the body and identity of the eater, and for this reason, the control of food is central in the control of the self (Fischler, 1996). Using this concept, this work show how people think the food like a way to shaping body and the role given to the individual and environmental factors in the control of this process. From 70 semi-structured interviews in Santiago and Mexico City, I identified two opinions on the individual's ability to control their body through food. On the one hand, who believe that the quality of ingested food depends mainly on the individual and their will because it is the individual who decides what to eat and therefore what kind of body have. On the other hand, are those who believe that individuals are limited in their decisions by factors outside the human being, as the available food supply, the resources and the food culture. The first position was more common among Mexican interviewees, while the second position was more usual among Chileans interviewees.

**Energy Cooperation and Security In The Eastern Mediterranean and Its Future Impact To Local Political Conflicts and To EU-Integration and Enlargement**

Due to recent important developments in the energy field in the Eastern Mediterranean over the last few years this region is becoming the focus of a growing geopolitical tectonic shift affecting all neighbouring countries, especially Turkey, Cyprus and Greece. Important developments are, however, expected not only in the energy field as such which will put the relationship of these countries to the EU on a new track, anyway. Leaving aside merely economic impacts of energy supplies from this region to the EU in the years to come one should state that energy is currently going on case that would set the background of local political and ethical conflicts which will greatly affect the EU-integration and enlargement processes as well as the EU Neighbourhood Policy ahead. Existing and future alliances as well as conflict potentials deriving from the energy strategies of all countries concerned in the Eastern Mediterranean region with the EU, only have an important impact on still unsolved political-conflicts in the wider region such as the political problem in the still divided island of Cyprus, on the dispute over the Aegean between Turkey and Greece as well as on the long-lasting conflict between Israelis and Palestinians. The proposed paper seeks to analyse what kind of energy strategies in this fragile world region could produce structural inequalities and thus additional conflict lines between states in the region and under which conditions multilateral cooperation could support regional solutions to political and ethical conflicts thus enhancing economic prosperity in the EU and beyond.

**Scientific Communities and Social Inequalities in Latin America: The Chilean Case**

The presentation summarizes an ongoing research regarding scientific communities in a peripheral emerging country, which includes more than 50 in-depth interviews conducted with leading Chilean scientists and one digital survey results, answered by nearly 350 academic and researchers from three disciplines. The presentation also describes several structures and mechanisms that are related to the market, the government and the university which, in principle, transform the scientific community in a way that seems to be different from the EU and US. The analysis of three communities (astronomers, molecular biologists, and sociologists), attempts to uncover the economic, social and cultural reasons for why these function as they do, especially in terms of their different intellectual and social competence. The findings indicate that these structures and mechanisms are very different than before, suggesting that there are new structures and emerging mechanisms - local and global - whose impact is still unknown. The framework of analysis and discussion centers around the idea that there is a utilitarian historical and current relationship between the University and companies, conditioned by the Neoliberal economics revolution, which prevents universities from creating a genuine scientific culture of their own. Finally, the principal sociological vari-
ables that come into play in the changes that are occurring in these communities’ current processes are described. These changes include gender, age range, income, values, workplace, and use of financial opportunities to develop scientific research.

Social Relationships in Later Life: The Role of Childhood Circumstances

There is an established body of research in social epidemiology which links both health and emotional well-being to social relationships across the life course and in later life. However, there is surprisingly little evidence on how differences in the nature and quality of these social relationships arise. It is not known, for example, whether existing social gradients in the prevalence of social engagement, social network size or quality mirror gradients in childhood socio-economic status (SES) and/or health.

This paper investigates the long-term impact of childhood conditions on social relationships. We use data from SHARE (the Survey of Health, Aging and Retirement in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining novel objective and subjective measures of current social networks with retrospective life history data on childhood health, cognition, SES and household environment we examine the long-term impact of childhood conditions on social network size, social network satisfaction and emotional closeness in older age.

Using regression techniques, we show that there is a strong but differential association between each aspect of childhood circumstance on social relationships in later life. Therefore we critique the index approach to measuring childhood conditions which gives equal weight to SES, health and social environment over time. We find that emotional closeness mediates the relationship between childhood circumstance and social network satisfaction.

Technique, Instrumental Formal Organization and the Hinge in Exercise Physiology Research

This presentation outlines results from a 12-month multi-method investigation of how exercise physiology research focused on physiological mechanisms and markers of sport performance is enhanced, curtailed, shaped and ultimately determined by socio-cultural and economic contexts. The leading scenario that we investigate is cross-national comparisons, which are characterized by small numbers of contexts, many observations per context and high complexity in terms of marked differences over the contexts. In doing so, this presentation follows the theoretical leads of Jacques Ellul, Erving Goffman, and Norbert Elias in briefly reviewing three discrete but connected issues. First, the social and political factors that affect the conduct of lab-based research and how they shape knowledge processes from discovery to development, delivery, and use in the sports world; second, the processes of identification, construction, and resolution of biophysical problems in sport and exercise physiology research; and, finally, the ways technologically mediated understandings of people developed in the lab and manifest in sporting endeavours facilitate the emergence and transmission of cultural logics and societal values. Throughout the presentation special attention is paid to the recursive relationship between biology and sociology in order to understand how people and their political, social, and moral potentialities are interwoven into historical trajectories of cultural production and societal organization of their bodies.

The Allies of the Front National: A Sociological Overview of the French Nationalist Groups and Parties

Since 2002, when the Front National (FN) suddenly entered the final stage of the French, presidential elections, the rise of nationalism, embodies the rise in the polls of this party, is a concern in France. However, there are many ideologies that are related to the FN and are, in a paradoxical way, not necessarily compatible altogether, and can even be totally opposed: radical Christians, « identitarians », anti-sionists, sovereignists, anti-muslims, conspirationists, a few neo-nazis ...people voting for the FN don’t necessarily abide by the same doctrine.

Who are the voters of the Front National and why do they unite, in spite of the large differences that exist between their beliefs and socio-professional categories, is the question to which this communication will try to answer. First, by describing the sociological history of the different groups or categories of voters, and how they came to ally themselves with the FN. Secondly, by analyzing in detail the communication strategy of the Front National and the external elements that supports it, especially the large internet nationalist network: websites supporting one ideology or the other, linked between them by affinity, some even violently criticizing each others (for example, identitarians and the anti-sionist groups), but every single of them pointing to the Front National website, creating a galaxy of beliefs where a great number of voters can recognize themselves.

This work will be based on interviews with members of the Front National, but also activists of different groups voting for the FN without subscribing to the current main political line of the party (conspirationists, anti-muslims, anti-sionists, neo-nazis), on periods of observations in events organized by these groups, and on the study of the nationalist internet network, as well as on a large bibliography on social movements, populism and nationalism.

Does Deregulation Help? the Impact of Employment Protection Reforms on Youths’ Non-Employment and Temporary Employment Risks in Europe

Previous comparative research argued that, across Europe, youths face increasing unemployment risks and insecure labour market positions in the course of globalization and related macro-structural changes. Besides macroeconomic conditions which have led to the deregulation of employment protection legislation (EPL) has been blamed as the root of youths’ employment problems in Europe. Against this background, many European labour markets have reacted with the deregulation of employment protection laws, often targeted at the group of youths. However, doubts on the effectiveness of the EPL reforms occurred. Against this background we investigated the impact of EPL reforms in integrating youths into labour markets or whether they were ineffective and just promoted temporary employment as a crucial new social inequality in Europe.

The empirical analyses are based on a pooled cross-sectional design by using yearly micro-data from the European Labour Force Survey for 14 Western and 8 Eastern European countries for the period from 1992 to 2011. This database provides unique large-scaled, standardised micro data. We apply multilevel models with three levels (individual-, country- and time-level) implemented in a two-step estimation procedure to investigate contextual influences on individual age-related temporary employment and non-employment risks. At the individual level we use cross-national and cross-temporal variation to quantify the impact of EPL reforms under control of other macro-institutional and macro-structural factors. Further, we control for country and time fixed-effects to account for unobserved heterogeneity.

Our analyses reveal heterogeneous inequality trends in youths’ temporary employment and non-employment risks in Europe. Moreover, our results cast doubt on the effectiveness of EPL reforms.

HEISIG, JAN* (WZB Berlin Social Science Center, jan.heisig@wzb.eu)
SCHAEFFER, MERLIN* (WZB Berlin Social Science Center, merlin.schaeffer@wzb.eu)

Social scientists generally rely on three broad modelling strategies to test hypotheses about contextual effects: random intercept and slope (often simply referred to as “multilevel”) models, pooled OLS with cluster-robust standard errors, and two-step approaches. Econometric textbooks tell us that while random intercept and slope models are the most efficient estimator, two-step approaches handle unspecified (random) slope models that ignore context specific heterogeneity. How well do the different approaches handle unspecified (random) slopes that vary over level two units? Third, we explore the consequences of Normal and Gamma distributed errors

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
at both levels one and two. Finally, we alter the number of level two units, as any simulation study on hierarchical data should.

We focus on linear models with continuous outcomes and on standard set ups as they are typically implemented in applied research papers. However, we also plan to investigate whether and when more refined versions of the three modelling approaches such as GLS with bootstrapping or multilevel SEM improve their performance.

Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change

As nation-states are further lowering their climate ambitions in response to the economic crises, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group individual cities combined have about 4700 actions directed at mitigation and adaptation.

However, the question remains whether these actions have resulted in different practices within the cities’ institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also analyse what dimensions are particularly relevant to these changing practices. The preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice.

Yet the changing practices are primarily associated with spatial departments such as transport and spatial development.

Connected Audiences of Politics: Analyzing Twitter Conversation on Beppe Grillo and Five Star Movement Generated during Political TV Talk-Shows

In the last two decades, characterized by an increasing crisis of traditional forms of politics, talk-shows have placed interesting challenges to the research on contemporary political communication and participation forms. Scholars of the “third age of political communication” have studied the cognitive, evaluative, affective effects of this mix of entertainment and information on the citizens/spectators. Recent analysis considered the increasing symbiotic relationship between political talk-shows and Twitter, by studying the “second-screen” practices in terms of audience dedication to the discussion of the public debate.

Referring to this approach, our study analyzed Twitter connected audiences of all the Italian political talk-shows (1,077 episodes) on air from September 2012 to April 2013. This period covers significant political events related to the 2013 Italian General Election (24th and 25th February), from the electoral campaign to the Five Star Movement’s electoral achievement, and its institutional consequences.

We aimed to understand: how much do “connected audience” of political talk-shows discuss on Twitter around MSS, in the different phases of the “permanent” electoral campaign (RQ1)? Is the presence of MSS, Grillo and other representatives as a topic of conversation on Twitter correlated with specific characteristics of the aired episodes (talk-show, audience, phases of the campaign, issues)? (RQ2)?

While significantly less frequent than conversations mentioning the right and left coalition, Tweets around MSS were present during the three phases of the campaign. Furthermore, the analysis identified significant amounts of Twitter discussions around MSS generated during the episodes dedicated to specific issues (political backstage, polemics, strategies of the MSS, scandals, anti-politics).

GILBERT, CLAUDE* (CNRS, claude.gilbert@msh-alpes.fr)

Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representatives of the state attach importance to these powers (corresponding to the “state of emergency”).

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons: central governments no longer have resources to support alone public policy in this area. A divorce occurred between formal and factual capacity of the state (in particular during disasters). Second, for political reasons: local authorities (in particular in the major cities) and a part of civil society (in particular firms) want to play a role in defining policies they help to finance. Third for “societal reasons”: disasters can no longer justify the interruption of democracy.

We begin to accept the idea that the state can not be the only or the main actor to manage risks and crises. Reflections on resilience are intended, including by officials, to promote the involvement of other actors in society. But politicians and administrators want both transfer a part of their responsibilities while keeping control of risk and crisis management. There is an ambiguity that local authorities and other actors of civil society help to maintain: if they want to play a more important role, they do not want to assume state responsibilities.

The question central of this paper is to know what are the effects of this ambiguous situation in the effective management of risks and crises (especially from the example of pandemic influenza threats).

GILBERT, EMILY* (University of Toronto, emily.gilbert@utoronto.ca)

How Much Is a Dead Soldier Worth?

How much is a dead soldier worth? This paper will interrogate the monetary valuation attached to the death of soldiers in the 21st century, and the narratives of sacrifice and heroism that infuse military fatalities. Rather than focus on public funerals and burial, I explore the more intimate yet no less social acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the ‘inadvertent’ death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the ‘hearts and minds’ of the population, and demonstrate the compassion of the international forces.

How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated? And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

The Mercurial Piece of the HIV/AIDS Puzzle: ‘Stigma’ and HIV/AIDS in South Africa As a Social Scientist’s Challenge

‘Stigma’ and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emergence
gence of HIV/AIDS. The range of negative responses associated with the epidemic placed ‘stigma’ on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning of the term ‘stigma’ is ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises. The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in explaining the HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at ‘measuring’ stigma and reducing its impact is evidence that ‘stigma’ exists out there and continues to be a threat to the successful implementation of public health programmes.

**GILINSKIY, YAKOV** (Herzen University, yakov.gilinsky@gmail.com)

**Social and Economic Inequality As Deviantogenic Factor**

There is no only “reason” of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific “weight”, “power”, value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as “reasons” of crime and others of negative (deviant) acts. The ever-growing economic polarization of the population in Russia – is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 1:4.5 in 1991 up to 1:15 in 1999 and later up to 1:11.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Ol’kov, I. Skifsly, E. Yuzikhanova. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs, economic inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Ol’kov, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was at a maximum (32,300) and suicide too (39,200). According to research of I. Skifsly (dynamics in 25 years, from 1980 to 2004), the correlation coefficient between homicides and Gini index was the highest 0.9253, between violence crime and Gini index 0.843.

The catastrophic scale of social and economic inequality serves in Russia as the main factor of deviant manifestations.

**RC29-500.1**

**GILINSKIY, YAKOV** (Herzen University, yakov.gilinsky@gmail.com)

**Sociology Of Deviance and Social Control (Deviantology) In Russia**

The criminology, sociology, genetics, cybernetics were forbidden by a Stalin regime. These sciences started reviving only in the period of N. Khurshchev’s “thaw”.

The first articles on sociology of deviance (Y. Gilinskiy, G. Zdravomyslov) were published in 1971. The early empirical sociological studies of different deviance types were conducted from the 1970th years. It was researches of alcoholism (A. Gabiani, Y. Gilinskiy, B. Levin, A. Nemtsov, G. Zaigraiev), prostitution (V. Afanasjev, A. Gabiani, Y. Gilinskiy, E. Pobegailo), suicides (A. Ambrumova, Y. Gilinskiy, N. Proskurnina, L. Smolinskiy), drug abuse (A. Gabiani, L. Keselman, M. Matskevich), crime (A. Sacharov and others).

Contemporary sociology of deviance and social control is well developing branch of Russian social science. There are most known centers of a deviantology in St. Petersburg, Moscow, Kazan, Tyumen and Krasnodar. The St. Petersburg’s Center of a Deviantology has a site (http://deviantology.spb.ru), which well-known and visited colleagues of Russia, Ukraine, the Czech Republic, Poland. Deviantology is closely connected with sociology of crime and other. “Sociology of Deviance and Social Control” is taught at some universities of Russia.

Russian scientists (V. Afanasjev, Y. Gilinskiy, M. Rusakova and others) took part in work of Research Committee No. 29 (Deviance and Social Control) of International Sociological Association (ISA) on Congresses ISA in Bielefeld (1994), Brisbane (2002), Gothenburg (2010) and on the Sociological Congresses of Russia.

Besides, conferences on sociology of deviance are regularly held in St. Petersburg, Moscow and Krasnodar, and also in Tyumen and Nizhny Novgorod.

The topic of deviance is particularly actual for Russia, where level of violence, alcoholism, suicide is very high.

**Gender Politics, Virtuous Racism’ and Diasporic Political Resistance in Europe**

Gender politics has long been the staple of national discourse surrounding the integration of colonial diasporas in Europe, in particular in Britain and France. If during the 1970s and 1980s the male immigrant father was depicted as patriarchal and oppressive who prevented his female counterparts from integrating into the state, contemporaneous debates in relation to their children perpetuate similar tropes. Male diasporic citizens, now in their third and fourth generations, have come to be seen through pathological images that place exclusive focus on their supposed dysfunctional gender relations rooted in ‘other’ cultural practices.

This paper examines how dominant narratives of the patriarchal and redundant migrant and diasporic male rooted in culture depoliticise – and erase – decades-long struggles to carve their rightful places in Britain and France. De-industrialisation, joblessness, extreme right-wing racism and institutional exclusion are silenced as the driving forces for contemporaneous male political resistance (civil riots). Instead, dominant discourses pathologising ‘other’ cultures divide diasporic men and women, pitting them against one another to legitimise the intervention of the state, a process the French sociologist Nacira Guénif-Soulammas terms ‘virtuous racism’. The paper traces the deployment of virtuous racism in Britain and France that serve to reinforce structural inequalities through their precise eradication under the privileging of culture to ‘explain’ diasporic gender politics.

**Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar**

**Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar**

Michael Gillan and Htwe Htwe Thein

Abstract:

This paper examines the emergence of open industrial conflict (strikes, various forms of worker protests) in Myanmar (Burma), with special reference to industrial clusters/special economic zones in the urban periphery of Yangon, the nation’s largest city. In recent years, Myanmar has shifted towards quasi-democratic governance and this has led to significant change in both external relations (i.e. the suspension of most international trade sanction measures) and internal institutional development. The paper will explain that although worker initiated protest and strike actions in various industries preceded democratic reforms, these changes have enabled more prevalent and open expressions of dissent. Indeed, the growing incidences of conflict, alongside the reformation of institutions and governance, mean that the labour ‘problem’ has for the first time in contemporary Myanmar come into view as an important area for intervention and management by the State. Arguably, however, the development of mediating labour institutions (law, dispute resolution agencies, trade unions, employer associations) has lagged behind the expression and management of conflict in the industry, leading to ambiguity as to the capacity and role of the state and workers’ conceptions of forms of collective association, citizenship and dissent. Moreover, industry development and forms of labour regulation have emerged not only via shifting relations between the state, capital and labour at a national scale. Geopolitics and international institutional actors (ILO, Global Unions, NGOs), forms of supra-national regulation (for instance, the impact of international trade sanctions) multi-scalar production and economic networks (investor and supplier relations) have also played an important role in institutional formation and reformation and the dynamics of industrial conflict.

**Distinction and Identity in Later Life**

The cultural turn in the social sciences during the 1980s brought new prominence to sources of distinction based on the body, such as disability, gender, race and sexuality. We argue that many of the embodied practices associated with these newly privileged bodily distinctions were further developed, sustained and
extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and ‘liberated’ what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the ‘aging’ of those youth cultures have affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This ‘cultural turn’ is exemplified in contemporary research into ageing lifestyles, ageing and exercise, ageing and fashion, ageing and sex and more generally the performative aspects of ageing. Rather than developing a transgressive ‘age liberation’ movement however, much of this embodying performativity seeks to resist the purchase of ‘agedness’ on fashioning lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one’s adult life.

How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativized, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arise anew for transnational families. How do migrants and their families do often experience social interweaving relations, which are not bounded to one single national territory, but interact in a multi-local situated context. At the same time the existing boundaries of the nation-states do still influence a lot the mobility and opportunities of individuals.

The proposed paper discusses the ambivalence of social belonging and local/regional attachments under modern conditions of social fluidity and multi-local attachment in social relations. First, the paper starts with the elaboration of the theoretical questions as sketched and explores methodological questions related to that. Second, referring to empirical research on migrant families, the paper analyses family practices in which social and cultural boundaries are negotiated with reference to the places to which family attachments exist. Empirical findings show that there is no single belonging to a community or society without local/regional attachment(s) and it precisely the new constellation between the social belonging(s) and the local/regional attachment(s) which can be seen at the basis of the ‘migrant condition’ of human beings. Situating the self and the family in a context of fluidity and constant change entails developing family practices in which belonging is understood as the ambivalence of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.

Limits of Complexity? - the Need of a Multilevel Approach in Migration Research

In the age of migration, cities have become heterogenic places, which strongly influence the life courses of their inhabitants. They define their framework of social relations and locality connected with reference to the places to which family attachments exist. Empirical findings show that there is no single belonging to a community or society without local/regional attachment(s) and it precisely the new constellation between the social belonging(s) and the local/regional attachment(s) which can be seen at the basis of the ‘migrant condition’ of human beings. Situating the self and the family in a context of fluidity and constant change entails developing family practices in which belonging is understood as the ambivalence of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.
laboration between universities and social movements, Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice on building a real alternative to the hegemonic models of university and rationality. Recognizing the centrality of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project “Popular Legal Promoters” on coping with gender based violence in the outskirts of Brasilia, Brazil. Established jointly by feminist movements, the University of Brasilia and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an alternative toward an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

GIUDICI, FRANCESCO* (Columbia University, francesco.giudici2@gmail.com)

Comparing Employment Policies in a Globalising World: New Challenges and New Methods

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionally associated with the nation and the nation-state: public problem formulation, public problem solution and the definition of citizenship rights as a form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national settings, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bonds linking the various policy scales (Scarpa 2009, Anderson, Ostrom 2008; Mahen, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational and global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

Ignou- Paradigm Shift for Higher Education in India

India’s higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total approximate number of institutions imparting higher education in India is 26,000 whereas it stands at 6,706 in USA and 4,000 in China. Despite massive expansion, there is mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent. Open distance learning is one of such strategy which aims at universalization of higher education, to address the barriers of higher education.

IGNOU- Indira Gandhi National Open The Indira Gandhi National Open University (IGNOU), established by an Act of Parliament in 1985, has continuously striven to build an inclusive knowledge society through inclusive education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reach out to the disadvantaged by offering programmes at affordable costs
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology.

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provide seamless access to sustainable and learner-centric quality education, skill up-gradation and training by using innovative technologies and methodologies and ensuring convergence of existing systems for large-scale human resource development.

IGNOU has been conferred with awards of excellence by Commonwealth of Learning (COL), Canada, several times. Recently, it was listed 12th in the webometric ranking of Indian Universities, based on the caliber of its presence on the Internet.

The University is committed to quality in teaching, research and extension activities through ODL system.

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis-advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Impacts of Brazil and India’s Development Dialog on Poverty Alleviation Policies: Knowledge Sharing and South-South Cooperation

Since the beginning of the 1990ies a South American approach to Conditional Cash Transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main experiences can be singled out as most significant for their characteristics, range and influence: the Mexican Opportunitades and the Brazilian Bolsa Familia. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program.

Due to the results of these policies the lowest income group, below the poverty line, is currently encouraged and financed by the World Bank to alleviate poverty and break it’s generational cycle. The spread of this model of poverty is currently in discussion in many south-south forums around the world like BRICS and IBSA.

As part of this current discussion in 2012 the city of New Delhi started a pilot program focusing on poverty reduction as a result of the on-going National Debate about Cash Transfer Policies. The Latin American experiences were important base for the Indian discussion and the results exposes challenges to the southern perspective.

This article presents the results of a research done in Brazil and India asking what can be perceived as processes of this south-south development dialogue. It exposes the challenges and opportunities as well as the different approaches that each society gives to the same set of policies as well as the discourses about poverty and development.

Questioning Development: Global Integration and the Ecological Efficiency of Well-Being

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain different countries’ carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country’s progress toward simultaneous environmental and social sustainability by asking how energy (or ecologically) intensely (or efficiently) a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored for this topic in the sociological literature. Results indicate that varying forms of integration have an impact on states’ abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.

Migrant Nannies In French and German Households – Insights From a Care Worker’s Point Of View

“This presentation focuses on migrant nannies working in two European countries: France and Germany. The main interest of this comparative analysis is to evaluate social policies of these two nation states through biographical research with migrant care workers who take care of small children in private households on a regular basis. This is a crucial task as nowadays the industrialized countries are highly interested in finding adequate solutions to their increasing care-deficit. European countries like France and Germany are structurally close and face similar problems such as demographic aging and the pluralization of life and work forms. However, their efforts to guarantee the production of human beings themselves in a globalised and capitalised world differ remarkably. At this juncture, migrant care workers are important key actors, because they represent a significant resource. Therefore it will be interesting to analyze how dimensions of class, and above all national belonging and socialization influence their relation to local families. The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work, realities of their employers: from a nanny’s perspective.”
Nous proposons d'analyser en quoi la figure du client de ces organisations de service permet à la fois d’occultuer les relations de pouvoir et d'intérioriser les contraintes organisationnelles à travers l'utilisation d'un certain imaginaire leurrant (Enriquez, 2007).

Value Identity of Russian Younger's

The study on value orientations in Russia has been conducted from the middle of the 1960s when the theoretical works by a psychologist B. G. Anan'ev, sociologists A. G. Zdravomyslov, V. A. Iadov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers' value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Iadov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and ‘re-comprehension of values’ on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds theses defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodical correctness and opportunities for the data comparison remain to be a subject of criticism.

GOBO, GIAMPIETRO* (university of milan, giampietro.gobo@unimi.it)

The ‘Inter-Vey’. Towards the Conversational Survey

For decades, the dilemma between open-ended and closed-ended response alternatives occupied the methodological debate. Over the years, dominant approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer's behavior. If this methodological decision has been the survey's fortune, making it the methodology most widely used in the social sciences, however it produces a large amount of biases well known in the literature: misunderstanding of the response alternatives by the interviewees, the multiple word meanings of response alternatives due the communicative functions of quantifiers, the invented opinions (or lies) phenomenon, the influence of the response alternatives on formation of the judgment, social desirability effects, the yea-saying and response set phenomena, etc.

In order to remedy these biases an alternative proposal can be designed by re-discovering and adapting two “old” proposals: Likert's technique called “fixed questions/answers” (1930s), and Galtung's (1967) procedure named “open question/closed answer”. Both procedures are guided by the same discursive principles: make the interview into a conversation, let the interviewee answer freely in his/her own words, and thus release him/her from the researcher's schemes, making an “interviewee-centered” survey.

These principles have been recently blended in an innovative technique for collecting survey data, which has been named “inter-vey” (Gobo and Mauceri 2014), blending in-depth and survey interview (or unstructured & structured interview). “Inter-vey” is based on the idea of the “conversationalizing survey” (Schober and Conrad 1997, Maynard and Schaffer 2002, Gobo 2011). An experimentation (and a procedural example) of this technique will be presented.

Can ‘Religion’ Provide a Response to Today's Climate Challenges? the Valuability of Environment in the Islamic Republic of Iran

The very recent report published by the United Nations confirms unsurprisingly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people’s everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it.

Islamic government policies that have been used to deal with at least some of these concerns have not always been systematic. The Islamic government’s disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that ‘Islam’ informs policy, state-provided education, people’s attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. ‘Islam’ really incapable of tackling climate challenges in the context of Iran? A social constructionist approach of ‘Islam’ will be presented.

“The Question I Would Never Have Asked Federer Or Nadal”: The Sexualisation Of Sportswomen In British Contemporary Print Media

The sexualisation of sportswomen was well documented by sport sociologists and feminist media scholars alike in the 1980s and 1990s (Creedon 1994; Lenskyj 1998). However, in the 2000s research claimed that a shift was taking place in sports media. Amidst cries of increasing gender equality in sports coverage, this paper explores whether claims of significant inequality in the form of the sexualisation of sportswomen continues to exist at the end of the first decade of the new millennia. Using five British Sunday newspapers over 24 months (Jan 2008-Dec 2009) this paper attempts to construct a comprehensive categorisation of how sportswomen are sexualised by British contemporary print media. The sexualisation of sportswomen is classified into five categories which consider: 1) sexualised bodies in text and images, 2) a specific and singular type of sexuality, 3) stripping and nudity, 4) sexed bodies and sexual partners, and 5) flirting as sexiness.

GODRIE, BAPTISTE* (University of Montreal, godrie.baptiste@yahoo.fr)

Shaping the Contour of Psychiatric Intervention. Peer Support's Contribution in the at Home Project, Montreal

To what extent does the integration of peer support workers (former service users) in mental health services contribute to the renewal of clinical intervention among homeless people with severe mental health illnesses? This presentation is an analysis of the integration of three peer support workers in two intensive care management teams and one assertive community treatment (ACT) team of the At Home project, Montreal, Quebec, Canada (2009-2013). This housing first project (also conducted in four other Canadian cities) compares clinical and housing support services to conventional services. An important feature of the project is the participation of service users in the governance and the clinical intervention.

We'll discuss the clinical practices developed within the teams by the peer workers in collaboration with the clinical staff, placing a particular emphasis on two of their contributions: 1) bringing their experience of severe mental illness and their broader experiential knowledge into the understanding of the service users’ situation and the thoughtful application of coercive measures, contributing to the improvement of the existing services; 2) challenging the classical definition of clinical distance with the service users, contributing to the redefinition of the clinical role in the At Home project. These two contributions will open the debate on the professionalization of peer support workers and their ability to shake the professional psychiatric hierarchy and the traditional practices.

The qualitative data was collected during a PhD field work through observation and individual and group interviews conducted during the year 2012 with 25 peer support workers, clinical staff, managers and psychiatrists of the At Home project in Montreal.

Changing Life Course, Changing Housing and the Housing Market

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social prob-
items have begun to threaten residential environment there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the To-kyo suburbs, and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Sequestering Public Housing Policy and Research

Sequestering the Poor: Budget reductions and housing policy change in the US and UK

Public housing in the United States has had a long history of both being perceived for financial solvency as well as for redressing the racial and poverty concentration of its residents. In 2013, a fiscal cut-back of substantial size occurred as the budget “sequester” took effect. In New York, for example, the loss of funding amounted to over $200million for the year (Chaban; Dawsey). Politically analogous budget cuts have also occurred in Britain as the Conservative government has pursued fiscal restraints over the social rental sector.

This paper will examine the intersection of the various formats of the US-UK fiscal crisis and its impacts on housing policy and related national housing research. A series of major housing research experiments have been recently launched in the US to learn how to better manage with less, while the ground rules of fiscal support for most forms of welfare policies are being eroded. My presentation will be upon the choices and tensions as these policy experiments are developed, in the context of on-going reductions in support for the poor.

Intergenerational Reciprocity – the Idealization of the Interchangeability of Phases of Life

Among the prominent concepts used for the sociological description of intergenerational relations is the one of reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Goulard in the perspective of exchange theory, thereby ignoring other traditions of thought. In the course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the “goods” exchanged between generations are not equivalent, that this exchange extends over enormous spans of time, and that donors often are not rewarded by the original recipients. Theorists reacted by introducing additional elements: the double-pole relation was extended to a three-pole relation, time was neutralized in the idea of generalized reciprocity, and models were assembled that allowed the translation of actually incommensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

Drawing from the phenomenological school of thought, the presentation aims at breaking through to the dimension of reciprocity that lies “behind” its behavioral occurrence. Reciprocity as an action generally rests on the cognitive assumption of reciprocity, as described by Alfred Schutz in the so-called general theoretical occurrence. Reciprocation as an action generally rests on the cognitive assumption of reciprocity, as described by Alfred Schutz in the so-called general theoretical occurrence. Is it to be described as action or rather as inaction? Are processes of waiting to be conceived exclusively as the outcome of unsuccessful synchronization or are they a constitutive part of the procedure of synchronization itself? Is waiting socially dysfunctional or functional?

Considering the existing literature on the phenomenon the presentation does not intend to give answers to these questions, but rather aims at unfolding the spectrum of aspects that have to be taken into account when answering is attempted. It reflects the fundamental difference between “long” and “short” waiting as well as various framing conditions of waiting. Specific attention is given to the aspect of interculturality, thereby criticizing the conception of the so-called FIPs-rule (first in, first served) which plays a big role in studies on waiting lines.

GOFII, EMMANUEL* (Paris Institute of Political Studies, emmanuel.goffi@intradef.gouv.fr)

Dying or Living: A Moral Dilemma for Ethical Warriors

Western countries have developed a romantic vision of soldier’s relation to death. In France, the so-called “acceptance of supreme sacrifice” is deeply rooted in both warfare ancient history and the over promotion of physical courage. Dying for France’s higher interest is considered as the core of military identity. This Hostility has been reinforced by the professionalization of French forces in 1994 which initiated a professional/client relationship between service members and citizens. With the development of modern remotely controlled weaponry, relation to lethal risks is changing raising concerns among the military about soldiers’ identities. If supreme sacrifice remains a holy concept hardly disputable, concerns are growing due to the gap between the idealized holistic way of thinking sacrifice within the military and the common reluctance to warfare casualties of individualistic western societies. The French military is experiencing a clash between the promotion of altruistic death and the promotion of egoistic life, both within and outside the forces.

 Debates about the future of the French forces always focus on how to adapt the current format of the military to the new expectations and constraints it faces. I would suggest that this is the wrong way to deal with these issues. I would suggest that we should re-think the way we consider the military in regard to our current objectives and constraints, and not according to outdated concepts.

The proposed presentation thus aims at re-thinking the French pro patria mori to the light of the current framework in which the French military is used, getting rid of the weight of history and re-assessing our relation to death in warfare. My reflections will be supported by philosophical and sociological considerations about the physical courage and the need to get rid of the idea that courage is intrinsically linked to combat.

Fashioning Religious Selves: Middle Class Muslim Women in Post-Apartheid South Africa

Almost twenty years after the inauguration of a democratic dispensation, South Africa remains caught up in the paradoxical efforts of nation-building. To produce unity out of a racially fractured past, the language of ‘social cohesion’, ‘diversity’, and ‘cultural and national heritage’ (exemplified in the setting aside of Heritage Day) is large on the Government’s agenda. Yet signs of the failure of the ‘rainbow nation’ (and hence of the multicultural project) seem ubiquitous – growing socioeconomic inequalities, rampant government corruption, social unrest and discontent among the poor, as well as arguably unchanged or hardening of racial mistrust and racial separateness. That forms of cultural and religious authenticity arise and are ever more strongly asserted within this climate makes it crucial to ask what they might mean: more specifically for this paper, what does being middle class and Muslim in post-apartheid South Africa mean?

This paper provides some insights into the questions around nationhood and religious subjectivities through an analysis of the historical situatedness of middle class Indian Muslims in South Africa. Some preliminary thoughts will be provided on the ways in which discourses and practices around clothing and ‘proper’ dress among middle class Indian Muslim women in South Africa construct ways of un-dressing and placing the self within and/or outside the frames of nationhood and nationhood. Using a combination of literatures – an extensive global literature on Muslim women and dress/fashion, the literature on Muslims and Indians in South Africa – I will explore how the expression of religious group belonging
through the visibility of the clothed body - relying on connections between the local and the global – ultimately comes to shape the local landscape.

Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-side focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality.

Social inequality, differentiations in economic, educational and cultural capital elevated through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of new collective schemes such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals’ different present and future based on their social class.

The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class replication model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class. Within a mature phase of post consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

Social Movements and Protests in Brazil in 2013: What’s New?

Social movements and protests in Brazil in 2013: what’s new?
The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like features were aspects of cooperation and of political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: what the character and sense of the demonstrations, what is the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations

Most defence organizations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, on missions, in academic settings). Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of collaborative work arrangements, it is indeed an important issue that affects both operational and organizational effectiveness. This presentation will focus on several related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative. Further, results from the Canadian Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (ND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the CAF/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge that support military and operational functioning, as well as upon civilian personnel trained in a variety of occupations and possessing a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

Oh, Didn’t Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational variable that has been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members’ perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee perceptions of organizational justice. Furthermore, multivariate analyses indicated that military personnel’s perceptions of informational justice were related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice.

Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention

The recent decade has witnessed remarkable success in various aspects of socioeconomic development in Tropical Africa. However, contrary to the “development is the best contraceptive” expectations, fertility in many countries remains stalled, frequently at very high levels of 5 and more children per woman. We investigate the values and behavior patterns underlying African persistent “pro-natalism” to reveal that some of the best-recognized fertility-inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the skyrocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal primary education (with particular attention to enrollment of women in their 20s and early 30s) accompanied by re-introducing family planning campaigns as a development priority.

Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful “velvet” or “color” revolutions in the USSR and Eastern Europe in 1989, or the “color” revolution in Georgia in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power - Islamists alongside secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal, ethnic and tribal divisions.

Native Languages of the Bering Strait: The Changing Conditions of Interaction and Endangerment

A characteristic quality of the area under consideration is the variety of distinct groups inhabiting it. If one only counts broad ethnic and linguistic categories, Chukchi, Siberian Yupik (including St. Lawrence Island Yupik), Naukan Yupik, Inupiaq, and, to a lesser degree, Central Alaskan Yupik have to be considered. The universities in Western Siberia will be provided.

The Entrepreneurial University: Institutional, Political and Social Factors

The mission of the public research university is to advance excellence in research, scholarship and creative activities. Within the increasing cutbacks in government spending on science, the university should achieve a greater degree of flexibility to be more prepared to respond to the needs of a knowledge-based society. It means the greater significance to the ways in which the production of scientific knowledge and the technology transfer are organized. We think that the political sociology of science approach can be adequately applied to study the institutional matrix of the entrepreneurial sector of the public research university. We suggest that intertwining of the institutional, political and social factors gives us an opportunity to build a good explanatory model of the development of the research sector of the university. Political factors cover the state policies, programs and initiatives to engage in and support the technology transfer. Institutional factors cover direct steps undertaken by the university officials to guarantee true entrepreneurial activity. And social factors include both the relationship between the university and the public, and the dynamics of aspirations and value orientations within the community of scholars, contract researchers, project managers, technicians and other professionals who actually make theoretical and practical advancements of science a success. The presence of the team, coupled a detailed public opinion survey at each location, demonstrably raised awareness on coastal change and sowed the seeds for creating an inclusive coastal forum, engaging local stakeholders in the mission of spreading the adaptation message. The research paper will sum up the results of the CHANGE process, aiming to offer a contribution towards new models of adaptive coastal governance.

A Sour Battle in Lago Agrio: The Judicial Protection of the Environment and Indigenous Rights in Ecuador

Since at least the 1990s, representatives from several Ecuadorian indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessionaries that operated in the Lago Agrio oil field of the Ecuadorian Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US – where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuan battle, however, is a $182. billion judgment issued by an Ecuadorian court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has reignited an interesting debate on the development of mechanisms for the protection of diverse rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues ifoather contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.
national approach applied to conceptualize ‘race’ as transregional inequality and the central role of law in this regard. The second part presents some articulations between law and ‘race’ in Latin America as conditioning ethno-racial discourses, social hierarchies and inequalities during European rule and the most significant continuities of such articulations after independence and in subsequent regime transitions.

Double Troubled-Young People Struggling to Cope with the Conjoined Status of Neet-Youth Homelessness in Times of Austerity

Despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NEET-Youth homelessness, particularly in times of economic austerity. As such, the NEET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NEET-youth homelessness framework presented herein is that irrespective of the importance of micro–level factors and personal preferences in shaping young people’s lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell et al., 2011).

Importantly, the NEET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant ‘silos’ approach to understanding both NEETism and youth homelessness separately, despite their acknowledged links (Smith, J., and Ravenhill, M. (2006);Qualgars et al, 2008; Jones, 2009). This paper posits that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthood.

GONTHIER, FRÉDÉRIC* (Université de Grenoble, frederic.gonthier@iep-grenoble.fr)

Public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002). Contrasting with the comparative welfare state literature, that usually focuses on social indicators’ annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators’ overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP Role of Government, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a “thermostatic” pattern (Wliezen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., help to understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether and how collective attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare across countries and assess the values convergence hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space. Then we modeling in order to look at the evolutions among subpublics, especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment and its weight of the different age groups in years of life expectancy lost (YLEL). This is particularly true in the last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?

Identidad Nacional, Imaginarios Sobre El Estado Nación y Procesos De Exclusión De Los Migrantes Internacionales

Argentina ha sido y es un país atravesado por procesos migratorios. De este modo, se fue constituyendo un imaginario social acerca de los aportes y las pérdidas que la llegada de los inmigrantes significaban para la “identidad nacional”. El presente trabajo analiza de qué modo la presencia de migrantes internacionales supone un desafío a la estructuración de las sociedades organizadas bajo la idea de identidad nacional. Así, la presencia de dichos migrantes es vista como una figura “disruptiva” para el relato nacional, “ficticio”, pero no por ello menos real. Para el estudio la construcción de la “comunidad de nacionales”, Inker & Cohen (2002) resaltará la problemática del nacionalismo a partir de comparar las manifestaciones de los argentinos acerca de las migraciones llamadas “tradicionales” (que incluyen a las olas migratorias de fines del siglo XIX y principios del XX) y las “actuales” (desde la segunda mitad del siglo XX a la actualidad). Y los modos como las diferentes representaciones inciden en procesos de exclusión de los grupos de migrantes. Se indagará sobre las representaciones sociales de los nativos (entendiendo por ese término: los argentinos) acerca de la cuestión antes señalada, a partir del análisis de entrevistas en profundidad realizadas en el marco de dos Proyectos de Investigación en los cuales participo. El primero, titulado: “Exclusión, control social y diversidad articulando la relación entre el migrante externo y las instituciones educativas y jurídicas” y el segundo denominado: “Diversidad etno-nacional y construcción de desigualdades en las instituciones escolares y judiciales. Un desafío teórico-metodológico en el abordaje de los casos del AMBA y la provincia de Mendoza”. Ambos proyectos son dirigidos por Néstor Cohen y tienen su sede de trabajo en el Instituto de Investigaciones Gino Germani de la Facultad de Ciencias Sociales de la Universidad de Buenos Aires.

Male Homicide and Life Expectancy in Mexico

Objective. To determine the impact of homicide on male life expectancy in Mexico and its 32 states during the three-year periods 1998–2000 and 2008–2010 and the weight of the different age groups in years of life expectancy lost (YLEL) due to this cause. Methods. Based on official death and population data, abridged tables for male mortality in Mexico as a whole and its states were created for the three three-year periods studied. Health-adjusted life expectancy and YLEL for men aged 15 to 75 were calculated by selected causes (homicide, diabetes mellitus, and traffic accidents) and age groups in each three-year period. Results. In the years between the 1998–2000 and 2008–2010 periods, YLEL due to homicide increased more than two-fold in 19 of the 32 Mexican states. In four states, the YLEL in 2008–2010 exceeded two, with the state of Chihuahua standing out at 5.2 years. In 14 of the 18 states where health-adjusted life expectancy among men declined between the two three-year periods, the YLEL due to homicide increased. From 2008 to 2010, homicides were the leading cause of YLEL among men aged 20–44. YLEL due to homicide among those aged 15–44 increased between the two three-year period.

Family and School Effects in the Explanation of Migrant-Native Differentials in Performance and Educational Expectations in Spain

We examine the effects of school context on educational outcomes and of the children of immigrants, in comparison with natives in Spain, an under-represented case in the international literature and a fast growing immigration destination in Europe. Using two recent datasets, the Challenge Survey and the Secondary Schooling Evaluation Survey, which cluster students across schools, we investigate the factors that contribute to the migrant-native differentials in school performance and the formation of long-term educational expectations, and propose an explanation to migrant optimism. We look at three dependent variables: Performance is here studied from both an (1) objective (test scores) and (2) subjective perspective (estimation by children and their parents of whether their performance allows to reach tertiary education) and (3) the adjusted educational expectations (controlled for prior performance). Our results reveal the different way that school context works for immigrant and native origin children. Although immigrant children themselves understand the constraints that such disadvantage imposes on their future educational careers, immigrant parents seem to hold on to a rather unrealistic position. This parental optimism in turn seems to boost the career expectation of immigrant children independent of school effects. Thus while school context determines the performance of immigrant origin students to a greater extent than those of natives, the opposite is true for expectations. The formation of aspirations is more family-oriented among im-

Sociedad, Violencia y Demografía En América Latina

Los cambios sociales y económicos vividos en tiempos recientes por América Latina (democratización política, crecimiento económico, reducción de la pobreza) no han evitado que sigan existiendo notables desigualdades sociales, y que la violencia alcance niveles insospechados décadas atrás. Obviamente esta situación ha influido en la demografía latinoamericana: si bien el aumento de la esperanza de vida y la disminución de los niveles de fecundidad han propiciado un acelerado proceso de envejecimiento poblacional, lo que ha llevado a que la proporción de personas con 60 años y más se haya incrementado sustancialmente, simultáneamente en la mayoría de los países latinoamericanos hay todavía un numeroso grupo de población en las edades más jóvenes, lo que en la práctica genera una coexistencia de demandas sociales que difícilmente han sido satisfechas en la sociedad en general, lo que da lugar a que se genere un nuevo patrón de interacción social con nuevas formas de organización y de expresión y de participación de la población, y que esta situación no se ha registrado en la mayoría de los países de América Latina. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to the regulation of this kind of risk. Political governance structures can emerge as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

Human Rights and Political Governance. Using the Sociological Theory Tools to Address the Monitoring and Compliance Problem of the Human Rights NORM at the National LEVEL

The monitoring and compliance with human rights norm in domestic political contexts still is a core research problem in the human rights arena. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to this problem. Political governance is defined in institutional terms as a negotiation structure between state and non-state agents that works as an interface between the domestic political system and regulation processes of the human rights problematic outside this system, mainly at the international level.
A New Crisologie after 2008? Crises and Cognitive Autonomy

This paper is an attempt to address Morin's (1968) plea for a sociology of crisis, focusing particularly on the issues of the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis.

Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narration where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells. Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek krino (to cut, to select, to judge) – narrations do frequently appear, for without a minimum of foreseeability, action is impossible and the future un bearably daunting.

If, precisely at the moment in which narrations are the most unstable we need them ever more urgently, we face a tension where the role of intellectuals becomes fundamental. Already Gramsci had acknowledged this. Furthermore, as Morin had already argued, intellectual reactions to a crisis are in no way readily predictable, for they raise forcefully the issue of the justification of normality. This might even mean the ascent of ‘regressive’ responses to a crisis – plagued with dualisms – or a newfound sense of complexity.

From this starting point, it is tempting to weave together the tension between cognitive autonomy and narration after critical events. I argue that in order to fathom intellectual change and crisis, sociology must meet at least two characteristics: First, it must understand cognitive autonomy as a relational (not absolute) characteristic of intellectual actors and second, it must be particularly attentive to the issue of time in a self-reflecting way, i.e. it must become a ‘temporalised’ sociology.

Researching the Ordinary: The Extraordinary Sociological Research

This paper's aim is to contribute to the sociological literature on think tanks by drawing insights from the sociology of intellectuals. I first proceed by describing and establishing links between some of the latest contributions stemming from sociology and political science: Tom Medvetz's Bourdieuian framework and Hartwig Pautz's neogrammian approach. From there, a discussion ensues on the potentialities and limits of these perspectives to study intellectual change, independence and stability within think tanks. Herein positioning theory, previously used to study public intellectuals (Baert) becomes relevant, as it highlights the relationship between a public intervention, its context and other actors. In the case of think tanks, it highlights how these organisations must “juggle with” diverse forms of credentials, how they are positioned within and outside, crisis-crossed by institutional and economic constraints. Since within think tanks individuals and institutions are enmeshed in various public debates and connect to a range of people and organisations, alliances are crystallised in the public sphere through the think tank's intellectual reputation (and the form we understand a think tank’s intellectual function: based on technocratic expertise, on being a critical voice, etc.). These resources can in turn be mobilised in the form of allegiances and distances, economic constraints and intellectual resources. This reputation thus becomes a think tank’s greatest asset, its depository of symbolic capital. A public intervention is the exercise of weaving together the intellectual image of a think tank, “talking”, as it were, through its experts in every public intervention and across platforms and publics. This stretches the concept of cognitive autonomy in interesting ways, as organisations themselves generate an image vis-à-vis the image of those who talk on its behalf. In order to exemplify this I expose the case of the British think tank “New Economics Foundation”.

Obesity and Gender As Status Characteristics

For over 30 years, researchers have examined social influence and persuasion using Status Characteristics Theory (Berger and Conner 1974). While research has investigated beauty and attractiveness as status characteristics (e.g., Webster and Driskell 1983), no research to date has investigated obesity as a status characteristic. The current paper reviews the literature on influence and persuasion, demonstrating how they are related to status characteristics. Next, this paper
This paper examines the contentious politics of salinity in the Mekong Delta, paying particular attention to the competing perspectives towards salinization that exist within both the Vietnamese state and in rural communities in salinity-affected areas. Drawing on interviews with Vietnamese officials and reviews of policy documents, I first look at the competing interests - such as export-oriented development and national food security - which drive tensions over salinization at the policy level. I then turn my attention to differing perspectives and attitudes towards salinity at the local level, drawing on focus group interviews and ethnographic observation to examine the reasons - idealational and material - for which some social groups in the Mekong Delta have embraced salinization and salt-water shrimp farming, while others have sought to persist with rice farming even in the face of mounting salinity pressures.

Civil Society and Civic Culture in Modern Russia: Experience of Sociological Diagnostics

It is hard today to speak of a common and well formed civil society in Russia. Civil society exists, but it is fragmentary and divided across both horizontal and vertical sections of the population. The paper contains the results of sociological researches, including a description of the strengths and weaknesses of Russian civil society and the environment in which it develops, as well as recommendations on strengthening civil society in Russia. The author draws a complex, and in many respects inconsistent, picture. The condition of civil society in Russia is not subject to unequivocal judgments in terms of good or bad. The breadth and variety of the information allows the author to depart from simple, sometimes speculative perceptions about Russian civil society. A sincere interest in civil society can tempt to make too many a priori assumptions, but when the empirical base is rich enough, it is impossible to draw black and white conclusions. The author of the paper felt obliged to inform international audiences not so much about his own points of view as about empirical facts and expert judgments. Certainly, the picture is not complete. As will be shown, the research tools capture different aspects of the development of civil society unevenly. Nevertheless, the data obtained are sufficient to assert with confidence that Russian civil society is in a difficult process of development, and it has considerable, if not realized, potential.

Youth Studies in Russia under the context of globalization

The paper is concerned with the problem of the Russian youth, with a special emphasis on the history of the theoretical and empirical researches devoted to the youth issues. The authors attempt to provide a comprehensive account on the development of theories on youth in Russia and the issues of the development of future research in the area of youth and youth policy. In particular, they determine the main trends in research regarding Russian youth, especially in relation to the so-called «new Russian reality» of the market economy, the changes of social and sociological analysis of the various problems related to the educational opportunities for young people in Russia; Russian youth identities, etc.). At the same time the paper reveals some certain problems in youth studies, conducted by Russian sociologists under the context of globalization.

The Two First Paradigms of Empirical Social Research in Germany

Irmela Gorges

Abstract:
The two first paradigms of empirical social research in Germany

Empirical social research in Germany evolved from the necessity to get information about the impact of the industrialization on the social conditions in Germany during the 19th century. At the example of the Association for Social Policy, founded in 1872 in Germany, it will be exemplified how the founders of the Association developed a strategy to conduct empirical social research with which they could collect data which they could use to realize their political views of a functioning society. In front of the peak of the industrial revolution, the second generation of members of the Association, among them Max and Alfred Weber, developed a different political view of a future society. As a consequence, they fought for a different strategy to gather empirical data. Because both strategies of empirical social research differed from one another not only with regard to the methods to collect data but also in view of the political goals, i.e. with regard to their epistemology and methodology as methods to collect data, it seems to be justified to identify the two approaches to empirical social research as two different paradigms.

The Social Nature of Salt: Competing Perspectives on Salinity in the Mekong Delta

The Mekong Delta region of southern Vietnam is currently undergoing a massive and accelerating environmental transformation. As the seas rise and an increasing volume of fresh water is diverted from the upper reaches of the river, both for hydropower and for irrigation, waterways and soils along the coast have become increasingly saline. Driven by the rising tides, water from the South China Sea now penetrates for dozens of miles inland, up the mouths of the Mekong and its distributaries and into the irrigation canals that crossmatch the delta, posing a mounting threat to rice production and to agricultural livelihoods in the region. This change, however, is not seen by all actors as a negative one; instead, many residents of the region have abandoned rice farming for saltwater aquaculture, turning their rice paddies into saline ponds and cultivating farmed shrimp for international markets.

huge machineries of calculation have been mobilised. Regular surveys are used to track progress and to respond to the first sign of ‘decline’. In this sense, we could say that the complexity and uncertainties of the world are transferred to the processes of calculation, which in turn render clear and less uncertain accounts of the world in the form of numbers.

In this paper, I take the notion of ‘uncertainty’ to the statistical translations of the education world and the attempts made through these translations to erase uncertainty and ambiguity and provide clear, certain accounts. I explore how complex such operations are, and how the uncertainty and complexity of the world constantly challenge and stymie the attempts to tame it. I support my thesis with several empirical examples from my research on the Programme for International Student Assessment (PISA) and on Australia’s Education Revolution.

I explore the dilemmas involved in these attempts to contain uncertainty (including through mathematical devices such as calculating ‘confidence intervals’), and the ways in which the world exceeds these attempts to contain its uncertainties. Using Callon et al’s (2001) notion of ‘acting in an uncertain world’, in particular their argument with regard to ‘hybrid forums’, I argue in this paper that keeping uncertainties alive can have the beneficial effect of bringing more resources and expertise forward and adding new voices into the discussion. Uncertainty can thus be seen as neither a problem that needs to be solved.

Towards a Synergy Society: Beyond Reflexive Modernization

The purpose of this paper is to consider the reality of synergy society criticizing the theory of reflexive modernization and third way. Though positive welfare oriented third way politics has acquired greater importance in creating active civil society and wealth, it is too Western because reflexive modernization implies the project of political subject concerning the ideal attainment. Synergy society is social collaboration beyond boarders. It lies in seeking the social well-being accompanied with rethinking process of modern values. The rise of communication sector where consultant, adviser, planner and religion play an important role in empowerment is a characteristic of synergy society. Instead of public sphere, we focus on communication media such as the standard of fair trade and eco-label circulate and create the networks of social resonance. This has political, economical and cultural meaning simultaneously. Synergetic modernization is not a progressive project which has political and historical end. It just exploitation of free space of human being continuously. It is the influence of utilitarianism and excessive individualism. Then we reevaluate the Japanese semantics of happiness (shiaiwaese) and research the activities of Japanese Buddhism after 311. Arguing the everyday life with suffering and joy, we realize that a contextual succession of accidental meetings build necessarily social relationships which have potential to form the networks of social resonance related to germinating aspects of another modernity beyond the risk society. Synergy society promotes social diversity and well-being against the increasing liquidity. But fragility is unavoidable as resonance contains contingent process. Therefore we conclude that stable social commitment and sustainability are possible when institutional embedding of synergy develops to construct interactive partnerships with synergy networks of well-being.

Re-Regulating Reproductive Bargains

This paper proposes a framework integrating various capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance modes and related labor regulations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic narratives. Without a systematic account of the gender dimensions of employment practices, institutions, and regulations, the varieties of capitalism approach cannot decipher the gendered patterns of nonstandard employment and its variation across countries. National variation in generating of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargaining. This paper constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalist countries, including the United States, the United Kingdom, Germany and Japan, typically post-industrialized and evolutionarily, these developments reveal a complex picture of the gendered character of nonstandard work in each country. I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of labor and the quality of these arrangements. An examination of the European Union and the International Labor Organization also suggests that supra-national institutions influence the transfer of regulatory norms. Yet, employment outcomes and workplace practices still largely depend on a country’s type of welfare state, coordination mechanisms of employment relations, and varieties of reproductive bargain.

Climate Change Policy: The Role of the World’s Cities

The community of nations has struggled in vain to shape a coherent and effective agreement to reorient the global emissions of greenhouse gases. Rather than advancing toward the modest emissions reduction targeted by the 1997 Kyoto Protocol, we have witnessed a dramatic increase in global emissions.

Concurrently, climate change policies have devolved to non-governmental actors and to sub-national levels, often with far greater effectiveness. Particularly remarkable is the role of cities and the large cities adapting to climate change already. Home to over 50% of the world population and routinely major players in the global economy, the world’s cities are primary consumers of energy and other natural resources and account for an estimated 70% of global greenhouse gas emissions—a ratio likely to increase dramatically in the future. Moreover, many of the world’s cities are acutely vulnerable to the effects of climate change, such as rising sea levels.

In light of these profound challenges, it is hardly surprising that many cities are vanguards in reducing GHG emissions, increasing energy efficiency, and adapting to climate change—social, economic, and social risks of climate change. Hundreds of cities around the world have successfully established and implemented climate action plans with ambitious emission reduction and energy efficiency targets, and many are taking preventive measures to cope with climate change-related risks.

In light of the unparalleled challenges to urban planning and economic, social, and environmental policy posed by climate change, the articulation of a theoretical model that defines the key elements that contribute to the success of climate change policies is of utmost importance. The current study elaborates such a model and tests it empirically by examining several case studies in cities around the world.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of "over-education". For the future of potentially "over-educated" societies, even on gender differences is a concern for education policies.

We base our analyses on a unique global dataset on educational attainment – encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex – developed at the Wittgenstein Centre for Demography and Global Human Capital.

Natural Law, Human Rights and Sociological Theory

Barnett has argued that the requirements of organized social life are the principles of natural law. These laws are “as fixed and unchangeable as the laws which operate in the natural world.” For Barnett, the (normative) force of natural law is found in “if-then” propositions. “If you want to achieve Y, then you ought to do Z.” There are three dimensions of sociological theory integral to a natural law argument, which is essential in the formulation of a human rights agenda. Barnett’s characterization of the normative force of natural law requires that sociological
theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages. A characterization of the stages of social development culminates in a stage that constitutes equitable social relationships. Here, Barnett’s standard for cultural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

Multiplexity in Personal Networks: Comparing Three Cohorts of Portuguese

Personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional inter-dependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advice and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has an impact on networks' multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family status. Do different configurations provide different types of interdependencies? Data is drawn from a Portuguese national survey applied to cross-sectional sample of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) in which respondents provided information about their personal networks and mapped the exchanges of emotional support and material goods between them.

Globalization and New Communication Technology in a North Indian Urban Setting

The process of globalization in India has brought many changes not only in the sphere of Indian economy but also brought ample scope for the mass media communication to expand its network at global level. The advent of satellite television in the early nineties and new communication technology in the later part of nineties have shape the process of globalization of mass media in Indian part of subcontinent in a significant manner. Computerization of different private and government organization has not only improved the performance of these organizations but also helped in the growth of service sector in India. The number of internet users and mobile phones has increased tremendously in the recent past. It has enabled fast and uninterrupted communication between the masses located even in remote areas. These new communication technologies are giving rise to new patterns of communication and culture and have great impact of the style of life of their users. The present paper is aimed to understand the social background of the users of new communication technologies and the patterns of mass media exposure as well as patterns of using new communication technolo
gy-internet and mobile phone in Ghaziabad town of Uttar Pradesh on purposive sampling (N=240) using and a highly structured interview schedule. It was found that there was a sharp difference in the patterns of using internet and mobile
phone. The use of mobile phone was relatively wider than the accessibility of the internet. The connectivity of mobile phone is spreading cutting across all caste, class and gender categories but internet connectivity is still confined to some selected sections of the mobile users.

Religion and Church in Times of Social Change

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the global trend to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers, who remained in open or covert opposition to the system.
2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominational compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WWII). That’s why communist authorities had to take into account the “local conditions”: the policy towards the church(es) and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.
3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy, able and willing to stand up for their rights, and the democratic government accepted them or even sought their support.
4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.
5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as will society’s attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.
6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WVS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on state-church relations and sensitive issues are not represented equally well).

GRABOWSKA, MIROSŁAWA* (University of Warsaw, grabomir@is.uw.edu.pl)
DURLIK, JANUSZ* (Public Opinion Research Center, j.durlik@cbos.pl)
Social Conditions of Survey Research

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the “escape from the field” of the questionnaire for significant answer refusal or refusal to answer. We attempted to determine whether these responses depend on how and why they depend on the questions’ issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender and age, education and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

The Life Course and Individual Time Styles of Elderly People in Cross-Cultural Perspective

The life course and individual time styles of elderly people in cross-cultural perspective

Our contribution presents the conceptual framework as well as preliminary findings from a cross-cultural qualitative study, focusing on life course-related time perceptions and time-related agency of older persons in Germany and the United States. Both countries are similarly affected by demographic change, but reveal significant differences regarding life course structures and the institutionalization of old age. Our epistemological interest centers on the interaction between the wealth of everyday time and biographical time poverty in old age. A special focus is on the relationships between experienced time sovereignty during the life course and the perception of one’s own finitude in old age, i.e. the potential tension between a more autonomous disposition of time in daily routines on the one hand and the necessity of handling the limitations and unavailability of one’s time on the other. How do both forms of time management interact with each other – and to what extent does the specific individual time style in old age relate to the internal temporal ordering of the life courses elderly people experienced in younger age? Based on problem-centered interviews including large biographical-narrative parts with retirees from various social milieus and different cohorts, we investigate individual experiences with managing ageing, lifetime and everyday time. A special focus is set on the effects of culture (e.g. regarding the relevance of autonomy values or the societal handling of death and finitude). In doing so, the common self-restriction in ageing research with its still-dominating focus on the cultural “own” is overcome. Simultaneously, we aim at gaining a deeper understanding of the peculiarities of different cultural contexts and their specific impacts on the structure of life courses and individual experiences with time and aging.

Unhappy Souls at Work: Subjective Narrations about Psychosocial Working Stress

Since the end of the last century new types of work, employment and management have caused substantial changes in contemporary subjectivity. In the meantime, an increasing social consciousness about psychosocial problems caused by working stress can be observed. In public and media discourses, the „diseases of the soul“ are increasingly linked to flexibilized working and living conditions in late capitalism. On the other hand the reality of „the exhausted self“ (Ehrenberg) is questioned – at least in Germany – on the part of psychiatrists and employers’ associations. At the same time, the „psychomedicalization of the social“ is gaining significance in almost every area of social reality.

In my research I aim to contrast these complex socio-discursive interpretation schemes with the subjective knowledge about psychosocial working stress people develop under flexibilized working conditions. I want to know how affected individuals experience and interpret the experience of emotional stress caused by work. By conducting narrative interviews with persons from different working areas (education, health, industrial production, financial services) who have been suffering from incapacity to work due to psychological strain, the interpretive patterns in which this experience is subjectively framed are investigated. The analysis shows how and to what extent psychological vocabulary and interpretation schemes frame subjective interpretations of stressful working experiences – and that they are used in multifaceted and often creative ways, oscillating for example between criticism of working conditions on the one hand and an psychologically “informed” self-ascription of causes on the other. In my contribution I will explore the types of narration and implicit knowledge individuals concerned by working
stress use in order to re-establish and/or maintain their personal and biographical agency.

Age and Knowledge As Challenging Factors for the Energy Transition in Germany

The German federal policy for phasing out nuclear power and supporting a shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step by step have adapted to changes. This study’s research is based on an outstandingly long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel who embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and eco-friendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientations and visions. It is not about alternative innovation but instead about eco- and know-how innovation. Adopting the neo-institutional concept of legitimacy we investigate which requests for radical or incremental changes are recognized by people in the management of energy companies and which symbolic and cultural resources they deploy to legitimate (unpopular decisions) that affect groups of employees. The main question is, how the required changes are processed through the existing organization and how employment structures and relationships as well as work organization and qualifications become reorganized. Our qualitative data show, that employees become grouped into newly defined categories of those that are seen as being part of the “future” of the company and those that represent the “traditional” identity of energy suppliers as conservative realms of primary sector stability and security – be it in terms of employment or in terms of infrastructure.

Eco-Innovation - a New Paradigm for Latin America?

Global phenomena of climate change on the one hand and not predictable technological risks of energy supply on the other hand are challenging not only Germany and the European Union but society, politics, science and industry worldwide. The answers to these challenges are very different. Some countries are screening their existing energy concepts and are searching ways of alternative energy, such as legislation on clean technologies, so-called eco-innovation. It is especially this shift to eco-innovation that catches our attention. It is not reserved for energy technologies: sustainable production can also be meant in aspects such as legislation on clean technologies, so-called eco-innovation.

This shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step by step have adapted to changes. This study’s research is based on an outstandingly long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel who embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and eco-friendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientations and visions. It is not about alternative innovation but instead about eco- and know-how innovation. Adopting the neo-institutional concept of legitimacy we investigate which requests for radical or incremental changes are recognized by people in the management of energy companies and which symbolic and cultural resources they deploy to legitimate (unpopular decisions) that affect groups of employees. The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?

In a classic 1968 paper Merton described the “Matthew Effect” as the tendency of highly successful scientists to accumulate more advantage. More recent analyses, Zuckerman and Cole (1975) documented the experiences of women scientists and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention. Recently, the Council of the Canadian Academies’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academds.

In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research grants and publications), career advancement, compensation, and awards and honours. As well, we examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show...
that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

Investigating Teachers’ Decision-Making about the Use of Digital Technology in Kindergarten

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced information Communication Technology (ICT) skill sets to meet the demands of global ‘knowledge’ economies. Political initiatives to introduce digital technology in educational settings have seen the emergence of digital technology educational outcomes within the national early childhood curriculum, The Early Years Learning Framework for Australia (2009) and in Building Waterfalls (2nd edition, 2011) the curriculum framework used by Queensland Crèche and Kindergarten teachers. Although emerging in early childhood curricula in the prior-to-school sector, digital technology is not yet visible as a policy priority with a plan for funding of digital technologies and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountability and an absence of early childhood education digital technology policy the question arises, “How do teachers make decisions about the use of digital technology in Kindergarten classroom practice?”

To address my research interest in teacher decision-making about the use of digital technology in Kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Crèche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project “Interacting with knowledge, interacting with people: Web searching in early childhood” (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use of digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

Places and Belongings: “Circular” Conjugality Between Angola and Portugal

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjugality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, we seek to understand how the construction of masculinity is reformulated in gender stratification when the domestic space is transnational rather than shared, living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, living apart (one in Portugal, the other in Angola).

Invisible Assets: What Working Fathers Learn from Their Families

Within the work-family balance literature little is known about the benefits and rewards perceived by working fathers in combining their work and family roles. As literature revealed, research on work-family balance has primarily focused on negative outcomes between work and family domain. The conflict perspective is rooted in scarcity theory (Goode, 1960; Marks, 1977), which assumes that human resources of time, energy and attention are finite. Work-family researchers (Barrett, 1998; Greenhaus and Parasuraman, 1999) have called for an approach or theory that examines the positive side of work-family balance.

Greenhaus and Powell (2006) did an effort to fully capture the mechanism of enrichment. During the same year, Carlson et al. (2006) published a work-family enrichment scale, based on Greenhaus and Powell’s construct. The recent valid work-family enrichment scale is helping us to examine and determine whether employed parents are gaining knowledge, acquiring skills or having new perspectives in one role that can have a positive impact on the other role. However, neither the theoretical arguments nor the work-family enrichment scale are shedding light on which specific skills, knowledge, resources, values or perspectives are working parents developing or learning in one role that can be transferred in another role and vice versa. Qualitative research methods seem useful for this aim.

Thus, the purpose of this study are, first, to examine if the rewards and benefits perceived by working fathers in occupying both roles fits in the work-family enrichment construct proposed by Greenhaus and Powell (2006), second, to examine if there are differences between the rewards and benefits developed at home and rewards and benefits developed at the workplace; third, to extend the work-family enrichment theory to new samples in Catalonia.

When People Fight By Themselves. Anarchist Practices and Values In Grassroots Groups

From the early 21st century, protests in Argentina led by the slogan ‘They all must open the door to a new cycle of mobilizations, both in Latin America and other places around the world, which were led by social subjects excluded from the analyses and definitions of collective action traditionally centered on the institutional and structural dimension of protest. Recently, increasing attention to the cultural and subjective dimensions in the study of social movements has risen. The academic and political visibility of grassroots groups, characterized by a social and self-managed organization and proposals where social discourses and practices of anarchism can be observed.

In this paper we wish to contribute to the comprehension of these experiences by putting forward an analysis of the anti-authoritative and self-managed practices inspired in the ethical values of anarchism, based on a piece of research work regarding movements such as NOTAV and NOMUOS in Italy, los indignados in Spain and the insurgency in Oaxaca in Mexico. We aim to highlight that the anarchist values and practices do not arise ‘abruptly’ or as the ‘ultimate’ possibility for change after the failure and the cooption carried out by the ‘civil society’ and leftist organizations, but consist of a cultural and practical repertoire of protest that has always been present in grassroots organizations.

Based on the direct experience of more than twenty years in the anarchist movement in different countries, such as Italy, Spain, UK and Mexico, and also on anthropological work, we will show that this interconnection between anarchism and grassroots struggles are not new. As for the anarchist subjects who make themselves present in many of these protests, whether local or national, they have always valued the space of daily practice as a room for struggle and social change.

Domestic Abuse in the British Military Community: Structure, Discourse, and Help-Seeking

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper employs a feminist analysis to explore civilian military wives’ experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses which construct military culture. Following Stark (2007), I conceptualise domestic abuse as a crime of assault, but also as a gendered pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of “unfreedom” through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities for, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetuated domestic abuse, and civilian and military support workers with experience of supporting either/all of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constructions of the public and private spheres, wives’ disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In concluding, I explore the contributions of this work for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21st century.

RC12-230.1

GRAY, KEVIN* (American University of Sharjah, kgray@aus.edu) Systems Theory and the Constitutionalization of International Law

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann theory to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theorists have drawn on Habermas’s work to suggest that it is possible to imagine a constitutionalization of international law and legitimization of international institution along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and Dellavalle 2009; Von Bogdandy and Kestner 2010). The broad trend has been to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics – where strong publics are parliament and other deliberative institutions, and weak publics are those public spheres which influence parliaments and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge theory of law as outlined in Between Facts and Norms – law is a ‘transformer’ which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with law making in the international arena. Luhmann and Teubner’s model of law formation does a better job of describing both meaning formation in law (Teubner 1989) and the relationship between laws and different branches of both public and private international law, and the public sphere (Ladeur 2005; Teubner 1997). I will make reference to the so-called Solange Decisions in making this argument.

GRAY, ROSSARIN SOOTTIPONG* (Mahidol University, rossarin.gra@mahidol.ac.th) NGOIWATCHAI, NONGLAK (National Statistical Office, Ministry of Information and Technology) Religiosity, Spirituality and Happiness In Buddhist Thailand

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the National Statistical Office Surveys in 2008 and 2011 were utilized. They are the national representative sample surveys. The sample consisted of 25,950 population in 2008 and 23,670 population in 2011. Based on binary logistic regressions, the results reveal that Thai people were happier. Religiosity and spirituality were associated with happiness statistically significantly after controlling for study year, demographic factors (age, sex and marital status) and socioeconomic factors (education and occupation). Those who always undertook all five precepts and mediated in Buddhist holy days and other important days were more likely to be happier. Those who expressed their gratitude, gave an opportunity to others before self and donated regularly were more likely to be happier than those who rarely or never did them. The findings suggest that religiosity and spirituality played a vital role in increasing happiness among Thai people during the difficult time.

GRAZIOSI, MARIOLINA* (University of Milan, mario@unimi.it) The Self and Identity in Technological Times

Abstract

The self and identity in technological times

I intend to explore the impact of technology on the formation of the self and identity. The Italian philosopher Umberto Galimberti, in his book Psycho and Technic (1999), maintains that it is no longer accurate to speak of alienation. When Marx advanced his concept of alienation in capitalist society man was still a subject who could imagine new horizons. Today, the domination of technology has reached a point where the relationship between man and technology has been reversed: technology is the subject and man is the predicate. In this new situation, it is not correct to speak of alienation but rather of identification with technology. In a world totally generated by technical equipment, according to Galimberti, man is an official of this apparatus and his identity coincides with its function. Thus, man is himself only if he is functional to the other, technology (1999). In the light of Galimberti’s thesis, can we still speak of a reflexive identity developed in contemporary society, as the sociologist Antony Giddens does? Furthermore, can we still believe, as the existential philosophers Sartre and De Beauvoir did in the seventies, that identity is a project and coincides with subjectivity? Moreover, what becomes of the self? If identity coincides with function, the self is totally withdrawn, and the difference between interior and external life is suppressed. Naturally, this creates a psychological and sociological pathology for which the recent denunciation when he spoke of the one-dimensional man. Gareberi speaks of the death of the psyche because what is enhanced are the intellectual abilities while emotions are disregarded (1999).

GREBE, EDUARD* (University of Cape Town, eduard.grebe@uct.ac.za) LOW, MARCUS (Treatment Action Campaign) New Forms Of Transnational Organisation On Access To Medicines: The Global Activist Response To The Imatinib (Glivec) Case

In the late 1990s and early 2000s, global AIDS treatment activism had been characterised by innovative forms of organisation, including the construction of transnational ‘networks of influence’ (Grebbe 2011; 2012) incorporating activist networks and broader coalitions comprising national and international bureaucrats, scientists, the media, etc. These networks were built and deployed in order to expand access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely demobilised. The recent patent dispute between Novartis and the Indian Supreme Court in 2013—spurred existing activist networks into action to a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade “watchlist” in response). The mobilisation described in this paper illustrates the innovative characteristics of activism on access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organisation that span geographic and sectoral boundaries—representing what Ferguson (2004) might have termed ‘horizontal topologies of power’—in order to deploy influence and social power at the global level. The paper further develops the ‘networks of influence’ theorisation of transnational civil society mobilisation previously described.

Immigration and Public Opinion in Japan: Keys to Fostering Integration

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opinion in both the developed and developing world—whether for or against immigration—continues to be highly polarized. For example, in the United States, the 2000 Census data revealed that the public is divided on the issue of immigration, with 52% favoring increased legal immigration and 48% favoring decreased legal immigration. The paper concludes by discussing likely future trends.

GREENBERG, DAVID* (New York University, dp4@nyu.edu)
Criminal Careers: Discrete or Continuous CANCELLED

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. This approach represents a set of individual event sequences with a finite number of discrete trajectories. Individuals are typically matched to the trajectory that is most likely, given the distinctive pattern of that individual's sequence. We use hierarchical linear modeling and individual time series techniques to test the assumption that arrest trajectories are meaningfully and usefully classified into a small number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

GREENBERG, MIRIAM* (University of California Santa Cruz, miriam@ucsc.edu)
“What Is to be Sustained?: Towards a Critical Theory of Urban Sustainability”

We live in a time when the need for urban sustainability has become a new common sense. We daily witness confirmation of the famous prediction made by Henri Lefebvre that our planet is becoming progressively urbanized, as well as more crisis-prone (Lefebvre, 1970). Urban sustainability appears to many the “hardest form”: unilateral military intervention. From a social constructionist perspective toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly contribute to a broader understanding of the intersection between polices of housing assistance and the structure of metropolitan opportunity.

TG03-938.1
GREGG, BENJAMIN* (University of Texas at Austin, bgregg@Austin.utexas.edu)
The Local Construction Of a Human Right To Democracy

Is the idea of a human right to democracy coherent? Sociologically oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These are empirically studied in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders and their obligation to ensure the practice and defense of that right. If, as it appears, in the Arab Spring there were no domestic institutions or powers obliged to ensure a human right to democracy, could any conceivable foreign institutions or forces be so obliged – and obliged, perhaps, to intervene? Intervention ranges from “soft” forms, such as scholarships for dissidents, to “harder” forms, such as financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for every given individual in a particular political community, a human right to democracy imposes obligations only on fellow members of that community. The idea of a universal human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly contribute to a broader understanding of the intersection between polices of housing assistance and the structure of metropolitan opportunity.

JS-28.1
GREGG, BENJAMIN* (University of Texas at Austin, bgregg@Austin.utexas.edu)
What Cognitive Sociology Can Contribute To Human Rights Diffusion

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words “from within” already suggest the central aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? The conceptual framework I will develop does not require that the argument can be extended to all human rights or even to other rights internal to any given community's culture. I then propose human rights as a learning process in two senses: (4) as a “cognitive community” and (5) as a social system. (6) These steps render human rights, understood in the theoretically least taxing way as merely parochial social constructions, nonetheless spreadable across cultural and political boundaries—through a technique of “cognitive reframing.”

On Religion and Hospitality Cultures in Economic Relations

GREGORY, MICHELE* (City University of New York, mrgcpw@emailink.net)

Body, Sports and Work

Organizations, from financial institutions, government bodies to hospitals are important spaces for understanding the relationship between sports, bodies and production. This relationship is particularly vital when employers use competitive sports to construct hegemonic masculinities, which sometimes affect workplace opportunities for the disabled, immigrants, working classes and ethnic, racial, gender and sexual minorities. In a recent lawsuit filed by former female employees of Goldman Sachs, one alleged that ‘golf’, ‘push-up contests’ and ‘other physical pursuits’ represented the culture of the trading floor (Lattman 2010, p. B1). Other cases show that Stanley has been embroiled in gender discrimination lawsuits ($46 million) and the use of male sports was notable (Anderson 2007, p. 178). These lawsuits illustrate that competitive male sports are used by employers as a form of cultural capital, excluding women and possibly ‘others’ who have no interest in sports and who do not fit the athletic male model of fitness. Using empirical case studies, I will apply the concept that I call ‘sportswork’ to describe and analyse how white collar professionals in non-sport organizations use sport in the workplace to engage in a number of practices, such as symbolic practices, actual practices and exclusionary practices. Sports is not devoid of power and social relations—class, disabled, gender, migrant status, racial and sexuality. These were made explicit by van Ingen (2003) – therefore the paper will also illustrate how sportwork is used by employees to manage their bodies and how it shapes employees’ perceptions of their and others’ bodies.

Educational Accountability, Safety, and Youth

Abstract:
Young people who feel unsafe and disconnected from their neighbourhoods are most likely to engage in violent or unsafe actions, themselves (McMurtry & Curling, 2008). Students designated as ‘unsafe’ through Ontario’s Safe Schools legislation are pushed out of their neighbourhood schools through suspension, expulsion, and proactive relocation processes. In this way, Safe Schools and other institutional processes that are designed to mediate the unsafe behaviour of particular young people also serve to exclude these youth from their neighbourhoods and institutional processes, increasing the risk that the young person will engage in further violence. During our presentation, we will we describe a project that seeks to understand how young people's transitions between programs and between systems (e.g., education and youth criminal justice) influence their own experiences of safety and unsafety and their connections to their neighbourhoods, community-based organizations, and to mainstream institutions. Research for this project is being conducted in collaboration with a community hub organization – Promoting Education and Community Health (PEACH). PEACH is located in a designated priority neighbourhood in Toronto. It houses a Safe and Caring Schools program for the Toronto and the Toronto Catholic District School Boards. The research – an institutional ethnography – documents and analyzes inter-institutional processes, moving between systems, and between programs that shape young people’s experiences of safety and unsafety in the neighbourhood. Focusing on young people’s transitions within and between institutional systems, we aim to generate findings that will be useful to researchers, practitioners, institutional leaders, and policy decision-makers interested in the integration of service delivery for marginalized or “at risk” youth.

Finding a Language for Mental Distress: Narrative Accounts of ECT

Electroconvulsive therapy (ECT) remains one of the most controversial treatments in mental health today. It can cause permanent loss of some personal memories. ECT if often given to people with severe depression who have not responded to other treatments or for people who have responded to ECT treatment previously. The effectiveness of ECT with so-called drug-resistant depression vary from 40-70%. The decision to have ECT is viewed seriously by clinicians and ECT remains one of the most intrusive clinical practices in modern psychiatry. The issue of “capacity” to make a decision is viewed by the medical establishment in the UK as the ability to (a) understand the issues and (b) to weigh them in making a decision. However under the Mental Capacity Act, a doctor can declare that it is in their best interests. Alternatively, they may be detained under a section of the Mental Health Act. If, on the other hand, they are capacitous, then their wish not to have ECT must be respected: they cannot receive ECT, even if they are detained under the Mental Health Act.

However comparatively little qualitative research has been conducted into the decision-making process, experience of ECT or a fuller narrative investigation of the effects of ECT. This paper presents this decision as located in the wider context of someone’s feelings about their mental health, their social care and support networks and their experience of mental health treatment – including their experiences of compulsory care. Through the analysis of the narratives of 30 people who have been offered ECT, and 13 carers, (collected by the Health Experiences Research Group at the University of Oxford) the broad social context of this decision is described and analysed with some surprising results.

Educational Inequalities in the Access to Higher Education at the Intersection of Gender and Migrant Background: Results from Switzerland, Germany and France

Gender inequalities as well as migrant-related inequalities in education have been profoundly analysed in sociology during the last decades. While gender inequalities were shown to have been reversed during the last decades (Buchmann et al. 2008), youths with a migrant background appeared to generally perform lower in most European educational systems (Heath et al. 2008). However if it is controlled for social origin and school performance – and in line with migrants’ higher educational aspirations - many studies reveal increased transitions of migrant youths to the more demanding educational tracks available to them (Jack-son et al. 2012).

In spite of these studies, the question of a possible interaction between gender and migrant background has been rarely investigated so far (e.g. Fleischmann and Kristen 2011). Given this lack of research, the paper focuses on such educational inequalities at the intersection of gender and migrant background at the transition to higher education.

In order to formulate the theoretical expectations, we refer to decision theory. At the core of the analysis stands a comparison of Switzerland (datasource: TRES), Germany (HIS-Studienberechtigte 2002) and France (Panel d’élèves du second degré 1995). Multivariate regression models were run in order to investigate the research questions.

Preliminary results indicate increased transition rates to Higher Education for second-generation males from socially disadvantaged backgrounds in Switzerland and Germany, if controlled for social origin. A deeper analysis for Switzerland thereby also reveals that such advantages are largely driven by the high occupational aspirations these males pursue.

However, the assumption that second-generation females originating from countries characterised by a rather patriarchal culture would encounter disadvantages at the transition to higher education was not backed by the data for none of the countries under consideration.

Sociology of Corruption

Sociology of Corruption

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of desdifferentiation, a throwback of modernity, because their superior, to functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent to subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy. The reference to the political culture may be enough to highlight that corruption in everyday life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzer refer to social change and changes in the institutional context. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to
- ideal-typical, but normative desired logic system. However, as much corruption as related phenomena are widely used as exceptions to a normal social functioning displaying operations. Another conceptualization is advisable in my view, e.g. of democratic rule of bureaucratic administration and the rule of law, which is not based on the model developed by Webers ideal type of legal authority. Corruption should be defined as “normal” even if socially disapproved and criminal sanctioned appearance have been recorded. Having the opportunities explored at the same time, the redefinition of social areas (such as private vs. public) and system specific logics which provide a better theoretical perspective on gaining corruption.

GRIN DEBERT, GUITA* (Universidade Estadual de Campinas, ggdebert@uol.com.br)
Caregivers and the Biopolitics of Aging

The aim of the paper is to discuss the way in which the global aging crisis gives special configurations to elderly care. To this end, an analysis of the Brazilian recent debate on transforming caregiver into a professional career that took place in the legislative arena is juxtaposed to the practical solution given to elderly in home care in Brazil and in Italy. The absence of public policies directed to old age and the new needs of care reconfigure and give new meaning to women migration and to domestic paid work.

GRIN DEBERT, GUITA* (Universidade Estadual de Campinas, ggdebert@uol.com.br)
Immigration and Elderly Care in Italy and Brazil

This paper focuses on the migration of women from Latin America and Eastern Europe to work with home care of the elderly in Italy. Through an ethnographic approach and based on field research conducted in Bologna with caregivers and their employers the aim of this paper is to discuss: (1) the configuration of this new growing market that responds to the rapid aging of the world’s population; (2) how gender, age and nationality produce categories of differentiation and inequality; (3) how the visibility gained by the duo combining two unwanted populations - the elderly and immigrants - redifines forms dependence, gives new meaning to family relationships, to obligations of the state and to domestic life. The discussion of these topics is guided by a doubly comparative perspective: family relations in Brazil marked by the presence of domestic workers and the transnational sex industry and the global care industry.

Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic

A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and the USA. When the wave arrived to the US the New Yorkers gave to name to the global new repertoire of resistance: Occupy Movement. Although the events in one place encouraged activists in other places, the content and impact of the new movements was determined by the local political conditions.

It is my argument that despite all the differences and peculiarities of political context and dynamics, there is a common pattern to all movements: the need to occupy the public space in order to be recognized and to talk in the name of the people, the masses or 99%. All mobilizations are resisting the economic damage caused to middle and lower classes by the neo-liberal economic policies. Two main effects of neo-liberal policies gave rise to the occupy movement's new repertoire: the individualism that destroys social solidarity, and the weakening of political parties as the locus of negotiations between civil society and the state.

Occupying the public sphere is an innovative repertoire designed to reconstruct social solidarity and “peoplehood” that have been destroyed by the neo-liberal policies, and to make claims in its name. The paper will compare various the most salient cases of popular mobilization, and the specific political contexts that facilitate the movement, and the different political dynamics they provoke.

Orthodox Christianity and Mixed Religiosity Among Russian University Students

In the early 90’s of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students’ mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a ‘practicing Orthodox believers’ group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level.

To sum it up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents’ parents, continues to indirectly influence the religiosity of students in the 2010s.

The Death of Reading (or, Worrying about the Wrong Things)

“The Death of Reading (or, Worrying about the Wrong Things)"

In a digital world, scholars and the general public have both assumed and misunderstood the death of reading, especially leisure reading of print media. Research on young, highly educated digital natives from the developing and the developed world (Nigeria, Ghana, South Africa, Malawi, Botswana, Kyrgyzstan, the United States, China, and Japan) suggests that a persistent reading class is reproducing itself and is retaining a preference for print over screens. This paper reviews these findings and considers their implications for the future mediascape.

GROSHEVA, LYUBOV* (Tyumen Military Institute , Marduktoten@gmail.com)
Obstacles and Opportunities of Self-Employment of Young People in a Modern Society

In the modern society the elimination of the problem of youth employment becomes one of the main tasks for every country despite of its level of development and income. It is absolutely clear that developing countries and countries with transition economies have more difficult situation and have less institutionalized transition conditions for providing enough possibilities for young people. One of the most perspective trend that is considered as a reliable solution to this problem in the world is the self-employment youth.

Though international experience is of great help for some young current and potential entrepreneurs, the extent of its efficiency in countries like Russia is still questionable.

The author suggests a hypothesis that these difficulties can be solved by eliminating unnecessary institutional formations and correction of youth policy as a whole. The author had conducted a survey that was aimed at identifying the main obstacles to the creation of youth business. There were surveyed 800 universi- ty full-time students aged 18 to 25 years. The results of the study showed the most significant barriers to the startup. For example “unofficial payments at the opening of business” were checked by 46.8 % of respondents, while 59.2 % were concerned about “additional fees to inspection bodies” though there are some ways that make possible to avoid such fees students consider them as something inevitable. This imbalance shows that there are some problems with information support of youth startups while students themselves are not too bothered by this problem (19,2 %). Further analysis of the results showed that some of the essential elements of the current policy of the country are neglected. Author believes that such situation is represented in many regions and countries and offers some recommendations in order to reduce the dysfunctions of current programs for business-active youth.

GROSJEAN, SYLVIE* (University of Ottawa, sylvie.grosjean@uottawa.ca)
Following the Constitution of an Organizational “Way of Seeing”: Intertwining Talk, Body and Materiality in Context

Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styhre, 2011), construction (Nicollini, 2007), medicine (Mondada, 2003; Alac, 2008), scientific work (Daston, 2008; Vitereri, 2012; Vertesi, 2012), researchers have shown how the members share a “professional vision” (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational “way of seeing” is interactionally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the spatial dimension of the interactions (Mondada, 2008). I studied the survey work as a situated activity and an interactional activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property, and, in particular, how specific “practices of seeing” (Styhre, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective “way of seeing” in organization. In this presentation, I would like to contribute to the discussion of the role of “socio-technical arrangements/agencements” (Callon, 2004; Latour, 2005) in processes of constituting an organizational ‘way of seeing’.

Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people still in obligatory school imagine their future jobs and how their representations impact their professional aspirations and choices. In particular I wish to explore how two different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of how difficult the studies to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competences, as to parent expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

Marathon Running, “Bodies for Others,” and Social Class in Post-Communist Estonia

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twenty-fold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and links the marathon boom to wider socio-economic and value changes in the post-communist setting. The paper pays special attention to the phenomenology of the body in the context of novel ideals of health, welfare, and success in post-communist Estonia. Bourdieu’s notion of “bodies for others” is particularly helpful when trying to make sense of the runners’ perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. This notion of the multimodal dimensions adopted by a social class if it does not contradict that class’s relation to the body at its deepest and most unconscious level. The paper demonstrates that subjecting one’s body to regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed “optimization of the self” constitutes a new form of bio-politics that fits with the neoliberal values of efficiency and productivity.

Exploring Residential Mobility As a Spatial Practice Via Qualitative Interviews, Quantitative Survey and Agent Based Modeling

The paper reports on a collaboration of sociologists and landscape ecologists in understanding future residential patterns in a medium sized shrinking city in Germany. Shrinkining cities are an especially interesting case here, because numbers of inner city relocations are in general higher than in other cities (Sturm et al. 2013 for Germany). This is due to housing over-supply with more and cheaper offers being available. Like this, patterns of socio-spatial segregation can alter faster.

In a step-wise design, we included inductive and deductive steps, qualitative and quantitative approaches and finally the construction of an agent-based model to simulate future households residential mobility patterns. Firstly, we explored mobility practices by means of in-depth interviews from which we derived context-appropriate information on the orientations and decision criteria of residents. Here, space is included as the life worlds of interviewees.

Secondly, from these results, we constructed a classic questionnaire survey to achieve representative data on the decision criteria among different social and demographic groups. In this step, administrative spatial boundaries were introduced in order to standardize questionnaire responses. From the survey results, thirdly, we develop rules of behavior of households and simulate their decisions in an agent-based model (ABM) as a method to understand patterns emerging from individual behavior. Thus, ABMs use abstract spatial categories and typologies of spatial practices of agents (households in our case). In ABMs, space can be both an independent variable (thus influencing behaviour) and a dependent variable if the space is influenced by human actions). In our case, space is an independent variable in that location choice depends on the socio-spatial structures and the images attached to certain places and neighbourhoods, on distances to work-places, social networks, infrastructure access etc. Space is a dependent variable when analyzing collective household migration patterns and the changed patterns of socio-spatial segregation.

Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities

Socio-spatial segregation - the question of the uneven distribution of social groups in urban space - is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in todays cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which lose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other economic restrictions, urban restructuring, suburbanization, political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project “Shrink Smart”: Leipzig/ Germany, Ostrava/ Czech Republic and Genoa/ Italy. The loss of inhabitants due to far reaching de-industrialization experiences, job migration, suburbanization and steep drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social make up of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, aging, and socio-spatial inequalities. The results show that even though solutions do not add up to accelerate the changes for social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.

The main question of the paper is on the scale and dynamics of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young people and for society. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, to independent living of the young population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. The study are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, to independent living of the young. Why Do They Sit at Home? the Neet Youth in Poland in Perspective of UE

The paper focuses on NEET youth in Poland in the perspective of EU. The NEET is the acronym of the young who are not in education, employment or training and first emerged in the UK in the late 1980s, reflecting an alternative way of categorizing young people following changes in unemployment benefit policies. Now the interest in the NEET group has grown at EU policy level, and NEET-equivalent definitions have been discussed. The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life-course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people’s transitions towards independent living. Becoming NEET is the risk for a young people and for society. The main question of the paper is on the scale and dynamics of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. The study are based on quantitative data of the Eurostat and Polish Central Statistical Office for the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative data collecting of own research to show the reasons of the young belonging to NEET for their fate and the decision to remain outside the labor market and education. This part of the analysis concentrate of most significant events in a young Pole’s life during the transition from childhood into independent adult life (from education to employment, leaving parental home, family formation, etc.).

GRUJIC, MARIJA* (Goethe University, marija.grujic@gmail.com)

The Ambivalence of Memory and History - the Case of Kosovo and Serbia in the Biographies of the Kosovoserbs

The main topic of my presentation is how Serb and Kosovan histories are discussed and negotiated in the biographies of the Kosovo Serbs living in the displacement in Serbia. I am drawing on the biographical interviews collected in Serbia in 2012, and my ongoing doctoral research on the intersectionality of national, gender and religious facets in the social and political realities of the war and belligerent nationalism caused migrations.

In particular, I want to focus on the interrelatedness between political (national) and religious dominant discourses on Kosovo as “Heart of Serbia” or “Serbian Jerusalem” in the biographies of the Kosovoserbs. Therefore, I am looking into the period after the North Atlantic Treaty Organization (NATO) bombing of Kosovo and Serbia in 1999 (when majority of the Serbian population left Kosovo), and the social and political situating of Kosovo in the Serbian national-religious (Serbian Orthodox) memory practices relevant to this event and the wider understanding of the “Kosovo conflict”.

The question of history has emerged in my research as significant topic, and I am currently analyzing its relatedness. First, there is an ambivalences of knowledge(s) and memories on the Kosovo and Serbian histories - both on the individual and collective level, and second that the history of the former Yugoslavian conflicts and therefore “Kosovo conflict” is often orientalized and balkanized, both in the scholarly work and the media reporting.

My findings are that personal and collective histories are intertwined in the religious and national discourses on the collective (nation, religious community) histories. Moreover, I am arguing that in the case of the wars and conflicts this entanglement becomes more visible and prevailing, leaving the individual almost hidden in the biographies.

NOACK, ANDREA* (Ryerson University, anoack@soc.ryerson.ca)

Who Are Kosovars? Multifaceted Positioning of Internally Displaced Persons (IDPs) from Kosovo in Serbia

In my paper I discuss the politics of belonging and multifaceted positioning of the internally displaced persons (IDPs) from Kosovo in Serbia and the racialized images of a “Kosovar”, as a part of the IDP from Kosovo group, in the Serbian society. Internal displacement in Serbia is not only a political category but as well is constructed on the basis of ethnicity, gender, class and housing arrangements. I am drawing on the biographical interviews and participant observation conducted in Serbia in 2012, and a further data analysis of my ongoing doctoral research on the intersectionality of national, gender and religious identities in the contemporary Serbia.

My argument is that the notion of a “Kosovar” carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the “other kind of Serb”. In addition, the political community of belonging for the Kosovo Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living as IDPs in Serbia are visible significant referential and differential points as localities of belonging – in terms of language, region and ethnicity. Although, in the studies on social exclusion and boundary-making this could be described as a “classical” examples of the tensions between the “newcomers” and “locals”, or, “established” and “outsiders” leading to different aspects of Othering and marginalization, in the case of the Kosovo Serbs (IDPs ethnic majority) it is paradoxical. Namely, Kosovo-Serbia displacement/emplacement politics of belonging shows a significant gap in relation to the dominant (right wing) nationalist discourses on Serbians and Serbianhood – describing Kosovo as the most important topoi of the Serbian national history, and Kosovo Serbs portrayed in as a “Serbian martyrs” while Kosovo is a Serbian Jerusalem.
Financial Independence of Mothers upon Returning to Work

Welfare states increasingly foster policies that individualize risks over the life course. Today, the individuals, not primarily families or households, need to be able to support themselves financially throughout adulthood (financial independence). Employment interruptions and career adjustments in favor of child care have short-term and long-term consequences for an individual’s ability to maintain economic independence. In this paper we investigate German mothers’ financial independence before and after the birth of a child. In particular, we assess how long it takes for mothers to re-attain financial independence after the birth of a child. We also identify individual and group characteristics which speed up the re-attainment of economic independence upon return to employment. Empirically, we focus on employed women in the eastern and western regions of Germany who entered motherhood between 1992 and 2009. We operationalize financial independence in two ways. First, we measure how long it takes for mothers until their earnings (re-)approach the minimum living wage (Existenzminimum). Second, we estimate the duration until mothers are back on their pre-birth earnings level. We apply event history techniques, using a novel longitudinal register data set (BASID data). Our findings show a deep East-West divide in the speed with which mothers re-attain financial independence. Within ten years after the birth of a child, less than 25% of West German mothers have re-attained their pre-birth earnings. About 50% reach the minimum living wage or higher. Eastern German mothers regain financial independence much faster and at higher rates. More than 60% reach their pre-birth earnings within ten years. About 80 percent reach the minimum wage threshold. Our findings are in stark contrast with the general idea that German mothers first reenter employment part time and regain financial independence when children get older. The defining moment for re-attaining financial independence is the moment of returning to work.

Access to and Perceived Quality of Childcare (and elder care) in Europe

The reconciliation of work, family and private life has become one of the main challenges for younger and older families in Europe today. Access to affordable and good quality childcare is essential in removing barriers to parents’ (especially women’s) labour market participation, as is ensuring effective access to affordable, quality early childhood education and care for all families that also fits to the increasingly diverse working patterns’ (European Commission, 2013). The same applies to elder care, which is an important service in connection with generally longer life spans, population ageing and the increasing labour market activity of women.

Our paper’s research was funded and done for the European Foundation of Living and Working Conditions in Dublin (Eurofound) and is based on Eurofound’s EQLS3 data set, a European quality of life survey which was run in 2011/12. It investigates perceived access to and perceived quality of childcare and eldercare (also known as long-term) care services in Europe as a whole and in different EU member states and how the availability of such services is related to (female) labour market participation. In order to investigate the determinants of perceived quality of childcare and elder care services, we use multi-level analysis with grand mean centering (Hox, 2010). The model takes into account individual but also country-related factors, thus investigating the impact of age, gender, number of children, household’s financial situation, overall life satisfaction, female employment rate, being employed, rural or urban living area, satisfaction with economic situation of one’s country, level of corruption, etc.

Access to and Perceived Quality of Childcare and (Elder Care) in Europe

The reconciliation of work, family and private life has become one of the main challenges for younger and older families in Europe today. Access to affordable and good quality childcare is essential in removing barriers to parents’ (especially women’s) labour market participation, as is ensuring effective access to affordable, quality early childhood education and care for all families that also fits to the increasingly diverse working patterns’ (European Commission, 2013). The analysis of the work trajectories shows that uncertainty and instability are part of most of these itineraries, with the exception of some groups of garment workers from big transnational factories, technical and professional workers of higher hierarchy in call centers and tenured musicians from the most stable orchestras. While precariousness in garment industry is multidimensional, in the call centers precariousness is mainly based on quality metrics, and among musicians multiactivity is the main feature of this phenomenon. In these conditions the meanings of work are multiple and require from workers constant adaptations along their labor trajectories.

GUAY, LOUIS* (Laval University, louis.guay@soc.ulaval.ca)
Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities

Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology. A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced is important; 5) finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in instruments of environmental governance are sensitive to social and ecological justice. The approach will be applied to problem-definition and policy-making in the adaptation to climate and biodiversity change in a selection of large Canadian cities.

Conditionality: The Cure Or The Cause? An Exploration Of The Psychosocial Impact Of Cash Transfer Programmes Across Five Settings

The use of cash transfers within the anti-poverty policy domain has witnessed a ‘quiet revolution’ across the Global South over the past decade (Barrientos and Hulme, 2010). At the same time, conditionality – the granting of cash transfers or services on the condition that the recipient carries out activities or meets certain behavioural requirements – has been increasingly applied in social assistance programmes in the Global North (Griggs and Bennett, 2010). It is, however, a relatively new strategy to anti-poverty efforts in the Global South. Yet reflecting a contemporary neo-liberal agenda, conditional cash transfers, with some success stories in Latin America, are now being advocated as a policy model for these regions as well (Dornan and Porter, 2012). A comparative, qualitative study across five settings – two in the Global North (Norway, the UK) and three in the South (China, India, and South Korea) – has explored the psychosocial impact of anti-poverty measures aiming to make citizens ‘productive’. The measures studied in welfare settings in the Global North have been specifically structured around an ‘activation’ aim, and those in the Global South have moved away from poverty reduction to a focus on investment in productive citizens (Surender and Walker, 2012). The paper presents findings from a targeted policy analysis and an analysis of interview data with measure recipients in the settings under investigation. Specific focus is placed on the potential for measures to shame or heighten the dignity of the measure recipients. It demonstrates how despite the new possibilities offered by the emergence of new transfers, the conditionalsities that are attached have the potential to create new spaces for shaming. When claimants are already vulnerable, this may then undermine the efficacy of the measure offered.

GUBRIUM, ERIKA* (Oslo and Akershus University College, erika.gubrium@hioa.no)
LEIBETSEDER, BETTINA (Johannes Kepler University Linz)
DIERCKX, DANIELLE (University of Antwerp)
The Personal Impact of New Activation Possibilities on Social Assistance Claimants in Norway, Austria and Belgium

Studies of the psychology of poverty report on the psychosocial barriers – including stigmata and stigma – that may be experienced in tandem with financial instability within the Scandinavian (Angelín, 2009; Jönsson and Starrin, 2000; Underlid, 2005), Austrian (Die Armutskonferenz, 2008; Leibetseder, 2013) and Belgian settings (Raeymaeckers and Dierckx, 2012). While social assistance may mediate shaming and stigmatisation, it may also exacerbate them, undermining the agency of users. Across Europe, a new emphasis on work activation has taken place in the realm of social assistance. New requirements have been added to a previously established set of social contract entitlements (Lüdemel and Moreira, forthcoming, 2014). While new activation approaches may heighten the stigma attached to the socially constructed categories surrounding social assistance, Norway, Austria and Belgium are three settings in which the activation landscape for social assistance has resulted in a publicly promoted offer of more for the claimant. Norway’s approach has been characterised as a best-case scenario for the social assistance claimant and has since the mid-2000s provided those eligible with programming claiming new opportunity to approach more commonly associated with state level unemployment services. In the same period, Belgium has also moved towards active inclusion and tailor-made approaches, as reflected in a pilot project (‘Public Centre of Social Welfare’) with intensified collaboration between the regional employment agency and social assistance authorities. A 2010 federal and provincial agreement in Austria was to provide claimants with better access to jobcentres, but with local responsibility for activation. Drawing on interview data with social assistance claimants, we explore and contrast the personal impact of the approaches in these three settings. The paper highlights the crucial place of the claimant in the evaluation of activation strategies and offers preliminary conclusions concerning its impact on claimants and suggests several lessons to be learned.

GUELBEYAZ, ABDURRAHMAN* (Osaka University, guelbeyaz@lang.osaka-u.ac.jp)
On the Concept of ‘human’ and the Aporia of Social Sciences

It is to be ascertained by way of a simple juxtaposition that the set of concepts “human / human being / humanity / humanness”, which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of “human” does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it. It belongs to a class of concepts that I provisionally call “hoax”. A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construction. The concept “human” is the best and truest of this kind. It is the epitome of “hoax”. Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtuousness. To top it all, one of the most significant features of “humanness” and human existence consists in the circumstance that the humanness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept “human” is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is damned to always end up in a cul-de-sac of some type of biology. Parallel to a radical critique of the central conceptual edifice of the modern social sciences, and, within the framework of a theory of ‘modified and extended semiotics’, and a qualitatively different mode of knowledge production developed on the basis of this, my paper offers a radically new line of approach to the texture and the mode of operation of human society.

Postcolonial Sociology: An Oxyoron or a Border Crossing?

Since its inception, the division established in the course of securing the disciplinary borders of the sociology field between the populations to be studied by sociologists and those who fell in the “other” group to be studied by anthropologists was taken for granted. Postcolonial sociology, which reasserts the political conditions of possibility of the institutional recognition of their profession that included the labor division between sociology and anthropology. Now that the
descendants of those other populations have become the new citizens of former empires such as France and UK, or Japan, the question of the repatriation in the sociological repertoire of notions such as de/colonization, indigeneity, autochthony, and the coloniality of power and social relations, in terms of gender, race and ethnicity is to be investigated anew. If such endeavor is upheld in various corners of the globe, the sociology has become, in places like France, where a main sociological contribution was made, it remains a contentious topic. From this situated sociological universalism, post-colonial studies remain the outside of the sociological field. Whether one thinks of courses taught in an interdisciplin ary perspective or of research funding moving beyond the pale of deliverables, coloniality and its contemporary expressions are unthinkable in a still ethnocentric socioculture. Acknowledging that the colonial is indeed the past and the outside of sociologized societies and sociological routines, but also their present, may be a first step towards a postcolonial sociology in search of its academic locations and professional habitations. Mapping such an ongoing history may help include, or not, France in a global dialogic field aiming at understanding enduring inequality processes.

GUÉNIF-SOULAMAS, NACIRA* (University Paris 8, ngs39@hotmail.fr)

Reflecting/Reflexive Surface: An Ethno-Gender Othering Experience

Practicing sociology as an act of resistance offers an unusual vantage point on what may seem to be the hidden agenda of the sociological duty: locating the sociologist from within. Beyond empirical and routinized practices, this paper aims at giving an account of oneself as a sociologist at the margin or as a minority sociologist. Recording and narrating various encounters of the othering processes, it will explain and discuss the kind of knowledge built under such guise and the way in which it can add some value to the sociological experience. Undoing the disciplinary process still considered central to the existence of sociology is an intellectual itinerary and a collective platform for change in times of enduring inequalities. Reconciling the individual and intimate, here considered as a reflecti ng/reflexive surface, with sociology as a discipline will be one of the challenges of this paper, as it is one for sociologists in a common world of uncertain paths to equality.

Party Members in Bulgaria, Slovakia and Czech Republic

Political parties in ECE countries are assessed to be unstable, weakly entrenched into the civil society, very much attached to the state (Hafner: 2001) and with low levels of members (Brezen and all.). Political parties in ECE countries are even described as “party with no members” (Cabra: 2013). This is problematic for the levels of representativeness and the leve l of integration and the expression of different civic groups and interests. In general, parties in ECE countries are not implementing formal rules for equal representation of young people, woman and minorities. According to some researches the boundaries between statutes of formal party membership and other forms of activism like sympathizers (Schnaiberg: 1980) have covered, for better or for worse, their own way in today’s societies, and the urgency of change is gaining more and more advocates. Despite this, the holistic view of sustainability – while promoting human welfare and preservation of the natural environment – is becoming a programmatic and cross dominant ideology that has shaped the generality of environmental policies, but its effective implementation has basically been done in an evasive (Adger and Jordan, 2009), superficial (Redclift, 2005), and inconsiderable (Léé, 1991 [2005]; Carter, 2001) manner.

In those rough economic times that we are experiencing in Europe – and described as the end of the “age of irresponsibility” the offshoots of infinite re sources (Jackson, 2009) – those features tend to worsening and, nevertheless, do not release an engaged, empowered and collective movement able to request and support just, equitable and pro-sustaining measures. Hence, based on the testimony of representatives of Portuguese civil society organizations (focus group, off-line survey, and document analysis) we will try to define i) motivations, ii) interests, and ii) profiles of civil society organizations, taking into account that, despite the rhetoric of holistic sustainability, environmental groups tend to ignore social problems and overestimate ecological ones, while the remaining groups tend to take a reverse position.

Sustainable Adaptation Projects and Initiatives in Portuguese Municipalities

Governance for sustainability has gained broader public awareness and social significance since the late 1980’s (Adger and Jordan, 2009), and it shares basic purposes and characteristics with sustainable adaptation. Consequently, both governance for sustainability and adaptation to climate change often overlap in policy design and implementation (Kemp, Porto and Gibson, 2005). In the Portuguese case, despite the persistent lack of a concerted national framework and/or reliable funding policies, incontrovertible advance has taken place in recent years. However, these dynamics are still irregular, in reality some misconceptions and unsustainable practices are persistent (Schmidt & Guerra, 2011). Bearing this in mind and in the context of climate change, the overall objective of BASE - Bottom-up Climate Adaptation Strategies for Sustainable Europe, a FP7 funded project is to produce knowledge to support decision making on adaptation strategies and pathways, as well as related action programmes across Europe. Based on results from an online survey applied to a representative sample of Portuguese municipalities by the BASE Portuguese team, and framing our analysis within a multi-arena governance framework (Jorgensen, 2012), this paper will discuss the conditions and features of local sustainability initiatives promoted by Portuguese municipalities. We will attempt to diagnose the situation, analysing the features and context of initiatives and projects currently being implemented by municipalities, under the framework of European and national policies for climate change mitigation and adaptation. Moreover, we will try to highlight some relevant features of local communities

GUTRÓN, LAURA* (Ecole des Hautes Etudes en Sciences Sociales, guerinlau75@gmail.com)

Control of the Bodies and Self Expression during Mealtimes in the French Nursing Homes. A Ethnographic Study

This presentation falls within the framework of my PhD research, which aim to get to a sociological understanding of mealtimes in the French nursing homes. I’m studying the social conditions of the daily lunch – when the residents have to eat together – in spite of physical and cognitive disabilities, eating and moving challenges, and frequent deaths. I question this social practice considering that residents often declare they do not want to live in institution, and do not want to share mealtimes with others. Eating together is a daily rule in all types of nursing homes – public, commercial, or associative. Eating alone is always an exception with a medically justified reason.

From the institutional point-of-view, the shared meal practice is built around the values of the French conviviality, and the institutional appropriation of the French public health discourse on the undernutrition of elderly people.

Thanks to participant observations of mealtimes during four months in two nursing homes, I intend to describe how the social practice of eating together produces forms of social control of the body according to different health restrictions. Depending on the health condition of the elderly people, they face various body management (ex: table placing, type of food service), and various forms of food incorporations (eating habits). I aim to show how the daily practice of eating together often produces typologies of eater’s, far away from gender, social and generational conditions of the residents.

In the context of control of the embodied dimension of the selves during mealtimes, I propose to focus attention on forms of deviant behavior of residents as forms of self expression in different social conditions. By way of example, attempted negotiations with the nurses, continuous criticism or refusal to eat will be analyzed with gender and social categories references.
The Effect of the 2008 War on Estonian Public Confidence in International Organisations: A Mixed Methods Study

When the so-called 5 Day War between Russia and Georgia occurred in the summer of 2008, the Estonian public reaction was especially passionate. Two major explanations stem from the strong identification of Estonians with the situation of Georgia (post-Soviet state, small country, Russian citizens/speakers on Georgian territory) and the question of existential insecurity (will the EU and NATO institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, or the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

International Comparisons of Health Systems: Tools of Learning or Tools of Power?

International comparisons have become unavoidable for anyone who wants to govern health systems, including health organizations and professions. Because health systems cannot be evidence-based, health policies can also be evidence-based. In parallel, since the early sociologists it is believed that the comparison is better way to produce “evidence-based social science”. As a consequence, comparing is believed to be the better way to conduct efficient policies to face health systems challenges. But the many and recurrent flaws of these comparisons cast doubt on their actual role and effects. Among the most common deficiencies are the comparability of data, the lack of clear definitions of terms (like “shortage” or “nurses”) and the state-centrism of comparisons (where issues are more and more either decentralized or global).

Why thus such a success of international comparisons among health policy-makers? The argument developed in this paper is that behind their technical substrate and their apparent neutrality, international comparisons carry values, interests and power relations. Under the guise of rationalizing and depoliticizing decisions, international comparisons are less a tool of learning than a tool of power. This is probably the fundamental reason for their success. First, comparisons hide that health policies choices are always value-laden. Indeed, comparisons are in themselves “scientific” and thus deliver the “truth”. Furthermore, the language through which comparisons are presented (tables, histogram, etc.) create effects of truth. As a consequence comparisons rule out any debate. Moreover, international comparisons create political pressure, not least because this language is easily understandable and particularly well-suited for the mass media.

This gap between the official and unofficial role of international health comparisons can contribute to explain the tension between the apparent convergence and persistence of country-specific arrangements.

GUILAT, DR. YAEL* (Oranim Academic College, yael_g@oranim.ac.il)
Redefining The Public Space Through Art and Culture Events—The Case Of Bat Yam City In Israel

I propose to examine the ways in which contested images are inscribed in the public space behind and beyond art events. The city of Bat Yam in Israel was chosen as the location of this study because, in recent years, it has been the municipality to promote diverse cultural enterprises such as the Biennale of Landscape Urbanism, and the street theatre festival that has taken place since 1996 along other art projects. According to the extensive research about the linkage of art and gentrification (Freeman and Braconi, 2004) and in keeping with the social profile of Bat-Yam—a medium–lower class city on the Mediterranean coast south of the Tel Aviv-Yafo metropolitan area, this policy evidently constitutes an explicit attempt to improve the town's prestige and attract potential new residents and investors. The groups of artists that participate in the municipal projects have a different aim: to empower residents and their identities in the public space and rehabilitate the local multicultural communities. The paper will focus on the strategies used by different actors during the three intensive days of the International Festival of Street Theatre to influence on the public space under the umbrella of top-down art events for the purpose of reinforcing their social aims.

From this perspective, the process at the festival may be viewed as a micro-cosm or a lab that allows us to examine whether and how the public space and more specifically the linguistic landscape reflects or conceals the conflict between social forces, especially between the municipality, which strives to promote
the economic and social regeneration of the area, and the groups of artists, who propose to empower residents and their identities in the public space and attain the rehabilitation of the actual community.

Trade Unions As “Contested” Legal Intermediaries? Reflection on British Unions’ Legal Mobilisation for Equal Pay Since 1970

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not develop in a consistent manner over time and across unions though. In the 2000’s, unions have been heavily criticized for having consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as “contested organisations” which highlights the disputes both between and within unions as to what constitutes the central trade unions “project”. To understand why union legal mobilization for equal pay has been very controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as “contested legal intermediaries”. Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations existing between members with different interests, the competing relations between union officials and their base, and the often adverse relations between trade unions and employers. I will also claim that litigation strategies need to be apprehended in their complex and sometimes constrained relationships with other types of legal mobilization such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

GUILLAUME, OLIVIER* (EDF R&D, olivier.guillaume@edf.fr)

Fishing in River, Confrontations at Risks and Ambiguous Situations

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denounce the presence of the works modifying the living environment of the local residents (Lolive, 1997), or externalities are denounced as being risks (Chataureynaud and Torry, 1999; Borraz, 2008). But what about cases where the local residents do not denounce the industrial risks and confront themselves with the risks? And what can their incidence on the risk management?

Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, minimize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1992) and practices are facilitated by multiple rules which create ambiguous situations (Lot, 2008). They clarify the situations by establishing “cognitive compromises” (Amalberti, on 1996) or by mobilizing “techniques of neutralization” (Sykes and Matza, on 1957) to justify their practices (IV). The ambiguous situations are maintained by the associations of fishermen in order to develop their practice.

Bullying As Social Control: Prejudice and Discrimination Among Children

This study examines bullying as a form of control, surveillance and punishment of socially deviant behavior among children. This violent practice mobilizes regulation-powered rules that outline the limits and possibilities of what it means to be a boy or a girl. It is based on data from an exploratory ethnographic research in primary and secondary education schools in Brazil. It is argued that bullying is centered on complex power (gender, social class, race and sex) relations embedded in the broader sociocultural context, and particularly in children’s cultures. The bully, along with a group of followers, enforces a prescriptive ideal. His or her performance classifies and naturalizes normality through symbolic aspects that act to produce and socially legitimize the socially established, ideal types. The ‘popular’ and ‘successful’ imposes desired attributes, and guide the actions of those who must live in constant fear of isolation and rejection. Noteworthy is the continuous effort by boys and girls towards the visually ‘perfect’, which is intensified by a celebrity-driven culture and their own exposure on social networks. The process of identity formation and competition are marked by a differentiation from the abject. The Other is the self’s regulating and identity referential. It directly affects subjectivities drifting from guilt to resignation, failure or hope of a future metamorphosis. As an example, this is the figure of the ‘whore’, who manages sexual regulation, and prompts a demand for prescriptive performances of femininity by the ‘good girls’. Thus, the bullying-engendered game of violence segregates children territorially, and affirms and protects dominant identities, affiliations, representations and social roles.

CHILDREN’S PARTICIPATION IN THE PROMOTION OF THEIR RIGHT TO HEALTH: THE SPECIALISTS’ VIEW

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children’s scholars in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to information as a prerequisite to participation in the promotion of the right to health; c) the connection of health education as an instrument of information dissemination; and d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the sine qua non to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include ‘learning by doing’, which is centered on the development of personal and social tools. One text alone mentions the importance of the children’s awareness and knowledge about their own rights, as well as that of exercising their citizenship.

Household Carers and Gender Inequalities: A Comparative Perspective on Care

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread beyond the nobility to merchants and farmers’ households. In fact, then as now, the recruitment of domestic labor is an important expression of social relations, including social class and status, as well as a means of reproducing them. Housework, which has been a source of feminist debate, is now also a source of concern due to its liquidation and outsourcing. The paper examines policies that encourage (through fiscal policies mainly) the hiring of domestic workers thus has a political economy aspect since labor market regulations and welfare state policy legacies will influence responses to socio-demo-graphic changes. It focuses on gender inequality: Domestic workers relieve women from doing this work themselves and avoid gender conflicts over the division of domestic work but can reinforce inequalities amongst women and reproduce gender roles. Finally, domestic work is often performed by migrants or minority women from previous migration waves although some activation policies have emphasized the retraining of women native workers. Notwithstanding what is the contribution of household services on the question of ‘global inequality’? This paper focuses on political debates relating to domestic work during the last quarter of century and the policy measures adopted, their stated goals and their actual consequences in France, Belgium and at the EU level.

Handling the End-of-Life Between Institutions and the Individual

Many factors are involved in defining the changes within the field of death and dying: innovations in medical knowledge and practice; changes in health institutions, family structures and everyday life practices; the pluralism of beliefs and religious affiliations.

A new dimension is represented by the emergence of the legitimacy accorded to the individual's decisions in choosing how to handle his end of life. This is no small thing, and, in fact, it has led to the opening of a rather heated debate in the public space.

The paper examines some recent cases in order to identify the knotty problems and the way the new law can be applied, and instable compromises are reached.

SANDLIE, HANS CHRISTIAN (Norwegian social research)

Intergenerational Transfers and Solidarity in the Wake of a House-Price Boom: The Case of Norway

Housing is an important source of households' wealth. Tenure is becoming an important marker of social difference and point of distinction between 'good' and 'poor' housing. In Norway most households has become home owners early rather early in life. However, the house-price boom in the last two decades has changed the conditions and opportunities different cohorts has met to access homeownership and climb the housing ladder. While young households meet a housing market where access to homeownership is steady more troublesome, the increased housing prices amount to substantial housing wealth for older households and a capacity to support their own children's acquisition of a home.

An important question in the paper is how middle aged and elderly Norwegian dispose their growing housing wealth. Do they spend their wealth, do they continue to save or do they help younger family members? Another question is whether new generations of elderly behave in other ways than generations before them. Our main question is whether an explanation based on different attitudes in different generations or an explanation based on life course changes fit our data on how middle aged and elderly people plan to dispose their housing wealth.

The enormous increase of housing wealth is a newer phenomenon than the Scandinavian Welfare State where good housing originally was one of the pillars but not the vehicle of capital collection as we see today. We will ask how this development in the housing sector and in the system of family wealth affects other aspect of the Scandinavian Model as for instance pensions and policies towards income and wealth distribution. We will also make a short comparison with Sweden, another representative of The Scandinavian Model, with a system of housing tenure where the rate of individual home ownership is much lower than in Norway.

The Territorial Separated Marriage As a New Reality

Aim of this research is a new form of marriage – the territorial separated marriage. Now some part of migrants have two (or more) families: the first is in the motherland and the alternative – on the migration territory. What are the reasons of this situation? How many kinds and species it has? What are the profit and problems men and women have? What about children?

Background of this research is the theory of demographic transition, theory of social stratification and social mobility, analysis of the international labor market and labor migration and the model of balance outlays/income of the generation offered by author, published in the paper of RC33 Eighth International Conference on Social Science Methodology in Sydney, July 2012 (N. P. Gulieva. Socio-demos- trative problem of modern society: age structure, migration and labour force).

The research method is the analysis of the open (official) statistic data, media data (including internet source) and the results of investigating activity published by another authors and research centers.

Results: the territorial separated marriage is a new form of marriage generated by long-time migration. Appearance a new marriage on recipient territory often does not destroyed a first marriage on the motherland. Frequently it is because the woman has no possibility or necessity removing the first family to the job land. At the same time the job of the working migrant is the main source of in- come to both families.

It is concluded that the territorial separated marriage is reality. As international migration is growing it is opportunity of the dissemination of this form of marriage.

The Role of the Court-Reforms in Transforming Azerbaijan Society

Both in the judicial system and in the minds of the population, there are still problems with the past communist regime in modern Azerbaijan. The conducted survey of the character and the essence of this problem can allow us to identify the ways of improving the judicial system in the country in line with the requirements of a democratic society.

The majority of the surveyed believe that democratic transformation of society cannot be successful and private enterprises cannot develop without legal base and perfect judicial system that are capable of effective protection of private property rights, control after execution of the agreed responsibilities, protection of the rights of economical subjects, foster creation of market relations.

One of the reasons for the judicial power not to be able fully satisfies demand for the services is the fact that this demand is artificially lowered because of the distrust of the population to the judicial system. The other reason that lowers demand for the judicial services is lack of economical growth, which doesn't foster growth of the need in resolution of economical arguments.

It is evident that the observed tendency for activation of the commercial activity and successful implementation of the economical reforms will foster increase of demand for the services of the judicial system.

Some of the opinions of enterprise managers, representatives of the general population, judges and employees of the court machinery, analysis of their judgments and proposals allowed to reveal the most relevant problems related to the work of courts and render of the judicial services, to determine the paths for extension of population's and business sector's access to the judicial services, which will help to further improve the judicial system and will become a cause of the more effective implementation of the goals of the judicial reform in Azerbaijan.
ties for women and men on a labor market, expansion of opportunities for career growth women, appointments them on senior positions.

The state supports strengthening of social protection and protection of mother and children, baby sitting simplification for working parents according to the ratified in the Workers with Family Responsibilities Convention of the International Labour Organization increase in number of kindergartens, and also development of services on to family planning.

For the purpose of realization of noted directions the parliament of Azerbaijan accepted a number of the target documents. The parliament accepted such important documents, as “Strategy of the Azerbaijani families”, the National plan of action on gender equality, Children's code and National children's strategy. Along with it, in the country are created institute “Family psychologist”, the help and shelter centers for the women who have undergone the household to violence, and also system of monitoring of violence against women, evasion of women from education and early marriages.

The joint family system provides more leisure, since the work is shared by all members. The sample of the study consists of 500 interviews with the respondant interactive method of interpretation is adopted to interpret qualitative as well as quantitative data.

How can we deal with issues concerning the use of force in international conflicts, for instance debates about Humanitarian Interventions, RtoP, Human Security etc. beyond idealistic and normative prejudgment?

Based on our discourse analytical study this paper illustrates the analysis of international conflicts, which incorporates structure as well as agency by focusing on conflict narratives. Our starting point is the discourse on Humanitarian Interventions vs. RtoP. Grounded on the pivotal epistemological hypothesis that the relation between discourse and practice is inextricable and mutual, we argue that this linkage is triform: Discourse consists (1) basically of long-term constitutive beliefs that are (2) due to social trends constantly reinterpreted and modified in (3) the face of interactional events and crises of action, when conflicting norms are negotiated. In this sense ‘discourse’ is seen as an entirety of correlated speech acts, which are analyzed for institutionally stabilized patterns of structure and rules of action. By combining discourse analysis and grounded theory, narrative speech acts (e.g. minutes of plenary proceedings, UN resolutions, the ICISS-Report) perceived as a form of action and hence as an important part of political practice. We show how strategic narratives, constructed from interactional events, get systematized and condensed into strategic culture, thereby part of the discourse. We portray the process of change of hegemonic narratives on the basis of the international discourse in the cases of former Yugoslavia, Democratic Republic of Congo, Sudan and Afghanistan: what grounds of justification concerning the use of force emerge? In what way UNO, NATO and EU differ from each other? Which role plays state-building in the concrete action of international agents compared to other goals?

The study of leisure disabled children and their welfare measure assuming a importance that is especially developing countries of the world in general India is in particular. The children are the most precious asset of any nation & deserve the very best of man kind has to offer . They have not only a right to full health, phigically development but also the right to grow to full their potential intellectually, socially, morally, & culturally all efforts and resources mobilized to wards the end by any society or country are a necessary and crucial investment .At present 80 % of disabled live in the developing countries where less than 1% received any trained help. of the 146 million disabled children under the age of 15 year, as many as 106 million are in asia & africa. according to senses of 2011 figures, 5.7 million children in INDIA are disabled in which means 1 out of every 4 children suffering from one or the other kind disability. Hence, it is extremely important focus on their urgent needs, allowing such children to lead a reputable & life quality in the society recognizing their leisure rights. the present study is aimed to know about the socioeconomic status and the effective utilization of leisure time & welfare service measures of the disabled children in Hyderabad Karnataka region of India.

This study data has collected on the basis of empirical survey & detailed interview with the respondent interactive method of interpretation is adopted to interpret qualitative as well as quantitative data.

students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritorious and talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as disabling mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with preservation and suspension of reservation policy within the framework of public policy and development discourse.

Since the late 1970s, Kawashima's approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociolegal scholarship share a skepticism about efforts to explore Japanese law through the lens of culture, which they see as conceptually weak, undefined. With cultural translation theory, this paper argues that vagueness of Kawashima's theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture. A case study of Communicational Impact in Kawashima's Legal consciousness theory is analyzed in two part: the first, to compare the form of Kawashima's academic work from this discourse on public, with a paperback book called Ni-honjin no ho ishiki (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory, by following Kawashima's Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.

An Emerging Social Movement in China: Frames and Activists in Dog-Rescue Actions

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China since 2011. The activities taking action on highways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs, in China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform af

FINANCING HIGHER STUDIES - THE RELATION BETWEEN ECONOMIC RESOURCES AND CHOICES IN SWEDISH HIGHER EDUCATION

How do students in higher education finance their studies and how is this related to their choice of place and field of study? This is the portal question for the presentation.

At the same time as the number of students in higher studies has increased vastly in Sweden during the last twenty years, the economic gaps in the society at large have grown. We know from surveys and examinations that the public student loans - introduced in 1965 - are not sufficient for covering all students expenses, but the knowledge of where in the educational landscape and for which groups of students the loans are particularly meagre (or superfluous) is lacking. In this presentation, we explore the ‘economic landscape’ of Swedish higher education by first mapping landmark areas, defined by students with different economic situations. We locate both the students with the largest amounts of economic resources (loans, wealth and incomes) and the position of the students with the smallest amounts. How is the public student loan system utilized at these two ends and what function does it seem to serve in the students' total economy? Secondly, we relate these economic differences to educational differences. Do the largest concentrations of educational resources (grades, results from aptitude tests, and backgrounds in prestigious educational programs) coincide with where we find large economic resources? Theoretically, we relate educational resources to educational opportunities - both central forms of capital in Bourdieus sociology - and discuss their relative importance for choices and strategies within higher education.

The presentation utilize a dataset from Statistics Sweden on all students in higher education during the last 20 years, including previous educational investments, present educational choices and their own and their parents' economic and social situation, as well as how they make use of the public study loan system.
According to our recent research study/survey, it shows that the immigrants in Spain 2013 (Romanians 19%, Moroccans 18.8%, Ecuadorians 9.4%, sub-Saharan Africans 6.3%, Colombians 6.1%, Bolivians 9.4% and those with dual nationality 16.9%) 77.6% of them live in rental housing, 27.3% work in private labour market with temporal contracts and 27.1% with fixed or permanent contracts, while 26% are unemployed although they have worked before. 57% of them have the intention to stay definitely and in general terms, they are highly satisfied with the services. They are also highly satisfied with their interpersonal relations (88%), with their family life (80%) and at work/studies (63%). Nevertheless, only 44% of them are satisfied with the economic situation. 83.5% consider their cultural contribution as positive and 75.3% consider their economic contribution as positive and 69.8% consider their demographic contribution as positive. 50% of immigrants surveyed think that they should keep their civil traditions, specially if they can. However, 68% agree that the languages which are majority should be included in the academic curriculum and 37% agree with the headscarf ban in classrooms. Integration for 78% of the surveyed is a society issue, and those with more difficulties are the Magreb population 36.9%, the sub-Saharan African countries 13.8% and the Chinese 13%. We conclude with the affirmation that, according to the immigrants, 50% of them agree that the economic aids should exist for Spaniards and immigrants, although they are seen as individuals, while 47% of them should have the right to live with their families, 95% think they should collect their unemployment benefits after paying their social security taxes, 80% think they should be able to vote in local/municipal elections and 85% think they should be able to obtain the Spanish nationality.

Between Ideology and Practice of Child Rearing: Differences Between Men and Women in Two Cultural Contexts

The third wave of feminism declares that the most important mission in becoming a gender equal society is to encourage men to take a greater part in the family life, and especially, take greater responsibility toward their children’s upbringing and education. Some scholars suggest that this revolution has yet to take place because women still guard their traditional roles and refuse to share them with their spouses.

Our study indicates that although women ideologically declare their wishes for a more supportive and active partner and for a more egalitarian division of household labor and child rearing, when these ideas were turned into practice and examined, we found that men define these practices as far less feminine than women. This tendency appears both for secular men and women and for religious men and women.

Thus, while ideologically, women are more liberal and feminist than men, in practice, they tend to hold a traditional view regarding child rearing daily practic-es, as they view these practices as feminine.
Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European continents. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In Port Harcourt, the commercial and oil Hub of Nigeria’s Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is greatly considered to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 households was administered questionnaire. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that one, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiator between the victim and the perpetrator of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people’s behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.

GÜZELBAEVA, GUZEL* (Kazan Federal University, Guzel.Guzelbaeva@kpfu.ru)
Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)
The report deals with the revival of Islamic identity in the Republic of Tatarstan which is an ethnic republic within Russia and the Muslim informal organizations of Tatar youth. Sociological research shows that religion is more important for Tatars than for other ethnic groups who traditionally do not profess Islam. There are more people who observe religious customs and ceremonies; there are less non-observers and non-believers. As far as religion is concerned, sociologists used to argue that women were more religious than men, older people more than youth, the uneducated more than people with higher education and people from rural areas were more religious than citizens from urban areas. However due to processes of post-modernity the situation has changed and another tendency has become apparent, which is sometimes the reverse. One of these trends is Tatar youth. The research data reveals that desecularization has increasingly affected young people, and their degree of religiosity does not depend on the level of education or place of residence (there is even more rapid Islamization among the educated youth of big cities). A group of strictly observing young Muslims has been pointed out. They are about 5% of all Tatar youth. They are very religious and they confirm it by their behavior. The report focuses on some initiative groups and informal organizations of Muslim young people in Tatarstan classified as ‘Analogue’ and ‘Digital’ but in general relate a lot in the social life (Consciousness, ‘Alyun Urtu’, ‘Ikhisas’, SAMI). They were formed in 2004-11 and gained their activity uniting Muslim students of Tatarstan cities. The report is based on the results of sociological research, 2008-2013 in Tatarstan, Russia. The methods comprise of two surveys by 1500 respondents each and about 80 in-depth interviews.

Effects of Interview Mode on Self-Reported Well-Being
This study explores the differential effects of face-to-face interviewing and web-survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g. the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries. The survey differs from previous studies in several respects. First, respondents are allowed to change survey tools at a lower cost and large numbers relative to traditional surveys that are conducted via phone, mail, or on a face-to-face basis. The WageIndicator is a labor market oriented survey that also includes several subjective well-being indicators. In the first step we contrast the characteristics of samples resulting from different modes. Second, controlling for demographic characteristics, we test the hypothesis that online surveys decrease measurement error in sensitive questions created by the presence of an interviewer (e.g. the underreporting of socially undesirable behavior). We show that mostly in advanced economies respondents tend to report higher subjective well-being levels in the presence of an interviewer, while in developing and former communist countries the presence of an interviewer generates a downward bias in the reported well-being levels. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

Changing Identity: Istanbul Clubs during Gezi Protests
Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. But even %90 percent of Turkey’s population see themselves as fan of these 3 big clubs which are also the oldest clubs, these Istanbul clubs have zero class affiliation throughout history. Very crudely Galatasaray represent aristocracy, Fenerbahçe bourgeoisie and Beşiktaş worker class but like we said these assumptions are very crude and can not apply to fans and general public.
At June 2013 Turkey was the headline of all press worldwide. A small peaceful protest against the AKP (Justice and Development Party) and especially its leader Recep Tayyip Erdoğan. While police brutality against peaceful demonstrations triggered the situation it must be realized that there is a building frustration in non-conservative society for the last couple of years. At Gezi Park protest we can see mostly all political, ideological views developed in Turkey. From communists to nationalist, from Muslims to Atheists, from LGBT to football fans of these 3 biggest clubs. Of course politicization of these fan groups can be described as political awakening of youth after 1980 military coup and turning it into a struggle within their passionate interest.
This paper aims to understand these fans, their change and their demands from authority.

Voluntary Commitment in Church-Based Environments As a Chance of Generating Meaning for Adolescents
In analyzing the religiousness of youth, positions vary between the hypothesis that religiousness has decreased and the hypothesis that there is a specific youth religion. In my paper I will assume that the development of religious identities and convictions depends on social contexts and family environments. My paper elucidates that adolescents generate different religious interpretive patterns in order to position themselves in relation to concepts of life and meaning in societies that are marked by the pluralization of values, the secularization of social relations and the individualization of life styles.
In western Germany, church-related status passages are still part of the norm. With the growing importance of the ‘new’ and ‘old’ media, religious socialization is being 2-sided. Parents often provide religious education to the children at home, while at school, pupils are exposed to different religious teachings. Church-based projects can be seen as a bridge to the ‘real’ world and help young people to experience first religions. However, the question remains which religious teachings are best suited to the needs of adolescents. In my paper I will present the case of a non-profit oriented, community based project in the south of Germany. In the project, the adolescents are encouraged to ponder about the meaning of life and to find a personal faith. In analyzing the results of the project, the project leader provides a critical reflection on the meaning of religiosity and the role of religious education in adolescence.

Knowing ‘New’ and ‘Old’ Media: Translating Memories and Body Rhythms Across Generations
The ‘sociology of translation’ offers a variety of methodological devices in order to study body rhythms and their changing material-social Eigenzeiten. Drawing on the case of a non-profit oriented, community based project in the south of Germany, in which the elderly and young people meet, work together, and practically exchange about usages of ‘analogue’ and ‘digital’ media objects, I am going to unpack how knowledge about ‘new’ and ‘old’ is being translated and reinterpreted among the two generations. Drawing on ethnocultural fieldwork I am going to...
show specifically how the implicit dimensions of knowing how to use ‘new’ and ‘old’ media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either ‘new’ or ‘old’ media and discuss the implications for memory and media studies. Second, I will show what happens when the implicit knowledge of using these objects is being translated to the other generation. I will follow how the rhythms of bodies in interaction with their environment change, and how the use is being remembered and reinterpreted. Third, I will discuss the implications of such an intergenerational view on the enactment of social time in each of the generations’ body rhythm.

GÖBEL, HANNA* (University of Hamburg, hanna.goebel@uni-hamburg.de)

**Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations**

Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a ‘sociology of translation’ and the methodological devices offered by the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconfigurations of body rhythms in the city. The case will be unfolded in three steps. First, I will focus on specific moments when sensual ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythmanalysis as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

**In the Name of the Rule of Law and Democracy: Institutional Restructuring of the State and Women’s Rights in Iraq**

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused of using women’s oppression to justify war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

**Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice**

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g. foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western (neo)liberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethnic reconciliation and implement the rule of law (e.g. Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. GUSTAVSSON, MARTIN (Stockholm University SCORE)

**Power Shifts and Transnationalization. A Comparative Study of Long-Term Changes in the Swedish Power Elite, 1990 - 2013**

Based on three surveys with a few thousand decision-makers each in top positions in all areas of Swedish society (in 1990, 2001 and 2013), we analyze changes over a period of more than 20 years in the composition and internal power relations of the power elite. It is to our knowledge the first time that a historically oriented study has been made, where three points in time are studied using the identical research design. Also, it is possible to analyze the entire elite stratum (not just a sample) as it is small enough, while at the same time it is big enough to allow statistical analyses.

Comparisons are made both over time and in social space, that is, between different parts of the field of power, characterized and ruled by different logics and relations. The previous studies have shown systematic differences between fields and also between the genders in various respects. Our paper has three parts: the first part gives an overall perspective of the long-term development and changes, and the second part discusses some important results. The third part discusses methodological problems, emerging especially in connection with the growing transnationalization of fields and of elite groups. With the increase of international ties, migration and the merging of big business as well as of cultural arenas, INGOs, and economic and political cooperation, important power seems to be moving from Sweden as a European periphery to the big financial and industrial centers and cultural arenas. What is a national elite group these days? Also, several sites of power are gender-balanced (or de-gendered) in Sweden. How will the scope, force and hierarchy of the gender-order be affected in the meeting with other gender-orders as part of a transnationalization process?

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Is human IVF (in vitro fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question ignited controversy in the 1980s when the term “human IVF” first appeared, creating competition between experts. This paper focuses on the competition over expert authority between obstetricians, gynecology clinicians (OG clinicians) and embryology (E) scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is “an amalgam of thoughts, a mixture of habits, an assemblage of techniques” (Mol & Berg 1998), not a coherent prime face. The process of mixing and assembling that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the “dominant professional” (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OG clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise. Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.
peoples in Darwin recognize and understand who is Euro-Australian, who is Ab-
original, and Aboriginal views on Euro-Australian values, priorities and lifestyles. We argue that a necessary ingredient for improving race relations in Australia is for dominant cultures to understand the relative nature of their own cultural attachments. Through interviews, social media and survey with Aboriginal peo-
ple this research provides a basis for Euro-Australians to discover how they are viewed from the outside. It repositions the normativity of Euro-Australian culture which is a prerequisite for a truly multicultural society. Aboriginal disengagement from mainstream political and civil law proces-
ses and institutions contributes to their social exclusion but the reasons for this dis- tance are not well understood. Through ideas of agency, recognition and resistance we also explore how Aboriginal people view and understand the gap between Western-style governance and traditional Aboriginal approaches to deci-
dion-making and the impact this has on patterns of compliance and participation.

Romantic Love and Media Usage Among Japanese Youth

Over 90 % of Japanese married people are married until 35 years old and single people who would like to marry are 82.7%. Japanese have a strong desire for a formal marriage and making a family. An opportunity of the modern marriage is needed the encounter at a school, in friend relations, at the workplace or at a daily place. Japanese marry from 20s to early 30s, after their experience of romantic love. After early 2000s, a new style was born in the place of an electronic encounter, like SNS web sites. This paper is aimed to examine what is the relationship between the experi-
ence of romantic love and media usage in Japan; drawn on our quantitative re-
search conducted in 2011.

Attitudes Towards Patriotic Education and Armed Forces among Slovenian Youth

Contemporary democratic societies are encountering many demanding challenges such as decreasing political participation in the democratic societal sphere. In most European countries one can detect an almost annual drop in citizens’ political particip-
ation. Due to the dramatic changes in political, security and societal conditions in Europe in the last decade, today’s youth is being brought up in a fundamentally differ-
ent spirit. As a result more participative citizens for the future, there is debate in Slovenia regarding civic and patriotic education, as well as active citizenship among the youth. Differing opinions may be found on how to realise this education, and what forms and methods should be involved. In general, two different concepts are at odds: a) discipline of patriotic education, introduced in rather limited way into the Slovenian elementary schools in 2009; b) second concept attempts to cultivate a sense of taking responsibility and of the acceptance of democratic culture while si-
multaneously maintaining a critical stance on the very political system; this concept is traditionally not synced with military tradition, but was introduced into school curric-
ula in 1990s. The proposed paper will analyse attitudes of youth towards patriotic ed-
ucation, and try to ascertain, wheater the concept of patriotic education is has been able to deliver its goals. When analysing trust of youth towards different institutions of democratic state in the last decade, one finding is relatively high trust of youth in the armed forces and school as an institution on the one side and relatively firm distrust into various political institutions of democratic state. Research question will ask how patriotic education has been accepted by the pupils and teachers and how patriotic education is affecting pupils trust in the armed forced and school as an institution on the one side and distrust various political institutions on the other.

A War without Images?

A “war without images”? : Secrecy, information and communication during the war in Mali

As the international operation is still under way in Mali since January 11th 2013, the French armed forces played a huge role in the defeat of the jihad’s fighters. From the first days of the French commitment (i.e Operation Serval) to the Mali presidential polls (August 11th 2013), this paper will deal first with the information and communication policy conducted by the French forces during this new “war on terror” both on the political and organizational sides (political discourses and structures), is the war in Mali a “war without images and without facts” as French and foreign reporters described it? How the French authorities dealt with this traditional dilemma: the (French) people’s right to be informed and the need of secrecy, especially on the front line? Based on the analysis of the political an instit-
tutional discourses and on interviews, this paper will explore all these questions.

School Alienation, Patriarchal Gender-Role Patterns and The Lower Educational Success Of Boys in Secondary Education. A Mixed-Media Study

This paper attempts to be an empirically backed contribution to the current debate on gender differences in educational success in favour of girls. As explan-
atory factors, school alienation and gender-role patterns – together with other crucial factors – are analysed (controlling for social origin). School alienation is characterised by a low attachment to school, low school commitment, a low iden-
tification with school and learning and an emotional detachment from academic goals and values (Finn, 1989). Categories that illustrate – the disparities in masculinity and femininity – are orientations that are assumed to structure attitudes, aims, motivations and, finally, behaviour, and are therefore also relevant for education-
al success. Analyses are based on a Swiss mixed-method study (standardised sur-
vey among 872 eighth-graders, group discussions, class room observations). Re-
sults indicate that the gender gap in educational success is caused partly by boys being more alienated from school and preferring patriarchal gender roles. The impacts of these factors on educational success are mediated by school deviance. Further important issues emerging from this analysis are peer attitudes towards school and teaching style; both of them environmental factors which influence school alienation. In particular an authoritative teaching style can largely reduce school alienation.

Coherence; Art Content & Society

Some claim considering the content of art is a task for art critics & historians. However, this may be relevant also for sociologists, to reveal information on so-
ociety. Contemporary art is dominated by conceptual art with a broad range of art expressions, diverging from traditional art. Many consider this tendency to express democracy and art diversity; others regard it as a breakdown of rules claiming it creates art anony. Durkheim describes how anony appears in times of crisis. However, he also describes how anony may appear in times of sudden wealth, which is the case in Norway, which has grown tremendously rich during the last decades. Simultaneously there has been a breakdown of norms in the society, which obviously has created some features of anomy. Additionally the art interest has increased, as well as governmental support to artists, on principals of democracy and freedom of speech. Today Norwegian artists have great free-
dom to create whatever they like, including controversial political art, such as a Norwegian artist who creates art performances in North Korea with North Korean artists. Although he is criticized by many, as his performances probably requires some connection with North Korean authorities, others defend his performanc-
es. According to Benjamin, art criticism is crucial for art development. Although Norwegian media often provide art articles, art criticism is rather weak and art is seldom criticized in a critical way. Norwegians today seems liberal to controver-
sial art, perhaps more than people outside Norway. My PhD-thesis on corporate art and architecture (2011), also reveal that Norwegian art collectors seem more

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
liberal to controversial art than collectors abroad. This makes me wonder; is it a coherence between art liberalism and features of anomy in a society caused by sudden wealth? May this be reflected in the content of art in the current society?

HAGEN, MALFRID IRENE* (Previously affiliated to Buskerud University College, moliren@online.no)

When Art Becomes an Emotional Burden

Art influents our emotions, usually positively. However, art may also appear as offending and become a burden. Here I discuss so-called “offending art”, defined as art with improper sexual, violent or blasphemous content. I use empirical examples from my PhD-thesis (2011) and new observations. My thesis reveals different practices for corporations collecting art in four countries, including the USA and Norway. Although related cultures, the policy for collecting art diverges regarding offending art. While most of the American corporations express that they avoid art that can be experienced offending by employees and visitors, the Norwegian corporations are more liberal. Although most art in the Norwegian collections are not offending, they also contain offending artworks that creates emotional reactions among employees, who experience this art as a burden. Due to the emotional impact on employees and visitors corporations have had to remove artworks from public areas, for example a painting regarding blasphemies. An artwork still hanging contains a digital text about sexual abuse and is described by employees as depressing. The employees have got used to it and suppress their emotional reactions. Corporate collectors can easily avoid offending art, as there is no policy for their art collection. They like to show their art interest and support art. They also like to appear as democratic organizations and will probably not risk being accused for censoring art. Sometimes art seems prioritized on the cost of people. This applies also to commissioned art. Some new paintings in a governmental building in Oslo show falling paper and skeletons between flying buildings. Employees experience the artworks as an emotional burden, because they give associations to the terrorist attack on the government buildings in 2011. Seemingly there is a gap between fear of art censorship and consideration to employee emotions worth examining.

KRISTIANSEN, TRULS TUNBY* (UIT The Arctic University of Norway, truls.tunby.kristiansen@uit.no)

Institutional Change through Rational Collective Action

The paper seeks to establish an analytical framework for the study of institutional change. Its main components are drawn from sociological systems theory, rational choice analysis and sociological systems theory. The distinctive theoretical maneuver is assuming that modern, functionally differentiated societies can be analyzed as communities, more or less capable of collective action. The analytical core of the framework is a concept of collective action characterized by the conflict between collective and individual rational lines of action. This subjectively experienced conflict is also a social dilemma because the outcome of an action is codetermined by the choices of other actors. Mutual interdependence creates a particular social dynamic that can be applied to the study of institutional change.

We take modern society to consist of several self-referential social systems that operate through unique social media and burden cages. However, we also conceive of modern society in a second sense, as a kind of reflection of society in the first sense, and which regulate or condition the operations of subsystems. A modern society like ours can be conceived of as a collective regarding its own cohesion or societal integration. The reason for this shortcoming is an ontology of the social based in spatial metaphors which refies collective phenomena. When this epistemic obstacle is identified, we might create an alternative ontology that enables a new understanding of modern societies as communities or social wholes with varying capacity for collective action on local, regional and global levels.

Renewal of Organizing Strategies for Child Care Workers?: Union Responses to Neoliberal Child Care Reform and Downgraded Care Work in Japan

Child care work, mostly performed by women, is almost always poorly paid. Unionizing child care workers is an important strategy for securing fair compensation and better working conditions for child care workers. This entails social movement that re-evaluates care work and women’s work.

In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments acted as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for publicly run child care centers. With their collective bargaining power as an occupational group and a women’s group, organized teachers have also tolerated a critical role in improving working conditions for child care teachers as a whole.

However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reform policies such as the privatization of accredited child care centers, and the deregulation of the workforce such as lifting of the limit on the number of part-time teachers per center. Certified child care teachers employed by local governments, once regarded as secure and decent jobs for women, are disappearing, and child care providers, including certified teachers, are now becoming members of the working poor. How will unions renew their strategy to organize child care workers? How will teachers respond to lost occupational homogeneity? Furthermore, will the union’s survival be compatible with sustainable care provision? The paper describes some of the history of the organization of the child care teachers and their activism, and focuses on and compares the current struggles and functions of two unions: Jichiro and the Union of Workers of Child Care. The craft union for teachers and non-certified teachers affiliated on an individual basis.

Hidden Tapestries of Lived Experiences: The Commodification of Latin American Migrant Workers in Canada

This paper will explore how the complex lived experiences and plural identities of Latin American agricultural migrant workers participating in Canada’s Seasonal Agricultural Worker Program (SAWP) are reduced to very narrow representations in the Canadian racial imaginary. Although our interactions with workers have revealed their lives to be rich tapestries of experience, love, fear, regret, and complex familial ties, popular perceptions of migrant workers remain negatively racialized, gendered and classed. We argue that this suppression of workers’ individual histories in the Canadian imaginary is a key component in legitimizing and maintaining the commodification of migrant labour and, by extension, transnational systems of exploitation. In turn, these processes of inscription serve as hidden mechanisms of social and spatial control, shaping the ways that the Canadian public interacts with migrant workers and the degree to which migrants are considered part of the Canadian communities in which they live and work. Motivation for the project was sparked through the relationships we have built with migrants in our work with a grassroots migrant worker support network in the Okanagan Valley, British Columbia. This paper is also informed in part by a 2012 case study

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
of Mexican migrant workers in Canada's largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

“Planning the Unplanned” - Trajectories of Managing the Informal in the Urban North

This paper will present research on how informal activities and practices in Berlin’s public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of receding welfare states, many people’s possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin’s parks are faced with various regularization strategies in a city that otherwise is known for its “anything goes” attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its “urban pioneers” that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings was perceived as weakness in the new urban development processes. However, today they are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies “planned informalization” is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the informal/formal duality and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about the ambiguous role of the city government that on the one hand, embeds in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in depth. This is especially the case for European cross-border commuters. Our paper aims to close this gap by taking the Central European Region (CENTROPE) as an exemplary instance. Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary, the four countries of the so-called CENTROPE. Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2,550). Empirically, the focus of our paper lies on three research questions: (1) how do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria? (2) What are the labor market outcomes of these job search methods in terms of wages? (2) What are the labor market outcomes of these job search methods in terms of wages? (2) Our results strengthen the hypothesis that human and social capital resources serve as key factors for finding job strategies and successful labor market integration. For example, we can show that far family and friendship ties are more intensely related to job finding than near-family contacts. However, near or far social ties do not influence wages of cross-border commuters. Furthermore, there are substantial gender differences and differences related to previous occupa-
and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtin and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as ‘unconventional’, given her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which also generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Brahm and Bhante Sujato have, and continue to be, at the forefront of promoting gender equality in Buddhism in Australia. This paper explores the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotyping Buddhists, and Buddhism more generally, as passive and pensive, negates Buddhists’ commitment to the Bodhisattva ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

HALAWA, MATEUSZ* (Polish Academy of Sciences, mateuszhalawai@gmail.com)

Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw households into the currency market, making for considerable debt, betting on how LIBOR will move, and a favorable exchange rate between the Polish zloty and the franc. “Franc people,” as they have to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the “safe haven” of the Swiss franc causing its strong appreciation, the mortgage indicator saw a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: “Franc people,” or “currency spread generation,” Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is “just a tool” to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle of debates about postcolonialist transformation, capitalist generation, instabilities of contemporary capitalism, and the legitimacy of speculation. What are the practices of domestic living with multiple currencies engendered through a complex and long-term contract? How do charts, exchange rates, and the LIBOR index become objects of attachment both in intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

HALD, LENE* (KEA Research and Innovation Centre, lhel@kadk.dk)

Design Experiments As Intervention: How May This be Rendered Visible?

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multisensory and process based aspects within fashion and identity studies. Furthermore, the paper address how visual, expressive and design ways of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual cultural productions. People and material artefacts of culture (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design’s main goals.

Design disciplines (including fashion design) have, throughout their histories, actively engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, critical and social design (von Busch 2008) - elements that historically have been the core of sociology. This points out some of the distinctive levels of visual, sociological, and the study of fashion which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visual surface and re-frame these meanings in a visual and designerly manner.

HALL, ALAN* (Memorial University, alan@mun.ca)

Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards

Based on a qualitative study of 120 Canadian born and immigrant workers in unorganized and non-unionized workplaces, this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to construct levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers’ actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the conditions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

HALL, DEREK* (Wilfrid Laurier University, dehall@wlu.ca)

Where Is Japan in the Global Land Grab Debate?

Some of the main explanations of the “global land grab” implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world’s third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab investors show few cases originating in Japan; in Japan’s role is scanty, and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in might go relatively unremarked. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSAVANA project in Mozambique) lowers the visibility of Japan’s actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan’s experience shows that there is much more to “land grabbing” than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

HALL, MICHELLE* (Queensland University of Technology, michelee@emplacement.com.au)

Throwing Together Experiences of Belonging within Public Space
This paper examines place-based belonging as a construction of thrown-together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey's (2005) concept of throwntogtherness and Amin's related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through our everyday negotiations of the multiple trajectories of people, objects and symbols, that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unfixed, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based belonging, to consider how the experience of flyt-ty college may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafes, bars, and shopping centres - where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to end placing and create opportunities for diversifying exposure; both of which have the potential to communicate the presence of the community across time and space. In doing so this work seeks to demonstrate the ways that geographic and temporal boundaries of public space are blurred, breached and yet also reinforced, as we throw together placed-based experiences of belonging.

HALL, TOM* (Cardiff University, hallta@cf.ac.uk)

City Streets, Dirty People and the Politics of Cleaning

This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the social (although similarly physical, messy and material) work of ‘outrtech’ and street care. We consider a team of council employees working in the area of Cardiff in the UK whose job it is to make repeated tours through the centre of the city, day and night, looking to establish contact with and minister to ‘vulnerable’ adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside assorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets – picking up litter, emptying the bins and sweeping surfaces clean.

The paper develops two themes of analysis. The first examines the ways in which street cleaners and outreach workers – the latter ‘moral’ street sweepers, of a sort – employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same dirty, grimy, cluttered, smelly and unsightly places as they do. The paper’s second contribution, building on the first, considers the ways in which the expected outcomes required of street cleaners and street carers (outrtech workers) are often equated with the appearance and look, and ‘feel’, of the places and people in, on and with whom they work. This linking of care and upkeep to appearance – as the desired outcome of work that tends to and mends place and people – signals a politics of repair, enacted with ‘deviant’ groups in frequently dirtied city places.

HALLENDE, KARIN* (Stockholm University, karin.halden@sofi.su.se)

Gender Differences in Academic Careers in Sweden

Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women’s likelihood of becoming professors is compared to men given PhD obtained in the same year. Women’s greater family responsibilities are often assumed to account for much of the observed labour market gender inequality. Nevertheless, to our knowledge no Swedish study has analyzed the impact of parental leave on academic careers in a systematic way. Hence, the current study uses Swedish register data for all teachers and researchers at Swedish universities and university colleges and matched information on individual and family related characteristics for the time period 1995 to 2011. Event history analysis is employed to analyze the effects of parental leave and temporary parental leave on gender differences in academic careers. The results show that men have a higher likelihood of becoming professors - which is in line with previous research. However, the gender gap in academic careers gets smaller over time since obtained PhD. Parental leave and temporary parental leave have negative effects on academic careers for both men and women. When studying separately individuals with small children in the household we find that the gender gap in academic careers is significantly larger for this group compared to the gender gap in academic careers for others academics.

Ethnic Stratification and Income Inequality Around the World

The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

Social Inequality and a Comparative, International Analysis

Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are other horizontal dimensions more important in determining who is participating in which type of sport and how often? In this presentation these questions will be examined using the 2007 International Social Survey Programme (ISSP) on “sport and leisure time”. The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular. Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent the country the lower the horizontal dimension income inequalities. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

Searching for European Values

Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100,000 respondents) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not in clustered coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching values.

What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogeneous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet) resulted in a converging of the values of the Europeans. Ideas of multiple or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e.g., Inglehart) seem to be confirmed by such results.

In this paper I focus on European values in 2008 and elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identify one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

"why independent elderly prefer to continue living in their home even when they become frail?"

frail old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the long-term care (ltc) insurance law).

as a multicultural society, israel serves as a natural laboratory for identifying similarities and differences between various groups. the present research compared independent jews and jews aged 75+ who live in the community, on various aspects of their preferences for care.

the study included two stages, a quantitative one, in which closed-ended questions were administered to 200 old jews and arabs, followed by a qualitative one, in-depth interviewing 20 respondents. the study found that jews mostly preferred nursing or sheltered homes, whereas arabs preferred mostly to remain in their homes. however, approximately 40% of both populations preferred "mixed care," staying in their home with a live-in worker or with one of their children.

three main aspects were identified: a macro-level aspect of social and cultural context (collectivism vs. individualism); a mezzo-level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/home; dignity vs. honor). although main aspects were in general similar between jews and arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms and the importance of home in late life.

results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

the disconnexion between attitudes to transport and policy choices

this proposed article explores the following paradox: whilst research on attitudes to transport and travel behaviour in european states often suggests that the negative externalities of the transport system are a significant everyday concern, decision-makers at various levels of government are reluctant to support "anti-transport" measures that are binding sustainable transport policies and policy tools such as speed limits, urban tolls or other carbon taxes. this article seeks to further explore this paradox by revisiting the public policy assumption. political attitudes research, especially that which seeks to identify influences on voting intention, shows that transport is often relegated to a much lower level of priority. based on successive waves of eurobarometer surveys, our analysis suggests that attitudes to transport and travel are increasingly shaped by the politics of choice and combination of policy tools. following the claim made by the so-called policy feedback model, we expect transport policies to shape citizen's attitudes towards institutions, including policies, measured in terms of trust, causal narratives, the punishment of free-ride.

halsa, astrid* (lillehammer university college, astrid.halsa@hil.no)

at home and elsewhere: how to handle daily life growing up with a "mad mother" or "drunk father?"

there is a large body of research on children living in families with parental mental illness/substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. the risk and harm perspective is however less suitable to study children as participating agents. there is a gap of knowledge about how these children deal with the different realities of home and away, and at what costs and benefits they adapt to these different contexts. they often have to negotiate between the often secret and shame-laden family context and arenas and situations outside the family. this paper focuses on children and young people's first persons accounts on growing up with parental mental illness or substance abuse by analysing children's own experience. the paper concludes with the suggestion that to grasp these children and young peoples lived experiences the research has to look outside the families front door and include children's activities in school, leisure and community, and focus on the active and challenging identity work these young people go through in trying to keep their homes together while developing a sense of selves.

new risks of youth exclusion. nordic policy responses in a european perspective

including youth in the labour market is a major challenge facing many european countries, including the nordic countries. since 2007 many european countries have witnessed an increase in the rate of young adults neither in education, training nor employment (neeet) and an increase in the number of young adults registered as 'unemployed'. despite efforts at adopting counter-offensives to change the negative economic conjuncture through new measures to promote education, training and inclusion in the labour market the rate of inactive young adults has increased the last decade in europe. possibly we also see the impact of more long-term trends and structural changes making transitions from school to employment more difficult or variable.

this paper discusses how the nordic governments have responded to diversity in the youth population and whether country differences in policy measures may account for the differences in unemployment and neet rates in the nordic countries. the paper demonstrates that the nordic countries have responded differently to the concerns about the public expenditures and financial disincentives for the individual to participate in the labour market, the need for an up-to-date and relevant educational and vocational training services and social regulation of the market to ensure an inclusive labour market.

the paper argues that gender, ethnicity and disability represent social categories of high policy relevance for understanding the present challenges to the nordic welfare states, including their efforts to promote the inclusion of new generations of men and women in the workforce. while the nordic countries have been at the forefront in adopting policies to promote gender equality the nordic countries have been more reluctant to adopt policies to ensure equal opportunities independent of disability and ethnic origin. the paper identifies the challenges for the nordic countries and concludes by identifying the policy lessons for non-nordic countries.

causal relationship between the feeling of alienation and anti-foreignism in contemporary japan

in the last decade, anti-foreignism has emerged gradually in japan. grassroots right-wing organizations such as "zaitokukai" have held anti-korean demonstrations repeatedly. furthermore, we can easily find many postings and articles on the internet which have hostilities toward foreign nationals and left-wings. they claim that the people who have a liberal view on migration and advocate for immigrants are "traitor" to japan and have intended to damage japanese national interest. although only a few people participate in these movements, quite a number of people may share the feeling of intolerance toward vulnerable and minority groups. for example, a national diet member satsuki katayama waged a campaign to investigate the recipient of welfare public assistance and expressed
the opinion via twitter that welfare public assistance for foreign residents should be cut off. Why has this trend emerged during recent years in Japan? Who support these speeches of anti-foreignism?

Yasuda (2011) pointed out that the people who support “Zaitokukai” have a feeling of alienation from societies and participate in activities to gain the esteem from others. On the other hand, Higuch (2012) claimed that “Zaitokukai” have recruited “ordinary” people who have a patriotic feeling through the internet, because there are only a few organizations which fulfill the demand of conservative people. However, these discussions are based only on the qualitative research of “Zaitokukai” members and it is difficult to generalize about characteristics beyond this particular group.

The aim of this presentation is to clarify the relationship between a feeling of alienation and anti-foreignism in Japanese ordinary people. For this purpose, I analyze the data from nationwide surveys conducted in 2009 and 2013 using the method of causal analysis and structural equation modeling.

Late Alain Touraine’s Theory of Modernity, New Subjects and Cultural Movements: Toward Theorizing Social Transformations in Contemporary Asia

The purpose of this presentation is to theorize social transformations in contemporary Asia from the perspective of late-Touraine’s theory. The “compressed modernity” theory (Chang) is often used, which is based on the theory of “radicalization of modernity” (Giddens, Beck) that focuses on the institutional level of modernity. However, the latter is partly criticized by the theories of “multiple modernities” (Touraine, Beck), because the cultural orientations characteristic of modernity are embodied in institutions, but not reducible to them. Its founding gesture is a break with the widespread assumptions that there is one main pattern of modernization and modernity.

This presentation explores the insights that emerge from the exploration of Touraine’s major works after 1990s that are highly appreciated by the theorists of multiple modernities. Touraine does not justify modernity institutionally and does not anchor it in the market economy, the government administration, or democratic organs. Instead it brings other regions of the world into the debate over modernity. Touraine maintains that modernity was characterized from the beginning by the two poles of reason and the resisting subject. In a world best defined by multiple process of change, there exist no other means of combining economic strategies and cultural entities than through the individual. It is not the individual as consumer or member of various organizations, and even less as citizen, but the individual as subject, in the desire for individuation, which constitutes the only principle able to mediate between the instrumental world and the world of identity: the collective situations that protect the uniqueness and individuality of individuals called cultural movements.

These conceptualizations can be applied to Asian societies, however to that end it should be developed into institutional analysis based on a new theoretical model from the theories of welfare regime, new social risks, social/cultural movements, and social governance.

Contested Rights of the Cross-National Family: Recent Cases of International Parental Child Abduction Between Japan and the United States

This paper aims to explore conflicting rights claims of cross-national family members. Based on multinational case studies of recent international parental child abductions involving Japan and the US, it discusses the ways in which the realization of the basic human rights of each party of a cross-national family (father, migrant mother and child) involves fundamental challenges to the achievement of social justice in the absence of a universal legal system. In May 2013, the Japanese Diet passed a bill approving Japan’s accession to the Hague Convention on the Civil Aspects of International Child Abduction. Signatories to the Convention such as the US had for many years criticized Japan for showing little interest in the increasing number of cross-national parental child abduction by Japanese nationals. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage. In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child’s right of access to both parents and violate the Convention rule against unilateral removal of the child from their habitual residence. Japan’s accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter.

However, in this paper I argue that in order to improve global social justice in relation to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.

Taking Action for the Recognition of a Lay Expertise over the Body: A Narrative Based Activism? the Case of Breast Cancer Patients’ Organisations

For thirty years, biomedicine is characterized by the development of clinical, organizational and legal structures that promote the “narrative based medicine”. These structures are expected to strengthen the “humanization of care” and the “patient participation in decision-making”, but they also inherently contain a risk of strengthening the social control of the patient, especially in cases where these narratives are used to assess the legitimacy of the patient’s demand for a medical intervention. According to Memmi (2003), a consequence of the development of the “narrative based medicine” for the therapeutic activism is the focus on issues related to the body, evidenced by the emergence of feminist and LGBTQ movements from the early 1970s and, more recently, the mobilization against the AIDS epidemic and the increase of patients’ organisations. Therefore, how to think, in the same analytical framework, the incentives to produce subjective narratives of the body in the privacy of the medical practice and the public claims for recognition of a lay expertise over the body from the patient’s organisations? My PhD thesis focuses on the shaping of an experiential expertise in and by the French-Belgian breast cancer patient’s organisations, a pathology strongly subject to the incentive to produce narratives because of the impairment to the performative femininity. In this paper, I propose on the one hand, a reflection on the theoretical and methodological challenges that seem to be facing the researcher when (s)he studies the patient’s presence in this medical context and, on the other hand, based on examples from my fieldwork, an illustration of how these activists frame their critique of the system through their personal awareness of the illness experience, transforming this awareness into a “politicized collective illness identity” (Brown et al. 2004) holding legitimacy from the discursive operation of generalization - from the singularity to the collective experience.

Linking Middle Class to Political Stability in Ghana

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The concept “Middle Class” conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world.

Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960's, 1970s and 1980s. But since the return to democratic rule in 1992, it has steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate.

This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gauge out who these middle class are? What classify them as middle class? To borrow Bourdieu's social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?

Transforming Legal Professions in Scandinavia

In Scandinavia, the legal profession has been regarded as the midwives of the modern state; the legal profession was totally dominant in the most important position in society. However, with the development of the welfare state and with neo-liberal management methods in various branches of the public and private sector the legal profession has been replaced from the most prominent positions. With globalization new markets have opened for Scandinavian lawyers, the question is however, if the profession at large gains from the new opportunities or if the profession is stratified. This paper examines how different parts of the profession react to new challenges for the legal profession.

La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro

Los procesos formativos de los doctorandos son heterogéneos, la socialización se deriva de las comunidades a las que pertenecen. La variación en los mecanismos y modalidades se relacionan con los procesos de formación, cognición y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es de un cierto shock con la realidad dificultad que se va superando según se logre un proceso de enculturación, mediante el cual se adquieren habilidades tácitas de competencia científica a través de ensayo y error hasta lograr la independencia para la publicación (Delamont y Atkinson:2001). El propósito es abonar conocimiento sobre el vínculo de la ciencia con la vida del doctorado y su inserción en la comunidad científica (Laude y Glaser, 2007) en bioquímica y ciencias sociales porque varían las tareas y las formas en las que publican resultados, aunque tengan en común transitar por procesos cognitivos, formativos y jugar roles en la construcción de sus rutas para convertirse en investigadores. Se parte de que en estos programas de doctorado se tiene, en distintos grados, reconocimiento del campo de conocimiento, consolidación de la disciplina de formación, prestigio institucional y liderazgo del grupo de referencia; factores que aumentan la probabilidad de que sus doctores devengan en científicos. Se presentan resultados parciales sobre las entrevistas de los egresados de estas disciplinas sobre su participación e integración en las actividades propias de la comunidad científica; se analiza la reconstrucción de sus experiencias en la formación doctoral y las posiciones que ocupan en los ámbitos de inserción laboral que reflejan su formación como científicos; finalmente, se reflexiona sobre el futuro de la socialización para la emergencia del científico.

Risk Perception and Risk Governance in East Asia

The aim of this paper is to examine salient characteristics of the public perception of risks in Beijing, Seoul, and Tokyo as capital cities of three major countries of East Asia and to explore multiple pathways to reflexive risk governance in East Asia as an important condition for second modern transformation. Based on the 2012 survey data of citizens from Beijing, Seoul, and Tokyo over the issues of risk society, risk governance, the future of East Asia, and second modernity, the authors will show 1) the overall consensus among East Asian citizens about the consequences of modernization and the future development; 2) the commonalities and differences in the public perception of risks in three capital cities; 3) the major factors which may shape a concrete paradigm of risk governance in each country. Reflexive risk governance at issue is second-modern in that state alone can no longer be able to adequately perceive and manage complex risks citizens face today, requiring a partnership though its forms are various. The authors will thus examine interactive patterns among government, experts, NGOs, and citizens in forming risk governance, drawing particular attention to the evolving procedures in which the bottom-up inputs from citizens and the extent of institutional responsiveness are linked together to produce efficient policy outcomes. The authors will argue that it is necessary for East Asia to delineate and combine two dimensions of risk governance, that is, local and cosmopolitan, depending on the types of risks to be regulated. In so doing, the authors want to demonstrate the overall commonalities of risk governance in East Asia, on the one hand, and specific characteristics involved in each country, on the other.

Transitional Justice and East Asian Community: Two Patterns of Civil Engagement

This paper deals with two salient patterns of civil engagement in South Korea and China as a collective response, first, to the lack of transitional justice on the part of Japan concerning war crimes committed by its imperial army and its colonial rule and to the difficulties in forming East Asian community in its genuine sense as we can see in European Union. Confronted with, and challenged by, this unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delineate contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among civil society of East Asian countries rejecting a state-centered and politically motivated nationalist drives. The authors argue that the advance in transitional justice in Japan is an important condition for East Asian community. At the same time, the authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pairs of the Japanese colonialists and victims of the war (created by atonement) can no longer be able to adequately perceive and manage complex risks citizens face today, requiring a partnership though its forms are various. The authors want to demonstrate the possibility of mutual understanding and solidarity among citizens and eventually overcoming the ghost of the past and establishing East Asian community.

Incorporation of Urban Differences in the Tokyo Metropolitan Complex

Incorporation of Urban Differences in the Tokyo Metropolitan Complex

Differences mark an essential element of urbanity. In the case of Tôkyô, differences seem to appear beyond significant income disparity, migrant or ethnic minorities. On the local scale differences create a finely grained, heterogeneous urban condition. This contribution asks, what are the modes and practise leading to an incorporation of these particular social and cultural elements, which give a locality certain irreplaceable urban qualities, into the dominant logics of space production.

I will investigate the process of incorporation by looking at two case studies: Shimokitazawa and Kitamoto. In Shimokitazawa accumulated efforts of citizens...
have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in a incremental and bottom-up process have been turned into an attraction for people beyond Shimokitazawa and a mainstream compatible youth culture, whereby the space is being deprived of its experienced dimension. Kimatomo in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tōkyō is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assets, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at the production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

HANCOCK, ROSEMARY* (University of Sydney, rosem@chrneck@sydney.edu.au)

Islamic Environmental Activism in the United States and United Kingdom

Social Movement theorists have, until recently, accepted after Marx that religion is the opium of the masses and inherent opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically ‘Islamic’ environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a concern for social justice. However, their underlying ideology is grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God’s representative on earth; the environment as a ‘sign’ from God in perfect, divinely ordained balance; and the necessity of following Islamic teachings in everyday life.

The global environmental movement and its organizations have heavily influenced IEOs, both in the framing of environmental crises, and in terms of their organizational structure and forms of action. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

Growing up in a One-Parent Family: Families and Child Wellbeing

Background
A large body of international literature has documented that children who grow up living with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect.

The Irish case is particularly interesting given the selective nature of non-marriage.

Methods
This article extends the literature in this area by employing propensity score matching using data from the first wave of the Growing up in Ireland child cohort study. We compare a range of child and family outcomes between a series of treatment groups (cohabiting parents, never-married one-parent families and step families) and a control group of married biological parents using semi-parametric estimators.

Results
Marriage has significant positive effects on child health outcomes, educational scores and psychological wellbeing. Selection effects however account for a non-trivial proportion of the differences in child outcomes at age 9 across families but hidden bias remains an important issue. The main finding is that the socio-economic disadvantages inherent in childbearing outside of marriage account for a non-trivial portion of the effects of family type.

Conclusions
The selection argument assessed in this paper maintains that childbearing outside of marriage does not necessarily cause negative consequences for child development. The majority of Irish mothers who give birth outside a traditional married setting come from impoverished backgrounds so that much of the adverse consequences on child development are an artefact of pre-existing socio-economic disadvantages resultant in different lifestyles, including factors such as rates of smoking during pregnancy and lower rates of breastfeeding.

Comparing the Governance of Novel Products and Processes of Biotechnology

The emergence of novel products and processes of biotechnology in medicine, industry and agriculture has been accompanied by promises of healthier, safer and more productive lives and societies. However, biotechnology has also served as a focus and catalyst of social controversy about the physical safety and social desirability of novel technologies. Such controversies have put the principles, institutions and instruments of governance, which has conventionally guided the interactions between science and society, under pressure. While researchers in articles on technology studies (STS) have done extensive work on the substance and processes of such controversies, they have devoted less effort to link their work to the broader tradition in political science and political sociology, which analyses more general principles and varieties of governance in modern societies.

This paper presents an attempt to start to fill this gap and develop a conceptual framework for comparing and analysing new and emerging modes of governance affiliated with biotechnology in the light of more general approaches to governance. We aim for a framework that can facilitate comparative inquiries and learning across different contexts and applications, e.g. biomedical and agricultural applications, and across different policies and policy domains, e.g. different regional, national and supranational settings.

We introduce five different dimensions of governance, which we discuss with empirical illustrations: 1) the purpose of governance, 2) the drivers of governance change, 3) temporalities of governance, 4) extension of the modes of governance, and 5) sources of acceptance/legitimacy.

HANSLMAIER, MICHAEL* (Criminological Research Institute, michael.hanslmaier@kfn.de)

Punitive Trends in Germany: What Role Does the Media Play?

In criminology there has been an active discussion about rising punitiveness in the United States and other Western societies (e.g. Garland, Wacquant). The present contribution aims to examine the factors that drive individual punitiveness. Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

This is done in a twofold way. Firstly, we look at patterns of media consumption and punitiveness at the micro level. The empirical analyses are based on three waves of a nationwide representative survey conducted in Germany in the years 2002, 2005 and 2010 by the Criminological Research Institute of Lower Saxony. Secondly, a content analysis of German newspapers assesses the way crime and punitiveness are represented in the media and to what extent this has changed over time (e.g. if newspapers evoke more empathy for victims). Therefore we analyzed trends in punitive attitudes over time.

This study confirms the impact of the media on punitiveness. Other factors on the macro level, for instance trends in the crime rates, which also may drive punitive attitudes will be discussed.

From Enclaves to Citadels: A Dynamic and Contested Transformation of Informal Settlements in Urban China

The economic reforms of the late seventies led to a massive urban expansion in China as villages were swallowed by the urban sprawl. The most striking example is Shenzhen, an area with 300,000 inhabitants grew into a metropolis of 14 million people over a couple of decades. Today only 3 million are formal residents of the city, and the rest of the people without local residency are excluded from subsidized amenities like education, health care and social housing. Most of the people that move into the city find accommodation in one of the 320 villages that have become embedded in the urban fabric. These urban villages provide rough-
ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests social and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led redevelopments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to fall on the same redevelopment path.

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Geryn, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in “scientific” knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no “correct” knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates online discussions on Wikipedia articles related to Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thiomersal). Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provides an online discussion space for each article. This offers rich space for technical milieu for examining how scientific knowledge is negotiated in an open online environment. This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

In this article, I will first define the term “intellectuals” and their political positions and roles to play, or their subjectivities, in terms of organic, critical, and professional. Then I will define the left and right intellectuals. Thirdly, I will examine contemporary Chinese intellectuals’ political positions. We will find that the left intellectuals are more likely to be organic to the government, and the right intellectuals are more likely to be critical of it. Fourthly, I will emphasize the complexity, subjectivity, and dynamics of intellectual politics in terms of the changeability of their political roles, the organic intellectuals’ living for or off politics, and the commonality between the left and right intellectuals. Finally, I will speculate on the possible future development of intellectual politics and their implications for China’s democratization.

The method of analysis in the paper is typological, i.e., I am categorizing intellectuals into left and right, and organic and critical. The representative texts I analyze use a typology that is mainly from the Internet and the traditional media because this is where the battle between the left (organic) and the right (critical) over the politics of the government is mainly waged.

This paper addresses “co-production of knowledge” (Jasanoff, 2004) in the context of social media. With the prevalence of Web 2.0 applications, such as Wikipedia and Twitter, laypeople are more often contributing to knowledge production, which ranges from sharing travel tips to product assessment (e.g., Allen, 2010).
with women's survival rates at reproductive age. (3) For women, their expanding lifespan and survival rates at reproductive age could have influenced reproductive decision making to minimize the risk of childbearing; even if the theoretical fertility rate meets the reproductive level, women's views may remain unchanged. In Japan, fertility is lower than the replacement level because women's cost-benefit imbalance for childbearing is too high.

Social Capital of Seven Countries/Areas in East Asia: From the Questionnaire Approach

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about 'social capital' both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawsaki City in Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that 'social capital' might differ from the degree of economic development and urbanization. We define 'social capital' as the index of four components: social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet. We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but 'social capital' differs in urban and rural areas, families, communities, and so on. This may also suggest that 'social capital' differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis. We have to carefully treat the outcome of the questionnaire, because the degree of 'social capital' does not imply the superiority or inferiority, nor the positive or negative, of social capital. We just declare the type of social relations and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

HARAGUCHI, YAYOI* (Ibaraki University, yayoih@mx.ibaraki.ac.jp)

Civil Movements in Low-Recognized Disaster Affected Areas

We discuss how civil movements have developed to protect children from radiation pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as "Affected Areas" by the government, although local residents have sought to gain institutional recognition of the damage due to nuclear accidents. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAAs).

It is important to pay attention to LRDAAs in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institutional recognition, residents in LRDAAs have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushima. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislatures, and the government of Japan. We analyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out that the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government's attitude toward citizen groups from oppositional to cooperative.

Toward the Inclusive Resilience for Both Individuals and Community

This presentation focuses on the different kinds of social conflicts between local people/individuals and the communities/local governments arising in the process of disaster rebuilding. It means that the cases of Hurricane Katrina and Fukushima Nuclear Power Plant Accidents are so much different, but there are a few similarities between two cases. One of them is contradiction between community resilience and individual resilience.

First, we would like to consider the case, for instance, that the poor and social minority have been excluded in the process of community rebuilding, while community prosperity are achieved to some extent and community resilience increases in the aftermath of disaster.

The city of New Orleans after Hurricane Katrina could be considered to be one of these cases. Since Hurricane Katrina, the city of New Orleans has been显得 being in attracting new industry and younger generation, although it lost its overall population than 2005. Over the same period, the population of African Americans is decreased the most among other racial and ethnic populations. Under New Urbanism, the role of public sector in education system, the medical and welfare services, and housing services have been drastically decreased or extinct.

In case of Fukushima, the local governments seem to have a strong and inherent demand of restoring the community as soon as possible, while some families, especially those with small children, may choose not to return with concern of health risk due to radioactive contamination. The more families choose to stay outside, the less resilient the community will be. Contradiction between community resilience and individual resilience could happen in both natural disasters and technological disasters. We will discuss two cases in depth at the presentation.

HARAMBAM, JARON* (Erasmus University Rotterdam, jaron.harambam@gmail.com)

Conspiracists’ Longings for a Pure Science

Conspiracists’ Longings for a Pure Science

Conspiracy theories have in recent decades become a popular cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a communality can be found in the challenge they pose to the epistemic authority of science. The social sciences have, however, simply conceived of conspiracy theories as bad science, making a parody out of the respectable scientific tradition, but in their moral condemnations these scholars leave unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch “conspiracy milieu” to explore what conspiracy theorists claim about science, scientists and the knowledge they produce. On the most abstract level is modern science critiqued for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge scientific experts produce which in practice is not living up to its a-social ideal of objectivity and disinterestedness. The last strand of critiques then centers around the power of social position scientific experts have established in relation to outsiders that subordinate laymen and protect their in-group. In sum, what these critiques articulate is a (particular) public understanding of science. Despite a strong critique of science, conspiracy theorists are not against science, but hold a rather ambivalent position: science is at once sacred for its intentions but profaned for its outcomes. I conclude by showing how these critiques resonate with both pre- and post-modern scientific understandings of science, and argue how the frality of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary western conspiracy theories.

HARAMBAM, JARON* (Erasmus University Rotterdam, jaron.harambam@gmail.com)

Strategy and Identity in the “Conspiracy Milieu”

Strategy and Identity in the “Conspiracy Milieu”

Conspiracy theories have in recent decades become a popular cultural phenomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of “conspiracy theorists” in rather abstract terms, they have paraphrased a story of an outdated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who these people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch “conspiracy milieu” to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a communality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these
changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order; practices therefore take place on the barricades. Adherents at last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

HARDERING, FRIEDERICKE* (Goethe-University, f.hardering@soz.uni-frankfurt.de)
Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work (Rosso, Dekas & Wrzesniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work.

The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations. Four distinct types of ascription of meaning emerged from the data: 1) reference to basic identification with work, 2) reference to meaningful aspects of work, 3) reference to the purpose of work for a greater good, 4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the “good life” and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyles include “Lifestyles of Health and Sustainability” (LOHAS) and “Lifestyles of Voluntary Simplicity” (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that those involved with these new lifestyle models may also have a notably different orientation to work.

We investigate the understanding of work held and articulated by members of these newly lifestyle groups. We reconstruct the understanding of work using the responses from four narrative interviews, two from representatives of the LOHAS lifestyle and two from the LOVOS, collected in Germany in 2012 and 2013. These four cases are a selection from a larger sample of 21 job-changers who described their new lifestyle and employment biographies. The central analytical questions of the research are health, sustainability, work-life balance, and simplicity. Our results show that the understanding of work as expressed by these new lifestyle representatives deviate strongly from common understandings of “normal work” or “organizational careers.” The respondents report that it’s very important that their work mirrors their broader values on the dimensions of self-sufficiency, deciding for themselves rather than being driven by outside forces and demands, health-consciousness, and meaningfulness.

HARDY, JANE* (University of Hertfordshire, j.a.hardy@herts.ac.uk)
China in the Global Division of Labour: Contradictions and Class Relations

By examining the contradictions in China’s model of growth and the shifting dynamics of its place in the global division of labour, the aim of this paper is to understand the tensions in the class relations that underpin the Chinese ‘success story’. It will provide the contextual underpinnings necessary for understanding the environment in which increasingly Restive Chinese labour is located. The paper will argue that China’s integration with global capitalism and global circuits of capital have been profoundly shaped by the early 1970s, with its meteoric growth, but has also sharply increased its economic vulnerability as manifested in its exposure during the 2008 crisis. High rates of growth, driven by unprecedented accumulation that outstrips private consumption, has increased China’s reliance on exports, particularly to the core capitalist economies of the United States and the European Union. Reflecting fears that this scale of accumulation is not sustainable, the government’s 12th Five Year Plan (2011 to 2015) called for slower growth and rebalancing from investment to consumption, in part at least through higher wages. Such an approach, however, presents a threat to China’s comparative advantage based on low wages and super-exploitation. Some regions and sectors are already under strain and production has moved within China or to other cheaper economies. In addition, the combined and uneven nature of China’s development, sectorally and regionally, underpins the fractured interests of the ruling class. Finally, the presentation will point to the massive infusion of financial capital to sustain the growth and wealth creation of the Restive Chinese population, to the extent that this has outstripped the domestic savings base.

This paper shows that certain images captured by such technologies are increasingly harvested by anonymous users, who seek out photographs they find notable and re-share them. Such ‘notable’ images frequently include images of topless women, or women sunbathing, or women merely dressed in a fashion the anonymous crowd feels is worthy of comment. This paper argues that geo-immersive surveillance thereby replicates the male gaze in a manner that has adverse impacts for the claims of a range of equity-seeking groups, particularly but not exclusively women.

HARGREAVES, STUART* (The Chinese University of Hong Kong, stuart.hargreaves@cuhk.edu.hk)
Geo-Immersive Technologies & the Male Gaze

Geo-immersive technologies are a set of nascent services that digitally record public spaces and then make the imagery accessible to anyone with an internet connection. The best known is perhaps Google’s StreetView service. This paper argues that by transmitting images of public spaces to anonymous groups of billions, far removed both spatially and temporally from the site of the initial public behaviour, these technologies form a new kind of public street surveillance.

This paper shows that certain images captured by such technologies are increasingly harvested by anonymous users, who seek out photographs they find notable and re-share them. Such ‘notable’ images frequently include images of topless women, or women sunbathing, or women merely dressed in a fashion the anonymous crowd feels is worthy of comment. This paper argues that geo-immersive surveillance thereby replicates the male gaze in a manner that has adverse impacts for the claims of a range of equity-seeking groups, particularly but not exclusively women.

In most jurisdictions, such photography is nonetheless largely unregulated. Individuals are typically treated as having no reasonable expectation of privacy while in public and thus are granted no legal recourse to prevent such “street photography” or seek ex post facto remedy. At the same time, Google and other service providers make no efforts to enforce copyright over the imagery they publish, and thus certain photographs tend to rapidly go ‘viral’, increasing their potential to create harm.

This paper suggests that this situation demands regulatory change. The balance between privacy claims in public and legitimate claims for freedom of expression through ‘street photography’ must be better struck in a way that acknowledges the differing ways in which surveillance is experienced by different groups, who may be more susceptible to surveillance-related harms.

HARJU, ANNE* (Malmö University, anne.harju@mah.se)
AKERBLOM, ANNIKA (Malmö University)
Academic Discourse Meets Praxis Discourse in Group Tutoring

The aim of this study is to explore the meeting of academic and praxis discourses in group tutoring of undergraduate’s thesis. The point of departure is that the quality of the thesis, especially at master level, at the teacher education programs has been questioned by The Swedish National Agency for Higher Education (2006). The main critic concerns lack of academic qualities, such as failing theoretical awareness, weak analysis, normativity and lack of critical writing and thinking. The teacher education program is, however, primarily defined as a professional training program meaning that students to a large extent are focusing on the practical aspects of the profession. Two differing discourses can thus be identified, and this contradiction is explored by investigating the difference between students and the supervisor’s perceptions of the purpose of the thesis writing. The results from the analysis of the transcribed extracts of
Children's Reproduction of Power Relations in the City

This study investigates power relations in a small city in southern Sweden. It is a city where there have been radical social changes in the population structure due to a major inflow of immigrants. The social situation can best be described as filled with tension between different groups. In relation to the tension there is a strong and dominant narrative about "us" and "them", relating to the categories "Swedes" and "immigrants". The study has two aims in relation to this narrative. One is to explore how it is used to reproduce power relations in the city. The second aim is to investigate how children actively use and reformulate the narrative and the power relations within it.

The point of departure is the assumption that human beings are embedded in figurations (families, social class, ethnic groups, nations etc.) containing different power ratios that are transferred from one generation to another (Elias 2009). Socialization is thus central in the transmission of power ratios, as children acquire adult standards of behavior and social norms. However, children are from, childhood sociology's point of view, also active agents involved in creating and influencing their own and others' lives, which implies that socialization is not equal to adaptation and internalization, but also to children's negotiation, sharing and creation of culture (Allison, Jenkins and Prout 1998, Corsaro 2005). In the study the children's contribution to reproduction and reformulation, in relation to the narrative of "us" and "them", is in line with William Corsaro's (2005) concept of interpretative reproduction. The term interpretative captures children's participation in their own unique peer cultures by creatively taking information from the adult world to address their own peer concerns, while the term reproduction captures the idea that children not only internalize society and culture, but actively contribute to cultural production and change.

Educational Institutions As Matting Markets

Educational institutions are important settings in which future partners meet and where inequalities in the current and next generation formation emerge. Yet there is little research on educational institutions as mating markets, partly due to limitations with existing data. In this study, we use population register data to follow the educational histories of an entire birth cohort of Swedes, born in 1970. We are able to identify the educational institutions the members of this cohort attended, and also how their partners' educational paths overlapped in these institutions. We focus on high schools (Gymnasium) and universities. As the outcome, we focus on first births and analyze assortative mating through the characteristics of the parents. We estimate which share of our cohort members overlapped with "(met)" their partner in high school or university and use contextual level information on the structure and social compositions of the high schools and universities attended to analyze the probability of meeting one's partner in these institutions, and on the probability of assortative mating according to age, ethnicity, and class background. Our preliminary results suggest that up to 40 % of tertiarily educationally homogamous couples have met in university, and that the social and demographic compositions of both high schools and universities shape meeting chances and mating along demographic and social lines.

Newspaper Messages about Public and Private Health-Care Services in Australia: The Entrenchment of Unequal Choice

Media representations of health care can perpetuate stereotypes about public and private systems that unequally shape consumers' perceptions and enactment of health-care choice. For instance, recent research about Australians' (dis) trust of public and private health care suggests that participants' concerns about long public hospital waiting lists echo prominent media messages, which might in turn contribute to the fact that one in two Australians supplement Medicare (the universal public health insurance scheme) with private insurance. As part of a larger study about health-care choice, we seek to understand ways in which the media represent both public and private health services, and their role in structuring different 'choice' pathways through Australia's health-care maze.

This paper presents results from an analysis of newspaper reporting of public and private health care. The sample consists of newspaper articles and letters dealing with public and private health services, private insurance and Medicare from 'broadsheet' and 'tabloid' newspapers in three Australian states (2011-13). These texts were coded for positive, negative and neutral messages about public and private care and examined for representations of choice, trust and responsibility. In line with the theoretical framework for our study, we also focused on articles that presented different aspects of 'health-care capital' – economic, social, cultural, symbolic or geographic – as influencing consumers' capacity for health-care choice. The analysis reveals variation by state, newspaper, and over time.

We found that articles in the populist tabloid papers are dominated by negative, frightening messages about the "crisis" in public health systems and, to a lesser extent, the threat of rising costs of private health insurance. The 'quality' broadsheets present more balanced accounts, with articles typically combining positive, negative and neutral messages. Media representations thus contribute to the differential structuring of health-care choice, potentially compromising quality of care and exacerbating inequality.

Researching Racism: Reflections on Different Methodological Approaches to Recording People's Experiences of Racism

This paper combines two contrasting and complementing methodologies to explore young people's experiences of racism in everyday life. The paper will reflect on how the use of qualitative and quantitative methods can lead us to different understandings of experienced racism. The first method uses ethnography and non-structured interviews which do not directly ask respondents to talk about their experiences of racism. The second method examines data from the
Understanding Society (UK) survey, which records people's responses to specific questions about their own and others' experiences of racism.

What emerged is that in the qualitative project, participants found it difficult to name racism and deny that quite explicit forms of racism they had experienced was 'really' racism. In the survey, respondents recorded widespread racism which they and/or people they knew had experienced. This paper considers some of the implications of these apparently divergent findings. The use of ready-structured questions is helpful in alerting us to the persisting prevalence of racism. This is facilitated when survey respondents are not actively encouraged to reflect on the personal or societal factors that underpin it. However, the other hand highlights how confronting racism can be difficult. The paper argues the process of interview can in itself help reveal a great deal about the nature of different forms of racism. The paper also indicates that this has worrying implications for the ways in which racism can be resisted in everyday life when it can be so difficult to talk about.

HARRIKARI, TIMO* (University of Helsinki, timo.harrikari@helsinki.fi)
Securitizing Childhood – Childhood and Youth in Finnish Crime Prevention Programmes

Several international analyses of criminal justice and social policy have revealed an increased focus on children and young people during the past decades. One of the key characteristics of the recent interest has been a new concerned tone, even with signs of moral panic. This type of public interest originates from the turn in political policy in the US and UK in the 1970s and 1980s, leading to a punitive turn in youth crime policy, to the rise of the risk agenda and, in general, to the intensification of formal social control towards children, young people and families with children.

The described transformation has expanded into a wide-scale international phenomenon, an alienation from one another. The development on have also touched the Nordic welfare states. Consequently, the presentation addresses the issue of how children and young people are constructed and governed in Finland's crime prevention and securitizing programmes and projects. The analysed data consists of abstracts and appraisals of 88 local securitizing programs.

The results of the analysis suggest that, in many ways, the programmes reflect a post-recession situation in Finnish society. Children and young people are dominantly positioned as 'risks' or as 'exposed to risks' and the goals and means of the programmes are connected with intensifying their control. The results suggest that the status of security speech and crime prevention technologies within the entity of governing childhood and youth require critical consideration.

The presentation is based on the article published in Youth Justice in April 2013.

Governing Global Capital: Professions and Regional Competition In Offshore Finance

How do professions affect the configuration of political economies worldwide? This study addresses the question through interviews with members of a new trans-national profession—wealth management—whose innovations are reshaping the balance of power in global finance. Wealth managers specialize in helping elites avoid taxes and other forms of regulation. The study documents how the wealthy and upper class purchase their foods at national and transnational supermarkets, while residents of Monterrey, Mexico purchase their foods at national and transnational supermarkets, while residents of Monterrey, Mexico.

The agri-food system in Monterrey, Mexico is structured by three segments. The third segment is an emerging alternative food network that emphasizes locally produced foods, distinctive traditional foods, heirloom varieties of vegetables, organic farming, and artisanal food production. This system attracts both middle class and upper class shoppers, who find these foods in health food stores, niche shops, and periodic alternative food markets. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one's consumption from the transnational agri-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

CHENG, MARIAH (Carolina Population Center, University of North Carolina at Chapel Hill)
Family Structure Models and Nonmarital Childbearing in the Transition to Adulthood

Nonmarital childbearing is now a common fertility event during the transition to adulthood in the America. Current estimates indicate more than forty percent of births occur to unmarried women in the U.S., however, the image of a single, unmarried mother raising a child on her own is no longer accurate. This paper uses national data from Add Health to document the relationship contexts (co-habitation, dating relationship, no relationship) in which nonmarital first births occur and model the environmental influences of family structure on nonmarital first births that women aged 24-32 have experienced by 2008-09. We focus particularly on collective socialization effects of family structure models during adolescence by exploiting Add Health's unique design to measure family structure in the multiple social contexts of adolescent life, including the family, peer group, school, and neighborhood. We analyze both traditional (prevalence of two-parent families) and contemporary (prevalence of single-parent families) family structure models in these multiple social contexts during adolescence on subsequent nonmarital childbearing and the circumstances of nonmarital first births. Controlling for other economic and policy-relevant determinants of nonmarital childbearing and socioeconomic confounding factors, we find robust and significant effects of family structure models in the multiple contexts of adolescents' lives on subsequent nonmarital childbearing that are independent and additive. When the prevalence of two-parent families is low or the prevalence of single-parent families is high, young adults face higher risks of nonmarital childbearing, and these risks are additive across the family, peer group, and school or neighborhood context.

SCULLY, BEN (University of Witwatersrand)
Before and Beyond Neoliberalism: The Development Of Precarity And The Emerging Alternative

In this paper we contend that, to understand what might exist beyond neoliberalism, we need to rethink processes of capitalist development before neoliberalism. We make two arguments.

First, for poorer countries, processes of commodification which are highlighted as evidence of neoliberalism often predate the neoliberal era. Third World development policies tended to make social and economic life more precarious as a corollary to capital accumulation, before neoliberalism as an ideology took hold.

Second, intense theoretical focus on neoliberalism obscures a recent shift in the global South towards a tendential and tangible de-commodification of social
life. In fact, during the height of what is widely accepted as the period of neoliberal triumph in many countries across the global South, the relationship between work, land, and welfare has begun to transform in ways that look quite different from what the dominant paradigm leads us to expect.

The most salient examples today are state-led social protection programs which have been implemented across the former Third World. For those who lament that the post-2008 crisis has produced no Polanyian double movement, we argue that these state-driven social assistance policies are precisely such a mechanism. These emerged not out of technocratic fixes from above but often out of political and social struggles from below. The rise and spread of these programs are not only in stark contrast to popular conceptions of a neoliberal reinforcement, but are specifically targeted at social strata whose precarity has been largely generated by developmental policies which predated the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of social protection programs in the past two decades in the global South, and qualitative comparisons of these programs in the BICS – Brazil, India, China and South Africa – as evidence of our argument.

HARRIS, KEVAN* (Princeton University, kevanharris@gmail.com)

Two, Three, Many Middle Classes: Theorizing Middle Class Power From a Global Perspective

Analyses of the post-2008 global wave of social protest have generally celebrated the rise of educated middle classes as a driver of historical change as eagerly as they celebrated the destruction of the ruling proletariat. In the global South, middle classes are analyzed as both object and subject: the goal of economic growth is a middle-class society and the middle class is assumed to be the most suitable base for political development. Yet public discussion about the middle class occurs with a set of implicit assumptions which underpin this sort of teleological thinking, many of which derive from the application of late 19th-early 20th century sociological theory to the 21st century world economy. As an intervention in contemporary debates over class and protest, in this paper I reconstruct the concept of the middle class for the purpose of analyzing the current political economy of middle-income countries. To do so, I historicize middle class formation – from the popular and political characteristics of class formation on a world-historical scale over the past several centuries. I argue that a key secular process of the history of capitalism is the production of “middling” classes, yet these classes themselves are transformed along with the capitalist world economy. Social theory has tended to rely on a particular instance of this process, the rise of the 19th century European bourgeoisie to state power, as a general theory of class formation. This Whiggish story is arguably the main cause of confusion within the debate over the post-2008 global protest wave. To analyze what is actually new about the “new middle class” of the late 20th and early 21st centuries for the global South, I create a typology of four ideal-type middle classes and identify their social position and structural power vis-a-vis the state and economy.

HARVEY, DAINA* (College of the Holy Cross, dharvey@holycross.edu)

“disaster Capitalism’, Regular Capitalism, and the Search for a Big Mac: Undermining Assumptions of What is to be Done’ for Marginalized Communities in the Aftermath of Disasters.”

In the aftermath of Hurricane Katrina and the federal levee failures the EPA declared 100% of the homes in the Lower Ninth Ward uninhabitable. Nearly five years later there was no police or fire station, no continuously operating health clinic, no grocery store, no community center, and one school where before there had been two. Public schools and the civic spaces were were war zones. As the Disnecification of New Orleans, residents of the Lower Ninth Ward were dealing with what Harvey (2013) has called “secondary vicinies”—social policies that have resulted in the hyper-marginalization of the community. In the midst of this abdication non-profits and volunteers have sought to fill the void left by the State. These non-profits have been staffed mainly by non-residents who have brought ideas on rebuilding sustainable communities and environmental justice, and who have been weary of what Klein (2007) has called “disaster capitalism”—which involves, in part, corporations (with the aid of government) using the “shock and awe” of the aftermath to seize taken-for-granted rights and raid the public sphere. Rather than embracing the social justice mission of many visitors and volunteers, residents simply want their neighborhood back. In many instance these ideas and efforts have been rejected as urban experimentation. Rather than a green-grocer residents want a Wal-Mart. Many have opposed projects like rebuilding roads with permeable concrete, the installation of solar panels, Kommer’s markets, and the widespread use of vacated lots for guerilla gardening. This paper, based on thirteen months of field-work in the Lower Ninth Ward, looks at the problems of rebuilding marginalized communities through volunteer labor in the aftermath of disasters. Ultimately, I suggest that these problems result in a process of misrecognition whereby rebuilding efforts stall.

is only bringing public works of long lines of a huge coastal levee like the Great Wall. Despite being a fisherman's village, new life will start away from the ocean and with no ocean view.

Among residents, there are a lot of clashes of interests. Within a household, we can find a generational gap between the retired elderly with a pension and the younger generation who seeks a job and is raising children. While the former wants to stay within the village, the latter hopes to move out of the village, to an inland area more convenient for getting higher income, shopping, transportation and education. The town forecasts the population aging rate of over 65% of elderly will increase to 38% in the year of 2033, from 28% before the tsunami attack. The population will decrease to less than 13,000 from 17,000. How can we support the recovering process?

Comparison of the "Examination Hell" (JP) and "Testing Wars" (US)

Comparison of the Examination Hell and the Testing Wars is the comparison of Japanese school examination and American school testing, mainly in the late 19th century.

Specifically, for Japanese examination, I will explain how Japanese elementary school examination had been composed during the very short years of the beginning of Meiji Era, from 1868 to about 1879. It seems to inherit the ethos of being official from the feudal ages when only some portions of the Samurai Class (ruling class) executed examinations for the sake of encouraging prudent students of the Samurai. However, it got the new "shape" or "form" from Western school examination information. Judging from the remaining foreign books of those ages, it is likely to say they came mainly from America. After Western information, Japanese examination got many rule books as well as guide books.

For American testing, William Reese's Testing Wars in the Public Schools: A Forgotten History, (2013), tells us many about how testing in 19th century American public schools had flourished under the influence of Europe. The years, from 1868 to about 1879, when the information about the testing of this country came to Japan and utilized much, were such era that standardized testing was almost conquer- ing all States, regardless of the good will to improve teaching by using statistics and testing; days of test's side effects.

My comparison would be made on both examinations' (testings') procedure of implementation, process of execution, standards for scoring, logic and ways of its utilizations and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people's understanding of assessment and evalua- tion of both culture differ.

Generations and Globalization: Shifting Family Relations in a Postindustrial Society

This presentation provides a cultural sociology of changing intergenerational relations in the face of globalization, focusing on a historized account of shifting family relations that have dramatically altered the landscape for elderly people in Japan today. The demographic and economic transformations that have impacted expectations of social welfare and the ground rules of social obligations will also be examined as part of a broader trend in postindustrial societies. Drawing on her work on comparative aging, Hashimoto will discuss how these shifts have influenced the cultural ideals of aging in the global era.

Multi-Sensory Experiences at Aso Farmland, Kumamoto, Japan

Aso Farmland is a multi-sensorial experience for tourists. The farm stay resort allows tourists to consume local food produced in the region at 11 restaurants, exercise in an activity zone, and enjoy a variety of onsen baths including mud baths, as well as 13 heated saunas (earth power spas) lined with different herbs and minerals as well as a cold dome. Visitors can place their feet in a pool of fish for foot care and they can visit a petting zoo. There is an agricultural production facility on site as well as a farmers' market. Tourists experience a range of aromas from sulphur baths, to perfumed and herb baths to the aroma of a variety of cuisines and the busy market place and deli. An arts and crafts centre allows tourist to make a variety of crafts including music boxes, paper crafts, candles and snow globes. Accommodation is in dome shaped rooms infused with an antioxidant

(anti-aging) solution. The paper will look at attempts by the attraction to provide a stimulating environment taking visitors beyond their reliance on just sight to engage in a more holistic experience.

The Non-Nationalized Narrative of Two Korean School Graduates

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean school (Hosoo school) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been iden- tied with North Korea, and Korean school students are exposed to the outside prejudice that they are "brainwashed, anti-Japanese children.”

In this paper, based on an interview about whether it was appropriate to ex- clude Korean schools from the waiver program, I present the complicated realities of an insider’s life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation (zainichi) Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviewer is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as "the occasion to put my life in order," I could hear these insider's life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewees' reasons and experiences are different from each other, the opinions they arrive at in this interview are similar:
1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school.
2) Neither interviewee entirely denies the value of Korean school itself.
3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one another? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (i.e. North Korean) framework.

The Discursive Construction and Performance of Gendered Identity on Social Media

This article looks at the construction and performance of gendered identity through the medium of social media. Data was collected from a sub-section of Facebook webpages belonging to the Slut Walk movement. Our analysis suggests that gender is constructed through the subjects’ participation in the ‘post-feminist masquerade’ – through which their gendered identity is defined in relation to a hegemonic masculine ideal. This situates the network of sites within a post-feminist context, characterised by the ambivalent and appropriative treatment of feminism. Acts of resistance are framed as individual, momentary ruptures of Judith Butler’s heterosexual matrix of ‘cultural intelligibility’. The online context of these ruptures is found to vest a creative potential, by removing the constraints of time and location, indicating that the impact of these ruptures may extend beyond its immediate environment.

What Explains the Rise of Ethnic Minority Tensions in China?

In the past few years there has been a rise of flash ethnic violence in the rela- tively developed areas of China such as Beijing and Shanghai, to the far-reaching Western provinces of Xinjiang and Tibet. While the state’s response to ethnic unrest oscillates between ‘soft’ (e.g. funding ethno-cultural activities) and ‘hard’ (e.g. increasing security mechanisms) policies, this paper suggests that this strategy will do little to address the underlying causes behind ethnic minority tensions in the long-term. Instead, it will argue that the most culpable factor behind cur- rent ethnic tensions are socio-economically rooted: Minorities are increasingly experiencing ‘ethnic penalties’ in the labour market, whereby their comparable educational attainment and training, akin to the majority ethnic group, Hans, do not match similar labour market outcomes. While intuitively, overt discrimination insofar as one’s physical appearance or linguistic abilities, and first generation migrant status, are often cited as prevailing reasons to explain this penalty, the findings presented in this paper will suggest that explanatory factors such as an individual’s social network, a firm’s working culture, and social trust in a com

Over-fishing and eutrophication caused by agricultural nutrient run-off comprises two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure from Eugene Berliner’s work on design principles, arguing that a selection of these principles fruitfully could be scaled to serve as analytical tools at the international level. The principles of conflict resolution mechanisms, nested enterprises and monitoring are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute hard cases in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nestlessness is often incomplete, that is, the interventional fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

*The Co-Construction of Identity As ‘Japanese Women Living Abroad’ in Interview Narratives*

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere representation of past events, but should be understood as a process of co-construction influenced by the social norms of their new/previous communities.

In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bamberg 1997, De Fina 2003, De Fina, Shiffrin and Bamberg 2006 and others), analytical methods of small stories (Bamberg 2004, Georgakopoulou 2007) and multimodality (Goodwin 1981, 1994, 2006, McNeill 1992, 2005, Kataoka 2011).

Analysis of the data shows how co-construction is manifested in linguistic and other semiotic resources - final particles, supportive giving/receiving verbs, nodding, laughter, dysfluency, overlapping, gesture, eye gaze, and so on - appearing in interview narratives. This presentation will reveal that 1) how the narrative message can be conveyed by not only language, but also other semiotic resources, 2) the participants of the conversation put much value on collaboratively constructing their mutual identities in the ‘here and now’ situation, rather than the contents of their storytelling, 3) they inevitably encounter aspects of internal conflict derived from home and abroad, and 4) they represent their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

**HATA, MIKAKO** (Hanazono University, hata.mikako@gmail.com)

*Reading Comics with Ears*

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopeia, emana, and even gutters convey meanings non-verbally. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page.

Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made speech translation of comics catering for visually challenged people. Although translating images to voice information has been already practiced in comics-to-speech translation it is necessary to bring not only characters’ behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, while others have never seen pages and treat comics as entertainment-oriented stories, in other words they are not so interested in the visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works.

The focal points of this paper are both on translators’ experiences of reproducing comics with oral language and on readers’ experiences of reading comics with ears. This paper describes how comics communicate with readers without using images, via translators’ modest intervention, and examines what for people read comics.

*“We Want to Report about Everything!” How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation*

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partners are obliged to deliver before they receive the next slice of funding.

The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to "report about everything", meaning: not only what the donor wants to hear. Aspects of "telling the whole story", including grievances outside the scope of the donor’s program, are interpreted as expressions of dissent aimed towards the construction of a dialogic relationship between donors and recipients. It is discussed whether this is possible within or alongside with RBM, or whether dialogue based on local experiences implies a rejection of the RBM framework.

Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence without Silencing?

This paper starts from the observation that most of the literature on decision-making is concerned with methodological individualism: at least in the western world, it seems that a decision can only be understood as the outcome of an individual act or an aggregate thereof (voting). Nevertheless, genuinely collective practices of decision-making (consensus) are widespread across institutional and cultural settings, but the collective dimension of these is inadequately understood, leading to confusion between unanimity (everyone agrees) and consensus (no one disagrees). Both researchers and practitioners of decision-making have largely avoided this issue, so that empirical studies often remain unclear about how exactly a decision was made, and decision-making groups sometimes find themselves in the paradoxical situation of disagreeing whether they have reached consensus or not.

Based on participant observation of numerous meetings among global justice activists using the consensus principle, this study seeks to untangle some of the conceptual confusion through a detailed interactional analysis of meetings as communicative events. Focusing on the final stage of the decision-making process, the paper identifies four types of consensus: imposed, acclaimed, hasty, and considerate. Drawing on previous findings from conversation analysis, it is argued that although all they observe the absence of voiced disagreement, they differ significantly in how this absence is constructed interactionally. Therefore, what appears to be the same mode of decision-making – consensus – should be treated as different modes, both by researchers and practitioners.

The paper concludes by discussing the consequences of this analysis for radical democracy and anti-hegemonic practice, wondering whether it is possible to produce silence without silence.

Towards a Post-Hermeneutic Phenomenology

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be interpreted in order to lay bare an underlying and abstract meaning. Thus we tend to subject the mutitudinousness of lived experiences to different kinds of selection and reduction implied by that production of knowledge aiming to render the world in clarity.

Nevertheless, the blurriness of emotive and physical reactions to the world can be said to be due not to their impreciseness but rather to their richness in nuance and complexity. Hence, they may be much precise vehicles of meaning not in spite of but on account of their indistinctness.

In this paper we ask what epistemological potentials might be revealed if we explore our lived experiences in their own right rather than try to explicate them and make them conclusive. Based on empirical research of our own, we turn our interest towards the possibilities of understanding bodily reactions during the process of research as being informative in themselves and discuss possibilities for translating them into scientific writings that likewise invites a reading not only with the intellect but also with the senses. We propose an approach to both the making and communication of knowledge, which could be called post-hermeneutic – a phenomenology not aiming at fixation of identified significance, but at a knowing that includes and even takes advantage of the fluctuating and manifold ways we experience the world when we move in it instead of stopping to make analysis.

Hormone Decline and Aging: Sociology of a Medical Promise

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine's hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the myths of the period of youth, for thousands of years and in a great many civilizations. This idea emerges regularly in the public and scientific space, from the early 20th Century attempts to transplant animal glands in order to restore the vitality of people's youthful state to the forecasts made about "regenerative" medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have even intensified and become more structured, with the development of so-called "anti-aging" medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body's functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible "youth pill".

It this presentation we will first examine the construction of DHEA's anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, its impact on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

Voting As Symbolic Practice: Comparing Electoral Rituals in France and Britain

Voting is a symbolic practice. Yet as political scientists focus either on the outcomes of elections or on citizens' motivations to vote in the first place – typically by building models of the voter on assumptions made about the voter's mind – we tend to forget the symbolic significance of the act itself and the meaning and impact it has on the participants. In this paper we seek to restore a focus on this symbolic dimension, exploring some of the differences between the ritualisation of democracy through an analysis of voting rituals in France and Britain. We explore what citizens do when they vote and the extent to which these actions reflect and contribute to construct particular visions of the polity and the place of citizens within it. In particular we pay attention to how the voter's choice is constructed as either something that can be performed and hence displayed publicly or as irredeemably secret and private. We consider how such typically taken-for-granted practices help us to understand how politics have been constituted and reproduced on the basis of divergent assumptions about the boundaries of the public and the private.

Company Brand Vs. Professionalism: The Marginalization of Women in TV Newsrooms in Japan

This paper analyzes Japanese media elites from a gender perspective in order to identify why male domination stubbornly persists even in a working environment where institutional arrangements all seem to support women, such as paid maternity leave and an equal payment agreement. We argue that the pervasive domination of corporate culture, rather than journalistic professionalism, is the source of the persistent marginalization of women in the media sector.

A growing number of women have entered the world of corporate journalism in Japan since the late 80s after the implementation of the Equal Employment Opportunity Law in 1986, but the ratio of women in senior management positions still remains at the lowest level among advanced industrial countries, according to a survey by the International Women's Media Foundation in 2010.

Having conducted in-depth interviews on the social/educational background, professional career and life course of 21 senior news editors ranging from their late 40s to late 50s at leading TV stations in Japan, we identified clear differences between the genders in their understandings of the role of professionalism and the brands of the companies to which they belong. Female journalists tend to rely more on meritocratic professionalism based upon individual skills and achievements in moving up the corporate ladder, whereas their male counterparts feel their success largely owes to informal networks and prestigious corporate brands to which they belong.

Although gender studies has emphasized the masculine nature of the conception of professionalism, and the sociology of work has revealed the self-centered ideology underlying professionalism in many occupations, we contend that playing down the role of professionals and professionalism imposes a substantial brake on change in terms of gender equality within an occupation.

Integrity Management and Fantasy Planning: The San Bruno Pipeline Rupture

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno, near San Francisco, California. The resultant fire burned for two days. Eight people died, and thirty eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using document analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke’s work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than functional, role in this organization. ‘Knowing’ about the system was grounded in elaborate graphs purporting to show risk was declining, and yet this analysis was only tenuously linked to the actual level of danger. In an environment of cost cutting, expensive inspection work was tailored simply to meet available budgets. Small failures were repaired and then dismissed from the collective memory so that valuable opportunities for learning in this uncertain environment were ignored.

This professional disposition on the part of the expert engineers was embedded in a broader organisational context. The paper further argues that senior management decisions about cost cutting were divorced from the real world impact of the historical restructuring of the domestic gas industry overall and the low status of relevant industry expertise at senior management levels. We conclude that this ‘organisational accident’ provides important lessons for all organisations relying on technical expertise to prevent low frequency, but high consequence events.

Knowing Stories That Matter: Learning for Effective Safety Decision Making

Ongoing safe operation of complex, tightly coupled technologies such as hydrocarbon production and transportation, air traffic control and nuclear power generation depends on effective decision making by those in key positions. Safety studies often focus on the extent to which actions of operational personnel in particular are dictated by procedures or rules and hence reinforce the need for compliance to ensure the best outcomes. This paper directs attention to a different area – the judgements made by experts in the cases that are not covered by rules and, in particular, the key role of stories and storytelling.

This ethnographic research draws on literature related to high reliability theory, systems thinking and storytelling to examine how experts working in diverse critical contexts use stories to share and make sense of their own experiences. It argues that these stories are vital to effective decision making as a result of both the general and specific lessons that they embody. Our analysis shows that experts use stories as parables to nurture their safety imagination. Stories are also embedded in work practices to support decision making in the moment. Finally, stories are strongly linked to organisational learning for experts and their less experienced colleagues. We argue that the increased focus on incident reporting systems in hazardous industries is driven at least in part by a consideration of organisational learning, could be improved to better facilitate story-based learning. Finally, we report early findings of our current research regarding how best to integrate story-based learning with other formal systems for professional development and reporting.
The Peace-Seeking Body in East African Pastoral Society

When approaching anthropologically to emergence of the new disease in the way that goes beyond a dichotomy between nature and culture, the phenomenological body, which enables to attach significance to experience, is often assumed. While its silent power of representation can be explicated, the social and political power is removed from consideration. To illuminate the bodily power in toto, the paper describes the process of embodiment of political violence with reference to local medicine and the subsistence activity for healing patients. The Karimojong, Dodoth and jie in northeastern Uganda and the Turkana in Northwestern Kenya live in the dry savanna, keeping cattle, goats and sheep. Their living setting, the Uganda-Kenya international boundary, is trans-local-national multi-layered space, where armed violent conflict has occurred endlessly in the wake of the spread of automatic rifles and forcible pacification. Political violence separates herders’ bodies as grounds of cultural existence from particular place and time and creates new classification, and then each body becomes the antagonistic referent. Since 2000s' disarmament policy in the area, the epidemic chronic disease (called as ngikerep) has been generalized. It has variety of symptoms that represent headache, nausea, nightmare, insensitivity to pain, confusional state and people like returned soldiers, killers, and survivors suffer from it. Its cause is identified based on symptoms and life story narrated by the patient and family. Methods of treatment comprise of music and kinetic therapy, dialogue with a healer, and looking after the pastoral animal herd. To cope with ngikerep is to unlearn the culture of violence. People think peace only can heal the disease, and so it may relate to the peace-seeking body which underlies medium- to long-term peace-building.

"Religion, Culture and Cultural Modernization"

So far there is no general consensus on the definition of religion, culture and cultural modernization. And here religion has been regarded as a socio-cultural phenomenon and refers to an organized system of beliefs, ceremonies, and rules used to worship God or the supernatural power, culture refers to the complex of knowledge, institution and ideas that can impact and explain human lifestyles, and cultural modernization is an expression of the modernization phenomenon in the cultural sphere. Cultural sphere includes fields related to the creation, production, distribution, provision, conservation and consumption of cultures. Modernization has been a worldwide phenomenon and a profound change of human civilizations since the 18th century. It includes not only the great change and transformation from traditional to modern politics, economy, society and culture, but also all human development and the rational protection of the natural environment at present, and meanwhile cultural diversity and religions exist across space and time.

In the process of world modernization, what happen for religions and cultures? Does secularization takes place anywhere? Does tradition disappear? Does modern cultures divided from traditional cultures totally? This paper will discuss the changes and relationships among them since 18th century.

HE, SHUZHEN* (Tohoku University, aronhasi@yahoo.co.jp)

From Community to Network: A Case Study in Rural Inner Mongolia in Modernization

Inner Mongolia has 118.3 km² of land, 12.3% of whole China. 70% of its area are grassland and its main industry is livestock farming. In this area where nomadism has had a history of more than 2000 years, settled breeding has arisen in 1980s, and cattle shed dairy in 2000s. The aim of this report is to clarify, 1) how the prohibition of grazing, adopted as grassland protection policy in 2003, has changed the pastoralists’ lives and community, and in other words 2) how the prohibition, that included restriction of grazing, restriction of rest grazing, and restriction of rotation grazing, divided the pastoralists’ response to the prohibition in these each restrictions, and 3) how their response reconstructed their local community.

Through a case study in some life histories of women pastoralists this report concludes that their lives have been differentiated as a milk supplier, a cheese producer, and a bread producer, even on the same ground of stock farming, and that there a new network of diversified inter-dependent subjects has arisen in place of a community of homogeneous independent pastoralists.

HEAP, JOSEPHINE* (Stockholm University, josephine.heap@ki.se)

Multiple Disadvantage in Midlife and Old Age - Exploring the Associations

To experience multiple disadvantage – the simultaneous occurrence of disadvantages such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life.

Previous research has established that individuals’ health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life is a time when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in midlife and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40–59) and 2011 (age 77–96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no multiple disadvantage in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

Autoethnography, Theorizing and Transnational Movements and Moments

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland (Autobiography, nation, postcolonialism and gender*, Irish Journal of Sociology, 2005). The second focuses on changing relations to children, family and household (“The personal is work is political: theoretical: continuities and discontinuities in (pro)feminism, Women’s Studies, men and my selves*, NORA, 2008). The third concerns changing relations to transnationalisations, transdisciplinary and transinstitutional developments (“Opening up material-discursive (trans)forms of life ..., politically, theoretically, institutionally, personally*, in M. Wojtaszek and E. Just (eds.) Quilting Stories: Essays in Honor of Elzbieta H. Oleksy, 2012). And the fourth highlights the relations of men, intersectionality, organizations and proeminism in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (Equality, Diversity and Inclusion, 2014).

In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limitations; critical positionality of men, masculinity/men’s “I”s: the unwriting of men, and the concept of gex*, Revista Canaria de Estudios Ingleses, 2013; and the relation of body and writing (Writing as intimate friends ... how does writing profound research become methodologically challenging*, in M. Livholt (ed.) Emerging Writing Methodologies in Feminist Studies, Routledge, 2011).
and New Synergies", organised within GEExCell Collegium for Advanced Transdisciplinary Gender Studies (Orebro-Karlstad-Linköping Universities), with specific focus on violence seen as inequalities (Hearn, Sociological Review, 2012; Current Sociology, 2013). The larger project examines intersectionality in gender studies, in relation and dialogue with the diverse, sometimes conflictual, theoretical and political positions in feminist debates (Walby, Armstrong, Strid, 2012; Strid et al. Social Politics, forthcoming). The project is designed against this background of rich, diverse feminist traditions for theorizing of intersectionality, and informed by tensions between these traditions. This paper takes up this challenge in terms of violence, especially violence against women, and state policy thereon, addressing the place of violence in contemporary state regulation and intersectional gender relations. The paper examines the complex, situated and spatial relationship between theorizing on violence against women and state policy on such violence (Hearn and Mckie, Policy & Politics, 2008; Violence Against Women, 2010). This focus continues on multiple linkages between multiple inequalities, policy and theory, in local, national and transnational contexts. More specifically, drawing on extensive comparative European data at local, national and transnational, it explores the concepts of gendered intersectionalities and intersectional gender by examining how multiple inequalities, long been prominent in feminist activism and intervention on violence, are made (in)visible and conceptualized in state gender-based violence policy and debates. Attention is paid especially to tendencies to degendering strategies in violence research and state policy. A key aim of the paper is to investigate how analysis can be a starting point for assessing if, how, and why multiple intersectionality could contribute to the quality of policy, for both reducing and stopping violence, and assisting those subject to violence.

Gender Equality or Religious Freedom? Testing Competing Rights in the Canadian Polygamy Trial

Constitutional provisions protecting fundamental human rights are central features of liberal democracies. However, tensions exist between the construction of rights as universal principles and their application in a fragmented political world. For example, the right to be free from discrimination based on creed or gender may be at odds with each other or with other rights, laws, and practices. The Canadian Charter of Rights and Freedoms of 1982 guarantees freedom of conscience and religion and the right to equal protection and benefit of the law without discrimination based on race, national or ethnic origin, color, religion, sex, age or mental or physical disability. The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concerning autonomy, cultural integrity, and religious freedom are pit against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia embarked on an unprecedented reference case to test whether Canada’s prohibition against polygamy is consistent with the freedoms guaranteed by the Canadian Charter of Rights and Freedoms. A central concern is whether polygamy perpetuates inherent harm to women, children, and society. In contrast, arguments were made that some women freely choose to enter into polygamous relationships, and that criminalizing this family form offends their right to religious freedom. In 2011, Justice Bauman ruled that, although the law violates the religious freedom of fundamentalist Mormons, the potential harm caused by polygamy outweighs this concern. Thus, in the name of protecting women from harm, women who practice polygamy as part of their religious commitment are made criminal under the law. This paper examines the treatment of competing rights and societal values in the BC Supreme Court case that pits the individual’s right to act on “sincerely held beliefs” against the equality rights guarantee in Canada’s Charter.

HEATH, MELANIE* (McMaster University, mheath@mcmaster.ca)

Migrants are commonly considered a vulnerable group due to the fact that they are not citizens of the country in which they live. Moreover, when a migrant enters another country illegally, or enters legally and subsequently loses legal immigration status, her or his susceptibility to exploitation increases. The instability of migrant status is further complicated when immigrants participate in undesirable or illegal practices in the host country. France has a particularly complicated history of migration, that involves immigrants predominantly from Gambia, Mali, Mauritania, and Senegal. During the period following World War II, immigration to France significantly increased due to the shortage of male workers. Under the family reunification immigration policy that took effect in 1974, France permitted the immigration of polygamous families. In 1993, it passed the Loi Ponsas, which altered the immigration law so that only one spouse per immigrant would be issued a visa. The law has had negative consequences for polygamous families, as it requires multiple spouses to divorce and “décohabit” (physically separate their households) or face deportation. Women living in polygamy in France are particularly vulnerable. They may choose to bear numerous children to increase their monthly family allowances and to avoid deportation as guaranteed under the post-1993 legal framework. Yet, many are forced to live in undesirable situations where a husband can only support the first wife and children in social housing. Drawing from in-depth interviews with women living in polygamy in France, this paper examines the ways that the legal and policy framework shapes the mobility of African polygamous wives. It uncovers the strategies these women employ to manage their precarious immigration status in France.

HECHT, GABRIELLE* (University of Michigan, hechtg@umich.edu)

Global Atomic Inequalities: Marginal Work in the Nuclear Sector

This paper takes the aftermath of the Fukushima accidents as the starting point for an exploration of work and workers commonly considered marginal to nuclear systems. The paper seeks to make visible labor that – by virtue of its unsettling nature or (apparently) peripheral location – often remains hidden in our accounts of technoscientific work: ordinary maintenance, African mining.

It begins with the contract workers hired to “clean up” the Fukushima melt-downs, then move back in time and across oceans, to consider the subcontractors hired to conduct ordinary reactor maintenance and refueling in Japan, France, and the US. Maintenance is the unseen, decidedly unglamorous work essential to keep any technological assemblage working—work so invisible and unintentional that most scholars avoid studying it, preferring instead to focus on acts of creation and construction. Yet without these workers, sociotechnical systems could not function: they may be socially marginal, but they are technopolitically central to the production of nuclear power (and all other industries).

In nuclear and other systems, subcontracting has consequences for occupational health, as well as for transnational knowledge production (about the effects of low-level radiation exposure in the nuclear case). Contemplating these consequences, in turn, takes us to another apparently peripheral part of the global nuclear industry: uranium production. After a quick comparative consideration of knowledge production about the dangers of radon exposure in mines, the paper discusses uranium mining in Gabon. It examines labor and occupational hazards there, including the efforts of Gabonese miners to make themselves and their illnesses visible on the global technoscientific stage.

CAUSEY, CHARLES (University of Washington)

Social Order and the Genesis of Rebellion: Mutiny in the Royal Navy, 1740-1820

The possibility of rebellion is a check – sometimes the only check – on authoritarian rule. Although mutinies in which crews seized control of their vessels are rare events, they occurred throughout the age of sail. To explain the occurrence of this form of high-risk collective action, this paper provides a theory which holds that shipboard grievances – related to material deprivation, poor governance, and the inadequate provision of health and welfare -- are the principal causes of mutiny. Yet such grievances can only lead to rebellion when obstacles to collective action can be overcome. Whereas seamen usually could count on an ample supply of informal organization, their ability to engage in collective action was increased by factors that facilitated coordination and provided a critical mass of ringleaders. Using a unique database drawn from extensive archival information about Royal Navy voyages from 1740 to 1820, this study employs the case-control method and random forest classification to show why shipboard social order shifts, sometimes tipping crew members toward the high risks of mutiny. The findings have implications for the role of grievances in generating rebellion and for an earlier generation of historians.

International Networks of Banks and Industry Revisited: The Financial Crisis

What impact did the financial and economic crisis that swept the Western world have on the international network of the corporate elite? Has corporate
governance become more national or have transnational networks been robust? Here we take a first step in answering this question. We see the financial crisis as a test case for the cohesion of the transnational capitalist class (TNC). If business interests are coordinated and the TNC is resilient, we expect that the business community remains stable in times of economic downturn. A decline of the transnational business community however may indicate a fragmented elite that cannot uphold its cohesion when the financial sector is in trouble.

We investigate this issue by comparing the networks of interlocking directorates among the 176 largest corporations in the world economy in 2006 and 2013: just before the crisis unfolded and present day. We place this in the empirical context of the corporate networks in 1970, 1975 and 1996 as collected by Carroll and Fennema (2002).

HEEMSKERK, EELKE* (University of Amsterdam, e.m.heemskerk@uva.nl)
The Global Corporate Elite Uncovered

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi-polar architecture of the global corporate elite. Applying new social network tools and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directorates between a set of 100,000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

Processes of Success Among Students in Gender Segregated VET Qualification and Social Inclusion

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and I will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeships, ‘leaks’ a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for higher education. This means that the ‘success’ according to the individual and national higher education attainment goals, may be seen as ‘failure’ according to policy aims regarding high quality vocational skill formation at the upper secondary level.

Theoretically, gender has been shown to be of importance for the development of identity, as a learner, for failure and success in school, particularly for boys but also for girls. The key objective of this project will be to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which supports or hinders the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.

HEGNES, ATLE WEHN* (University of Oslo, a.w.hegnes@ub.uio.no)
Dimensions, Practices and Dynamics in Cultural Adaptation Work: An Example from Norway

My paper concerns the movement of an idea and a legal system. The idea is that a product’s quality can be determined by where it comes from. The legal system is known as Geographical Indications and may enable protection under law of product designations for foodstuffs with a special geographical origin, tradition or characteristics. In 2002 a system for GIs (Protected designations) was set up in Norway modelled on corresponding systems in the EU.

I develop a grounded conceptual framework to understand the implementation, administration and the use of protected designations in Norway. I emphasize that the movement of ideas and legal systems is dependent on actor’s adaptation practices. More specifically I describe this as Cultural Adaptation Work (CAW). My analysis shows that the actors’ work with adaptations of meaning, social organization and materiality, during implementation, administration and use of the Norwegian scheme is important. They occur because opinions, forms of cooperation and production of Norwegian food culture do not always coincide with the food-cultural conditions which the EU scheme was founded.

To identify, describe, and understand how the implementation, administration and the use of Protected designations is worked out I elaborate on the concepts of translation, reorganization and transformation, giving them a special meaning. In this regard, translation refers to adaptations of meaning, reorganization refers to adaptations of social relations and transformation refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW.

I conclude that CAW takes place in the interplay between people’s translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.

HEIBERGER, RAPHAEL* (Otto-Friedrich University Bamberg, raphael-heiko.heiberger@uni-bamberg.de)
The Social Construction Of Prices – The Impact Of Culture, Networks and Institutional Rules On Stock Quotations

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the embeddedness of trading in culturally constrained frames of meaning, corporate networks and institutionalized rules. Economic sociology is well aware of such social forces. Still, sociological investigation of price formation lacks both theoretical integration and empirical evidence for how different types of market conditions interact and influence prices.

A transnational field theory as a starting point I combine three independent strings of price formation explanations, considering the simultaneous influence and interaction of institutional regulations, network positions and cultural frames. Empirically, I test this field theory of financial markets by comparing the setting of US and German stock prices in culturally constrained frames of meaning and the longitudinal development of macroeconomic structures are discussed. Secondly, I investigate correlation networks of stock listed companies using social network analysis. I am particularly interested in the shifts occurring in the network ecology after the financial crisis and the subsequent changes in each systems’ stability. Finally, the change of stock repurchase laws in Germany in 1998 delivers an ‘experimental’ setting for different types of rule based information trading before and after the legislation reform. Applying Event Study methods the short- and long-term influence of repurchase plans in the US and Germany is compared.

Different patterns of stock price volatility are revealed, depending on culture, networks and rules. But these differences are masked by the cultural frames of meaning. This study shows that the changes of the German repurchase laws can be seen as an indicator of different institutional environments and that price formation processes are embedded in cultural frames of meaning. Different institutional environments tend to leave different traces in the price formation processes, thus highlighting the importance of cultural frames of meaning. Understanding the transformation of financial markets, their embeddedness in culturally constrained frames of meaning and the longitudinal development of macroeconomic structures is discussed.

HEIMER, MARIA* (University of Uppsala, maria.heimer@statsvet.uu.se)
PALME, JOAKIM (University of Uppsala)
Rethinking Child Welfare Policy

Studies on children’s welfare have been pursued in a separate strand from the welfare state literature in general. Welfare state theory has been blind to children as actors and research on children’s participation has neglected welfare state theory. This should warrant us to rethink and reformulate the concept of child welfare. The point of departure is the concept of welfare as formulated in the Swedish welfare state literature. The interplay between the welfare state literature in general and the new welfare state theory refers to adaptations of meaning, giving them a special meaning. In this regard, translation refers to adaptations of meaning, reorganization refers to adaptations of social relations and transformation refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW.

I conclude that CAW takes place in the interplay between people’s translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.
surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as 'beings' and 'becomings' by recognizing that it may be necessary to invest in children's education and child care but that this is not sufficient as long as we do not consider children's rights to voice.

Hunting the Northern Lights

This work in process explores gendered landscapes imbuing the increased use of ‘hunt’, ‘hunters’ and ‘hunting’ in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest with Finnmark Selvål’s (county DMO) winter project in 2002. The evolvement of the last decade’s hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedle and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfer, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relation to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former exploration today is mainly a masculine pursuit which requires preparation and good physical strengths the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008). Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as snowshoeing and northern lights hunts. These tourists emphasise the pureness and freshness of the winter climate as well as a fascination for winter lights during the day and night. Other tourists dislike being cold on holiday and would only travel to warmer climates. Some of these tourists live in winter destinations and know how to deal with a cold climate. Others do not. In particular disinterest in winter activities, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the indictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem Amos Oz mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the witness account of the Auschwitz survivor Alfred Oppenheimer who gave a testimony at the Eichmann trial.

The paper refers to other reconciliation attempts such as the truth commission in South Africa or the Comfort Women issue in Korea and Japan and seeks to identify conditions that make future reconciliation possible. The example of the comfort women in Japan shows that witness testimonies alone cannot lead to positive change and reconciliation as long as there is no recognition of wrongdoing and guilty behavior in the first place. In other words witness accounts can only be effective and fulfill their purpose if there is an opposition from the political individual or a political body who acknowledges his wrongdoing. In the case of the Eichmann trial and the South African truth commission the perpetrators were physically present whereas in the case of the comfort women nobody has assumed responsibility.

From Traditional Religiosity to Religious Diversity - Youth and Religion in Post-Soviet Latvia

Traditionally Latvia has been described as a Lutheran country with a Catholic Latgale region in the South Eastern part of the country. During the Soviet period between 1940 and 1990 religion was in a marginal, and only after the collapse of the Soviet Union the revival of the religious life became possible. Now, twenty years after the new independence, there are three main denominations (Lutheran, Catholic and Orthodox) and several minority religions making the religious field pluralistic. According to youth researchers, young people in the Western and Eastern Europe today are increasingly similar. Important difference among the youth in the West and the East is economic resources which is causing obligatory cohabitation in the family of origin which is influencing more widely attitudes of young people. The qualitative and quantitative data that has been collected among the university students in 1999 and 2010/2011 in the city of Riga will answer to the question what is the role of religion for emerging adults in a post-soviet society. The paper examines youth and different dimensions of religion (e.g. belief, practice, affiliation) and what are the differences among the attitudes of young people with ethically different backgrounds in the country where approx. 75% of inhabitants belong to the so called “Russian speaking minority”. How do young people, born in the end of 1970s and 1980s, themselves see the role of family and other traditional authorities in religious socialization? The study belongs to the field of sociology of religion and to the youth study because it explores the changing attitudes and religiosity of young people in one of the post-soviet societies.

Shimakutuba - Adapting the Ryukyuan Languages for the 21st Century

Language endangerment is often the result of repressing language use but of repressing language adaptation. The way endangered languages are characterised is not neutral but include ideologies constructing these languages as static, marginal and obsolete. Due to such repression, endangered languages indeed lose their language habits and knowledge of a past society. Revitalizing languages involves the modernisation of endangered languages in terms of language corpus and styles. Before that the static ideological view of endangered languages needs to be challenged. Language ideological clarification about the role and function of the endangered language in the present-day must be delineated. It must be done so convincingly as to ensure that such reframeing aligns as many people as possible to the task of language revitalization. This paper discusses this process on the case of the Ryukyuan languages which are spoken in the extreme southwest of the Japanese Archipelago. These severely endangered languages are crucially important for the Japanese language and tourist. As an effect, the task of ideological clarification is being pursued. This is urgently needed, because the Ryukyuan languages have huge lexical gaps, lack styles for public speech or writing specific genres. They also maintain social varieties characteristic of its past use in a feudal society. Its large number of regional dialects, 750 in total, also reflect boundaries of community which no longer exist today. Dialect levelling is rampant. Mixing of formal and informal styles, and of high and common social varieties is also frequent in the language use of those seeking to revitalize Ryukyuan languages. In the view of criticism on their language use, they might resolve the tension between children as ‘beings’ and ‘becomings’ by recognizing that it may be necessary to invest in children’s education and child care but that this is not sufficient as long as we do not consider children's rights to voice.

Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they can contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleefer, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to ‘teach for social justice’, equipping them with the necessary skills during their training, and retaining them in schools are important tasks for policy makers and teacher educators.

This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants’ perceptions of teaching, learning and second-level education in Ireland.

Researching teacher candidates’ diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mis-match between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993, Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the minority ITE candidates’ perceptions of teaching, learning and second-level education in Ireland).

Based on the Israeli case, this article highlights the role of intra-state conflicts between bureaucratic actors in the politics that surround the reform of the government of public employment services and the ways in which these conflicts have shaped not only the reform process, but also the institutional makeup of the reform itself. We analyze the politics that surrounded proposals to change the governance of long-term unemployment in Israel (1997-2004) and shaped the institutional makeup of the reform (2004-2010). We highlight how intractable conflicts between state agencies— the Ministry of Finance (MoF) and the Israeli Employment Service (IES)— brought about the delegation of administrative authority to private agents (replacement of state bureaucratic control over the management and implementation of a welfare program that targets the long-term unemployed who are entitled to social assistance benefits. We suggest that the delegation of administrative authority to private agents in no way represented a rolling back of the power of state agents, or a transition to a “regulatory” or “steering” state. On the contrary, we argue that this delegation of authority actually enabled state agents to strengthen their intervention in the routine management of the program, bringing about a process of bureaucratic re-centralization. We conclude that the initiation of partnerships where private agents does not necessarily signal a transition to a steering state or towards a collaborative mode of governance, but may also function as a strategy through which certain state agents seek to impose their projects, thereby marginalizing alternative or competing conceptions of the role of the state in society.

Distinction Practices and Socialization Of “Native” and “Foreign” Elites In Mexico

The paper summarizes the results of an empirical research project on “native” and “foreign” elites in Mexico in a comparative perspective. The focus is set on the elites’ different attitudes, socialization and distinction practices (in particular “completeness” versus “synecdochism”). Furthermore, the relations and interactions between „native“ Mexican elites and „foreign“ expatriate elites in Mexico are taken into account.

Similar to other ‘emerging market’ countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helu being the richest business man in the world.

Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign – bringing to Mexico their own foreign top managers (expatriates), cultures and distinction practices.

The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed.

It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards synecdochism.

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The use of noncontingent incentives constitutes a well-established technique in order to reduce both item- and unit-nonresponse in self-administered surveys. While there is considerable research literature and data, research clearing indicates that monetary incentives included in the initial mailing should be the method of choice, the use of nonmonetary incentives might be more appropriate in at least two situations: Depending on the study area, various regulations on data protection or budget restrictions might prohibit researchers from sending multiple follow-up reminders as suggested in Dillmans’ Total Design Method (TDM). Current research indicates that low-value nonmonetary incentives can serve as a substitute for the absence of follow-up mailings to a certain degree. Secondly, the use of monetary incentives might be disadvantageous in interaction with certain survey-topics (e.g. topics that correspond to reciprocity, morality or other social desirable norms as well as intimate questions) and might even turn out to provoke reactance on the respondent’s side.

The contribution renders the adequacy of nonmonetary incentives under these two conditions and presents the results of an experimental designed study. We mailed to a random sample of 400 German respondents, who received a survey on “Morality and Conscience in modern life”, the initial mailing of a ball pen showed significant effects on the following criteria:

- Response rate (unit-and item-non response) and response-speed
- Sample-composition
- Data Quality (Elaborateness of answers to open-ended questions and Reduc-tion of Acquiscience Response Patterns)

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash- or money-related incentives in certain contexts.

Intra-State Conflicts In Activation Reforms: Authority Delegation and Bureaucratic Centralization In The "Privatized" Implementation Of Welfare-To-Work In Israel

In Germany, the sector of renewable energies (RE) is currently experiencing enormous growth. Besides first estimations about the type of the expansion, energy mix, resulting demand for workers and new requirements for firms, the effect of the RE sector’s growth on the job structure and on skill requirements has not been sufficiently examined.

Our proposal exemplifies results from an ongoing research project. Theoretically and empirically the study is based on a combination of three frameworks. We refer to the distinction of requirements on the level of the working place: Firms will have to structure their working places according to new requirements. Being able to describe occupational content and its links to new qualificational demands will put us in a position to examine a) what the new requirements for firms and employment are and b) what the effect of the occupational structure is.

The first reference framework draws on work by Prediger and others (c.f. Prediger/Swaney 2004) who developed dimensions – namely „people vs. things“ and „data vs. ideas“ - which are used to describe certain aspects of occupational contents and for graphing occupations. The second is the requirements on knowledge work by Volkholz and Kochling (2001), where the working population is partitioned according to the type of knowledge work of their employment,
ranging from qualified workers to task flexible and innovative workers. The third reference framework is the task-approach by Autor and others (2003) about the share of routinized occupations, which is an enhancement of the "Skill-Biased Technological Change’ approach.

Questions we address empirically (analyzing primary data of surveys of employees and firms) include:
- What is the extent of RE on the labour market?
- What characterizes jobs in RE?
- Are there unequal chances for working in RE as opposed to other occupations?

Uncertain Transitions: Changing Attitudes, Values and Lifestyles of Young Finns

This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project “The changing lifestyles and values of temporary employed young people in the different labour markets of Finland” analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporarily unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on the viewpoint on human development through life-course (Bronfenbrenner, 1995) the paper discusses about the impact of uncertain transitions on coping with shifts between dependency and independency as a result of prolonged transitions (c.f. Du Bois & Stauber 2005, "yoyo transition").

Leaders’ Enhancement of Leader-Member Exchange (LMX) Relationships: An Examination of Leaders’ Cognitive Support and Knowledge Resources in Research Group

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers’ perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigate the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM): Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

WERNLI, BORIS* (FORS, boris.wernli@fors.unil.ch)
Leaving the Parental Home and the Material Conditions of Entering Adult Life

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnett, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars insisted on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain autonomy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyzes are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into account their other transitions, like education and the information provided about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents’ household is correlated with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

HENDERSON, LESLEY* (Brunel University, lesley.henderson@brunel.ac.uk)
Mediating Mental Distress in Young People: The Role of Popular UK Media in Challenging Stigma

Most mental-health needs in young people are unmet, even in high income countries and ‘stigma associated with mental disorder is a key challenge’ (Patel et al, 2007). Media representations are considered to play a key role in fuelling stigma though this is not a new problem. Mental illness and prejudice has a trajectory which predate modern media and is deeply ingrained culturally (Signorielli, 1993). This paper draws on semi structured interviews with programme makers and source organisations as well as thematic content analysis to explore messages concerning young people in mental distress. What role might popular media play in helping to challenge or perpetuate stigma? Are there unique opportunities created by popular television that challenge prevailing representations of young people in distress? How do source organisations work with programme makers to create positive collaborations? What are the associated opportunities and pitfalls? Is there evidence that such representations can change attitudes and beliefs?

This paper builds on studies that have identified connections between media coverage and public beliefs about mental health (Philo 1993). The negative coverage of mental health is considered to bear significant responsibility for fuelling public prejudice and misconceptions (Wahl, 2003). Acute conditions such as schizophrenia are associated with particular stigma and the media stereotyping of those affected by such diagnoses is considered to have significant repercussions for their social network. Charities and other organisations have explicitly targeted popular prime time drama in a range of successful health campaigns and there is evidence that young people are receptive to ‘public’ issue messages within popular media formats (see Henderson, 2007). This paper examines the role of popular media UK entertainment shaping public understanding of risk and suggests that populist depictions of young people in mental distress can challenge prevailing perceptions of those affected and represent their experience in unique ways.

HENDRICKX, JEF* (KU Leuven, jef.hendrickx@kuleuven.be)
‘What’s in a Gauge?’ an Assessment of Self-Reported Measures of Informal Activities

The relationship between different measures of informal activities is at best unreliable. In theory, if one estimated the same reality, the outcome of different measures should point in the same direction. That remains unclear in the case of informal activities. This paper assesses self-reported survey measures of informal activities. If surveys measure informal activities in a reliable way, the possible applications are extensive. In comparison to national level macro-economic estimates, their potential is much bigger.

One source of bias in surveys is the respondents’ propensity to answer sensitive questions in a socially desirable way. This problem would be limited to the impact of the error terms on the condition that the bias were randomly and evenly distributed throughout the population. One possible consequential issue in questionnaire based measures of informal activities, however, is that the social desirability bias may be associated with certain group characteristics. In this contribution we will investigate the indication that the prevalence of the social desirability bias in a given population is positively associated with experiences and current policy of government interventions. The lack of rule of law or of basic individual rights should influence the willingness to honestly disclose past illegitimate actions such as tax evasion off-the-books work by respondents.
Indeed, the disturbing fact is that the gap between macro-economic and survey based estimates of informal activities seems to be bigger in former communist regimes in Central Europe or repressive right wing governments. This paper tests the prediction that the social desirability bias in self-reported survey measures of informal economic activities depends on this institutional history. Based on the second round of the ESS, this thesis is tested with the help of comparison with other forms of (economic) deviance, the impact of generations to the social desirability bias and direct measures of negative attitudes toward informal activities.

“No taxation without representation!” These iconic words of tax rebels like the “Sons of Liberty” marked the birth of a new nation. Yet when they became formally codified under law, neither can be fully understood without reference to race. In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and enfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not “no taxation without representation” but “no taxation without discrimination.”

“Creativity As Anti-Alienation: Towards a Sociology of Artistic Labor”

Based on qualitative research in the fields of the visual arts and design we aim to show that the actors in those realms experience the non-alienating qualities of their work even under current conditions of an intensified commodification of the “aesthetic” sphere. The idea and the activity of “creative labour” thus may still serve as an ideal for a Critical Theory of alienation. We propose that this view is legitimated by the self-reflexive stance of this type of activity on the one hand and serves as an ideal for a Critical Theory of alienation. The “aesthetic” sphere. The idea and the activity of “creative labour” thus may still serve as an ideal for a Critical Theory of alienation. We propose that this view is legitimated by the self-reflexive stance of this type of activity on the one hand and serves as an ideal for a Critical Theory of alienation. The “aesthetic” sphere.

Reification, Money, and Wage Labour: A Defense of the Classical Theory

Reification is not a new topic, neither in Sociology nor in Social Philosophy: Authors such as Georg Bataille, Lukács, Hannah Arendt and Helmut Hössler of the Anna F. Hegel have described it already. Astonishingly, however, when Axel Honneth ‘re-constructed’ this concept from the angle of his normative theory of recognition in 2005, he did not include the ‘classic’ factors of reification: money and wage labour, in his new version of the theory. This lead, or so I will argue, to a re-idealisation of the concept which had more in common with Hegel than it had with the classical Critical theory that used this term in a Marxist understanding.

Against this moralization and de-economisation of the term, this paper argues for a re-economised theory of reification. The starting point for an alternative reconstruction, however, is not History and Class Consciousness, but the political economy of Karl Marx himself, who already used the term in an interesting way (e.g. in VI. of Capital). The paper will first develop and defend a sociological interpretation of Marx’s Paris Manuscripts (1844) and Capital (1867), where Marx identifies the mechanisms of a monetarized economy and a production based on wage labour as the main drivers of a capitalist ‘reification’ of social relations. In a second step I will apply this reformulated classical theory of reification to today’s globalized and flexibilized economy. I would like to suggest that conceptually the ‘classic’ tradition of Critical theory still has a lot to offer for an analysis of contemporary capitalism.

No Taxation without Discrimination: The Racial Interconnectedness of the Third-Fifths Clause, Taxation, and Alienation

“No taxation without representation!” These iconic words of tax rebels like the “Sons of Liberty” marked the birth of a new nation. Yet when they became formally codified under law, neither can be fully understood without reference to race. In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and enfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not “no taxation without representation” but “no taxation without discrimination.”

“Creativity As Anti-Alienation: Towards a Sociology of Artistic Labor”

Purposes and Rationalities in a Globalized and Multicultural World. A Study of the Agricultural Sector in Chile

Purposes and Rationalities in a Globalized and Multicultural World. A Study of the Agricultural Sector in Chile. While global integration, productivity, and profitability are a company's goals; and income maximization, individual benefit, and increasing economic power seem to be a manager's goals, what are a worker's goals beyond the solution of his/her basic needs? In a culturally diverse context where globalization appears to guide the different actors, what are the different purposes they pursue? What kinds of consequences and what cultural peculiarities do we identify in a world where interconnection and the imposition of transnational patterns are becoming more important?

This proposal discusses the multiple rationalities that mobilize social actors, in a context of major inequalities, using an ethnographic approach carried out in Limari, a provincial agricultural sector in Chile. Numerous development strategies designed to increase productivity and economic growth have been introduced, meaning that the local society has had to deal with big transformations, in the economic, social, environmental and cultural spheres. The arrival of national and transnational companies to give value to the agricultural sector, with foreign managers who do not know the local culture, has put the agricultural sector in conflict. Productivity, competitiveness, efficiency and economic development are not concepts shared by all the actors.

The research based on this case study, combines with the study of social, cultural and economic transformations, such as the confrontation and diversity of the different actors' representations, purposes and rationalities, triggered by development strategies.

Dissatisfied But Not Enough – Israeli Protest Of Summer 2011

In the Summer of 2011, between the first major eruption of protests in Tahrir Square and the emergence of the American Occupy Wall Street movement, Israel experienced a massive protest wave. However, unlike Egypt and the US, at that time Israel did not face unusual political, social or economic difficulties. In fact, by most objective parameters, this was a relatively calm period. Yet the protest gained unprecedented attention and participation. Based on social movements political process theories and public opinion data collected in the framework of the monthly Peace Index and the annual Israelis Democracy Index run by the author, the paper will examine the reasons for the unexpected momentum of this protest campaign; and analyze the public assessment of the 2011 protest ex post facto.

The main argument here is that the 2011 protest popularity on the one hand and its negligible results on the other are two sides of the same coin. Dissatisfied with the government performance and motivated by their perceived political inefficacy and simultaneously fascinated by the political and social transformative ideas, rhetoric and activities of the Arab and Western protest campaigns of the time, the Israeli masses filled the streets of Tel Aviv from July to September 2011. However, the data suggests that the protestors were not "hungry" for substantial social, economic and political changes. In fact, they had national (Jewish) and (middle) class vested interests in the maintenance of the socio-political status-quo, as manifested later in the 2013 parliamentary elections. Because of this duality, significant social dissatisfaction together with strong motivation to reform the socio-political superstructure, despite certain similarities, unlike the Tahrir and Occupy struggles, the Israeli 2011 protest did not and could not have produced a clear transformative agenda or action plan.

HERMANOWICZ, JOSEPH* (The University of Georgia, jch1@uga.edu)

Colleagues and Quests For Immortality

Achievement in the professions is situated relationally. Work comes to constitute contribution only by the judgments of colleagues. This is paradigmatically the case in science and scholarship, a realm understood to be imbued by charismatic authority, where colleagues not only sanction the lives of scientists and scholars, depend on them. The present work, however, examines empirically how incumbents value colleagues in actuality. Taking academia as a site for analysis, the present work investigates one aspect of the social significance of colleagues by asking how scientists might desire being remembered by them. The study is thus centered on two social-psychological domains: the importance, if any, that incumbents assign to colleagues and the specific attribution to colleagues of how incumbents would like to be remembered. Data come from in-depth, face-to-face interviews with 60 scientists at a variety of points in their careers and employed at a range of types of universities.

The results reveal a highly circumscribed set of ways—just eight in number—that scientists wish to be remembered. Ways of remembrance cluster on professional versus personal grounds, which constitute a contest in the politics of reputation and commemoration. In addition, responses vary by departmental tier, age, and productivity. The discussion exposes social codes of scientists, which, while purporting universal and contradictory, are used to project a transnational route to remembrance, nestled in the context of work values, norms, and perceptions. Anticipation of the self in memorial is argued to constitute a principal means by which people socially construct status.

The paper is fully written and complete. The presentation will discuss its major points.

HERMO, JAVIER PABLO* (Universidad de Buenos Aires (UBA), jhermo@sociales.uba.ar)

Internationalization of Knowledge Work in Argentina: The Case of ‘Global Professors’

Globalization has changed the world in many aspects relevant for professionals and ‘knowledge workers’, such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of ‘symbolic analysts’ and other ‘knowledge workers’, who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for ‘knowledge workers’ and for cross-border higher education, and subsequently this may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a ‘global professors’ in 21st century. A growing number of professors are working in different countries but without moving; moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing Argentina.

Sociología DEL Trabajo Y Desigualdad: Nuevos Desafíos Globales - Labor Sociology and Inequality: New Global Challenges

En 1995 reflexionamos sobre la Sociología del Trabajo y sus paradigmas disciplinarios, afirmando que había que superar el reduccionismo economicista. Tan por la necesidad de incluir otras perspectivas, como por las dificultades que suponía dar cuenta de las nuevas realidades de las transformaciones post-fordistas en el capitalismo globalizado.

En 2012 actualizamos la descripción y análisis histórico de los procesos sociales de trabajo, ampliándolos a escala global y relacionándolos con el desarrollo del moderno sistema mundial.

Es el propósito de este trabajo continuar el esfuerzo para superar el mainstream de la Sociología del Trabajo, con miradas eurocentrías que consideraban como modelo de trabajador al obrero industrial asalariado, lo que ya era insuficiente para dar cuenta del mundo laboral de los “Años Dorados”, fuera de los países centrales.

Esto implica la necesidad de abarcar en el análisis un espectro más amplio y diverso de categorías del trabajo, y la plasticidad permanente que supone la existencia de población “supernumeraria” en diferentes momentos y localizaciones como, por ejemplo, ahora en la Unión Europea.

La crisis a la que hoy se enfrenta la Humanidad, ya no sólo es económica sino sistémica: involucrando los recursos planetarios disponibles, alterados y extinguidos.

La suposición, para la sociología laboral, la necesidad de renovación para comprender el sistema dominante capitalista (procesos financieros y tecnológicos, poderes globales); la racionalidad y metabolismo del sistema; la baja respuesta global e identitaria de los colectivos sindicales tradicionales; el avance de las fuerzas productivas, su concentración y sus contradicciones; los nuevos movimientos y conjunciones heterogéneas de los trabajadores y, por último, la necesidad de contar con metodologías colaborativas.

Para ello, se abordarán elementos de las nuevas corrientes del pensamiento crítico y de las realidades del trabajo hoy para dar cuenta de cómo afectan a la división del trabajo global y a los trabajadores.
Globalizing the Classroom: Innovative Approach to National and International Learning

This essay examines an innovative approach to teaching globalization and assesses a course on Globalization, Social Justice, and Human Rights co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, policies, environments, and human societies are experiencing great connections across the globe, the educational system continues to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of student learning is the opportunity to interact in diverse classrooms across academic calendars, facilitating transnational group service learning projects, and the great demands required to coordinate and monitor students' online interactions. Our objective is to contribute to improving and innovating approaches to teaching globalization.

La Industria De La Migración En Los Flujos De Trabajadores Temporales Legales De México a Estados Unidos

La producción de la migración internacional, ya sea como movimiento colectivo o acto individual, no solo es resultado de las grandes desigualdades económicas entre países. La migración también requiere de intermediarios que ponen en juego saberes e infraestructuras que vinculan efectiva y eficientemente a emigrantes de un lado, y trabajadores, por el otro. Definimos a este conjunto de intermediarios como la industria de la migración. Aunque es comúnmente asociada con las migraciones indocumentadas, la industria de la migración también está presente en los flujos autorizados por el estado, sean éstos permanentes o temporales. En este trabajo analizamos el papel que la industria de la migración juega en la organización del flujo de trabajadores mexicanos a los Estados Unidos, bajo el programa de visas temporales H2. Si bien el programa de visas H2 es un programa del gobierno norteamericano creado para suministrar trabajadores de baja calificación a la agricultura y otras industrias intensivas de mano de obra, el manejo práctico de dicho programa está en manos privadas. La administración práctica de este programa inicia con un conjunto de agencias estadounidenses que certifican, a nombre de los empleadores, la “escasez” de mano de obra determinada industria y región de la Unión Americana. Estas mismas agencias colaboran con contratistas mexicanos y norteamericanos para anunciar, seleccionar, contratar y coordinar los trabajadores que recibirán visas H2, por medio del Consulado de los Estados Unidos en Monterrey, México. Esta ciudad es el epicentro de la industria de la migración que maneja programa H2. En este trabajo analizamos a los actores que la conforman, sus saberes y articulaciones: reclutadores, transportistas, hoteleros y tramitadores de documentos.

The Industry of Migrant Mobility: Bastard Institutions and Infrastructures in the Eastern and Western Migratory Corridors of the U.S.-Mexico Border

The study of transnational collaboration in social movements has a long tradition, yet a focus on labor union solidarity across borders is rather recent and, surprisingly, there is very little cross continental fertilization among scholars. In this study I seek to bring together scholarship from the Americas and Europe as I seek to understand the experience Mexican labor unions have had with transnational labor collaboration. I contribute to our understanding of transnational labor collaboration by viewing it from the perspective and experience of unions in the South. Through interviews with 27 leaders of 16 unions, both corporatist and independent unions from different unions, I offer a broader picture of the factors that influence transnational labor collaboration. Unlike previous US scholarship, I do not only study independent unions, but also corporatist ones. Rather than select the existing cases, I use a sample of various kinds of unions in Mexico, and explore what is their experience and view of transnational labor collaboration. This approach allows me to understand more complexities in our understanding of transnational labor collaboration. Supporting earlier findings, I identify internal, external, structural, and economic factors influencing the possibility and shape of collaboration. However, I pay closer attention to ideological factors than has previously been done. This research also permits me to explore the difference between corporatist and independent unions transnational relations and the way national-level disagreements among unions and intra-union tensions play out at the international level.

RC16-297.4

HERNANDEZ HERNANDEZ, ALVARO* (Kobe University, arkev@hotmail.com)
in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

By introducing a typology of actors that traces their careers (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees’ affiliation to Correa’s party, Alianza País, but also on the recruitment in the social movement organizations mobilized for the migrants’ cause.

Relying on this tableau of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of capitals (Bourdieu, 1972, 2004), practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the restructuring of the bureaucratic field during the Correa’s administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

<th>HEROD, ANDREW* (University of Georgia, <a href="mailto:herod@uga.edu">herod@uga.edu</a>) Thinking through Worker Responses to Globalisation – What’s Geography Got to Do with It?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Everywhere we go, it seems, we hear about globalisation. And, if we are associated with a labour movement in any way, we often hear a corollary to this globalisation talk – ‘workers must organise globally’, ‘unions must internationalise’, and many similar such statements. Certainly, I don’t want to suggest here that these are not important elements in a vibrant labour politics that seeks to confront the untrammeled power of global capital. There are growing numbers of labour unions who are merging across international borders as a way to gain leverage in the global economy. But what I do want to suggest is that responses to the activities of global capital are more complicated than a simple ‘we need to globalise’ response. And part of what complicates this is questions of geography. In this section, then, I will detail some of the geographical approaches that a group of self-styled ‘Labour geographers’ have developed to think through issues of worker power to show how the way in which the geography of capitalism is made is both reflective of capital-labour conflicts but also constitutive thereof. In particular, I will focus upon two claims which, when viewed through a geographical lens, are problematic than at first perceived, these being: 1) the claim that workers must organise at the same geographical scale as capital if they are to have any purchase upon the world economy (i.e., globally); and 2) that transnational organising by workers is necessarily progressive. Such geographical perspectives provide a means to think about world order and political praxis in a more nuanced manner. Researching how different places are geographically connected, then, is a central starting point to developing effective and progressive strategy in an increasingly networked global economy.</td>

<th>HERRALA, ELISE* (University of California, Berkeley, <a href="mailto:eherrala@berkeley.edu">eherrala@berkeley.edu</a>) Is There a Field of Art in Russia?</th>
</tr>
</thead>
<tbody>
<tr>
<td>A popular opinion among the international and Russian art communities is that Russian art collectors—often thought of as nouveaux riches—have no taste. Contemporary Russian art is also poorly received by both, and frequently dismissed as derivative of western art. And Russian art world insiders often complain that because of a lack of education, the general Russian public does not understand or appreciate contemporary art. Yet Russia has long had a rich cultural history with emphasis on appreciating the arts and is home to world-famous museums. Further, the transition from socialism to capitalism would suggest there is ample inspiration for creating original art instead of aping the West. What accounts for this divergence between the potentiality of Russian art and the reality as claimed by its players? Looking toward Bourdieu, one could say that there has been a failure to create a field of art in Russia. After ten months of fieldwork in Moscow, I found that while some conditions are in place, ultimately the field of art has not fully developed. Despite the Soviet Union’s collapse over 20 years ago, its effects have left an enduring mark on the landscape of contemporary art today. I argue that this past has created barriers to creating a field of art in post-Soviet Russia, such as a lack of institutional support (including government censorship), a negative view of the past, dependence on the West for ideals about the art world, and a belief that art market is the index of collective success.</td>

Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of ‘Australian’ national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethico-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric. Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insight into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting ‘flavour of the month’ political and institutional discourses.

The “Art” of Occupying the City: Contestations and Resistance through Creative Activism in an French Suburb

The “Art” of occupying the city: contestations and resistance through creative activism in an French suburb

Recent urban renewal policies in France have led to a reactivation of “urban activism” rooted in the “urban struggle” of the early 1970s (Castells, 1973) and the rise of “new social movements” (Touraine, 1978), while knowing deep changes in the modalities of action chosen by inhabitants who challenge and intend to participate actively in the transformations of their material surroundings, in a context of changing decision-making process in French urban planning. We will see how, through use of art in urban activism, between performance and informality, it is possible to dissolve their union? Are the rights associated with civil marriage always more profitable to women than the flexibility of the “de facto” marriage? Are these rights consistent with local reality or do they correspond more to principles with no practical application? We will examine these questions on an empirical basis, using a small-scale and longitudinal research in rural Mali, implemented in 1987-9 and updated every 5 years (the last in 2009-10). Quantitative data come from an exhaustive life event history survey that was carried out in two villages (1,750 inhabitants in 2009). Quality data include a corpus of individual interviews (65) on the family interactions experienced at different periods of life, and 7 interviews on marriage legalization (6 with focus groups + 1 with the judge in charge of divorce and family affairs). In line with women’s perceptions that civil marriage is a brake to marital rupture, quantitative results confirm that divorce is rare in case of legal marriage, while it is commonplace in case of rupture among women’s first marriage) otherwise. The paper will show that legal marriage can increase gender inequalities by making it more difficult for women to dissolve a union, while failing to provide them with rights that are suited to local realities.

Civil Marriage in Africa: Rights of Women, or Rights over Women?

Although matrimonial procedures in sub-Saharan Africa are highly complex, civil marriage is often a minority practice in this region. It is being increasingly promoted, however, notably in policies to advance women’s rights, since legal marriage enables each partner to assert his or her rights, if necessary through the courts. But why are women opposed to this practice in different populations? Is it because it represents a factor of progress for women? To what extent does it challenge the traditional way of women to manage their conjugal life, for instance to dissolve their union? Are the rights associated with civil marriage always more profitable to women than the flexibility of the “de facto” marriage? Are these rights consistent with local reality or do they correspond more to principles with no practical application? We will examine these questions on an empirical basis, using a small-scale and longitudinal research in rural Mali, implemented in 1987-9 and updated every 5 years (the last in 2009-10). Politicization of the Youth in Germany – Two Case-Studies about Protest Movements

In this paper I want to explore the criminalization and politicization of young left-radicals (anti-germans) through the use of biographical methods. I found a connection between those that became graffiti-artists and gang-members in the 1990s in Frankfurt am Main, because of their experience of racism and disregard in the German host society. After the German reunification a new form of politicization took place as well as on the political left side of society as on the side of migrants. The attacks on the home for people seeking asylum in Rostock, Mölln and 'Aussiedler' in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethico-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric. Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. Le paternalisme comme système total régnant la relation entre employeur et salarié a vu son essor à l'aube de l'industrialisation et du travail salarié en Europe. A travers ses différentes caractéristiques et ses différents usages, (encadrement de la population marginale, outil de fidélisation et de discipline, univers clos, outil de contrôle politique et social permettant de faire écran à l'Etat et aux luttes sociales), ce système demeure au travers de relations plus complexes et d'acteurs nouveaux.

Nous observons ce système de domination au Pérou, où certaines entreprises minières ont un contrôle non seulement sur leurs salariés, mais sur l'ensemble de la population avoisinant le projet minière. Nous voulons étudier la relation entre l'entreprise minière Suisse Xstrata, et la communauté de Fuerabamba au Pérou. Installée depuis 2005 sur le territoire communal, l'entreprise développe des stratégies d'adhésion à son modèle, notamment à travers le système de Responsabilité Sociale.

Le paternalisme n'est pas, ici, uniquement la prise en charge des employés par l'entreprise, mais d'essentielles habitudes du communautaire (fidélisation, dépendance, distraction, suivi « social », sponsoring, etc.) pour le bon déroulement de son projet.

Ainsi, l'entreprise remplace l'État, crée son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et d'autres services pour devenir une institution totale, réinventant tradition et nature des structures de pouvoir dans la communauté et s'imposant comme le modèle légitime pour précher la bonne parole aux paysans.

L'entreprise minière semble ainsi recycler des systèmes anciens de subordination, rappelant les relations entre Indiens et métis dans les haciendas durant plusieurs siècles, où les relations de subordination des travailleurs miniers à l'abreuvoir du XIXe siècle.

Nou s'agit donc de dissecé ce complexe rapport de domination où, a priori, chacun semble y trouver plus ou moins son compte.

Le Nexus of Scandinavian Exclusionary Thinking and the Naturalization of Difference

Studies of European political party programs, social movements, news media coverage, scores of books, and social media networks have embraced a negative view of non-Western migrants. But how do people reason on these issues in everyday interactions? The aim of this paper is to discuss how negativity against migrants in Scandinavia is related to negative beliefs towards "multiculturalism", "feminism", and "liberals" (left-wingers) in Scandinavian popular reasoning about difference. While there is much research about different forms of exclusionary beliefs separately and against specific collectivities, there is little scientific knowledge about how one belief co-exists with another as figures in reasoning. We approach this coexistence as a "nexus of exclusionary beliefs" with its blurred relations, inherent contradictions, and taken for granted assumptions. Through interactive methods that include a variety of qualitative interviews and participant observation followed by analysis of online social media and web news commenting, we seek to understand the cultural logics of this contemporary Scandinavian reasoning about difference, and if successful we can supply some input to the discussion whether the anti-beliefs are related by diffusion, analogy, correlation, or competition.

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both "religion" and "secular" are not universal nor essentialist entities, but rather contingent dimensions of social life that are embedded in time, place, and changing historical circumstances. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monotheistic religions was disrupted by the secular school of biblical criticism that flourished in Germany from the mid-19th century on and challenged the historicity of the biblical narrative. A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavating sites mentioned in the Old Testament and thereby testifying to the historicity of the biblical events. This approach was enthusiastically adopted by secular Israeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion.

Since the 1990s, the pendulum has swung toward a critical view of the archaeological data. Secular scientific archaeology rejected the shackles of religion and national concerns.
Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area

Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research area is increasingly recognized, in particular because of the following question: how can vulnerable coastal areas make a transition towards areas that are more resilient and better prepared to cope with unexpected ecological, social and economic changes in the future? In this paper the concepts of tourism, complex social-ecological systems, resilience and planning will be illustrated by the case of the Dutch Wadden area, which is one of the largest tidal wetlands in the world and was enlisted as UNESCO World Heritage in 2009.

This paper will be organized in three parts. First, we will examine the concept of tourism and indicate where the academic gaps and shortcomings regarding tourism in vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Ballesteros, 2011) and to find ways to develop and protect at the same time.

Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable areas through different scales. Planning is important and has to be done carefully, since tourism can lead to regional development, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used for fostering socialist revolution. But World Bank economists championed PB. While PB has most often been initiated by Left parties, there are a number of cases in cities controlled by centrist and right-wing parties. For the most part, scholars argue that participatory reforms, such as PB, can only succeed when a Left party is in power at the local level. Through a nested, cross-site sub-national comparison, based on 19 months of ethnographic research, my dissertation interrogates this assumption by looking at participatory budgeting in cities run by the Left and Right in Venezuela and Bolivia. I expected to find more success in my two Left cases. Surprisingly, I found robust participation in my Left and Right Venezuelan cases but limited participation in my Left and Right Bolivian cases. I was also surprised to find greater success in my Venezuelan cases given the greater strength and autonomy of social movements in Bolivia compared to Venezuela and the different trajectories through which Hugo Chávez and Evo Morales rose to prominence (Chávez through a failed military coup and Morales through social movements). I argue that these unexpected findings can only be explained by examining the relationship between local and national politics in Venezuela and Bolivia.
social rights of citizens, the latter highlights the protective role. Even though the war ended in 2009, public discourse continues to be dominated by security issues. Persisting ethnic tensions in the country feed into the dominant discourse, relegating social policy issues to the background.

**Issues in School to Work Transition in Sri Lanka**

The transition from school to work has become more complex in recent years due to both the changes in the education system as well as the dynamics within the labor market. This paper, first provides an overview of the above changes based on secondary data drawn from various institutions and then examines how young people in Sri Lanka fit into both the education system and the labor market in the light of data drawn from the national youth survey of Sri Lanka conducted in 2009 under the direction of the authors.

As is evident from the survey data, the desire on the part of the youth in general for securing educational credentials remains strong, though the opting out of education at secondary level is also increasing, particularly among male children. This tendency appears to be related to labor market dynamics as well as poor prospects for employment among youth with higher levels of education. Domestic labor shortages and increasing overseas employment opportunities for people with low levels of educational attainment persuade young people to leave school early. The paper discusses the implications of the above for skill formation in a country that strive to achieve a higher level of economic development in the years to come.

**Statistical Methods and Network Simulation: The Role of Limited Information in Edge Formation**

Snijders et al. (2009, 2013) have contributed to an approach integrating agent based models and empirical network data in which instead of empirical data “validating” the simulation, the simulation estimates the empirical parameters. One assumption is that agents have information about the other actors in the network, i.e. that any two agents could potentially form a tie. This assumption means that the model is limited to modeling relatively small empirical networks. Another potential solution is to consider how information about potential matches might be limited. In a loosely related area, Bearmann et. al. (2004) looked at the potential generating mechanisms of a specific type of social network: sexual histories.

They found that ‘limiting potential matches (excluding those close of one’s network) generated social networks that closely matched empirical data.’

We use agent based simulations to consider the effects of assuming full versus limited information in evolving social networks. First, we limit information in a network’s evolution based on the existing network, partitioning the list of potential new friends between those within one’s local network (e.g. 3-step acquaintances) and a small sample of strangers. We test whether assuming about potential matches generates more realistic graphs in terms of the average path length, clustering, edge distribution, and connectivity, as community size increases. The question of limited information is then extended to sexual history networks, again, partitioning potential matches into those in one’s local network and a small sample of the general population. The evolution of social networks is based on an exponential graph models while the sexual histories implement a small sample of the general population. The evolution of social networks, again, partitioning potential matches into those in one’s local network.

by institutions of higher education in Japan. Yamagami & Tollefsen (2011) report that globalization forces can offer opportunities and threats for global non-native speakers of English.

A higher educational approach promoting awareness and skills necessary to be global, are keys to gaining access to predominantly English academic discourse. Such access can lead to the sharing of common life goals and more specific participatory mechanisms across national boundaries and cultures. The promotion of both global awareness and skills, based on Steiner’s three-tiered model of social life development, involves discipline-specific information exchanges and knowledge-sharing, specific genres, highly specialized terminology, and a high level of expertise (Swales, 1990).

Content and language integrated communication learning or CLICL, prioritizing academic literacies and discipline-specific content, provides learners with knowledge, skills, and life values enabling them to be mobile and local and global through academia. Our paper provides an account of CLICL, which balances academic literacies and discipline-specific knowledge, skills, and values. We outline the practicalities that nurture CLICL, or lead to its rejection.

**The Changing Significance of Social Class in Later Life**

During the 1980s the concept of class constituted a fundamental touchstone of social georontology. This was especially true within the political economy approach to ageing, however with the development of societies of a ‘late’ phase of modernity this concern was overshadowed by an engagement with other stratification orders. This has had the consequence of leaving class analysis “surprisingly underdeveloped”. Although the field does at times focus on the class background of older people, the arbitrary implementation of Marxist or Weberian standpoints informs us only of the extent that older persons conform to middle-aged norms rather than shedding light either on the unique character of class relations in later life. Moreover, tracing the class position of older people back to the breadwinners’ final occupation does not really account the reality of older people’s connection to class. This ‘modernist’ strategy contains crucial analytical and empirical lacunae. For instance, whilst it may have been valid in the past when most individuals died either before or soon after statutory retirement age, nowadays retirement generally signals the start of a ‘third age’ phase of life.

Moreover, instead of an ‘add and stir’ approach to class where age is ‘added on’ to existing empirical models, they miss the opportunity to explore how new people as ‘older’ men and ‘older’ women when they are addressing the linkages between ageing and class. This presentation will introduce the key themes of power identity and lifestyle as they connect to class in later life and assess the extent to which social class is a useful category in studying old age.

**How Can the Public Service Improve the Uncertain Transition of Youth into Adulthood? a Case Study of Educational Support Centers in Japan**

In Japan, the uncertain transition into adulthood for some young people is being recognized as the problem of futoko: a term that refers to youths who have been absent from their school for over 30 days in a single year. A person with experience of futoko tends to have difficulty in advancing to a higher education or obtaining a job, and may become isolated from society. Futoko shares similarity with hikikomori, as both refer to a youth’s withdrawal from the public sphere. In contrast to hikikomori, however, futoko youths are formally registered in school, and the educational administration agency therefore attempts to become involved with them.

This paper examines the governmental service for futoko adolescents, with the aim to clarify the factors constraining the transition of this age group to school or work. We focus on the Educational Support Centers (ESC) program, which is the most extensive and longest-running policy of Japanese Ministry of Education for futoko juveniles. Futoko has been a topic of interest for many Japanese sociologists, however ESCs have received little attention to date. Using interview data from instructors of ESCs in four cities, we examine how the staffs approach futoko youths.

The major findings are summarized below. First, although instructors find young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths’ private lives because of limited authority. Sec- ond, background of lacking social skills, young people are often plagued by familial problems or economic difficulties that make it harder for instructors to improve their situations.

This study demonstrates that governmental support makes the phenomenon of ‘corenication’ more visible, but it confronts the dilemma of how (and to what extent) the public service can intervene in the private problems that underlie futoko.

This paper compares two surveys conducted by the authors in 2004 and 2013 which look at the possible "civil-military gap" in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gaps between the officers and civilian elite, while there were signs of gap with the general public; (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the "civil-military gap."

Contested Spaces: Informality, Dwelling and Spatial Governance in Berlin
This paper examines the intersections between informality and the governance of place in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law.

In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday life of its inhabitants. Here, the poor are seen as "a site that is not just inhabited but produced through that inhabiting" (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Bayat’s (1997, 2000) notion of ‘quiet encroachment’, which describes the quotidian and longsome advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: 'Schrebergärten' (best translated as allotment gardens), camp sites and 'Wagenburgen' (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalization, I set out to explore, if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of encroachment. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their sum, I highlight both enabling and destabilizing aspects of these processes: While

Language and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg
This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely referred to as xenophobic attacks – the status of African immigrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of "otherness" within and beyond the urban boundaries of the "City of Johannesburg." We begin with a GIS-based study of speakers designated "other" in the 2011 census, focusing particular attention on the distribution of foreign others at neighbourhood level. This section provides the backdrop to a more focused study of Zimbabwean migrants, drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu's "ecosystem of social practice" as an analytical framework, we show how each neighbourhood is a social universe of struggle and regulatory ambiguities. Second, people’s lives are not only governed by the state, but also by alternative forms of rule and institutions that exist beyond the state. It follows that allegedly informal processes can similarly be understood as a form of formality, while what appears as formal might work through multiple informal relations. Our comparison, then, aims to work towards an understanding of informality that is more attuned to the multiple roles adopted by different actors involved in urban processes and the power relations that are mobilized in this process.

Species out of Place – Investigating the Visual Framing of an Ecological Problem
Invasive species designate a recently emerged category of ecological risks: alien plants and animals, introduced by human agency, causing extinctions of native species and also diverse economic, aesthetic and human health problems. This paper provides a broad and methodological analysis of the visual framing of these forms as a way to understand the impact of the different forms of framing on the public’s perception of these species. It aims to contribute to the understanding of how specific visual frames are crucial in establishing the problem formula in question by integrating the realms of science, media and political action. Exhibitions, flyers, documentary films, websites and databanks use maps, photographs, graphics, icons and numbers to display environments as relatively homogenous spaces, which enable clear-cut distinctions of inside and outside (native/alien). Thus specific species become perceivable as invaders and understandable as phenomena of disorder (biological pollution). Furthermore visual references of horror and science-fiction stories (aliens, zombies, monsters, etc.) relate factual and technical information metaphorically to more emotional realms of experience and popular imagination. By this means these forms of ecological communication (Luhmann) encourage state actors and civil society to fight against certain species.

Geopolitics and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg
This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely referred to as xenophobic attacks – the status of African immigrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of ‘otherness’ within and beyond the urban boundaries of the “City of Johannesburg.” We begin with a GIS-based study of speakers designated “other” in the 2011 census, focusing particular attention on the distribution of foreign others at neighbourhood (sub-place) level. This section provides the backdrop to a more focused study of Zimbabwean migrants, drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu’s “ecosystem of social practice” as an analytical framework, we show how each neighbourhood is a social universe of struggle that is inscribed with its own internal logic and relational matrix of recognition, and how language repertoires are adapted to fit these matrices. We discuss these patterns critically, and relate them to the wider “field of power”, a complex socio-cultural economic order that belies the post-1994 Constitutional enshrinement of eleven official languages.
HILLOTT, SAM* (University of Göttingen, sam.hillott@durham.ac.uk)
A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England

The paper compares and contrasts three English, rural villages, each with different low-income social class groups and are not immune to global influences.

It then questions the sustainability of each of these periods of boom and bust. What implications does each model hold for their respective village? Who benefits from each of these three differing circumstances - local, regional or national (or even global) interest groups? What lessons can be learned from local adaptability and resilience? The paper finally seeks to comment on the theoretical model best suited to capturing the complexity of rural villages. Are you defined by where you live, as some sociologists have recently argued? Or does there remain something sociologically significant about the social situation as grounded by the local level? This approach to comparing and contrasting the three villages provides an opportunity to place economic trends and changing circumstances as experienced and also informed by local, community-level social actors.

What Facilitates Moving from Urban Cities to Rural Depopulated Villages?: “I-Turn” Phenomenon in Ayabe City, Kyoto Prefecture, Japan

The Japanese countryside is suffering from severe aging. Due to the lack of job opportunities, many young people migrate from their home villages, leaving the elders in difficult living environments. Moreover, according to government reports, 42% of villages will be depopulated by the year 2050, with the other 58% already depopulated. However, as in many other countries in Japan, some people living in urban cities are willing to move their residence to those depopulated villages. This movement is so-called “I-turn” phenomenon. In this report, I use data from my fieldwork, which includes a case study and social surveys of Shigasato town, Ayabe city, and Kyoto prefecture in Japan. Shigasato (1,444 people live in here) has warmly invited about 40 families in the last 10 years. Almost 10% of their population is “I-turn” residents from other urban cities in this town. What kind of social factor fascinates these “rural-oriented” people in Japan? Answering from my studies, 2 factors are accountable. First, Shigasato Town has plenty of “bridging” social capital (Putnam 2000). Shigasato’s local neighborhood association called “KODAKARA-Net” hold various events of cultural exchange with other cities, and they introduce their vacant houses for “rural-oriented” people. Second, Ayabe city is located in Kyoto city’s neighborhood. It enables residents of Shigasato town to run various side jobs besides keeping farm. As is often the case with “I-turned” people abandon their rural lives due to the lack of job opportunities, this case avoid the problem. These social and geographical factors have strong influence for people who intend to “I-turn” in urban cities, and those points makes different Shigasato’s case.

It Takes Two to Tango: Dutch Majority Group Evaluations of Muslim Political Acculturation

Explanations of the degree to which ethnic minorities are included in a national political system typically concern either the institutional build-up of a nation (e.g. electoral systems, seats in parliament reserved for ethnic minorities), or characteristics of individual minority members (e.g. gender, education, social capital, political orientation). While these explanations are very valuable, they ignore the pivotal role played by the ethnic majority group. After all, minority groups and their individual members become politically active in the face of constraints presented by the political system – a system that is shaped by the rule of the dominant majority group. In other words: it takes two to tango. Drawing from Berry’s seminal work on cultural accommodation (Berry, 1997), we formulated different ways in which minority members can acculturate politically (e.g. integrate, assimilate, or separate). Employing representative samples of Dutch majority members (N=802 and N=928) we then conducted two vignette studies in which Muslims, the most prominent minority group in the Netherlands, were the target group. In addition, we considered the roles of perceived threat and perceived political unreliability. The results showed that minority groups’ acculturation strategy indeed affects majority group’s attitudes. Furthermore, evaluations of Muslim political participation hindered in a significant way the conceptualization of the level of perceived threat and political unreliability. The results are, however, not in line with expectations one would derive from cultural acculturation, indicating that the strategy for minority representation in the political domain might differ in important ways from everyday ethnic relations.

HINRICHS, KARL* (University of Bremen, hinrichs@zes.uni-bremen.de)
Labor Market Exit of Older Low-Skilled Workers: German Firms’ Practices

Recent pension reforms in EU countries display two main trends: 1) early retirement pathways are closed and standard retirement age is increased; 2) the contribution-benefit link is strengthened, mainly by calculating pensions on the basis of lifetime earnings. Both developments endanger the adequacy of old-age pensions of low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In the paper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an “early retirement culture”. The first part describes and analyzes the pension reform trends and the employment situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms’ strategies and workers’ preferences have (already) adapted to shifting institutional frameworks. This part is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to “normal” exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Furthermore, this study suggests that firms have indeed modified their behavior towards older low-skilled workers and have become more responsive to their needs, i.e. the quest to stay on in the job longer in order to prevent pension cuts. Those workers who actually made it until standard retirement age are often eager to return to their former employer to increase their public pension by working temporarily or part-time.

Sovereign Debt Crisis and Pension Reforms in European Countries

The „Great Recession“ and sovereign debt crises in several EU countries in the wake of the 2008 financial market crisis have triggered drastic reforms of old-age security systems. They aim at ensuring the financial viability of public pension schemes in the short and long run and/or at realizing notions of intergenerational justice. The crisis has, however, changed the political economy of pension reforms and pension systems. In the paper, pension reforms in eight crisis-shaken EU countries: Greece, Hungary, Ireland, Italy, Latvia, Portugal, Romania, and Spain, are examined with regard to the circumstances and the reform contents and the circumstances which led to the respective changes or facilitated them. It is shown that the challenges these countries were (or still are) confronted with allowed or enforced alterations which would not have been feasible otherwise which would not have been initiated by the respective governments in view of the political consequences. Moreover, cross-national comparison reveals similarities and differences and also sheds light on the social consequences that are already visible today.

How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the ‘Post-Oslo’ Period

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. In academic literature on Palestine, it has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family resp. clan (Hamullah). In large parts research focused on the effects of female integration into ‘committee work’ and the increased familial authority of young Palestinian males (Petet 1994). The period after the so-called Oslo peace process (roughly after 1995) and the various transformations it entailed for Palestinian society, however, have caught much less attention in research on the Palestinian family. Based on biographical case reconstructions and participant observation we want to discuss if the societal conditions in ‘post-Oslo’ Palestine have altered the interplay between participation in resistance against the Israeli occupation and the construction of manhood and family relations. Therefore we show the effects that the interplay of involvement in ‘resistance activities’ and family relations yields for the biographical trajectories (Schütze 2006) of young Palestinian males. Looking at the relations of family members from a biographical perspective allows us to reconstruct the changing relevance of family relations in the course of a lifetime as well as the intertwining of family relations with other biographical spheres of action. Our paper is based on fieldwork in the West Bank which is part of our PhD-projects as well as a larger Israeli-Palestinian-German research project funded by the German Research Foundation (DFG) and supervised by Prof. Gabrielle Rosenthal, University of Göttingen.

Women’s Experience of Maternal Morbidity - a Global Meta Ethnography

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared ‘human’ experiences, regardless of inequalities in economies, healthcare resources and the social capital of women in different settings.
Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy. Studies of near miss maternal morbidity, where a woman needs urgent life saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

Methods: Qualitative interview studies of near-miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

Findings: There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low vary very greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the ‘social capital’ of women in different contexts impact on the long-term emotional and physical impact of these experiences?

Conclusion: This presentation will explore what can we learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

ESA The Position Of The Female Gender In The Political Space. An Analytical Biography Access To The Study Of East German Female Politicians Career Chances

This abstract aimed to determine the career opportunities of East German female politicians in the time of the collapse of the GDR and consider the processes of their social and mind-making. The empirical basis are 24 biographical interviews with female MP’s from East Germany. In this regard my research confirmed that “the revolution in the former GDR” has got a crucial influence on the East Germany politicians careers, especially, when it is cooperation with other categories of difference such as “gender”. That is why influence of the collapse of the GDR and the following transformation processes had crucial influence on career opportunities of East German female politicians to be considered. To that extent, the research aiming to show how “gender” and “gender differences” in politics are constructed. These consequences for their political careers and the political culture will be demonstrated, too. It will also demonstrate, how “gender identity” is constructed in the field of politics. The abilities which are essential for successful career oans if women in politics are discussed. Another focus is paid the specific advantages and disadvantages female politicians have got because of their “gendered” role. Besides, it will be shown if and in which way female politicians will be accepted by the male competions and by the society. Last but not least the consequences of these projects for the political culture at the present time are also discussed.

HIRAGA, MIDORI* (Kyoto University, midorihiraga@gmail.com)
Restructuring Vegetable Oil Supply and Demand in Asia: The Impact of Trade Liberalization Facilitating Increase of Fat Supply Among Asian Nations While Jeopardizing Their Domestic Production

This research examines strategy shift in vegetable oil sector among global transnational corporations, focusing on Asian TNCs like Japanese sogo-shosha and food industry, together with related trade liberalization and deregulation policies of Asian countries in the Corporate Food Regime (McMichael, 2005). These shifts are assumed to be increasing Asian countries’ dependency on global vegetable oil, which can jeopardize their food security as the global oil supply increasingly depend on only two crops, oil palm and soybean, produced in the limited number of countries. The shifts also can jeopardize public health of the Asian population.
by increasing availability of oils and fats in the nations' diet as a forerunner of nutrition transition.

Asian countries have rapidly increased vegetable oil supply in last few decades. China and India transformed from mostly self-sufficient countries of vegetable oils into the global leading importers by rapidly increasing imports of palm oil, and of soybean in case of China, since the mid-1990s. Thailand and South Korea have increased their vegetable oil supply, mainly with palm oil and soybean oil, after the financial crash in 1997. Japan liberated its vegetable oil supply decades ago and reduced its self-sufficiency rate as low as 2%. More significantly, recent neoliberal trade liberalization, especially direct foreign investment and corporatization, are suspected to be facilitating (re)structuring of the supply chains of vegetable oils with development of food industry based on imported vegetable oil and oil crops, like building large-scale oilseed crushing facilities or developing instant noodle industry in China. The increased availability of oils and fats, and the concurrent change in diet toward higher-fat, lower-carbohydrate, more processed food, can jeopardize the public health among Asian nations. This research investigates the structural changes in vegetable oil supply and demand in Asia, in order to secure food and health of the population.

HIRAI, TARO* (Hirosaki University, of-hirai@nistify.com) Legitimacy or Legitimation?

After years of Great East Japan Earthquake, day and day, disparities in restoration among similar regions are seen as social problem. In this study, we explore the limitation of this schematic way of making problem, through the process-oriented research of local governments’ decision-making concerning their restorations. Certainly, restoration disparities among regions are verified statistically, for instance, numerical difference of population recovery rate. Furthermore, the popularly supported national policies have been made to target restoration disparities among regions. However, each of region or its local government has been permitted to decide distinctive plan or style of restoration. After the Second World War, Japanese local government is not just bound by national law but also become to be allowed to pursued its autonomy. Additionally, this degree of allowance of local autonomy has increased with successive fiscal crisis of national government. In fact, through our follow-up survey of the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive determination of local government. As we attempt to identify the “distinctiveness” of determination of local government, in this research we pay attention to the different ways of restoration financing between condition similar local governments. The results show differentiation of financing: from dependence just to the different ways of restoration financing between condition similar local governments. This is the first case for Japanese government to officially receive foreign nurses coming to Japan, under the Japan-Philippines Economic Partnership Agreement. A four-page questionnaire, including GHQ (General Health Questionnaire), socio-demographic status, motivation to go to Japan, degree of knowledge about Japanese language, within three years after their entry to Japan. However, the recent phenomenon indicates that many implementations on this program should be made. The number of applicants as nurses and as hospitals for this program has been shallowed, and many criticisms on the programs have been discussed in both sending and receiving countries. One of the criticisms is based on the absence of the governance of the nurses, including Japanese and foreign nurses, of the programs. In this presentation, the JI-EPA and JP-EPA programs are analyzed through quantitative and qualitative analysis which author and her co-researchers have been working for since 2007. Throughout the study, some suggestions will be made to contribute the cross national movement of health professionals in Asian countries.

INTE-19.1
HIRANO, SEDI* (University of São Paulo, sedihi@usp.br) Theoretical Considerations of Recent Studies of Japanese Immigration to Brazil

The paper considers that the migrant, even prior to becoming an emigrant, was transforming within his own country and within his own community/society of origin, due to his dreams, desires, and utopias, into an atopic, that is, an atopic being, without place. Among the various ethnic groups that migrated, including Japanese, those who belonged to so-called “complex genetic stock,” due to their cultural singularities that differentiated them from the supposed community/society standard accepted as nationally prevalent, faced prejudice, acts of intolerance and “racism”, in which “myths” and “historic facts” were mobilized to justify the violent actions of people, of social group, and of the receiving State itself. However, how does one remain Japanese after living outside Japan for many years? When, with the passage of time, is a new place (topus) constructed in Brazil with a complex web of family relations and professional activity? When are the children socialized and educated through schools, according to the Brazilian standards of being, feeling, thinking, and acting? How the subject appears as an unquestionable value for Brazilian Japanese descent, is an essential instrument for social and economic ascension, and is the place where the rules of civility and Brazilian active citizenship are acquired.

HIRAI, KEIKO* (Sophia University, hirai@env.sophia.ac.jp) Construction of the Environmental Problems: Biblio-Metric Analyses of the “Tragedy of the Commons”

“The Tragedy of the Commons” is frequently cited as a model to explain how resources with open access are destined to deplete as a result of rational individual’s actions. The original neo-Marthusian message of the metaphor however, has been largely forgotten. This paper explores how the frame of “environmental issues” has changed over the years by tracing the citation trends of the original paper written by Hardin in 1968. The data used in the analyses are the 4,330 bibliographic records that cited Hardin’s article identified in the Web of Knowledge. The results show an exponential increase in the number of citations especially after 1990s. The scope of disciplines related to environmental studies also expanded after the year 2000. The proliferation and popularization of the metaphor indicate the decoupling of population problems through the changes in the frame of environmental discourse that synchronized with the trends in global environmental politics.

HIRAOKA, KOICHI* (Ochanomizu University, hirao@ocha.ac.jp) Need for a Comprehensive Reform of Old-Age Security in Japan

The disaster caused by the Great East Japan Earthquake influence foreign residents in Japan. A mass exodus of foreigners was observed especially in the first few months after the earthquake for fear of being exposed to long-lasting radioactivity. The evacuation cause many problems for the state including supply of electricity from Nuclear Power Plant. Nevertheless, there were Filipino nurses, who entered Japan to work at hospitals across the country, only two months after the earthquake. This study aim to find the predictors of the mental health status of the 3rd batch Filipino nurses coming to Japan, under the Japan-Philippines Economic Partnership Agreement. A multi-linear regression model (R²=.535, p<0.01) indicated that the strongest factor to indicate GHQ score was satisfaction for pre-departure training (beta=.370, p<0.01). This impact of the earthquake did not show a significant correlation to GHQ score. One can assume that Filipino nurses’ migration was derived by their motivation based on their economic needs. On the other hand, the degree of impact of the earthquake did not influence their migration patterns.

En conclusion, nous présenterons des pistes de travail pour approfondir l’analyse des difficultés de l’emploi domestique et des métiers du care dans les institutions, sur lequel nous avons déjà des publications. La phase méthodologique sera le fil conducteur de cette deuxième partie de la communication.

This study then examines the historical and institutional factors behind the problem of work-force composition in the care sector and in the public pension system.

Lastly, this study analyzes the employment situations of middle-aged and older workers. It is suggested that improvements in the employment policies for these workers should be prioritized, given their high work ethic and the financial difficulties of the public pension system.

First, this study analyzes citizens’ attitudes toward the pension system using national survey data. The data show that citizens tend to have high expectations for the social security system.

This study then examines the historical and institutional factors behind the problem of work-force composition in the care sector and in the public pension system. The data show that citizens tend to have high expectations for the social security system.

Lastly, this study analyzes the employment situations of middle-aged and older workers. It is suggested that improvements in the employment policies for these workers should be prioritized, given their high work ethic and the financial difficulties of the public pension system.

In last decades, real estate production turned into a main capitalist way of re-producing the global financial dynamics. For urban space this means impoverishment of a city notion. For social mobilization that seeks for the reduction of social inequalities it leads to a perception of insignificance of small victories, even with a high level form of organization. In this way, the urban vision over society by philosopher Henri Lefebvre, not just makes clear the role of the urban for capitalization, but also gives us elements of reflection for social mobilization practices by an anthropologist.

Reshaping the Housing System in the Context of Japan’s Post-Growth Society

Many mature economies are now entering the ‘post-growth’ era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards ‘post-growth societies’, where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-aged population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-price volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar ‘golden age’ of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, welfare state and urban transformations. With entering the ‘global age’, however, the ‘post-growth’ social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping ‘post-growth societies’.

HIRSCH ADLER, ANITA CECILIA* (Cecilia Navia Antezana, anahua007@yahoo.com.mx)
NAVIA ANTEZANA, CECILIA (Pedagogical University of Durango) Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has been evaluated and compared with many other countries, and has been located with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been changes in the labor conditions that have created uncertainty. In our research project: Professional Ethics for Professors and especially from the open question: which are the five necessary actions to prepare teachers about professional values? we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of team work and personal relations and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

HISANO, SHUJI* (Kyoto University, hisano@econ.kyoto-u.ac.jp) Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in)security politics in Japan and East Asia, and could therefore be an introduction to the session.

With its rapid economic growth, East Asia is widely recognised as one of the most important regions in the world economy. Despite its significance in the globalised agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region’s heavy dependence on food imports has become too significant to be disregarded. According to FAOSTAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural imports in 2010. This situation is unsustainable not only for regional economies but also for the world food economy in the era of “the end of cheap food”. A heightened sense of “food crisis”, especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our “food security concerns” are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

In this paper, the development of policies and discourses on food (in)security will be critically analysed as a underlying basis for further empirical studies with a perspective for social mobilisation of food sovereignty in the region.

HISHIYAMA, KOSUKE* (Kagoshima University, hsym@leh.kagoshima-u.ac.jp) Policing and Autonomy of Community: Comparative Study of Japan and Indonesia

The objective of this presentation is to clarify the character of community policing in Japan and Indonesia from the viewpoint of the autonomy of community and my filed research. This presentation will be divided into three parts.

First I will examine some discussions and theories regarding the community policing, where we will see that the autonomy of community is needed to manage the way of policing practiced in community in the case of the US. Then, I will clarify the crisis of the autonomy of community with special attention to a discrimination among communities. It has been produced by the development of suburban area and individualized auto-mobility in the US.

Secondly, we will turn to the case of Japan, and I will cover weakening role of Japanese neighborhood organizations and activation of policing by the central government. The government tries to apply “broken window theory” and discontinue tradition of mutual respect between community and police. Through the cases, I will identify the difference and similarity with the social condition of the US and clarify difficulty of the autonomy of community in Japan.

In the third part, we will look at the community policing of Indonesia in the development era and evaluate a mixture between local security and tourism for community development in Bali. The police has tried to apply the community policing in order to reestablish new structure of the police and grasp vigilante groups since the collapse of centralized policy. However, in the case of Sanur area in Bali, finally, we will see the mixture of the community policing with new image of tourism.

While Japan is said to be the country which has one of the strictest control for refugees and asylum seekers, Japanese government accept some refugees, especially from Burma. After receiving the asylum, some of Burmese run a small business in their community. How do Burmese become a refugee entrepreneur? How do they run a small business? This presentation aims to explore the factors which foster the refugee entrepreneur from the view point of the opportunity structure theory. This presentation is based on the field work data carried out in Tokyo, Japan from 2004 to present. The data consists of interviews with Burmese refugees, refugee advocacy NGOs, Government agency, and other related personnel. Based on the opportunity structure theory, there are some types of Burmese small businesses. One type is a small business serving an ethnic community’s needs. With the help of their colleagues, they mobilized various ethnic resources: capital, labour and skills. Other type is small business serving an ethnic community. The presentation is followed by Burmese entrepreneurs’ lives in the presentation. However, their businesses are not stable because of the small size of their ethnic market and the intense competition of the service industry. Following the presentation, I will discuss the economic integration of refugees in the future.

HIYAZAKI, MASAYA* (Meiji University, masayam2010@gmail.com) The Communion without Boundaries and Sakae Osugi’s Anarchism

The purpose of this paper is to investigate the political ideals of Sakae Osugi. Osugi argued that it was possible to establish a “society of mutual aid” based on the principle of “expansion of life”. In his view, the hierarchy meant fixing the boundary and every boundary was an expression and exercise of power. That explains why anarchism is a perpetual movement which attempts to transcend every hierarchy forming the hierarchy. Osugi aimed at a free and diversified federal society where life is expanded. Osugi’s influence stemmed from his articulation of the basic concerns of his generation. That generation confronted difficulties of a different order from those faced by the Meiji leadership. Osugi was attracted to the problem presented by the emerging masses: how could they be incorporated into society? His reply to this question was “mutual aid”. This paper focuses on the relation between both notions of freedom and society and analyzes it throwing a light on the principle of “expansion of life” in Osugi’s anarchism. Similarly to his contemporaries, it might be helpful to enquire into that principle, in a way that is beneficial to the relation between freedom and society.

The Determinants of Intrinsic and Extrinsic Work Motivation Among US and Norwegian High School Students

This paper investigates the work motivations of American and Norwegian high school students. It centers on types of motivation that are widely defined as either intrinsic or extrinsic to the work itself. The distinction, which has a long history in the empirical study of work values, aims to separate the motivational force of self-development through work from that of obtaining external rewards as a result of work. The paper draws on prior studies of young Americans’ work motivations, and attempts to build bridges to cross-national research, which has primarily been preoccupied with the work values of adults. The paper thus aims to pave the way for more comprehensive cross-national research on young people’s work motivations. While scholars have disagreed as to whether intrinsic and extrinsic values should be treated separately or as opposite poles on a common continuum, the paper underlines the benefits of not committing exclusively to one understanding, and giving both their due in empirical examination. A key benefit of this approach is that it tackles acquiescence bias, a surmountable challenge when conducting cross-national comparison of rating-based survey data. Regression analyses reveal that national context, gender and ethnicity greatly impact intrinsic and extrinsic work motivations. In the Norwegian context, intermediate variables (grades, part-time work, and particularly high school program) are also strongly linked with work motivations. Conversely, no significant effects of parental education are found in either context, signaling a break with earlier studies.

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

K.C. Ho (Sociology, NUS)

East Asia countries are late comers in international education, league tables and world class university formation. This entry was marked by a fundamental restructuring of the university system, particularly top national universities whose traditional role has been the training of the nation’s elite. My paper discusses Singapore’s restructuring experience and its consequenc es in terms of its search for international talent for professors and students, its focus on basic research rather than applied or policy research, and its increasingly ambiguous relationship with society and community. Drawing from a participatory survey of the country’s two largest comprehensive universities, the paper discusses impact of the internationalization drive and its connections to Singapore’s global city-state status, its implications of being unhinged from its traditional societal roots from a variety of disciplines: science and engineering, medicine, and business and management, and the reactions of different societal and community groups to this shift.

The Place of Community Practices in City Heritage Projects

The Place of Community Practices in City Heritage Projects

My paper examines two heritage projects, Pomahakan in Bangkok, Thailand and Kampong Glam in Singapore. Both sites represent contrasting ways in which local communities have been alienated from wider city-based efforts branding heritage. Set in a planned Rattanakosin historical park of old Bangkok, Pomahakan represents a case of how local heritage and ways of life are fighting for recognition and preservation alongside the royalist and religious heritage being represented in the Rattanakosin Project. Kampong Glam project, in contrast, has retained the local community icon, the Sultan Mosque as the jewel of the ethnic Arab-Muslim quarter, but is stripped of its residential and community elements. The result is a vernacular physical form, redressed to play a larger role as tourist attraction and entertainment district.

Ultimately, successful projects require an understanding of how activities get sedimented, layered and connected, how places develop identity and meaning, and how policies should combine with market and community to create the attractive diverse spaces, transforming the city into what Lofland calls “a garden of earthly delights”, comprising of the kind of places we love and want to go back to.

HO, PETULA SIK-YING* (HKU, psycho@hku.hk)

This paper addresses Chinese women’s self conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid and diffused than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between currents inside and the world spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013). Erotic justice points to how institutions, policies and anticipations, however, erode the “politics of economy of life chances” which are not equal. Indeed, people in their movements, emotions, and desires are themselves made in terms of the discourses and unequal differences, of the present, past and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the field of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a politics of iconocanism using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

Women Negotiating Work and Family Responsibilities in Hong Kong and Britain: Rethinking Modernity, Individualization and Intimacy

Drawing on comparative qualitative research conducted in Hong Kong and Britain, this paper contests western theorists’ ideas on the consequences of modernity for women’s orientations to work and family. Our data derive from life history interviews and focus groups with young women and their mothers in both locations and reveal similar realities and differences in the effects of social change on the two generations. The differences cannot be attributed to the pace or duration of modernization, nor are they wholly consistent with the changes that might be predicted by Giddens’ (1992) ‘transformation of intimacy thesis’ or Beck and Beck Gernsheim’s (2002) individualization thesis. While the Hong Kong women are more committed to family than their British counterparts (cf. Chang and Song 2010; Jackson and Ho 2013), in particular in terms of obligations to close kin, they are also far more career oriented. Conversely, the British women seem much more individualistic, sometimes hedonistic, in their personal lifestyle choices, but they are far more willing to sacrifice career to motherhood than those in Hong Kong. Hong Kong women are much more strategic in pursuing economic opportunities; evident especially in pressure on daughters to succeed, in terms of advancing the family as a whole. This is in keeping with the idea of Asian instrumental/utilitarian familialism (Lau 1978; Chang 2003; Chang and Song 2010). Young British women are encouraged by their families to succeed, but this is not uncommon thought of in terms of familial advancement and personal fulfilment. These differences are not only cultural, we argue, but also a result of material conditions of life in each location and the ways in which gender intersects with other inequalities in local contexts, creating differential opportunities and barriers to reconciling family and work under late modern conditions.

Nationality of Food: Food Safety As National Crisis and Nationalistic Ideology in South Korea

This paper examines food safety issues as national crisis and nationalistic ideology in South Korea. Food safety issues are one of the major issues at stake in South Korea recently. The import of US beef and potential threat from mad cow diseases had caused one of the biggest protests in Korean modern history in 2008. The risk of agricultural products imported from China is almost the daily topic in the mass media. The uncertainty of possible radiated fish from Japan after 311 Fukushima incidents arouse panic around family tables. Food safety is a topic that touches people’s nerves in everyday life.

In this paper, I will analyze the discourses and regulations regarding original places of food productions. My argument is that although food safety is a reasonable issue to worry about, yet in South Korea it is rather a political/nationalistic issue. An agricultural movement called shintobuli in late 1980s had successfully

Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternative Sociotechnical Network of Assisted Reproductive Technologies

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only “married” (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligibility criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between moral restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbians in Taiwan how did they negotiate to get access to ARTs despite of the legal restriction. First, the author finds self-insemination is not well diffused and used in Taiwan like the United States and some other western countries, and it’s due to different feminism movement context and the predominant feminist antinatalism discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) women to fulfill their original desire, while some physicians consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marriage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found how Taiwanese women negotiate and navigate their way to partie ARTs and ART-based reproduction challenges the original ARTs intend. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

Infliction Into The Country, Infliction Into The Mind? Framing Of Asylum Seekers In Israel and Its Consequences For Attitudes Towards Them

In January 2012, the Israeli parliament passed an amendment to the infiltion prevention law, originally passed in the 1950s as part of Israel’s defense policy against security threats. The new amendment expanded the infiltion prevention law to treat any person who did not enter the country through border terminals as an ‘infiltrator’ entering Israel illegally. The context for the amended law was the large incoming flow of asylum seekers entering Israel between 2006 and 2012. The new law coupled with legal means systematically deprived them of their basic rights for asylum. While the official ‘infiltrator’ terminology is relatively new, the term ‘infiltrators’ has been used by policy makers to describe asylum seekers already before 2008. Thus, the association of African asylum seekers with national threats is, by now, embedded in the Israeli public discourse. This study investigates whether framing asylum seekers as infiltrators is not only exclusionary policy measures, but also public support of such measures.

This study is the first to investigate the consequences of Israel’s policy towards asylum seekers more explicity, the study asks whether framing asylum seekers in Israel as posing demographic and security threats encouraged the formation of negative public attitudes towards them, and public willingness to support policies implying a withdrawal from liberal values like individual freedoms, and human rights. The study also asks whether such a withdrawal is more characteristic of specific groups within the Israeli Jewish population which are typically presenting more negative attitudes towards foreigners, or if it represents a more general tendency among the Jewish majority in Israel.

Attitudes Of The Israeli Public Towards Asylum Seekers: Humanitarianism and Its Consequences For Exclusionist Attitudes

This study focuses on the role of humanitarian convictions in shaping exclusionist attitudes towards asylum seekers in Israel. It provides first empirical evidence regarding public views on asylum seekers, the most recent non-Jewish migrant group to this country. Data for this study is based on a survey conducted during the spring of 2013 among a representative sample (N=500) of the adult Jewish population in Israel.

Our interest in the public views towards asylum seekers does not derive merely from the innovative empirical potential they hold, but rather from the theoretical questions such views bring to the fore. Previous studies indicate that the Israeli public consistently opposes the granting of social, civil, and economic rights to non-Jewish migrants. These exclusionist attitudes are mostly guided by a sense of national as well as socio-economic threat associated with the need to maintain both personal and group well-being. Although asylum seekers may invoke similar threats, we expect attitudes towards them to be based in addition on other psycho-social mechanisms associated primarily with notions of universal liberal values and human rights.

The association of asylum seekers in Israel with a human rights discourse is not intuitive. In fact, policy makers have initiated a public campaign delegitimizing their refuge claims and questioning this association, presenting asylum seekers as ‘infiltrators’. In this paper, we examine whether the link between humanitarian convictions and attitudes towards asylum seekers in Israel is maintained also in the presence of this politicized public campaign as well as other contextual factors, like the ethno-national emphasis in Israel’s membership conceptualization. The findings confirm that humanitarian values play a role in public attitudes. Specificaly, while the embody threat decreases respondents’ willingness to grant rights to asylum seekers, humanitarian values partially mediate this relationship.
interrogating conjointmently the nature of mutations of work in magasin and les registres d'action et de contestation dans une multinationale des services dont la main d'œuvre est essentiellement peu rémunérée, féminine, immigrée et pas ou peu diplômée. S'appuyant sur une série d'entretiens réalisés auprès des salariées des magasins, activistes et syndicalistes du secteur ainsi que sur des observations in situ de réunion et manifestations menées par ces derniers, cette communication souligne les dimensions organisationnelles et institutionnelles de la difficile émergence des formes de contestation dans une firme qui en un demi siècle est parvenue à tenir en échec les tentatives de syndicalisation de sa main d'œuvre.

This presentation is based on the analysis of “discrete” mutations of work, employment and trade unionism in and around the US Walmart stores. While the corporation is experiencing significant technical and organizational transformations, the rise of criticism invites us to question both the nature of mutations of work in stores and the action and protest records in a global service firm whose workforce is mainly made up of low paid immigrant women, holding jobs that do not require a particular degree. This communication is based on a series of interviews with employees and union activists as well as on in situ observations of meetings and walkouts organized by unions and associations. Through a diachronic approach, it emphasizes the organizational and institutional dimensions of the difficult but ongoing emergence of protests in a firm that, in half a century, has come to thwart all attempts at unionization of its workforce.

Managing the Difference Engine: A Cybernetic Analysis of Discrimination

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, must be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetics, Bateson’s models for schismogenesis and for schizogenesis will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Philology tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multi-culturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine’s account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot’s theory of fractals will be drawn on, as will theories of artificial life.

Social Networks and Strengthening the Participation in Brazil: “Projeto Vidas Paralelas” Experience

“Projeto Vidas Paralelas” – PVP aims to reveal and give visibility to daily life, culture and work from different social groups, from the perspective of the subjects involved, by means of training processes in digital culture and articulation of social networks to strengthen social participation in the construction of public policies, health promotion and culture. It is a proposal for strengthening the social movements and struggle processes through audiovisual training and use of new media as tools of expression, critical thinking and social organization. The project arises from a demand of workers for expanding the visibility of conditions and work processes experienced in the contemporary context and strengthening social movements. This proposal is raised by the network of social movements and delegates of the Third Brazilian Conference on Occupational Health held in 2005. Thus, “Projeto Vidas Paralelas” – PVP is articulated and built with all the Brazilian Union Centers and social movements related to occupational health. Between 2008 and 2010 the project was implemented in twenty-one (21) Brazilian states, in a partnership between “Rede Escola Continual em Saúde do Trabalhador”, Universidade de Brasilia, Brazilian Ministry of Culture and Ministry of Health. In 2010 indigenous students demanded the formation of “Projeto Vidas Paralelas Indígena” – PVPi, and in 2012, the process for the construction of “Projeto Vidas Paralelas Campo”. Currently, “Projeto Vidas Paralelas” – PVP is a social network that articulates the major social movements in Brazil, related to urban and rural workers, indigenous and “quilombo” communities. This study aims to share the experience on their theoretical and methodological proposal, as well as socialize the progress and challenges regarding the implementation of the strengthening of social participation through social networks.

Do RRT and the Crosswise Model Produce Valid Measurements of Sensitive Items? An Online Validation Study

Social desirability and the fear of negative consequences often deter a considerable share of survey respondents from truthfully responding to sensitive items such as own norm violations (e.g., unforgiving, tax evasion, cheating). As a consequence, the prevalence of norm violations is underestimated and results are inaccurate. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) or the Crosswise Model (Tian et al. 2007), a new variation of the RRT, are intended to mitigate this problem by providing complete concealment of respondents’ answers.

However, it is far from clear whether these indirect techniques generally produce more valid measurements than standard direct questioning (DQ). Furthermore, most systematic evaluations so far compare a particular method’s resulting prevalence estimates of sensitive behavior with DQ estimates under the “more-is-better”-assumption and lack a known true value for validation. Under the “more-is-better”-assumption higher prevalence estimates are interpreted as more valid estimates. So, it cannot be ruled out that higher prevalence estimates are a methodological artifact and not the result of a technique’s superior validity. Whether or not a particular sensitive question technique truly produces more valid measurements can only be answered for certain with validation studies. But the possibilities to carry out validation studies are rare and the topics’ range very restricted.

Therefore, we designed an online experiment which allows for the in-depth validation of any sensitive question technique. Inspired by Fischbacher and Heusi’s (2008) widely used cheating dice game we developed two dice games where respondents had an incentive to violate a norm, i.e., they could illegitimately claim a bonus payment. After the game, respondents were surveyed about their personal norm adherence, i.e., whether they cheated or not. We used different sensitive question techniques to survey this sensitive item. Resulting prevalence estimates were then validated with the true observed behavior.

Institutional Ethnography for Oppressed People

The especially oppressed people in modern society are the people with communicative, mental or social disabilities stemming from brain injuries, developmental disorders and mental illness such as schizophrenia. These people are in many ways marginalized in modern society where social and communicative skills are highly valued and sometimes requisite for achieving a position on the labor market as well as getting into social networks of modern urban subcultures. Being in such a position often makes them ultimately dependent on welfare institutions where they have difficulties in expressing their needs and demands for social relations, daily activities and means for personal development.

Since 1997 the author has been involved in several investigations into the institutional landscapes for these people following the ambitions of an applied institutional ethnography. That means that our point of departure was the life-world of these people and their efforts to get a coherent everyday life and a basis for personal development. With this reference we judged the total structure of insti-
tutions they were confronted with and the powerful relations and social processes behind these institutions and out of the horizon of their experiences. When mapping these relations between life-world, professional interventions and the regulatory forces behind (discourses, norms, jurisdictions etc.) we often succeed in uncovering processes that had been unnoticed by users, professionals and the people in charge.

This paper will summarize the methodologically challenges for institutional ethnography when entering the life-world and institutional structures for people in especially oppressed situations. To deal with the situation of these people challenges our tradition and changes slightly the elements in our research design. Among the regulatory principles that gain more importance and weight in this field are discourses ranging from pedagogical theories over diagnostic systems and the concept of evidence to governmentalities.

The Emergence of the European Research Council As Supranational Funding Institution

Structural transformations in the European Union's funding policy of the last decades have led to the historical emergence of a genuinely supranational funding institution, the European Research Council (ERC). Conceptually oriented towards an institutional approach of the sociology of science, and methodically led by extensive documentary analyses, we empirically analyze historical evidence for the opportunity structure, social mechanisms and effects of European research funding as part of the history of the ERC as an institution. Analytically, we draw a distinction between the following levels of investigation: Firstly, the structural relationship of national and supranational dimensions of the European research policy is located at the heart of a historical interest in Europeanization processes in science. While the ERC as supranational organization can be seen as intermediate in relation to the European Commission and the international scientific community, the transnational organization structurally builds on and reflects historical predecessors at level of national science systems as well. Secondly, we try to clarify in which way we deal with integration or rather disintegrative stratification of European research, reflected in cultural objectives of funding programs such as 'transnational cooperation' and 'scientific excellence', and researchers' socially structured opportunities, ambiguities, and potential conflicts to realize these objectives. Thirdly, seen from a dynamic perspective, we investigate how and to what extent European funding policy's goals have historically changed and been subject to self-perpetuating processes with unintended effects feeding back towards the social structure of European, and global, science as well.

Flexible Work Practices, Workplace-Related Policies and Individual Strategies for Reconciling Eldercare and Paid Employment. Findings from the European Carers@Work Project

Faced with a historically unprecedented process of demographic ageing many European societies extended the working lives of older workers, with the side-effect that working carers have to juggle the conflicting demands of employment and care-giving even longer. This does not only impinge on working carers' well-being and ability to continue providing care, it also affects European enterprises' capacity to generate growth which increasingly rely on ageing workforces.

The focus of this paper will be a cross-national comparison of flexible work practices and other workplace-related company policies aimed at enabling working carers to reconcile both conflicting roles in four different European welfare states – Germany, Italy, Poland, and the UK – based on expert interviews with human resource managers and 240 semi-structured interviews with working carers in the four countries. It is analyzed to what extent these company-based measures are path-dependent according to the respective welfare state / care regimes, which resulted in diverging degrees of state intervention and support and, subsequently, varying levels of company-based policies. However, a key finding to the research was a trend towards converging individual reconciliation strategies in the four countries. Finally, varying degrees of gender inequality in the provision of care will be examined.

Experiencing It like a “Gogo”: Intergenerational Relationships in South Africa

“Gogo” is the Zulu word (from “ugogo”) for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and Japanese poverty. An estimated 1.2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers’ contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complex and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grandmothers in Mpumalanga, South Africa towards a deeper understanding of such intergenerational relationships. The main findings relate to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

Promoting Intangible Cultural Heritage Protection Through Research: An Analysis Of The Impact Of Academic Discourse On Local Protection and Tourism Practices In China

This study traces the impact of the Chinese academic discourse on intangible cultural heritage (ICH) protection on local government and tourism practices in the PRC at the subnational level. Since the concept of intangible cultural heritage (ICH) entered the Chinese academic discourse in 2003, the academic elite has actively promoted the development and protection of intangible cultural heritage nationally through the publication and circulation of research. While their influence on the drafting process of the ‘Intangible Cultural Heritage Law’ has been acknowledged, hitherto little research has been conducted on their impact on local governmental policies, protection strategies and tourist promotion activities. This paper therefore aims at filling this research gap by conducting a comparative historical text analysis of Chinese academic journals from 2003 to 2013 in order to assess how academic discourse affects local government strategies for the branding of intangible cultural heritage. Comparing various selected cases, the paper will examine how scholars support local governments by reinforcing and framing local traditions according to ICH discourse, promoting them for ICH nomination and attributing tourism values. Furthermore, it will explore how successful local government practices and management models of ICH protection are disseminated within epistemic communities of scholars, ICH experts and local administrators. The findings not only shed light on the impact of Chinese academic discourse on specific local practices of ICH protection but also point to common protection strategies ready for adoption in other localities.

HOLDGRÜN, PHOEBE* (German Institute for Japanese Studies, holdgruen@dijitokyo.org)

High Aims, Low Outcome: Implementing Gender Equality in Japan

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan’s state. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012.

This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses, how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectures, an outlook of policy change during the DPI government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of the DPI government in the quest of gender policies which published 2013.
HOLDSWORTH, CLARE* (Keele University, UK, c.m.holdsworth@keele.ac.uk)

Alcohol, the Body and Gender in Later Life

Alcohol consumption in later life has emerged as a public health concern in many advanced economies in recent years associated with an observed increase in alcohol consumption among the elderly. The dominant public health message has centred on the need to moderate drinking in later life due to the direct and indirect impact that alcohol has on frailty in later life. This paper challenges the assumption that increased alcohol is associated with functional as well as social decline, but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and class-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular, we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in older age, but also how these can be resisted. The paper is based on a qualitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

JS-76.1

Youth Leisure As Job Training and the Pursuit of Distinctiveness

In 2009 a group of students at the University of California, Santa Cruz who self-styled themselves as the ‘Research and Destroy Collective’ issued a *Communiqué from an absent future* denouncing how demands on young to perform and be active rather than liberating, were stifling their futures, and that ‘even leisure is a form of job training’. This paper responds to this rally cry to map out how young people are increasingly engaging in leisure pursuits in advanced economies in order to enhance their CVs. I will consider how leisure activities, which may include travel, sport, hobbies, volunteering and membership of organisations, are increasingly seen as ways of standing out from the crowd and demarcating oneself as distinctive. While these quest for uniqueness is not a particularly new quality of youth transitions, in the paper I argue that it is taking on news forms as the desire to acquire experience capital is increasingly tied up with securing young people’s futures. In an era of high youth unemployment in advanced economies and increasingly global precariousness for youth employment, young people are increasingly expected to be responsible for their own futures through the acquisition of skills and training both within and outside of formal education. The paper will also explore how the continual refinement and uptake of e-technologies, not just social media but also through the role out of eportfolios, enhances young people’s capacity to articulate experiences and record what they have done. The paper draws on theoretical and empirical research with different cohorts of young people in English Higher Education over the last ten years.

HOLLMANN, HANNAH* (Amherst College, hannah.holmann@gmail.com)

Supply-Side Economics and Demand-Side Planning: U.S. Southwest Water Challenges, the Case of Oklahoma

In 2013 the U.S. government categorized all 77 counties in Oklahoma a disaster area due to persistent drought conditions. While 597 counties nationally were in decline, the declaration, Oklahoma, Kansas, and western Texas were hardest hit. Years before this, scientists’ projections of anthropogenic climate change showed “widespread agreement” that in the Southwest “the levels of aridity seen in the 1950s multiyear drought, or the 1930s Dust Bowl, become the new climatology by mid-century: a perpetual drought.” However, such information is not the basis of ecological and economic planning in the South.

I examine the development of the Comprehensive Water Plan recently adopted by the state of Oklahoma to demonstrate how planning in the region continues to operate on an undemocratic and “demand-side” basis. With disastrous consequences, the OCWP offers no real plan for long-term change subject to science or the democratic process. Rather, the politicians demonstrate their desire for historical modes of development in the region while downplaying the costs and publicly encouraging skepticism of scientific projections. Drawing on Michal Kalecki’s distinction between “monopoly-capitalist” and democratic planning and exploring the historical turn identified by Forster Nduibii towards “demand-side” (in ecological terms) planning, I offer a theoretical approach to understanding the limitations of the dominant mode of planning for addressing such long-term anthropogenic ecological crises. I argue that the official designation of drought-stricken counties as facing “disaster,” has short-term implications and is therefore misleading. This region must be recognized as facing an historical transition, in need of genuinely democratic, and ecological or real “supply-side,” economic planning to avoid some of the worst ecological and social outcomes. To end, I offer suggestions based on current, localized attempts at planning outside of the dominant framework, for alternative approaches that, if forced by movements to the state level, or beyond, could help reverse current trends.

HOLLMANN, KEITH* (University of Bedfordshire: England, khdeva@btopenworld.com)

Tourism Studies and Conceptual Unsettlement: The Decolonisation Of The Bleached Field

Each discipline / domain should regularly examine its effectivites regarding the representation and making of the socio-historical world. In inspecting the so-called global provocations of tourism, this presentation advances the view that the increasing domination of tourism / Tourism Studies over matters of culture, heritage, nation and race has not only been carried out according to eurocentric canons, but has been bolstered by theoretically feudal forms of knowing. It thereby calls for a concerted decolonisation of Tourism Studies --- that is, for a conceptual cleansing of the field to clearly identify and confront the hegemonic agency and
authority of the industry over colonised places / spaces and over histories / contemporaneities.

The presentation therefore will principally question:

1. Which priority areas of concern in international tourism should be decolonised, if any?
2. What would / should / could the decolonisation of Tourism Studies principally entail, or mainly consist of?
3. Who should be involved in the so-called decolonised ‘cleansing’ of Tourism Studies?
4. How would the decolonisation of tourism be substantiated educationally (in the schooling of practitioners and researchers who currently drive international tourism)?

The main supposition underlying this paper is that the decolonisation of the so-called bleached realm of tourism (after Pfleger’s term “bleached” field / “bleached” issues which form a part of the critical indigenous (in the Wampee community) social justice issues and, on the other hand, discriminatory practices. We lean on the idea that the industry’s internal and collaborative sinews of oppression are identified). Hence a more fluid acumen is demanded vis-a-vis the fields “improved conversation with the world” (after Bauman), where the productive / composensible genius latent within it can be positively used much more strategically and frequently for distant / removed / colonised populations in their own found interests.

In 2011, Heffernan produced Wilful Blindness, a text inspecting “why we [in our institutions] ignore the obvious, at our peril” as the examined the structures of our brains and working institutions to see why we --- within our instrumentali-
dies / corporations / organisations --- act with such sustained blindness and such deliberate indifference to what outsiders deem to be very large, important, or crucial matters. Thus, Heffernan’s “security of institutional connivance and organisational silence” will be distilled to generate discussion amongst RC50 delegates to critique what that total, all-encompassing, self-perpetuating blindness and under-recognised abnegations might indeed characterise ‘Tourism Studies’ as a disciplin-
ing institution.

In this Heffernian light, Tourism Studies will be dissected to reveal (from the present) the power dynamics and the agendas --- the unwillingness to question (involuntarily or in a critique) tourism’s historic silence and its institutional silence --- and the pernicious, habitual homage to long-established economic, cultural, social, political, and environmen-
tal impacts.

* is intrinsically interdisciplinary, yet offers so few bona fide interdisciplinary / multidisciplinary / transdisciplinary investigations;
* fundamentally deals with the image of places and spaces, yet rarely codifies any such mix of symbolic (or representational) impacts as it coterminously plays habitual homage to long-established economic, cultural, social, political, and en-
vironmental impacts;
* is seemingly a creative industry which selects, produces, and projects ‘differ-
ences’ about peoples / places / pasts, yet which has only the poorest of connec-
tions with other lead creative / inscriptive industries such as film / the media / the arts.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s conceivable ‘purbblind addiction to received procedure’; and, (ii) upon their own individual willing subservience to such forms of unquestioned / unthought praxis.

Finland has a reputation of providing a good and just education for all stud-
ents independent of ability and background. However, even in this kind of edu-
cational system there are students who are marginalized. We focus here on the relationship between laws and official documents regarding issues concerning social justice issues and, on the other hand, discriminatory practices. We lean on a discourse analysis of the rhetorical policy level including the national curricu-
um. This analysis is compared to empirical findings about students’ experiences regarding social justice issues.

There are some remarkable socio-cultural differences in Finnish schools. For example, the gender differences in literacy are the largest in Finland of all the OECD countries. However, even in our study we found that teacher education students do not consider social class important for their future work.

In Finland the Roma children have not done very well in school. The national curriculum is very supportive of Roma children but the reality is different. The indigenous Sami population is also doing less well that the majority Finnish stu-
dents. Students with immigrant background are a risk group with regard to bully-
ing and discrimination.

Hence, even in a system that at the policy level officially strive for equality and equity, the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for welfare and achievement.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s conceivable ‘purbblind addiction to received procedure’; and, (ii) upon their own individual willing subservience to such forms of unquestioned / unthought praxis.

In this Heffernanian light, Tourism Studies will be dissected to reveal (from the present) the power dynamics and the agendas --- the unwillingness to question (involuntarily or in a critique) tourism’s historic silence and its institutional silence --- and the pernicious, habitual homage to long-established economic, cultural, social, political, and environmen-
tal impacts.

* is intrinsically interdisciplinary, yet offers so few bona fide interdisciplinary / multidisciplinary / transdisciplinary investigations;

HOLMES, PABLO* (University of Brasilia, pabloholmes@gmail.com)

Social Inequalities in Latin American Social Thought: Beyond Culturalism and Class Theory

Since its origins in the nineteenth century, Latin American social theory has been primarily concerned with the unequal position of the region in the world society. The “Latin American condition” has been largely explained with reference to its “cultural singularity” vis-à-vis “developed societies”. In the last two decades, following a broader critique of developmental theories, there has been strong criticism of cultural explanations for global, regional and national inequalities in the region. In Brazil, some theoretical attempts have attracted attention. The first one, formulated in the beginning of the nineties, argued that structural forms of extreme social exclusion from modern social systems like law, politics, economy and education would have striking consequences for the institutional reproduction of these systems in the region. Accordingly, there would emerge a small sector of a socially over-integrated population, which would be in the position of using legal and political institutions for its advantage. Simultaneously, a broader sector of under-integrated population would have only an insignificant meaning for institutional operations, remaining thus excluded and being used to reproduce unequal social structures. Another well-known approach has drawn on many elements of this formulation, insisting, however, on classical categories of class theory to explain the social reproduction of inequality.

In the present paper, I would like to look critically at these different interpretations. I will, thus, argue that, although one can consider the existence of social classes as an outcome of important social dynamics, any theoretical explanation of social inequalities in the Latin American context must take into account the role of legal and political institutions. The paper also argues for the necessity of taking not only institutions into account, but also for the importance of bringing back the role of transnational institutional dynamics in the debate, although without stepping back into old culturalist traps.

HOLMES, PABLO* (University of Brasilia, pabloholmes@gmail.com)

The Social Constitutionalization of Trade? the WTO-Trips and the Chances of a Reembedment of the Global Regime of Intellectual Property

Since the financial crisis, the consciousness has grown that increasing social inequalities can have impairing implications for the functioning of institutions and for economic efficiency. Nevertheless, the tools that were known until now to tackle inequalities still seem to be ineffective on the transnational level. Mechanisms of tax & transfer, as well as the promotion of social rights, cannot be used in the same way as they had been in national contexts. For many scholars, the only way to face these problems would be a shift towards the transnationalization of social rights. Although much talk has been seen on the necessity of “constitutionalizing the WTO, the fact remains true that the global regime of trade remains highly fragmented. Moreover, the rules of the many regimes existing in the WTO do not seem to be interpreted under the light of the so called “global regimes of human rights”. Rather, it seems that they reproduce extremely specialized vocabularies, each of them taking for granted specific conceptions of how to balance property and social rights. As some authors argue, if it is true that the highly specialized global regimes of governance operate in close relation to economic knowledge, maybe they could develop some sort of “responsivity” to their non economic social environment on which they depend. In the present paper, by carefully analyzing 34 decisions of WTO dispute settlements regarding the Agreement on Trade-Related Aspects of Intellectual Property Rights, I try to assess the extent to which it is possible to identify in this regime internal elements of the constitutional semantics of social rights or possible functional equivalents of it. Hence, I will assess whether it makes sense to have any hope on transnational constitutionalization processes of trade carried out exclusively by the legal and functional mechanisms of economic global governance.
The Function and Uses of Society

Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a reified collective concept; and in the wake of the globalization debate, the critique of ‘container theories’ of society has further decreased the number of those who regard society as an essential sociological concept. But ‘society without society’ not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the present meaning of the term outside academic discourse. This paper addresses the sociological and everyday usages of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of society is thereby discursively constructed? The usages of the term ‘society’ in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that society usually refers to an anonymously constituted and therefore not directly addressable social horizon.

The Function and Uses of Society

Next?

After the Dream of Medicine As a Versatile Solution, What Comes Following the excessive expectations of biomedicine and distrust in medicine, it is possible that the Japanese are currently seeking greater faith in traditional forms of medicine, as a form of “regression.” This analysis presents a basis for rethinking the question of what comes after medicalization.

Blocking the Road to the Future: Biases and Misperceptions of Chinese Youth

The future of Asia will be highly influenced by the current opinions of its youth and bilateral relations between China and Japan. The current perceptions of the Chinese youth have not been well documented, and there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers’ opinions. Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents’ feelings as well as how they believed themselves to be perceived by the other nation. Therefore, to improve the relations between the two countries in the future it is imperative to identify the feelings and the perceptions of the Chinese youth concerning Japan and opinions on the controversial issues. Preliminary analysis of data collected from 261 college students indicates that, on average, Chinese students rate themselves and their peers to be more knowledgeable than the average Japanese student on China-Japan relations; what is more, they perceive the Japanese to have more amiable feelings towards China than their Chinese counterparts feel toward Japan. There is evidence to suspect the false-consensus bias is present and the possibility of naïve realism which has conflict resolution implications. Though numerous social scientists have focused on the past and the historic issues between Japan and China, my goal is to focus on the current perceptions and their implications for building a better future.

The Advent of Vulnerability: Socioeconomic Insecurities and Feelings of Social Isolation in Contemporary Japan

Over the past two decades, topics related to social inequality have come to dominate public discourse in Japan. Over the same time span, the number of Japanese who experience socioeconomic anxiety in their everyday life has increased. Analysis of data of a nationwide survey carried out by the author for the German Institute for Japanese Studies (DIJ) in 2009 shows, that an increase of social risks is not only perceived as something affecting others, but that socioeconomic anxieties and fears of social isolation spread throughout all strata of Japanese society. The data indicate that such negative emotions have a strong negative impact on subjective well-being in the Japanese context.

An analysis of who is most likely to be affected reveals objective differences in social status to be only weakly associated with a variation in insecurities. Instead, resources of different forms of trust and individual coping competences – in particular, the sense of coherence – are decisive for an experience of status anxiety or social isolation.

However, trust levels, especially in governmental welfare, prove to be low in Japan, and, thus, cannot fully develop their protective function. Japan has not yet managed the transition from a society based on assurance to a society based on trust. Most of all the youngest generation is vulnerable and ill-equipped to cope with the new social risks it faces in present-day Japan.

After the Dream of Medicine As a Versatile Solution, What Comes Next?

Since ancient times, Japan has had an unusual self-care culture. Following Japan’s nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for promoting medicalization. Modern Western medicine is currently the national standard in Japan, with universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people’s high level of interest in health does not exert an influence at the institutional level. Thus, medical discourse still has prime influential power.

We have studied illnesses that lack objective abnormalities, especially the awareness of fibromyalgia, with respect to both patients and physicians. Although medicalization has prevailed in all fields in Japan, disseminating the concept of fibromyalgia and incorporating its treatment in the health-care system has lagged markedly compared with other countries.

This paper presents four phases of medicalization for descriptive purposes: cultural basis and prevailing healthism; explanation of specific conditions using medical terms; institutionalization and dissemination of medical categories; and demedicalization of untreatable conditions. We discuss the issues related to each phase using the data from our previous survey. We especially address the situation after medicalization has progressed with respect to fibromyalgia diagnosis: when fibromyalgia is being diagnosed but social awareness does not follow or effective remedies do not exist, how do patients and physicians interpret the diagnosis of fibromyalgia? We describe the process of demedicalization, whose characteristics in Japan may differ from those in Western countries. Namely, following the excessive expectations of biomedicine and distrust in medicine, it is possible that the Japanese are currently seeking greater faith in traditional forms of medicine, as a form of “regression.” This analysis presents a basis for rethinking the question of what comes after medicalization.

Who Feels Powerless? : An Examination on Self-Attitudes of Japanese Youth

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCS), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCS data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the stalemated social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much greater negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

**HONDAGNEU-SOTELO, PIERRETTE* (University of Southern California, sotelo@usc.edu)**

**Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles**

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizo, from southern Mexico and Guatemala.

Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their households gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with a material life such as sugar cane, mango trees and corn stalks. The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacas that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance and belonging, but also, as feminist scholarship reminds us, a site of patriarchal production. This is one important reason why in Korea discussions on individualization are exclusively concentrated in areas of gender and family.

**HONG, CHAN-SOOK* (Seoul National University, ufs341az@snu.ac.kr)**

**A Special Way of Modernization ("Sonderweg") or Methodological Cosmopolitanism?**

Since the IMF crisis of 1997, Beck and Beck-Gernsheim’s “individualization thesis” has attracted much academic attention in Korea, for it was seen to explain the important social symptoms that have already manifested on the peninsula in the 1990s. An important feature of the discourse on individualization in Korea is its intensive focus on the transformation of family forms. Unlike the original German approach of “individualization thesis” as a critique on researches of social inequalities, Korean academic analyses, when employing the same model, are limited to areas of gender and family.

Another important feature of the discourse is Beck’s “methodological cosmopolitanism”. Beck and his Asian colleagues seem to consider the values and institutions of strong Confucian family as unique characteristics of the Asian path to modernization. The result is that the narratives of Western discussions on individualization are exclusively concentrated in areas of gender and family.

Industrialization developed in Germany significantly later than in other Western European countries, and for many decades thereafter, the country’s path to modernization was considered as a special way ("Sonderweg"). Beck’s individualization theory, however, aims to explain Germany’s modernization as a typical process of Western development. Within the above introduction in mind, I propose to investigate the historical context between “Sonderweg” and the methodological cosmopolitanism of Beck as an initial step necessary for the analysis of the special ways of Asian modernization. I will proceed to make a further comparison between Germany’s Sonderweg and Korea’s path of modernization as a mean to evaluate Beck’s methodological cosmopolitanism, and the implication this has for Korean sociology.

**The Power of Expectation: Apply Wisconsin Model in China’s Educational Stratification**

Besides Blau-Doncan’s Status Attainment Model, Wisconsin Model is another important model in US to explain educational and occupational stratification and mobility. However, the Wisconsin Model is relatively ignored in Chinese stratification studies. Drawing upon data from a national survey conducted by Tsing-presents the validation methods of social emotional stability, under educational expectations of Chinese parents: idealistic educational aspiration and realistic educational expectation, and then examines the effects of parental educational aspiration and expectation on children's educational achievements.

In this paper, first, I describe the distribution of educational expectation levels across different classes both in urban and rural China. Second, I analyze the formation mechanisms of the gap between idealistic aspiration and realistic expectation, examining feasible influencing factors. Third, I adopt a family capital framework, mainly including social and cultural capitals, to explain how educational expectations work in household level. In sum, this paper attempts to reveal the cognitive and behavioral processes of how educational stratification occurred in current Chinese society.

**Social Emotional Stability Facing Disaster Warning**

Social emotion is a complex system, with a dissipative structure. When the carriers of social emotion percept threaten from a disaster warning, the initiative dissipative structure of social emotional system will be broken down. This study presents the evaluation methods of social emotional stability, under disaster warning from the aspect of a complex system. Firstly, we analyzed the dissipative structure features of social emotion and used Social Emotional Entropy (SEE) to measure the changes of social emotional stability, which was explained by the empirical data of Bird Flu H7N9 events in 2013. Secondly, we considered that social emotion is not simply the totalizing of individuals’ emotions, but results from both the combination of individual-level affective factors as well as from the group or contextual level. In that way, we used the Cellular Automaton modeling method integrated with the Social Network Theory, in order to present a dynamic dissipative process of SEE from both aspects: ‘bottom-up’ and ‘top-down’. Finally, we used a case study to verify the effectiveness of the integrated method. Our results indicated that the social network properties and population characteristics are key determining variables of social emotional stability.

**Golden Age - Ageing, Well-Being and Tourism**

Population ageing is likely to affect the tourism movements especially in Western countries. The importance of seniors for the tourism economy is growing. Nowadays seniors are expected to be more active in domestic tourism and traveling more often abroad than previous generations. However, there are several reasons why ageing people are not traveling as health problems and lack of resources.

The paper clarifies how active travelers ageing people are and it identifies reasons why seniors are not participated in tourism. The main research question is how well self-estimated health predicts the propensity to travel and travel activity is compared with other leisure activities.

The survey questionnaire was distributed to inhabitants of North Savo region (Finland) who turned 60 and over in the year 2012. The response rate was 51 %. In total 1827 inhabitants participated in the survey. The survey was named as Aging and well-being in North-Savo as part of the Age Innovation 2012-2014 Project.

According to preliminary results, only 4 percent of respondents answered they did not participate in domestic tourism but 20 percent were not traveling abroad.
The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents’ self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

HOPMAN, MARIT* (Utrecht University, The Netherlands, m.hopman@uu.nl)

Child Investment in Youth Care Services: Dilemmas and Consequences

Welfare states have (re-)invented family policy as a response to the notion that children are the social, cultural and economic capital of societies. Consequently, the healthy development of children is an important aim in policies regarding child care, and the role of parents in safeguarding their children’s development is stressed. For professionals working in the field of youth care this change in policy aims has had its effects on the way their profession is organized and carried out:

1. more attention is directed towards preventive and early interventions—in order to ensure the best possible developmental trajectory—as opposed to curative interventions.
2. There is a stronger emphasis on effectiveness and evidence based practices and its concurrent emphasis on protocols and guidelines. At the same time however, professionals are expected to adjust their work to the demands of parents, and to serve parental expectations and wishes.
3. In line with this, professionals find themselves balancing “distance” and “control”: working with parents presupposes that professionals can’t be directive and should refrain from being too authoritative. Yet, professionals also expect to intervene when children are at risk, and policy measures emphasize risk-assessments and inter-organizational information exchange.

The international research project “Governing New Social Risks” centers on this turn to parenting. In our paper we will discuss how these changes and dilemmas have affected the way in which professionals develop and concurrently, a pro-to-professionalization of parenting has taken place. On the other hand, the same attention for development can be found in governmental policies, resulting from the influence of child investment theories. Consequently, parenting support in welfare states has had its effects on the way their profession is organized and carried out:

KNIJN, TRUDIE (Utrecht University, The Netherlands)

Defining Children in Youth Care Interventions

Within welfare states, attention for the development and upbringing of children is increasing. On the one hand, scientific disciplines such as developmental psychology have professionalized child development and concurrently, a pro-to-professionalization of parenting has taken place. On the other hand, the same attention for development can be found in governmental policies, resulting from the influence of child investment theories. Consequently, parenting support in welfare states has had its effects on the way their profession is organized and carried out:

1. What are the dominant definitions of children’s problems and which ideas of social order do they respond to?
2. How do stocks of professional knowledge as well as the practices of intervention on children’s problems evolve over time?

The questions are addressed by using both quantitative and qualitative data from the international research project “Governing New Social Risks”, which centers on the turn to parenting from the 1990’s onwards. In the quantitative part, results of the analysis of parenting support interventions are presented. For example, changes in scientific theories underlying the interventions help us in understanding how children are being defined. In the qualitative part we discuss data gathered through interviews with (academic) experts and relevant decision makers about dominant views and changes in the perception of children and families and of state-family relations. We focus specifically on the Netherlands, but information from the other countries included in this research project will be addressed as well when applicable.

Gender Differences in Happiness: The Effect of Marriage, Employment, and Parenthood in 33 Countries

Happiness remains an important measure of psychological well-being. Given the current challenges of struggling global economies and political conflict and unrest, psychological well-being has never been more important. While previous studies have focused that females, the young, the unmarried, and people with lower socioeconomic status are more likely to suffer from lower psychological well-being, they fail to fully capture societal-level conditions’ impact on individual happiness. Although previous studies have focused on how societal conditions affect individuals in a given society and shape perceptions of their personal conditions, in this study I focus on gender. Utilizing hierarchical linear modeling on data from the 2002 International Social Survey Programme, I examined gender differences in happiness and how country-level gender stratification affects the relationship between happiness and family-related predictors in 33 countries. The results show that there are clear and significant gender differences not only in the happiness between men and women but also in the factors affecting their happiness. While, on average, women evidenced lower happiness than men, results indicated that there were gender differences in the effects of being married, not working, and the number of children individuals had on happiness. However, desegregation at the country-level gender equality and egalitarian gender norms would improve women’s happiness, the measures of gender equality and gender ideology at the country-level showed mixed results in the cross-level interaction and therefore suggestion are made for future directions in this important area of research.

HORIGUCHI, RYOICHI* (Inst d'Histoire Culturelle Européenne, ryoichi.horiguchi@gmail.com)

« Utopie » Dans L'enclos, Ou égalité Ségréguée

Cette communication a pour but d’avoir une meilleure connaissance sur la mentalité de l’époque sur laquelle reposait la société moderne du Japon dans la première moitié du 20ème siècle et de montrer que l’on poursuivait au niveau national un idéal d’ « égalité » non seulement dans la vie politique mais aussi dans la vie quotidienne. On connaît bien que l’égalité sur le plan politique a été partiellement mise en œuvre lors de la réforme des lois électorales qui ouvrait la porte aux scrutins universels en 1925. De l’autre côté, il n’en est pas demeuré moins que la misère et l’inégalité sociale n’étaient pas encore décarénées dans la vie quotidienne, c’est-à-dire dans celle des vulnérables comme des ouvriers, des malades, des handicapés etc. Ce sont encore des problèmes d’aujourd’hui. La résolution s’est réalisée à cet égard d’une manière ségrégative: tout en séparant les pauvres des riches, les malades et les handicapés des personnes en santé, on a mis les précédentes dans l’enclos. On voudrait donc dans cette recherche historique montrer un aspect peu étudié sur la mentalité de l’époque qu’on pourrait appeler une « utopie dans l’enclos » en jetant une lumière nouvelle sur en particulier la vie des ouvriers d’usine et des lépreux dans la léproserie avec le changement de la conscience sociale en perspectives socio-historiques.

A ‘Ritual’ of Surgical Mask Wearing in Japan: A Short History

The practice of surgical mask wearing in Japan has been adopted by a significant proportion of the national population and has become embedded in people’s everyday lives. This paper studies the practice as a ‘ritual’ and outlines its history in Japan. The notion of ritual is employed in this paper, not analytically, but operationally, in order to highlight the structural/functional aspect of the practice, by which individuals come to terms with invisible threats. In the 1920s, the practice of mask wearing, introduced from the West and conveying the symbolism of modern science, replaced pre-modern ‘superstitious’ rituals against flu in Japan. It started to be worn by healthy individuals in order to avoid infection, and spread as a matter of social etiquette to the infected, so as not to infect others. In addition to this usage, which continues up to the present, by the 1990s masks had become widely used by cedar pollinosis sufferers to avoid inhaling pollen. Some people wear masks in order to prevent their throats from drying up or to keep desired odours away while others hide their faces for aesthetic or psychological reasons. More recently, radioactive particles from Fukushima and air pollution spreading from China have been added to the list of health risks to be minimised by wearing masks. Wearing a mask appears to provide peace of mind amidst uncertainties. Its instrumental value in reducing health risks is scientifically

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
inconclusive. What is certain is that the practice precedes scientific discussions. The practice of mask wearing absorbs anxieties and uncertainties and restores a sense of security and self-control.

The Invention of Religion Category and the Formation of the Secular in Japan

This paper examines the social construction of the categories of ‘religion’ and ‘the secular’ in Japan. This is a preliminary analysis of how the term ‘religion’ was imported into and translated in Japan, how it was indigenised, how it has been employed by the state to establish the secular, and how the term ‘religion’ is used strategically by people in their everyday language. The Japanese concept of ‘religion’ shûkyô was invented amid the power struggle of international diplomacy against the Western colonial powers in the mid-nineteenth century. It also played an integral role in the formation of non-religion (or the secular), more specifically, the modern Japanese nation-state. After the fall of the shogunate in 1868 and throughout the modernisation process thereafter, the invention of the religion category, in turn, demarcated the modern Japanese secular, the category of non-religion, where the centralised state legitimised its authority over the population. The secularity of the state enabled the government to mobilise various groups classified as ‘religious’ for political purposes, while suppressing so-called ‘pseudo-religious’ groups, in order to achieve the ideological goal of the Japanese nation-state. After the Second World War, these categories of ‘religion’ and ‘the secular’ were reformulated under the influence of American-style liberal democratic values and sensitivities, which delimit the post-war Japanese secular. The boundary between these two realms, however, has always been ambiguous and often contentious. This paper argues that sociological studies of religion should critically analyse the social construction of the religion-secular dichotomy, by focusing on the social processes in which particular meanings of the terms of ‘religion’ and ‘the secular’ have been constructed and the ways in which the two categories are demarcated from each other.

HORNUNG, BERND R.* (University Hospital Giessen and Marburg, hornung@med.uni-marburg.de)
Managing Complex Organizations in A Global World

Modern business organizations are complex dynamic systems in a complex dynamic environment. This environment has the properties of an ecosystem rather than those of a controlled and steered system. This holds for the economy and for its particular subsystems like the health care system, both constituting the complex and dynamic environment of internally complex organizations like hospitals. Such organizations often move at the edge of chaos and sometimes beyond. In their operations they need to be understood as actor-systems at different internal levels. Examples from hospitals will illustrate management problems resulting from the combination of high internal and high external complexity and dynamics. This requires to clarify the concepts of both complexity and organization from a sociocybernetic perspective. A generic reference model of organizations will be used for the subsequent analysis.

Central to this is Luhmann’s ‘sociology of society’. This model implies that only complexity can reduce complexity. It will be analyzed how this could be achieved by taking a sociocybernetic approach.

For this purpose concepts will be used like: open information, teamwork, task forces, leadership styles, subsystem autonomy, problem-orientation, staff-line organization, matrix organization, Web 2.0 leadership, organizational culture, mediation, etc. Any activity, also informational, requires energy. Increasing the efficiency of an organization when facing complexity can be achieved by: (a) Changing objectives, (b) Reorganizing structures, (c) Reorganizing a complex, including management, (d) Depleting stocks (material, financial, but also health and motivation of staff). The strategy chosen has to be sustainable without unduly reducing the internal complexity of the organization, essential for its capacity to cope with external complexity.

Hypotheses will be presented, how a sociocybernetic approach to managing complex organizations can help to avoid problems and failures.

A* apart from this, the paper will present a sociocybernetic but non-luhmanian approach.

A Birthright to Belong: Hereditary Claims and Religious Authenticity Among Converts to Judaism

This paper examines individuals who convert to a new religious identity as adults and the ways in which they use perceived sources of external validation to make claims to religious belonging and authenticity. This study on which this paper is drawn includes 100 in-depth interviews with converts to Judaism in three metropolitan areas representing distinct regions of the United States: New York City (Northeast), Atlanta, GA (South), and the San Francisco Bay Area (West Coast). All of the converts employed various methods of making hereditary or genetic claims to Judaism, including discussing evidence of Jewish ancestry discovered in DNA tests (taken post-conversion) and telling stories of distant relatives who family members believe may have been Jewish. When paired with respondents’ belief that others often do not see them as authentically Jewish because of not being born into a Jewish family (particularly as stated by those who did not make genetic/hereditary claims), it is clear that the perceived ability to make genetic/hereditary claims is meaningful to converts, providing a sense of having the right to belong to their new religious community. I further explore how the language of parents and grandparents, showing how the conceptualization of race in the United States is applied in a context outside of race (i.e. religion). The sample, moreover, is notably racially diverse, with approximately half white and half non-white (e.g. African American, Asian American, Latino/a, multiracial) respondents, allowing for a comparison of traditionally recognized ethnorracial identities in the context of a racialized understanding of religious identity and belonging. By addressing the role of genetics and heredity in making claims to religious belonging, this paper sheds light on the complex intersection of race and religion as categories of identity in American society.

HOROWITZ, ADAM* (Stanford University, ahorowitz@stanford.edu)
The Myth of Multireligiousness: Assessing the (Im-)Possibility of Identification with Multiple Religions

The rate at which people of different family-origin backgrounds (race, ethnicity, religion, etc.) form romantic relationships and have children continuously increases in the United States. Scholarship has provided compelling accounts of the experiences of the children of inter-racial couples and their construction of “multiracial” identities. This study explores whether a similar form of identity construction with multiple religions is possible for children of inter-religious couples. For this purpose, semi-structured interviews with children of inter-religious parents, I examine the mechanisms most salient in religious identity formation and their effects on the possibility of defining as “multireligious.” I explain the relationship between parents’ choices in the religious upbringing of their children (or lack thereof), their influence on cultural/religious exposure, and how these contextual factors affect one’s ability to feel a sense of “fitting in” in a faith community. I conclude that these mechanisms serve to make self-identifying as “multireligious” a modern impossibility.

OLOFFSSON, GUNNAR (Forum for the study of Professions, Linnaeus University, Sweden)
A Life-Long Response to Talcott Parsons: The Global Sociology of Goran Therborn – A Critical Yet Friendly Appraisal

Talcott Parsons represents the culmination of sociology as a paradigmatic science, its high tide during the late interwar and early post-war period. Goran Therborn is still active global sociology, a public intellectual, a proponent of “world sociology”, and critic of “world sociologist” which in his own words makes him more of a social scientist than a sociologist. This mix of presentation and self-presentation is challenged in this paper which outlines the ambition of Therborn’s career as an academic sociologist and public intellectual, his occasional poems as well as his main oeuvre from the mid-1950s to the first decades of the new Millennium. In focus of this paper is his relationship to classical sociology as epitomized by Talcott Parsons and C Wright Mills as well as the movement the latter early on gave a strong voice. After a brief biographical note on his socialisation in the pre-university environment of Southeastern Sweden, Therborn’s face-to-face engagement with on the one hand the first generation of domestic sociology in the form of the eminent Swedish class analyst Gosta Carlsson, and on the other hand the internationalist new left movement after 1956, is conveyed. Thereafter follows a step by step close reading of Therborn’s major works whereby his main sociological motifs are portrayed: the discipline itself and its problem to identify its research object (“society”), and contrasting subject matters of closely related academic disciplines (economy, ide-
ology, state, modernity, family and kinship, civilizations, and human inequalities. A tentative re-interpretation of Parsons’s AGIL-scheme in light of Thoreborn’s life-long preoccupation with the same themes ends the paper. This brings us to the present state of the discipline, its relationship to the outer world and prospects for its future.

Miracles, Giants, Dragons and Small Tigers: Beyond the Unique, Hybrid, World and Model – Asian Welfare States on the Move?

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the forefront of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transformations going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular western researchers have flocked to this lump of sugar and interacted with the growing stock of domestic comparative scholars in this field. So far, this stream of research is only intensive in China’s context. The Chinese is an infant stream of research regarding its impact on the larger picture of comparative research. On the other hand, in the shadow of the rise of China, a fair amount of research of specific cases in particular in Southeast Asia has completely been neglected by both the comparatists of the traditional cases and contemporary Chinese developments. Recent social policy developments in countries such as Indonesia, Malaysia, the Philippines, Thailand, Vietnam and to some extent also India have become a growing concern among social welfare researchers interested in a particular case. Again, this is another stream of research still in infancy, the outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

Climate Change in Portuguese Media: Global Politics and the Vanishing National Reality

Portugal is highly exposed to risks and vulnerabilities related to climate change, such as a continuing increase of average summer temperature, more frequent and intense heat waves and a reduction of rainfall, and, as a consequence, floods, droughts, fire hazards, air pollution, erosion and changes in water quality and availability. The climate change is therefore a major concern for the country’s future, and media debates are likely to play an important role regarding the choices that have to be made. In fact, the framing of climate change in the media guides public perceptions of reality and offers hints for thinking and acting (Entman 2004) from the individual to the policy-making level. In line with the COMPON research protocol, newspaper articles were selected by searching for the keywords “alterações climáticas” (climate change) in all items published in three daily newspapers (Público, Jornal de Notícias, and Diário Económico) from 2001 to 2010. A random sample of 25% of the articles published between 2007 and 2010 by each newspaper was selected, and the sample was stratified by year. Results show that the Portuguese press tends to reproduce the global political agenda on climate change, mainly focusing on international events associated with global political decision-making processes, while typically reducing the debate to climate change mitigation. Adaptation’s low visibility may be explained by a dependency of Portuguese newspapers on the international political agenda and by the news sources used. The lack of mobilization of national leaders for adaptation may also play a part. This type of coverage tends to obscure local and national realities and responsibilities, though they are key to addressing climate change.

Changes in ICT Usage in Times of Scarcity

The information and communication technologies (ICT) market has been showing a remarkable expansion. Considering the severe ICT and economic crisis in some countries are currently facing, and the restrictions in several forms of consumption due to scarcity, what changes may be affecting ICT usage in everyday life? This presentation tries to address how are individuals adapting to new challenges related to inequity of (material) access to ICT and a growing digital divide in ICT usage which may emerge in societies that are particularly relevant in a context of scarcity such as the one Portugal is now experiencing.

The research adopts an approach based in recent theoretical developments in sociology of communication, which consists in analyzing media as practice. This perspective enables media research to move beyond a narrow focus on audience practices in order to understand the complexity of contemporary media-saturated cultures (Coudry, 2004). Studying the whole range of practices focused directly or indirectly on ICT allows understanding how ICT are embedded in everyday life and are constitutive of routines (Coudry, 2004; Pink and Mackley, 2013). By focusing on social practices, attention is shifted from the individuals agency and choice to the prores as merkhedral structural elements such as things, technologies, physical entities, competences (skills, know-how, techniques), and meanings (symbolic, ideas, aspirations) are connected and enacted in the form of patterns of practices, thus allowing to explain the dynamics of reproduction and transformation of social practices (Shove, Pantzar, Watson, 2012).

The analysis draws upon data from in-depth interviews conducted with people from diverse social groups in terms of age, education and socio-economic status. Results show the complexity of the relations established between individuals’ practices, motivations, knowledge and material conditions related to ICT use.

Bringing Science and Academia to the Population: Activities to Raise Questions and Make People Think in Vulnerable Urban Contexts

The university role in society has been increasingly framed by models aligned with the academic capitalism, institutional competition and the quantification of activities/results. These, associated to decreasing resources and public funding, are placing the integrity of the university as a social institution at risk. The roles in society that universities are expected to pursue have also multiplied and substantially increased the burden placed on these institutions. One of the new dimensions of the mission of universities is to contribute to the strengthening of the role of the university – also dubbed as the 3rd mission. This has been gaining increasing relevance in more recent years as a form to open the university to society. Yet, in most countries, this latter mission of the university is somewhat understood as a fuzzy concept and there is a tendency to associate it with activities associated with commercialization of science. In this article, we argue that this may be a simplistic view of the service mission, and that this mission in fact can encompass a range of activities that can not only benefit the university – orienting it to fulfill its social mandate and consolidate its legitimacy - but also contribute directly to the benefit of populations in vulnerable urban areas. Through the use of two case studies focused on activities voluntary developed by academics of a school of engineering in Lisbon, Portugal, we analyze two strategic activities that aimed at bringing the university to vulnerable populations and if not solve, at least raise awareness about risky phenomena and vulnerability situations. These cases represent an overhual of the more narrow thinking on the service mission of the university, as they combine activities that interact public understanding of science purposes, with hands-on teaching that applies engineering theoretical principles to real life cases, while fostering interdisciplinary research.

HORVATH, KENNETH* (University of Education Karlsruhe, horvath@ph-karlsruhe.de)
Differentiated Rights, Segmented Labour Markets: The Emergence of New Guestworker Regimes and the Making of Marginalised Precarity in Western Europe

This paper contrasts current labour migration with post-WWII guestworker programmes and argues that hierarchical differentiation and exacerbated precarisation for some migrant groups are the main characteristics of current labour migration regimes. My main objective is to show how both low-wage and ‘elite’ migration programmes are structured by (i) the secuartisation of migration and (ii) racialised boundary making. These processes are disguised by the hegemonial notion of migration management. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid industrial jobs has given way to a simultaneity of (i) even more precarious forms of employment mainly in agriculture, tourism, and construction and (ii) relatively privileged elite migration linked to the transnational mobility of capital and goods. These new labour mobilities are regulated by complex legal frameworks that are marked by a radical deprivation of fundamental rights for some migrants, while other groups face hardly any mobility barriers. Second, in all three case countries the establishment of these new frameworks was dependent on a securitised discursive context in which migration was mainly discussed as an existential threat to social security, cultural identity, and public order. This context was used to establish policies that would have been considered illegitimate under ‘normal’ circumstances. Third, I explore the ways in which the differentiation between migrant groups is linked and how it is reproduced in society through everyday practices, mainly in the context of EU-integration. Developments are very similar across all three countries – although they represent different “varieties of capitalism”, party systems, migration histories, and welfare regimes. Together they illustrate how the neoliberal political-economic project structures life chances of millions of migrant
workers throughout Europe, many of them living under conditions of radicalised precarity.

**HORVATH, KENNETH** (University of Education Karlsruhe, horvath@ph-karlsruhe.de)

**Enforced Temporariness – the Interplay of Securitisation and Economisation and the Emergence of Temporary Migrant Worker Programmes in Western Europe**

Focusing on the level of migration politics, this paper enquires into the logics and processes underlying the formulation of temporary migrant worker programmes. Based on Foucault’s analysis of liberal governmentality and Jessop’s strategic-relational approach, I argue that the governing of temporary labour migration in liberal nation-states requires sophisticated political technologies. These technologies entail the differentiated deprivation of fundamental rights and are therefore neither unproblematic nor self-evident. Developing and establishing the necessary legal categorisations along skill levels, nationality, employment status etc. requires a complex interplay of two political rationalities that are often conceived of as contradictory: the securitisation and the economisation of migration. Once established, differentiations and measures introduced under securitised conditions can be invested in utilitarian migration policies. The interplay of these two rationalities depends on and is mediated by wider political-economic and societal transformation processes. In order to illustrate this general argument, I, first, give an overview of temporary migration policies introduced in Western European nation-states from the early 1990s onwards. Similar policies have been implemented in nation-states representing different “varieties of capitalism”; party systems, migration histories, and welfare regimes. In a second step, I focus on developments in the UK and Austria to show how the securitisation of migration changed the strategic setting and thus enabled some actors to push their agenda of enforced temporariness and radicalised precarisation. Finally, I discuss how these political developments are linked to changes in the political-economic context – and argue that the interplay of securitisation and economisation has allowed to adapt migration regimes in line with new labour market needs.

**Elderly Prisoners’ Life World – Comparative Study in NZ and Japan**

The Elderly Prisoners’ Life World-comparative study between NZ and Japan

In Japan and NZ the crime rate of the elderly persons (up to 65) is dramatically getting upward since 1990s. I and John Pratt(NZ) have engaged in the comparative studies to make clear the backgrounds and reasons to put the elderly persons committing crimes. Both countries did a lot of effort to prevent them from doing crime and take care for them after release from the prisons. Nevertheless, such kinds of crime policy and the welfare trials were found out ineffective for the decrease their reoffending.

Therefore we make our ideas to understand the elderly people in terms of their life world such as their life plans in childhood, dreams, hope, political needs, religious consciousness, love, alterism, family networks, crime and violence aspirations and satisfactions etc.

Based on the research findings (600 prisoners in Japan and 66 prisoners in NZ), here, we would like to construct their life worlds to get some suggestions to step forwards for them in their future without the criminal lives.

**HOSOKI,RALPH** (University of California, Irvine, ittomen@hotmail.com)

**The Determinants of Cross-National Variation in Migrant Accessibility to Rights**

Nation-states vary largely in the degree to which the economic, social, cultural, civil and political rights enjoyed by the native citizenry are conferred upon foreign nationals, and rarely do nonnationals fully enjoy such rights unless they naturalize. There is considerable cross-national variation in accessibility to the legal institution of citizenship, but extant studies on the determinants of such variation are fragmented, revealing contradictory findings. Comparative studies, though informative, are largely qualitative and geographically limited to Western liberal democracies, making it difficult to make generalizable claims about other parts of the world. Furthermore, there has been limited theorization on the impact of international exogenous pressures on citizenship and nationality laws. Using the 2001 Citizenship Laws of the World dataset to obtain data on the minimum residen
cy requirements for naturalization, this cross-national study utilizes OLS regression to compare the explanatory power of world culture variables against domestic economic, political, and demographic variables commonly used in studies on the determinants of citizenship laws. Results show that international non-governmental organization (INGO) membership best predicts cross-national variance in the minimum residency length requirements for naturalization, thereby suggesting that extensive linkages with INGOs and the resulting diffusion of world cultural scripts on human rights into the domestic society and policy influence a state’s willingness to confer the ultimate means to legal membership and rights.

This research focuses upon the institutional systems which have been constructed by the regional head-quarter managers of Japanese multinational corporations (MNCs) in Asia-pacific. Theoretical frameworks for dealing with these systems or conditions are notably conceptions of institutional entrepreneurship.

The activities of Japanese multinational corporations in the Asian region are now history. They have been characterized by a tradition in which managerial control has been centralized by its home base in Japan. But this has changed with the expansion of production-consumption in the Asian region. Contemporary MNCs are much more sensitive to local conditions. Such changes have induced new organizational forms with the formation of regional networks surrounding these headquarters with active and energetic horizontal exchanges.

These institutional systems effectively function when activities in regional networks are appropriately embedded into related organizational fields. In many cases such regional activities are initiated by heads of headquarters in Japan, however they require appropriate and realistic organizational procedures. In general, Japanese expatriates who are delegated from the head office in Japan have played vital roles in such system-construction as institutional entrepreneurs. They utilize their positions and authority derived from the head office, and at the same time they have made efforts to advance their local networks and use resources and relationships in the host community so as to develop a new institutional scheme which is responsive to the perceptions of members who are involved in these networks.

For some reasons, their efforts have not always led to successful outcomes. In this research, the entrepreneurial characteristics that have been shown in the construction of appropriate relations between their networks and the fields are presented in order to identify the factors which determine success and failure.
Many Post-Modern Princes? Rival Cosmopolitanisms in the Global Field of Justice Movements

In this article, Hosseini reflects on the recent organizational and ideational shifts in the so-called global justice movements. While some recent studies conceptualize these movements as ideologically mature and coherent, other inquiries highlight growing disorganizations, fragmentations, disputes. The former argue that underlying global solidarities are coherent cosmopolitanist or globalist values, whereas the latter claim that the global justice movements lack the necessary ideological vision for uniting the masses behind a global project for changing the world capitalist system. Alternatively, by drawing on his research project (2002–2006) and examples from the post-GFC uprisings including the Occupy movements in 2012, Hosseini argues that there have been four major parallel trends of ideological changes, dividing the global field of transformative practices between rival camps in terms of their orientations towards cosmopolitanist values. There are however significant potentials for traversing the divisions between the cosmopolitanist camps. Among them is the rise of a new (meta-)ideological vision, coined here transversalism by him. Transversalism assumes the possibility of creating common grounds for dialogue, collective learning or actions among multiple progressive identities and ideological visions in the global field of resistance. It appears in two forms: (1) the extension of any of the above mentioned camps to accommodate some of the principles of the other camps, such as regional Bolivarian cooperation between socialist/populist states in Latin America in recent years, or the idea of Democratic global Keynesianism that attempts to improve the conditions for democracy within societies by adopting democratically developed international regulations; (2) in the form of independent integrative projects based on pragmatic adoption and combination of transformative practices from the camps, such as Economic Democracy.
is recent, western trend of ‘slow food’ markets, shops and cafes established in
gentrified urban spaces as well as middle class suburbs of the state capital.

Based on the results of fieldwork carried out in 2011 and 2014 in the central
part of the state of Oaxaca (Valles Centrales) this paper analyzes the ambiguous
relation between two seemingly similar, but heavily diversified along gender, class
and ethnic/national lines patterns and ideologies of consumption that can be ob-
served in contemporary marketplaces of Oaxaca City: traditional, indigenous/ mestizo, peasant usage of food versus those promoted by the local branch of slow
food movement connected with new, transnational urban lifestyle. Moreover, it
points out the implications and dubious outcomes of the ongoing changes in
Oaxacan urban foodways for indigenous communities and especially those who
traditionally produce, consume and sell food at local markets – Indian women.

From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond

In this presentation, I will draw from the lessons of Taiwan’s local environmental his-
tory in 10 counties and cities over the past 60 years to assess the possible future
for sustainable development.

First, I will sketch the overall and detailed historical trajectories of how local
environment has been affected and become deteriorated by human actions and
government policy factors such as ill planned industrialization and over urbaniza-
tion in many localities.

Second, I will look into the rise, development, and effect of green local civil
society forces in the forms of anti-pollution, nature conservation, and anti-nuclear
power protests that have tried to stop the pro-growth path and reverse the envi-
ronmental injustice in various counties and cities.

Third, I will then assess if the slow yet steady paradigm shift facilitated by the
green movements has been effective enough to change the government-business
social mindsets, and then lead Taiwan to a sustainable and just development future.

The Struggle for a Sovereign Taiwanese Sociology: History and Lessons

The Struggle for a Sovereign Taiwanese Sociology: History and Critique

I. The modern political history of Taiwan and its political limits to and shaping of Taiwanese sociology
1. Under the Japanese colonial rule: 1895-1945 (non-existence of sociology in Taiwan)
2. Under the Chinese Nationalist authoritarian rule: 1945-1980 (suppressed sociology of Taiwan)
3. After the political liberalization and democratization: 1980-2013 (indigen-
ization of sociology for Taiwan)

II. The true beginning of localization of sociology of, by and for Taiwanese soci-
ety and its people
1. The moderate turn
2. The radical turn
3. The radical turn

III. Is there a self-reflecting and self-criticizing “Taiwanese theory” for the mak-
ing of Taiwanese sociology for sovereign Taiwan people?
1. Critical assessment of the limits of localized Taiwanese sociology so far
2. Critical assessment of the limits of globalized Taiwanese sociology so far
3. The struggle of solving the “problematic” of the sovereignty of Taiwan state, Taiwanese people, and Taiwanese sociology.

IV. What can the Taiwanese experience contribute to the making of a truly
global sociology?

The Unspeaking Shame – the Politics of Memory during Cold War in Taiwan

How do political victims recall and deal with their pasts after prolonged griev-
ous state violence? This is a research aims to account for the way in which the
politically victimised ones in Taiwan look back on their pasts during the Cold War
from the present point. Whilst conducting interviews with the victimised individu-
als, as former state enemy, informants are prone to conceal their pasts as to their
treason crimes, and even tend to deny the pasts in public. The attitude highlights
the impasse of transitional justice work in Taiwan, while the society has not pro-
vided the former state enemies enough rooms to voice their deeds that had once
seemed to be committed crimes. In addition, informants of the research express
an emotion of shame that they even have never voiced to the loved ones. Yet,
after the fieldwork for years, the informants disclose their unspeakable shame to
researcher such as I during interviews. It is salient to denote that the emotion of
shame has intertwined with their memories is not remnants of the state vio-
lence or political stigma. In stark contrast, a shame was derived by the depression
of not revolting the regime successfully. As the society see these individuals as
victims, they tend to see themselves as revolutionaries instead.

The research aims to elicit the hidden context of the collective state of mind of
the former state enemy in Taiwan. With in-depth interviews and collected data,
the paper manages to analyse the subjectivities of these individuals through their
memories. By unraveling the way in which the victimised individuals remember
their life stories, the research aims to deliver another perspective of the politics
of memory in Taiwan.

“My Girlfriend Said She Won’t Live with My Mom in the Future”: Online Discussion about Relationship in Taiwan

The contemporary self-help culture raises scholars’ interest, through it to
investigate whether the discourse and imagination of intimate relationship or
biographical pattern and life decisions. However, although people still rely on
advises and counseling from self-help books and manuals written by experts and
professionals when they are troubled by problems about relationship and life,
more and more people login to online forums to ask for advices from other ordi-
nary people. Not only in new media but in non-western context is the self-help
culture significant and prosperous, though in different ways from western societ-
ies on which most studies concentrate. Therefore, this study aims to inquire the
advising interaction about intimate relationship on an online forum (Boy-Girls) of
Taiwan’s largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I ex-
amine the discourses about intimacy in Taiwan and compare with what have been
suggested in the previous studies based on the Western self-help literature in
print media. The online advising discussion shows different concerns and dis-
courses about intimate relationship, and has a different relationship between
advisers and advisees. First, family issues, gender difference, and ethics of relation-
ship are main themes in the discussion. Secondly, comparing to what have been
indicated in the past, the discussion in virtual forum concerns less self-centered
than ethics-centered, less value of self than equality between genders. These
discourses may promote a perspective of intimacy based on rather mutually de-
pendent partnership than ego-centered atomic individuals. Finally, the pattern
of the production of discourse in online forums is different from the way structured
in mass media which allows only one author/expert/advisor preaches their ideas/
experience/strategies to the mass audience. In this sense, the different relation-
ship between advisers and advisees in new media, I argue, is the reason resulting
in different discourses about intimate relationship and self.

Big Data: The Concept in the Next Society

In our society, each social phenomenon leans on every new concept to clarify.
Concept of “Big Data” reveals the novel route to further illustrate our society.
Combining endless possibility in the society nowadays, connection produces
innumerable different situation since they are highly correlated. These variable
contexts currently become a huge complexity than within the modern society in
the sense of Niklas Luhmann. Therefore, the aim of next society is finding a way
in which to construct the order of the system (in the sense of Dirk Baecker), not reducing
the complexity.

Facebook demonstrated a solution, which has been developed by the society. By
algorithmic programming in Facebook, each loose coupling (uncertainties) click of
the user is now referring to different distinction and building up the boundary of
meaning. Every time user clicks “like” on status that it means he understands
something. Following understanding and meaning, the uncertain state will soon
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty is possible to construct the order or coexist with other systems.
The novelty of “Big Data” isn’t itself but clearly the targeted question. The paper
illustrated how Facebook reveals the solution to the problem of the next society,
computer society, as Dirk Baecker said.

Living Arrangement, Intergenerational Support, and Life Satisfaction in Japan, Mainland China and Taiwan

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but this also forms a basis for promoting intergenerational exchanges between elderly parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support and individual life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that coresident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn't live with children.

Results from logistic regression models suggest that while living with own parents does not appear to affect adult children's life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction of female adults in Mainland China and male adults in Taiwan. Japanese males who didn't live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn't live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life.

While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

Sociology As Social Memory: Narrative Identity and Knowledge Construction in the Study of “Chinese Modernization” in Cold War Taiwan

Man is a story-telling animal and sociologists are not an exception. Sociological works are often more informed by historical narratives that function as particular forms of collective memory than sociologists would have admitted. My article aims to show how sociology may be a major agent of collective memory and identity formation by analyzing the sociological study of “Chinese modernization,” especially the case of Kwan-hai Lung (1906-1983) as one of the major founders of sociology, in Cold War Taiwan. The study of Chinese modernization in social sciences in general and in sociology in particular were promoted mainly by scholars of Chinese Mainlander background who exiled to Taiwan, where the Japanese colonial rule just ended, after 1949 owing to the Chinese Communist Party’s victory in Chinese civil war. These scholars dominated Taiwan’s sociology in the Cold War era up to the 1980s. The Mainlander sociologists in exile were haunted with the bitter memory not only of their displacement, but of modern China’s cultural trauma caused by foreign oppression. Embracing Chinese nationalism and the modernization theory imported mainly from the U.S., they hoped that China could become a rich and powerful nation by modernizing itself. By integrating the metanarrative of global and Chinese modernization and the metanarrative of Cold War into their sociological works, they became a major story-teller who endeavored to narrate post-colonial Taiwan back into relationship with the Chinese nation. As an important source of public narratives, the sociological study of Chinese modernization helped in the construction of collective memory and national identity in Cold War Taiwan. Situated in the context of the political and cultural inequality between the Mainlanders and the local Taiwanese, however, their historical narrative and their study of Chinese modernization per se were ready to be co-opted into the ruling ideology of the Chinese Nationalist Party.

The Effects of Sibling Structure on Fertility Decision in Taiwan

Drawing from theories of son preference and family resources, this paper attempts to construct a sequential fertility model, and then uses it to estimate the probability of parents’ fertility decisions of their first few children by the sibling structure and to elaborate the effects of various socio-demographic factors in Taiwan. The data used in the analysis come from the PSFD (Panel Study of Family Dynamics) in which respondents were born between 1934 and 1986 in Taiwan. The main findings are as follows. Firstly, the sibling structure has a significant effect on fertility decision. Secondly, the gender-balance hypothesis is rejected, whereas the son-preference hypothesis is supported. Parents with daughters in their first three children have a greater likelihood to have a next child. Thirdly, son preference and son investment have an opposite effect on fertility decision. The number of sons tends to reduce the likelihood of parents to have a child.

Fourthly, the hypothesis of social stratification makes similar fertility decisions. Fifthly, the data didn’t support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the “developmental state”. Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the imputed of post-war East Asian development stems from the external big bang that shook up the existing social orders and molded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous factors in order to explain the variations in strategies of state-society relationship posits a different economic conjunctures. Secondly, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationships, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.
On Appropriation and Japanese Sociology: The Case of Postmodern Social Theory

What does it mean to appropriate a social theoretical approach—initially developed elsewhere—into a different social context? The aim of this paper is to interrogate this very question through the prism of postmodern Japanese sociology. While some scholars have suggested that the practice of appropriation indicates a lack of creativity, others have suggested that something more intricate and innovative has been at work in Japan (Elliott, Katagiri and Sawai 2013: 11-12). In this paper, I substantiate the latter interpretation of Japanese sociology by exploring how postmodern social theories have been used to generate insights about contemporary Japanese society in new and unconventional ways.

Although postmodern social theory is now regarded as a largely defunct—if not also unproductive—area of study in the Western world (e.g., Ryan 2007), Atsushi Sawai (2013) describes how the field continues to remain relevant in the Japanese context. This is because Japanese scholarship on the postmodern has not remained overly fixated on the issue of epistemology, as a sizeable portion of postmodern social theory in Japan has sought to analyze various social transformations and events.

It is also crucial to note that the scholarly debate on postmodernity and postmodernism in Japan has not unfolded in the same way as it has in the West. What is unique about Japanese postmodern social theory is that it has not simply held a ‘diachronic’ view of postmodern culture (Koto 2006). Some scholars have noted that it is possible to detect postmodern features in pre-modern periods of Japanese history, and that postmodern culture may be more ‘indigenous’ to Japanese society than other thought otherwise (Katarani 1985).

Post-Developmental State with the “Therapeutic” Turn: The Case of Taiwan

The East Asian developmental states fell for decades due to global economic restructuring and their respective contradictions and dilemmas. Political exploration of post-developmental scenarios remains ongoing. In Taiwan, this exploration could be named as “therapeutic turn” in three respects. First, the Taiwanese welfare state system has a rich history of the implementation of National Health Insurance, wherein population health became a new ideology of legitimation. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the descending information and communication industry, for a new mode of growth. Third, there is a ‘managerialistic-developmental’ creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, privatization of health promotion on the one hand, and intensifying workforce re-organization on the other, contribution to a dysjuncture among current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the welfare turn is in fact a political project and illustrate how the therapeutic turn of Taiwanese post-developmental state runs into crisis.

Is There a Motherhood Penalty in Taiwan? The Effect of Childcare on the Wages of Women

Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital theory, neoclassical theory of compensating differentials, and statistical discrimination. First, scholars employing human capital theory have assumed that many women spend time at home caring for children, interrupting their job experience. This interruption is likely to reduce the accumulation of human capital such as work experience, seniority, and formal skills. Therefore, the loss of the human capital may have an influence on later wages. Second, the neoclassical theory of compensating differentials suggests that mothers may trade off higher wages for “mother-friendly” jobs that are easier to accommodate their responsibility of childcare and employment. Finally, the main argument of statistical discrimination is that employers may discriminate against women because of their motherhood status. Compared to the rich evidence of childcare wage penalty in the United States, the relationships between motherhood and the wages of women have not been well investigated in Taiwan. Therefore, this paper aims to examine the wage penalty for motherhood by using data from Panel Study of Family Dynamics with fixed-effects models. The research analyzes whether the effects vary by different marital statuses.

The Knowledge Inequity in Hidden Curriculum of Taiwanese Higher Education Under the Trend of Globalization: The Comparison Between Private General University and Technology University

The knowledge condition in higher education under the trend of globalization has been moving toward post modern universities, which is consistent with the argument of Lyotard (1984) – the rise of performativity. Under the dominance of performativity, the curriculum with practice, efficiency, performance or productivity has undoubtedly become the important strategy for universities. Moreover, the vocationalization of curriculum in higher education and the hidden curriculum of performativity also became important in higher education.

It is worth studying whether there remains knowledge classification in terms of management and skills among students between the hidden curriculum of performativity in private general universities and those in private technology universities. The inequity as well the corresponding consequence in the workplace is the main issue of this research. This paper aims to explore the relevant arguments about vocationalization and hidden curriculum of the higher education under in the trend of globalization. Samples for case study include two private universities, one general university and one technology university, from which the knowledge classification and the inequity in the hidden curriculum of performativity will be explored.

This a qualitative research and the method includes text analysis and interviews. It is expected that the vocationalization of curriculum and the inequality in the hidden curriculum of performativity can be unveiled for the reflection of the undergraduate curriculum related policies in higher education.

Key words : the vocationalization of curriculum in higher education, globaliza- tion, performativity, hidden curriculum, sociology of knowledge

HSUNG, RAY-MAY* (National Chengchi University, hszung@nccu.edu.tw)
Social Capital, Civic Engagement, and Political Efficacy in East Asia

This study attempts to explore plausible mechanisms among social capital, trust, civic engagement, and political efficacy in four East Asian societies. The data are from the 2012 East Asia Social Survey on Social Capital, including data from Taiwan, China, Japan, and Korea. This study differentiates social capital into individual social capital, organizational social capital, and trust. Individual social capital is measured by the diversity of accessed position-generated networks, and organizational social capital is measured by the diversity of voluntary associations people participated in. Trust is classified into three types of trust as well: trust to personal contacts, trust to public agents, and general trust. This study attempts to examine the effects of individual and organizational social capitals on three types of trust, and then furthermore examine the function of all types of social capitals in terms of civic engagement and perception to political efficacy. One dominant and macro-level mechanism of argument is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy are even stronger for those in Korea. Trust to government agents and personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.

Green Home for Whom? Estimating Green Housing Opportunities of Various Socio-Economic Groups in Nanjing China

Although sustainability is considered an integration of society, economy, and environment, it is criticized that the concept of sustainable city is not necessarily accessible or affordable to the majority. The improvement of the quality of life and the quality of life after sustainable plans leads to a significant market premium which can only be afforded by the minority rich. Take Nanjing China as an example. In the transition from an industrial to a post-industrial city, Nanjing government attempts to build a sustainable city by constructing green apartments, improving metro networks, and increasing green public spaces. However, the construction of green apartments is mainly built in places with good accessibility and neighbourhood quality. The high prices make green apartments as a symbol of luxury for the upper-middle class. To involve different socio-economic groups in developing a sustainable
Parental Migration and Adolescents’ Transitioning to High School in Rural China

The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals' lifetime status and the society's educational stratification and social inequality. Educational reforms beginning in 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China. Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?

This paper investigates how parental labor migration influences rural adolescents’ transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more demands on children's time and labor on housework or farming, access to parents’ information and networks on migrant work opportunities, and changes in parents' values and attitudes about children’s education. These mechanisms will in turn affect children's aspirations, motivations, academic performance and educational outcomes in different ways.

The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

Profesiones Sin Fronteras? Las Trayectorias Profesionales De Los Ingenieros Mexicanos Que Migran a Estados Unidos

Con los procesos de globalización, la migración calificada se ha incrementado de forma importante en las últimas décadas. Se advierte un interés notable de países desarrollados por atraer a profesionales, sobre todo ingenieros, que a su vez aparecen como las principales perspectivas de la denominada sociedad de la información. La localización de su family work de manera significativa se ha visto incrementada por varios cambios en la configuración geográfica y socioeconómica, incluyendo la creciente importancia de la educación superior y el aumento de la oferta de oportunidades laborales en otros países. En este sentido, es importante considerar el impacto de la migración en la vida laboral y educativa de los jóvenes ingenieros mexicanos en Estados Unidos.

La migración de los jóvenes ingenieros mexicanos hacia Estados Unidos se ha caracterizado por una serie de factores, incluyendo la necesidad de economías de escala para el desarrollo de carreras de ingeniería, la demanda de profesionales calificados en países desarrollados por atraer a profesionales, sobre todo ingenieros, que a su vez aparecen como las principales perspectivas de la denominada sociedad de la información. La migración de ingenieros mexicanos a Estados Unidos ha sido un fenómeno que ha tenido un importante impacto en la vida laboral y educativa de los jóvenes ingenieros mexicanos.

Institutional Divergence in Petrochemical Industry of Mexico and Taiwan: Combined Effect or Failure of State Intervention and Liberal Marketization?

This paper examines the shift from interventionist state to market-led growth in petrochemical industry for both Taiwan and Mexico since 1980s, which leads to the formation of mixed –market economies (MME) in these two countries. Despite the similarity, Taiwanese petrochemical industry demonstrates a backward and forward linkage in a full scale of privatization, whereas Mexican petrochemical industry remains in a state of government control due to high prices. To ensure social equity in developing a sustainable city, policy makers need to consider affordability and sustainability simultaneously.

The initial finding shows that the Mexican’s model of state-business coordination via “PEMEX and contractors” and strategic alliance have failed to create incentives for public-private partnership as well as attract investment due to state ownership of oil in the upper stream and oligopoly among big corporations dominated by a few business groups in the middle stream of Mexican petrochemical industry. In contrast, in Taiwan’s case the effectiveness of state intervention lies in developing a state-business co-evolution model, featuring not competing with business but rather complementing to business needs in the market. It seems that the continuity of state intervention in Taiwan has penetrated into the era of neo-liberalism, while lacking monopoly and oligopoly in Mexican case.

Yoichi Takeuchi

Teacher Quality Vs. Social Justice: Issue and Status Quo in Taiwan

Teacher quality is taken as the strategy to social justice in the trend of standard-based teacher education. In the accountability of the interpretation of social justice is about student learning opportunity that every student can learn depends on teacher quality. Especially, all students in every school can receive teaching from qualified, knowledgeable, and capability teachers that means school success. The assumption of the relationship of teacher quality and student learning is worth to investigate. Why the relationship is about social justice, what kind of social justice in the assumption, and how about the context in Taiwan. Is its meaning in Taiwan the same in the concept of standard-based teacher education with globalization? Therefore, this paper would like to find the relationship of teacher quality and social justice. Second, this paper would like to understand the meaning or perception of social justice in the case. Third, this paper would like to...
analyze the relationship of teacher quality with social justice in Taiwan context. Finally, this paper provides some findings and suggestions.

The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examining foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Food is not only a necessity in daily life but also a contested site where gender, class, and ethnicity intersect. Chinese marriage migrants are often depicted as opportunistic gold diggers in the Taiwanese society. Not only do they suffer various forms of discrimination from the general public, but even more unbearably, within their own family. This research shows that living arrangement has a great influence on Chinese marriage migrants’ agency. In a “three generation cohabitation” setting, the dining table becomes a battlefield between Chinese immigrant wives and their Taiwanese in-laws. Chinese immigrant wives’ food preferences and cooking habits such as the general usage of oil, salt, MSG, and other condiments are associated with their national origin, further classified as the lack of modern knowledge and inferior. In the name of a “healthier” diet, Taiwanese in-laws often despise Chinese marriage migrants cooking habits and ask them to adapt. Food consumption and cooking styles not only draw a subtle ethnic line between Chinese marriage migrants and their Taiwanese in-laws, but also serve as a marker of status and class. Facing such difficulties in the domestic sphere, Chinese marriage migrants often claim that unlike many restaurants in Taiwan, what they cook are the real “authentic” Chinese food. They develop a nationalist discourse as a means of asserting their subjectivity and the legitimacy of being a good mother. With limited agency in food consumption in their own household, Chinese marriage migrants, despite they come from different regions, have collective memories and establish a special bouding, a sense of belonging through food making and sharing.

HUANG, PAOYI* (CUNY Graduate Center, phuang@gc.cuny.edu)

“I Want to be a Breadwinner Too”; Chinese Marriage Migrants’ Narratives of Gender, Identity, and Family in Taiwan

This study aims to explore the intricate gender dynamics in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Gender is not only a major element to immigrant identity, but also a vehicle for minority groups to claim cultural superiority over the dominant group. Taiwanese men and Chinese women have very different expectations of gender roles in marriage. Taiwanese men and their parents expect these Chinese women to behave in a traditional way – be a good stay-home wife/mother/daughter-in-law. Yet Chinese women, who grew up in communist China, consider such expectations outdated. Most of these Chinese women anticipate Taiwan as a more modern and Westernized society before getting married, but only to find out that patriarchal ideology and practices still prevailing. In contrast to stereotypes portraying Chinese marriage migrants as lazy and opportunistic “gold-diggers,” many of these immigrant wives, despite external immigration policies and their lack of local networks, express a strong desire to work. Being confined in the domestic sphere, these Chinese women long for part of their old identity – a financially-independent working woman. Facing stigmas in the Taiwanese society, Chinese immigrant wives criticize that their Taiwanese in-laws are under Japanese colonialism and feudal Confucianism’s influence, thus they are backwards and lack of modern concepts. This research argues that these Chinese marriage migrants develop such discourse as a strategy of resistance – a means of asserting their progressiveness. At the same time, gender dynamics in the household (private sphere) has become a public issue – the Taiwanese government launches programs to “teach” Chinese women how to be an “appropriate” Taiwanese wife/daughters-in-law. This study elaborates how the conduct of micro private life is deeply tied to macro social structures.

History and Text: A Study on the Changing Forms of Governmentality of the Communist Party of China

Following the traditions of New Historicism, this paper explores the historicity of text and the textuality of history through a case study on the changing forms of governmentality of the Communist Party of China (CPC) before and after the foundation of the People’s Republic of China (PRC).

The paper focuses on two social movements initiated by CPC: Land Reform before the foundation of PRC and Patriotic Hygiene Campaign afterwards. The former movement intended to classify ‘class backgrounds’ of people in rural China in order to distribute private properties to create an egalitarian society. While the latter aimed to arouse awareness of public health so as to win an alleged germ warfare and raise people’s standard of living.

The first part of the paper uses two literature texts to analyze the change of governmentality. One is Ding Ling’s award-winning novel Sun Shines on Sangelang River which portrays the Land Reform. The other is Clear Sky written by renowned playwright Cao Yu which tells the story of how an American-sponsored hospital transformed during the Patriotic Hygiene Campaign. Under CPC’s ideological influence, both texts served the purpose of political propaganda. While the former text adheres loyalty and storytelling reveal the change of CPC’s governmentality from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse.

Second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, the paper uncovers the changing meaning of the idiomatic ‘class enemy’. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatum of the same word unveils the fact that history is more of a narrative open to various interpretations than a solid causality between events.

Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong, Jiangmen city, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of “Jiangmen nuclear crisis” on Sina Weibo revealed two important oppositional frames: risk of radioactive contamination and its hazardous effects on health/understanding of the risk. Untrustworthiness towards government and opponents was found to be a common characteristic of the framing process. Yet, unlike the previous literature emphasizing the importance of “technological fix”, the risk was framed as a social issue associated with the lack of confidence in authorities’ supervision and regulatory capacity which was justified by past scandals regarding shabby public projects, food safety as well as the widespread pollution problem in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials’ inappropriate responses, ill-prepared feedback channels, and more importantly the micro-blogging censorship. As untrustworthiness levels increased, the sense of risk was also enhanced. Besides, the Internet played an important role in revealing the procedural flaws and demonstrating the potential widespread fallout through digital mapping system; it also helped activists counter officials’ discourse head-on. These findings echo previous conclusion that limited public participation in the framing process in a technocratic society can lead to activism. However, the interactive framing processes suggest that the public’s perspectives on environmental issues are inevitably intertwined with government’s responses and the public’s general perception of the government.

The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. The data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second,
in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers’ human resource management in Kaoshung and future studies were discussed.

Inclusionary Housing in China: Achievements and Challenges

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban land and local governments’ right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What is its social, economic and political costs and benefits? 3) What kind of mechanisms need to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when intersecting with such institutional hurdle as hukou (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai hukou and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 per cent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called “group renting” (qun zu) in which existing medium even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city centre where job opportunities lie. The local government has taken measures to stop ‘group renting’ which leaves many young non-natives nowhere to find a home. The second case is about a recent regulation issued by Shanghai government in which non-local unmarried people are denied the right to buy a home in Shanghai. The effects of this regulation are further reinforced and complicated along lines of gender and class; how the measures has infringed on their private life decisions particularly marriage choice (to get married or not) by regulating on their housing right, in order to refrain housing prices.

Breaking the Cycle: Inequality, Social Investment, and Human Capital in Latin America

Latin America has long lagged behind the East Asian Tigers in investment in education. In particular, Latin American countries failed to invest heavily in public secondary education. This has had costs both in terms of economic growth and inequality. After some 20 years of democracy and particularly with the turn to the left, social investment in the form of increasing expenditures on education and health care and the spread of Conditional Cash Transfer Programs has received unprecedented attention. The CCTs are based on the recognition that investment in the human capital of the next generation requires that poverty in the present generation be addressed. We argue that in Latin America social investment, human capital stock and inequality and poverty are linked in a feedback causal process and present quantitative and qualitative evidence supporting our argument.

Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professions in Occupational Health and Safety Regulation in Germany and the United Kingdom

Risk-based governance provides, inter alia, the means to target regulatory interventions by the probability of occurrence of ‘harm’ and their impact. For example, in 2005, the influential British Hampton Review suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based governance regimes raises tension for the professional ethics of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored. Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the occupational health and safety governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. We compare and explain their role in German and British OHS governance. We argue that variation in treatment of occupational illness across countries depends – apart from historical and legal conditions – on the organisational structure of professions (e.g. regulatory agencies vs. professional associations) within the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the UK, while the medical profession in Germany treats each case as particular and largely rejects risk-based targeting as non-compatible with their professional identity.

Social Movements and The Citizen-Consumer: Evidence From The Canadian Sustainable Food Movement

The proposed presentation builds on the established limitations of the citizen-consumer hybrid through a study of key actors in the sustainable food movement. Many others have focused on how consumers are mobilized to purchase ethical products as an expression of citizenship or social agency, we examine the motivations of social movement actors and their tactics for engaging others. Using the case of food, we examine how movement actors seek to engage consumers through food products, while encouraging movement towards citizenship responsibilities and political change. Data are derived from a qualitative case study of 45 leaders from civil society, the state, and the market in two Canadian cities. Findings are used to scrutinize the concept of the citizen-consumer hybrid as this entity relates to environmental social movements. While advocates of shopping for change suggest that ethical consumption creates opportunities and discursive spaces that encourage individuals to develop collective identities, the actors interviewed were not brought into the arena of social change via consumption activities. Interestingly, these individuals continue to advocate for greater consumer education and opportunities for ethical consumption as tactics to enlist greater consumer engagement. Tensions for the professional ethics of low-hazard occupations and the need to influence the state, participants locate possibilities for citizenship in the consumer marketplace, largely eschewing the role of the state in social movements. Implications for theory and practice are discussed.

Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden of care on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventative medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents/carers' children's and health professionals' understandings of asthma and their perceptions of the barriers and facilitators to good asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasises the dynamic, multi-dimensional and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses using this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

Funding acknowledgement and Disclaimer: This project was funded by the NIHR- HSU programme (Ref 09/2001/19). The views and opinions expressed therein are those of the authors and do not necessarily reflect those of the NIHR HSR programme or the Department of Health. effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identity is continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distractions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

*L’Innovation Contributive Au Service d’une Résilience Urbaine? Pratiques et Moyens (Numériques) de Transformation de la Ville de Détroit*

Détroit illustre aujourd’hui assez bien l’Amérique des laissés pour compte : une métropole ouvrière noire et difficile à situer sur une carte tant elle illustre les atermoiements, les échecs de l’American way of life et la mémoire d’une ségrégation socio-raciale importante. Dans ce contexte urbain en faillite, nous souhaitons explorer le lien entre crise économique et apparition de pratiques socio-politiques alternatives mises en place par la société civile. Ces pratiques conscientes orientées vers une économie fondée sur la valeur d’usage traversent le quotidien des gens par nécessité ou par persistance de formes sociales non marchandes. Elles contribuent à des projets de parage des technologies de la communication qui révèlent à la fois une diversité de moyens modestes pour faire face à la crise économique, et un ensemble de pratiques innovantes permettant de penser la possibilité d’un mode de vie alternatif, voire anticapitaliste. Notre contribution se situe au cœur de cette ville, renvoyant à des pratiques numériques visant à la réduction des inégalités d’usages et d’appropriation, à la création de nouvelles solidarités et au renforcement des communautés à l’échelle du quartier. Elle vise également à montrer comment ces initiatives mettent en lumière des questionnements relatifs aux rôles que jouent les usagers dans l’organisation et le fonctionnement matériels d’un réseau social numérique. Car, selon nous, ces moyens qui émergent dans cette ville sont effectivement à l’image d’un mouvement de contestation récent qui révèle de manière plus ou moins directe les enjeux de la démocratie Internet et ceux des publics « forts » et/ou « faibles » du Web. Détroit et ses pratiques de transformation basées sur les mondes du numérique illustrent un vivre Internet différent et le développement de l’économie de la contribution, vecteur d’empowerment des citoyens utilisateurs nécessaires à une émancipation citoyenne.

*Legal Consciousness and Labour Insurgency: A Comparison Between China and the U.S.*

This paper seeks to examine the effects of legalization of labour relations on workers’ participation in the 1935 Wagner Act of the U.S. Some U.S. scholars pointed out that the Wagner Act has deradicalised the U.S. labour movement by imbuing legal consciousness that built upon contractualism and private property rights into workers and by confining their actions within the legal institutes and practices (Klare 1978, 1982). Similarly, many scholars in the field of labour studies highlighted that the labour laws system used by the party-state to channel workers’ protests into bureaucratic procedures (Lee 2007; Gallagher 2007; Friedman and Lee 2010; Chen and Tang 2013). However, little is known about the grievance-diversion mechanism vested in the Chinese labour laws system. For example, how does the party-state make workers believe that the legal system can protect their interests so that many of them do not launch an insurgency? To what extent do workers trust the legal system? Under what circumstances will they bypass it?

This paper aims to fill up these gaps by analyzing how the Chinese party-state construct the legal consciousness of workers, the characteristics of this consciousness, and when and how workers would act beyond the legal consciousness. I answer these questions from two approaches. First, while not many current studies examine the Chinese labour laws from the perspective of workers, I have conducted 60 in-depth interviews with workers in the Guangdong province in order to find out the agents’ viewpoints on the juridico-political structure and the characteristics of their legal consciousness. Second, by comparing to the Wagner Act in the U.S., I aim to investigate the impact of this legal consciousness on labour insurgency in China and the possibility of overcoming its effects.

HUI, LUAN* (The Chinese University of Hong Kong, luanhui614@gmail.com)

*How Parental Absence and Social Capital Influence the Psychosocial Development of Left behind Children Whose Parent(s) Work Abroad? - the Case of Yanji City, China.*

As a major supplier of migrant labor, China has a large number of people who are moving from rural to urban cities and even crossing borders to search for better opportunities and wish for a better future for their families. This paper focuses on the left behind children in China whose parent(s) work abroad (LBCPWA). The reason is that these children are largely ignored in the country, and such cohort of children are encountering the crisis of troubles within the context of globalization, which has threatened the qualities of life for this vulnerable child population.

Previous literature shows that when compared with children of non-migrant families, the psychosocial development of LBCPWA due to parental absence is mixed. Some studies indicate a significant difference between LBCPWA and children of non-migrant families, while others show relatively small results. In this vein, this study employs a resilience perspective that regards social capital as protective mechanism, which can buffer or mediate the impact of parental absence on the psychosocial development of LBCPWA. It adopts a quantitative research method, uses a cross-sectional survey design to collect information from a sample of 1000 LBCPWA and children of non-migrant families in Yanji City, China-an ethnic minorities area, where international migration is a common phenomenon. The findings and policy implications are discussed.
in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires.

Unfortunately, Today, traditional values of leisure have in this multivariante sociocultural transformation been muted more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and shopping, or with what is fashionable that the rich like to boast about.

This article attempts sort out Chinese traditional leisure culture and style from Confucianism, Daoism and Taoism... as well to reflection on contemporary Chinese face to the confusion and difficult, as well to the loss of leisure value and cultural traditions.

Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back' neoliberalism) differ from those found in the following 'roll-out' or embedding phase of neoliberalism implemented by Third Way Labour governments in both countries.

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents' will, to support parents financially, to support them with care or just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well by a generational and gendered order as they may be especially strong towards daughters. These strong expectations young adults are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context.

In both countries, the professional project is a medium to get into an established position. By comparing the two countries and the various groups in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

Sexual Rights In The UK: The Christian Right and The

In recent years the United Kingdom, much like other western democracies, has seen the proliferation of sexual minority rights largely through equality legislation (especially Equality Acts 2006, 2010). As a consequence many faith communities are now challenged by such legislative enactments that advance the equality, citizenship and social inclusion of sexual minorities (and heterosexuality) and prohibit discrimination in various economic and social spheres. This paper will explore attitudes and views of conservative Christian churches that have come out strongly against such developments on moral grounds and advance freedom of speech to express their vehement views. Christian Right campaigning groups are however more strident in their attitudes which have tended to have become increasingly polarized. This paper considers the key issues in the context of, firstly, the result of increasing marginalization of conservative Christians in a post-Christian environment and, secondly and relatedly, the narrative of rights and the philosophical underpinnings that they adopt in the opposition to sexual rights. The paper will also consider how such narratives also engage with religious rights that are simultaneously advanced by the Equality Acts 2006, 2010 and which generate contradictions and conflict/potential conflict between sexual and religious rights.

Sidewalk Cafes: Formal and Informal Negotiation of Private and Public Space in the Creation of a Parochial Social Order
Albert Hunter
Northwestern University
Abstract

Sidewalk cafes are a venue for exploring the intersection of public and private space in the urban environment. Drawing on the work of Duneier, Goffman, Hunter, Lofland, Sennett, Whyte, Zukin and others the research defines the way in which the transition between the public space of the sidewalk and the private space of a restaurant is symbolically negotiated and defined. The result is a new social order -- a parochial realm -- that selectively draws on and amalgamates elements of the public and private realms. In addition to the informal negotiation * denotes a presenting author. Abstracts are organized by first presenting author's last name.
of norms defining this space among patrons, proprietors and passers-by. The research also explores more formal mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. These also trace the mutual impact of the two levels of informal and formal negotiations. The research explores variations in these negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a “consumer” and at the formal level as a city plan commissioner.

A Reflection on Social Class Differences in Australian Mothers’ Experiences of Full-Time Employment and Family Life

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers’ experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, we will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the increasing demands of middle-class employment create a “time deficit”, which may deplete women’s capacities to genuinely attain ‘the good life’, associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of ‘good motherhood’, regardless of a woman’s social class location.

Older Canadian Men’s Perceptions and Experiences of Ageism in Everyday Life

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from in-depth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogeneous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual).

Our analysis of the data revealed three key findings: a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalized ageism. Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalized elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of inferiority for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, ‘dirty old men’, or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age relations.

Social Engineering of Talibanization and Manipulation of Religious Preference With Reference to Violence

Simulations of social behaviors perfectly orchestrated on scientific grounds with exceptional precession employ religious violence. Based on the 80, Talibans sampled in the study probe schematic chain of Talibanization with associative direction in logical order. The study further explains the behavior modification and fabrication of religious preference. We find militants doctrine of propagation and develop religious violence propagation model.

HUSU, LIISA (Örebro University)
Advancing Gender Equality in Nordic Academia: Political Will and Persistent Paradoxes

The Nordic countries – Denmark, Finland, Iceland, Norway, and Sweden – can be characterized as global leaders when it comes to overall gender equality of society (World Economic Forum, 2012). Political will to advance gender equality in academia is evidenced by the gender equality promotion that has been actively on the national policy agendas since the late 1970s-early 1980s, through various national level interventions, especially so in Finland, Norway and Sweden. Gender equality is addressed in the university legislation in Norway and Sweden, and universities are legally obliged to engage in equality planning. These three countries show the highest proportion of women on scientific boards in the European Union, approaching gender parity, and the highest proportion of women among university Vice-Chancellors in the EU (EC, 2013). Even if many key gatekeeping positions shaping the academic and scientific landscape show greater gender equality, unequal gendered structures in academic careers prevail. If the proportion of women among full professors is used as an indicator of gender equality in academia and science, Norway and Sweden do not excel in a European comparison, having only reached the same level as the European (EU-27) countries on average, while Denmark has among the lowest, whereas Finland among the highest proportions of women among full professors within the EU. This paper interrogates the Nordic paradox of high overall gender equality in the society, political will and active policy regulation to advance gender equality in academia and science, on the one hand, and the persistent unequal gendered structures in academic careers and inequalities in resource allocation, especially in research funding, on the other. Accordingly, differences and similarities between the Nordic countries will be highlighted and discussed, along with historical developments, policy landscapes and continuing resistances to greater gender equality.

The crisis of organized labour has given rise to an extensive literature and various policy ideas for trade union renewal. One proposal has been to call for union mergers to create new types of labour organizations better equipped to conduct campaigns to increase union density and influence. Are such mergers an indication of union weakness or, if undertaken strategically, do they hold promise for a revitalized labour movement?

After reviewing past union mergers in selected industrial relations systems, the paper focuses on a recent new union formed out of the merger of two large private sector unions—the Canadian Auto Workers and the Communications, Energy and Paper Workers Union of Canada. The paper provides the background to the merger and offers an assessment of the possibilities for labour movement revitalization.

Objectives for the new union include the organization of non-union workers, especially in private service sectors characterized by a concentration of young workers who make up much of the difficult to organize precariat. New organizational approaches include building union associations and community chapters. These tactics require innovative union philosophies, organization structures more appropriate to the new general unions, and political campaigns to change legislation. Having critically considered these and other ideas on reshaping unions, the paper makes more far-reaching proposals for recasting unions to address class perspectives that can provide a counter-hegemonic political culture to that of neo-liberalism.

The paper contributes to theory and policy by arguing that an increase in the size and complexity of working-class organizations need not necessarily compromise class perspectives. These tactics require innovative union philosophies, organization structures more appropriate to the new general unions, and political campaigns to change legislation.

The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author’s involvement in research and education programs for one of the two unions involved in the formation of the new labour organization.

New General Unions: Trade Union Mergers and Labour Movement Renewal in Canada

Social Class, Age, and Identity in Later Life

This paper will present a comparative analysis of social class identity and age identity over the life course in the context of later life. First, the paper will address genealogical approaches to class and later life alongside key theoretical approaches to identity and social change. Second, the paper will consider the methodological and data issues associated with cross-national research and review evidence, at national and cross-national levels, for a relationship between class identity and age identity. Third, the paper will present an analysis of (i) global comparative data from The International Social Survey Programme (ISSP) and (ii) changes in identity over time using the UK Citizenship Survey. Findings show relatively wide cross national differences in the salience of class and age for identity in later life. Moreover age and class identities operate independently of each other suggesting that different forms of identity and identification need to be examined. However, overall, neither appears to be a particularly important aspect of identity. There is some evidence (in Europe at least) of a relationship between GDP and class identity lending some support to Inglehart’s post materialist thesis but there is no evidence of a generational effect. Analysis of UK data suggests higher levels of class and age identity among this sample of retirees raising both methodological questions and the possibility of greater variation within samples. The paper will conclude by discussing the salience of class and age identities at national and international scales.

Socio-Economic Differences in Health Trajectories Around Retirement in the USA

There is increasing concern about possible widening inequalities in health amongst the older population. There is a growing body of work on the relationships between patterns of labour market participation in later life and health. However, the results are equivocal and little has been done to explore socio-economic variations in the impact of retirement on health. To redress this data from 10 waves of the Health and Retirement study in the USA were used to analyse trajectories of poor health and retirement for different socio-economic groups. Repeated-measures logistic regression with generalised estimating equations were used to analyse data up to 7 years before and 7 years after retirement from 1992 to 2010. The results show that for the sample as a whole the prevalence of sub-optimal health increases sharply in the years before retirement, from around 16% four years before retirement to 23% at retirement. Following retirement the prevalence of poor health remains high but the rate of increase slows down. Educational differences are evident throughout the period. Those with a lower level of education have higher rates of poor health for all years and show a more rapid increase in poor health up to retirement compared to those with higher levels of education. Four years before retirement 25% (95% CI 20.0-30.0) of those with a lower education reported poor health compared to 12% (95% CI 9.8-14.1) of those with a higher education. At retirement this had risen to 36% (95% CI 31.2-41.2) and 19% (95% CI 16.7-21.3) respectively. The analyses showed that poor health is a main driver of retirement in the USA. Also those with lower levels of education continue to be at greater risk of poor health following retirement which might contribute to growing health inequalities in later life.

Environmental Gains and Social Losses? Critical Reflections on the Sustainability Potential of Telework

Anthropogenic climate change and its environmental and social consequences are of increasing concern worldwide. Approaches that advocate a ‘greening’ of financial systems through technological innovation and development tend to dominate policy responses, especially in resource-intensive sectors such as transport. This position is labeled as ‘shallow ecological modernisation’ (EM) thinking whereby technology is perceived in (over)optimistic terms, with limited evidence of challenges to contemporary growth-centric models of development, production, and consumption that cause climate change.

Work takes up a considerable portion of people’s lives whilst travelling to and from work has become a key feature of everyday mobility in many development and developing countries. A significant contributor to greenhouse gas (GHG) emissions, transport in its current form is deemed to be unsustainable. In a-
ropean context, telework - an arrangement that enables employees work from home - has been suggested as a virtual mobility option with the potential to reduce the 'consumption of distance' associated with regular commuting. Given its emphasis on the application of technology to solve environmental problems, the uncritical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental benefits can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

Smart CCTV in Contemporary Crime Control: Policies and Practices of Surveillance

I would like to address risk governance in crime control by illustrating the development and implementation of so called "smart" CCTV systems in Germany. These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms. Since this technology is not based on the psychological or criminological analysis of deviant individuals, but on the analysis of situation and space classified as dangerous, it comes with an expansion of risk perception: everyone who is monitored by these systems is a potential risk. Hence smart CCTV can be seen as a signature of national crime control, described by scholars as situational crime prevention, new penology or neo-liberal governmentality. In this new rational, smart CCTV is seen as an efficient and effective tool for security measures. In accordance with this view both, advocates and critics of this technique draw a picture of new powers of control, that stretch from terrorism and incivilities to mass events. This vision of technology based security yet faces technological problems (how can indexical behavior be translated into software algorithms?) and the often divergent interests of prospective users (police, public transport, private enterprises). Drawing from empirical research conducted for the German FMI-funded MuViT project and the EU-funded VisionSense project I want to show, that the development of smart CCTV is on the one hand part of a new rational of risk governance in crime control since it comes with a re-coding of risk and security. On the other hand its practical implications correlate with a multitude of social factors.

A century ago, Max Weber concisely brought Switzerland's character as a 'Well-sensate Nation' into the research field. Only one of the key beliefs in the unique nature of their habits and morals, the identity of the Swiss could emerge and consolidate. Based on a mythology of rural-alpine nativeness and isolation, this "belief in commonality" entails both the construction of boundaries vis-à-vis the threatening outside world and corresponding semantics of resistance. Given the recent discussions on foreign "attacks" on the Swiss banking secrecy and the increased charismatisation of the Swiss mountain guide (as an idealization of the laudable Swiss) at the present time, it becomes apparent that the architecture of "Swissness" still provides important symbolic resources. Yet, what about those Swiss who do not live on the very "Helvetic island" but are dispersed all over the globe? First, the paper aims at discerning how this interrelation fosters a new logic of artistic recognition. Within the framework of the latter, it headmost is the mastery of "performative piroettes" that will be awarded: Artists more and more have to assert themselves as virtuosos of a somehow "reflective" performativity.

In order to go to the bottom of this phenomenon, two theoretical reconsiderations will be proposed: First, referring to Michel Foucault, it will be argued that one can speak of a "discursive explosion" around and apropos "performativity" within the theatrical art world, producing new forms of artistic mysteriousness. Second, drawing on Max Weber, this latter proposition will be linked to a charisma-theoretical model of artistic performativity. 

Different Paths of Family Policy Modernization in Continental Welfare States

Family policy in continental welfare states strongly reflected the male breadwinner model at the beginning of the 1970s. This model has become increasingly ill-suited with regard to new social structures and values. This paper studies the impact of new social needs and demands on family and care policy and politics in Germany and Switzerland. The power resources approach falls short of explaining the division of labor in the field of childcare. The growth in part-time employment has no strong interest in care policy and the mobilization of women's organizations has remained weak. The paper argues that the politics of reform must be analyzed with a coalition approach in a multi-dimensional policy space. Indeed, the adaptation of the male breadwinner model to new needs and values can be analyzed in terms of different paths, namely via a) the recognition of care work (recognition model), b) increased female labor market participation (working mother model) or c) an overall re-balancing of work and care for both men and women (social transformation model). Both the working mother model and the social transformation model contain elements of the social investment agenda. Each of these reform directions gives rise to different conflict lines that foster specific actor alliances.

Based on an empirical analysis of actor positions in all family policy reform processes since the 1970s, the results show that in both countries, social-liberal alliances have become important drivers of the working mother model, whereas social-conservative alliances tend to advocate the recognition model. This multi-dimensionality of care policy modernization has led to sequential waves of care policy reforms in Germany and to reform stalemate in Switzerland until the end of the 1990s. Recently, social-liberal and cross-class alliances have become successful drivers of family policy, mostly in the direction of a working mother model.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper describes preliminary results of an interdisciplinary research involving sociologists and architects, funded by the Autonomous Region of Sardinia. The analysis focuses on the experiences of relational public art (or community art), studying the strategies that artists activate to enable citizens' engagement in the transformation of urban spaces. These strategies are able to "revitalize" models of urban governance in which participation often translates in a mere consultative practice. We are facing emergent phenomena that are not only "counter-cultures", but could also feed into processes of policy formation and decision making. Indeed, the "new genre of public art", represents a new way in which citizenship is practiced: artists ask the audience to become co-actors in the construction of their works, taking in charge conflicts/relations related to urban spaces, intercepting needs and experiences of people who live in these spaces, and activating citizens' awareness of their role in the transformation of urban spaces. Starting from a background analysis of significant national and international case studies, the research focuses on Sardinian experiences activated in the urban "border areas". The aim is to investigate – through interviews to the "citizen-artists" and the other actors involved in the artistic intervention – the practices of production and consumption (active/participatory); the shared meanings of participation, politics, community, territory; the representations of the other actors; the discourses related to objectives and results; the communication strategies; the interaction with the reference contexts. The process of analysis will conclude with the production of three outputs: a "Participatory Research Laboratory" which involves artists and other actors of the urban governance (architects, sociologists, public administrators, stakeholders); an online platform containing informations (texts, video, images, georeferenced maps) about experiences we analysed and the modalities to activate similar participatory processes; a procedural tool for administrators, oriented towards a participatory territorial planning.

**Filling up Discontinuities in the Urban Landscape: Alternatives and Strategies**

The end of the so-called housing bubble with the current economic crisis is having dramatic effects in the urban landscape as construction companies have declared bankruptcy and have left many unfinished buildings and empty lots in the urban space where garbage is being accumulated while no one seems to be responsible and neighbours suffer the consequences. Thus, it is urgent to develop initiatives and alternatives that provide an answer to the deterioration not only of the urban landscape but, more importantly, to the everyday lives of the citizens who suffer the consequences of years of speculation with the urban space.

In this paper I will show the preliminary results of the research project FUTURE (Filling Up Territorial Discontinuities in the Urban Landscape) that has been carried out in the Spanish city of Burgos with the goal of promoting citizens' participation in the elaboration of proposals and alternatives that activate sustainable forms of participatory engagement for a better living in urban areas. This research is based on ethnographic fieldwork research with neighbours, independent artists and local authorities (participant observation, interviews, life stories, discussion groups) as well as archival research (year of construction/demolition, name of the constructor, original project). More specifically, in this paper I will discuss the following issues: (i) how neighbours perceive these empty spaces and abandoned buildings in terms of risks (garbage, physical injuries, gang activity, depreciation) and what alternative projects and uses they proposed; (ii) what are the intended projects developed by the local authorities in order to fill up these discontinuities; (iii) examples of successful projects developed from below. The presentation will also include a dynamic chart where I have mapped out both these territorial discontinuities or 'spaces-in-between' and the alternatives suggested by neighbours and other actors of the civil society (independent artists).
Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in there field, but it will also demand to carry out this work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curricula -either as knowledge discipline or transversal axis- it is recent and even more so when it refers to specific aspects of this discipline. The research analyzes the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about devices for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of: the instrument validated by Hirsch (2005) from National Autonomous University of Mexico (UNAM) for values; the questionnaire for the competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according with Alcoberrero, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law: it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use there transgression to save life at the expense of an unequal relationship between the physician and the patient.  

Urban Conflicts As Spaces of Politicization of Collective Action Around the City: Notes to Think the Continuities and Discontinuities of Urban Social Movements in the City of Santiago (Chile)  
Over the last 40 years the city of Santiago has experienced deep transformations, which have been linked to the implementation of neoliberal policies. Also, the city has been not only the stage, but rather the protagonist of a variety of conflicts around urban issues, such as urban growth, use and appropriation of urban spaces, environmental, demand for housing. This has been the scenario in which old and new forms of collective actions have emerged to propose new forms of appropriation and use of urban spaces, transforming the urban space into an object of political action.  
In this context, this paper aims to study the processes of politicization and depoliticization that have been developed in these frameworks of action, understanding that the politicization goes beyond the mere mobilization and involves the generation of new spaces for the production of reality, in this case realities and socio-political imaginaries around the design, management, use and appropriation of urban space and urban goods. However, preliminary data analysis on urban conflicts in the city of Santiago suggest that not all collective actions around urban issues develop the same levels and types of politicization. Therefore, in this paper I will try to address the following question: what are the factors that can explain the trajectories of the process of politicization or depoliticization of collective action around urban issues? To answer this question I will study the collective actions that have developed around the problems of housing, inquiring into its politicization paths from the mechanisms and strategies that develop as part of their urban struggles (configuration of their social networks, identity, organizational structure and action strategies). Finally, I will try to establish the relationship between the processes of politicization and the construction of imaginaries and collective discourses around the city and urban issues.

Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism  
The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political communication in a world circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community has long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such Kokugaku, a ‘nationalist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in China and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

The ‘Overcoming Modernity’ Symposium: Modernity, Japan and East Asia  
The paper aims to address the theme of the session by using the ‘Overcoming Modernity’ symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as ‘infamous’ or even ‘notorious’, not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium’s primary purpose was to serve the wartime propaganda, the symposium participants sought to overcome and understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism  
The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political communication in a world circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community has long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such Kokugaku, a ‘nationalist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

Another Way of Modernization and Sociology? A Critical Assessment of the “Japnistic Sociology” in the 1920s and the ‘30s  
During the late 1920s and the early ‘30s there was a movement among the Japanese sociologists to establish the “japnistic sociology” that should differ from the western sociology. Concerning the social & international context in which this movement emerged, three points should be mentioned at least. First, in the 1920s social inequality and social conflict were more clearly recognized than before in Japan. In 1919 the Japanese Ministry of the Interior established the “social” section for social policies. There also arose a “social science” movement among the university students in the early 1920s. This was strongly opposed by the Marx-Leninism, and therefore oppressed soon. Many Japanese sociologists tried to separate sociology from this kind of “social science”. Secondly, the political orthodoxy in Japan shifted its orientation gradually from the westernization to the asiанизm. The Japanese proposal for the racial equality was rejected at the Paris Peace Conference (1919). And the new Immigration Act of USA (1924) raised antipathy among the Japanese. These experiences made them to seek another way of modernization which they had equated simply with westernization until then.

Thirdly, after the brutal and bloody suppression of the Samil (March 1) Movement (1919), the Japanese Governor General of Korea changed its colonial policy from “overlord soft power” to “Bunkit” (soft power). Also, the Japanese government tried to camouflage its colonial domination in “Manshukou” (established in 1932) with the ideology of “mutual harmony among the 5 peoples (Gozoku-Kyowa)”. It was in this social & international context that the movement for the “japnistic sociology” emerged. What was it? What kind of sociological theory can we make today from this history? This presentation considers these questions.
VITMAN, ADI (University of Haifa)

Ageism and Social Integration of Older Adults in Their Neighborhoods in Israel

Purpose: The paper aims to examine the extent to which ageism is connected with the social integration of older adults in their neighborhoods and to identify factors that explain social integration.

Design and Methods: A convenience sample that included 300 older adults aged 65 and over from three neighborhoods in Tel-Aviv, with varied socio-economic status, was interviewed. The study included a combination of qualitative and quantitative research methods.

Results: Neighborhoods varied by levels of ageism and social integration. Higher levels of social integration of older adults' residents was explained by a combination of factors: younger age, better self-rated health, and fewer limitations of outdoor mobility, lower levels of ageism reported by a sample of younger respondents, and higher socio-economic status of the neighborhood.

Implications: To enable better social integration intergenerational programs should be developed to decrease ageism and in order to make communities more age-friendly there is need to facilitate accessibility to services and public spaces.

IECOVICH, ESTHER* (Ben Gurion University of the Negev, iesen@bgu.ac.il)

Nurses' Attitudes Toward Migrant Care Workers In Hospitals In Israel

Aims. To examine nurses' attitudes on tasks that paid carers of older patients should or should not be allowed to perform and to examine the factors that best explain nurses' attitudes towards the involvement of paid carers in providing care during the older patients' hospitalization.

Background. Many older patients who are hospitalized are functionally dependent and employ paid carers who perform a variety of tasks during hospitalization. Yet, this issue has been barely examined.

Methods. The study included a combination of qualitative and quantitative research methods.

Results. There were no formal policies and guidelines regarding the tasks that paid carers should be allowed to perform. The majority of nurses perceived that paid carers should be allowed to perform a variety of tasks except for professional nursing tasks. Type of hospital and ward and nurses' education were significant in explaining nurses' attitudes towards involvement of paid carers in providing care to their older care recipients.

Conclusions. Attitudes of nurses towards paid carers are determined mainly by local organizational characteristics and nurses' education. There is need for explicit policies and practice guidelines and their enforcement with regard to paid carers.

Positioning and Counter-Positioning in an Institutional Setting. the Role of Children's Active Participation in Managing Conflicts

This paper presents some videorecorded episodes of conflicts involving children and adults at school. These cases describe the multidimensionality of school community work and point to: 1) the distinctiveness of the interactional construction of the conflicts in schools; 2) the ways institutionalized organizational narratives become cultural resources for framing, scripting, and revising problems as plots; and 3) the interdependence of micro- and macro processes. The approach construes conflicts as a dynamic part of classroom social life in which personal expressions are affected by and affect teachers' and students' classroom norms of conduct. Conflicts are observed in discursive practices that interactively construct social positions and diverging/shared narratives. Drawing from work on organizational narratives, positioning theory, and conflict analysis, this presentation focuses in particular on the role of children's active participation in managing conflicts in an institutional setting.

IVERSE, VITTORIO* (University of Modena and Reggio Emilia, vittorio.iverseve@unimore.it)

The Promotion of Agency in a Conflict-Affected Context. the Social Participation of Children and Adolescents in the West Bank

One of the most challenging narratives in the past few years (and probably one of the most stimulating for the future) has been the importance of children's active participation not only in terms of having the right to say, but also the right to choose among alternatives in communication systems, i.e. in terms of practicing agency rather than simply having voice. Supporting and improving children's capabilities means promoting children's participation beyond their right to speak and to be heard to a wider concept of active citizenship, which means contributing to the structuring of social systems. In this approach, therefore, children's capabilities assume the social form of children's agency. In other words, the idea of agency emphasizes that children can condition the actions of their interlocutors in communication with them, above all in interactions and can, in this way, transform the social structures.

This presentation tries to examine how children's agency and participation can be promoted in a conflict-affected context. With this aim the chapter conducts an evaluative analysis of a project of international cooperation developed by Oxjam Italy and the Palestinian NGO Dci/Ps which is aimed to promote social participation and to raise children's rights awareness among Palestinian children and adolescents.

The analysis is conducted by drawing on theoretical and methodological concepts from recent literature on social participation, sociology of childhood and Sen's capability approach, and looking at 1. the structures that promote agency in communication processes, 2. the ways in which agency modifies the structures of communication processes. The analysis of videorecorded data permitted some conclusions about social conversion processes and factors of agency, which allow social change. Our data shows that social change can be enhanced through children and adults' turns, but it is determined only in the self-organisation of a communication system.

Acquiring a 'Right' Combination of Capital: Japanese Nouveau Elites' Capital Accumulation Trajectories for Children through International Schooling in Tokyo

As economic globalization has been proliferated by nation-states' espousal of neo-liberal agendas, various domains of educational institutions have been internationalized and valorized globally valid forms of cultural competencies, termed 'global cultural capital' (GCC). With the rapid changes occurring in the global fields of education and business, many East Asian families and students have pursued GCC through international schooling, overseas education, and/or extra-curricular activities in order to improve and/or secure their status position in the global stratification hierarchy. However, existing research pays little attention to these factors of strategies and trajectories of accumulation of not only GCC but also national cultural capital (NCC) through schooling and extra-curricular activities. By examining school choice patterns of nouveau elite families having enrolled their children in the preschool section of international schools in Tokyo, this paper examines a neglected domain of parental strategies to acquire the 'right' combination of GCC and NCC for their children through a series of school choices (e.g. pre-school, primary school and secondary school sectors of international or Japanese schools). My findings reveal that Japanese nouveau elites see an embodied form of NCC (e.g. Japanese language and mannerism) as a primary resource to constitute their child's identity as cosmopolitan Japanese. Therefore, the mothers monitor their child's language acquisition and strategy to have their children acquire both GCC and NCC, which lead the families to be flexible and spontaneous in their decision-making to enroll their child in overseas schools, local Japanese school or other international schools in Tokyo. I conclude that NCC is still recognized as an important set of competencies for globally-minded elites in the context of Japan and that makes the families' capital accumulation strategies complex, flexible and stressful.

Is It Possible to Overcome Social Gap through Coproduction? : Kashiiwa's Practical Experience As A Radioactive 'Hotspot' after 3.11

Kashiwa, a typical commuter town in the Greater Tokyo Area, is a significant urban farming area where the principle of 'local production for local consumption' is here to stay. However, Kashiwa lapsed into being the most serious 'hotspot'...
within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the ‘Round-table Meeting for “Kashiwan Products for the Kashiwan People” towards Security and Safety’, and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childbearing years—to be engaged in that meeting. We deliberately and scientifically discussed some a unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved the results for the recovery of the reliability of local farm products.

Our primal motivation to convene the meeting was to overcome the ‘gap within the local community’, namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of ‘choice’ and ‘mobility’ between them. Refocusing local consumers and farmers as Kashiwan citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-communication strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiwa, this presentation will discuss social ‘coordination’ and trust-building between people with opposite interests under the risk of uncertainty.

Decision Makers and Those Affected in the Japanese Expert Community—the Fukushima Nuclear Disaster

An aim of this presentation is to describe the great distance in risk evaluation regarding the Fukushima nuclear incident between the experts in Japan and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann(1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimate a seriousness of the disaster and a possibility of spreading of radio activities. In contrast some experts such as Hiroaki Koide and Tetsuji Imanaka from Kyoto University point out a possibility of core meltdown in the nuclear plants and warned citizens the great dangers of the serious nuclear disaster through local or community media from the early on. A distinction between expert communities and people which is very common in the previous risk analysis might be useless to explain this distance, because it appears within the expert communities. Therefore the author focuses on the other distinction and takes into account the diagnosis of Luhman that the serious conflicts over the perception and evaluation of future loss between decision makers and those affected who are excluded from decision making process cross into the every functional area in the society. It implies the splitting of the scientific experts into such two unintegratable positions. As a participant, I obtained access to video data systems for a year and created the following three types of data: asking for participants to challenge some themes. As a participant, I obtained access to the video data systems for a year and created the following three types of data:

1. a title and contents list of TV programs about dementia;
2. documentation of the story, the contexts and scenes of each program; and
3. pictures of symbolic scenes in these programs.

Results: Two controversial descriptive patterns of the thoughts and wishes of those with PWD emerged. The first is that descriptions of these characteristics relate to problematic behaviors for caregivers. The second is that when PWD suffers think and feel are important in and of themselves and, therefore, sometimes conflict with the needs of caregivers.

A Pragmasemiotic Analysis of “Occupy Nigeria Group” Online Posts on the 2012 Fuel Subsidy Removal in Nigeria

In response to the fuel subsidy removal by the Nigerian government on 1st January 2012, Occupy Nigeria Group, a protest movement, embarked on different mass strike actions and demonstrations including online activism. The civil resistant actions geared towards reversal of petrol price increase deployed certain verbal and visual means in portraying the government and its actions. Previous studies on online protest discourse in Nigeria have adopted sociolinguistic and discourse analysis approaches in examining issues of identity and self-determination with little attention paid to visual pragmatics in representing people and their actions. This paper, therefore, undertakes a pragmasemiotic investigation of “Occupy Nigeria Group” online posts on the 2012 fuel subsidy removal in Nigeria with a view to examining verbal and visual modes of representing people and their actions in the event. Seventy-five online protest posts purposely sampled from the groups’ page are used to identify and categorize various pragma-semiotic elements and functions in the representations using insights from Mey’s pragmatic act, Halliday’s systemic functional linguistics and the semiotic theory. It is observed that the verbal mode complements the visual in projecting the demands and resistance of the group. The findings also reveal the use of various visual-pragmatic strategies such as prayer, negative labelling, humour, mockery, abuse, passionate and fierce appeal, including photo trick. This study has established some pragma-semiotic patterns in verbal-visual posts in the Nigerian online protest context. An awareness of the peculiar patterns and use is crucial in understanding and interpretation of socio-political realities of such news events by online consumers.

Comparative, Realistic, Communitarian and Public Qualities: Looking Back Michitaka Kaino’s Sociology of Law

Among Japanese socio-legal scholars, Michitaka Kaino (1908-1975) remains hidden abroad, though he is unique with comparative, realistic, communitarian and public qualities. Kaino covers the Emperor system/Fascism, human rights, the courts, ownership, commons, family, sociology of law and pollution, which are titles of his eight collective works. He wrote many papers and articles in various journals and newspapers, which included opening essays to the monthly legal magazine called Horitsu Jiho. Furthermore, he invoked Western legal doctrine to solve domestic problems, presided over a public book-reading circle, represented as an attorney regional peasants who insisted upon their rights of iriai, and developed the sphere of environmental law.

Above-mentioned Kaino’s qualities seems to have characterized Japanese sociology of law to some extent. A comparative law perspective has been requisite for most Japanese socio-legal scholars. Realistic view of law in confrontation with Japanese social situation has become a matter of course. Kaino’s stance to the right of iriai has been reevaluated in light of the study on the commons. In reference to the notion of “public sociology”, Kaino’s stance and works seem to fit “public sociology of law”. Kaino’s life history analysis, which tries to reconstruct Kaino’s personal experience and life from his written records such as interviews and his biography. It is expected that a relationship between one socio-legal scholar and society would be brought into relief through this approach. Thereafter, qualities, merits and limits of Kaino’s sociology of law will be considered from the point of view of global legalization.

Mediating the Professional and the Amateur: Social Activism in a Post-Union Democracy
Since the fallout of the triple disaster in March 2011, coupled with the government's pursuit of the reactivation of nuclear plants, Japan has once again become a seedbed for grassroots political activity. Various anti-nuclear rallies and demonstrations are held across Japan, and the largest of them all, the Friday Protest rally in front of the Prime Minister's Official Residence has been staged more than fifty times. Such contentious activism, especially among Japanese youth, has been quite inconceivable in the country for many years. How should we understand this development in relation to the three decades of relative silence after the end of student movements in the 1970s, which is said to have left a negative legacy by its violent disintegration? Building on the sociological studies of the protest cycles, this paper explores the concept of “abeyance” and demonstrates the working of “mediators” as key actors for social movement continuity in a post-union democracy.

Climate Change Policy-Making Process and Reasons of Its Stagnation: Activities and Preferences of Stakeholders in Japan

Institutional processes of making political decisions determine the range of their outcomes. The international comparative research project, the COMPON project (Comparing Climate Change Policy Networks), explores characteristics of the decision making processes in each society, based on common methods. The purpose of this presentation is to show results of the Japanese face-to-face questionnaire survey to national stakeholders and to discuss its interesting findings, especially on activities and preferences of major stakeholders. The COMPON-Japan conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change really occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases. On preferences of domestic climate change policies, there is a cleavage over policy orientations, especially between industries and NGOs. Industries prefer a bottom-up voluntary goal setting, while NGOs prefer more institutionalized and legally-goal-binding measures. Our respondents replied the progress of climate change policies are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government’s coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies. Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami. Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan. Community organizations for disaster management (jishubousaikai) are conventionally established under each residents’ association (jichikai) or neighbourhood association (chounaikai). Men in their 60s and 70s, retired but active, are the main members of jishubousaikai. Women of the same generation also participate in activities of jishubousaikai, but they are seldom engaged in decision-making because of cultural and gender boundaries that characterize this generation. Younger generations with more egalitarian gender attitudes are generally not very interested in disaster management activities. After the disaster, jishubousaikai managed shelters and distributed relief goods in many affected areas. The national government for the first time issued requests to each affected local governments to consider diverse needs of affected women and care-giving families in shelters; however, the requests were not recognized as important in many affected areas. This paper investigates how age and gender interacted and shaped response processes in 2011 Tohoku Disaster though the analysis of data collected in two studies: 1) interviews with people engaged in disaster response and recovery during the 2011 Tohoku Disaster, most of who were also affected by the disaster themselves and 2) an action research project with three jishubousaikai, aimed at incorporating gender and diversity sensitivity in their activities in Shizuoka Prefecture, where another gigantic Tokai Earthquake is predicted to occur.

Gender-Based Violence Following the Great East Japan Disasters

Research on gender-based violence following disasters remains limited in Japan. A team of researchers and advocates, who are members of the Women's Network for East Japan Disaster, conducted a case-finding study and compiled 82 unduplicated incidents of gender-based violence perpetrated in the aftermath of the Great East Japan Disasters. This presentation discusses the study’s results and analyzes various manifestations of gender-based violence following the disaster.

While the majority of the reported cases (n=45) pertained to intimate partner violence/domestic violence, the remaining 37 cases involved violence and harassment by individuals other than intimate partners. These incidents were diverse in their manifestations and situational contexts and included sexual assault, unwanted sexual contact, voyeurism, sexual harassment, ad stalking. The majority of the perpetrators were individuals whom the victims knew, as opposed to total strangers. Some of the reported cases involved sexual assault and exploitation committed by individuals who were in the position to provide assistance and protection, such as leaders of evacuation centers. Exploitation as a sense of fear and helplessness was a tactic frequently employed by perpetrators. For example, ex-partners perpetrated violence after approaching women and offering help, and disaster response personnel/volunteers exploited disaster-affected individuals. Women of all ages and in all situations are at risk of this type of exploitative violence; however, women who are single, divorced, separated, or widowed and those who have lost a place to live, job or other sources of livelihood appear particularly vulnerable to this type of violence.

This study elucidated multiple layers of vulnerabilities of women in the wake of the disaster, which stem from the pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

Does East Asian Social Capital Bring about Beneficial Effects over Its Indigenous Cultural Constraints?

East Asian social networks, as compared with North Americans’, are often colored with their emphasis on hierarchy. In tandem with network structures, East Asian cultural context also stresses that hierarchy is essential in society, which is often modeled after traditional kinship networks. As was revealed in a book by Ikeda & Richey (2011) in Japanese cultural contexts, this hierarchical nature does affect Japanese political trust, knowledge, and participation. However, we are not certain that the case is true for other East Asian cultural contexts, i.e. the generalizability of the findings. This paper will focus on this point. Using EASS 2012 dataset (East Asia Social Survey among Japan, Korea, Taiwan, and Mainland China), we will show comparative analyses of social network and its effects on social trust, social support, and political/social participation, especially focusing on the hierarchical nature of “Asian” social networks.

IKEDA, SHINGOU* (Ins Labour Policy and Training, ikeda@jil.go.jp)

The Factors of Japanese Female Workers’ Job Quitting for Childbirth/Childrearing

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Haskins stresses on “preferences” between work and home to explain behaviors of female workers with family responsibilities; “work-centered”, “home-centered”, and “adaptive”. She presents the data that many of women are “adaptive” in Europe. She also points out the influences of relaxing labor market regulations.
on increasing part-time work and on intermittent careers which are typical of adaptive women.

I suppose it is also important in Japan to focus on the structure of labor market as influential factors to explain the mass of women's behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as part-time and temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers’ job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations.

The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their organizations and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose non-reguler jobs in order to balance work with family lives.

The Influence of Gabriel Tarde on the Development of Japanese Sociology in the Early Twentieth Century

The purpose of this paper is to examine Gabriel Tarde's influence on the development of Japanese sociology in the early twentieth century. During this period, Tarde was an opinion leader of French sociology with his famous opponent, Émile Durkheim. After his death in 1904, Tarde's presence in the French academic community declined gradually, while Durkheim earned a reputation with his collaborators known as “Durkeimian school.” Unlike Durkheim, a professor at the Sorbonne, Tarde did not have his own students at the Collège de France, where lectures were open for everyone. It may be one of the main reasons for Tarde’s decline, as some historians of sociology think.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the Collège de France. One of Japanese sociologists who attended Tarde’s course, Shotaro Yoneda (1873-1945), became the first professor of sociology at the Kyoto Imperial University. Yoneda established his sociological theory based on Tarde’s “inter-psychology.” In 1913, Yoneda co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Taro Takebe (1871-1945), who also attended Tarde’s course. Yoneda’s earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde’s idea for his “Power theory of economics,” but discussed Tarde’s imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde’s sociology was more important in Japan than in his home country.

What Is Happening in the Northern Mozambique Under the Prosvavana Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia

This paper intends to reveal what is happening in the Northern Mozambique under the ProSAVANA Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called “land grabbing”, is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers?

In Mozambique, some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, ProSAVANA programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of ProSAVANA covers the Nampula, Zambezia and Niassa provinces.

The UNAC (Uniao Nacional de Camponeses) and international NGOs are claiming to stop ProSAVANA because of many problems causing from ProSAVANA and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on poor peasants examining how large scale land acquisition by foreign investment infringes food sovereignty of the society.
material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., draws stable psychosocial climate of a rural area. Mutual support is a phenomenon in modern society where personal values and disunity dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tatarstan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestrecinsky area are concentrated basically on meso-level and in Kukmorsky area on micro-level. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business.

1. Specifics of a demographic portrait of population in Pestrecinsky area reflected on making facilities inside the house. At the same time home improvement in Kukmorsky area is connected with household needs outside the house.
2. Rural residents working on a family farm show high level of satisfaction of fulfillment of his/her reproductive capabilities. 3. Such form of rural residents' cooperation as condemnation of co-residents for not taking part in life of a rural community. 4. Life of rural people living in Pestrecinsky area is concentrated on the development of a social wellbeing while in Kukmorsky area - on personal wellbeing. None of these strategies cannot be viewed acknowledged as the best for the development of a rural society because personal welfare also constitutes social capital of the whole area.

A Visual Retrospect of Istanbul’s Galata Neighborhood: Pursuing the Path of Socio-Spatial Segregation

This paper will examine the visual effects of gentrification in the historic neighborhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and conducting a new fieldwork in the neighborhood, I intend to examine the evolution of visual contrasts between physical proximity and social distance, revealing the differences and similarities concerning residential segregation and neighborhood change. Galata is a historical district which was inhabited by non-Muslim minorities until the first half of the twentieth century. Since these had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the “wealth tax” in 1964 and the cancellation of the residence permit for more than eight thousand Greeks. These years also represent a significant wave of migration from underdeveloped regions of southeastern Turkey towards Istanbul. These migrants have settled in the neglected and abandoned apartments mainly in Galata. In the 70’s, small factories moved into the area, usually in the ground pavements, destroying the walls in order to install machines and thus worsening the condition of the buildings. Since the 2000’s, the dilapidated buildings are restored and the migrant population is gradually replaced and replaced firstly by the middle and then upper classes. Using the concept of territoriality, enrolling in both frames of time and space, this study aims to elaborate the interpenetration of these two structures and to identify the new ways, developed by different social groups living in the district, of appropriating the same urban space.

Is a Non-Violent Way of Resistance Against Violence Possible? Istanbul’s Gezi Park As a Battlefield

This paper will examine the interactions between the actors of the Gezi Park urban uprising and the Turkish state in the framework of shifting violent and non-violent strategies. The movement of peaceful, unarmed, non-violent people against the demolition of the Park was faced with violent tactics from the police force, varying from excessive use of tear gas and water cannons to plastic bullets, while streets turned into battlefields. This led to an emotional urban communing process of different political groups with different perspectives or agendas, and even “ordinary” people without any activist experience or intent, which represents a unique characteristic. The approach of the government, fostered by accusing the protesters as being “looters”, has resulted in defensive, as well as new, creative, non-violent (but not always) ways of resistances such as standing still and silent in front of the police or painting stairs in rainbow colors. This study aims to elaborate the two months of resistance spreading over Turkey, from the main reasons behind it, as excessive police intervention, not merely during uprisings, but even before as discursive and political violence; which makes it one of the reasons behind the resistance. Apart from being a participatory action research, this paper will also cover discussions on violence, which was one of the main issues within the movement too.

The Focus on Everyday Life As a Turn to the Human Dimension of Social Structures

The focus on everyday life as a turn to the human dimension of social structures

If to use the metaphor of construction, we can say that the classical sociology mainly interested in architecture, leaving on the periphery of his attention the problem of the nature of the materials. This was reflected in the priority of macro sociology. Theories focusing attention to the logic of behavior not the mass and groups, but individual, emerged but they always, first of all, were in the background, secondly, do not exert any noticeable influence on the theory of macro-level.

At the end of the twentieth century, the visible turn of social science to everyday life had acquired a paradigmatic character (P. Sztompka). If to use the construction metaphor, we can say that the sociology came to understanding that the ‘architectural forms’ are unthinkable without careful study of the molecular structure of materials from which they are implemented. This means that the traditional division of macro and micro sociology has lost the meaning. Social system predetermines the quality of used elements, and the characteristics of the latter depends the fate of the system. In other words, the social structure is no longer regarded as something external to the people. Firstly, the social structure is understood as sustainable forms of social behavior (the theory of structuration by E. Giddens). Secondly, the social structure is regarded as socially programmed behavior of individuals (the concept of habitus by P. Bourdieu). As the interaction of individuals generates external emergent quality in form of social and cultural fields (situational approach by K. Lewin). Fourthly, situations of daily interaction acquire stable and predictable forms in the context of the action of macro-level institutions (Performance Theory).

**ILYAS, MOHAMMED* (Goldsmiths College University of London, modini11@hotmail.com)**

**British Muslim Response to the Post-9/11 Uncertainties**

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on Terror and its effects have had a tremendous sociopolitical impact on the British Muslim polity. On the one hand the effects have fostered Islamophobia and the securitization of Muslims. But on the other hand, which is the focus of this paper, the aforementioned events have fostered an atmosphere where sociopolitical and religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and they identified three main ways in which the Muslim community is changing. Firstly, some Muslims are adopting a literalist reading of Islam, which is performance orientated and piety conscious. Secondly, a small number of Muslims are reading Islam in a liberal reformist way within a modern sociopolitical milieu. The group is composed of born and convert Muslims and ethnically diverse. The reformists tend to focus on human rights, women rights and the rights of the Muslim LGBT community. Finally, an increasingly large number of young Muslims are becoming politically assertive, confident, and organized. These Muslims in the main are concerned with human rights, especially of fellow Muslims. Like the literalist group, this group is composed born and convert Muslims and is also ethnically diverse. This group adheres to a mixture of reformist and literalist reading of Islam and often receives criticism from the literalists.

New Technologies, Therapeutic Zones and Islamist Groups

**New Technologies, Therapeutic Zones and Islamist groups**

Communication and entertainment technologies over the last decade have transformed sociopolitical activism. Ayman Al Zawhari, in his book Knights Under the Prophet’s Banner states: ‘We must ... get our message across to the masses and break the media siege imposed on the jihad movement ... This can be achieved through the use of the Internet’. In most cases the new technologies were first developed for military purposes and later modified for civilian use – in Internet, mobile phones, and military games. However over the last two decades Islamist groups have started to use the technologies in ways that they were first intended for—to build secret communication networks, attract and train new recruits and create a part of the terrorist, especially Internet has been well documented in academic literature, and think tank and government reports. However, there is little written about how the aforementioned technologies are used to create psychosocial environments that act as precursors to joining and acting on behalf of Islamist groups.
in the iterated Prisoner's Dilemma game.

Model." Second is
anism of
emergence
to derive the characteristics of macro (society) from the micro (individual). In fact,
emergent property of a macro level, it has been regarded as almost impossible
ism. To bridge this division has been the most difficult work so far. Because of the
division between the methodological individualism and collectiv-
cro-macro link between individual and society by a bottom-up procedure . There
whole (social system) from individual behaviors .
small number of constraints, each interacting autonomously in the computer
space. Then we can reproduce by simulation the manner of forming the ordered
whole (social system) from individual behaviors.

The agent-based simulation lies in that we can explore the mi-
cro-macro link between individual and society by a bottom-up procedure . There
has been a deep division between the methodological individualism and collectiv-
ism. To bridge this division has been the most difficult work so far. Because of the
emergent property of a macro level, it has been regarded as almost impossible to
derive the characteristics of macro (society) from the micro (individual). In fact, while

efforts to the problem of micro-macro link have been made in sociology
meaningful results have not been achieved.

In the presentation, I argue the micro-macro problem from three aspects
based on the viewpoint of agent-based simulation. First is to examine the mech-
anism of emergence with reference to Schelling's "A Self-Forming Neighborhood
Model." Second is unintended consequence of action by referring to Yamamoto's
model regarding a trap of egalitarianism in the logic of social contract. Third is
mathematically unsolvable solution with reference to Axelrod's "Tit for Tat" strategy
in the iterated Prisoner's Dilemma game.

Making Places for Identity: Urban Alleways As Places of Belonging and Displacement

This paper presents a comparative study of the roji, urban alleways in Tokyo,
and urban alleways in Berlin-Mitte, which once have been part of people's per-
sonal spatial sphere and everyday life, but which have increasingly been trans-
dered by diverse and competing interests. Marginalized through the emergence
of new forms of housing and public spaces and re-appropriated by different fields,
the traditional role of the alleyway becomes re-interpreted as a hybrid between the
subcultures and new social movements to fit hybrid and multiple concepts of liv-
ing and lifestyles. Focusing on the comparative cases of central Tokyo, Japan and
Berlin-Mitte, Germany, drawing on ethnographic data supported by a conceptual
framework derived from theories of place making and identity formation pro-
cesses, this paper investigates the kind of functions the alleways fulfilled in these
cities in the past, and the qualities of urban life that have been lost or changed.
Providing multiple narratives of change, the paper's main purpose is to critically
reflect on the recent 'revival' of the urban alleyway, arguing that the interstitial na-
ture of these places can be characterized as a boundary between belonging and
displacement being on the hand places which are desired and needed to express
local voices, thoughts and personal opinions but also places which face different
forms of occupation, transformation or destruction.

In summary, conceptualising the alleyway as a contested place and sample
for assessing physical, corporeal, and social relations in these processes of mi-
cro-scale place making, allows us to view the alleyways as the material expression
for broader social struggles, and locus for generating, proclaiming and negoti-
ing different cultural subjects, which are aspects of contemporary urban life.
The outcomes of this study should offer more insights and alternative views to
understand the potential and future of the urban alleyway in a global perspective.
Vocational and Academic Effects on Gender Segregation in VET - a Three Country Comparison, Germany, Norway and Canada

Gender segregated vocational education and training (VET) is usually attributed to gender stereotyped career choices of students at the end of junior high school. However, institutional logics may also promote gender segregation in VET. Empirical findings in German-speaking countries show that mixed-gender educational programs require higher school achievement compared to both male- and female-typed programs.

The paper investigates how institutional logics of the education system impact on the allocation of school leavers to gender-typed upper secondary (general and vocational) programs in Germany (DE), Norway (NO) and Canada (CA). We test the assumptions that (a) the more vocationalised an educational program, the more gender-typed the program (vocational effect), and that (b) mixed-gender education programs require higher academic school achievement than gendered-typed programs (academic effect).

The three countries were selected because of their different educational policies (vocational and academic principles in DE; academic and universalistic principles in CA; NO sharing the vocational principle with DE, and the universalistic principle with CA). We use youth panel data in all three countries (DE: BiBB Transition Survey 2006; NO: Young in Norway YIN; CA: Youth in Transition Survey YITS) to analyse both the vocational and the academic effect on educational gender segregation. We apply multinomial logistic regressions for men and women separately, with gender-type of the educational program (male-typed, mixed-gender, female-typed) being the dependent variable to test our hypotheses.

Preliminary results show clear evidence for the vocational effect on educational gender segregation in all three countries, including Canada. In contrast, the academic effect on educational gender segregation is strong in Germany but relatively weak in Canada and Norway. We interpret our findings with the unique constellation of different educational policies (vocational, academic, universalistic) in each country.

Shrinking the Ballooning Young Precariat Class in Nigeria: The Need for Youth Empowerment

All over the world, the debouchment of a new class has been observed with new demands for the progressive troika of equality, liberty and fraternity. Far from being the forlorn cry for the establishment of a Marxian utopia or pantosocracy, the genuine demands for egalitarianism necessitating the restructuration of economic, social and cultural capitals has become a desideratum for society’s preservation. Social upheavals, civil protests and collective movements led by the dependent variable to test our hypotheses.

The imagery of Nigeria’s future is akin to sitting on a time-bomb or walking a jagged precipice. In this paper, authors contend that the growing precariat class in Nigeria must not be ignored. Leaning on the political-economy paradigmatic thesis, they argue that the political class must reverse its natural shenanigans and rhetoric for change programmes that will impact on Nigerian youths who are simpering with rage and disenchantment. Luking around for the right moment, this dangerous class could spell the doomday for an already divided polity if genuine efforts are not well said. Youth empowerment programmes must be practically rolled out soon and fast with a genuine politics of paradise built on the principles of economic security and social wellbeing to integrate this class into mainstream society.
does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents’ experiences and they are very conscious not to allow their children to lose them while becoming “American.”

JS-78.3

INOKUCHI, HIROMITSU* (Daito Bunka University, hiro.inokuchi@gmail.com)

Reading “Battle Hymn of Tiger Mom” As an Educational Biography

In this presentation, I explore Amy Chua’s “Battle Hymn of the Tiger Mom” as a biographical account of child rearing by a second generation Chinese American. I examine Chua’s account in relation to Asian immigrant experiences in the United States. The biographies asked include: How do second-generation Chinese Americans account for the ways in which they raised their children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can we situate Chua’s biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua’s account of child rearing in the context of existing quantitative and qualitative educational research on the educational achievement of Asian Americans. I review the literature on educational attainment of Asian Americans to point out the missing area is Asian Americans’ self-account of education at home, i.e., how they raise their children.

Second, I analyze Chua’s account. Chua comes from an intellectually elite family, and she herself is also an intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pitfalls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the biographical account of second-generation mothers is advantageous, as they know the ways their foreign-born parents raised their children and they are very conscious of how they raise their children.

Facing the Selves in the Field Research of Immigrants : From the Research Question Based on Visibility to Led through Daily Relationships

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalized environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers’ perceptions that categorized immigrants as the “aliens” visibly in the social structure, while the researchers’ positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to inspect their presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghassan Hage proposed (Hage 2005).

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. Put it differently, there exists a coevolution mechanism of trust and generosity in our social world.

“A Battle Hymn of Tiger Mom” As Social Capital Building

“A Battle Hymn of the Tiger Mom” as Social Capital Building

In this presentation, I explore Amy Chua’s “Battle Hymn of the Tiger Mom” as an autobiographical account of child rearing by a second generation Chinese American. I examine Chua’s account in relation to Asian immigrant experiences in the United States. The biographies asked include: How do second-generation Chinese Americans account for the ways in which they raised their children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can we situate Chua’s biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua’s account of child rearing in the context of existing quantitative and qualitative educational research on the educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua’s account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pitfalls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents’ experiences and they are very conscious not to allow their children to lose them while becoming “American.”

Reading “Battle Hymn of Tiger Mom” As an Educational Biography

In this presentation, I explore Amy Chua’s “Battle Hymn of the Tiger Mom” as a biographical account of child rearing by a second generation Chinese American. I examine Chua’s account in relation to Asian immigrant experiences in the United States. The biographies asked include: How do second-generation Chinese Americans account for the ways in which they raised their children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can we situate Chua’s biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua’s account of child rearing in the context of existing quantitative and qualitative educational research on the educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua’s account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pitfalls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the biographical account of second-generation mothers is advantageous, as they know the ways their foreign-born parents raised their children and they are very conscious of how they raise their children.
Vocational Education and Gendered School-to-Work Transitions in Switzerland and Japan

The labour markets of Japan and Switzerland are significantly gender segregated. In Switzerland the seed for labour market gender segregation begins with the gendered orientations of young school leavers. Via the Vocational education and training (VET) system and the occupational linkage of education and employment, early career aspirations are transformed into gendered employment opportunities. VET is indeed very prominent in Switzerland, where seven out of ten upper secondary graduates come from vocational programs.

But the case of Japan challenges the assumption that gender segregation is mainly due to gender segregated VET. Japan’s upper secondary graduation rates figures are more than reversed from those of Switzerland with three out of four graduates having enrolled in general programmes and only one out of four in VET. Within VET, however, Japan (JP) and Switzerland (CH) show a similar distribution of gender by field of education and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. The paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

We use comparable youth panel data for both countries to analyse our research question (JP: Youth cohort study of Japan; CH: Transitions from Education to Employment TREE). Our dependent variable is job gender concentration as measured on industry level. We apply stepwise linear regressions to analyse country specific effects of (1) junior high school variables (CH: track, marks, literacy skills; JP: position of class), (2) senior high school variables (field of VET, academic level), (3) higher education variables (field of study, short vs. long studies), (4) family background variables, and finally (5) gender on job gender concentration.

The findings allow for a critical assessment of VETs contribution to job gender segregation in different educational systems.

Female Employment and the Socioeconomic and Family Factors in Japan

This study uses nationwide panel data to identify determinants of female employment in Japan. Almost 70% of women exit the labor market during marriage or childbirth and this figure remains high, especially among higher educated women (Cabinet Office 2006).

Reports indicate that whether married women work or not is explained by “Douglas-Arisawa’s law,” which suggests that there is a higher non-core family members’ labor force participation rate in lower core income than in higher core income households. This law’s validity has been proven using panel survey data in 1997 (Kawaguchi 2002), yet some reports currently indicate that Douglas-Arisawa’s law is collapsing, especially among married women with less than a high school education (Manabe 2004). Furthermore, Takeuchi’s (2003) study used panel data from Japanese married women aged 30 years and below and found that life events such as childbirth and child-rearing serve as restraints to employment, and that wives have not reacted to changes in their husbands’ income. This study verifies the current validity of Douglas-Arisawa’s law and the determinants of women’s employment in Japan.

Data obtained from the National Family Research of Japan, 2008–2011 Panel Study (NFR-08 Panel) were used with a dependent variable having a job dummy, where married and living with a job = 1 and not having a job = 0. The results of the various regression analysis shows that vocational school or university graduates would probably work than high school graduates with a lower probability of wives working if their husbands’ income are higher. A short-term reduction in the husband’s income did not affect the wife’s probable employment; however, the youngest child’s age did have an effect. Results indicate little change from Takeuchi’s (2003) results and appear to maintain Douglas-Arisawa’s law.

The Street As Urban Borderland: Micro-Geographies of Inequality and Co-Existence in Manchester and Shanghai

The paper examines the micro-geographies of spatially divided but adjacently located and coexisting social groups (defined by place of origin, ethnicity, socioeconomic status or various other criteria) in two very different cities. It is rooted in six years of fieldwork in Shanghai, China, and several months of research-based teaching (Architecture) in Manchester, UK. The study builds on ethnographic work (namely long-term observation, visual methods and in-depth interviews) in two divided neighbourhoods, where the street acts both as a border, separating difference, and as a space of conviviality, bringing together and merging. In this way, everyday streets are established as spaces where the various barriers between the different are often patiently and persistently undone by those who live them in their everyday, just as symbolically as they are sometimes erected

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
by the powerful. Furthermore, the paper looks at how the formal and informal production, appropriation, transformation, use and management of street space in the case study areas of Manchester and Shanghai are linked and contribute to the formation and maintenance of multiple and hybrid social identities among members of distinct groups. The focus lies on the exploration of the street as a space which makes various types of inequality explicit, a space which is temporally, culturally, economically or, simply, physically in-between, and can thus be regarded as a type of urban borderland.

**Widowhood Practices Among the Edo People in Nigeria: Continuity and Change**

This is an empirical study involving both quantitative and qualitative approaches. It explores the widowhood practices among the Edo people in Nigeria which is a patriarchal society where majority of women especially those in the rural areas suffer from severe cultural constraints and prohibitions, creating an unequal relationship between men and women. The widowhood rites are often very dehumanizing to the extent that it erodes the self esteem, potentials and capabilities of women. They are made to suffer emotionally, physically and economically as it carries any significant effect especially in the rural milieu where customary law seems to be stronger than statutory law. This is the debilitating situation facing most widows in Edo State, Nigeria, hence the need to examine the prevailing situation and proffer appropriate solutions that would help address the challenges of widowhood practices in the 21st century and beyond.

**Keywords:** Cultural constraints; customary law; patriarchal societies; rural areas; statutory law; widowhood practices

**Money Vs. Space? Intergenerational Transfers in a Comparative Perspective**

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational co-residence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of money and space. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Using the Survey of Health, Ageing and Retirement in Europe (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other: children who receive time support from their parents often receive monetary help as well.

**Ukrainian New Left and Grassroots Social Protests: A Thorny Way to Hegemony**

When and how the emerging radical new left in the post-Soviet societies is able to win hegemony within the rising social-economic protests mobilization? In the context of the post-Soviet weak civil society the new left has a unique opportunity to use the ‘primacy effect’ in order to win strong position within the grassroots social protests. The prior strong position within the movement around some problem gives the privileged position compared to other political groups when the mass mobilization around it erupts. I will analyze the case of Ukrainian radical leftist student union ‘Direct Action’ organized in 2008 by ideological anarchists and libertarian Marxists which appeared to lead 20,000 student mobilization in over 15 Ukrainian cities against introduction of paid services in the universities in 2010 when established student NGOs were siding with the government or discovering they have no mobilization potential. However, the ‘primacy effect’ has its limits as not so many issues are remaining ‘vacant’ (because of the far right active intervention particularly) and not each issues has the same potential to destabilize the political regime. It means an increasing necessity for the post-Soviet new left to win and retain hegemony in the broad coalitions competing with other politicized and often hostile actors over non-politicized masses. Analyzing the case of highly successful ‘Save Old Kiev’ initiative against the privatization of public space, established in 2007 with the dominance of the new left groups coalition but where the
far right has ultimately won hegemony. I will show the process of ‘double instrumentalization’: participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

An Analysis of Imagined Boundary of the “Japanese”: Results from an Internet Survey in Japan

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the “Japanese” among Japanese people. There is a legal definition of the Japanese, that is, the Japanese is the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or ‘real Japanese”) and non-Japanese may vary from person to person according to their experiences and social status. Especially, judgment terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people’s imagined boundary and definition of the “Japanese” in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical combination of conditions relevant to national identity, i.e., nationality, resident, blood, and language, and asked respondents to judge whether a person who has a certain combination of conditions is regarded as the “Japanese” or not. By using this data, we can capture a person’s imagined boundary as a Boolean algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

Income Inequality and Relative Deprivation: A Formal Theoretic View

In a time of increase of inequality, does people’s frustration or feelings of deprivation rise? If it is yes, many theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals?

This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhak’s (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gin’s inequality coefficient.

In this paper, especially, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people’s relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

ISHIDA, KENJI* (The University of Tokyo, kishidar@gmail.com)
Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990’s. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Heckman’s two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Secondly, however, male job changers with ‘weak ties’ get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where work migration may lose their human capital and be put under uncertainty about their career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network’s aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball

As the result of globalization of a sport, the border crossings of athlete are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has evolved as a profession sport in part with the capital.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league. This network had subsumed Central America-Caribbean region by 1950s and East Asia after 1990’s, and has been expanding to the “Baseball Barren”, Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the ‘Baseball Barren’, and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it has been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as the conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of ‘labor’, but parts of ‘consume’.

From this analysis, the word of ‘Sport Labor Migration’ is becoming no longer appropriate to represent the border crossings of athletes.

Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children

Raising and nurturing children is one of the most important functions of a modern family. In the emotional parent-child bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship. This study discusses the process of creating new relationships and parents’ viewpoints by analyzing the narratives of parents of Japanese transgender children.

Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children’s problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an “as suspected” response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child’s unique or queer gender identity. And in their life stories, parents tried to reconfirm or reconstruct images of their children and reforify their emotional ties with them.

How Do Support Providers Deploy Care Workers Effectively in Japan?

This presentation aims to develop a more effective method of deploying care workers for in-home care of aged persons. Although in Japan the government provides long-term care for aged persons who require it in accordance with the Long-Term Care Insurance Law (Kaigo Hoken Ho), aged persons do not always find compatible care workers. This is not only because of the shortage of care
workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing compatible care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers.

To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford.

These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

**The Education of Young Brazilians in Japan**

Currently (2011), the Brazilian population in Japan totals 210,032. Of that total, 46,855 (22%) are under 20 years old, and 24,061 (11%) under 10 years old. From these data, we can conclude that many of these children attend, or have attended, school in Japan. Compared to the Japanese-Brazilian adults living in Japan, their children learn the Japanese language much more easily and quickly. Many of these children start their education in Japanese kindergartens, and then most of them continue studying in Japanese schools. Some advance to the university level. However, even if they speak the Japanese language, most of them have problems keeping up with the regular disciplines. The main reason is that they don’t have the background the other Japanese children have. Additionally, they don’t have their parents’ help with their studies at home since most of the Brazilian parents are not fluent in the Japanese language. Another issue to be considered is that in Japan, education is mandatory for children under 15 years old who are citizens, but optional for foreigners. One problem here is how Japanese society views foreigners. For the Japanese, the Japanese-Brazilians are temporary foreign workers who will leave Japan after a finite period of time. The result is that the Japanese-Brazilians are dealt with as visitors, and this feeling extends to the children. This treatment negatively affects any policy regarding the education of foreign children in Japan. The prospect for Japanese-Brazilian children in the future depends on where they settle. Lacking a higher education a large number of Brazilian children experience difficulties with stability and ascension in both Japanese and Brazilian societies. In this paper, I will focus on cases of young Brazilians raised in Japan who were successful in obtaining a higher education in Japanese universities, although they are currently the minority.

**Volunteerism among Mexican Youth in the US: The Role of Family Capital**

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation theory, first generation Mexican immigrant youth are found to be more likely to engage in volunteerism compared to their third+ generation counterparts. This study shows instead that through environmental certification regimes, ecology or nature itself is largely shaped, transformed and restructured to fit into, and thus serve, neoliberal governance and accumulation in a normalized manner.

Certification regimes offer some avenues for a sustainable aquaculture; however, the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

**Volunteerism among Mexican Youth in the US: The Role of Family Capital**

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation theory, first generation Mexican immigrant youth are found to be more likely to engage in volunteerism compared to their third+ generation counterparts. This difference is most pronounced at the lower end of the family income spectrum. The study also analyzes the effects of components of family capital, family income and parental education. Compared to the Japanese-Brazilian adults living in Japan, only 360 thousands in France where the national population is two times less than that of Japan. In order to compare the judo practices in these two countries, first of all, I examine the recent debates in Japan on the violence related to judo and on the ideas of jodo as education (Hori, K. 2010). The introduction of the club in Paris suburb, infamous for a poor and dangerous area. From my ethnographic research at this area, I found the social boundary in the area and that it was closely related to the order of violence. In Japan, the value and the morals that are not common in the area but are more extensively in France in practicing judo. The judo practice in the club is common to others in France. In this presentation, I examine the relationship between education and violence through judo practices of children in Japan and France. Judo originated in Japan but it is not anymore popular there. While the population of judo players is less than 200 thousands in Japan, it is almost 600 thousands in France where the national population is two times less than that of Japan. In order to compare the judo practices in these two countries, first of all, I examine the recent debates in Japan on the violence related to judo and on the ideas of judo as education (Hori, K. 2010). The introduction of the club in Paris suburb, infamous for a poor and dangerous area. From my ethnographic research at this area, I found the social boundary in the area and that it was closely related to the order of violence. In Japan, the value and the morals that are not common in the area but are more extensively in France in practicing judo. The judo practice in the club is common to others in France. Contrary to France where the judo practices are oriented to avoid any violence and they are often considered as education, judo and jujudo players are often considered as violent in Japan but the Japanese educational policy has believed the educational
values of judo. Such policy has caused mortal accidents at public schools every year in Japan. I examine why the judo practices are so different in these two countries in regard to education and violence.

Habermas’ Discourse Theory and the Concept of Public Sphere

The aim of this paper is to clarify the concept of Jürgen Habermas’ public sphere in his book, Between Facts and Norms, especially focusing on his perspective and method.

In this book, discourse theory is formulated with “D: Just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses.” However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere “is a warning system with sensors that, though unspecialized, are sensitive throughout society” and “can best be described as a network for communicating information and points of view.”

Some existing discussion found that Habermas succeeds to use a theoretical technique, called conversion of perspective and shift the level of a reference in The Theory of Communicative Action. However this paper points out that Habermas already uses similar techniques in Between Facts and Norms. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, such as politics and law, one of focusing point is a public sphere. Finally, we think on the feasibility of the concept of Habermas’ public sphere as an analytical tool of actual problems.

ISTVAN, ALESHA* (Texas A&M University, diivan@tamu.edu)

Using an illustration of the relationship between the U.S. environmental movement and the U.S. wind energy industry, I develop a theory for understanding the relationship between social movements and their economic outcomes. Synthesizing the social movement theory of political process with the economic theory of social structure of accumulation, I argue that social movements become more and less important to industry creation based on the intersection of the two in the cycle of contention with the industry's position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four distinct propositions to further clarify this theory. First, during times when economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become less important and the macro political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

Re-Thinking of Community Based Pre-Disaster Activities; The Problem of Social Divisions in the Case of Japan

As the lessons learned about local initiative of disaster preparedness, this paper will be re-thinking the role of local community mainly focusing on the case of Japan recent two decades and especially based on the original research findings about neighborhood association “chonai-kaي and making secure-and-safe community-activity” after the Great Kobe Earthquake of 1995. The questions are 1) why and how previous disasters and terrorism have changed local communities’ disaster preparedness and risk perception nationwide, 2) how the local office promoted risk mitigation at the level of local community and 3) whether they worked out or not during the tsunami disaster efficiency.

The findings are that 1) the local communities are one of the best social capitals which are worked as emergent aiding and caring system each other and so 2) the construction of “chonai-kaي based disaster preparedness have become main important program of the disaster planning nationwide. For the “chonai-kaي the problem of risk became more and more main subject of their activities. 3) This trend was connected to nationwide anxiety and “making secure-and-safe community activity” after terrorism using chemical substance by cult in 1995 Japan. But 4) the initiative of the activities is not belong to “chonai-kaي or local community itself and 5) the social division within local community itself is the problem such as the isolation of disabled people or other minorities which Tsunami disaster revealed in 2011. This are connected in the case of unequal gender/ethnic relationships in communities and reflected in the local pre-disaster preparedness.

The discussion is 1) how the disaster studies take up the problem of social divisions in the theme of local community at global level and 2) how the relationships of the nations and local citizens in the disaster planning should be.
In conclusion, this paper forecasts the future of post rapid expansion of secondary education. The diploma was not enough to have a stable job in the metropolises, but was insufficient to related to families or community. Moreover, in 2007 a new word ‘activity to get married (Konkatsu)’ coined and since then the word has gotten popularity. These suggest surge of interest in how to create or keep relationships in family or neighborhood. These phenomena to seek relationship actively seem to correspond with the theory of ‘pure relationship’ by A.Giddens or of individualization by U.Beck at a glance.

However, there are data which are contrary to their theories. If we focus on family relationship, since about 2000 we see tendencies that people regard family relationship as more important than before. First, people try to stop postponing the marriage of the family, which is not successful though. Second, they try to keep the family relationship; they support the idea that one should keep the family relationship, even if one becomes to dislike his or her partner, which are contrary to Giddens’s theory. Third, more people tend to support the normal family; registered marriage and the family consisting of a husband, a wife and their children.

While Western social science are experiencing the diversification of family types in the social sphere, Japanese society is experiencing the re-institutionalization of family on people’s consciousness.

In conclusion, although the theory of reflexive modernization is a useful tool to research Japanese society, we should re-theorize it from our differences.

This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialist economy to a market-based one. Influenced by this drastic transition of economy, people’s aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school now is not increasing, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization policy of secondary education introduced a number of private high schools with weak management bases. They provided temporary bases for people’s aspiration to go to high schools, but could not be continued due to lack of strong management strategies. Secondly, the development of the labor market could not keep up with the rapid increase of the newly produced labor force, high school graduates. People began to realize that only having a higher secondary education diploma was not enough to have a stable job in the metropolises, but was also much education to work as part of the manual labor force in factories. In conclusion, this paper forecasts the future of post rapid expansion of secondary education in the first two decade of the transition economy.

This paper examines the experiences of candidacy faced by the hikikomori people in Japan. This paper is based on fieldwork data and narratives of hikikomori people in self-support group in Kobe. This self-support group organizes peer supporters with their experiences, and provides support to hikikomori people as the person concerned (Tojisha). This paper analyzes their narratives from the approach of life-history analysis. In Japan, hikikomori phenomenon has been problematized since the 1990s. According to research conducted by the Cabinet Office in 2010, the population of hikikomori (age range 15-39), is estimated 696 thousand (comprising 1.79% of the total population of Japan). In this survey, hikikomori is defined as “people who predominantly stay at home for more than six months, other than for household work, child-care, schizophrenia or physical illness.” Therefore, hikikomori has been referred to as problems of psychology and requires psychiatric treatment. Moreover, hikikomori has been also identified as problems related to Japanese education and employment systems. However, experiences of difficulties faced by hikikomori people are more complex. In fact, on their narratives, they address the various issues which they face in their daily lives. When talking experiences by hikikomori, they talk about various categories of human relations. In particular, their narratives on difficulties are often associated with intimate relationships, gender, sexuality and the other. For example, a hikikomori person said “I am troubled about how to interact with other people familiarly.” Thus, this paper focuses on the intimacy of human relationships within their everyday-life experience. Through this analysis, I argue that the experiences of difficulties faced by hikikomori people not only reflect instability of employment of youth but also related to the anxiety and uncertainty concerning their intimate relationships.

One of the most debated questions in happiness studies is whether or not there is a relationship between income and life satisfaction. The evidence is rather mixed (Easterlin, 1974; Hagerty and Venhooven, 2003). This study attempts to give an answer as well, using preliminary data from the European Survey on Income.
come and Living Conditions (EU-SILC), which contains a very good measure of income and several indicators on subjective well-being (overall life satisfaction, meaning of life, positive and negative affects). Multilevel regression is employed as a method, in order to study the impact of country level variables, especially related to income distribution, and the differences between European societies. The hypothesis is that inequality may be the missing link between GDP and subjective well-being.

"Tolerance" Frame As a Hindrance to Effective Public/Authorities Feedback in Belarus

The report is going to consider ‘tolerance’ as a misconception and an ideological frame. A critical assessment will be done of tolerance on the part of Belarusian people. It is going to be shown that a) tolerance as an invariably beneficent trait of the Belarusian people is quite mistaken, b) that the ‘tolerance’ frame interferes with democratic governance principles as accepted and practiced worldwide, c) that responses to public dissatisfaction (part and parcel of normal governance systems) in Belarus are complicated due to persistence of the ‘tolerance’ frame; and d) that for sustainable and democratic outcomes in Belarus a regular public/authority feedback should be restored by getting rid of ‘tolerance’ as part of the ideological apparatus.

The idea of this paper concerns ‘tolerance’ as it enters democratic governance schemes and might be leading to their malfunction. The word tolerance is widely used in liberal democracies and is ascribed a positive meaning. However, it appears that tolerance is not necessarily a virtue. The word tolerance has negative connotations as it acknowledges a problem. The danger with the ideological frame ‘tolerance’ is that it might enter democratic governance models where it can effectively block public responses to dissatisfaction. This way, the system is incapable of conveying public dissatisfaction, and the stimulus is removed for the authorities to improve their work. This might be evident in Belarus, where people have little opportunity to convey their dissatisfaction, given that they are considered as well as consider themselves ‘tolerant’. In this case, their tolerance, being mere holding on, is a potential volcano.

Spatial and Temporal Structures of Inequality in the Super-Urbanized World. Flow-Structures of Glam-Capitalism and New Configurations of Inequality

The economy and society in networked enclaves of globalization – super-urbanized areas like Los Angeles, New York, Tokyo, Hong Kong, Moscow, London, Buenos Aires etc., are considered as glam-capitalism. Preconditions for new form of capitalism have been generated by virtualization of social structures. By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being since the 1930s specific life style or aesthetic form, glamour has become now rationality of capitalism. Precondition for new form of capital in economy but also in politics and culture.

Low growth human development index are accompanied by reduced anxiety (-0.88), high level of social activity (0.81) and feeling of happiness (0.71). Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease in activity occurs in depression. Anxiety is accompanied by disappearing of emotions, interest loss, and energy reduction. Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased immigration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of immigration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a “visible minority”) and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participating observations from a 12-month period in the greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in perceived emasculating settings, priorities in partner selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant’s legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

IVORY, TRISTAN* (Stanford University, tivory@stanford.edu)

Marriage As a Social Resource: Distinctions Among Immigrants In Japan

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalijin 1993; Rosenfeld, 2001), the basic premise has remained intact (Qian and Lichter 2001). Using the 1995, 2000, and 2005 waves of the Japanese Longitudinal Survey of Youth, I show that marriage is substantially different across two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less instrumental mate-selection process and increases the likelihood of marriage to non-native-born individuals. The segmented nature of immigrant/native-born intermarriage in Japan highlights the importance context- and country-specific factors play in understanding intermarriage and the process of group assimilation.

Who Tolerates the Use of Physical Punishment?

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by massive wartime controlling have been reported in Japan. Before that incident, although the Fundamental Law of School Education prohibits physical punishment, public opinion generally tended to tolerate the use of physical punishment by parents in Japan. Many people think that hitting a child as a way of parenting is unavoidable in some cases. According to JGSS-2008 data, more than 60% of respondents approve the use of physical punishment by parents. Physical punishment by teachers was also more or less permitted in JGSS-2000/2001. It is now necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. This paper explores the factors of approving the use of physical punishment among Japanese adults. The results of analysis show that gender and the experience of being a subject of violence in childhood are strongly related to the attitude toward approving physical punishment. Young people who suffered violence in childhood are likely to support the use of physical punishment by parents. In addition, women whose father was perceived to ignore her in childhood are likely to support the physical punishment. The results imply that physical punishment possesses ritualistic elements among Japanese people by symbolizing intimate relationships. It is also suggested that new types of ritualistic behavior in intimate relationships should be created in order to prevent serious problems by physical punishment.

The Impacts of Wartime Mobilization on Postwar Social Stratification in Japan: A New Direction of Quantitative Historical Research

During the World War II, a large number of Japanese men were drafted in military service or forced to work for military factories. After WWII, they returned home from military or moved from military factories to other workplaces. This wartime mobilization influenced the formation of postwar social stratification system. Japanese Social Stratification and Mobility surveys, which have conducted at an interval of 10 years since 1955, have collected work history data of respondents born from 1886 to 1985. This work history data included the information on wartime experiences such as military service. So far, this information has not been utilized in Social Stratification and Mobility research. Using the data, we could reconstruct the information on what age the respondents started military service, at what age they returned from military or in what kind of job they engaged after WWII. Life histories of respondents born from 1901 to 1925 are thought to be strongly influenced by WWII since they experienced the wartime at their active adult ages. Using 1955 and 1965 Social Stratification and Mobility surveys, this paper, first, attempts to reconstruct life history data of respondents that enable us to analyze the relations between wartime experiences and careers. The analyses of this life history data, then, reveal that there are clear age differences in wartime experiences among birth cohorts. Third, multivariate analyses of postwar occupational attainment indicate that although educational levels strongly influence patterns of occupational transitions from wartime to postwar period among people who experienced wartime mobilization in their twenties or thirties of age, factors such as age, birth cohort, and gender are more important in the transition period than before. Based on these results, this paper discusses the future possibilities of quantitative historical research.

Balinese Reactions to UNWTO's Global Code of Ethics for Tourism: A Case Study of Balinese NGO's Initiative

This paper examines an emerging tourism-related movement in Bali, initiated by the local NGO to reform long established mass-tourism. While Bali is well-known as Indonesia's most prestigious tourism destination today, Bali's economic prosperity has been seen as resulting from the development of the tourism industry since the 1970s. However, especially after the 2002 terrorist attack, various social-cultural, economic and environmental changes caused by modernization have come to be recognized as serious threats not only for the social stability but also for the tourism development among the Balinese. This is partly but significantly because Bali has been relying on international tourism. In other words, tourists' fluid attitudes on culture and the environment seriously concern tourism practitioners. Consequently, although there is no unified idea and approach, introducing sustainable tourism has come to attract considerable attention especially among Balinese intellectuals, policy makers and NGOs.

A local NGO, Wisnu foundation, has launched a village tourism project called ‘Bali DWE’ in 2010. The project has two purposes: to promote alternative forms of tourism and to preserve the Balinese cultural heritage. In order to publicly demonstrate the necessity of reforming Balinese tourism, Wisnu foundation came up with ethical standards based on the UNWTO's Global Code of Ethics for Tourism (GCTE) supported by urban intellectuals.

This paper firstly illustrates how Wisnu foundation and its collaborators identified the issues of tourism in Bali and promoted its ethical dimension by ‘rearranging’ the concept of tourism. The outcome of the field research reveals that although there is an apparent divergence between active villagers and urban intellectuals, both NGOs in terms of their perspectives on tourism, preserving culture and means of livelihood, the usage of GCTE is playing a certain role in unifying the participants of the project.

The Impact of Fukushima Daiichi Nuclear Accident on People's Attitudes Toward Nuclear Energy Policy: Silent Movement

Multiple nationwide opinion surveys, carried out by the government (cabinet office), mass media (national newspapers and NHK), the National Institute for Environmental Studies, and the Atomic Energy Society of Japan, have revealed that the Fukushima nuclear accident have heightened people's perception of disaster risks, fear of nuclear accident, and recognition of pollution, and have changed public opinion on nuclear energy policy. The gap of opinion on nuclear energy policy between environmentalists and lay people has widened after the disaster happened after the accident.

The results of Japanese Social General Survey data show that the objection to the promotion of nuclear energy is strong among females, and weaker among young males and the supporters of the LDP. This is similar to the data collected after the Chernobyl accident. Among people who live in a 70km radius of nuclear plants, those who live nearer to plants tend to evaluate nuclear disaster risks higher. Distance from nuclear plants and the perception of earthquake risk interactively correlate with the opinion on nuclear issues: among people whose evaluation of earthquake risk is low, those who live nearer to the plants are more likely to object to the plants. Abolishment of nuclear plants. It is also found that the nuclear disaster has changed not only people's attitudes but also people's behavior. People have come to try to save electricity in addition to turning off electrical equipments frequently. It has led to the 5.1% reduction of electrical demands over the previous year in 2011, and 1.0% more in 2012. The level of commitment to energy saving is found to be correlated with opinion on nuclear issues: 80% of the proponents of nuclear reactor decommissioning have tried to reduce electrical consumption. The reduction of electrical demands has been people's silent movement, that is, their manifestation towards the nuclear energy policy.

The Apple Does NOT Fall FAR from the Tree: Offspring of Interracial Marriages in Brazil

Starting from colonial times, Brazil has a long history of racial miscegenation. How do families structure themselves with respect to a concept of racial hierarchy? Several censuses and surveys from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: “White”, “Black”, “Asian”, “Mixed race” and “Native Brazilian”. Though it is possible that some subjectivity is introduced to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). But how do offspring of interracial marriages self-report themselves? Among possible alternatives, is the race/skin color of the mother the determinant factor? Is this choice affected by geographical region or social status? Is there a noticeable time trend in choices made? The study analysis data from five Brazilian censuses, between 1960 and 2010, in order to identify patterns and trends among offspring of interracial marriages.

Among exogamic couples where one of the partners is “White”, this is the dominant race/skin color alternative for the offspring. When the mother is “White” the difference with respect to other alternatives is even wider, less so, when the father is “Asian”. The reported proportion of “White” children increases with socio-economic status to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). During the postpartum period, it is recommended that women avoid certain food and activities in order to ensure a successful recovery. This study aims to provide a comprehensive overview of the traditional postpartum practices observed in Laos.

Reconsidering the Traditional Postpartum Practices of Laos from Women's Experience

The traditional postpartum practice that keeps mothers body warm for a certain period after childbirth is still practiced throughout the Southeast Asia and has been performed in Laos usually as well. As the biomedicine penetrated into Laos, such traditional practice has been often considered as a “bad custom” which injures women’s health. However, it must be said that this is partial and insufficient recognition which comes from overlooking the experiences of women who have actually practiced it. This presentation attempts to describe the postpartum practice called “yu fai” in Laos through the viewpoints of Lao women. These perspectives were suggested from interview survey which was conducted to 25 Lao women who have given birth, and it shows the following points. Yu fai is a process of caring a postpartum vulnerable body to make it recover to be able to do daily activities through performing a set of practices such as; lying by the fire, following food restriction, taking hot baths and drinking hot drinks. Interestingly enough, while their practices are generally oriented by a customary framework as a whole, the remarkable differences appeared in each individual way and the time period of yu fai. Through the experiences of monitoring and caring their bodies cautiously during a period of yu fai, women acquire individual knowledge about their own body's characteristics, and they can reconstitute their body perceptions and ways and period of yu fai based on their realization. Such differences are reproduced through the women’s knowledge based on experiences of practicing yu fai by themselves. From examining above findings, this presentation tries to approach the aspect of yu fai as dynamic practice to care postpartum body based on women’s individual experiences and knowledge.

Japanese Single Fathers’ Role Performance and Resources in Family and Work

In this study, interviews with single fathers were conducted in a semi-structured way, and the balancing of their roles as fathers and workers was investigated. The sampling number was ten and all the samples were single fathers living in urban areas with a child or children aged under 18. The sampling was carried out by network-sampling through two NPO supporting single fathers. All the collected data were divided into two groups depending on whether or not the samples lived with parents able to share the burden of child-rearing and the data were analyzed with the constant comparative method. The results showed that housework and child-rearing skills are required as necessary resources at home, and all the fathers who lived independently of their parents have acquired these skills. The need for these two skills decreases slightly in the case of those living together with their parents, although these fathers have concerns about declining support from their father and/or mother. In terms of career roles, fathers living apart from their parents focus on advanced scheduling in order to receive maximum support from their parents as well as from the public, and therefore a work environment that facilitates making advanced schedules is an important resource for them. On the other hand, fathers who share the burden of child-rearing with their parents pay attention to the politics of the work environment so as to gain an understanding of their coworkers in order to fulfill their parental roles. Finally, for both groups, the sense of a single father and management skills to create suitable conditions for child-rearing are essential in order to accomplish their roles as both a worker and a parent. In addition, it was found that a single father has a unique identity structured by family role, work role, and masculinities.

Social Structure, Race, and Racial Relations in Japan

Literature on racialization processes has predominantly examined the Western societal contexts and societies where high levels of racial/ethnic diversity and conflict existed, such as the U.S., Europe, Brazil and South Africa. These studies have identified that social institutions, ideologies, and social interactions together shape, legitimize and thus perpetuate systemic racial inequality by classifying individuals as ‘whites’ and ‘non-whites.’ Yet, theoretically grounded studies on racialization in other societies have been limited; we know little about if and how structural forces affect racial hierarchy and meanings in other social contexts. This study highlights the intricate relationship between social structure and historical development of the concept of race and subsequent racialization processes in Japan, using semi-structured interviews of foreign residents in Japan and Japanese individuals. It shows how the state, its structural positioning, cultural representations, and dominant discourses of different foreigner groups together condition Japanese individuals’ understanding of race, racial hierarchy, and their position within the hierarchy. The concept of race in Japan denotes a combination of phenotype, nationality, and cultural desirability internalized among Japanese individuals. Following this conceptualization, Japanese is understood to be a distinct racial group while foreign migrants become marginalized differently based on their perceived racial statuses. This study also highlights the salience of structural forces in creating and maintaining the significance of race, racial meanings and hierarchy, similar to the racialization processes documented in previous studies; since the ideology of homogeneous Japan and importance of maintaining social boundaries have been heavily embedded in the structure, there is a limited opportunity for social integration, which perpetuates the rigid racial boundaries. Thus, it provides deeper understanding of the effects of racially biased structure in perpetuating and even fostering racist acts and attitudes, which is imperative in bringing about positive changes to alleviate the increasing racial tension and conflicts in Japan.

IYALL SMITH, KERI* (Suffolk University, kiyallsmith@suffolk.edu)

Indigenous Populations Achieving Human Rights in the Global South?

The adoption of the UN Declaration on the Rights of Indigenous Peoples has resulted in enthusiasm for the potential it provides and skepticism surrounding the limitations of the Declaration (Anaya 2009, Schulte-Tenchhoff 2012, Watson and Venne 2012, Xanthaki 2010). While there remains much to be skeptical about, including continued human rights violations, little or no legal standing to demand human rights, and a state-centric model of protection and provision of human rights, unexpected victories are emerging.
Catholic Faith-Based Filipino Organizations in Japan

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipino to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong. Discussion of this paper is partly based on an author's three year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagapay Oita Filipino Associations or KOFA. A reflective account, this paper narrates the experiences of the organization as it tries to cultivate a “space” in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias By Using the Propensity Score Adjustement?

The main goal of this presentation is to find out whether the refusals to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation. Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood to refuse is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsu et al. 2011). A procedure is proposed to approximate the outcomes in random cases and to estimate the propensity score based on logistic regression, but I will demonstrate the usefulness of a credit-scoring model for such purposes. In fact it is also based on logistic regression, but it helps to compare the relevant set of predictors as well as to illustrate and understand the nature of income refusals. Secondly, based on the data from the “Polish General Social Survey”, an assessment will be provided of whether PSW or PSA leads to lower total survey error (TSE). By removing the known values of income I will consider three patterns of missings: (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values. Findings are four-fold: (1) PSA is much more effective when missings mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSW increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

Classical Sociologists on Music and Society

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc.

Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphon Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistency in conceptual grid. There is also poor debate on the role and significance of classical sociology reflection on music and society in the contemporary sociology.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The leitmotiv of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociology of music.

New Donors of Development Assistance: Theorizing the Future of the OECD Aid Apparatus

This paper explores the new role that non-OECD nations such as Brazil, India, Russia, South Africa, South Korea and, especially, China are playing in providing international development aid. While global aid flows from traditional OECD nations remain significant to the development of global politics and what William Robinson calls the “Transnational State” (TNS) apparatus, these new aid donors are challenging the Western nations’ vision of what development means and what kind of global economy is being built. The consequences of these increasing aid flows for the global economy and for the development of aid recipient nations at this point are unclear. But it is crucial for scholars to pay close attention to the rise in official development assistance (ODA) from non-OECD nations as a key indicator of global political and economic integration. Often considered to be of secondary importance to many globalization scholars (who prefer indicators such as foreign direct investment (FDI) and international trade), ODA is perhaps the most important measure of “economic politics” (to use Bourdieu’s definition of globalization) for sociologists of development to observe. Bringing together insights from world systems theory, world po p oly theory, Robinson’s Transnational State perspective, and Saskia Sassen’s work on deterritoriality and denationalization, this paper will offer some theoretical analysis of the role that new donors are likely to play within the global political economy in the coming decades. Particular attention is paid to the so-called “South-South” aid from these new donors is really “South-South,” whether we can expect to see a counterhegemonic shift in aid practice, what kind of future conflicts between donors are on the horizon, what this might mean for world state formation, and finally, whether any of this amounts to the beginning of the end for the nearly 60-year old Western aid apparatus.

Multiculturalism and Minority Well-Being in Fourteen European States

Despite pronouncements of its death by leaders of key European states in 2010, multiculturalism “carries on” (to use the Guardian’s term 9/19/12) in public policies at the national and local level in these same states. Kymlicka (2012: 6) argues that “[m]ulticulturalism is part of a larger human-rights revolution involving ethnic and racial diversity.” Using the European Social Survey (2002, 2008, 2010) for fourteen European states with scores on the Banting/Kymlicka Multiculturalism Policy Index (MPI), we operationalize well-being in terms of the Council of Europe’s (2003) specification of the eight key areas of life (cf. Jackson and Doerschler, 2012). These are employment, housing, health care, nutrition, information, culture, and basic public functions (which include equality, anti-discrimination and self-organization) (Jackson and Doerschler, 2012: 1). Greater well-being of minority populations is seen to result from reductions in disparities and polarizations between them and the majority population (European Parliament, 2007). Scores for the eight dimensions of multicultural policy development (Banting/Kymlicka, 2012) allow us to consider the effects that specific state policies have on targeted areas of minority well-being. We furthermore examine the possibility that the situation of minorities also improves when states turn toward multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Do minorities report greater trust in the political system where multiculturalism has taken hold? What happens to majority group members’ levels of education, employment and political trust as states implement multicultural policies? These are the questions on which this paper centers. With such information, political leaders can defend multicultural policies from criticism or amend them in directions that will better reduce disparities and divisiveness.

Classical Sociologists on Music and Society

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc.

Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphon Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistency in conceptual grid. There is also poor debate on the role and significance of classical sociology reflection on music and society in the contemporary sociology.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The leitmotiv of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociology of music.
Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. "Multiple discrimination" is a special focus of the EUfoy Agency for Fundamental Rights. Discussion of the need for a "Horizontal Directive" (EU-MIDIS, 2010 (5); 5) and the "Genderace" project of the 7th Framework Programme both highlight multiple discrimination and the "intersectionality" (Genderace, 2010: 272) of axes of discrimination. The GenderRace report (2010: 32) uses the term intersectionality "to define a situation ... in which several grounds of discrimination intersect concurrently." This report follows the European Commission's 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to consideration of the discrimination-reducing impact of state policy in eight areas: (1) affirmation of multiculturalism by the constitution, legislature or parliament; (2) school curriculum; (3) media—sensitivity and representation; (4) dress-code exemptions; (5) dual citizenship allowed; (6) funding of cultural activities of ethnic group organizations; (7) bilingual education; (8) affirmative action (Banting and Kymlicka, 2012: 11). On the basis of the results, we assess the policy changes warranted by the data to enable European Muslims to fully utilize their talents and abilities to the benefit of Europe and its member-states.

Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks

In their bid to globalise, transnational corporations (TNC's) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC's invest in a range of powerful and innovative advertising, marketing and promotional campaigns, marking the pressure to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant pressure to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant mine (Goldman and Pappson, 1996) resulting in a range of political, economic and ethical questions This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey's concept of monopoly rent which emerges "because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects non-replicable." (2002: 90). The paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate the cultural, political, legal and ethical/moral issues associated with the logic of monopoly rents.

Towards a Practice Theoretic Approach to Understanding Sexuality

In our book 'Theorising Sexuality' (2010) we re-worked the Interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1937) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Lindemann and de Nora in order to enable an understanding of the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of Walsh, Schatzki/Redclift / Warde and Shove in order to set out in the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary – or, the critical comparative reflection about media formats – constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how mediation has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

Conflict over Confirmation Teaching in Public School – the Impact of Neoliberal Policies on Local Political Level in Denmark

The neoliberal discourse is part of a larger shift from democratic to neoliberal policies that has been occurring over the past decades; a shift accompanied by both discursive and structural changes in society. If the neoliberal discourse is transforming the core functions of government globally, then this must also be true in the case of the close co-operation between the Danish state and the national church in Denmark. In this paper the cases of conflict over and transformation of the position of confirmation teaching in Denmark is analyzed in order to find out if the changes is a result of neoliberal policies in Denmark or simply a matter of structural changes caused by another rational basis. In Denmark confirmation teaching is part of the public schools timetable according to the Primary Education Act. Municipalities in Denmark have according to the Primary Education Act the right to place the confirmation teaching after school but until recent-ly it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument used is that the changes are necessary due to efficiency improvement of the public schools (after the merging of public schools) and more efficient utilization of the public schools timetable. Confirmation teaching is by the reform politicians seen as part of the private sphere and the National Church’s claim for confirmation teaching in school is seen as an ineffective tradition, which is not corresponding to the state policies efficiency requirements for teaching and efficient operation of public schools. The friction over confirmation teaching is not only about the position of confirmation teaching in or out of school but a case showing consequences of how the neoliberal discourse is transforming religious authority in Danish society.

Transdisciplinary Research on Work and Innovation: Co-Production of Knowledge on Contested Terrain

There is a long tradition of funding research to improve the organization of work according to the requirements of changing production processes and in accordance with the demands of the employees for not only damage-free but also personally and socially rewarding working situations in Germany. Background for this tradition is not at least the high relevance of qualified labour for the German diversified economy. This research is crossed by two potential lines of conflict: First, scientists are asked to postpone or defer their academic logics in favour of contributing to immediately relevant knowledge production on-site. This line of conflict is widely acknowledged by concepts of inter- and trans disciplinary research (mode 2, triple helix, entrepreneurial university, techno science). A second line of conflict results from the social organisation of employment in capitalism. Constant re-arrangements by new ways of deploying labour and of relating work and organisations shape the forms of contradictions between interests of employees, owners, and state actors and thus require the development of innovative work organisations. The German Federal Ministry of Education and Research. It further investigates which solutions are chosen in the funded joint projects to turn potential conflicts productively. Data are derived from a content analysis of programs and project reports. It is shown, that leaving these conflict-lines implicit rather than differentiating between diverse approaches in the context of application explicitly, weakens the potential of the projects’ work for stabilising the German production model and shifts balances from sociological towards micro-economic perspectives.

Long-Term Visitors’ Adaptation to the Tourism Context of Costa Blanca, Spain

Tourism and analogous phenomena have assumedly become structural elements of Costa Blanca societies, on the Mediterranean coast of Spain. The large international flows of multitudes of people have assumedly led to blurred precints here between tourists, holidaymakers, sojourners, drifters, migrants, and residents. Particularly the most economically independent lifestyle and retirement ‘migrants’, residential tourists’ and lifestyle and health-oriented sojourners are still under-researched. On the basis of questionnaire surveys, the paper will explore self-reported adaptation features among Nordic long-term visitors, including language skills, media use and assessments of facets of ‘local’ and expatriate life.

Multi-Sensory Tourist Experiences

Since the end of the twentieth century, there has been an ocular-centric affinity in tourism research, often related to studies of place images and tourists’ visual sensations. But there is more to travel than sightseeing: travel experiences are not just in the eye of the beholder but also in the ears, palate, nose, hands and feet. Tourist experiences are both corporeal and multisensory. Although vision is a dominant mode of consciousness in the modern world and some 90% of our perceptual intake is visual, this may not indicate an overall significance of eyesight. What one might call polysensualism is a manifestation of the increased emphasis on senses other than vision in travel experiences. Based on personal interviews, the paper will exemplify some under-researched non-visual tourism experiences related to novel themes on the research agenda.

Decent Work and Corporate Social Responsibility: Contemporary Debates about Human Rights and Paternalism in Organizations in Brazil and Portugal

The concept of decent work (ILO) has recently appeared in corporate social responsibility (CSR). The social relations of contracts, the types of contracts, the regarding of diversity and gender equity are themes emerging in business landscape. Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (UN) , national discussions and effective practices are not homogeneous. The CSR academic debate revolves around the perspectives on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose motor function is masking the “real intentions” of corporations in their quest for higher profits (Thorton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes
to build the legitimacy of organizations in contemporary capitalism (Fremnan, 1984). The aim of this work is to investigate the influence of the guidelines of decent work in CSR in the national contexts between Brazil and Portugal, on a comparative basis. We investigated the existing regulatory guidelines for CSR through document analysis, corporate social reports and comparative studies of the relevant legislation. The results demonstrate that while human rights and decent work appear as topics of CSR agendas in both countries, in Brazil, the corporate actions are voluntary, whereas in Portugal, there are laws that reinforce the communication of business practices within the CSR and decent work framework.

L’évolution De La COMPétence En Organisation Des Documents Numériques: Le Cas De L’entrée Dans L’enseignement Supérieur

La fracture numérique de second degré (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d’informations sont disponibles (Gantz & Reinsel, 2011), où l’accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Thornton, 2009), la compétence sociale des objets médiatiques se complexifie, la compétence à organiser ces informations devient fondamentale. Cette compétence d’organisation correspond à la capacité à imaginer des structures pertinentes et à les implémenter à la faveur d’outils matériels ou logiciels. Dans les usages, cette compétence à organiser s’actualise aussi bien dans des activités de recherche, que de gestion des flux d’informations, ou de stockage (Jones, 2008).

Une série d’entretiens d’étudiants réalisées avant et après leur entrée à l’université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d’adopter et de modifier les affaires (Norman, 1990) offertes par leur environnement. Trois catégories d’affaires peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d’organisation consiste donc pour l’utilisateur à prendre parti des affaires et contraintes des outils adoptés afin d’aménager l’environnement technologique pour le faire correspondre à la structure de l’activité de l’utilisateur, de sorte qu’il soutienne au mieux celle-ci (Kirsh 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence : l’intensité des usages des médias (Schradie, 2011), la variété des contextes sociaux dans lesquels les usages se développent (Ito et al., 2009), et finalement, le rôle de stimulateur des relations sociales de l’utilisateur. Nos premières observations semblent indiquer que, plus encore que l’intensité ou la variété des usages, l’entourage des utilisateurs joue un rôle primordial dans le développement de la compétence d’organisation, en ce qui concerne des opportunités d’échange et de confrontation de pratiques médiatiques.

Marginalization As the Social Context of Risk Perception in Everyday Life

In this paper, by adopting a constructivist perspective, it is tried to address the question how experience of marginalization and a sense of exclusion could affect the ways individuals perceive risks in everyday life. In general, social constructivist approaches to epistemological status of risk emphasize that the perceptions of risk are socially constructed and cultural and political contexts impact on how risk are made sense by people. The methodology in this research is based on qualitative methods and the data has been obtained through in-depth interview with 28 students from the University of Tehran in Iran. In the interviews we asked the students to describe how they make sense risks in their everyday life. Furthermore, they were asked to describe their experience with a sense of exclusion as a consequence of being marginalized in society. According to the findings, the ways the university students perceive risks have been closely intermingled with their experience of marginalization in their everyday life. Although studying in university may potentially result in social inclusion, most of the students have had the experience of marginalization and a sense of exclusion.

Creativity and Embeddedness

Creativity, understood as an innovative and novel way to solve problems and challenges combined with a variety of factors influence both the sociological perspective, as well as psychological. One is the factors influencing the level of creativity might be also the quality of social interactions and the conforming influence the possibility of being misunderstood or socially rejected.

The aim of the study would be to create analyze the relationship between the characteristics of the social structure and individual degree of creativity. The study group was analyzed from the perspective of the declared behavior in different social situations, declared level optimal distinctiveness and tendency to take the social risk. The level of creativity was measured by tests of divergent thinking based on the number of different responses to a given problem. Demographic factors were controlled. A study was conducted using a commercial online tool tracking IP numbers of participants based on the answers given by 306 people. Analysis shown that people who tended to be more socially independent and less embedded in the social networks gave more divergent responses to the creativity test during the research. The level of individual creativity, commonly regarded as psychological factor, might be influenced by the social milieu of the person.
societies really distinguish from other societies is the millennia-long Christian tradi-

tion. But has this tradition also brought forth unique values? And if so, are they

still influential in modern societies?

In the nineties a similar debate started in Asia. Asian values were initially seen

as a stronghold against Western value imperialism and against Western democra-

tization. The multiculturist scholars emphasized the empirical results of the Eu-

eropean findings on value pluralism. Dalton and Nhu-Ngoc (2005) could not iden-

tify specific and homogeneous value patterns in the Confucian societies. Rather,

family orientations and respect of authorities largely varied in Asian countries.

This will not be the end of the debate on Asian values. There are so many vis-

ible differences between Asian and Western cultures that the search for specific

underlying Asian or Confucian values will continue. Education and work values,
as well as economic and social inequalities might be domains in which specific Asian

values have emerged. The paper focuses on values which are related to social and
economic inequalities and tries to find out which of multi-level analyses of the ISSP
Social Inequality Module 2009 whether and to what extent these values are

affected by different cultural backgrounds and whether Asian societies in particu-

lar differ from societies with a Christian tradition.

JAHAN, MEHRAJ* (NAW, mehraj.jahan@tu.ac.ae)

Formal and Informal Female Migration: Challenges of Governance in Bangladesh

In the last three decades, Bangladesh has grown to be an important source of

migrant labor migration, however, has lagged far behind the male migration.

Starting with a small number, in recent years the number of Bangladeshi women has grown. Official figures put the proportion of Bangladeshi female labor migrants as 1% of the total number of migrant workers in 2003. In recent years proportion of women as total migrants is estimated at around 14%.

Bangladesh has a history of female labor migration and respect to the Gulf countries, especially, in view of the harsh treatment they face as undocumented workers. They also take great risk, including the risk of life in crossing the Bangladesh - India borders. The present paper examines how the government of Bangladesh has dealt with the issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

JAIME-CASTILLO, ANTONIO M.* (Universidad de Málaga, amjaime@uma.es)

Inequality of Opportunities and Preferences for Social Policies

The positive relationship between democracy and equalization of income pre-

dicted by the well-known Meltzer-Richard has been highly criticized on both theo-

etical and empirical grounds. In this paper, I analyze whether inequality of oppor-

tunities (rather than outcomes) is connected with preferences for social policies at

the individual level. I focus specifically on the sources of current inequalities by decomposing individual outcomes into a fair share, which can be attributed to personal merit and effort, and surplus outcomes, which are the results of struc-

tural barriers in the labor markets or depend on inherited factors such as social

background. To do that I rely on the methodological approach used by the growing economic literature on reference groups, in which individual income is the product of two components: the average income of the group and an idiosyncratic factor, which is the result of individual attributes. I use data from five waves of the European Social Survey in order to test these hypotheses. Empirical findings prove that occupational status and individual differences with respect to refer-

ence groups (especially those caused by inherited disadvantages) have a strong and significant impact on preferences for redistribution. In addition, educational inequality has a negative a significant effect over preferences for redistribution at the aggregate level.

MOORE, REBECCA (San Diego State University)

New Religious Capital, Conversion, and Drug Rehabilitation: Evangelical Social Projects in Baja California, Mexico

The aim of this paper is to analyze certain changes in evangelical identities and

their religious capital in the religious field at Baja California, following the impact

of charismatic movements and the crisis of denominational models during the 1980s, and their relation to the expansion of the so-called “Christ-therapy” in Re-

habilitation Centers for drug addicts. From a general perspective, religious capital

suffered a series of rearrangements within their referents mainly anchored in
doctrines, practices and preconceptions relatively unchanged until last decades of the twentieth century.

Therefore, this work raises the question of whether the expansion of a new evangelical model of openness to society in Pentecostals and Charismatic churches, especially in Northern Mexico, may explain the growth of Evangelical Christians, with new forms to mobilize symbolic capital and social participation.

In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector, has opened new opportunities for religious organizations to take on individual conversion. To study the above, this paper analyzes some cases of Rehabilitation Centers in Tijuana, and Ensenada, Baja California.

JAIN, RASHMI* (University of Rajasthan, rashmi.jn1@gmail.com)

Making People Illegal: What Globalization Means for Law and Migration

In any given week in 2007, newspapers around the world carried reports of

“illegal” migration. This did not start in 2007. It is not poised to end any time soon.

While many of the accounts are about the United States or the European Union, unauthorized migration is newsworthy in all corners of the globe. Russia has a large and growing extralegal population. China stopped more than 2,500 illegal border crossers in 2009. Thailand and Malaysia have launched a cooperative approach to their shared illegal populations. The Gulf of Aden is a key human smuggling route. South Africa is attempting to grapple with its unauthorized occupants. Illegal migrants come to droves in India, and in lesser tempering this view of citi-

zenship. Considering the limits of law in this regard, it is crucial to unearth the place of law in accounts of globalization, and to understand both how and why globalization forces are making people illegal.

It is worth examining as to why people and tribes of people are being termed illegal, what is it that does not give them support in the country they seek shelter and why do they leave their native land to find shelter in a foreign land. Here under the paper proposes to study and understand the concept of illegal people, how illegal migration is being aided by the process of globalization and how does it harm the native society and also the ill effects of migration on the migrants.

JAIN, RASHMI* (University of Rajasthan, rashmi.jn1@gmail.com)

Technology and Family Leisure: Is It the Way Forward?

Families are one of the fundamental units of society and are the building blocks of social structures and organizations in every culture. A theoretical framework that has been used to describe and understand how families function and interact is the Family Systems Theory (Steinglass 1987, Whitlatch & Constance 1993).

According to the Family Systems Theory, the family is a complex system of individ-

uals interacting with one another. The concepts of family cohesion, family adapt-

ability and family communication are the key to continuation of family systems. Over the last seventy years, researchers have consistently reported positive relationships between family leisure and positive family outcomes when examining recreation and leisure patterns among families (Hawks 1991; Holman & Epperson 1984; Ortner & Mancini 1991).

Enjoying family leisure time can be a way through which cohesion, adaptability and communication is increased within families. The perils of the modern world with its fast paced life, both parents working, emergence of nuclear families, pressures of weekend socializing, demands of curriculum on the children have all made a serious dent in family leisure time.

The present paper proposes to examine the role of technology especially com-

munication technology in promoting family leisure time amongst urban educated families.

Multi-Scale Analysis of the Effects of Socio-Spatial Segregation

The variable “space” is increasingly being used by scholars in the social sciences.

In this sense, the methods that use spatial analysis are becoming more known

The Changes in the Form of Japanese Integration in Brazil

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arriving of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country traditionally in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

Autochthony, Whiteness and Loss in Outer East London: Tracing the Collective Memories of Diaspora Space

This paper explores autochthony through the memory practices of in Newham, East London. It addresses how remembering East London as the home of whiteness and traditional forms of community entails powerful forms of forgetting that feed into contemporary ideas of racialised territorial belonging. Newham's formation through migration its ‘great time’ has ensured that myths of indigeneity and whiteness have never stood still. Through engaging with young people's and youth workers' memory practices, the paper explores how phantasms of whiteness and class loss are traced at the same time as the migrant, a figure of racialized and exclusionary in prejudice, is constructed. It addresses how this tracing reveals ambivalence, porosity, and the continued allure of race. Overall, it explores how whiteness and loss develop into autochthonous forms appropriated across ethnic boundaries, and how they are mobilized to produce new forms of racial hierarchy in a ‘super-diverse’ place.

The Changes in the Form of Japanese Integration in Brazil

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arriving of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country traditionally in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

Autochthony, Whiteness and Loss in Outer East London: Tracing the Collective Memories of Diaspora Space

This paper explores autochthony through the memory practices of in Newham, East London. It addresses how remembering East London as the home of whiteness and traditional forms of community entails powerful forms of forgetting that feed into contemporary ideas of racialised territorial belonging. Newham's formation through migration its ‘great time’ has ensured that myths of indigeneity and whiteness have never stood still. Through engaging with young people's and youth workers' memory practices, the paper explores how phantasms of whiteness and class loss are traced at the same time as the migrant, a figure of racialized and exclusionary in prejudice, is constructed. It addresses how this tracing reveals ambivalence, porosity, and the continued allure of race. Overall, it explores how whiteness and loss develop into autochthonous forms appropriated across ethnic boundaries, and how they are mobilized to produce new forms of racial hierarchy in a ‘super-diverse’ place.

Sharing Information at the Operative Level

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we already know more about how we protect vital information, or how they are obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas “friction” and “fog” act as much between the belligerents as within the armed forces. My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where hey learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not. The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training center.

Antonio Gramsci's Prison Notebooks on the Role of 'the Intellectual' Meets Social Responsibility Theory

This paper seeks to explore social responsibility theory that emerged in the 1940s to protect freedom of speech, the media, and the public tissues’ right-to-know from government and corporatist interventions in information and moral exchanges. However, the strategy in the paper is to marry social responsibility theory with the writings on ‘hegemony’ or ‘cultural leadership’ in the Prison Notebooks and Antonio Gramsci’s
thesis on the role of 'the intellectual' in times of social crises and social change. The discussion in the context of the paper, is integrated into the overarching and broader contextual theme (of the conference) on 'facing an unequal world [and the] challenges for global sociology'.

**Stuck in the Moment? Time Perspective and Time Allocation Across Social Classes in Poland**

Individual's time perspective and everyday time-use patterns have major impact on all realms of human life. They influence the chances for upwards mobility and affect individual life trajectories. As put by Jeremy Rifkin, “those who are most present oriented are swept into the future that others have laid out for them” (Rifkin, 1987). However, time perspective is a multidimensional phenomenon and needs to be studied in relation to the actual time use patterns – in which it is supposed to be reflected. Only combining attitudinal and behavioural data can give deeper insights into socially differentiating role of temporal arrangements. This study analyses daily time allocation patterns in conjunction with temporal preferences and the possible drivers behind them – such as individual time perspectives and time constraints. It focuses on the relationship between the perception of time or daily allocation of time and individual position in the social structure. Using quantitative data for Polish population aged 24-65 (n=780), it shows how temporal orientations and perception of time are related to individual social position and how they differ depending on the respondent's genders, age, educational attainment or occupational category (ISCO-based). The study casts light on the much overlooked dimension of social inequality, including the effect of temporal perspective on status attainment, social determinants of the ability to plan long-term and delay gratification, as well as the link course-related choices and their consequences.

**Happiness in the New Unified Theory of Sociobehavioral Processes**

This paper explores more deeply the part played by happiness in the recent attempt to unify justice, status, and power theories. Specifically, the paper does three things: First, it strengthens the foundation from Plato and Aristotle for the theory’s premise that different people seek happiness in different ways and by different means. Second, it connects those different ways and different means to the attributes and possessions that people care about, as well as to the basic outcome -- justice, status, or power -- that is activated. Third, the paper analyzes a new set of situations in justice theory, in which individuals may compare themselves to everyone who outranks them (on the salient attribute or possessions), everyone whom they outrank, or everyone in general. These situations lead to different outcomes both for individuals and for societies. Further, the paper shows vividly the implied effects of inequality in the distributions of attributes and possessions on average happiness and inequality in happiness.

**Technologies De Communication Et Inégalités D'Usage**

Il est devenu quasiment impossible de se déconnecter des technologies de l’information et de la communication. Parce qu’elles sont devenus des facilitateurs du quotidien, synonymes d’immédiateté, de sécurité, d’ouverture et d’évasion. Se tenir informé, gérer son emploi du temps, faire ses réservations et achats, se sentir en sécurité et près des êtres chers malgré l’éloignement physique, autant de raisons nous portant vers une connexion permanente. Mais cette connexion est aussi la base de nombreuses informations non désirées, d’appels non souhaités, de surcharge de travail, de confusion entre urgence et importance, de nouvelles dépendances et de contrôles non autorisés.

Face à cela, des tactiques de réajustement visant à reprendre la main dans la gestion de son temps et de ses occupations apparaissent. Il s’agit de conduites de refus, non pas des technologies de l’information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle. Or, il s’avère que cette capacité de maîtrise des flux informationnels est très inégalitaire. Dans les organisations, il y a ceux qui ont le pouvoir de se déconnecter et ceux qui ont le devoir de rester connecté, dans la vie privée ceux qui...
voulaient se déconnecter de temps en temps mais n'y arrivent pas et ceux qui y parviennent, et, de façon plus générale, ceux qui possèdent les capacités cognitives et le capital culturel leur permettant d'utiliser au mieux ces technologies en particulier dans les traces qu'ils laissent et ceux qui n'ont pas les moyens d'y parvenir et en subissent les conséquences, en particulier en matière de surcharge informationnelle et de contrôle.

Growing Trends in Non-Standard Employment in Nigeria: Insight from the Food and Beverage Industry
In spite of the effort of the International Labour Organization (ILO), to promote social justice and recognition of human and labour rights, decent working conditions have continued to elude workers in developing countries, job creation has gone hand in hand with the proliferation of non-standard work contracts in Nigeria such as temporary work and part-time employment. The World of Work Report 2008 showed that the incidence of part-time and temporary employment has increased over the past two decades globally. Workers joining the labour market at will, engaged in poor quality of work, casualised, informalised, and are forced to accept severe cuts in their wages when fortunes change, and are less likely to take part in training. It is estimated that approximately 4.2 million job losses had been recorded in the entire sector between 1983 and January 2006. Apart from job losses, most workers are not adequately protected as most organizations have continued to defy labour laws that abolish workers exploitations in any form as well as high workers' violations concerning fundamental human rights at work as entrenched in the Labour Act of 2004. This study explores both primary and secondary data in bringing out clearly this phenomenon in the food and beverage industry in Nigeria. A total of 500 questionnaires was administered to workers in three selected organizations that have high incidence of non-standard employment as well as 20 interview session with some selected workers and union executives. The study found that this kind of employment have tremendous impact on the workers, who have continued to be voiceless at work, lay-off at will, engaged in poor quality of work, casualised, informalised, and are forced to work among others things.

Mobilizing for Immigrants’ Rights Online: Creating Symbols of Belonging to the “American” Nation
It’s no secret that being an immigrant, especially an unauthorized immigrant, is a challenge these days in the United States. Discrimination, marginalization and deportation loom large, and comprehensive and fair immigration policy seems an elusive goal. In response, the immigrants’ rights movement increasingly mobilizes online. Among these cyberactivists’ primary tools are symbolic representations of immigrants helping to translate claims of belonging to the “American” nation, more specifically its civil sphere, the moral universe where battles for inclusion take place. Concrete symbols of family, hard work and community coexist with more abstract representations of “American” national ideals such as equality, fairness and opportunity. Utilizing a cultural sociological perspective, I examine the ways in which the immigrants’ rights movement uses such symbols to perform national identity online. In particular, I employ the tools of the Strong Program, as articulated by Jeffrey Alexander and Philip Smith, among others. The goal is to put meaning and the process of meaning making squarely at the center of analytical attention.
What are the ways in which the immigrants’ rights movement creates and engages symbols to signal immigrants’ belonging to the nation? How do such structures of meaning work to portray immigrants as part of the sacred social fabric of the civil sphere and to counter images of pollution? How does the deployment of symbols help translate claims of belonging for particular group into a universal right of inclusion? To explore these questions, I apply a dual methodology. First, I perform a hermeneutical analysis of the website content of 15 national-level organizations – focusing on the visual but paying attention to important textual cues and discourse. I also interview their leaders and webmasters to explore their motivations and goals and strategies. The ultimate goal is to contribute to the understanding of the relationship between symbols, social movements and national identity.

Intergenerational Communication in Transnational Families: A Gendered Perspective
Examining multiculturalism, and combining a postcolonial feminist perspective with intergenerational communication, transnational migrant families are examined with a view to understanding the realities and negotiations between generations as well as how cultural values are transmitted across generations. In particular the communication: varied aspects such as verbal and nonverbal, that grandparents use in relation to their grandchildren will be examined. A nuanced analysis of gender intersecting with race, class, ethnicity and cultural diversity will be used in this study. The goal is to empirically uncover and shed light on the following questions: How do grandchildren transmit cultural values to their grandchildren in the Canadian context?
More specifically, what negotiations do grandmothers make to effectively communicate with their grandchildren about the cultures of their countries of origin?
Interviews, at least ten to twelve, using a semi structured interview protocol as well as focus groups if needed will be conducted in Ottawa among grandmothers and a group of respondents from various cultures as possible representing varied nationalities and cultures will be selected to participate in the study.

The Cons/Truction of Gender in the Canadian Construction Industry
We examine the Canadian construction industry by looking at how gender interacts with various markers of identity within the construction industry: such as age, ethnicity, class, race, education etc. In Canada and how these interactions affect women’s participation in the industry. We base our categorization of gender and a broad sense to include its intersection with other aspects such as ethnicity, race etc. (Denis, 2006; Mohanty, 2003; Spivak, 1999; Tastoglu, 2006). In the Canadian context, the espoused policies of multiculturalism and immigration provide a context for immigration related research (see http://canada.metropolis.net/index_e.html). However, there are challenges of labour force participation of immigrants and of women in almost every sector (Cohen, 1994; Watts & MacPhail, 2004).
In addition, research on the construction industry in Canada has shown that it is highly gendered in terms of the experiences of women (Watts, 2007) manifest in such behaviours as sexual harassment of women as well as a hierarchical and male dominated culture (Watts, 2007). At the same time, immigrants into Canada who are very diverse in terms of the various facets of identity outlined above have also tried in some instances to make inroads into the construction industry (Walton-Roberts & Hiebert, 1997).
By performing secondary data analysis (Rubin, Rubin, & Peele, 2005) through a survey of the literature as well as through an examination of construction industry periodicals, we want to examine how gender in its broadest conception as intersecting with race, ethnicity, and age, and other dimensions plays a role in the construction industry in Canada and, if there are differences in various segments of Canadian society.
We will do this by a comparison between mainstream women’s participation and the barriers faced by them, in the construction industry, and ethnic immigrant women.

JEANET, AURÉLIE* (Université Sorbonne Nouvelle Paris 3, auverlie.jeanet@free.fr)
Emotion at Work: Between Alienation and Resistance
This presentation endeavors to utilize the concept of emotion in an heuristic and sociological manner in order to investigate the subjective link we have with work. More specifically, we will use it as a means to grasp not only the suffering and alienation that are associated with work, but also the pleasure that can intervene to ameliorate work-related pathologies. Furthermore, if we view emotions as a link to the self as well as to others and to the world, it becomes possible for an investigation of emotions associated with work to reveal how relationships to work can point to forms of resistance. It is also necessary in this regard to take into account the fact that the concept of emotion enables us to rethink the classical oppositions between rationality and affect, nature and culture, and masculinity and femininity. In addition, what Rime (2006) has written about the social elements of emotion from a psychological point of view can be developed from a sociological and critical perspective. Finally, the concept of emotion is subversive in a manner that is analogous to the way in which care theory is subversive, which Caroll Gilligan (2013) has demonstrated. This is particularly the case at the work place, which is characterized by control and self-control. The discussion will thus seem to reveal how the concept of emotion not only is heuristic in character, but also possesses a subversive and critical force.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between income groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.

Rebuilding Memories, Projecting Utopia in Lac-Mégantic Reconstruction

On July 6th, 2013, a train carrying crude oil derailed in downtown Lac-Mégantic, a town of about 6,000 located in the Estrie region. The industrial accident caused a series of explosions, killing 47 people. The fire destroyed almost half of the main street and affected the surrounding residential areas. The disaster created an acute awareness of Quebec cities vulnerability to industrial risks. On one hand, it launched a debate among planners, business groups and other decision-makers on how to adapt the train tracks crossing densely populated areas. On the other hand, many questions remained on how to maintain sustainable local economies that rely very much on the presence of the railroad system. Reconstruction plans were laid out within weeks of the disaster, proposing to redevelop a new commercial area, and creating a memorial ground where once stood the destroyed buildings. The community seemed absent of the debate, seen rightfully as a victim of events, and yet not perceived as an actor of the reconstruction process. The destruction of the urban fabric of Lac-Mégantic raises issues of collaborative resilience and participatory planning: cities are spaces of the everyday, of belonging, of state, establishing political rules due to religious norma, which leads to planning and policy can generate a stronger collective capacity in decision-making. The loss of space called for an affective response that traditional Canadian planning is sometimes overlooking. This communication proposes to discuss the use of cognitive maps as a methodological tool that can be used in understanding how people perceive their environment, the lost one, the one that is being lived in and the one that will be built. It will analyse how they can highlight the construction of overlapping narratives that can contribute to the resilience process, and how it can potentially be used in the reconstruction process.

When Religion Influences Political Choices in the Context of Nation

In the times of Nazi regime every choice made was political, obviously. It made nearly every sphere of life political (as Hobbes and Schmitt would put it). Research on the history of churches – both catholic and evangelical – clearly shows how the national identity and ideology influenced their institutional form.

Nowadays, religious identity, which influences the political choices, is connected with the religious extremism, unwelcome lack of separation between church and state, establishing political rules due to religious norms, which leads to human rights violation. My aim is to describe opposite side of the idea of linking religion to politics and nationality. Moreover, the concept which I’ll present is intersubjectively considered to be morally right, possibly because of history. I’ll present the theological and religious concept by Dietrich Bonhoeffer, “Protestant saint”, member of the anti-Nazi resistance. I want to show how “benevolent dictatorship” (Raymond, 1998, 1999/2004) model on one hand contradicts the a-, or anti-hierarchial ethos of Wikipedia. Through a case study of development of Jimmy Wales role in Wikimedia community, I am going to show that in principle, “F/LOS communities only tolerate an individual’s exercise of authority over her areas of expertise” (Monteza-Georgi & Steinmueller, 2008), with a possible exception recognizing also organizing skills (Yoo & Alavi, 2004; Carter, Chidambaram & Becker, 2000). I am also going to show that leaders in open collaboration movements have to carefully and sparingly accumulate merit and charisma (Besse, 2010), and that they can lose it overnight, after one careless blunder. I am going to seek conclusions for the pros and cons of celebrity leadership, and describe the current role of Jimmy Wales, who gained real momentum and increased his influence only after he resigned from performing most of active duties on Wikipedia. (references cut out due to exceeding word-count limit).

Incorporating the Social Investment Element into East-Asian Productivist Welfare System: Path Dependence or Path Breaking?

The critical difference between East Asian productivist welfare state and European social investment welfare state is the logic of social policy formation. East Asian productivist welfare state was designed according to the principle of economic developmentism to achieve economic catch-up. However, European social investment welfare state is emerging as a new policy paradigm to adapt new knowledge-based economy and deal with new social risks. Recommodification and decommodification are both prominent in the social investment welfare state. However, the logic of economic developmentism in East Asia (and probably, in Southeast Asia) led East Asian governments to push labours into labour market (the process of commodification) by devoting most of resources to human capital formation policies, such as universal education system. Family policy is very prominent in European social investment welfare state, but not in East Asian productivist welfare state. Third, one of the critical features of the social investment welfare state is the focus being placed more on the life course and on the future than on equality of outcomes in the present. Last but not least, the concept of citizenship in East Asian productivist welfare state and European social investment welfare state is different.

Given the differences of the East Asian productivist welfare regime with the social investment strategy in Europe, some ‘active’ components and mode of welfare delivery have changed recently in East-Asian countries, particularly Japan, Korea, and Taiwan. This article aims to highlight the contradiction of discourse and rationale for this change. The political position of different actors (political parties, unions and employer organizations) toward this change will be examined. Moreover, a new social/political cleavage and possible building of effective coalition for pushing this social investment in East Asian context will be examined.
For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of 'indeterminate sex' (ICD-9-CM code 752.7). But this diagnosis is a further diagnosis (such as cancer), course classification of the medical problem is necessary for deciding on management and prognosis. In the case of intersex, medical professionals assess additional data to determine the intersex individuals’ ‘true sex,’ in effect explicitly diagnosing intersex while implicitly dismissing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyon, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this vein, we (1) show how multiple social actors (e.g. parents, doctors, technol- ogy, legal and cultural institutions) contribute to diagnosing the individual’s ‘true sex,’ which, once determined, can be ‘restored’ medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals ‘sick’ – not their chromosomes or organs.

JENKINS, TANIA* (Brown University, tania.jenkins@brown.edu)
The Myth of Meritocracy in the American Medical Profession

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical gradu- ates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. Last year, for example, over 90% of spots in plastic and or- thopedic surgery were filled by USMGs. In contrast, non-USMGs fill lower-prestige desirable positions. What are the social forces and beliefs that sustain this system of stratification among internal medicine residents? Drawing on two years of eth- nographic observation and interviewing at one such ‘friendly’ hospital, this paper presents evidence for a ‘myth of meritocracy’ among residents. Doctors feel they are individually responsible for their own success, and conversely, that they are to be individually blamed for not reaching certain goals, such as getting into competitive residency and fellowship programs. They also deploy examples of non-USMGs successfully achieving these goals as evidence for this belief, rather than as referable structural factors (e.g. institutional racism, gender inequality), which constrain opportunities for non-USMGs. By elaborating local understandings of social mobility and advantage among medical residents, the paper reveals the power of this myth of meritocracy in obscuring, sustaining, and perpetuating the role of significant social and institutional constraint.

Horizontal Knowledge Dynamics and the Initiation of Students in Expert Cultures: Investigations into Profession-Oriented Programs in Higher Education

The aim of this paper is to discuss relevant approaches for studying how stu- dents in profession-oriented programs become initiated in their expert culture in a period in which such cultures undergo changes in several ways. Much is written about how modes of knowledge production and distribu- tion are in transformation in today’s society (e.g. blurred relationships between knowledge production and application; new relationships between knowledge, education, and work; and the spatial expansion of such processes). Less is known, however, about how such developments influence educational programs and student learning.

We present a conceptual framework for investigating these relations, highlight- ing the concepts of epistemic machineries, epistemic practices and ‘epistemologi-
of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commodities demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) domestic dependence are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political-economic formation. In world-historical terms, these may tentatively point towards emerging regimes of accumulation centred around a new phase of materially-based growth in the global capitalist economy.

*Normal Waste: Confronting This Unavoidable Matter in the Technoscientific and Consumer Society*

If we think about the topic of waste today we have to be aware of its plastic and ambiguous nature, rejecting both the economic view, which sees it as lost and as a negative value, and the socio-cultural view, which associates it merely with fear and repugnance. “Normal waste” summarizes in a two-word formula the idea that waste is a normal condition of a society of widespread production and consumption, something central and unavoidable that shapes cultural, economic and technical responses, which in turn shape our history. But because this is a problem which is widespread, permanent and global, with environmental and public health effects on current and future generations, intervention in this field has to be guided by a combination of responsible use of resources, sustainable patterns of production, consumption and development, and the involvement of citizen-consumers. From these foundations I seek to show, first, that waste as a “problem” is the product of an order of production and consumption increasingly shaped by industrialization and urbanization. This was accompanied by a cultural process of sensitivities, mentalities and philosophical and medical convictions, which encouraged the sanitizing of public spaces, greater individuality, the refinement of manners and of the sense of smell. Secondly, I see waste as an environmental issue and as a factor which encourages the search for ingenious technological developments, stimulates international political measures, and interventions at local level. The belief that the “problem” of waste can be only fixed technically is pure fantasy. Facing up to this problem effectively will also depend on co-ordinated political approaches and patterns of development which achieve harmonious combinations of the social, the economic and the political. Finally, I analyse waste in the context of its commodification as waste management activities are also significant business opportunities.
The Changing Labor Process and Power Relations In a Chinese Dualistic Production Regime and Dualistic Peripheral Workers -

This paper examines how the use of myth and symbol have helped to reinforce the dialectical and practical understandings of culture and understanding in Tibetan rural society and specifically the evolutionary role of works like Gesar of Ling in the integration of the social order and the practical understanding in day to day life of what structuration means.

Sociological Problems and Educational Divergence

This talk focuses on the relationship between education and social structure through applying Anthony Giddens's structuration theory to rural Tibetan society in China. In this, we analyse the dialectical relationship among local social structures and three forms of education in Tibetan society in China. The talk also looks at how myth and symbol have parallel and relationship to the social and cultural linkages in the construction of this identity and are reflected in stories, views of nature, the dialectical relationships of world and social beings.

The paper also examines how the use of myth and symbol have helped to reinforce the dialectical and practical understandings of culture and understanding in Tibetan rural society and specifically the evolutionary role of works like Gesar of Ling in the integration of the social order and the practical understanding in day to day life of what structuration means.

widowhood, Intergenerational Family Support and Living Arrangement Among Older Adults in China: Based on Gender LENS

widowhood becomes an extended experience for old adults in China because of increased life expectancy, particularly for older women. While intergenerational family support and living arrangement of older adults has changed greatly during the past decades in China because of huge population migration and life style transformed. Drawing on the Senior Citizens Survey date of the Third Wave Survey on the Social Status of Women in China, jointly launched and organized by Peking University (Wome) and Peking University (ACWF) and National Bureau of Statistics (NBS), which carried out on December 1, 2010, this paper explores the patterns, status and associates of widowed older adults’ living arrangement and intergenerational support in China, using logistic model. Conclusion: Preliminary findings suggest that the widowed older women have closer intergenerational support and higher probability of live together with children than widower. Controlled the age, health status, educational attainment, housing and income resource whether older adults give a hand to their children on housework make sense on their living arrangement, give money to their children can great increase the probability of older widower live together with their children, while take care of grandchildren decrease the probability of living together with children for widow older women. The paper try to explain the gender difference based on gender lens.

SONNENFELD, DAVID A.* (SUNY College of Environmental Science and Forestry, dsonn@esf.edu)

The Emergence of Precautionary Chemical Management As A Salient Environmental Policy Issue in China

The precautionary principle promotes preventive measures in face of scientific uncertainty. It has been integrated into a number of chemical regulations and agreements, including Principle 15 of the Rio Declaration, and the European Union’s Regulation on Registration, Evaluation, Authorization, and Restriction of Chemicals (REACH). China is the second largest producer of chemicals in the world. In recent years, health and environmental issues resulting from chemical pollution in China have frequently taken place, involving industries such as electronics and textiles. Environmentally sound management of chemicals is getting increased attention from the Chinese government. The development of China’s chemical management policy may be observed from its policy amendments in recent years. In this context, what (combination of) principles guide China’s chemical management policy becomes an interesting question. Drawing on interviews with key stakeholders, this paper analyses the precautionary principle’s application in China’s chemical management policy, including consideration of risk assessment. It also reviews major Chinese chemical management laws, finding that government agencies are increasingly emphasizing chemicals’ environmental hazards. The study finds elements of both the precautionary principle and risk assessment in China’s chemical management policy today.

Social Formation of Geographic Proximity Effects: Understanding Unequal Access to Higher Education in China

Recent literature has demonstrated that college proximity (such as the number of colleges within commuting distance) enhances college attendance in the United States. But not all differences in proximity affect college attendance. We argue that the causal role of proximity is crucially shaped by the educational institution and family logic of schooling the child generation. We thus focus on the question of what proximity matters and why. The question of what requires a distinction of different types of schools and measures of proximity. The question of why looks at signs of the underlying mechanism of a true proximity effect.

We have created a new database by combining (1) school address data from official censuses of organizations in China; (2) provincial educational and labor market statistics from official published sources, and (3) individual-level data from the 2012 Chinese Labor Dynamic Survey (CLDS), which is the first wave of a nationally representative panel survey with over 16,000 respondents. CLDS provides detailed address on the place of residence for respondents when they were younger. These variables allow us to directly address the research questions. Organizational censuses provide school addresses and founding dates that allow us to estimate the national spatial distribution of secondary schools and colleges over time. Provincial data facilitate the control for confounding variables.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz., the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory-industrialization and economic development are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment rate increased dramatically, while the spatial disparities are substantial. Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within provincial divisions, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors. This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic development, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic transformation - will result from such investments. Yet, studies have shown that the transfer of vital skills – and eventual national socio-economic transformation - is well espoused in the literature, little scholarly attention has been paid to the temporal and spatial variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

JIMENEZ HUERTA, EDITH R.* (Universidad de Guadalajara, ejimenez@ceuca.udg.mx)
Renting and Sharing: Housing Options for the Poor

The government of Mexico encouraged the construction industry and the financial sector through massive new housing projects, particularly from 2000 to 2012. Developers built houses and acquired land reserves where the price of the land was cheap: on the far away outskirts of the cities. An important impact of this policy is that the poor is the one who pays the price of the land where these settlements would be built. In the past have developed, has now become scarcer and more expensive. Over half of the population do not qualify for the new houses, anyway. Thus the financialization of housing on the periphery of Mexican cities is likely to have pushed the poor back into existing low-income settlements, or forced them to remain there, thus encouraging the already ongoing process of consolidation of irregular settlements. Old low-income settlements, founded more than 20 or even 50 years ago, have earned themselves a privileged location in the cities by now, as they can offer their inhabitants proximity to employment and infrastructure. In these areas, renting or sharing accommodation has become an important option for those with low incomes, either because, as is often the case, it is the only choice they have, or else because it suits their family or economic situation to rent instead of buying. Also, shared arrangements play a fundamental role in the lives of the most vulnerable groups: single mothers, the sick, the handicapped, and people of an advanced age. However, we now very little about current conditions in these settlements, and the problems faced by owners, tenants and sharers. To shed light on these parts of the city, I use information obtained from questionnaires and in-depth interviews conducted in Mexico, as part of a major research project into 11 cities in 9 countries of Latin America (the Latin American Housing Network).

Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and incoherence of civil society organisations and also of parent governments to effectively address these problems. Drawing on this context, I make two interconnected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of “invisible” rights that operate within this system. By this I refer to the range of sustained strategies that workers- and foreign workers in particular- engage in to earn livelihoods. Drawing on a global literature of mobilisation, and community relations, I argue that in the face of the poor and inhumane conditions that workers face, silence and invisibility are tactics that they use to fight back and survive.

Affiliation Divestiture As a Detour for Succession - in Case of Korean Business Groups, 1989-2010

This paper examines affiliation divestiture process of Korean business groups, chaebol, in 1989-2010. One of the characteristics of chaebol is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network's holding company. Thereupon, the corporate network, composed of individual legal corporations, is the group owner family's privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm's typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure's network across time. The result is as follows. First, group network's cohesiveness is an important factor of making affiliation divestiture. Next, separation experience works as a path-dependent by becoming 'a logic of succession.' Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient.

Last, group network forms plural cores before commencing gradual affiliate divestiture. Next, separation experience works as a path-dependent by becoming 'a logic of succession.' Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient. Last, group network forms plural cores before commencing gradual affiliate divestiture. By those processes, Korean chaebols get on different ways in succession due to how inner network of each structure is organized. In other words, cohesiveness of structure and composition of network show how a network of business group is divided, is transferred from previous owner to his descendants, and maintains its survival. This result provides a key to understand formulation and survival of derivative chaebol, which will continuously come into the world.

The Employment Relations in the Changing Circumstances of Korean Labor Market

This study aims to explain the employment relations in the changing circumstances of Korean labor market, focusing on the automobile industry. As globalization has developed, the segmentation between the regular workers and the non-regular workers in the labor market has deepened. The wage level of the non-regular workers is about 60-70% of the regular workers, while they engage in the same kind of job within a work organization. The labor movement of the non-regular workers to improve their working conditions has intensified, reflecting the serious situation in the labor market. This study analyzes the dynamics of labor movement of the non-regular workers, based on the segmented labor market in the Korea automobile industry. After then, we will try to present an alternative option to the present situation of the segmented labor market.

Transforming Violence on School through Family Minority Males

European schools are witnessing a growing range of violent behaviors, including bullying or gender violence. And especially strong violence is addressed towards ethnic and cultural groups. Research noted various factors that push to particular types of violence. In this paper we will focus on hegemonic masculinity that plays an important role on it. Thus, schools need preventive strategies like community involvement. Nevertheless very little research has pointed out women participation in their local schools. In this sense, the start point of the paper is to show how participation of minority males in schools contributes to promote diverse models of masculinity and in consequence reduce violence behaviors. The results presented on the paper, draw on data obtained on project INCLUD-ED (6th FP European Commission, 2006-2011). Researchers identify three specific types of masculinities (Flecha, Puigvert & Rios, 2013): Dominant Traditional Masculinity, Oppressed Traditional Masculinity and New Alternative Masculinity. As they point out, children and adolescents who do not follow the model of hegemonic masculinity are more often the victims. The New Alternative Masculinity, could become a reference for the adolescents to fight violence behaviors. It is through the involvement of role models in classrooms and in other learning spaces such as the playground, and also participating in decision-making that they help to create a safer atmosphere where violent behaviors are neither accepted nor tolerated.
can be organized to different degrees, and some phenomena are only partially organized. The least common denominator of organization is that it is a decided order. Without a decision, no organization, not even a partial one. Here, a distinction is made between full organization and different forms of partial organization, the latter consisting of mixtures of organization and other social orders; a phenomenon may be a mix of organization and institution (if it, e.g., rests heavily on rules, norms and beliefs) or a mix of organization and network (if it lacks a clear formal hierarchy). Organization is a widespread form of social order. Many such phenomena are temporally delimited. Here a distinction is made, regarding the nature of temporariness between known and unknown time-fixedness. The latter (when it is not known when a phenomenon will take place) is characterized by a higher degree of uncertainty. Disaster management belong to this category. Different aspects of disaster management are analysed with this theoretical framework.

Change in Daily Eating Habits – Organization and Arrangement of Nutrition Patterns in the Context of Family and Public Compared Between Germany and Japan

Instead of looking at unknown social arrangements far away, comparative sociological research should investigate the alien within the known following suit the ethnographic research of modern industrial society. While comparing the development of western industrial states, sociology can get insights in the meaning of social problems, its circumstances and consequences.

This perspective will be presented by an on-going project comparing eating habits of everyday life between Japan and Germany. The stark contrast between European and Asian nutrition habits illustrated by the German-Japanese comparison is examined to discuss the correlation of malnutrition, change of family structures, gendered responsibilities, and daily eating habits in regard to cultural differences as well as to numerous similar characteristics of the current social change. Thereby, the focus is to be laid on specific and comparative analyses as to how the diagnose of “malnutrition” is made, which shape it assumes and which causes are being named. Ultimately, it has to be questioned what kind of regional country-specific solutions of the stated problem take root and which family-supporting compensatory functions can be taken by extra-familial agents of socialization in order to teach nutrition skills. Afterwards, different national approaches to a solution of the respective problems of how to arrange daily nutrition in the area of tension between private and public nutrition supply as well as their transnational learning potentials can be discussed.

To compare developed countries with each other in regard to particular problems will not only result in new knowledge about the research objectives but will also help to evaluate and develop the theory of World Society, whether the world is differentiating into a multiplicity of societies or unifies in a way which takes a segmental, regional differentiation into account.

Times of Innovation – Innovation of Times

Social relevant times are caused only by social events. However the variety of events rapidly increases by the density of possibilities rising the problem of synchronizaton of social time. Pre-modernity could refer to natural events for this purpose. More important was the reference to the idea of fixed temporal horizons – the past and the future though. These temporal fixations were fixed by modernization, presenting the problem of synchronization anew and even exacerbate it by developments like sciences and the European expansion. Thus synchronizaton means the possibility of a joined temporal orientation by a fixed horizon rather than the alignment of times. At modern first synchronizaton could be ensured by well concept of progress. But once its singularity had dissipated into a manifold moving concept (Koselleck’s “Bewegungsbegriff”) the problem occurred again. It could also not be solved by introducing mechanical time measurements or longitudes. Nowadays innovations have been established as synchronizinzg mechanisms. The factual specific, recombination re-arranges particular social relationships in regard to their temporal conditions. Organizations shape innovations into plans, they appear as cycles for society. Innovations as plans and as cycles fix the temporal horizons. However innovations do not any more synchronize universal throughout all social different areas. Rather innovations synchronize in a particular way specific factal arrangements for specific social circumstances. In an evolutionist perspective these social structures are addressed by selections and re-stabilizations. The success incident to innovation in a sense of social far reaching and enduring affiliations provokes ever anew de-synchronizinzg vari-ations of social structure trying to surpass earlier attempts in regard to range and endurance. Therefore innovations as alternative synchronization attempts increase in frequency. Under the current conditions of functional differentiation this can never result in a universal synchronization of world society but results in a highly dynamic multiplicity of temporal regimes.

Intersections Between Western and Indian Childhood Discourses

This paper presents one of the chapters in my Ph.D dissertation on Conceptualising Childhood, Indian children as a social category are neither homogeneous nor monolithic. “Childhood” in Indian discourses represent “shifting set of ideas” developed over a period of time, and across different sub-cultures. In this paper I requirements that neo-liberalism places on criticisms of World Society, whether the world is in order to show that childhood discourses (located in the West) documented in this study are getting percolated into Indian discourses due to globalization of childhood discourses, even as there are protests about childhood discourses being Eurocentric. In both the West and in India plurality of childhoods have been acknowledged in discourses on Childhood. Indian sociological studies document multiplicity of childhoods which in turn depends on varying factors such as region, religion, caste, social class, gender, family structure, etc. What emerges from the study of texts on the subject, is that both India and the West children have been marginalized in sociological discourses on children until now. There is a perceived emergent decrease in patriarchal control of children by adults, with adult-child relations becoming more democratic and participatory, manifested in greater negotiation of control by children. The “Century of the Child” notable for the United Nations Convention on the Rights of the Child (1989) and the new So- ciology of Childhood has brought children into the arena of international politics and academic debates in both the North and the South.

Pedagogies and Practices in the Modern and Postmodern

There is a paradigmatic shift in how pedagogy is conceived and practiced in contemporary discourses. In this paper, I focus on the discourses that arise out of the fragmentation of the project of modernity. I attempt to make a distinction between modernist and postmodernist educational theory, their languages and vocabulary and their tools of measurement. Furthermore I show that issues related to change, crisis, difference, diversity and fragmentation of identity, and of knowledge and power are important aspects of the emerging conceptualization within pedagogy. I try to describe some pedagogies such as the notion of “border pedagogy” etc. have emerged from critical pedagogues who locate themselves within the postmodern. Pedagogies that give students an opportunity to engage in multiple reference points that constitute different cultural codes. Finally I raise the problems that the radical critique of postmodernism pose for education that is central to post-Enlightenment, emancipatory, liberal humanist project of modernism.

JOHNSON, PAULINE* (Macquarie University, Pauline.Johnson@mq.edu.au)

Sociology and The Critique Of Neo-Liberalism

Sociology and the Critique of Neo-liberalism

On all sides we’re hearing that social critique is in trouble. Nancy Fraser’s remarks about a ‘crisis of critique’ confirm Axel Honneth’s account of critique’s ‘perplexing predicament’. Peter Wagner too observes that contemporary capitalism is ‘no longer so confident of its own righteousness’. What is alarming everybody is the supposition that the project of immanent critique has been undermined by what Honneth calls the ‘neo-liberal revolution’. Immanent critique, Michael Walzer tells us, judges the present with reference to ideals that are purely internal to a particular socio-cultural context. Immanent critique is having a hard time because the normative principles and ideals internal to our social and institutional practises appear to have been resigned in capitalist friendly terms by a triumphant neo-liberalism. So neo-liberalism issues a peculiar challenge to social critique. The distortions and cultural costs of its strategy of appropriations and resignifications need to be assessed. This paper aims to contribute to a scientific integrity, the critical sociologist struggles to meet these demands. So what, then, of Wagner’s claims about sociology’s vital contribution to a critical consciousness of modernity? My paper will briefly reconstruct his programme for a critical sociology of modernity and will argue that it falls short of the distinctive conditions of our time. However, the paper is concerned to emphasize the need for normative investments that are implicit in this programme that might be marshalled to a guide a critique that weighs up the cultural costs and damages in neo-liberalism’s re-working of our normative principles and ideals.
**Organising the 'Invisible' Sector: A Case Study on Household Workers in Lima**

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all household workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector ‘invisible’ and thus the workers’ rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers’ movement. In recent years, household workers have increasingly mobilised on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for domestic workers, setting labour standards for persons working in household services. Peru has not yet ratified the convention, but especially the local household workers’ organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers’ organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

**Women Human Rights Defenders: Promoting Women's (Human) Rights in Honduras**

This paper explores the recent developments in women’s human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d’état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women’s groups. While promoting gender equality and organizing against militarism, neo-liberal practises and human rights violations, Honduran women activists have collectively as ‘women human rights defenders’. I suggest that as a consequence, the discourse on women’s human rights has moved from academic spaces and a ‘feminist project’ to the everyday understandings of a large number of women’s groups and most importantly, a new framing of women’s agency. In doing so, activists have, moreover, enhanced their alliances with supportive women’s groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women’s rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activists’ work and the women’s movement in Honduras generally.

**Sustainable Consumption and the Enactment of the Fairtrade-Market in Vienna**

Since the current discussion about the extent and manifestation of an environmental crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are currently undergoing a fundamental transformation. As moral values and commitments are considered as constitutive practices of economic operations. But whether this culturalisation of the economy must be understood as based on a moralisation of markets (Stehr) or rather is the result of an economic colonisation of morals (Habermas) is neither theoreatically nor empirically verified. My contribution is based on these considerations: on the basis of a praxiologic research approach I ask how and in relation to which practices the so-called „fairtrade‟ market enacted and, in doing so, moves in a tension between a moralisation of markets and the economic colonisation of morals. I consider these questions with reference to empirical research; starting in a fairtrade district in Vienna, the capital of Austria, I focus primarily on the constitutive practices and settings in which the fairtrade market is enacted. In doing so I address especially the questions how citizen consumers are able to learn about social and environmental risks and to what extent consumption of fair and sustainable products are driven by practices as well as respective sociomaterial orders.
newed plans to mine extensively on what they thought was an area secure from future extraction. How do older people react to the loss of their familiar environment? How does the necessity of resettlement affect their health, spiritual well-being, as well as their sense of security in old age? What strategies do they develop to face the intense physical and mental effects of the threatened displacement? The variety of responses to these questions – based on my research interviews carried out from 2010 in the region – is formulated in my presentation.

2011 and 2016: Transnational Crisis - Transnational Social Movements?

2011 and 2016: Transnational Crisis - Transnational Social Movements?
The Arab Spring revolts, the Indignados and international Occupy! protests were perceived as harbingers of an international, even transnational, movement capable of displacing political elites’ neo-liberal agendas and politically and economically repressive regimes which. Clues for the feasibility of this transformative potential can be derived from comparisons with the protest movements closest in scale and character: those of the late 1960s. The two upsurges are similar in their lateral, non-hierarchical mobilisation and organisation, rejection of conventional ‘system’ politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties’ protests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties’ campaigners’ radical alternatives to liberal or managed democracy were isolated or subverted. The reversal of their tantalising vision of substantive equality, into nineteenth-century levels of economic inequality, suggests that contemporary movements need transnational, radical alternatives to today’s transnational economic crisis. What lessons do the failure of sixties radicalism in part share with contemporary campaigns?

Examining international diffusion of radical ideas and campaigns via their organisational, discursive vehicles and communication media, suggests three possible commonalities for achieving ‘transnationalised’ social movements: similar causative grievances;

• adoption of another society’s social movement model;
• and/or convergence of regional/national movements into transnational programmes and goals.

Analysis of these potential commonalities indicates that sixties movements achieved limited convergence in perspective and programmes only through a transnational, but ultimately unworkable ideological paradigms. Yet comparison, with the newer vehicles of global and social media and practices such as Occupy! Suggests these need, but lack, the meaningful and coherent discourse(s) to achieve the transnational force for political change.

JONES, ELLIS* (College of the Holy Cross, ejones@holycross.edu)

Measuring Corporate Social Responsibility for Consumers: Lessons Learned from Seven Years in the Field

Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data sets imply that must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of “greenwashing” – or deceptive marketing that makes corporations socially responsible – conceals legacies of unethical conduct. How can citizen consumers effectively navigate the muddy waters of corporate social responsibility?

Drawing from a seven-year public sociology research project that uses independent, third party data to evaluate corporate practices, this presentation examines the art and science of measuring corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement.

1. The Data Integrity Problem: Including all reliable data, on the one hand, while excluding overly-biased data (or data that is the product of greenwashing), on the other.
2. The Data Quantity Problem: Uncovering too little data on some companies and too much (potentially overlapping) data on others.
3. The Past/Present Problem: Weighing companies’ legacy of positive or negative conduct against more recent indications of change.
4. The Multidimensional Problem: Determining the comparative value of different dimensions of social responsibility (e.g., human rights, the environment, political lobbying).
5. The Simplicity/Complexity Problem: Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.
The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscoring how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

JONES, ELLIS* (College of the Holy Cross, ejones@holycross.edu)
Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3rd party tracking of corporate behavior. The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity in: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with some surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significant different methodologies. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute (“State of Power 2013”) and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems. Final recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than reconstitute the economic reasoning to neoliberal ideologies while focusing on social change efforts in other areas.

JONES, HELEN* (University of Huddersfield, h.m.jones@hud.ac.uk)
Youth Work in England: An Uncertain Future?

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are ‘NEET’, the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011. Perhaps it is not surprising that UNICEF (2007) found the UK’s children and young people to be the unhappiest out of those living in 21 developed countries. As well as the result included attitudes to education, personal well-being, home and family life and general satisfaction with their lives. The OECD (2013) has found that young people are most likely to suffer from government austerity packages; they suffer most from cuts. Youth workers have always tended to look back to a golden age. Currently, the period when government funding was channeled into work with young people via local authorities and third sector/ voluntary organizations provides the touchstone. In April 2013, the UK’s magazine Children and Young People Now published an article entitled, ‘Youth sector on a “knife-edge” as third of organizations at risk’. It presented a depressing overview of reductions in expenditure across all four systems to reveal where consensus can be determined despite significant different methodologies. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute (“State of Power 2013”) and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems. Final recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than reconstitute the economic reasoning to neoliberal ideologies while focusing on social change efforts in other areas.

JONES, IAN REES* (Cardiff University, jonesir4@cardiff.ac.uk)
Class and Health Inequalities in Later Life

For over sixty years significant research activity has addressed the extent to which the effects of social class over the life-course have been determined or contributed to an individual’s economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement issues among a growing body of epidemiological and social researchers. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. This paper will interrogate these issues as they relate to the role of class in later life, and considering the prism of health inequalities. The paper will also consider the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be contextualised in relation to a population that may have been out of the workforce for many decades?

JANSEN-JANSEN, LEONIE (University of Amsterdam)
Socio-Spatial Justice and Housing

While the relationship between justice and geography and spatiality is acknowledged and put central in research by several scholars, there is no consensus on the type of relationship. Space is often used as a contextual way and social justice writings are in many cases focused on power and struggles within society. Edward Soja has argued for putting spatiality more central in social justice research. Space may have a great explaining potential, but may also contain a causal power. This paper will further explore the spatiality of justice through an analysis of the Amsterdam housing market. Institutional changes related to housing that especially change the role, position and field of work of the social housing corporations in the Netherlands change the provision of housing. Space, landscape or territory shape the effects of institutional changes and are therefore both a means and an end of production and moreover distribution of housing. Amsterdam, by some regarded as an example of a just city, is characterized by a high degree of social housing that at the same time inaccessible for many. The private rental sector is small and expensive and owner-occupied housing prices have risen quickly. To what extent can the Amsterdam housing market be regarded as just? And how does space relate to the concept of justness? The analysis will be conducted by a data-intensive study in which data on the dwellings in Amsterdam are connected to data on households.

The Vulnerable Man-Machine: Human Actors As Productive Parts in Work-Networks

As parts of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. They may also have to learn how to manipulate the network so that they retain a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to attain certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at “Techno”, human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies and helmets, but in this network they necessarily remain some of the softest parts with different (dis)abilities and utilities. The analysis of ethnographic data from “Techno” suggests that technology and vulnerability is closely linked. The white-collar-domain of the network results in one set of human vulnerabilities and the blue collar in, to some extent, another, but the real difference lies in the actor’s possibility to manipulate the network. Depending on your formal position, who you know, how you are categorized (in terms of age, education etc.), and how well you fit into the network, you will be able to tinker with work schedules and the ordering of new machinery or software to different degrees. Being able to manipulate the network partially explains why some women have significantly increased in recruitment. In addition, the manipulation-strategies differ depending on what resources they possess and how closely they are monitored by management and co-workers.

Recruitment of Women and Persons Born Abroad to the Swedish All-Volunteer Force

This presentation examines the recruitment base to the Swedish all-volunteer force; the applicants for basic military training. So far the recruitment to the all-volunteer force has been satisfactory in respect of qualitative terms; both regarding psychological and physical capabilities. The capabilities of those selected for basic military training have been as good as or better in comparison to previous years with conscription. Despite good quality among the recruitment base there have been vacancies, and the future need of personnel will increase. To increase the recruitment base and extend diversity among the personnel, the Swedish Armed Forces are working to promote and increase the proportion of women and employees with different ethnic background. Although the all-volunteer force provides a more heterogenic recruitment base in some aspects than the conscript based force, the all-volunteer force in Sweden mainly attracts young men that are born in Sweden. A significant proportion of women has significantly increased both in conscription. However there are no well-known changes in the amount of persons born abroad. Studies have revealed that the proportion of applicants for the basic military training born in another country than Sweden decline in each step of the selection process. This presentation will focus on the recruitment of women and persons born abroad in the selection process to the Swedish Armed Forces.

The Locally Oriented Global City: From Iconic to Anti-Iconic Architecture

What does a global city look like? The desire to become a global city prompted many cities to undertake mega-projects that would increase their iconic capital, such as the tallest or the largest buildings and cultural institutions bearing the prestigious names of world-renowned architects. However, although the allure of iconic buildings has not completely diminished, recently a new paradigm for the material reality of the global city emerged: the anti-iconic. The anti-iconic development, even when expensive and large-scale, advocates human scale projects that retain heritage and encourage embodied social interaction while shying away from flamboyant “global” architectural style with little connection to local communities. It appears paradoxical, then, that construction projects to help build a global city highlight preservation and augmentation of local particularities. I argue that the interpretation of the global city has taken a turn to local so that the picture of the contemporary global city consists of vibrant local communities and a robust and unique form identity. To illustrate this empirically, I analyze the discourses underpinning Seoul’s Cheonggyecheon and Toronto’s Distillery District projects, based on policy reports, official statements and interviews. In the former, the Seoul Metropolitan Government removed an inner-city overpass to uncover and restore the historic Cheonggyecheon Stream; in the latter, Cityscape Holdings, a private real estate development company repurposed abandoned distillery buildings into an arts and entertainment area. Both projects were completed in the early 2000s, when Seoul and Toronto engaged in active campaigns to establish their reputation in the global stage, and were believed to contribute to consolidating the global city status. Yet neither involves a new conspicuous building. I conclude the paper with a discussion on theorizing the global city as a cultural concept with fluid meanings, which contextualizes and underpins discourses of urban development and globalization.

Finding New Opportunities in Shrinking Cities: Local Citizens, Artists, and the State in Urban Revitalization Projects

South Korea is one of many countries now facing the problem of inter-urban inequality. While Seoul and the capital region have nearly 50% of the national population, many other cities, which developed as the country rapidly industrialized during the latter half of the 20th century, are quickly losing their industries to newly emerging economies, such as China and Southeast Asian countries. In short, a number of Korean cities, once noted for their speedy urban transformation and growth, now face reversed difficult challenges of shrinkage. A good example is Busan, which had been the center of the southeastern industrial core, but is now struggling, with a shrinking economy and population. This paper examines two urban revitalization projects that took place in Busan’s dilapidated old downtown areas. Unlike typical top-down urban development projects of a developmentalist city, dependent on state-driven top-down approaches with a goal of supporting private capital accumulation, these two projects set themselves apart by relying on the active participation of local residents and artists to bring bottom-up changes that are strongly connected to the local history and social life. Through the two cases, I explore how the changed circumstances necessitated scaling back the roles of the state and capital, and permitted newly emergent civic actors to take much greater roles in the development projects, leading to unexpectedly successful outcomes. Additionally, the paper points out how the visible decline provided an opportunity to change the mindset of the society, which had been rather firmly embedded in development-oriented ideologies, and to seek alternative possibilities amid the shrinkage. Perhaps, with the arrival of more socially aware and inclusive development approaches and goals, shrinking cities may find new opportunities to build more resilient and livable cities.

Identities, Culture and Transnational Learning: Being Malaysian Women Medical Researchers
In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women's potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shape this group of highly skilled Malaysian women’s identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework for a transnational theory of women’s identities, a gap in knowledge-intensive industries. The discussion also considers an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women’s successful participation in the global economy.

Studying Selected Youth Transition Studies Between the Global North and South: A Conceptual & Methodological Analysis

This paper examines selected youth transition statistics and studies between the Global North and South, and focuses at understanding how conceptually and methodologically these studies may be related and contextualized to researching “transition crisis” in the Philippines. It focuses at assessing unemployment and education performance indexes from selected countries, and identifies how these statistical variations reflect similarities and differences along work-education nexus across societies. Methodologically, the paper evaluates empirical designs of selected studies to recognize what good measure of youth transition estimate may be applicable to Global South countries like the Philippines. In the end, the paper draws insights from youth statistics and content analysis of studies to inform the design and texture of conducting local youth transition research in the Philippines.

Theoretical Consistence Between Goffman and Luhmann

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by cross-referencing each other.

In a short journal article “Die Form Person” (The form person), Luhmann defined person as a form with two sides which through regulating the actions offers a solution to the problem of double contingency (Luhmann 1995: 152). After some explanation, Luhmann wrote: if you want to learn more, you have to read Goffman (Luhmann ebd.: 151). For a closer investigation of the theoretical consistence between these two sociologists, this article will develop its arguments according to the following guidelines:

1. Foreword
2. George Herbert Mead as a point of reflection: Both Goffman and Luhmann are unsatisfied with Mead’s explanation as to the process of social participation and reduce the “freedom” of psychic systems. However, media of communication may be defined in one way in social systems while, from the perspective of psychic systems, alternative ways to access system media through various creative and unexpected processes may be possible. The equal “freedom” of psychic systems in relation to social systems would seem to emphasize such a possibility. It is thus argued that Luhmann’s theoretical perspective provides a possibility for psychic systems of social participation according to their own logic, and that this possibility may provide a key for understanding how the alienation of social participation can be overcome.
3. Double contingency as a chance: Unlike Parsons, both Goffman and Luhmann do not treat double contingency as an communicative obstacle needed to be overcome through common culture normality, but as a chance or a pressure to set dynamic practices in motion.
4. Person/Non-Person: Both of them pay attention to the possible qualities and attributes of self-identity which are temporarily excluded from the side of non-person, but could potentially be ascribed as the self-identity. This may explain why one would behave so cautiously in the social interactions to maintain the civilian self.
5. Conclusion: Inspired by the above discussion about the theoretical consistence between Goffman and Luhmann, I would like to suggest, as the conclusion of this article, a practical perspective of a “self” that refuses the ontological existence of a pre-social self.

global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country’s specific characteristics and its location in the world-economy structure. This means that linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are deconstructing and transforming. This heuristic characteristic of collective action has an effective affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

**Information Management, Collective Intelligence Within The Context Of Crisis Resolution - Going Global**

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global.

Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war. Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict and “hearts and minds wars” are concurrently going global. Therefore it is more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “going global” as a new paradigm for overcoming crises and calamities. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values: 

- sharing  
- responsibility  
- respect  

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field.

**Saving the Environment? Environmental Policies of Japanese Firms and Their Effectiveness**

In the past decade, a new framework has gained popularity that firms, which aim to make profits, should also address broader social issues, such as environmental protection, human rights, and labor standards. It is no coincidence that this framework of corporate social responsibility (CSR) has become popular under the anti-regulation logic of neoliberalism. Instead of bringing the state back in, the CSR framework grants corporations a way to pre-empt state regulations, by claiming that market mechanisms through corporate voluntarism is more effective in resolving social issues than state mechanisms through bureaucratic supervision. Thanks in part to the promotion by international organizations (e.g., the United Nations), various CSR policies have been widely adopted across advanced industrial societies. Their effectiveness, however, has been largely unknown, raising serious concerns that adoption of such policies amounts to mere symbolism. In this paper, we examine environmental policies of major Japanese firms and their impact on the nature of environmental performance, using data from Japanese firms between 2006 and 2013. During the period, under the increased global institutional pressures for CSR, Japanese firms have adopted a broad range of environmental initiatives, such as environmental auditing and labeling. But there is little research on whether and under what conditions such initiatives lead to substantive changes. Our findings suggest that without other complementary mechanisms such as government regulations or other third party monitoring, corporate voluntarism alone is unlikely to achieve corporate environmental responsibility and may instead result in corporate-blanche.

**Transnationalism and Religion: A Study on Biographies of Immigrant Women in Germany**

This study research into the biographies of South Korean nurses who left Korea in early adulthood and have remained in Germany until now. Between 1963 and 1978, around 11,000 Korean nurses left for Germany as working migrants. Korean nurses were hired under a restricted three-year time period for migration. After the expiration of the contract, many returned to South Korea or chose to immigrate to another country such as Canada and the U.S. But other nurses did not return to Korea but instead chose to remain in Germany. They have formed Korean Communities and organized various Korean immigrant associations in Germany. After deciding to remain in Germany, they established their life over more than 30 years in German society and culture. So the research is interested in the way of how they dealt with their life between a home they left behind and a new home. To this end, the data collection was conducted using Fritz Schütze's autobiographical narrative interview and collected data was analyzed according to his narrative analysis.

We are going to present a case study about immigrant women concerning transnationalism and religion. We will show in which complicated, intertwining and often conflicting ways transnationalism occurs if we consider not only the flows of people but also the flows of goods, especially when these goods are symbolic ones, as in the case of religion. One aspect we were especially interested in was to learn something about the ‘flow of symbols’. As a result of studying interviews with Korean nurses it is shown how these people find or come to ‘religion’. We ask if religion is becoming an ersatz for moving back and forth between the home country and the current country of residence. This discussion leads to further considerations concerning the connection between religion, church religiosity, and transnationality.

**Civil Awareness: A Comparison of the 2011 Occupy Wall Street Movement in the United States and the 2008 Mad Cow Disease Protests in Korea**

The Occupy Wall Street protest that swept the United States in 2011 and the mad cow disease protests that emboldened Seoul in 2008 seemingly occurred in different political and cultural contexts concerning different issues. In fact, although the details of these two protests differ, the protests are similar in that the initial protest took on a larger symbolic significance that captured the imagination of other groups and encapsulated some essential truth about society. Both the Occupy Wall Street movement in the United States and mad cow disease protests in Korea demonstrated how spontaneous protests can strike a chord with the larger population and create a powerful dialogue between the protesters and the public wherein the protesters articulate a theme resonant for the larger population and have immense impact on groups at a distance from the original protest. The very successful performance of protests as intense fusion between protestors and the public display similarities in a broader sense symbolically, and these similarities emerge in the motives of individual actors and shared inner meanings of the respective protests. It is worthwhile examining the motivations of these two different protests, the ways the discourses were made up among protesters, and interpreted in the mass media, and how the general public responded. The comparison of the two cases offers insights into the process by which a small group can create movement that transfers to other groups that do not share the same interests, discussing how the themes were articulated and how meanings are created beyond a national level.

**Airports As High Reliability Networks and the Inherent Emerging of Security and Safety Threats**

The theory of High Reliability Organizations tries to explain why organizations or its units can achieve error-free results in complex and error prone environments. After the application in the fields of nuclear power plants, traffic control, etc. the theory was deployed to airport security screening procedures after 9/11 (Fredericksson/LaPorte 2002). It is argued, that under the vital impression of 9/11 the security regime became enforced and prone to produce more false positives (error type I) rather than false negatives (error type II). Therefore, these false positives may become an argument to reduce security in favor of efficiency. To avoid cutbacks in security it is – according to the authors – essential, that airport screening organizations become high-reliability organizations.
We will argue that the focus on high reliable screening organizations is too narrow – instead the whole airport needs to function as a high reliability network of organizations. Since airports do not solely consist of security producing organizations but rather need to be understood as complex systems of heterogeneous actors such as airlines, airport management, retailers, etc., security regulations often can conflict with their standard procedures and organizational logics. To maintain the processes that are vital for these actors adaptive strategies evolve constantly and are passed on. These adjustments are often not formalized but remain informal since they transgress the rules of the security system. They are therefore frequently not reflected in the predominant security regime as they are not intended and the regime builds on idealized assumptions of compliance. Consequently, new safety threats for the airport system can arise due to the attempt to increase the security regulations in this critical infrastructure. The presentation builds on findings of a research project on the social production of (in)security on airports in Germany.

**Democracy, Anyone? Support for Democratic Governance in Newly Unequal Societies: Evidence from Post-Soviet Market Economies**

In this paper, we examine attitudes about the desirability of democracy versus dictatorship in Kazakhstan and Kyrgyzstan, two of the most pro-market economies in post-Soviet Eurasia. Drawing on original data collected in late 2012, we raise a series of fundamental questions about the link between market economies and democratic political culture. Are some political groups more receptive to democratic ideals than others? Are the middle classes, following expansive market reforms and a shrinking of the welfare state, as hungry for political change and as hostile to dictatorship as democratic theorists posit? How do individual experiences with the transition to capitalism affect not only perceptions of current government performance, but preferences for the political future? To uncover answers, we systematically test the effects of a host of demographic and individual-level characteristics using a nationally representative dataset of 3000 respondents (1500 in each country). We look at minority versus titular status, household income, educational attainment, area of residence, and religiosity, as well as individual trajectories in the labor market, understandings of the roots of social inequality, and one’s satisfaction with current political institutions and practices. We find that, more than two decades since the onset of independence, post-communist citizens remain divided over basic questions of governance, and this division is especially pronounced in Kyrgyzstan. In addition, surprising patterns of group and individual-level preferences emerge, challenging a number of conventional theoretical expectations.

**Family Resilience in Times of Mass Migration: The Case of Lithuania**

A decade ago state officials believed that short-term emigration is a rescue for Lithuania during the difficult economic period. They state that short-term emigration reduces unemployment rate, increases income of the population and people gain useful experience abroad. Following Lithuania’s accession to the EU in 2004, the point on emigration radically changes - the de-bordering of Europe and the development of intra-European mobility is seen as one of the main factors of the family changes. We perform a qualitative analysis on longitudinal and semi-structured interviews –both individual and couple- gathered in 2011 and 2013 in Spain. This case study is part of the international TransParent study. In this piece of research we compare how the couple intends to care for the baby, before birth, and how the couple’s members describe having shared the care during the first and a half year of the child’s life. How do parents and their extended family members deal with child care burden during pregnancy and how do they come up either with more symmetric or more traditional care arrangements afterwards? What distinguishes quasi-symmetric from asymmetric care-sharing couples: their relative resources and employment contexts or their gender and care attitudes? This paper analyses resources in a large sense: from relative income, job security, job sector, job organization principles and work careers to relations with peers and the family. Results show that resources in a large sense matter as a necessary condition for a symmetric share of care, but the key to understand real outcomes is the form of the bargaining process and the mix of gender and care attitudes within the couple.

**JURENIENE, VIRGINIJA** (Vilnius University, virginija.jureniene@kfh.vu.lt)

**Transformation of Gender Roles in Lithuanian Society**

In 1990 after regaining Lithuanian independence, women organizations started their active performance. The majority of these organizations summoned re-constructive congresses, for example Lithuanian Women Catholic organization which was forbidden in the 1940s when the Soviet Union occupied Lithuania. At the beginning of 1990 the first democratic election to the Supreme Council of Lithuanian Soviet Socialist Republic was held. In 1990 there were 14 women who made up 10% of the elected in the Seimas (Parliament). Constitution of the Republic of Lithuania of 1992 consolidates the equality of men and women. A legal measure to eliminate gender discrimination is the Law of Equal Opportunities which was passed in 1999. This law was the first of its kind in Central and Eastern Europe. On September 29, 2008 the Seimas signed National agreement on realizing women and men’s equal rights and opportunities. The agreement was initiated by the National women’s consulting forum striving to enforce equal opportunities of genders in reality. After Lithuanian society entered the 21st century, with changes in economic and social intercourse, women have become more active while looking for well-paid jobs regarding their specialties. Though tenacious stereotypes about male and female jobs still remain.

Facts of public opinion poll and social inquiries prove that patriarchal attitude, which is based on a traditional understanding of manliness and womanhood, are still popular in Lithuania. It is often stressed that it is men who should take a more important place in labour market and social life. Women’s opportunities to seek for professional career or stay in a leading position are perceived sceptically. Though in Lithuania changes in labour market are present, a number of unsolved problems still remain. A problem of women – mothers’ discrimination still exists.

However, an important question is open: why women electorate do not vote for women candidates?

**Perspectives on Climate Resilient Food Chains - a Case Study from Finland**

Climate change has several profound effects on the functionality of food supply chains. Floods, soil erosion and changes in plant species for example make agricultural activities and food production more vulnerable. It is, however, increasingly evident that local impacts of climate change on food chain may vary remarkably not only between countries but also within one country. In this regard, it is a major future task to re-organize the prevailing patterns of the food system in order to make it more resilient. It is important that all stakeholders of the supply

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
chain from food producers to retail and consumers have access to this transforma-
tive food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkanmaa and Southern Savo. The interviewed stake-
holders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retail chains. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

JÖNHILL, JAN INGE* (Örebro University, jan.i.jonhill@oru.se)
The Paradox of Managing Diversity. Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective

On the background of “anti-racism” legislation, of ideas of cultural diversity and incentives of the marked economy, the management strategy of diversity management was developed in the early 1990s. It has since then made success globally as a “new paradigm for management”. - The aim of this paper is to present some results from a research project on diversity management in mass media organi-
izations in Sweden.

The project applies Luhmann’s systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organizations and (3) as well the complexity of the issue must be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communi-
cation-based theory.

Social changes in direction of (more) equal opportunity and inclusion chances as to cultural diversity have occurred in the studied media organizations. In a pre-
vious study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also a high confidence as to legal regulations.

Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Com-
petence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and not focusing on person’s cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.

JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)
Ingrid Jönnson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare

Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.

Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analysing recent developments of eldercare with regard to marketisation and de-/re-familiarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between care-
giver and receiver look like, under what economic, social and normative condi-
tions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, chang-
ing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis’s frame of analysis as well as in relation to the concept ‘care packages’ (used by Knijn, Jönnson, Klammer, 2005 compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for elder-

ly and its impact on the relationship between caregivers and receivers (depend-
dence/interdependence) and women.

RC11-207.16

JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)
Ingrid Jönnson: Childcare and Eldercare - Different Paths of Development

Traditionally welfare in Sweden is publicly paid, publicly organised and access is based on needs rather than means. Economic retrenchment, changes of gov-
ernance and legal frameworks in the 1990s have an impact on the organisation of social welfare with implication for universalism, marketisation and refamiliar-
isation. The paper will discuss the different paths of developments for eldercare and childcare and whether ideas of social investment currently being advocated by international organisations have contributed to the different paths of develop-
ment. Although ideas of social investment in Sweden dates back to the late 1930s (Morel et al 2012) recent emphasis on early childhood and care in the context of limited economic resources and changes of governance and legal frameworks have implications for eldercare. Discussing eldercare as social investment in a Eu-
eropean context means counteracting future costs related to ageing populations while it for children means capacitating them for changing labour market and family structures with the aim of improving employability and increased econom-
ic competition. Historical reviews of childcare and eldercare including changes of governance, legal frameworks, etc. constitute the background for the analysis of recent diverging paths within the two sectors in relation to universalism, marketi-
sation and refamiliarisation. The recent development is socially as well as gender differentiated.
Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Despite remarkable progresses in many spheres, the Gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men’s work and women’s work. Women’s work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 corers towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of cutting, de-husking and drying of nuts is entirely depending on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women labourers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status.

Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Gender inequality refers to unequal treatment or perception of individuals based on their sex. It reflects and manifests in numerous dimensions of life. Gender inequality and resultant discrimination in varying degrees on the grounds of sex are commonly witnessed, admitted and even justified in India. Despite the policy measures to overcome gender discrimination, gender inequalities within the family and at work place still exist. Most of the forms of discrimination against women have their roots in patriarchal system and its values. Women are dominated over by their male members in their own family. They have little power in making decisions.

The present paper proposes to examine the nature and extent of gender inequality in family and work place. The main objectives of the study are to analyse the power dimensions of women in family and work place and to examine their participation in decision-making process. This empirical study is based on field data conducted in three urban centres of Karnataka State, India. The data are collected from 500 working women. The findings of the study proved that, the power dimension splits vertically; women are discriminated by the male members in their own family and work place, they are marginalised on the bases of gender. It is suggested that progress towards Gender equality requires empowerment of women which will lead to notable changes in gender relations.

Global Social Governance As Inter- and Inner-Organisational Relations Between Actors

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors. Global social governance is commonly characterised as a complex and multi-structured process, driven by more or less powerful and legitimate actors. There are significant overlaps in their agencies, as well as they are bound in various (sometimes) overlapping networks and alliances that cross-cut organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what others’ do.

The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways of how the inter- and inner-organisational relationships can be conceptualised and how related interactions can be understood by drawing on a number of disciplines. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.
This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now about 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These two features characterize the Japanese educational system: the school districts. Since the 1990s, reforms, based on principles of decentralisation and deregulation, have reduced direct state control. As a result, local education authorities have developed distinctive policies concerning local models of selection and admission with diverse possibilities to exercise parental choice.

Recent international comparisons and rankings have highlighted the equality and quality of Finnish education system. Throughout the whole 2000s, PISA-test results have demonstrated that Finnish pupils score high; the percentage of pupils reaching only the lowest proficiency levels is small; the variation between schools is low; and, finally, the impact of pupils’ socio-economic background to learning outcomes is small.

Traditionally, Finnish comprehensive school system has been built on principles of equality; the provision of basic education has been governed through school districts. Since the 1990s, reforms, based on principles of decentralisation and deregulation, have reduced direct state control. As a result, local education authorities have developed distinctive policies concerning local models of selection and admission with diverse possibilities to exercise parental choice.

Our aim is to discuss the ways in which social class intertwines with parental values towards universal and selective features of comprehensive school within the particular social and cultural context of Finland. Based on our previous studies, we are especially focusing on 1) the changing emphasis on equality of opportunities, and 2) the new cleavages within social classes, in relation to school choice. We describe classed educational strategies by combining our empirical

The Classed Parental Attitudes Towards the School Choice and Equality of Opportunity in Finnish Comprehensive School

Recent international comparisons and rankings have highlighted the equality and quality of Finnish education system. Throughout the whole 2000s, PISA-test results have demonstrated that Finnish pupils score high; the percentage of pupils reaching only the lowest proficiency levels is small; the variation between schools is low; and, finally, the impact of pupils’ socio-economic background to learning outcomes is small.

Traditionally, Finnish comprehensive school system has been built on principles of equality; the provision of basic education has been governed through school districts. Since the 1990s, reforms, based on principles of decentralisation and deregulation, have reduced direct state control. As a result, local education authorities have developed distinctive policies concerning local models of selection and admission with diverse possibilities to exercise parental choice.

Our aim is to discuss the ways in which social class intertwines with parental values towards universal and selective features of comprehensive school within the particular social and cultural context of Finland. Based on our previous studies, we are especially focusing on 1) the changing emphasis on equality of opportunities, and 2) the new cleavages within social classes, in relation to school choice. We describe classed educational strategies by combining our empirical
findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617). Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis

In the present paper the effects of the Greek economic crisis to the Greek society are comparatively scrutinized with concentration on both male and female access to the labor market. In particular, the issues under investigation throughout 2008-2013 are: a) the unemployment percentage both of men and women, b) men and women part-time employment and c) the correlation between studies and labor. Besides, the variable of gender is studied in combination and in relation to age and years of studies. Through quantitative research an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time employment of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects. The economic crisis is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the outcome of a policy about gender equality will be evaluated and the educational structure will be within a policy of reinforcing gender equality all with a broader policy about equality conducive to the unification of vindication schemata for both genders.

Employee Driven Innovation - an Organisational Challenge

Employee Driven Innovation - An organizational challenge

The Nordic countries are about to open their eyes for that employees in all sort of workplaces is an important untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lacks the understanding of what it is and how to do it.

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seems to base the rather one sided notion that essential ideas occur in laboratories and research departments. However a paradigm shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up.

As part of the Nordic countries adopted the concept of “employee-driven innovation” in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

Churches and Religious-Secular Interaction in Welfare in Croatia and Finland

The welfare state reforms have changed the position of actors and put cooperation between public and private stakeholders in Europe on the agenda. In this situation, the Churches are also taken more seriously as partners of welfare services and they have an opportunity to expand their activities on the secular sphere. At the same time, the question regarding the position of the religious in the interaction must be taken account. Growing religious-secular interaction seems to reach to a different position than the religious institutions had during the modernization process. Thus, the situation differs also theoretically from the classical views of secularization: both differentiation and dedifferentiation are equally relevant viewpoints for the analysis. In the context of predominantly Lutheran and Catholic countries, which are analyzed in this paper, the interaction may also support the impact of the religious on the secular domain.

The paper focuses on the role of Churches in the welfare sector in Croatia and Finland. It presents results regarding the local-level interaction between secular and religious organizations in the field of the welfare sector. The data includes the interviews of secular public sector and the social work of the Churches gathered in 2013 in three regions in Finland and Croatia. On the basis of the empirical work and background analysis the paper demonstrates the multifaceted reality of interactions between religious and secular institutions and discusses theoretical consequences of changing ways of interaction in different social and religious contexts.

KALOGERAKI, STEFANIA* (UNIVERSITY OF CRETE, s.kalogeraki@gmail.com)

Disentangling Greek Xenophobia during Recession

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone’s economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the national social fabric has grown more fray generating a mixture of frustration, insecurity and anger among Greeks which has been directed against immigrants fuelling the upsurge of anti-immigration backlash. The acute augmentation of xenophobic stances has been expressed by the rise of the neo-fascist Golden Dawn which has grown from a fringe group into a nationwide political party propagating that immigrants are responsible for the socio-economic vows. The analyses unveil the ideologies of Greek xenophobic stances traced in the intense inter-group competition due to the scarcity in jobs and economic recourses but most importantly in the formation of a far-right-wing populist identity that tends to displace the blame for personal hardships and misfortunes onto the relatively powerless immigrant group members. The study unveils one of the social facets of the Greek economic crisis in breeding hostility against migrants and highlights that such hostility has recently taken more violent forms of racist attacks and racial clashes. It is underlined that the call to transform the xenophobic climate into a xenophilic one in Greece becomes more urgent than ever; hence immediate policy responses are needed to curtail xenophobia and safeguard the fragile social cohesion and order of the country.

Unveiling Correlates of “Don’t Know” Responses in the Left-Right Scale

Europe’s current economic crisis has spread to the political sphere and escalated populist tendencies and nationalistic politics. Specifically in indebted member-states the political crisis is echoed in citizens’ skepticism about an uncorrupted political system and widespread perceptions that political parties are not just ideological oriented, but rather populist, personalistic and clientelistic. In a period of socio-political bewilderment, the division of traditional patterns of individual’s ideological orientation towards political parties has become more ambiguous. In empirical research a classical measure to operationalize political orientation at the individual level (OK) responses in the specific scale are usually treated similarly with “Refusal” or “No Answer” and interpreted as individuals’ cognitive inability in the left-right self-placement; hence excluded from analysis. However, in the present study the DK responses in the
left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals’ perceptions of weakening of democratic institutions, their distrust in political parties to revive the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic woes. Using data from the European Social Survey (ESS) in 18 European countries, the paper analyses the changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multinomial logistic regression analyses unveil the different impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents’ left-right orientation during a period of economic downturn and political turmoil.

Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S.

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship while another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the hypothesis have been often unclear about what policy it entails. That is, it is argued that a policy aims to reduce the risk of exposure to marijuana in order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state level data, we analyze whether supply side factors (i.e., marijuana and other data sources (1999-2010), I estimate the effects of medical marijuana laws on alcohol-induced deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana results in a reduction in cocaine-induced deaths. The results shed light on understanding the complicated relationship between marijuana and substances in the sense that availability of substances plays a critical role in the gateway drug hypothesis. Alcohol is provided in a formal/legal market whereas cocaine can be only supplied in an informal/illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

Changes in Family Forms in Japan: Analyses of Subjective Definitions

In order to understand the changes in family pattern, it is crucial to look at how individuals understand and define the family subjectively. In this paper, I will examine the changes in the subjective boundary of the family among Japanese, namely, who among kin are normatively considered as members of the family*

The preliminary analyses of the 1st (1993) to the 4th (2008) National Family Survey of Japan conducted among married women by the National Institute of Population and Social Security Research show that there is an expanding trend of the normative boundaries. In other words, more and more types of kin are considered to be one’s “family member”. For example, the proportion responding that a “married daughter” is generally considered as one’s family member regardless of whether or not they live together increased from 35% in 1993 to 66.2% in 2008. The analyses also show that the defined boundaries vary by age, education, employment status, household size and its composition, and geographical region.

In the paper, I will further examine how the subjective family boundaries relate to their attitudes toward various family forms and ways of living, such as attitudes toward taking care of aged parents, aged couples living with their children, married women not having children, and mothers of young children who stay home. Finally, I will compare these results based on individual level data with the macro-level data on family structure to explore possible mutual relationships behind the changes in family pattern.

Effects of the Great East Japan Earthquake on Subjective Well-Being

We study changes in Japanese people’s subjective well-being (happiness) and feelings of altruism before and after the Great East Japan Earthquake of March 2011. We use a panel data set compiled by a group of researchers mainly from Keio University. Although the questionnaire is large, we focus on a question about people’s altruism. We are interested in altruism because, according to a Japanese Statistics Bureau report on expenditure by Japanese households, charitable donations increased by over 850 percent in March 2011 compared to one year earlier. Using this large panel survey consisting of responses from over 4000 households all over Japan, we found that many Japanese people reported more feelings of altruism following the earthquake, even in the most affected areas; this is consistent with the rise in charitable giving. We also found that a large number of people reported an increase in happiness after the earthquake, in fact, as the number who reported a drop in happiness. An interpretation of this finding is suggested by a recent experiment by Dunn et al., who find that spending money on others promotes happiness; according to this story, many Japanese people became more altruistic after the earthquake, inducing them to make charitable donations, which in turn made them happier.

We are interested in seeing how changes in altruism affect changes in happiness. However, both variables are subjective, so their measurement errors are likely to be correlated. Therefore, we use a two-step procedure, first identifying the effect of altruism on an objective variable, charitable giving, and then measuring the effect of charitable giving on happiness. In each step of the analysis, we run a two-stage logit regression, which controls for reverse causality. This analysis, which deals effectively with the aforementioned problem of correlated measurement errors, yields results that are consistent with our story.

Social Contribution through Student's Participation in Village Festival

Kanazawa University embarked on the new project on social contribution in 2010 through promoting students to participate in traditional festivals held in severely depopulated rural villages. This project aims to provide opportunities for...
students to learn the everyday lives of rural Japan, and also to take a leadership role in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show to what extent this project goal has achieved its initial goal.

In 2004, central government enacted the law to reform the national universities to quasi-autonomous bodies. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. “Matsuri Project” started in 2010 as one of the University’s social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called “KIRIKO festival”. Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the villagers necessary for festivities and festivals. Young students are pleased to join in the festival and walk around with shouldering heavy Kiriko with village people. Before the festival began, gorgous dinner are sometimes served to students.

For the students, joining Kiriko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, overseas students can experience the actual lives of rural villagers. So far “Matsuri Project” has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

KAMIYA, YASUHIKO* (Nagasaki University, ykami@tkc.att.ne.jp)
Rethinking the Body through its Disability
A person with physical disability has uncontrollable body. The body’s passive- ness and vulnerability go beyond its activities and capability. Disability studies associated with sociology of the body examine disability as a social, cultural, and political phenomenon in contrast to medical perspectives, focusing on how disability is defined and represented in society. Both of them have been positioned against medical science; they approach the body from the society and context while medical science approach it from biology and diseases. But they may be accomplice in the sense that they often ignore persons and their daily lives. Pluralism to which sociology of the body and disability studies owe much emphasizes diversity of human behavior and culture regarding health and illness based on binary comparison of sickness and health, and the uniqueness of needs of disabled persons and the disabled lives of human cultures. Nevertheless, post-pluralism relativizes pluralism discourse by suggesting plurality of natures and sciences, and their mutual construction with society and culture. Persons with disability are now assumed to increase in number as overall disease incidences have not been as decreased as the mortality. The gap in the status of disabled persons between developed and developing countries is larger than the gap in non-disabled. Disabled persons from poor families living in rural areas have greatest needs but receive least medical and social care. In developing countries, persons with physical disability have greater handicap than those with intellectual disability, which is opposite from developed countries. Disability in a person sometimes leads to body impairment such as lumbago in other family members. Physical abuse to disabled persons is hidden problem. Some of physical disabilities can be relieved through simply changing the body posture. The body can manage its disability by itself through plasticity, and may not require society or sociology so much as we presume.

Stabilization of the World Due to the Expansion of a Western State System: Explanation Using Game Theory
Stabilization of the world due to the expansion of a Western state system: Explanation using game theory
Dr. David Strang explained the stabilization of modern global society from the perspective of the (sociological) new institutional theory while criticizing the explanations given by realists in highly original research (“Anomaly and Commonplace in European Relations: Realist and Institutional Accounts.” International Organization, vol.45, 1991). He states that global society has been stabilized as a result of the expansion and the “institutionalization” of a Western state system that respects the sovereignty of each country, rather than as a result of the balance of power of countries that reasonably maximize their utility.

However, his explanation still insufficient when we ask questions such as: why and how such an expansion took place; and why such an expansion stabilizes global society.

The answer can be derived from the fact of historical conflicts between dependencies and sovereignties. The form of the dynamic game between resisting/non-resisting dependencies and oppressing/non-oppressing sovereignties is analogous to that of the well-known “chainstore” game. This dynamic game has two Nash equilibriums. Based on the replicator dynamics of this game, we can interpret the historical changes in global society.

Initially, in a path-dependent manner, the world heads for an equilibrium that includes “dependencies that do not resist oppressive sovereignties.” During this period, empirs vie for supremacy. Subsequently, global political discourse requires sovereignties to comply with a “commitment” to non-oppressiveness. The world then heads for a subgame perfect equilibrium in which “sovereignties do not oppress from dependencies.” Thus, when the sovereign authority of many countries becomes established, “cooperation” will be selected in the repeated N-person dilemma game, resulting in a more stabilized global society. The term “institution” referred to by institutionalists can be understood as “commitment” or “equilibrium” in the game theory.

Capacity for Urban Recovery in Southern Germany after the 2013 European Floods
This proposed contribution deals with the impact of natural disaster on the recovery of urban settlements. In the 2013 European floods, settlement space in the South and East of Germany was severely impacted, including the Bavarian city of Deggendorf situated along the Danube river. Reports point out that early damage appraisals in combination with environmental degradation may strengthen and accentuate differences among settlements. This project, therefore, aims to develop a methodological approach based on socio-spatial perspectives in disaster research and urban studies to serve as a basis for a more comprehensive understanding of urban recovery processes and the needs of impacted populations.

Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey
Using data from “The Study on the Quality of Life” collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 for the scale of 0-10) is higher than life satisfaction (5.98).

Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent’s age shows an U-shaped effect on the life satisfaction (lowest at age 40 through 50). The happiness is positively affected by the respondent’s education and being married, both of which seem to indicate more psychological, internal state of our life.

We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any others including our own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accommodation often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonie in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, which all indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.

Domestic Division of Labour and Marital Satisfaction in China
This paper analyses data of the Chinese Women's Status Survey 2000, a national-
the insured living everywhere in Japan. The other hand, Japanese physicians can practice medicine at their favorite place within Japan. This system has continued traditionally from the 19th century. Therefore, the government has not been able to adopt any policy to directly regulate the practice place of physicians. This presentation examines how the geographical distribution of physicians has changed in Japan under these circumstances. Concretely, it analyzes how the policies after the 1960s, namely the increase of medical schools in the 1970s, the regulation of hospital beds since the 1990s, the new clinical training system in the 2000s, have influenced the geographical distribution of physicians, and shows that the physician's geographical uneven distribution has decreased.

The Transition to Parenthood As Experienced by New Fathers
The Transition to Parenthood As Experienced by New Fathers
Abstract
While many studies have explored the transition to motherhood, literature on the transition to fatherhood remains scarce. This qualitative study sought to broaden the knowledge on the transition to fatherhood by analyzing the experiences of fathers to first children aged one year and under and looking at how they cope with the challenges presented by their transition to fatherhood.

Data was collected during an unstructured group interview held in a focus group of 9 married men in Israel. The study findings reveal that, contrary to common gender stereotypes, men were mostly concerned about emotional issues, and not numerical facts, emphasizing the men's need for emotional support.

The study concludes that while men do experience a social transition, it is not as evident as the transition a woman experiences as she becomes a mother.

The findings indicate the importance of developing unique intervention programs for new fathers in which all three areas will be addressed.

International Organizations in a Global Social Inequality
Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space.

National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market's destabilization. International and regional organizations in this situation need to elaborate common rules, norms and values that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition.

Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founders of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich Gulf countries and the rest. It, in turn, influences and strengthens the ethnic, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

From Theory of Social System to the Theory of Social Harbor
In the new post-industrial era, especially in the sense of ecological civilization, the concept of “society” in the end should be re-understand and re-define. The work is an urgent job. People in the past regarded “society” as a “complex system” and the intercourses, the understanding and studying work is based on the systems methodology to reveal its dynamics mechanisms. In fact, there exist an entirely demands to find a new set of concepts, categories and to establish a new theoretical framework for the sociology. In this paper, the concept of “Social harbor” or “Harbor society” is proposed to reveal the society to help people build a new comprehension or sense to security mechanism.

“Harbor” is an abstract concept from physical world; it can be used to study the problem that how humans can better cope with unpredictable or unavailable changes and bring a new sense of co-existence of social cooperation. Correspondingly, the concept such as “matrix”, “general climate” are important cornerstones. The concept of “harbor” is developed based on the theory of social system and a new kind of insight or ideology which is beyond the concepts of systems and institutions can be established.

Understanding Science Revolution By a Trinity Model
Paradigm change is an ex post summary of Scientific Revolution. How to make out a specific Scientific Revolution is still an unsolved mystery. Philosophy, mathematics and science are trinity, logic is the real core. Logic is mined from mathematics using the methodology of philosopher thinking. In other words, logic is refined from philosophy based on the mathematical framework. When philosophy and mathematics integrated, logic generated. While under the guidance of logic, new sciences are formulated. In order to achieve trinity, transforming from engineering, art and design language to the philosophical language system based on practice's significance.

Why people all think that a solution is no doubt can be found for a problem? If the language system used when searching for the answer is the same with the language system used when formulating the problem, at no time the solution can be found. The only way to elimate the problem is to completely switch the way of practice's thinking, which means to change the language system. Here, we stress the in-turn transfer of engineering language, philosophy language and
mathematics language, from which a new mechanism of science development which the core element is logic can be developed.

**Do Social Networks and Sns Function As Social Capital for Social Engagement?**

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagement whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/drinking and neighbors' social support as social networks, local participation, voluntary activities, and political interests as social engagement, and the presence of internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/drinking, but not neighbors' social support. Correcting for possible bias by counterfactual analysis, it is SNS activities, not internet activities per se, that facilitate social eating/drinking. It is also observed that both social eating/drinking and neighbors' support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust by counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious but more open people are more likely to use SNSs. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outreaching weak ties encourage social engagements for local and public interests; (2) SNS activities mainly helps social outreaches and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of internet activities.

**Measuring Community Resilience to Natural Disasters: Implications for Disaster Management and Reduction in Korea**

Building a resilient community to disasters has become one of the main goals of disaster management to absorb and mitigate negative disaster impacts. More disaster resilient community often experiences less disaster impact and reduces long recovery periods after a disaster. In this paper, we present the methodology that we constructed a set of indicators to measure community's disaster resilience (CDRI) in terms of human, social, economic, environmental, and physical factors. Moreover, this study develops a methodology to aggregate constructed disaster resilience index of local communities in Korea. 229 local municipalities are examined to measure the degree of community's resilience to natural disasters. Geographic Information System (GIS) is used to analyze and visualize spatial distribution of disaster resilience. Moreover, this study examined a relationship between the aggregated community disaster resilience index (CDRI) and disaster losses using a geographically weighted regression (GWR) method. Identifying the extent of community resilience to natural disasters would provide disaster management officials or decision-makers with strategic directions how to improve local communities' resilience to natural disasters and to reduce the negative disaster impacts.

**Violence, Cumulative Discrimination and Gendered Struggles for Justice**

The unabated violence against women, sexual minorities, Dalits, minorities and indigenous communities in India, it's resurgence even, resurrects older debates on subjugation, repression and resistance struggles. There are layers of new meanings and forms and articulations of suffering and harm that grow over these older debates on inequality and discrimination that signal shifts in economic realities and legal (im)possibilities -- spreading the sense of imminent crisis. The (mis)appropriations of ideas of justice, by the state, by non-state actors and “the people”, drive new vectors of change at the intersection of law, governance and public debate. The emergence of a new common sense on the (co)habitations of gender based discrimination and the interrogation of the very construction of crisis itself -- “is this the worst that has happened?” -- are at the centre of the renewed imagination of justice.

This paper will use the events and debates around the Report of the Committee on Amendments in Criminal Law headed by Justice Verma that recommended wide ranging changes in the law on sexual assault to open out the possibilities that a Bill of Rights for Women holds for a different imagination of justice -- looking at the specific situation of women, but also at the ways in which larger questions of modernity, impunity, targeted assault, the existing recognition of "atrocity" in the law and state practice inform and are shaped by these debates. What are the multiple locations and articulations of the law (or is it justice in the era of modernity?) -- within which the shifts in the debate need to be mapped? What are the aggravations in targeted assault that are consequent on rapid and escalating shifts in economic policy? And therefrom how does state formation take place around the edifice of patriarchy?
In addition, this paper also analyzes how civil society through varied collective
activisms has challenged current energy policy and moved towards democra-
tization of energy policy. Employing a qualitative approach along with discourse
analysis and interviewing actors from the various social movement groups,
the author attempts to answer questions above in five arguments – a feeling of close
cultural and geographical proximity to the Japanese, increasing distrust in safety
of the controversial fourth nuclear power plant, cyber communities as mobiliza-
tion networks, advocacy of elite and celebrity, activism alliances across varied so-
cial movement organizations. Finally, deriving from these empirical findings, the
author discusses how democratization of energy policy could take place in also
recognizing key barriers

Democratizing Expertise and Enhancing Public Participation in
Deliberative Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and
building public capacities for deliberative / participatory risk governance of sci-
ence and technology through an investigation of public participations in risk gov-
ernance concerning the controversies of electromagnetic fields (EMF) in Taiwan.
The author utilizes a qualitative approach, drawing from documentary data and
data from two focus groups, as well as in-depth interviews with key actors in this
controversy to critically investigate this Taiwan case. This paper reflects on the
politics of expert authority permeating practices of public participation, Employ-
ing insights from the sociology of scientific knowledge and STS, the author dis-
covers that extensive tensions taking the form of contestation have arisen from
discussing a common problem, such as accuracy of scientific literature trans-
lation, to what extent EMF exposure is acceptable, versus containing conflicts
around how to define the problem under scientific uncertainty and complexity. In
addition, the failure of expert authority reflection on their social value positions
has played a key role to understand their less-than-successful defence in the cit-
izen perspective. From this perspective, the author discusses some challenges
for democratizing expertise in this Taiwan case and then provide suggestions for
better public participation in EMF risk governance.

Do Social Networks Help You to ‘Get Help’? Usage of Mental Health
Services Amongst Women of Different Ethnic Groups in England, UK

The way in which people seek help and access mental health services is a
complicated and varied process. Contact with, and usage of, services may occur
through individual efforts, GP referrals, or informal contacts. Typically, in the UK,
mental health service use has been researched within a largely individualistic par-
digm, with Dixon-Woods' candidacy model gaining increasing popularity. There
has been a lack of consideration of the social processes involved in help-seek-
ing. More specifically, the way in which the resources available in social networks
affect usage of services (as theorised by Pescosolido in the Network Episodic Mod-
el) has not been explored in the UK context.

Pakistani women in England have lower rates of usage of outpatient mental
health services compared with women from White ethnic groups. Although there
has been an indication that social networks may have a role to play in the usage
of services, there is little robust evidence. Previous qualitative studies show
that Pakistani women’s social networks can be lacking in social support, leaving
women feeling socially isolated. Further, it is evident that Pakistani women’s social
networks may not contain network members that facilitate or encourage access
to mental health services.

This paper addresses previously unanswered questions of how the content
and function of networks are each associated with the access and usage of men-
tal health services, and how these associations may vary amongst women of dif-
ferent ethnic groups. Using quantitative data from an English community survey
(Ethnic Minority Psychiatric Illness Rates in the Community, 2000) this paper pres-
ents statistical models of the effects of social networks on access and usage of
services, and discusses how these vary between Pakistani women and women
from other ethnic groups. The findings are discussed in relation to the (lack of)
current UK mental health policies to address ethnic inequalities in service use.

WERCZBERGER, RACHEL* (Ben Gurion University, Rachelwercz@gmail.com)
New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to the fact that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Aageism in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan post-materialist, secular new middle class.

Drawing on post-Bourdieusian cultural sociology, we start by describing the theoretical and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to appropriate local religious forms, and to cosmopolitization them via New Age culture.

Career VS Children: The Effects of Institutional Background on Females' Subjective Well-Being Across Europe

The paper deals with life satisfaction and happiness among women in European countries. The research question is to disclose in which countries (with more liberal or strict labour market legislation) females are more happy to have job, kids or to combine children with employment. The author claims that women living in the countries with more liberal labour laws and open labour markets are happier to combine their work with childbearing than those women who have to re-enter labour market in the countries with very rigid labour legislation. The hypothesis is tested with the help of the European Value Study dataset for 2008 year, including 28 countries. The results of multilevel regression analysis proved that the hypothesis is correct. The results revealed that females are happier in those countries with family oriented labour legislations and at the same time where it is easy to find a new job, means lebral labour markets. In the countries with high rates of employment protection legislation females are more happy with jobs than with combining motherhood and employment. Conditional effects of multilevel regression was the results in a more detailed way. The paper could have important implications for social policy in European countries.

KARAISKOU, VICKY* (Cyprus Open University, v.karaiskou@ouc.ac.cy)

From Real to Ideal: Visual Narrations of Collective Traumas and Identities

The paper will focus on the commemorative sculpture in the Republic of Cyprus and comment the role attributed to individual actors in the process of narrating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are consecrated to the dead and missing during the political inter-communal and inter-ethnic conflicts. In Cyprus the construction of national identity and the enhancement of memory mechanisms are achieved through the promotion of the individual exemplary distinction within the social body and the personification of heroic models.

Comparatively, the paper will examine an example which is placed at the opposite: the anonymity of membership in creating the nation and heroic concepts in China. Both countries are newborn states despite their long history and rich cultural background. However, their radically diverse cultural backgrounds determine in a dramatically different way the position and the role of the ‘self’ within the social group. Greek-Orthodox tradition, under the hue of western Romanticism, mobilized personality cults in Cyprus. On the other hand, in China Socialism Realism summed up deeply rooted traditional behaviors and current political stands and revealed a different version of idealized interpretation of reality. Visual narration in China promotes the joy of the victorious results, the dynamics of the collective national struggles and the solid ground of today’s society heading to the future. Furthermore, in Chinese memorials male and female bodies are mundane vibrant actors vindicating the achievement of a shared goal. In contrast, Cyprus promotes martyrdom and orchestrates powerful connotations with a view to keep alive the collective traumas of the past. Commemoration focuses on the transcendental dimension of the individual heroes, on passivity and loss, and links them with familiar religious connotations.

KARACHENYU, AYHULLA (Saint Louis University, karmame@sfsu.edu)
This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic transitions, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analysis, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) the transition has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative “developmental” patterns during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

Gezi Uprising in a Macro-Comparative Perspective

This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were not the only ones. For instance, the cluster of movements known as the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single-country analytical models mostly constructed upon the experiences of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports on social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. For instance, the number of workers in the former defined neo-nationalist discourses being articulated from an “institutional power base”, “tactics” are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporarily and discursively slip through the “webs of power” that surround and constrain them.

KARNER, CHRISTIAN* (University of Nottingham, christian.karner@nottingham.ac.uk)

The Discursive Competition Between Very Different Counter-Hegemonies: Neo-Nationalism Vs. "Subaltern Counterpublics"

This paper draws on a decade of research on the politics of national identity and ethnicity in contemporary Austria. Employing a critical discourse analytical approach, it argues that in our current phase of globalisation and in the context of the EU as the “quintessential network state” (Castells 2000), the dimensions and meanings of counter-hegemony vary according to the political context and geographical scale being considered. Based on an analysis of diverse media materials, public debates and civil society organizations in Austria today, two very different forms of counter-hegemony are discerned: First, neo-nationalism as self-defining or based on the “transnational flows” and externalization of the “identities, interests and needs” articulated by groups of migrants and other subordinated groups in what Nancy Fraser (1993) terms “subaltern counterpublics”.

The discourse analysis of relevant data offered here revolves around the key-concepts of the topos or “structure of argument” (Reisigl and Wodak 2001) – and deixis, or “rhetorical pointing” (Billig 1995) effecting the (re)production of social boundaries. The central argument being developed is as follows: Key to conceptualizing the defining differences between neo-nationalism and subaltern counterpublics is Michel de Certeau's distinction (1984) between “strategies” and “tactics”, while the former define neo-nationalist discourses being articulated from an “institutional power base”, “tactics” are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporally and discursively slip through the “webs of power” that surround and constrain them.

KARNER, TRACY XAVIA* (University of Houston, tkkarner@uh.edu)

Poetics, Politics, and Possibilities: Visualizing Our Humanity

At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community--our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the role of emotions, especially empathy, in moral thought and action. In this research, the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self-aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathy impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vanities of the photographer. If the neurological research is true, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time.

The Facebook Gaze: Disciplining Action in Online Interpersonal Space

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Facebook as the most widely used social media site in the world has lead the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault’s Panoptican, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template. Creating a uniform normativity through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. Edgelfank, Facebook’s algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your Edgelfank score. Similar to the hermeneutic circle of the “self” which allows for an interpretable translation of the self, the Edgelfank score of self-constructed images that echo those shared and positively received by others, images that generate a large number of responses provide a model for expected and accepted contributions. Neuroscientists have also found that receiving ‘likes’ activates the reward center in the brain and these approval responses predict future Facebook use (Mersi et al. 2013). This informal, but immediate, feedback lets the individual know how well their performances are being received and assists them perfecting and refining their presentation to remain visible and included in this new form of society.

Job Is Not Everything. The Case of Return Migration from the UK to Poland in the Wake of the 2008 Economic Crisis

The human capital approach, which is dominant in the EU migration policy, suggests that migratory experience and resources are likely to improve returnee’s competitiveness and foster their successful adaptation on the home country labour market. Based on the analysis of the return migration from the UK to Poland in the context of the economic crisis in 2008, this paper critically examines this assumption.

It is estimated that within 8 years after the EU enlargement in 2004 about 0.7 million Poles went to work in the United Kingdom. At the same time it is suggested that about 250 thousand Polish immigrants in Britain decided to come back to their homeland. The financial crisis did not significantly influence the number of return migrants. It rather slowed down the new emigration and those who stayed in the UK employed wait-and-see strategy (Barcevičius et al.). The quantitative data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women). Simultaneously, they are much more likely to run their own business and work as a self-employed.

Addressing this apparent contradiction, this paper makes use of qualitative research to understand the conditions and process of successful and unsuccessful reintegration on the home country labour market. Based on the analysis of biographical interviews with the Polish return migrants from the UK to the Lower Silesia region in Poland, we examine the process of labour market reintegration as a result of the interplay of subjective and structural factors mediated by earlier biographical experiences. In the paper, the tentative results of an ongoing empirical study will be presented along with a theoretical discussion on the limits of human capital approach in understanding return migration.

Cooperation Between Strangers of Unequal Status

Recent studies of trust and cooperation in social dilemma situations focus on explaining how social identity processes - triggered by differentiation based on a nominal characteristic - affect cooperative behaviors among strangers. Few studies, however, predict and explain whether and how much cooperation occurs among strangers who vary by characteristics that have status value attached - i.e. characteristics that cause actors possessing one state of a given characteristic to be perceived as more worthy than actors possessing another state of that same characteristic. Even studies that incorporate the status hierarchies' effects into social dilemma models focus on groups' effectiveness in producing collective goods, rather than on the simplest trust-game type interactions. This might be defensible insofar as game theory predicts that status differences will have no effect on cooperation among strangers. Our paper takes a different approach: Using status characteristics theory, we predict that in a prisoner’s dilemma (PD) where actors are differentiated by salient status characteristics, the rate of cooperation will vary by the partner’s status relative to that of the focal actor, as well as by whether it is a simultaneous or sequential game. We report experimental results from a one-shot, two-person PD, before which subject pairs worked on tasks intended to manipulate the status of subject and partner. We test the following hypotheses: (1) in a sequential PD, if actors are differentiated by salient status, the rate of cooperation is higher when the low-status actor initiates the game than when the high-status actor does so; (2) regardless of the nature of the game, the cooperation rate among high-status actors is higher than that among low-status actors; and (3) in simultaneous PDs, the level of cooperation among status differentiated actors is at the same level as it would were they both high-status partners.

Contemporary Capitalism As an Economics of Seduction: Ethics and Justice Defined By An Aesthetic Principle of Pleasure

In neoliberal society, aesthetic seduction has become an important operator in economics. Commodities are successful only if they lure consumers. From an economics oriented towards practical and functional needs, there's a shift to multiplied fields of aesthetic productions. Aesthetic refinement has become the inner rationality and power element of neoliberal or post-neoliberal society.

Are we searching for the cultural logic of neoliberalism? As we must take reduction, the aesthetic powers of attraction, seriously. In this paper I will argue that the long-term commodification process has not only written the aesthetic principle of pleasure under producers' and consumers' skin but it might also be seen in ethical standards or even in legal proceedings. What it means to human culture and basic question of equality if ethics and justice are understood under market-based terms and values?

Gerhard Schulze has discussed of "the experience society", and Pine and Gilmore in their business theory of "the experience economy". Consumers are known to find experiences and emotions through services and commodities, but this theory could be developed forwards, by activating mental concepts, like experience or emotion, with more primal bodily connections and conceptualizations. Zygmunt Bauman has moved into this direction, by speaking of "the aesthetic consumption", and of consumers as divided into the seduced and the repressed.

Are we creating any space for controversial or critical voices under the hegemony of neoliberalism. This question is analyzed by taking a recent art censorship case, in which the court sentenced different terms for market and art referring it; business actions in porn industry were taken as legal, while art criticizing the same field was understood as a crime. Does the neoliberal ethics already demand that acts of anti-seduction - like market-critical art - can be interpreted as crimes?

Development Interventions, Livelihoods Security and Sustainability of Resources Among Tribal Communities of the South: A Case of Sugali Tribe

There is a direct link between livelihoods security and development interventions by different agencies and sustainability of the resources among the tribal communities of the global South in general and India in particular. The link between them is crucial to achieve the desired results of both sustainability of resources and livelihoods. It reduces the risks and paves the way for poverty reduction among the marginal communities of the South. To achieve the livelihood security, the donor agencies and also the State must take cognizance of and balance the existing local resources. This paper tries to address the interface between the poverty reduction strategies and to attain the goal of sustainable development, it is essential to examine the natural resource base among the tribal communities of Andhra Pradesh, South India. Further, it also tries to address the role of international donor agencies in bridging the gap between the haves and have nots, which is drastically increasing year by year without any change.

Objectives:
1. To examine the livelihood security and natural resource base
2. To understand the link between livelihoods security and poverty reduction
3. To assess the impact of developmental interventions in the tribal communities
4. To address the donor agencies or NGO’s role in sustainable development of tribal communities

Sources of Data:
Paper largely depends on the primary data collected from the field site among the Sugali tribe of Andhra Pradesh, south India. It also bases its inferences based on the data gathered from official reports and records, Census records, published as well as unpublished research reports, papers, etc., with reference to India. Besides, it also draws its inferences from the studies made by the authors and other scholars in Andhra Pradesh, India. It also takes into account the studies made in other parts of South Asia.
The government initiatives to enhance the situation of the rural mass, especially rural women, have paved the way to Integrated Rural Development Programmes (IRD) in India. As part of the IRDP, the Government initiated the formation of groups in the villages of rural India with the name as DWCRA or Self Help Groups (SHGs). With the help of the Government as well as donor agencies, the programme became successful in some parts of rural India and here are the cases where these groups became the symbol of success to neighbouring areas in the rural areas of Andhra Pradesh.

The present cases are situated in three backward areas of the Rayalaseema region of Andhra Pradesh, India. These three cases are different from each other but the ultimate goal of the three cases is the same as enhancement of lives and livelihoods of rural masses. The present paper tries to explain how the members of these groups have emerged as leaders in their respective areas and enhanced the lives and livelihoods of the people in general and women in particular in Andhra Pradesh. Three cases are Rythu Sangam (Farmers Club, Chittoor), Dalit Horticulture Club (Adilapur), and Village Organization (Anantapur) which have studied and regarded as the backbone of rural masses in the two districts of Andhra Pradesh.

The three initiatives have shown that people, rural women, have improved their awareness and enhanced their lifestyle. Further, it also explains how they have transformed the social groups by acting as adulting groups and labour which is benefited them to a large extent. To conclude, the paper has shown the importance of emerging leaders, rural women, in the rural areas of Andhra Pradesh.

In Greece the structure of rural society has changed profoundly since the 1960s. Rural exodus and consequent demographic ageing, restructuring towards more intensive seasonal farming and social rejection of wage labour in agriculture and living in rural areas created labour deficits.

The arrival of international migrants following the collapse of the neighbouring socialist regimes in Albania, Bulgaria and Romania meant new opportunities for the struggling Greek agriculture. The mass availability of flexible, cheap wage labour gave agriculture and rural areas an impetus of development and demographic regeneration.

The employment of these migrants was rather complementary than antagonistic to family labour often freeing family members to undertake other jobs outside agriculture and rural areas. The segmentation of labour markets between the informal and formal implied their smooth operation for the ‘benefit’ of both populations. However, the economic crisis variously affected the situation and the convergence of the labour markets. The crisis was now expected to bring closer the informal and the formal labour markets leading to a stronger competition for the same jobs the two populations.

Drawing from research material collected in a rural area where the intensive cultivation of strawberries was concentrated, the paper analyses labour relations and living conditions developed between oldcomer and newcomer migrant workers in the region of Elia in western Peloponessos.

The cultivation of strawberries is a typical example of an export driven industrial product while the employment of international migrant labour reflects the externalisation of reproduction costs and the demand led character of the labour market. It brought about that control over labour costs and labour relations is a critical issue for the competitiveness of the product. Thus, ethnicity, exploitation, racist production relations, irregularity of residence status and arduous working and living conditions are examined in the paper as part of this production model.

Sea level rise is one of the most critical climate change impacts that could exacerbate shoreline erosion, storm surge and flooding. As it represents a complex, uncertain and significant environmental, financial, social and legal risks to coastal populations, it demands a rethink of institutional arrangements for risk governance in the whole system of Australian coastline (Abel et al., 2011; Ryan et al., 2011; Lehman and Robinson, 2012). However there are challenges like conflicting expectations and normative judgements of values, contradictory perspectives of evidences and knowledge to deal with (Leitch and Robinson, 2012). Accordingly, the government will need to balance the aspiration, expectations and values of coastal communities by taking into account the socio-ecological and socio-economic changes which hold a vital role in the ability of local authorities to shift to new governance and practices (Leitch and Robinson, 2012; Taylor et al., 2012; Susskind, 2013). Failure to realize this may jeopardize the objectives of building trust, legitimacy and cooperation in risk management and impair the ideas of deliberation and inclusion. This paper presents the improved risk framework and governance. This transformative way can be achieved by a multiple approaches to risk governance through deep investigation and understanding of how social learning underpins risk perception, communication and decision making through negotiation and compromises and that it holds potentials to improve risk governance.

The aim of this research is to explore the meaning and the role of clothing for old women by analyzing their life stories. This means to investigate not only psychological but also sociological effects.

In general almost all elderly women have plural diseases in various levels. For example some old women need to be cared in nursing home or hospital, and the others don’t need but often go to hospitals from their own houses. We call the former type “dependent elders” such as dementia or bedridden people because of getting professional care and cure, conversely the latter one “independent elders” because of ability of social contribution as the volunteers in many kinds of fields.

But even if which type they are categorized, it would be desirable to wear their favorite clothing. The reason is that it would be helpful for them to maintain their Quality of Life (QOL) as a result of thinking positive and continuing to enjoy their activities. To investigate this issue, this research would emphasize the subjective recognition and experiences of their own clothing, and not the objective beauty of appearance and fashion trends.

Intensive data were collected as life stories of 7 elderly women including both types, “dependent elderly women” in nursing home and “independent” who had engaged the volunteer at medical agency. The interviewer asked all the interviewees to arrange some favorite pictures during their lives. These pictures helped to remember their clothing including some episodes and memories in their youth. As a result of content analysis, it is clear that “the meanings of clothing” and “the role of clothing,” for dependent and independent elderly women, are “Self-expression” and “the switch of identity”. It appears that the satisfied and favorite clothing as social body assist their lives when they confront some hardships.

According to T.W. Adorno, this society is full of contradictions, so the concepts of sociology cannot but be flawed and fractured. But he evaluates such a crackly character in sociology affirmatively because it enables sociology to grasp the essence of “non-identifiable” thing. If the concepts of sociology become too static and too systematic, sociology views society as the “identical” object and can’t face social contradictions. So Adorno intends to make a new style of sociology for the critical “non-identity” thinking. His narrative style is formed after art works, especially after avant-garde art. The purpose of this presentation is to consider Adorno’s unique style of critical thinking. Adorno emphasizes the hybrid character in sociology. He says that sociology has both philosophical and scientific characteristics. From Adorno’s view, sociology is a mixture of the European philosophical tradition and the American empirical science. This view is probably derived from his experience of exile. In other respects, Adorno’s sociology has hybrid characteristics between opposing things. For example, the study of The Authoritarian Personality used both quantitative researches and qualitative researches. By having multiple elements in it, sociology can comprehend a complex structure of social phenomenon. For Adorno, sociology is a jumble of various academic disciplines or methods of study. In
the lecture, Adorno says that sociology needs Chimerism and Quixotic attempts. Culture critique is as important work as social critical theory in Adorno’s thought, and these two aspects in his works are related. Adorno makes methods of comparative sociology which relates the modern western society and these two aspects in his works are related. Adorno makes methods of comparative sociology which relates the modern western society.

Between “Munesuke Mita” and “Yusuke Maki” -on the Possibilities of Fictional Construction By Sociology-

“Yusuke Maki” is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name “Maki” for creating a new style of sociology. Mita says that the name of “Mita” is used for works within the modern society and the name of “Maki” is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fiction sociologist “Maki” for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita’s project “Maki.” Maki often uses the word “clarity” affirmatively, and there are two aspects of this word in his works. The first connotation is the clarityness and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber’s “ideal types.” But such a fictional character in sociological theory enables us to have a theoretical “clarity.” The second connotation of “clarity” is unmediated interaction between people in society. Maki’s definition of “Gemeinschaft” uses this aspect of “clarity.” The fictional sociologist “Maki” creates the image of a not yet existent utopia by combining these two aspects of “clarity.” Here is a fictional possibility of sociology. Maki’s social theory intends to create a sociology beyond the modern rationality. But it doesn’t ignore or deny the potential of modernity. He seeks to change the direction of the modern rationality. The early works of Mita and Maki largely depend on modern Western sociological theories, and in the later works Maki creates his original perspective of comparative sociology which relates the western modernity. A consideration of Maki’s social theory probably links to a consideration of social theories in a non-western world.

Strong Family Ties and Demographic Behavior in Japan

This study investigates the effects of intergenerational family ties on demographic behavior such as marriage, divorce, marital fertility, and women’s labor force participation during the child rearing period, using retrospective life history data from a nationally representative survey in Japan.

Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and bereavement. The proportion of couples co-residing with the husband’s parent(s) or with the wife’s parent(s) at the time of marriage decreases from about 40% for those born in the 1930s to 20% for those born in the 1960s. However, the latter cohort starts living with their parent(s) soon after marriage, and then over 30% of them co-reside 10-15 years after marriage, showing a decline in proximate residence. The proportion of couples co-residing with the couple’s parent(s) is over 20%, higher than other cohorts, from the time of marriage onward.

A series of event history analyses shows interesting results: Intergenerational co-residency and/or proximity have strong positive effects on marital stability, marital fertility, and the labor force participation of married women. It suggests that weakening intergenerational ties can be a key cause of current demographic problems such as later and less marriage, rising divorce rate, very low fertility, and women’s labor force exit upon family formation.

In the past decade, much has been written and discussed about the relationship between strong family and low fertility. However, little literature has presented the whole picture of the relationships between strong family and demographic behavior. This paper will try to fill the gap.

KATO, KUMI* (Wakayama University, kumikato@center.wakayama-u.ac.jp)
Wolf, Extinction and Fukushima

Itate, Fukushima is a village designated as ‘whole village evacuation’ since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the “The most beautiful villages in Japan”, and was renowned for its high quality beef and dairy products. The farming community’s spiritual well-being is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Sasu called Yama- sumi-jinja. The shrine’s guardian or holy messenger is a wolf considered to protect farming villages from pest animals such as deer, boar and monkeys. The wolf’s mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Ansei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yamatsumi-jinja, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual well-being of the community deeply ingrained in the spirit of the place is critical in the reconstruction process even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt ‘anti-nuclear’ action.

KATO, KUNIKO* (Utsunomiya Kyowa University, kato925@ca2.so-net.ne.jp)
Intergenerational Relationships Between Adolescents and Their Grandparents in Japan

Intergenerational bonds among family members may be more important today than in earlier decades, because the individuals today live longer and share more years and experiences with members of other generations (Bengston, 2001). Relationships in child care and education are also the highest. The data includes 198 Japanese college students aged 20 to 21. The questionnaire included questions concerning their perceptions of the relationships with their grandparents and ICT communication with their parents, grandparents, friends along with demographic information. Multiple regression analysis was used.

The adolescents are likely to have greater satisfaction of the perception of relationships with their grandparents. In addition, having overly burden of the relationships with their grandparents are associated with little conversation between the adolescents and their fathers. Their higher commitment to their grandparents is related to their increasing the communication with older persons by e-mail and face-to-face communication.

Based on my findings, I suggest that Japanese society needs to consider the ways to facilitate communication between adolescents and their grandparents in order to build intergenerational relationships. It is also important to promote the perception of relationships between adolescents and their grandparents on influence processes within the grandparent-parent-grandchild triad in Japan.

KATTAKAYAM, JACOB JOHN* (University of Kerala, jikattakayam@yahoo.com)
Abuse Among Older People: An Invisible Discrimination

Absence of globalisation, modernisation and technological change, and the rapid transmission of knowledge have resulted in lifestyle changes and corresponding adjustments in cultural values. Improved healthcare, lifestyle changes and the subsequent increase in life expectancy have challenged traditional images of old age. Today, one-eighth of the world's elderly population live in India. The increased life expectancy in India is also leading to four-generation families. Kerala finds itself facing a huge human development challenge in the form of its elderly population that is burgeoning faster than other Indian states. Despite glowing accolades praising the Kerala economy’s improved performances in recent years, marginalised groups like the elderly have remained discriminated and neglected.

In many countries, older people are being treated unfairly by stereotyping and discriminating against them. Deprived of work, dependent on charity or old-age pensions and suffering from all types of physical ailments and are regular victims of robbery, assault and other crimes. Elder abuse constitutes different forms of abuse like neglect, disrespect, verbal abuse, physical abuse, financial abuse, psychological and emotional abuse or even sexual abuse. The discrimination that
older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependency. This article focuses on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders' perception of abuse. This paper focuses on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

**KATTAKAYAM, JACOB JOHN** (University of Kerala, jkattakayam@yahoo.com)

**Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India**

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Further, inadequate public healthcare facilities and expensive private healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. Hence, for social security during old age quite early. The Indian Constitution guarantees social security in old age under its Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government's social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based provisions of social assistance are now firmly recognised. It is noticed that more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitise the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

**Informal Caregivers' Expectations and Experiences of Hospital Admission of a Relative with Dementia**

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWD) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (QoL-AD and EQ-5D), severity of dementia (MMSE), carer stress (GHQ), activities of daily living (I-ADL) physical illness and depressive symptoms (GDS), and economic data on care services and resources (Sheehan et al 2012). These measures were repeated at six months and at twelve months where feasible. In the second phase caregivers whose relative was planned to be discharged to a long term facility were interviewed several times, the final interview took place about four months after the admission of the PWD to the facility (Katz et al 2013). This paper focuses on a) caregivers' observations whilst the PWD was in hospital and b) the process of choosing a facility.

Concurrently and retrospectively family caregivers gave detailed accounts of their relative's care in hospital. They varied considerably in their assessment of the quality of care received, but many focused on the patient's physical and mental deterioration during the hospital admission. Caregivers noted how their roles vis-à-vis their relative changed, and described their emotional and practical reactions to what they observed. Most recounted a difficult process of being an 'outsider' to the care of their relative and feeling guilty and remorseful. Caregivers described their experiences of having to choose a long term facility (often at short notice) with relatively little guidance from hospital or social services. This paper focuses on their perceptions of the conflicts caregivers face in endeavouring to provide protection for their relative whilst simultaneously carrying out their (filial) responsibilities.

*If I Had Cancer I Would Get Loads of Sympathy, 'Cos It's HIV, I Can't Even Tell Anyone*: Young People's Understanding of the Stigma of HIV

There is little research which has documented how the stigma of HIV is understood by young people who have grown up with the virus. This paper presents the experiences of twenty-eight participants living with perinatally acquired HIV in the UK. At the same time as being formally told their diagnosis participants recalled being alerted to the stigma of HIV. They are advised to keep their status secret to avoid discrimination or rejection. The fear and experience of stigma was reported as central to their experiences of growing up with HIV. Participants observed that HIV is viewed differently to other illnesses, and believed that, unlike other health conditions, HIV did not evoke a sympathetic or supportive response. The young people identified the negative and derogatory talk around HIV in wider society as affecting their self image. Through their observations of the negative media representation of HIV coupled with the lack of positive role models, they learn that it could be counterproductive to be open about their status.

This paper presents the strategies participants devised to avoid stigmatisation. This includes an alternative biography to explain hospitalisations and illnesses, conceal medication in the home, hide the taking of medication at school and with peers, deny knowledge and awareness of HIV and learn 'the code of silence' and to 'keep their heads down'. The external negative representation of HIV HLV+ere-enforces the stigmatised nature of their condition and young people in turn feel stigmatised. Young people's explanations of the stigma of HIV identify the link between sex, promiscuity, racial stigmatisation, fear of infection and association with homosexuality and intra-venous drug use. Participants themselves construct a hierarchy of blame: those perinatally infected are 'innocent' whilst those infected through sexual contact or intra-venous drug use are seen as responsible for their own infection.

**This Ain't Mere Eco-Nationalism: Undervalued Cultural Roots of the Lithuanian Green Movement**

A nation state embodies the political order of the modernity in contrast to contemporary Green movements foreshadowing its end (Hurrel, 1994; Lash et al, 1996). Consequently, nationalism and environmentalism are considered to be hardly compatible companions (Hamilton, 2002). Therefore a puzzle of the Greens, found at the vanguard of independence movements of Central and Eastern Europe in late 1980s, is often resolved with a simplistic disavowal of their “green” identity. In words of American scholar Jane I. Dawson, here Green movements were no more than a manifestation of eco-nationalism, a mere surrogate for a hidden nationalist strike (Dawson, 1996, 2000). The paper aims to challenge this “nationalist thesis”, a reductive and homogenizing reading of eco-mobilization of 1980s in the region, bringing to the fore a deeper empirical look into complex and diverse cultural origins of pioneer organisations of the Green Movement (Lietuvos Zalieji) in Lithuania. Archival analysis and in-depth interviews with surviving fathers and active members of the Movement reveal tangible distinctions in the collective identities (Melucci, 1995) of three earliest voluntary environmental associations, Zemyna, Aukuras and Atgaja, in Lithuania. The identity work and differences among the early Greens are poorly explained by eco-nationalist argument, however, their mutual tensions are well represented by the classical distinction between anthropocentric and ecocentric worldviews (Naisi, 1973; Eckersley, 1992), embedded in peculiar local cultural meanings of ‘nature’ and conflicting logics of soviet environmental modernization, (neo)traditionalist apotheosis of indigenous ‘ethnoscape’ (Smith, 1999) and lively postmodernist celebration of the ecology of countercultural lifeworlds. These findings negate an urge for a more rigorous and subtle approach to the play of cultural fields and cultural notions of ‘nature’ in environmental/ ecology movements not only in Europe but also worldwide, including Asia (Thomas, 2002).

**KAWABATA, KENJI** (The University of Tokyo, kawakj@gmail.com)

**How to Conceptualize Social Inequality after Risk Concept?**

How to conceptualize social inequality after risk concept? The risk concept has been in sociology with the publication of Ulrich Beck's Risk Society (Beck 1986). One of the most important thesis of Risk Society is the "paradigm" shift of social inequality. Beck claimed the "change from the
logic of wealth distribution in a society of scarcity to the logic of risk distribution in late modernity. Thus he pointed out the appearance of risk society "in contrast to class society."

However, Beck's thesis has been criticized in several researches by showing the continuity of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer Geißler (Geißler 1996). J.H. Goldthorpe, (Goldthorpe 2002) etc. Then how can we understand social inequality covering the relevance of risk and class. The issue is to integrate the relevance of risk and class to understand contemporary social inequality. And we need a concept which integrates class elements and risk elements.

This presentation attempts to figure out the issue to integrate class and risk concept focusing on 1980's individualization dispute in Germany.

**Acceptance of Foreign Nurses Based on the EPA in Japan and Future Challenges**

**Objectives:** The acceptance of foreign nurses started in Japan from 2008 under the Economic Partnership Agreements. Over 400 nurses have come to Japan from Indonesia and the Philippines thus far. If they do not pass the exam within 3 years, they basically have to return to their countries. They can work in Japan as nurses if they pass the Japanese national board exam for nurses within 3 years after coming to Japan and they will be paid the same or more as Japanese nurses. Passing the national board exam for nurses is the main issue for the foreign nurse candidates. So far, the rates of foreign candidate passing the national board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and 9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing the exam is very challenging for them considering the fact that the overall pass rate for Japanese applicants is approximately 90%.

**Methods:** We conducted a study on the practice national board exam targeting Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia. We requested them to take the Japanese national board exam translated into English and Indonesian and analyzed the exam results.

**Results:** The percentage of correct answers was low even though the practice national board exam for nurses was written in English or Indonesian.

**Conclusions:** Because the percentage of correct answers was low in the study on the practice national board exam for nurses, we believe that there is a difference in the nursing training curriculums and nursing itself in each country. It is necessary to compare and study the differences in nursing training curriculums in each country as soon as possible.

**Environmental and Ethical Implications of Food Consumption Affecting Distant Countries: How Aware Canberra and Tokyo Community Gardeners of These Issues**

Global food system has developed with the increased power of agri-food corporations. Under the current structure, wealthy people tend to over-consume food, while poorer people are experiencing social inequality and degradation of their environment. Recent studies around 'alternative' food systems have highlighted grass roots movements, especially in industrialized countries, for democratically and environmentally sustainable food systems, which often focus on local food production. However, it is still necessary to discuss environmental and ethical soundness of global food production and consumption, because it is unrealistic to expect that local food systems can immediately become the dominant structure of food society. To begin to transform the current dominant system, it is important to explore whether people who are engaged in ‘alternative’ food systems understand and care about the ethical and environmental issues around global food systems, from consumer point of view. Consumption attitude of imported food is a key, as citizens in wealthy countries are the major actors of global food consumption, who have strong power to choose what to buy, and can create demand, even though this power is restricted. This study may then point to the possibility of these people engaging in ‘alternative’ food system becoming agents for global change.

This study examined whether community gardeners in industrialized countries have an understanding of, and interest in, the ethical and environmental implications of the current global food supply chain. This study compares Canberra (Australia) and Tokyo (Japan) as case studies. Initial analysis of interview data suggests that participants from Australia expressed a stronger understanding and awareness of ethical and environmental issues occurring outside the country than Japanese participants. The cultural, political and economic differences, including different position in the global food system (Australia as a net-exporter and Japan as a net-importer), underlying these results will be considered.

**KAWAI, KYOHEI** (Tokyo Institute of Technology, k-kawai@cablenet.ne.jp)

**On Hannah Arendt's Understanding of Society or the Social: Resisting Unprecedented Crises**

Hannah Arendt stated in The Human Condition her intention to understand society or the social as well as provide criticism on society and salvage the political to promote appreciation of and resistance against unprecedented crises. In her pursuing an understanding of society, she has adapted a unique method tracing back to the distinction between the public and the private in ancient Greece as the origin of society, and then referring to the history of theories on society presented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above method and argue that society is fundamentally ruled by the biological life process. Therefore, human life and activities in society are regulated based on whether each person contributes to the sustenance of the life process and multiplication of lives. This interpretation can link Arendt's understanding of society in The Human Condition with her descriptions on unprecedented crises in her other writings, especially The Origins of Totalitarianism. Arendt has stated that when people are extremely forced to contribute to a function of the life process, an ideology forms out of ideas of race, body, and other biological things contributable to such a function. By rise of such an ideology, People not contributable to the function have been removed to a condition of complete rightlessness in imperialism and concentration camps in totalitarianism. Moreover, to accelerate the function of the life process, humans apply nuclear fission to harness nuclear power at the risk of irreversible danger, "to act into nature".

In addition, this paper outlines my attempt to search for a normative theory in her arguments on resisting unprecedented crises by focusing on her concepts of forgiveness and promise.

"I Don't Want to be a Burden": Japanese Immigrant Acculturation and Their Attitudes Toward Non-Family-Based Elder Care

Elder care remains in the family sphere in Japan while elderly Japanese immigrants in the U.S. are actively planning to utilize formal care services. Although social structural conditions may explain these differences, they do not fully explain how Japanese immigrants have developed norms of independent living and utilization of formal care services. This paper will focus on how Japanese immigrant women's value acculturation leads to their cultural preference for non-family-based care. They seem to accept the U.S. norms of the independent parent-child relationship and see their children as "other" individuals rather than "inseparable" family members who are obligated to fulfill their filial duty. This value acculturation may manifest in their preference for independent living, friend-based support, and utilization of formal care services. This ensures their middle aged children's freedom from filial care duty by showing no expectation of it at all.

**The Reception of "Art for art's sake" in Japan: Case Study of a Classical Music Festival Audience**

The purpose of this paper is to examine how the idea of "Art for art's sake" is received in contemporary Japan from the perspective of music and the human body. The concepts art and artist are typically described as relatively new conceptualizations that originated from modern European societies. In pre-modern societies, musicians were usually not regarded as artists, but rather as artisans who produced their work based on orders received from patrons. Therefore, their work was not regarded as art but as extensions of rituals or worship practices. However, during the modern period, a movement started that viewed these activities as art. It appears that the ideal of Art for art's sake provoked impetus to this movement. In this study, we therefore attempted to determine the reception of Art for art's sake in contemporary Japan. Research data were collected using a survey of the Saito Kinen Festival Matsumoto, which is one of the most famous music festivals in Japan.

The analysis focused on factors that oriented people toward the ideal of Art for art's sake, and the results demonstrated the following major findings. First, people who attended the festival because of their relationships rather music interest tended to demonstrate an orientation toward Art for art's sake. Second, participants who were closely involved with classical music indicated a strong orientation toward Art for art's sake. Third, people who were introduced to classical
music by listening to it with media, such as televisions or radios also indicated a strong orientation toward Art for art's sake. The results indicate that as people consume music through media rather than their bodies (e.g. playing musical instruments or attending music concerts), their musical consumption become individualized and their perspective on the ideals of art more purified.

From Clinton's Anti-"New Terrorism" Policy to Bush's "War on Terror": Presidential Transition in the Anti-Terrorism Policy of the United States

This paper aims to tackle the question of why the United States came to launch the war against Afghanistan and Iraq under the name of "Global War on Terror." To clarify this problem, I examine the historical usage of the concept of "terrorism" by the two U.S. administrations surrounding the 9/11 attacks in 2001. It is notable that some terrorist scholars were able to "predict" the emerging threat of the religiosity of the monasticism as "New Terrorism" shortly before the 9/11th attack on the World Trade Center. Scholars such as Daniel Benjamin and Steve Simon argued in the paper published in Survival that more lethal and dangerous threat of the religious terrorism was increasing. This poses a serious puzzle; because even those scholars themselves admitted that there were no dramatic statistics similar to the evidence before the 9/11 attacks. To answer this question, I focus on the concept of the "religious motivation" in those scholar's arguments, and perform a conceptual analysis. By doing so, I argue that the advocates of the "new terrorism" did not insist the newness of the "new terrorism" based on the empirical data of the lethality of terrorist attacks at the time, but in fact they redefine the conceptual dichotomy of "religious/semi-religious" based on the standard of negotiability, by which the "new terrorists" were characterized as non-negotiable and irrational jihadists. This new concept of "religious motivated terrorists" made possible the policy prescription of "war on terror" of the Bush Doctrine, which justifies the preemptive attack to those new terrorists and the "rogue states" which were supposed to harbor those terrorists.

Power Transition in the Legitimation Mechanism of Fashion Designers

Prior to the advent of the Internet and social media, fashion designers' reputations were legitimated by industry professionals who attended biannual fashion show events that took place in the major fashion cities, such as Paris, New York and Milan. It was their prerogative and privilege to be part of the by-invitation-only circle. Consumers and the general public eagerly awaited for the press coverage in newspapers and magazines to see what is going to be in trend the next season. It was an exclusive status to be a member of the industry because they were the "gatekeepers" of fashion who consecrated the designers. This mechanism of hierarchy has been completely overturned by the invention of the Internet and social media. Social media platforms such as Facebook, Twitter, and other social networking media, have made the luxury designers no longer interested in having a fashion show, and they communicate with their followers directly via social media. Their fans wear their favorite labels, take pictures with their smartphones and instantaneously post them on blogs, twitters, and Instagrams. This communication occurs on a minute-by-minute basis. The fans are making an invaluable contribution to the publicity and the promotion. Amateur bloggers with insatiable appetite for fashion are just as powerful and influential as professional magazine editors. Luxury brands that were reluctant to rely on the social media since they reach too wide an audience are finally and influential as professional magazine editors. Luxury brands that were reluctant to rely on the social media since they reach too wide an audience are finally

Family Support and Mental Health Care for the Japanese Self-Defense Force Personnel

Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 190,000 personnel at one point. In the increased operational tempo, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (JGSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and "Mobile Counseling", or outreach programs, to provide mental health care to JGSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families' perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of "community capacity" model will be discussed in terms of enhancement of social support networks for the JSDF families.

New Middle Class in Singapore As a Global Creative City

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed in the last 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intensions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would trace the historical transformation and analyze the sociological meanings. Singapore would compare with some South-East Asian case. In particular I would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and people. Especially I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities.(227 words)

Social Friction in the Community Hosting Evacuees of Nuclear-Disaster in Fukushima: A Case Study of Iwaki City

The Fukushima Nuclear disaster has brought various and complex social division, not only to those communities forced to evacuate but also to the communities hosting evacuees. Iwaki-City, Fukushima Pref., is currently hosting about 24,000 evacuees from several municipalities, which is the largest evacuee-hosting
municipality in Japan. One of the issues in the aftermath of disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and supporters in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existed social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and social changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women's perceptions, and their negotiations with rising phenomenon of femicide in Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out variation against women, and femicide as an extreme practice of violence through interrelationality with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class position, this study analyses women's emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women's practices in everyday life and re-constitute social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women's agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

Turkish Sociology's Footprint in the History of Sociology

A simple glance at the classical or contemporary sociological theory books is enough to recognise the general tendency of limiting the history of sociology to the West in general without even mentioning the existence of other sociological traditions. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology.

As the need for knowledge and practice of sociology in Turkey was different from the conditions the West was facing, development of sociology had its own unique way in Turkey. Sociology as an academic discipline was first taught in Daru-funun (House of Sciences) which was a higher education institution in the Ottoman Empire period. After the collapse of the Ottoman Empire and with the emergence of the new Turkish Republic, new reforms took place in higher education. In 1924, a decree was made that established Istanbul University then up until now lots of sociology departments have been established at various Turkish universities.

One of the assertions of this paper is that while sociology is considered as a mere Western heritage, the history of sociology's emergence and involvement in higher education in Turkey also show that particular social and historical contexts of Turkey have created different needs for and relations with it as a science-resulting in different approaches and traditions which are also scientific and historical contributions and which should not be overlooked.

Attributes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part1)

Purpose: Although there is a sizeable body of social research on gender inequality in Japan, biases against sexual minority groups have remained largely uninvestigated. Through surveying university students, we examined the feelings of heterosexual people towards sexual minorities.

Method: We conducted questionnaire surveys at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambiguous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with gays, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS is the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren't accepted due to their failing to fit into the binary. Although the feeling of rejection towards male homosexuality is stronger than that towards female homosexuality, it also suggests that gay men tend to be associated more with sexual matters than lesbians.

Social Security and Orphans in Foster Care: The Experiences of Social Workers and Home Based Care Workers in the South African State's Provision of the Foster Care Grant

South Africa's HIV epidemic remains the largest in the world. It is estimated that there were 5.6 million people living with HIV in 2009 (WHO, 2011: 24). South Africa had an estimated 1.9 million children who had been orphaned by AIDS by 2009 (SAHRC, 2011: 57) and this figure is expected to increase to an estimated 4 million children (approximately 10% of the entire population) by 2015 (Whiteside and Sunter in Madhavan, 2004: 1443). The South African state has a well-developed system of social security. The state introduced a foster care grant, which is unique to it, in response to the HIV and AIDS pandemic (Hearle and Ruwanpura, 2009: 427). For the state to get the foster care grant to the orphans there are at least three means to play a mediating role between the state and the orphans in foster care. This paper pays particular attention at the experiences of social workers and home based care workers in the South African state's provision of the foster care grant in Ha-Makuya, a rural district in Northern Venda (Limpopo Province). During the Apartheid era, Ha-Makuya suffered systematic underdevelopment and is now considered to be a national poverty node (Berman and Allen, 2012: 81). Data were collected from seven purposively sampled social workers and home based care workers who were interviewed in May 2013. It was found that the application of the foster care grant was dependent on the role played by the home based care workers as they were the ‘eyes in the community’ and also they, according to the social workers, ‘liaised’ with them. This paper also illuminates the functionality of other social institutions. These social institutions include the family, the legal system and the social services.

Detecting 'Ripple Effects' Of The Canterbury Earthquakes in a National Longitudinal Study Of Aging

The timing of the 2010 and 2012 surveys conducted by the New Zealand Longitudinal Study of Aging provides a clear “before and after” dimension to the exploration of the impacts of the Canterbury earthquakes, on the study population of older people. Our data shows some effects (after controlling for baseline differences) on attention and memory, and physical and mental health, according to location, and degrees of recorded direct and indirect exposure to the Canterbury earthquakes. In particular, the aspects of control and self-realisation within the quality of life measure show different trends based on location and exposure to earthquake effects. Other psychosocial measures of loneliness and depression also show regional differences. These differences are not unidirectional or consistently negative, to the extent that some exposure suggests positive outcomes on some measures. The relevance and value of these findings in terms of policy will be further enhanced by our future ability to continue to track such effects over the longer term, in light of the scale and duration of the Canterbury recovery process, and of other emerging phases of this country’s exposure to a potentially hazardous seismic environment.

Health, Work, Caregiving and Retirement in the New Zealand Context

Several features of the New Zealand policy context provide an interesting comparative perspective on the relationships between caregiving, paid work and health status in the fifth wave survey of a national sample of participants aged over 55 years, drawn initially in 2006 from both the general and the Maori electoral roll. Relatively high workforce participation rates for those aged over 65 years, followed the final removal of mandatory retirement in 1999, and a universal national superannuation system has been retained alongside the development of a voluntary contributory fund, known as KiwiSaver (introduced in 2007). Legislation (ISPA) to provide a ‘default on’ filter to address anxieties about internet filtering of such content. However, the exposure of children to inappropriately constructed means of regulating the internet in many countries. The availability of pornography involving child sexual abuse is understandably an emotive concern, especially in the UK and Australia. A preliminary analysis hints to three potential “entry points” into modern sociology: Spanish history of ideas that refers to Ibn Khaldun’s heritage; debates between organicists and historical sociologists at the Institut International de Sociologie; as well as Vienna as a place of debate around Ibn Khaldun, possibilities through the influence of Ottoman social thinkers. The paper then provides more detailed textual analysis of the reception of the Muqaddima by two important early sociologists, L. Gumplowicz and F. Oponheimer, with regard to their “sociological theory of the state”. The way in which they mobilise Ibn Khaldun as a reference is particularly interesting with regard to the question in how far sociological theory is context-bound as opposed to generally true.

Stressors and Resilience Resources: Exploring the Significance of Subjective Social Status and Objective Social Status for Depressive Symptoms Among African American and Afro-Caribbean Women Residing in the U.S.

Studies in the U.S. often find that black women report more subclinical depression and psychological distress than whites or black males. Scholars argue that these disparities arise from the intersection of race, gender, and social class that converge in unique ways to place Black women at higher risk of poverty and its associated stressors that challenge their emotional well-being. Stress research indicates that the strong inverse relationship observed between objective measures of social standing (e.g., education and income) and mental health arises from greater exposure to stressors and/or the lack of coping resources among the economically disadvantaged. Recent research suggests that subjective rankings relative to others may be even more influential. This study used data from the National Survey of American Life to investigate the association between objective and subjective social status and depressive symptoms among black women residing in the U.S. Using regression analyses, we investigated the extent to which two chronic stressors—perceived discrimination and financial strain—and four sources of resilience resources—religion, community involvement, emotional support from family, and racial/ethnic group evaluation—mediated or moderated the association between status and symptoms. Findings revealed a strong negative relationship between subjective status and symptoms for both groups of women and a less robust relationship between education and symptoms for...
Father-Child Relationship Quality in Living Arrangements after Divorce

Based on multi-actor data from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender of the child and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. Our results reveal that children who live in families with joint physical custody have indeed higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live mainly with their mother. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child’s gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men’s gender role attitudes explain men’s paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father’s role of providing is highly important, there is scant research that directly addresses providing as a form of paternal involvement. Second, I aim to unravel father’s role of providing is highly important, there is scant research that directly addresses providing as a form of paternal involvement. Second, I aim to unravel father’s experiences with paternal involvement. In most studies, scholars use the simultaneous measurement of father’s views on parental roles and paternal involvement before these men enter parenthood. In other words, the quality of the father-child relationship.

Father-Child Relationship Quality in Living Arrangements after Divorce

There is growing evidence that providing increased voice to vulnerable or disenfranchised populations is important to improving health equity. In this paper we will examine the movement of Aboriginal people and organisations in local governance reforms associated with the Indigenous Health National Partnership Agreements (IHNPA) in Australia and its impact on the uptake of health assessments.
The sample included qualitative and quantitative responses from 188 people involved in regional governance in Aboriginal health. The study included data on the uptake of Aboriginal health assessments from July 2008-December 2012. The eligible population was 83190 in 2008/2009, 856986 in 2009/10, 88256 in 2010/2011 and 90903 in 2011/2012. Logistic regression was used to examine the relationships between organisations within forums and the regional uptake of Aboriginal health assessments. The independent variables included before and after the IHNPA, state, remoteness, level of representation from Aboriginal organisations and links between Aboriginal and non-Aboriginal organisations.
The introduction of the IHNPA was associated with a shift in power from central government to regional forums. This shift has enabled Aboriginal people a much greater voice in governance. The results of the analyses show that improvements in the uptake of health assessments were associated with stronger links between Aboriginal organisations working with other Aboriginal organisations and between non-Aboriginal organisations working with Aboriginal organisations. Higher levels of community representation were also associated with improved uptake of health assessments in the IHNPA. The findings suggest that the movement of Aboriginal people and organisations in local governance reforms associated with the Indigenous Health National Partnership Agreements (IHNPA) in Australia and its impact on the uptake of health assessments.

Getting Better All the Time? Selective Mortality, Attrition, and Compositional Changes in Longitudinal Studies on Ageing

By default, life-course studies on ageing include selection processes. Selective mortality changes the composition of samples as people age. In addition, in longitudinal studies, this selection process may be compounded by selective attrition. Conversely, the distribution of important social attributes, such as education and social class, is likely to change over time in any given study cohort. The aim of this study is to explore changes in the distribution of baseline sample characteristics due to i) selective mortality and ii) attrition in an ageing panel sample (born 1914-1934) throughout different follow-up waves (1968, 1974, 1981, 1984, 1986, 1990, 1992, 2000/2002, 2011). The study is based on nationally representative longitudinal survey data from Sweden (Swedish level of living survey – LNU and The Swedish panel study of living conditions of the oldest old – SWEOLD).

After 43 years of follow-up, 67% of the total sample (N=2335) had died, and an additional 16% had been excluded because of non-response in at least one follow-up wave. The proportion women in the sample increased from 50% to 60% because of selective mortality. The mean level of education increased among both men and women. Similarly, changes in class structure were observed for both sexes. In particular, the proportion of manual workers decreased and the proportion of non-manual workers in the sample increased over time. In both women and men, the changes in class structure were compounded by attrition. In men but not women, selective attrition also compounded changes in education.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up. The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies

The emergence of the welfare state provided a countervailing force against the social ills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations. Despite ideological and institutional theoretical perspectives, we find that individual attitudes are attracted to the material returns of the welfare state and envy of those who have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (46 countries; 112 country-time points; 120 individual attitudes). We conclude that resource acquisition as opposed to equality or social cohesion drives the impact of welfare state institutions on individual attitudes.

Between State Bio-Power and Social Bio-Politics Documented and Undocumented Migrant Care-Workers in Israel

The paper deals with tensions emerging between high demand for migrant care-workers in affluent economies and their simultaneous construction as a demographic threat to the nation’s political body. Drawing on the empirical analysis of the Israeli case, an ethnically defined nation state and a major ‘insoucer’ of labor migration, the article examines how these tensions are put in display in the topical realm of migrants’ family formation and unity within host countries. It argues that while contradictions between the reproductive labor of migrant care-workers and their reproducing bodies are closely connected to gendered state policies managing labor migration, they manifest differently along the legal/illegal continuum of migration status. Thus whereas documented care-workers are subjected to the regulation of their employment conditions and protected by labor laws, they are also directly exposed to state and employers’ control on family formation. Paradoxically, undocumented domestic migrants who are for-saken to unfettered dynamics of informality and risk of deportation, gain space for greater maneuver over the creation and maintenance of family life in host countries. Moreover, difference in the management of the reproductive-reproducing dyad around care workers according to their legal status, shape the repertoires of contention available to civil society organizations and networks as they try to assert migrants’ rights to family life in the context of global feminization of migration and stringent control policies.

Socioeconomic Influences on Inequalities of Wellbeing in Later Life: A Study of Australian Baby Boomers

Promoting health and wellbeing in individuals across the life course has become a priority for many governments and policy makers around the world. There is increasing recognition of the value of subjective measures of wellbeing as a complement to the more traditional, objective measures of health and wealth. In Australia there is a widespread view that the early post WWII birth cohort has been advantaged relative to later cohorts but there has been little attention to the origins of inequalities arising from earlier life experiences within the cohort. This paper begins to address this gap by examining the influence of earlier life course exposures on subjective wellbeing among a sample of Australian baby boomers aged 60 to 64 years from the 2011-12 Life Histories and Health (LHH) survey (a sub-study of the NSW 45 and Up Study). Inequalities in childhood social position – notably parental social class and education – were found to have small but significant effects on later life wellbeing. The childhood influences operated mainly through their relationships to adult attainment of socioeconomic position such as highest education, occupational class and household income. Differences in childhood health also impacted on later life wellbeing through associations with adult health and physical capacities. Overall, there was evidence that advantages or disadvantages experienced in both childhood and adulthood had a cumulative effect on wellbeing on entry to later life. These findings underscore the value of examining wellbeing, not only proximal, but also earlier, distal life course determinants of wellbeing and the importance of reducing inequalities in health and wellbeing across all stages of life. Comparisons to English Longitudinal Survey on Ageing will indicate the influence of societal differences in socioeconomic development and public policies on wellbeing outcome.

Insights from the Past: Disaster Research and the Second Environmental Crisis

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet a second environmental crisis occurred in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as Silent Spring and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact wideranging laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the Environmental Protection Agency were created to tackle toxic challenges to health and wellbeing. This was a time of both rapid policy innovation and moral transformation regarding human interaction with the environment. In this paper, we consider how the experiences of that earlier era can inform needed change now.

Consumption Behavior and Disaster Recovery: Insights From Eight Years In a Living Laboratory

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams and drawing from extant research in marketing, sociology and psychology, this body of work investigates the short- and long-term effects of these natural disasters on consumers’ consumption behaviors and how these behaviors aid the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveying (n=448) conducted in the weeks and months after impact sheds light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evolving views of possession). Follow-up surveying (n=176) four years after a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.

This paper presents findings from research in six branches of a Wal-Mart owned food chain in Johannesburg, South Africa. Wal-Mart entered South Africa in a newsmaking majority share owner-buy-out of South African listed Massmart, Holdings in 2012. This paper explores the results of research with shop floor workers. It details labour conditions and worker frustration with company and unions, alike. It examines worker politics in these stores as they struggle to combat the erosion of existing conditions, and as they struggle to be heard by their union. It discusses union efforts to support this workforce and to build an All-Africa Alliance of Wal-Mart workers. It grapples with the gap between worker experiences of precariousness in their jobs and union battles to confront this multinational on its home turf.

Precarity and the Law: Regulating Casual and Contract Labour in the South Africa Retail Sector

This paper explores the history of legislation around forms of casual, part-time and contract labour in South Africa since the 1930s. Building on my previous work on casual and part-time labour regulation in the retail sector (Kenny 2009), this paper expands the discussion to explore the legal lineages which helped to define the construction of these forms of labour within the retail and distribution sector. It seeks to examine the relationship between the law as disciplinary apparatus, transnational importation of law and norm, and socio-political contexts and worker and union politics in explaining changing legal provisions over time. In so doing, I hope also to examine the boundary between these forms of employment law and the influences of Masters and Servants legislation as limit for black workers in South Africa in relation to the sector.

Shifting Power Relationships in the World Economy: A Long Term Perspective

It is argued by many that position in the world economy is, for the most part, highly stable and resistant to change, at least across the macro-level “zones” that form a key element of world-systems theory. I suggest that this apparent stability actually masks a considerable amount of change and discontinuity within the global economy. This paper takes a different perspective, focusing on power rather than position, to explore the extent to which shifting relationships between military and economic power, both within and across countries, reflect a changing dynamic with significant implications for the global economy. Following Kentor (2013), the balance of economic and military power within countries is charted at 10 year intervals from 1850 to the present. I then explore the impact of this changing balance of power on movement in the world economy.

KENTOR, JEFFREY* (Eastern Michigan University, jkentor@emich.edu)
The Structure of the Global Economy 1850-2000

This research develops a new typology of the structure of the world economy, based upon Charles Tilly’s (1994) theorization of the emergence of the modern nation-state system. Following Tilly, this research conceptualizes the world economy as a four dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology. This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

Insert Coin for the Next Level! Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster

Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields.

Even if economic development processes are highly localised not all ‘locations’ are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODTU Teknopark which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M.S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that Can digital games can be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems

Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within more developed countries and even among some of the least developed, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly lead to increasing inequality and less long term economic development in most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization. Recent evidence has suggested that the impact of economic globalization has contributed to the effects of many other socio-economic factors that can affect changes in poverty. Other data show that less developed countries in Asia, in contrast to African and Latin America, are more likely to have more economic development, less poverty, and less growth in inequality from increasing ties to the global economy.

The paper summarizes some differences between the USA and EU nations that have led to the different outcomes of globalization. It focuses on data and several years of fieldwork in four Buddhist countries in Southeast Asia (Thailand, Vietnam, Laos, Cambodia) to identify some of the causes of the impact of ties to the global economy which vary even within Asian countries, showing some Southeast Asian countries (such as Cambodia) share more characteristics with African or Latin American countries that are related to very uneven economic development, rapidly increasing inequality, and no poverty reduction.

This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

Literacy Leadership and Accountability Practices: Holding Onto Ethics in Ways That Count

Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard ‘benchmarks’. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday ways of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership, and how principals’ work is increasingly complicated by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of ‘validation days’, and ‘liter-
acy chats’ between a literacy leader and classroom teacher, are examples of such textually organised actions. We elaborate on these inescapable textural framings and tasks faced by the principal and literacy leader, and those that they create and modify in order to ‘hold on to ethics’.

We argue that while leaders' and teachers’ everyday work is regulated by ‘ruling relations’ (Smith, 1999), it is also organic and responsive to the local context. We conclude with a reflection on the important situated work that school leaders do in mediating trans-local policies that might otherwise close down possibilities for engaging ethically with students and their learning in a particular school.

NIXON, HELEN (Queensland University of Technology)

Ruling Relations at Work: The Active and Occurring Text in the Everyday Life of a Local School

In Australia, as in many western education systems over the last two decades, discourses of accountability, transparency and performative have reshaped education policy that in turn has reorganized the work of school leaders and teachers. Increasing attention to the production, analysis and display of student achievement data has been one of the effects of this reorganization.

This paper presents some of the work undertaken by school leaders and teachers in a small religious school whose NAPLAN results suggest that it is succeeding in mediating trans-local policies that might otherwise close down possibilities for engaging ethically with students and their learning in a particular school.

We trace the ways in which local and school leaders' and teachers’ everyday practices in this school are textually mediated and shaped by a number of different texts and discourses, including the discourses of accountability and transparency associated with the national school reform agenda, and the discourses of professional learning, validity and care that are promoted locally.

The paper examines how intersecting layers of national, state and sector policies connect with and coordinate school leaders’ and teachers’ everyday practices. We trace the ways in which local and school leaders’ and teachers’ everyday practices are promoted locally. Our analysis uses the concept of the ‘active text’, the text as activating and occurring in a specific place and time and at the same time coordinating and ruling from a distance. We examine in detail a sequence of the production and reading of assessment data by educators in one school and consider how this codifies students and their learning experiences and articulates with and coordinates teachers’ actual practices. In this process we begin to learn from those involved how their everyday work brings into being institutional processes that produce a particular institution’s standard sequences, its decisions, policies and outcomes.

Opening and Closure in the Reproduction of Social Movements and Organizations

This study examines the social mechanisms behind the reproduction of social movements and organizations based on Max Weber’s distinction of open and closed relationships.

Max Weber’s concept of social closure played an important role in the academic discourse about Marxist class theory in the 1970s and 1980s (Parkin 1972; 1979). Accordingly, the formation of classes is closely related to processes of social closure where a group of privileged actors monopolizes their access to certain resources (Murphy 1986, 1988). In this sense, the concept refers to a central mechanism behind the formation of social collectivities. In the context of the discussion about the production of social capital, the distinction between opening and closure was further developed and refined in the field of social network analysis. Burt (2000, 2005) demonstrated in several studies how processes of opening (brokerage) and closure affect the innovative capacities of social networks.

This presentation aims at transferring the findings of past research on social classes and networks to formal organizations and social movements. In the first part, I will discuss the social mechanisms that produce closure: While the closure of formal organizations typically depends on a continual process of decision-making (Luhmann 1998), social movements reproduce the boundary between ‘us’ and ‘them’ through ongoing mobilization. In the second part, I will draw on network analytical concepts in order to operationalize the opening and closure of social structures. In the third part, I will show on the case of the energy market in Germany how the mobilization of the environmental movement affected the balance of opening and closure between electric power companies.

Back Home: The Reintegration of Return Albanian Migrants in a ‘Foreign’ Environment

In this paper we explore the Albanian return migration from Greece. Albanian return migration is a neglected field of study and there is little empirical evidence related to it.

In the beginning of the 90s, after the fall of communism in Albania and elsewhere, Albania was the biggest exporter of migrants in the Eastern Block, judging by its proportion to the general population. Over one fourth of the country has lived or is living in a foreign country. Their main destination was Italy and Greece, because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our research is focused on the reasons of their return, the Greek debt crisis being one of them. We mainly explore the difficulties of their re-integration in Albania, and how they perceive themselves in the Albanian society. We call it a ‘re-integration’ because Albania is not the country that they left behind when they first migrated. It has changed, pretty much the same way as other closed societies have done after they opened their borders.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their return. We include the role of the Albanian government because it has been advertising itself as a facilitator and accommodating for their smooth adaptation.

KERR, ANNE* (University of Leeds, e.a.kerr@leeds.ac.uk)

All Change: The Social Life of Change Management in the UK National Health Service

The UK NHS is going through what is typically referred to as an unprecedented period of change, marked by key priorities of patient choice, innovation, quality, innovation and the minimisation of bureaucracy. These processes are associated with a plethora of paradigms, initiatives and tools designed to support the management of change, including strategies for developing the learning organisation and the role of change agents, predictive change tools, models and processes of personal change, and the rejection of old-style paternalistic theories of organisation and culture.

This paper will explore the rise of the change management agenda in the NHS, and the organisational and psychosocial theories and values which underpin it, before moving on to consider how and why we might trace its articulation in the practices of NHS managers, drawing on preliminary data from exploratory discussions and observations with NHS managers working in a large soon to be Foundation Trust Hospital in the North of England. We consider how and why we might go about understanding the social life of change management in organisation by focusing upon manager’s practices and accounts of their experiences of and rationale for change, especially the productive character of change mantras and devices. We end with some critical reflections on the importance and the difficulties of tracking, understanding and articulating the activities and the actants of change in organisations-in-flux and in managing the ways in which we ourselves as researchers are enrolled in the processes of change we seek to study.

Graffiti with Chinese Characteristics: A Longitudinal Study of Campus Graffiti in Northwest China

The current paper, utilizing an original data source of approximately 400 graffiti fragments from a single location in Northwest China taken in 2012 and 2013, is a longitudinal content analysis study. The markings were collected from a co high school/university campus in a predominantly Muslim region of China. The paper engages in a descriptive summation of dominant themes found in the markings and changes in these themes between the collection of original marking in 2012, and the markings that were appearing in 2013. Analysis indicates that themes are consistent with emotional issues experienced by youth embedded in transitional and temporary social networks. Beyond a pure descriptive summation, the paper further explores differences in themes appearing in its data compared to that appearing in documented studies in other parts of China and in other parts of the world.
Policing of Minorities and Police Accountability

In the European Union organizational structures, traditions and citizens’ trust in police differ substantially among the member states. While numbers of police per 100,000 population fluctuate between less than 150 to nearly 500, trust in police indicates an opposed relationship: the lower the numbers and the less money spend on police/ security the higher is trust in police (Kääriäinen 2013).

Despite of all the variety there is a common challenge to police in Europe which is the relationship between police and minorities. Whether working migrants and their descendants (e.g. Turks in Germany), traditional resident minorities (e.g. Roma in Hungary) or asylum seekers/ refugees from civil war regions (e.g. Sub-Saharan Africans in Austria), survey results indicate that minority men and women are more frequently subjected to police controls than majority citizens. More often than majority citizens, persons from a minority background feel treated unfairly by officers during encounters with police. At the same time, the victimization rates of minorities are significantly higher while their levels of reporting to police is lower, and this includes instances when they become victims of hate crimes (Goodey 2013).

The European Union has commissioned research aimed at an assessment and an improvement of police-minority relations in the EU member states. The presentation will report findings of such a project (www.corepol.eu). This research project investigates police minority problems and best practice conflict resolution in a wider perspective of restorative justice approaches in Germany, Austria and Hungary.

Creating Alternative Narratives in Activism

‘Crisis of Multiculturalism’, Neoliberalism and Possibilities for Creating Alternative Narratives in Activism

During the last decade the ‘crisis of multiculturalism’ discourse has characterized media and political discussions in many European countries. Especially Muslims and non-western minorities have been framed as problematic outsiders by the liberal cultures, followed by demands on stronger integration and assimilative measures. Notions of gender equality and sexual freedom have played a significant role in such debates not the least in the Nordic countries that build their national identities on being world-champions in achievements in gender equality. Building on interview and media data gathered in Denmark, this presentation focuses on how activists who belong (or are categorized as belonging) to racialised groups (Muslims, non-western minorities) seek to provide alternative narratives and question these hegemonic discourses about migrant/minority families and communities.

Public debates on gendered violence in Muslim families, especially forced marriages and honour-related violence, have been on the agenda in Danish media and politics since the 1990s. The othering images of the subordinated, victimized, in this approach by taking first things apart – after that is done, the whole is constructed again. This kind of thinking has its emphasis on things like analytical thinking, determinism, and reductionism, but it cannot cope with phenomena such as complexity, purpose, intention, uncertainty and ambiguity, to name a few. The arts are, however, often mentioned to possess capacities and methodologies to deal with these latter issues. Is this really true is a question well worth to be investigated. The theory of learning communities (Wenger, 2004) offers us plausible framework, from which the premises for the role of arts in education can be outlined. However, at the same time the theory reveals also the limitations of the current structures and predominant ideas within the field. Combining the theory of situated cognition with analyses of the on-going change in modern society, the new paradigm can be both grounded and justified that means also changes in educational designs.

From Topic to Problem. Organizational Mechanisms of Constructing Demographic Change

By referring to organizational theorists like Karl E. Weick and Niklas Luhmann, the proposed contribution starts from the assumption that for organizations demographic change is not a clear and unambiguous given problem, but rather a topic which might be regarded (i.e. constructed) as a problem-or not. Consequently, demographic change is understood as a non-instructive problem, which can be framed in different ways (e.g. risk, catastrophe, or standard problem). Based on the results of qualitative expert interviews that has been conducted in organizations of various types (e.g. business firms, health insurer, local government, social welfare organizations), I want to present preliminary results on the question: Which structural elements and which mechanisms are crucial for the organizational construction of demographic change as a problem?

More specifically, the proposed contribution wants to shed light on two aspects: first, it is asked as what kind of problem the demographic change is constructed by organizations. This refers to the organizational construct of demographic change itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the processes of constructing demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on.

Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the construction of demographic change as a certain type of problem and aims at identifying structural elements certain types of constructs depend on. To address this question promises a central contribution to understand why and how organizations by themselves do or do not refer to a shift in the social structure of populations at all.

The Transform of Finnish Educational Policy - the Viewpoint of Special Education

Educational policy in Finland is based on internationally ratified treaties, such as: UN declaration 1993; Salamanca 1994; Dacar 2000, and the Universal Declaration of Human Rights 2007. Since year 1998, educational legislation has been on change towards inclusive principles and values, such as emphasizing equality, participation and shared services. Education is guaranteed for all, regardless of ones background, wealth or origin. According to the official statistics the amount of students who get special education has increased significantly from the year 2005 to 2010. This study examines educational policy in Finland and its implementation in our primary schools. The data of this study contains two educational policy documents: (Education and Research 1999- 2004. A development plan and Education and Research 2011-2016. A development plan) What are the essential similarities and differences of these documents concerning special education?
The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economic status. 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economic status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and in family.

Key words: Leisure, life satisfaction, adjustment, support system

ISHAQ, MUHAMMAD (University of Sargodha)

Use of Facebook As a Source of Political Participation Among University Students of Pakistan

Use of Facebook as a Source of Political Participation among University Students of Pakistan. The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring.

However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. The following study intends to see that how Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influence its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to association between Facebook use and online and offline political participation.

South Africa's Development Public Policies, Emerging Contradictions and Prospects in the Brics Partnership

After almost three and half centuries of economic exploitation through internal capitalist pursuits through colonialism and apartheid, South Africa has emerged as a democratic country. The liberation mandate for South Africa's post-apartheid reconstruction and development was translated into a popular developmental policy called the Reconstruction and Development Programme (RDP) based on redistributive ideals framed in the historical document – the Freedom Charter. Such an ideal was a commitment made within two years of the reality of eradicating high levels of under-development amongst the vast majority of the previously disenfranchised Black populace became contingent on growth and development programmes that will create opportunities for their socio-economic advancement. Adoption of a neo-liberal economic development policy called Growth Employment and Redistribution (GEAR) was considered the most strategic approach for the state to deliver on its development mandate through participation in the international market driven economy. However, such an economic approach to development has been proven to come with a wide range of contradictions perceived to be the source of slow and unsustainable pace of delivery challenged by a restless civil society. In being afforded entry to BRICS in 2010 it has committed to new sets of multilateral agreements to solidify its south-south strengths so that it will enjoy mutual benefits from such an arrangement to meet its development challenges. It is against this context that this paper tests out South Africa's relative position and status within BRICS as a new entrant, highlighting some potential contradictions followed by prospects for engagement on a diverse set of development oriented programmes and projects within this multilateral arrangement.

YOUTH IN CONFLICT WITH THE LAW - A STUDY OF SOUTH AFRICAN YOUTH IN DETENTION AT THE WESTVILLE YOUTH CENTRE DURBAN, SOUTH AFRICA

The "government must stop focusing on building a future for the youth but start building youth for the future". The history of South African youth is especially those from disenfranchised backgrounds has been characterised by a struggle to become meaningful social actors. Many sacrificed their lives as foot soldiers of the liberation struggle so that the generation to follow will be contributing members of society so they may reap the benefits of their ultimate sacrifice for freedom. In recognition of the youth contribution to liberation in the country, South Africa earmarked a public holiday called the National Youth Day. As part of its post-apartheid reconstruction policy, a National Youth Development plan is in place to further their aspirations and social mobility in a rapidly transforming country. Despite such socio-historical context and policy initiatives for youth development, a large section of the populace are marginalized and excluded by a myriad number of socio-political and economic factors placing them at risk. This paper attempts to investigate the underlying nature and causes of South African youth who have come into conflict with the law. It draws from a situational analysis of youth who are incarcerated at a youth detention centre in the Metropolitan Area of Durban for various forms of crime. The paper seeks to provide possible proactive measures drawn from the social reality of incarcerated youth on how intervention at a micro, meso and macro level can serve as a safety net preventing youth coming into conflict with the law.

Changing Patterns of Ethnic Conflicts in India's Northeast and the 'Flawed' Peace Process: The Unfinished Business

With the beginning of the involvement of 'external powers' in the India's troubled Northeast (Assam, Manipur, Meghalaya, Arunachal Pradesh, Tripura, Nagaland, and Mizoram), ethnic consciousness gradually gave way to conflict among the various communities, a backdrop of significant poverty and inequalities, impacting dramatically on economy and society. To name a few, we have the ethnic conflicts between the Nagas, Kukis and Meiteis in Manipur, Bodos and Non-Bodos in Assam, the Gars and the non Gars in Meghalaya leading to 'strategic' and intensified militancy in the present scenario.

Khan, Sultan* (University of KwaZulu-Natal, khan@s ukzn.ac.za)

Changing patterns of ethnic conflicts in India's northeast and the 'flawed' peace process: The unfinished business

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The Peace processes could do no better. There has been a continuous ‘flawed’ peace process in the region providing no solution but encouraging more cycles of violence. The focus of the paper is to explore the dynamics of ethnic conflicts in the region, to examine the engagement of peace process by the Indian state with different communities and to conceptualize ‘Peace’ as a trouble more than a solution.

Key words: External powers, India’s Northeast, Ethnicity, Ethnicism, Peace

Dynamics of Social Indicators of Ukraine

Nationally representative surveys started in Ukraine (along with other countries, that arose after the collapse of the Soviet Union) only in the early 1990s. Several surveys in the framework of the ESS and ISSP have been conducted during the last 5-7 years, but these surveys are irregular. Therefore, long series of social indicators are a rarity for Ukraine. The report addresses social indicators available for the analysis, obtained mainly in the polls of the Kyiv international Institute of Sociology from 1991-1994 until 2013. These include indicators of well-being, health, happiness, morality (in particular, the level of xenophobia and modernization (in particular, the use of the Internet). We discuss the possibility of combining the individual social indicators in integrated indicators describing the state of the country.

Participatory Water Governance through Gender Sensitiveisation in the Indian Context

Equity in water, through gender-sensitization of developmental projects in the sector, is now recognised as an international agenda, owing to the commitments made in the Johannesburg Plan of Implementation, and declaration of ‘Water for Health’ as a human right. However, governments in developing countries have been found to be limited by social fabric existing at the community level, strongly held together by long standing traditions and social structures. The study discusses issues and concerns with respect to effective participation of women in governance of water projects, and provides case studies/examples to illustrate the practical implications of successes and failures to engage women for decision-making.

The study concludes that efforts that penetrate into the existing social structure to build opportunities for a re-allocation of power amongst different groups of people are required. Participatory appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

Participatory Water Governance through Gender Sensitiveisation in the Indian Context

The data of two surveys conducted by us in Novosibirsk Oblast (in 2012 the economically active inhabitants of semi-urban settlements from 16 to 45 years old were interviewed, N=35; in 2008-2009 it concerned young workers of urban, semi-urban and rural settlements, N=778) demonstrate that in whole a mass demand for further education among the adults has been observed. There is a special need in higher and second higher education, as well as in the courses/programs of supplementary professional education (SPE). The largest need in additional education, professional training and retraining were revealed among those employees whose work is connected with information use or innovative activities (as well as interest in them).

Anyway among all young workers educational activity of different kinds (real or projected) is realized as the most productive means for achievement of fuller self-realization in work. So, for this purpose they prefer increasing of their educational and qualification level in the major profession (41% of answered), also increasing of the general educational level and mental outlook (28.7%), than change of a place of work (8.8%), change of profession or kind of activity (9.8%) or even widening of area of independent decision-making (15.6%). However the discovered educational needs essentially surpass real involvement of the adult population in the continuing education. It was revealed the unequal accessibility to SPE services. Thus there is a noticeable part of employees (42.2%) and the unemployed (69%) who never passed before through professional training or retraining. The employees who are available to use a branch system of SPE often have experience of numerous cases of professional development. While the employees of the enterprises without corporate SPE system, become only casual participants of such programs. So it leads to unequal “accumulation” of knowledge among different groups of able to work people.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance around them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper advances a health capability perspective on systemic health protection, professional judgement, and collectivist health norms (eg Ruger 2010, 141–142). It offers an alternative perspective balancing individual health agency, scientific and professional judgement, and collectivist health norms which view patients as individual health consumers, leveraging symbolic and discursive factors (Venkatapuram, 2011, 33, CDSH 2008). This contrasts against traditional perspectives re-locates individual biology and agency within a larger context of physical and social determinants of health and health inequity. Non-communicable diseases and injuries are increasingly predominant, while social and economic factors such as poverty, inequality, and lack of access to health services play a critical role in shaping health outcomes.

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and development. Subject to this policy, contemporary St. Petersburg experiences significant transformations in the urban space and land use. However, we observe a combination of strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development. To analyze the decisions on urban futures taken by city administrations and developers, we apply the theories of urban political regimes (Stone, Molotch, 1977) and local communities, developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frameworks developed by Leirevbe, Scott and others.

However, our empirical data show that the abovementioned theoretical background has to be adapted to the local context of St. Petersburg where struggles over urban space unfold under the conditions of total uncertainty: coexistence of multiple property regimes, constant adjustment of legislative frameworks, insufficient transparency of decisions and actions performed by city authorities and investors. For instance, pursuant to growth machines theory, coalitions of authorities and developer companies are fashioned in Petersburg, but it is only true for big businesses whereas smaller enterprises often suffer damage from inconsistent authoritative decisions. Meanwhile, local communities always suspect developers’ interests in promoting urban assets and therefore struggle against such interests.

Social Effects of Neoliberal Policy in a Post-Soviet City: Urban Space Contestation Revisited

Challenges of Poverty and Inequality in the Arab World

The theoretical discussion integrates reflexive health governance and the capability approach, linking normative, substantive and procedural claims for health justice and rights with theories of health governance. A ‘joint scientific and deliberative approach’ can provide a means to guide decisions and bring together normative substance, scientific evidence and procedural decision-making to achieve broader health system development and reform towards more legitimate and just forms of shared health governance (Ruger 2010, 183).

Challenges of Poverty and Inequality in the Arab World

Despite spectacular economic rise of some of the Arab Gulf countries, poverty remains a persistent challenge in the Arab World. Social inequalities persist as new inequalities overlay old structured ones in a number of Arab countries. Despite spectacular economic rise of some of the Arab Gulf countries, poverty remains a persistent challenge in the Arab World. Social inequalities persist as new inequalities overlay old structured ones in a number of Arab countries. Social inequality is often deepened by the rapid social transformations. Historically formed structured inequality often combines with new poverty to produce social turmoil. Social inequality and poverty played a critical role in the waves of social uprisings popularly known as the “Arab Springs”. There are intra and inter-regional variations in poverty in the region which help shape not only internal political outcomes, it also impacts external relationships. Some of the poor countries in the region depend on their rich neighbors to meet ends meet, while others look beyond the region for facing the challenges of entitlements. Such external relations play an important role in shaping the geo-political alignments in the region. Intra-Arab regional migration too plays an important role. Remittance earnings play a critical role in meeting the challenges of poverty in some of the countries. However, social upheavals tend to disrupt patterned migration with far reaching consequences in the intra-Arab world relationships. The paper will provide a critical survey of the state of the play of poverty and inequality in the Arab world and try to chart various social and political implications of structured inequality and poverty in the region.

Gender Research in Japanese Sociology: Complicit or Critical?

Gender Research in Japanese Sociology: Complicit or Critical?

Gender Research in Japanese Sociology: Complicit or Critical?

The impact of feminism in sociology has been examined quite thoroughly in the US and Britain but comparable analysis has not been undertaken in Japanese sociology. The present paper endeavors to fill this gap, but less to assess the extent to which feminist research is represented in Japanese sociology than to examine the type of gender research published in a mainstream sociology journal, to obtain a picture of the nature of gender knowledge that is produced in sociology, and specifically, whether gender research in sociology raises questions about the way sociology is practiced. I analyzed all four issues per year from Volume 40 (1989-1990) to Volume 61 (2010) of the official general sociological journal published by the Japan Sociological Society, Japanese Sociological Review (Shakai-ku Hyouron), with a total of 558 theoretical and empirical articles. All articles were coded for topic/subarea, geographic focus, if relevant, methodology, and also gender, affiliation, and professional status of the author(s). In addition, the text of the gender-related articles were read and coded for major claims or findings and reference sources. Preliminarily, the analysis shows that most gender-related articles are on the topic of family and marriage, body and norms, intimacy and sexuality, and social stratification. The next popular topics are labor, employment and organization, and social network. Only two such topics are central to sociology represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in a highly diversified discipline, a closer look reveals a different picture, one that could suggest a marginal status. Results of further analysis will be presented at this ISA.

Protecting The Health Consumer – Health Capabilities and Collective Voice Versus Patient Choice

Patients’ are increasingly seen through the lens of the ‘health consumer’. Non-communicable diseases and injuries are increasingly predominant, while a rejuvenated interest in the social determinants of health and health inequalities re-locates individual biology and agency within a larger context of physical exposure and social conditions, highlighting longer chains of biomedical and social causal factors (Venkatapuram, 2011, 33, CDSH 2008). This contrasts against discussions which view patients as individual health consumers, leveraging symbolic and discursive factors (Venkatapuram, 2011, 33, CDSH 2008).

Patient advocacy paradigm offers an alternative perspective balancing individual health agency, scientific and professional judgement, and collectivist health norms (eg Ruger 2010, 141–142). This paradigm is also available in a capability perspective on systemic health protection and advocates for capability-oriented health system reforms (eg Thai Health 2013) which support and vindicate the principle of health protection. The discussion is illustrated with respect to well-known occupational and environmental health hazards such as asbestos that are beyond the health agency of individual patients (Kho and Kholsomboon, in progress). The goals are twofold – to prevent and decrease risk of exposure and to increase provision for those who have, or may in the future, become ill or disabled through exposure. The discussion points to the importance of protection as a systemic attribute in health governance. It focuses particularly on collectivist and solidarity consumer action and its role in participatory deliberation through organized civil society channels.

The theoretical discussion integrates reflexive health governance and the capability approach, linking normative, substantive and procedural claims for health justice and rights with theories of health governance. A ‘joint scientific and deliberative approach’ can provide a means to guide decisions and bring together normative substance, scientific evidence and procedural decision-making to achieve broader health system development and reform towards more legitimate and just forms of shared health governance (Ruger 2010, 183).
The North Caucasus is experiencing globalization challenges. New information technologies generate frequently the cultural shock, threatening ethnic cultures in the region. Interaction of the global and local in modern conditions strengthens intensity of tradition cultures. Therefore globality becomes time imperative. Globalization influences greatly the identity, opening a way to set of identities in the global world. Of principal value is conscious familiarization with cultural wealth of other people. We should take such values which do not break internal development of our own culture and do not tear it off from the historical roots, the best achievements and traditions. The ethnic culture can develop and rise to the universal importance only in dialogue with cultures of other ethnicu.

One of the findings of modern public consciousness is that it is impossible to imagine any civilized country out of communication with other world, with other cultures. The need for cultural communication and aspiration to learn an inner world of each other lead to expansion of spiritual bonds and contacts. Ideas of preservation and further development of a human civilization are connected with the need of cultural mutual communication.

Efficiency of cultural inheritance depends, first, on ability of a community to classify master and use values of other people in own ethnic environment; secondly, on aspiration of a community to take unavailable valuable elements; and thirdly, on readiness of a community to see in loan an opportunity to open the best qualitative lines and properties.

In concept of the new acquired does not lose ethnic coloring and originality, but on the contrary, it becomes more profound ethnically and at the same time integrated. This statement is especially topical for a modern sociocultural situation in the North Caucasus and in Russia as a whole.

Inequitable Access to Citizenship: Gendered Social Policies and Unattainable Democratic Ideals

Although gender equality is central to the attainment of democracy, its realisation in conceptions of citizenship in democratic states has been marred with complications. Access to citizenship rights is most often unequally experienced due to unequal power dynamics emanating from racial, gendered and socio-economic factors. As a result of these factors women and men’s experiences of democratic citizenship is a site of struggle and constant negotiation. This paper seeks to interrogate women and men’s ability to access the fundamental rights guaranteed in democratic countries. This examination is undertaken through an analysis of social policies in Southern Africa. The paper argues that gendered, racial and class factors hinders equitable access to citizenship rights, so does the inequitable valuing of social, economic and political rights in defining citizenship. In conclusion the paper discusses the inequalities limit the attainment of full democratic citizenship for most of those who have been historically excluded in terms of gender, race and class.

Micro-credit (Self-Help group), Dalit Women Inclusive Growth and Development

In last three decades, the gospel of micro credit through Gramin Bank model has become part of global legends of development in South Asian countries including India for poverty alleviation, especially for dalit. Historically, the main basis of dalit’s backwardness is effect of capital deficiency. In India’s eleven five-year plan, an agenda of inclusive growth is prioritized through household saving and productive investment for capital formation and economic development. Homogenous women group formation following approach of equity, consensus, democratic culture and voluntary spirit in line of Bangladesh model of Self-Help Group(SHG) is encouraged as an ideal, to promote financial self sufficiency, poverty alleviation, social, economic and political empowerment. SHG is linked to Government, NGO, Commercial Bank and private Microfinance agency for financial support, entrepreneurs, subsidies, training for capacity building etc., for creating the culture of an alternative sustainable development of the poor. An in depth study is conducted on most vulnerable Dalit women’ SHGs members in eight taluks of Nanded district located in backward Marathwada region of Maharashtra. The objectives proposed to understand the extent of financial inclusion in generation of employment, income, improvement quality of life, solution of own variations etc. Karl Marx and Max Weber’s conceptualization perspectives of capital accumulation and protestant-ethics of capitalism used in comprehending ethics of saving and credit of SHG phenomenon in context of development of Dalits. Ground reality of SHGs outcome reveals alarming; almost negating the goals it set, like over mental stress, raising under debt trap, pressure for over work, even less wages at cost of own freedom. The consolation is liberation from family restriction and opportunity of involvement in different social issues having no financial implications in improving living standard.

Prof. Suprava Khuntia
in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopias approach of E.O. Wright that new real alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? In this study, we used qualitative expert interviews to provide grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting, referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediating mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediating mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediating mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediating mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediating mechanisms.

Dimensions of Safety in the Process of Mental Health and Illness. Empirical Results and Theoretical Framework

Feeling safe in the world is regarded as a basic human need which Maslow placed at the second level of his human need hierarchy directly after bare physical survival. Consequently, lack or loss of safety in the most general sense is considered as a major risk factor for the impairment of human well being and the development of mental disorders. Dimensions of safety which have been identified as relevant for mental health are personal relationships, economic living conditions and environmental circumstances. Despite the fact that the relevance of these dimensions of safety for mental health has been confirmed in an increasing number of studies, there is still lacking a common theoretical framework that allows a comprehensive understanding of the interrelationships between individual and environmental aspects of safety in the etiology of mental disorders.

In this presentation the recent results of empirical studies on the impact of the lack or loss of safety on mental health will be discussed with regard to their contribution for the understanding of the interaction between personal characteristics and environmental hazards in the development of mental health and illness.

The Sociology of Work and Factory Sociologists in Communist Poland

In Communist Poland the sociology of work was one of the most prosperous social science branches. It was perceived as particularly important due to the Marxist emphasis on the category of work, as well as its supposed significance for national economy. It might have been even perceived as a dream come true by those who imagined social science as a scientific guidance for the practice. Besides academic field, in which the branch was hindered by imprecise definition of the very subject of its study, normative bias, censorship and, mostly, self-censorship, the sociology of work spread to big socialist enterprises which employed professional sociologists in 1960s and 1970s. Their role was significant also due to the role of the workplace as the backbone of Socialist civil society. As a result, new occupation and potentially interesting field of intellectual activity opened for young sociologists.

The paper will base on period literature dealing with factory sociologists - limited yet existing - as well as on archive resources and interviews with ex-factory sociologists. Due to fragmentary data it will not probably be possible to describe typical social profile or career paths of factory sociologists, so the paper will concentrate on those cases in which some more detailed biographical data is available. The study will aim at describing their professional role which was by no means clearly defined, position in the factory structure/hierarchy - somewhere in between the management, Party secretary and labor unions - as well as their aspirations and professional career paths. A special concern of the paper will be intellectual ambitions of factory sociologists and their relations with the academic field from which they were rather isolated, what in turn caused their constant dissatisfaction.

Medicalization in Turkey in the Context of the “Health Transformation Programme”

There has recently been a growing interest on the effects of health care systems on medicalization in particular national contexts. This paper contributes to this literature by focusing on the case of Turkey, where medicalization in the form of increasing consumption of medications, use of health care services and diagnosis of a number of diseases goes in parallel with the health reform process that started a decade ago aiming to radically transform the provision and financing of healthcare services. Special emphasis is given on how policy measures such as separating purchasers from providers, encouraging competition among public providers, implementing performance-based payments, and combining public and private health care services affect medicalization by creating financial and professional incentives for physicians to alter their diagnostic and treatment behavior. Additionally, the arguably positive and negative impacts of medicalization are discussed with reference to recent statistical data including population health indicators, patient satisfaction, outpatient/inpatient ratio, consumption of pharmaceuticals, the number of screening tests performed and the number of doctor visits with a particular focus on indications of overdiagnosis/overtreatment.
This paper explores the changes that have occurred for women in the legal professions in Korea since women first became lawyers to the present day. This paper seeks to delineate these changes and to offer a socio-historical analysis of how this took place as well as where it might lead.

Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths
Social Capital, Social Integration and Suicidal Thoughts among Korean Youths

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular how and to what extent measures of social capital are associated with having suicidal thoughts, ceteris paribus. In a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendship network size, frequency of interaction with close friends, quality of network members (number of “delinquent” friends), degree of intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents (in terms of time spent together), frequency of interaction with close friends, and neighborhood fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

KIM, DONG-NO* (Yonsei University, donkim@yonsei.ac.kr)
Different Manifestations of the Public Sphere in Japan and Korea

This paper examines the heterogeneous trajectory of the public sphere in Japan and Korea, especially how it is differently represented by NGOs in the two countries. The state has long been argued to safeguard the public ever since Anstotle laid the foundation for the intellectual tradition in which the state was considered as an agent of the universal interest. In contemporary sociology, however, this myth was challenged by a new tradition that emphasized the distinctive characteristics of modern state that concentrated on the reproduction of political power by the power elite, without paying due attention to the interest of the public.

The emergence of the public sphere in East Asia, more specifically in Japan and Korea, was rather hampered by the overdevelopment of the strong state during the process of economic development. Once the people in the two countries realized the necessity to protect their own interest as well as the public interest, however, NGOs were institutionalized and took a central position in civil society. These organizations tried hard to advocate the public interest in diverse aspects of everyday lives of ordinary citizens. Despite these similarities, however, the ways they represented the public interest were very heterogeneous. Their manifestations of the public interest are not only different in their organizational structures, but also the issues they are concerned with. Generally speaking, NGOs in Japan have small-scale organizations and more voluntary participations, being more concerned with the enhancement of everyday lives of citizens. In contrast, NGOs in Korea have large-scale organizations and are more concerned with the political issues, frequently initiating massive protests against the state.

KIM, HARRIS* (Ewha Womans University, harrishkim@ewha.ac.kr)
Understanding Civic Engagement in Asia: The Role of Social Capital

The question of “who participates” has received a great deal of scholarly attention among political sociologists. Increasingly, students of political participation, both formal and informal, have relied on the concept of social capital defined in terms of trust, networks, norms of reciprocity, and organizational membership (Putnam 1993). In analyzing the conditions under which people choose to engage in citizen activities instead of opting to ride free on the efforts of others, as Jacobs and Skocpol (2005) point out in Inequality and American Democracy, equal political voice and democratically responsive governments are under increasing threat due to the declining level of political interest and participation on the part of individual citizens. Understanding why some people decide to engage in politics formally and informally, therefore, is of paramount importance not only for the US but for any democratic nation. This study proposes to investigate this topic in the context of Asian countries. Based on the multilevel analysis of the Asian Barometer Survey of Democracy, Governance and Development (2006), which consists of data on 13 countries in Asia, it examines how and to what extent various social capital indicators (i.e., generalized and institutional trust, participation in voluntary associations, friendship network size, frequency of interaction with close friends, quality of network members (number of “delinquent” friends), degree of intimacy with parents, and neighborhood trust/fear) influence the likelihood of engaging in political activities, while controlling for key socio-demographic factors (i.e., income, gender, education, age, and religion). Four outcome variables are examined: two formal (voting and contacting an elected official) and two informal (attending a lawful demonstration and discussing politics in social settings). Findings from hierarchical linear modeling reveal that social capital is associated with different political outcomes in complex ways, at both individual and contextual (country) levels. Theoretical implications of the quantitative results are discussed in relation to earlier findings in the extant literature.

Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarriedness among youth. The explanations on the issue has been given to the causes such as economic condition or individualism among them, which seem to be insufficient. This article aims to analyze the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patrilineality privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The result shows the great gender differences in the narratives of family value. Men interviewees tend to tell the sons’ responsibility of care for the parents and the role of the male provider, while the women as well as to consumers by indulging the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents. So we can call the recent changes among them as ‘the family-oriented individualization’.

Korean Wave As a Hybrid Subculture

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any ‘Korean subculture’ including cuisine, clothes, cosmetics and language, etc. ‘Gangnam style’ by Korean singer PSY has recently acquired more than 1.7 billion views on Y-Tube in the world within a year.

This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative perspectives, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan

The Zainichi Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But succession of ethnic identity formation is not easy in a country that determines nationality by jus sanguinis and so many third- or fourth-generation of ZainichiKoreans has some trouble living as a ‘Korean’. Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the Korean Wave and ‘abductions’ by North Korea, this paper examines how the selection process of the new generation of Japanese media – in that young and pictures of ‘Korean’ media-look into the interpretations and responses of Zainichi Koreans through their selection processes of group appellation in everyday life.

In this paper, looking into the survey and in-depth interview data, which I have conducted after 2008, I will also attempt to analyze the relation between the using and selecting group appellation of Zainichi Koreans and the changing of ethnic identity of them.

These approaches would bring light to new aspects not only on the current Zainichi Koreans’ identity but also on how factors, like as Zainichization, affect changing ethnic identity in host society.

KIM, JONGTAE* (Korea University, jtkim0903@daum.net)
South Korea’s Developmentalist Worldview and Debates about Its Modernity

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seonjinguk (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seonjinguk or “on the threshold of seonjinguk” (“seonjinguk munteok”), which provides both senses of superiority over hujingo (backward country) and of inferiority over seonjinguk. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seonjinguk as its historical national mission. This paper aims to provide a critical review of the debates about Korea’s modernity in the light of its dominant developmentalist worldview, the discourse of seonjinguk.

International Policy-Translation Among Precarious Women Workers Organizations: Japan and Korea in Comparison

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women’s Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experiences of Women’s Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women’s Trade Union (KWITU) later. On the contrary, Women’s Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2). Yet, the organizational performance and political impact of the KWTU and KWWA overwhelm those of the Japanese, WUT and ACW2, in a decade.

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will be used for describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individuals and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women’s organization, the labor movement discourse, and the drivers in the process of policy influence.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
and matter within labor movement, and that its effectiveness can vary according to the strategy, environment and context.

KIM, MINZEE* (Ewha Womans University, minzeekim@ewha.ac.kr)
Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study

Whereas the impact of the welfare state on the quantity and quality of women's employment is widely studied, little research has further investigated the ways other (non-wage) types of policies affect women's occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 35 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by a policy that guarantees equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender equality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

New Media and The Social Reconstruction Of Reality

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann's phenomenological proposition: ‘Reality is socially constructed’, this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of ‘social reconstruction of reality.” Next, referring to the results from 2011’s survey of 1027 netizens on happiness, the constituting mechanisms of online and offline life-worlds are compared. Finally, based on aforementioned theoretical and empirical discussions, qualitative differences in online and offline life-worlds are further explored.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to follow virtual reality up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

South Korean Values: Understanding Who Koreans Are

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people in general, acts as the starting point. Identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of “magic of numbers” and fully utilizing the power of empirical generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used.

It could be argued that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in the sense of supreme bliss. As aforementioned tendencies went through significant alterations, the sense of supreme bliss’ sought after differs from that of traditional Korean society. The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by means of meaningful and beneficial personal connections. What we are witnessing is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

Inequalities in Life Expectancy and Healthy Life Expectancy in Korea: Gender and Educational Disparity

Health inequality is considered as a sensitive barometer of social inequality. Over the last decade, social inequality in Korea has become intensified in multiple dimensions. Social status and health are very closely related. In Korea, among the changes that have particularly accelerated over the last decade include the rapid rise of the health disparity.

While based on life expectancy (LE) and healthy life expectancy (HLE), we examined the health inequality across social groups by gender and education over time. LE is the expected number of years of life remaining at a given age, adjusted from the current age-specific mortality rates. HLE is a composite measure of LE and morbidity, approaching zero in principle when the person never suffers from disability.

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of categories of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of politics. The initial statistics compose an extremely complex portrayal of immigrants, often divided by esoteric categories (such as “black Russians”) that are remote from our contemporary understanding of race and ethnicity. As report progresses to the synthesis and recommendation, however, the notions of “desirable” and “undesirable” immigrants emerge as an overarching principle of categorization, and as such the recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

A New Style of Labor Movement Among Korean Youth

South Korea has shown high levels of collective interest in various forms of social movements in the modern history. So far, Korean scholars adopted social movement theories emphasizing the roles of resource mobilization, rational choices, political opportunity structures, or social networks; however, they could rarely include the role of emotions in social movements.

This study focuses on emotional factors influencing the mobilization of social movements: Although the youth generation feels anger and dissatisfaction with the perceived social injustice under the economic crisis, why do they fail to take collective actions? With the ever increasing economic polarization in the present neo-liberal regime, the relationship between emotion and social activities among young people in Korean society has been drawing scholarly attentions. As high rates of unemployment and unstable employment conditions (non-salaried and part-time work) become normalized in the society, youth anxiety and depression are emerging as societal problems. The emotions of the young generation (particularly anxiety and depression) were not approved as cultural nomos in traditional Confucianism and modernism. However, not in the line of Gustave Le Bon, the authentic expression of collective anger (resentment) can incite proactive behavior in a late-modern or post-modern society.

In this research, the subjects are youth in their 20s, mainly college students, involved in “Alba Yeon-dae” which literally means a solidarity group for part-time workers aiming to raise the minimum wage. This study employs ethnography and in-depth interviews to examine how the emotions of youth (anxiety, fear, and anger) exert a socially bonding influence that moves them to collective action. “Alba Yeon-dae” has emphasized the collective expressions of frustrated emotions against their low pay, part-time work, and precarious work. This study examines the workers’ conditions, development of a new style of labor movement, and their political struggle.

Language Rights and Disability Studies

Language rights discourses have rapidly evolved in Japan during the last decade. From an almost unknown term, it has advanced to a frequently used concept to address linguistic inequality. By foregrounding fairness in language matters, this discourse has expanded the scope of moral arguments on language diversity in Japan.

While being heavily influenced by international academic and political discourses, the Japanese discussion on language rights has gradually undergone some specific evolutions. For example, it is probably unique to Japan that the struggle for the recognition of the sign language has been one of the leading forces advancing language rights. Related to this is the most striking characteristic: the entwining of language rights with the discourse of disability studies. The so-called social model in disability studies, which sees the cause of disability not in the body of the individual but in the society, has ostensible affinity to the idea of language rights which also focuses on injustices rooted in sociolinguistic conditions. The approach to add options rather than just change the dominant regime, or the emphasis on improving the legal framework are also features common to both discourses.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language. After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

Education, Employment, and Gender Role Attitudes Of Japanese Married Women In The 21st Century: Declining Significance Of Rational Choice and Cognitive Dissonance Reduction?

Several students of attitude change have utilized models that combine rational choice with cognitive dissonance. Kimura (2007) proposed a hypothesis of “rational choice and cognitive dissonance under the constraint of the segmented labor market” in order to explain the apparently paradoxical associations among education, employment, and gender role attitudes found in the data of Japanese married women in 1980s and 1990s. There was a negative relationship between educational attainment and attitudes towards the gender division of labor, a negative association between these attitudes and employment, and also a negative association between educational attainment and employment. If we analyze the data in the early 21st century, however, we can find that all of these associations are weaker than before. Although this seems to reduce the explanatory power of the hypothesis that postulates rational choice and cognitive dissonance reduction, I will examine the factors that may have contributed to these changes form a rational choice perspective. On the one hand, surveys on gender role attitudes, as well as media reports on these surveys, have pervaded Japan so that respondents might have come to regard a negative attitude towards the gender division of labor as a socially desirable response. On the other hand, protracted recession have reduced the size of the fulltime labor market as well as the husband’s income so that even highly educated wives might have become unable to resist working as part-time or dispatched workers. The former implies that another kind of rationality plays a part while the latter implies that structural constraints on rationality are significant.

Who Support the Death Penalty in Japan?

One of the most powerful reason for retaining the death penalty in Japan is the wide public supports for it (86% as of 2009). However, it is often criticised that the governmental survey contains a wording misleading the public into retentionists, and it remains unclear who support the death penalty. Based on the online quota sampling survey conducted in 2013, the presentation clears what distinguishing attitudes are found in the retentionists. Although recent criminologist studies show that people’s misperception of unsafe society despite the counter evidences, no significant difference in this point is found between retentionists and abolitionists. Rather the gaps are found in their knowledge and perceptions of social factors of crimes, deterrence of criminal punishments, rehabilitation of criminals, international trends, and the principle of the presumption of innocence.

Branding of an Industrial Heritage and Practice of Local People: The Case Study of Gunkan-Jima

This study examines how the branding and the commodification of an ex-industrial area proceed and how they affect everyday practices and historical identities of local people. Nagasaki is a global harbor city located in southwest Japan. Less than fifteen kilometers away from the port of Nagasaki, there is Gunkan-jima island. The island was used as a coal-mining station between 1887 and 1974, contributing to the industrial modernization of Japan. In 1890, the Mitsubishi Company bought the island and set about gaining coal from the bottom of the sea. Subsequently, the company built up the island’s infrastructure as well as living quarters (such as large concrete buildings, apartments) to accommodate its workers. However, in 1974, the mines were forced to close due to a abrupt shift in energy use, which made the whole population move out of the island. Since then, Gunkan-jima has been totally uninhabited. However recently, the island started to arouse attention as a symbolic site of industrial modernization of Japan. Nagasaki City is now attempting to re-evaluate this abandoned island as an “industrial heritage” and utilizing it as a tourism resource for regenerating the declining industrial areas. There has even been a movement to make the island a world heritage site, while tours around Gunkan-ji ma are also becoming more and more popular.

Using data based on fieldwork conducted in Nagasaki City and semi-structured interviews with several actors related to Gunkan-jima, I found that the branding and the commodification of the ex-industrial island have been drastically promoted by the municipal merger and the “locality” as the basis of the legitimacy to represent the island has been totally changed. These findings can be utilized in the future studies that examine the mechanism of urban regeneration projects.

KIMURA, TADAFUMI* (Yes, k_tkimura@m.tohoku.ac.jp)

Situational Approach to “individuality”——— from the Perspective of Frame Analysis———

The purpose of this study is to examine the concept of “individuality” from the perspective of the definition of the situation and Goffman’s discussion in his Frame Analysis. Symbolic interactionists focus individual interpretation process about social reality. They postulate the great influences of the individuality upon constructing social reality. However, can we construct social reality freely? How can we explain the steady coincidence of our definition of the situation? In Frame Analysis, he investigates the acquisition process of social reality based on his “interaction order theory.” He indicates people’s impressions for others depends on the definition of the situation. When he engages in this problem, he focuses on the correlation between impressions for the role behaviors and these for the individualities.

Imagine an interaction in an operation room. Some surgeons say jokes or give some nicknames to surgical instruments during an operation. If a patient watches their ridiculous attitude, s(he) guesses they might be queer or incompetent. However, according to Goffman, they try to reduce stresses or tensions of other operation staffs and lead the operation to succeed by doing so. From the standpoint of the operation staffs, such behaviors by surgeons do not convey any odd impression about their personalities. In the American hospital culture, these behaviors are accepted as conventional role behaviors of surgeons. As shown in the above example, how people interpret the behaviors of surgeons and their individualities is dependent on their definition of the situation. According to Goffman, it depends on what kind of frame they apply to social reality. The frame in this context is a cultural cognitive pattern of social reality. Whether a behavior is interpreted as a typical role behavior or a unique behavior indicating her/his character depends on the frame of the interpreter.

It’s a Girl Thing: Tween Queens and the Commodification of Girlhood

This submission is a 58 minute documentary film to be shown either in a roundtable session followed by a Q&A or as part of a social event.

Description:
Since the birth of Mary-Kate and Ashley Olsen in 1986, the girls’ tween market has evolved from almost non-existent into a multi-billion-dollar money-making machine.

-Framed by the structure of a faux interactive website for tween girls, It’s a Girl Thing speaks with consumer critics, tween brand marketers, girls, moms, and educators to explore the seemingly benign cultural universe of candy-coated, pastel-colored, hyper-commercialized girl culture (and the tween queen phenomenon) to reveal the complex and contradictory messages directed at today’s young girls.

**GENRE AS SOCIAL FORCE: HOLLYWOOD COP ACTION FROM THE PERSPECTIVE OF FILMMAKERS**

Recent analysis of genre as social construction shows that critics and scholars tend to categorize works of art differently than producers do. The biggest market in Hollywood cannot copyright genres and so avoid treating their own product as generic. They sell their films instead as unique combinations of diverse elements, in order to appeal to many audiences and differentiate product. Interviews with contributors to the Hollywood cop action movies discuss the conditions under which they come to work on the projects, the extent to which they see themselves as generic makers, and how they craft their unique work. This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrates how the genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

**Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews**

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard et al. 2000; Mclie & Watton 2000). With the discussion having reached out to corporate culture, marketing communication skills and the ability to brand oneself in the current labour market where the CV advantage has been displaced by the tyranny of the right person, Feminist scholars (e.g. Acker 1990; Bordo 1993; McDowell 2009) have already shown how different corporeal characteristics in terms of sex/gender become categorized as suitable or unsuitable to conduct different kinds of work tasks. However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes.

The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge in determining which candidates would "fit in" with different working teams and environments. In order to fill in their clients' expectations, the consultants not only attempt to read the bodily performances of the employee candidates. In addition, due to the employment discrimination law, the consultants must be capable of interpreting the non-verbal hints of their clients concerning the ideal expected characteristics of the wanted employees. Theoretically, the paper draws on Marx's notions of labour, Bourdieu's (1984) conception of embodied capital and the phenomenological discussion of the lived body (e.g. Merleau-Ponty 1945).

"Strong Ones Manage Alone, Weak Ones on Each Other's Laps". Love and the Finnish Touching Culture

"Strong ones manage alone, weak ones on each other's laps". Love and the Finnish touching culture

The quoted phrase is an old Finnish saying which represents the traditional virtue of managing alone. The "lap" is not only a metaphorical expression; instead, it refers to the widely shared attitude to the sense of touch in human relations. In Finland, the touch is saturated with prohibitions, fears and taboos, even today whose material and symbolic power has only preliminarily been discussed in academic research (cf. Constance Classen 2005; Erin Manning 2009; Anthony Synnott 1997)?

Even the feminist theorization of affects has neglected the sense of touch although it, to me, represents an embodied reaction and act where (social) emotions and (physical) affects merge into each others (cf. Sara Ahmed 2000). By utilizing the empirical material of the Finnish cultural context, my presentation gives an example how the socio-cultural research of senses and feminist affect theory can be utilized when studying the tactile conditions of love.

**Re-Articulation on Japanese 'Comfort Women'/Survivors' Experiences**

This presentation examines the process of how Japanese 'comfort women' has been excluded discursively from the whole 'victims.' The number of Japanese comfort women is estimated from thousands to tens of thousands. Even such a large number of women seem to have been forgotten because the fact that they had been located in the poverty group, there has been a tendency, in the discursive space of 'comfort women issue,' that those women are not recognized as 'victims.' Moreover, those women have often been represented that they devoted themselves to the nation by performing comfort women. As a matter of fact, Japanese comfort women survivors' voices have not been heard enough. Presenter introduces some cases that were known by members of civic movements on this issue as Japanese survivors' claims but were not treated as the matter for the movement groups to make their victimhood known widely in the early 1990s.

To restore Japanese comfort women survivors' history, it is indispensable to describe the aspects that on the one hand those women have been included in the members of a perpetrating country, and on the other hand excluded from the compassion among local community. Being related to that, this presentation explores otherness and postcolonial context over victims/survivors in the country of the perpetrators from feminist perspective and nationalism theory. In doing so, it aims to re-articulate their experiences.

The Conditions for Sustaining Efficient and Inefficient Norms

Although most rational choice theorists have assumed that social norms are created to prevent negative externalities, some norms spoil the welfare of people. These inefficient norms have been discussed as "unpopular norms," which typically include the "shipper's new clothes," self-destructive adolescent behaviors, infatuation, and honor killing. However, it is also true that efficient norms, which prevent uncooperative behavior, are observed in social dilemma situations. In this paper, we hypothesize that long-term relations stabilize both efficient and inefficient norms, but communications destabilize inefficient norms. We analyze a Sub-game Perfect Nash Equilibrium (SPNE) and a Strong Perfect Equilibrium (SPE) in an N-person repeated prisoners' dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all other players if she deviates from this expectation. Two equilibrium concepts reflect a player's ability to communicate. A strategy profile is an SPNE if no player can carry out solitary deviations (change his/her strategy). This equilibrium concept assumes a situation such that players cannot communicate with each other, e.g. tacit price collusions in oligopoly markets. As the Folk theorem indicates, there exist efficient SPNEs, in which the Pareto-deficient payoff is sustained by costly punishment. In contrast, an SPE assumes a situation such that self-interest players can engage in cheap talk and collude. If feasible coalitional deviation exists, all members of the coalition can earn more by changing their strategies simultaneously. Every SPE is an SPNE, but the opposite is not true. The sufficient condition for existing SPEs is proved using the multi-objective dynamic programming method. In conclusion, we successfully formalize the hypothesized relationship between efficiency of norms, long-term relations, and communications among players. Additionally, we point out some notable implications.

**Future Visions and Social Theory**

Social science in general and sociology in particular are facing a challenge of conceptualizing the relation between environment and society in ways that assist the dialogue and multiple attempts for creating visions of a sustainable society. Thinking about the future always involves thinking about the future of society. However, in future studies little attention has been paid to how underlying social theories affect our future visions. Since backcasting is a special approach in future studies which starts with a normative vision of the future and elaborates a strategy to reach this normative vision, this issue is even more pressing. Our paper...
aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices.

In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only present in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses.

The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilizing such methodological approaches. We argue that being constrained upon both theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

Emotions As Reason, Rationale and Result of Urban Artist Areas

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the internal dynamics of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian – and often emotional – purposes internal to the participating artists and their community. The latter purposes are objectives directly achieved through the cohabitation. These artist areas are “reserves” that serve as catalysts for the creation of a spatial, relational and social environment of artists, performing and propagating a “liberty of delectableness” not offered outside these specific areas. As a theoretical starting point I interpret the concept of “living in the streets” (2006), plus the literature on the notion of “cultural sustainability” that alludes to emotional values (e.g., Kirchberg & Kagan, Brocchi, Duxbury, Throsby).

There is a variety of emotional benefits that can be paraphrased and typologized as “artistic community identity”, “alternative com-patriotism”, “lifestyle experimentation” and “bohemian sociality” – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the “affective turn” (Clough 2007, Gregg & Seighworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

KIRCHNER, CORINNE* (Columbia University, ck12@columbia.edu)

Agism and Language in Old-Age Inequality

Nikolas Coupland (2007) has focused on “style” as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coupland shows that the common sociolinguistic reduction of style to dispositive variation is of no interest or awareness after a certain age.

Aging of the global population has been widely publicized, generally expressing fears about negative effects on society-at-large – i.e., on younger generations and underlying pervasive public attitudes of ageism and disciplinary research inequality.

That ageism is embedded in language, and detrimentally affects aging identity-formation often through linguistic practices, has been recognized (Miniciello et al., 2011). It is minimally examined, with serious attempt to proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding “ableist” language and the stigmatized identity of disability. The Disability Rights Movement offers a model, led by disabled activists, eventually involving rehabilitation and other “helping professionals” and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key disability activist versus aging service organizations showing agentic linguistic style changes that can undermine negative effects of ageism.

Fitness Culture As the Factor in Globalization of Recreational Sports

In the context of globalization, integration in the sphere of competitive and professional sports that receives maximum support from political and economic institutions, International Olympic Committee, and international sports federations expands to a great extent. Increasing need of the modern society for health-recreational technologies unprecedentedly reinforces the role of health culture and health industry known as “wellness”. Fitness is an element of wellness culture, and it presents a universal basis for popularization of health forms of physical and sport activity along with optimization of nutrition and body weight control. It makes health fitness as the direction of recreational sports an effective tool for strengthening population’s health and preventing non-communicable diseases.

Globalization of health fitness culture is primarily determined by the development of global fitness industry. Another factor in fitness development is the activity of mass media and advertising, as well as marketing and educational campaigns in the form of fitness conventions. The third factor in globalization of fitness culture is the activities of international organization in the sphere of sports for all and fitness, which include Sport for All Commission of International Olympic Committee, the Association for International Sport for All, International Fitness Association, Federation of International Sports, Aerobics and Fitness, and others.

Issues in social factors of promoting health fitness on a global scale as well as its scientific, informational, educational, economic, legal and institutional support represent actual direction in integrative sociological research of sports, physical activity and health. Uneven development of fitness culture and inequality in access to fitness services caused by of various social factors are of particular interest to sociologists.

Problems of Access to Modern Wellness Culture

Society's growing interest to the quality of life has predetermined the development of modern culture and industry of health called "wellness." During last decades, wellness has acquired features of new institutional complex, which integrates functions of numerous spheres related to health preservation and improvement, e.g. medicine, pharmacology, sports, leisure, tourism, manufacturing of health goods and cosmetics. The process of popularization of wellness culture is supported by scientific and educational institutions, mass media and advertising.

From a sociological point of view the inclusion of individual into wellness culture is determined not only by the conditions of upbringing and quality of education but also by the motivational and lifestyle formation. The key role in this process is determined by individual's socio-economic status, which includes income level, nature of person's professional activity, availability of mon-
ey, free time and vitality strength for active-health leisure. In this aspect, the maximum access to the values and practices of wellness culture have the elite groups, middle classes primarily in the developed countries ("the golden billion"). Not only modern medicine and wellness culture but also basic medical care stay inaccessible for the majority, namely the poor population of the world.

In the increasing societal need for health improvement, the effective strategies of increasing access to wellness culture is determined by the limits of economic growth, amplification of ecological barriers, the need to shift to wise consumption. Such strategies include raising people's personal responsibility for their health, lifestyle, active-recreational leisure; strengthening financial, institutional and informational support; development of preventive medicine; using potential of leisure and local green tourism for expanding the access to health-recreational practices for people. In general, the study of health-stratification and unequal access to the wellness culture is based on integrative sociological approaches.

The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms, boarded the bandwagon of neoliberal urbanism, after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan's sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage in its own neoliberalization by its mayor, Tomy Hashimono, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of mushrooming fancy mansions and many homeless in the city renders this policy turn questionable.

In this urban sociological research, I aim to comprehend the process of neoliberalization in Osaka City, observing this change process over the last 30 years in detail at the level of a downtown neighborhood called Horie, located in the Nishi Ward. With reference to the concepts of post-industrial city, gentrification and neoliberal urbanism, the study comprises of an analysis of visual materials and narratives of the long-time residents in the area. Despite being very close to the central business district of Osaka City, Horie has a more residential character and is interesting in terms of the regeneration of its old shopping street of furniture stores during the 1990s. Its current atmosphere is visually similar to the western examples of neoliberalized gentrified neighborhoods, with its up-market mansions, western style cafes, specialty stores claiming to do fair trade, trendy people strolling around, and some small crime like purse-snatching.

How Can Trade Unions Improve Quality of Work in Low-Wage Services in Europe?

In 2010 the European Union adopted the Europe 2020 strategy, emphasising the need for increasing labour market participation with more and better jobs as essential elements of Europe's socioeconomic model. But there is evidence that quality of work in many of the low-waged sectors in Europe is still problematic (Holman 2012) and problematic configurations produce various forms of precariousness, low-wage work, problems of social inclusion and violence at work (Kalleberg 2009). Increasingly, employment at the lower end of the spectrum of skills and wages in Europe is dominated by services that are spatially distributed and often employ vulnerable groups of employees (e.g. contract catering, office cleaning, waste collection, etc.). In these sectors, work is often outsourced from the public sector or other private sector companies and taken over by private sector service providers (large service multinationals or SMEs). The outcomes for employees often are insecure and problematic working conditions and little representation. This results from companies' cost-cutting strategies, enhanced by changing regulations, the practices of contract awarding and public procurement, the role of the client, conditions that are likely to be exacerbated by austerity measures in the framework of the current crisis, etc. The continuous debate about the specifics of service work has brought significant evidence about the importance of the triangular relationship among employers, employees and customers (Korzynski 2009). The paper investigates how trade unions address these challenges at EU level and in selected European countries. It is based on the recent research done in the framework of a European comparative project WALKING (www.walking.eu). The findings presented in the paper are mainly results of the analysis of interviews with social partner representatives in those sectors as well as from company case studies carried out in the examined countries.

Discourses of Internal Migration and Belonging: The Case of Some Communities in Ghana

Ghana, whose geographical position is along the west coast of Africa, has a population of approximately 20 million people. It is estimated that 45-60 local languages and dialects are spoken in Ghana (Dzamshie 1988). English is the official language in Ghana, and is used as a medium of instruction in educational institutions, commerce and government. A large population of Ghanaians are multilingual but use English as a common language for communication with speakers of other languages in society and throughout France. Each of the nine regions in Ghana has a dominant language that is also taught as a subject to school going children. Of all the languages spoken in Ghana, the Akan language is the most dominant of all. About 44% of Ghanaians understand and speak the Akan language (Osam 2003), though not all of them can speak it so fluently.

This paper examines how highly proficient adults from Southern Ghana construct and negotiate social belonging and exclusion in Northern Ghana. The data comes from interviews of individuals who migrated to Northern Ghana as adults and spent a significant portion of their lives in Northern Ghana. How do they negotiate for belonging? What is in their personal identity that allows them to succeed in the Northern identity? The paper explores the relationship between language and identity, and how language can shape one's identity.

We argue that the study of identity and language use must consider socio-historical contexts. Success in acquiring the Northern language is based on interaction. We examine the aspects of a good language learner namely: learning process, learner characteristics, and language features from the perspective of identity negotiation. We also examine the narratives that the individuals tell of the processes of identity negotiation.

*KISEMBE, LYNN* (All Nations University, lkisembe@anuc.edu.ge)

Personality and English Learning: The Case Of Some Students In Ghana

This paper focuses on understanding the role personality plays in English learning among some students in the Eastern Region of Ghana. Personality as defined by Ortega (2009), are qualities in a person or predispositions that have been learned through social experience. The personality aspects examined are learner beliefs, motivation and self-esteem because they are linked to learner ability to negotiate for belonging within the Northern identity region and successfully learn the dominant language? How do participants position themselves as successful learners a Northern language? After successful negotiation, how do they see themselves in relation to the local people?

We argue that the study of identity and language use must consider socio-historical contexts. Success in acquiring the Northern language is based on interaction. We examine the aspects of a good language learner namely: learning process, learner characteristics, and language features from the perspective of identity negotiation. We also examine the narratives that the individuals tell of the processes of identity negotiation.

Frequency of Incarceration, Criminal Thinking, and Sense of Coherence Among Male Japanese Criminals in Offender Rehabilitation Facilities

For former convicts, reintegration into society is complicated by psychological factors, such as mental strains and personality traits, and socioeconomic factors, such as unstable employment. The aim of this study was to investigate the relationship between the frequency of incarceration (at children's self-reliance support facilities, juvenile reformatories, juvenile penitentiaries, and prisons) and the personality factors of criminal thinking and sense of coherence (SOC).

This study was conducted at two metropolitan area offender rehabilitation facilities and participants were 116 Japanese men who had been placed under parole/probationary supervision or had been recently released from prison. The participants completed a questionnaire survey that contained the Japanese
version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of the three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, “cut off” thinking, self-deception, and problem avoidance. Spearman’s rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of “cut off” thinking. The frequency of imprisonment (at least one) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders’ SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

Young People’s Practical Agency: Transitions From FE College To Work In London

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people’s experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. This group is an under-researched ‘missing middle’ (Roberts 2011) group, who are neither NEET nor following ‘tidy’ pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at the present, and thus they develop resilience. We suggest that agency is situated and discussed the interplay between young people’s agency and the contexts in which they live, particularly in relation to youth labour market conditions.

KIVELÄ, MIKAEL* (University of Helsinki, mikael.kivela@helsinki.fi)

Deteritorialising Teaching and Research through Information Technology and Capitalism

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deteritorialise teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deteritorialisation is used here in two senses: first, as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language.

This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level lines. It links liminal sciences, psychology and cultural-historical activity theory. Furthermore information technology is deemed to have the general capacity of enhancing the joint knowledge creation of humans in conjunction with it. Is the future role of universities to provide such easily adaptable concepts which facilitate bringing in corporate partners by avoiding excessive clarity? Would this contribute to the techno-political utopia of virtual online communities developing the roles of the state and combating transnational corporations as Taul Harper suggests in "Smash the Stratav?"
by the currently popular “evolutionary psychology” (Toolby and Cosmides, Pinker) regarding the human nature; (2) the "Homo economicus" criticisms of evolutionary economists in the spirit of A Cooperative Species: Human Reciprocity and its Evolution (Bowles and Gintis); (3) Geoffrey Hodgson's version of "Generalized Darwinism"; and (4) "niche-construction" approach to human “gene–culture coevolution” (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution.

While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to "the problem of social order" – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson's model in turn utilizes pragmatist conceptual tools well, but its level-on-tology and its generalization of principles of evolution remains less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment transaction model opens the brain–consciousness–language–society continuum "outside-in" rather than "inside-out" and allows understanding the processes in terms of localized organism–environment transactions by means of which evolution can in fact only be understood.

**Did Japanese Women Writing on Cultural Issues in Post War Japan Create Solidarity Among Themselves? a Case Study of the “Kusanomi Kai” (Kusanomi association)**

In post-war Japan, many Japanese women have been writing about their everyday lives, their opinions on social problems, or politics in major newspapers. These readers’ columns helped in founding the “Kusanomi Kai” (Kusanomi association), an association of writers and readers, in 1955.

In my presentation, I will examine how and why a community of writers was created between 1955 and 1958. First, I will explain why they founded the communication association and made it their primary media. Back in the 1950s, women often found it difficult to get their opinion published in major newspapers, since some editors might have had the view that women were inferior to men and consequently criticized women's opinions that appeared in the readers’ columns. To avoid being criticized, some women made “Kusanomi Kai” their primary media to communicate amongst themselves.

Second, I will discuss the practice of writing followed by the “Kusanomi Kai” members and the use of media studies. Those days, most women had little experience of making a speech in front of an audience. However, as they were good at writing, they used the skill for expressing their opinions about gender or social problems and read them out as they appeared in print. To do this, they would go to a meeting of “Kusanomi Kai” and talk about their writing in the media.

Third, I will outline the profile of the women who participated in the “Kusanomi Kai” and the categories of members in the association. The association was made up of not just housewives but also a few working women. They wrote about their opinions on issues that mattered and discussed them with each other in the group meetings. In this way, they developed a sense of intimacy and built their collective identity, not as “housewives” but as “women.”

**Kjellman, Arne* (Stockholm University, kjellman@dsv.su.se)**

**The Foundation of a Theory of Everything**

This paper discusses the basis of a recently developed “Theory of Everything” that builds on a "Subject-Oriented Approach to Knowing." Its persistent claim is that physics and modern science by their reference to the "given", most often explicated by the concept of “matter”, have led human thinking astray. This work shows that in the very moment a thinker/knower introduces “matter”, or the like, as something subject alien, he already in the outset introduces a crippling matter/mind distinction from which knowing never will recover. This contamination spreads to other men and their languages and conceptual frameworks, hence many of the perplexities and paradoxes found in modern science. On this view, truth and falsity, right or wrong disappear, as well as the traditional role of science as a pursuit of truth. Along also goes the cleft between the social and natural sciences. This means that all knowledge endeavours can, pace Ernst Mach, be grouped under the same umbrella. The idea of a common reality gives place to the idea of a private universe – a universe – belonging to each and every man, and laboriously constructed on the basis of purely private experience. By his own will, man builds this fund of cumulative experience in isolation or in a mood of communication and social consensus. In the latter case, the tools of communication are also critically influenced by his choice of conceptual seed. On this view, the first hominin man was forced to construct a private language to connect to his children simply to break free from the isolation of his thoughts. Thus Adam was forced to build an emerging science strictly in a bootstrap manner. There is no other way to explain science and human knowledge - a recognition that has hitherto been hidden by a misunderstanding of the sign function.

**We Are The People! Street Demonstrations As a Means Of Communication**

We are the people! Street demonstrations as means of communication

Over the last decades we have witnessed a dramatic rise in the occurrence of street demonstrations. Increasingly, citizens chose street demonstrations as a means of communication. “We are the people!” or more recently “We are the 99%!“ are appeals to politicians to listen to the people and to take their claims seriously. Movement politics have become the natural counterpart of party politics. Employing a unique dataset of over 80 demonstrations that occurred between 2009 and 2013 in 9 different European countries, we give voice to the citizens who populated these protest events. Some of these demonstrations were people protesting the austerity measures they were suffering from. For instance, students protesting a raise of tuition fees or public health workers fighting budget cuts. Other were people demonstrating against the way democracy was practiced in their country. Democracy, as we know it for decades, no longer satisfies many a citizen. Not only in post-communist and authoritarian regimes but also in mature democracies people challenges democracy as it is done. Occupy-London or Amsterdam, or the 15”of May in Spain are examples. We will compare the particpants in these two types of demonstrations. What were their grievances? How did they evaluate democracy in their country? Did they trust state institutions? What did they expect from their participation? Did they participate in party politics next to movement politics had they given up party politics? How were they embedded in the multi-organizational field?

We maintain that movement politics is a necessary complement of party politics. The democraciteness of a country is defined by the quality of both movement and party politics.

**Scenes of Street Art in Montevideo: City and Creative Processes**

La presente ponencia es punto de partida de la actual investigación que desarrolló en el marco del Doctorado en Gestión de la Cultura y el Patrimonio (Universidad de Barcelona).

El objetivo de esta presentación es visualizar algunas líneas claves sobre el papel que atesora el Street art en su diálogo con Montevideo, más precisamente, con respecto a la ciudad, su espacio público y los procesos creativos que nacen de las interacciones generadas entre los propios artistas urbanos (ya sea en su carácter individual o colectivo - crew).

Montevideo es una pequeña ciudad, capital del país más pequeño de América del Sur. Sus características propias de cercanía permite interacciones entre artistas urbanos, artistas, etc., generando un crisol heterogéneo de formas creativas en un territorio sumamente acotado.

Asimismo, estos agentes trazan lógicas horizontales en las tareas que realizan, eligen democráticamente y generan fuerzas lazos de solidaridad en las tomas de posesión al momento de “marcar” el territorio de la ciudad. La elección por el espacio público es tratar de impactar e involucrar al habitante de la ciudad con el graffiti u otras formas de arte urbano, “rompiendo” con su espacio cotidiano, con su familiaridad con la ciudad.

La ciudad se reinterpreta poniéndola en cuestión a través de sus formas, sus construcciones, su arquitectura, etc., demarcando los espacios sociales donde se presentan las producciones artísticas, ejerciendo su derecho a la ciudad, buscando reconocimiento en la distancia invisible.

Los procesos creativos son múltiples, y las formas de trabajo creativo también. Las estrategias de generación de arte en ese gran lienzo blanco llamado ciudad permiten construcciones compartidas entre los artistas como puntos de tensión y normas internas de respeto y convivencia.

En definitiva, Montevideo es un pequeño lienzo con multiplicidad de artistas e interacciones creativas que se visualizan y complejizan en territorios locales acotados.
The hereby proposed presentation shall focus on a very specific aspect of the relation or discussion concerning modernity and critique. The aim is to, considering the multiplicities of viewpoints addressing the centrality or relevance of modernity as a centerpiece of sociological interpretation, understand to which extent a predominant and (partially) normative concept of modernity can be taken as a point of departure to define the origins of (dialectical) critique while, at the same time, discarding the hegemony of modernization theory.

Therefore sociological theory as critical theory should be able to establish a profound and rigorous dialogue with distinct theoretical cornerstones, and here is where the interest lies in bringing to the debate standpoints from peripheral origins, focusing specially on the contribution of the Brazilian (although from a European and migrant background) critical theorist Roberto Schwarz. One has to take into account that a significant amount of his interpretations was written from the 1960s until the 1970s, and therefore precedes the more or less recent wave of post- as well as decolonial critique.

It is certain that the predominance of European colonization in so-called South America was tantamount to the pertinence of recovering modernity - carried foremost under the attributes of civilization and enlightenment - as a fundamento for economic, political and social conceptions. Hence, as a centerpiece of the discussion should stand Schwarz’s effort to work out the specific and distinct traits of the so-called modernization or state-formation process in Brazil and how this enables us to consider the particularities and generalities of a critical perspective based upon various academic disciplines. This dialogue of critique(s) is appraised as a possibility for putting present sociological theory under ‘cross-examination’.
Making true claims, mentioning being censored, or self-censoring do not influence the kind of plots these authors write either in a negative, or positive way.

Developing Home? Transnational and Translocal Return Migration To Ghana

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of ‘successful’ transnational or translocal returnees resemble that of the local elites who have made it in the capital or other big towns: migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana.

The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depend to a large degree on what return migrants have managed to remit back either during their migration or when returning.

KLESE, CHRISTIAN* (Manchester Metropolitan University, c.klesse@mmu.ac.uk)

Polyamory and Political Economy: A Note on Socio-Economic Inequalities

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of financial and other class privilege in polyamorous communities. This paper highlights the economic conditionality of polyamorous relationships and families. Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions which riddle poly communities in advanced industrialised societies and confine their reach to a particular niche to preoccupy mainly white middle class circles. The insertion of poly cultures into an economic and cultural nexus shaped by neoliberal capitalism helps to circumscribe the material and discursive spaces from within which poly relationships and kinship formations are enacted. In this paper, the author is particularly interested in how the construction of polyamory as a style of enhanced reflexivity reappropriates spaces from within which historical and contemporary polyamorous communities have been marginalized. The structure of polyamory as a reflexive ethics further goes hand in hand with the fading of an emphasis on passion and sensual pleasure and establishes a rationalistic bias within the discourse of poly love. The paper closes by proposing a research agenda into poly intimacies which is more attentive to class and socio-economic inequalities.

KLEY, STEFANIE* (University of Hamburg, stefanie.kley@uni-hamburg.de)

Employment Preferences or Family Values - Where Are the Pitfalls for Women's Labour Participation?

A better reconciliation of work and the family life is one important issue on the political agenda in many areas of the world. In West-Germany, the male-breadwinner family model is still well established. Only recently, the development of family care for children less than three years of age offers mothers the possibility to re-enter the labour market early. Apart from such important structural restrictions, family values and gender attitudes play an important part for explaining labour force participation of mothers. With regard to family values, the family-home plays a decisive role. In West-Germany there is a widespread belief that children should grow up in sub-urban or rural as a bourgeois, so that moving to a child-friendly home can be seen as a proxy for a strong value orientation towards family life. Such moves normally add space between the family home and the work-place, which results in the necessity of long-distance commuting. Hence, an early re-entrance in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to estimate the influence of family-oriented relocations on the re-entry in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panel Study (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010, and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entry of mothers in the labour market, whereas employment preferences have positive influences. Other important influences like marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.

KLINTOWITZ, DANIELLE* (Fundação Getulio Vargas, daniklin@gmail.com)

FARIA G. IACOVINI, RODRIGO* (Universidade de São Paulo, rfgiacovi@yahoo.com.br)

Political Arrangements of “Minha Casa Minha Vida” Program - the Role of State, Civil Construction Sector and Civil Society

Historically there is a functional relationship between the development of the civil construction productive sector and the Brazilian State, with a deep impact in housing policies’ decision-making processes. ‘Minha Casa Minha Vida’ program was an anticyclic measure to face the international economic crisis, supporting that sector and implementing Keynesian investments with macroeconomic effects, having few concerns with housing needs.

The Federal Government concentrates program’s normative and financing functions, redistributing from the cities/housing ministry to the economic planning ministry and the government’s strategic political decisions agency. Implementation decision power was granted to a public bank which acts guided by productivity goals, regardless housing needs. The constructive sector was already strongly present in the program formulation and influencing the rules to a better reproduction of the sector’s capital, being also a fundamental actor in the implementation, given that it became its main promoter.

In the case of municipalities – who had almost no influence on MCMV conception – it was assigned a role of appointing the beneficiaries of the first range (long-term families), assuring them, without financial/institutional efforts, the maintenance of electoral mandates through clientelistic relations. Social movements participation was limited to a category with only 3% of the budget (but that enables them to deliver actual results to their bases). They also informally participate in the appointing process, amplifying their political gains but with results that drift away significantly of their struggle against spatial segregation.

These decision arrangements discourage particularized solutions dialoguing with local needs and represent the State/corporations’ historic imbrication, ori-
ent by the development of construction sector and by its macroeconomic, po-

tical and electoral roles. This logic shapes the actual housing policy model and

explains housing investments’ decision-making process, apparently deepening

territorial inequalities. Then, a pending question is: does this model contribute to

or counter inequality in brazilian cities?

KLOCHKO, MARIANNA* (The Ohio State University - Marion, klochko.1@osu.edu)

Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world the notion of success, especially economic success, became very popular even for children. It is important to note that as eco-
nomic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achiev-
ing this coveted success.

Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one’s success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic insti-
tutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with its

relatively high level of corruption (according to TI index) and unstable economy

might be more likely to influence the population to acquire quite different val-

ues and attitudes, more suitable to ‘cut-throat’ conditions of the market. Is the Ukrainian population’s willingness to ignore the law and basic notions of honesty

an indicator of a rational adaptation?

KLUG, PETRA* (University of Bremen, petra.klug@uni-leipzig.de)

Good without God: Atheists Facing Moral Questions and the Question of Morality

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power alto-
gether is perceived to be without an ethical basis, and thus immoral.

Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts be-

hind this accusation, how atheists react to it, what kind of morality they bring into plays, and what they in fact think about religious morality.

In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in fact a variety of approaches atheists take in facing the issue of inequality. What these approaches share is a common pattern for nonreligious ways of dealing with social change.

These different points will be laid out and illustrated with interview material in order to create a theoretical framework regarding atheist and nonreligious mo-
nality and ethics.

Intelligentsia in Modern Russia: Social Status Change

Humanitarian intelligentsia is a specific social group. Throughout its history it

is not only developed non-material culture of society, but also played the leading

role as civil asset of the nation, its “conscience”. During two past decades trans-

formation in social life put the group in necessity of social adaptation, and so far

the social position of the group and its role in the new social relations became

unclear.

The paper is aimed to determine the current status of humanitarian intelligen-
tzia in socio-economic, socio-political and professional fields and seek ways to im-

prove its civil and professional positions. The analysis is based on the theoretical

and methodological approaches that take into consideration the stratification of

Russian society, differences in territorial conditions and professional fields. The

study was divided in two phases. Initially, a wave of semi-structured interviews

(n = 100) were conducted. After that, quantitative data were collected from ques-

tionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current so-

cio-political position of the group and its social adaptation level. The factors of

status change present different levels: macro - level (socio-economic, political ,
socio-cultural change in the country), meso - level (the development of the region

and current professional sphere), micro - level ( individual knowledge, attitude and behavioral strategies).

The Reality of Nineteen Eighty-Four. How Fiction Becomes Social

A literary text, according to the literary theorist Wolfgang Iser, operates by os-
cillating between the limits of the fictional and social worlds and thereby express-

es the plasticity of the human being and its continued evolution of self. Notwith-

standing, the question of how these fictional ideas spread into the social domain is rarely tackled. At the heart of this presentation is the task to forward develop an understanding of how the fiction found in literature participates in the shaping of social reality.

The reception of George Orwell’s popular novel Nineteen Eighty-Four (1949) in

the German public sphere in the years 1983/1984 will be taken to exemplify the

irruption of the fictional into the social. Symbolizing the concept of totalitarianism

in its purest and most extreme form, the element of imagery provided by the (fic-
tional) text moves beyond signification and pretends an ontology. This so-
io-fictional aggregate referred to either by the novel’s title or the term Big Broth-
er has come to shape the idea of totalitarianism for a whole era. I will introduce

the social philosophy of Cornelius Castoriadis to the debate, as I believe it can help us understand the functioning of the fictional within the social as displayed in this phenomenon. Castoriadis attributes primary importance to the imagination

for the creation of social knowledge as well as the interaction between the social

imaginary significations and the (individual) radical imagination. His framework

of the interrelation between the individual and the social may well be perceived

as a gateway for the irruption of the fictional as found in the arts into the social.

For fiction is a tool for social communication, to display the problems and dis-

orders which are avoided in the sphere of politics. This paper aims to look at

how fiction can be used in the social theory discussion of totalitarianism.

Dealing with Difference: Exclusion As a Problem of the Subject or the Discourse?

This paper integrates the sociology of knowledge approach to discourse (Rein-
er Keller) into the debate on exclusion on grounds of sex, ethnicity or age. The

main thesis is that exclusion is not a problem of closed or open structures, of powerless or powerful subjects or of intersectional categories. In contrast, the

paper argues that exclusion is mainly a result of the interplay between discourses as structures of power and knowledge and subjects related to an institutional context. Considering empirical results, which stress the relevance and irrelevance of intersectional categories alike, the paper discusses how to deal with difference in institutions, that is how to explain mechanisms of exclusion. We propose a concept, which applies the intersectional perspective to the level of communicative interaction in institutions. Focusing on intersectional categories, the concept regards them as discursive constructions, which are more or less relevant in sit-

uations of interaction.

First, the paper discusses the main strands of related theories, which deal with

the problem of structure and agency in the field of exclusion from three differ-

ent perspectives: structures constitute subjects, subjects form structures, and

subjects disappear behind the (intersectional) structures. Second, the paper con-

cludes that all three mentioned perspectives miss the decisive point. Neither the

focus on powerful subjects nor the dominance of structures of powers nor behind structures veiled subjects can cope with the problem of difference proceeding exclusion. Third, the paper presents a broader perspective which is needed, that integrates the interplay of discourses and subjects in the context of institutions. The paper argues that intersectional categories are constructed by discourses. Discourses as structures of knowledge and power, are (re-)produced and trans-

formed in communicative interactions. The main hypothesis is: How institutions
deal with difference (and exclusion), based on certain intersectional structures, de-

pends on the institutional context in which communicative interactions takes place.

AL BAGHAL, TAREK (University of Essex)
Consent to Data Linkage: A Focus on the Interviewer Respondent Interaction

Linkage of survey and administrative records is increasingly popular. The survey respondent's informed consent is required to perform linkages and a number of studies have documented interviewer effects in the decision to consent. Whilst studies found that 28-34% of the variance in consent outcomes is attributable to interviewer characteristics, many of the characteristics were unobserved. We use experimental data on consent to data linkage collected in wave 4 of the Innova- tion Panel (IP4) to examine the role of the interviewer-respondent interaction in the decision to consent to data linkage. IP4 included a number of experiments around the way in which consent is asked and respondents were asked for consent to refuse their interviews. See Saha, Knob and Burton (2013). We report results from multilevel models on selectivity in consent using information gathered from coding the interviewer-respondent interaction around the data linkage request. The code frame considered whether the interviewer read out the question as scripted, with minor or major deviations. Deviations from the script considered whether the change in wording may be viewed as biased toward a particular decision. We coded the interviewer-respondent behaviour for all available interviews which allows us not only to examine the prevalence and effect of non-standard interviewer behaviour and how it affects the consent outcome, but also whether these vary across experimental treatment groups in a nationally representative study. Results will contribute to elaborate on Groves and Couper (1998)’s model of survey response into building a theoretical model that explains better the complex processes that lead respondents to consent.

The birth of modern society follows structural pluralism and many forms of social differentiation. Processes of state formation are dealing with the population and their new personnel. But who or what is the population? How does the state address individuals? What are patterns of membership and belonging when individuals become persons i.e. citizens? Using a historical perspective through the lens of classification and social knowledge the contribution will discuss the “making up people” (Hacking 2002) within the formation of nation state’s political system. It will be shown that legal classification and categorization are state practices in order to address people and to distribute resources. These persons are reflecting structural changes and they can be used as a key to open modern society’s self-discriptions.

In the first step (1) beginning at 1945 the historical sequences will be sketched to reconstruct the legal paths of the cases Hungary, the Czechoslovak Republic, Ireland and Netherlands. In the second step (2) some common and some historic-specific implications of their interfering social dimensions (i.e. nation, ethnicity, sex or economy etc.) will be presented and compared to illustrate the social differentiation of the nation-state. Against this background (3) using the heuristic code of citizen/non-citizen major shifts of the meaning of political membership and belonging will be shown. Finally (4), it will be argued that society’s personnel stands for a specific institutionalization of inclusion and shouldn’t be seen as a deviance from “Vollinklusion”.

...
ThefirstpartofthepaperfocusesontheperiodwheninfluentialGerman
historians triedto emancipatethemselves from Hegel’s philosophicy ofhistoryin
order to create atruly empirical science – and failed! The problem was that they
couldn’tsolve the problem of relativism which comes up in anyhistoricalaccount
thatdistancesitself from Hegel’s teleologicalperspective. Thus, historians such as
Rankne and Droysen from multi-nominal logis regression models to engage
in argumentsthathad in the end were not to dissimilar to the Hegelian ones.

Butgettingrid of Hegel’s teleological history of philosophy was not only a
problem of historiography. It was at the center of the emerging social sciences in
generalclosertothewritersofthemostimportant Neo-Kantians,who
influenced Max Weber. Weber clearly saw the problem and deliberately tried
tocut off all links leading to a philosophy of history. This was accompanied by
somecosts and Weber’s particular conceptual move – the coining of highly robust
processualterms which seemingly could not be doubted and (thus could not be
relativized) contributed to their analytical usefulness – was not a necessary onetime
as contemporary developments in other philosophical traditions show. But it was
Weber’s theoretical apparatus which became most influential so that sociology
followed his lines of argument and continued to base its narratives of social
change on the assumption that social reality is to be understood as a cosmos
driven by robust processes (like “bureaucratization”, “rationalization”, “seculariza-
tion”, etc). This move, so it is argued, might have been convincing in Weber’s days,
but it is not any longer.

KO, JHY-JER ROGER* (National Taiwan University, jkjo@ntu.edu.tw)
Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan

One emerging issue of research on work and labor market is to study the seg-
mentation trend in job and work mobility in labor markets, and mechanisms be-
hind segmentation processes. Recently, some researchers argued further that the
division between standard and nonstandard workers has acted as an additional
segmentation of labor market. This approach also paves the way to understand-
ing of the link between precarious work and social inequalities. Considering the
significant impacts and labor market policy implication of this possible segmen-
tation, detailed and i research difference on patterns of job and work mobility
between standard and nonstandard workers, and also study if these differences
have caused segmentation in labor markets of Taiwan.

Existing literatures provide two strands of arguments regarding consequences of
nonstandard work arrangement: the stepping-stone hypothesis and the entrep-
ment hypothesis. The stepping-stone hypothesis claims that nonstandard work
provides a stepping stone to a standard job and is regarded as a means to flexibili-
ize the rigid labor market. On the other hand, the entrapment hypothesis, which
is derived from labor market segmentation theory, assumes that nonstandard
work has long-lasting negative consequences on job mobility because it makes
nonstandard workers “trapped” in the secondary labor market segment, or leads
to unemployment. To investigate which hypothesis is correct in Taiwanese labor
markets, I use “Manpower Utilization Quasi-Longitudinal Survey” (2008-2011) to
examine job and work mobility between standard and nonstandard workers. As
a result, the former hypothesis received robust support, which suggests that
the entrapment hypothesis. Segmentation of labor market is reflected in difference
of mobility pattern between standard and nonstandard workers.

KO, PEI-CHUN* (University of Cologne, ko@wis0.uni-koeln.de)
Determinants of Social Activities Among Older People in China: An Analysis of Family Factors and Community Factors

Objectives: The study investigates the extent of family factors and community
factors affecting engagement in social activities (non-market productive activities
and leisure activities) by older people in China.

Conceptual framework: Given filial piety and Chinese “quanzhi” value the
importance of family in Chinese culture, family factors, including older people’s
household size, composition and number of financial supporters are tested. In
line with opportunity structure arguments, the impacts of community factors
(public facilities, community offices and urban/rural communities) on the like-
hood of social activities are examined. Research hypotheses are summarized here:

H1: Older people living with more family members are less likely to engage in social
activities than are older people living with few or no family members.

H2: Older people living alone are less likely to engage in social activities than are
older people living with partners.

H3: Older people with more financial supporters from within their family are less
likely to engage in social activities than are older people with few or no financial sup-
porters from within their family.

H4: A community with more public facilities increases individuals’ propensity to par-
ticipate in social activities.

H5: A community with a longer office increases individuals’ propensity to participate
in social activities.

H6: Individuals living in an urban community have a higher propensity to partici-
pate in social activities than do individuals living in a rural community.

H7: Individuals living in an urban community have a higher propensity to partici-
pate in social activities than do individuals living in a rural community.

Methods and data: The first wave of the China Health and Retirement Lon-
gitudinal Study (CHARLS) is used. The analytic sample is composed of respon-
dents above 50 years old (N= 7,813). Multilevel models for dichotomous data are
employed (first level: individual characteristics and family factors; second level:
community factors).

TSUBOYA, MIOKO (Yokohama City University)
Transnational Families and Newcomer Children in Japan

In the 1980s, because of the economic boom in Japan, many workers came to
Japan from other Asian countries. In the 1990s, the Japanese government revised
the Immigration Law, resulting in workers coming from Latin America. Since then,
the number of foreign laborers has continued to increase.

The number of foreign workers’ children has also grown. They face difficulties
keeping up with academics in school because of insufficient Japanese language
and poor school support. Teachers also face challenges in instructing diverse
students whose native languages are Chinese, Tagalog, Portuguese, Spanish, and
others.

In Kanagawa prefecture neighboring Tokyo, the number of newcomer children is
relatively large. Four high public schools began providing special services for
foreign students in 2007, and the number of such schools increased to 16 in 2013.
Those schools provide a variety of services including native language classes, Jap-
anese-as-a-second-language classes, and special instruction classes for academic
subjects.

The authors identified the challenges and needs of newcomer students. The
data derived from interviews with 85 children at a high school in Kanagawa pre-
fecture from 2007 to 2013. The findings and interpretations indicate that (1) some
newcomer children have poor academic achievement and face difficulty going on
to college because of scarce resources and support even though they desire more
education; (2) many families experience separation due to migration for jobs or
women marrying Japanese men and leaving their children in their own country.

These are the “multinuclear households” often seen in countries with long ac-
cepted immigrants; (3) those families that live apart for many years have difficulty
reestablishing their ties. We argue that special educational and social attention
should be given to these families and their children.

Mobile Social Dilemmas in an Experiment: Mobility Accelerates the Cycle, but Does Not Change Cooperation

1. Problem

This paper sheds light on the role of mobility on cyclic processes in mobile
social dilemmas. Olson argues that rational actors will free-ride in large groups.
Ehgart and Keser’s experiment revealed that people formed cyclical directions of
group size and cooperation when they can change groups. But they did not com-
pare various levels of mobility. Thus, our research question is how mobility affects
the cycle and the cooperative behaviors.

2. Methods

We conducted a laboratory experiment (with 168 participants in 40 groups
in 10 sessions). Three conditions (treatments) were introduced (immobile, high
mobility costs, and low mobility costs conditions).

3. Results

We show the following findings. (i) Mobility did not change effects of size on
cooperation (N=339 group-rounds). (ii) Still, mobility accelerated effects of coop-
eration on size (N=360 group-rounds). As people moved more easily, cooperative
groups were more likely to expand. (iii) As a result, intergroup mobility acceler-
ated cooperation (N=40 groups). Groups rotated faster when people moved more
easily. (iv) However, mobility did not raise nor decline cooperation levels (N=40
groups).

4. Conclusion

We observed negative effects of size on cooperation. This was consistent with
the literature, both on mobile and immobile social dilemmas. We observed cyclic
dynamics. This reconfirmed Ehgart and Keser. We observed identical coopera-
tion at various mobility levels. This was inconsistent with Tiebout’s prospect. The
literature overlooked that free-riders can invade cooperative groups. To foster
cooperation among rational actors, first increase mobility to free-riders.

Then, restrict mobility to exclude free-riders.

Media Representation and the Cultural Politics of Zainichi (Residing-in-Japan) Korean Athletes: A Preliminary Conceptual Analysis

This paper examines how zainichi (residing-in-Japan) Korean athletes have been represented in the media and mobilised in relation to the cultural politics of Japan. Zainichi Koreans have been the largest ethnic minority in Japan largely due to forced migration during the era of Japanese colonialism. Second and later generations of zainichi Koreans have often strategically hid their Korean citizenship and identity by speaking Japanese and adopting Japanese names in order to avoid daily conflicts with, and discrimination from, Japanese society. Sport is one of the sites where the politico-historical issues of zainichi Koreans are brought to the fore in public consciousness and popular discourse. From the legendary professional wrestler—Rikidozan—to the naturalised Japanese football player—Tadanari Lee, zainichi Korean athletes have been represented in an ambivalent manner—both as ‘Japanese’ and ‘the Other’. This ambivalence of representation is linked to how they self-identify, the role of the media and the context of cultural politics at the time. By examining how representation and perception of zainichi Korean athletes have been maintained or changed over time, the paper highlights the key events and sport stars that have contributed to the re-positioning of zainichi Koreans in Japanese society. Research on zainichi Koreans has been rarely conducted yet deserves attention because it challenges the homogeneous construction of ethnic essentialism and sport nationalism in Japan and reveals the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of zainichi Korean athletes with respect to how they might be studied both theoretically and methodologically.

Taking Japan Seriously Again: The Cultural Economy of Glocalisation and Self-Orientalisation

Although Japan’s economic presence has declined over the past two decades, the legacy of Japanese cultural-economic contributions to the global process has not been adequately addressed. This paper identifies the pioneering role of Japan in developing, and globally disseminating, two key commercial processes of ‘glocalisation’ (Robertson, 1995) and ‘self-Orientalisation’ (Dirlik, 1996; Iwabuchi, 1994). By delineating the links between the two interrelated processes, it is argued that Japan’s contributions to the making of the global cultural economy have dramatically altered the mode of domination by transnational corporations—from economic rationalisation to cultural differentiation. This was triggered, as I contend, by the formation of strategic alliance of Japanese corporations with Western marketers and advertising agencies when they globalised their products and business operations in the 1970’s and 1980’s. Drawing on case studies of global sport brands, this paper demonstrates the ways in which Japanese workers and consumers have shaped the structural forces of the global West through their practices of glocalisation and self-Orientalisation. Overall, this re-thinking of Japan’s cultural-economic contributions counters the view of seemingly unilinear development of neoliberal capitalism that has been prevalent in theorising of global consciousness and connectivity.

Self-Rated Ability of Reading the Atmosphere and Correlated Factors Among College Students

Inartistic understanding of someone’s needs and feelings accurately, and communicating with people smoothly is represented as “reading the atmosphere”, and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire aiming at finding the self-rated ability to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as “cannot read the atmosphere at all (Group 1)”, 19.4% “cannot read the atmosphere very much (Group 2)”, 46.8% “can read the atmosphere a little (Group 3)”, 25.4% “can read the atmosphere very much (Group 4)”, and 5.3% “can read the atmosphere too much (Group 5)”. Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However, they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

Dark Side Of The Miracle: Hunger and Food Insecurity In Turkey

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantization, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income gap between the rich and the poor, worsening of working conditions, increase in the percentage of workers working for the minimum wage and high levels of youth unemployment. Despite these socially unfavourable social factors official figures celebrate success in terms of food security and fight against hunger.

This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

KOC, FLORIAN* (Universidad del Norte, fkoch@uninorte.edu.co)

Arranged Urbanism: Modes of Informality and Governance Structures in Barranquilla, Colombia

During the last several years a dynamic transformation has been taking place at the northern city fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built – a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the ‘formal’ and the ‘informal’. The re-thinking of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of agreements and agreements between the land owner and the public authorities. This form of urban development is described as ‘arranged urbanism’ and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of ‘arranged urbanism’ can also be found outside of the Latin American context and this paper present a new mode of planning governance in Cities in the Global South and the Global North.

Governance of Climate Adaptation through Urban Regimes: The Cases Bogotá and Frankfurt

Climate adaptation strategies have gained importance both in Cities in the Global South and the Global North (Birkmann et al 2010). A crucial aspect of these strategies are so-called climate adaptation plans. These plans show the actions that should be taken in order to reduce the negative effects of climate change on urban population. My presentation analyzes the climate adaptation strategies of Bogotá, Colombia and Frankfurt (Main) Germany and evaluates the political processes beyond these plans. Even though the context of both cities is very different, similar results can be traced: In both cities „climate adaption urban regi- mes“ have been established to determine the content and the implementation of the plans. These „urban regimes“ - an „informal yet relatively stable group with access to institutional resources that enable it to have a sustained role in making governing decisions“ (Stone 1989) are not locally bounded but consist of multi-level actors constellation and consist of private and public actors. The existence of these regimes does not guarantee the implementation of the climate adaptation plans. On the contrary profound changes regarding the future urban development are precluded by these regimes. These results are compared with the older discus- sions on Urban Growth Machines (Logan & Molotch 1987), Urban Regimes (Stone 1989, Stoker 1995) and the questions „Who governs?“. From a theoretical point of
Women's Health and Gender Discrimination In India

Abstract
The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realise their potential, that it's not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy.

Women's health in India can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women's health is often considered a secondary concern, and gender inequality is one of the reasons that play a major role in the health outcomes of women in India. Human development Report (United Nations report, 2011) indicates that India is one of the worst countries in the world and ranked 132 out of 187 in terms of gender inequality. In 2005 India enacted the National Rural Health Mission (NRHM) with a clear set of measurable objectives, like Maternal Mortality Ratio (MMR), Infant Mortality Rate (IMR), Total Fertility Rate (TFR), and targets for National Disease Control Programmes (NDCP) in addition to create universal access to public health services and also balance the gender ratio.

The present paper focuses on the achievements of Odisha through NRHM by presenting the primary data (Bolangir, Odisha, India). There is a significant improvement in rate of decline of IMR, MMR and TFR. In addition the present study also examines gender disparities in nutritional status and concludes that women are more malnourished than male.

Cleavages and Conflicts in Aging Societies: Generation, Age, Class

Fifty years ago, inequality in developed societies disadvantaged the elderly. Becoming old could mean falling into poverty, and some sociologists interpreted retirement as a form of social exclusion and alienation. Today, the tide has turned: the elderly have benefitted from the expansion of the welfare state, and some sociologists paint the bleak picture of a coming gerontocracy. The discourse on “new” class cleavages such as those of gender and ethnicity (or “race”). Emphasizing the generational conflict tends to downplay other inequalities, and by this, risks being ideological.

I will briefly retrace the stages of this discourse, and then examine the current extent of cleavages among generations in different terms of economic well-being and social inclusion. How these cleavages turn into conflicts depends on their potential for mobilization, which I will assess by examining political attitudes, participation and voting. The result is that the salience of generational conflicts is (so far) low, which I attribute to the mediating function of political institutions and of generational relations and transfers in families.

Class inequalities accumulate in old age, and class cleavages may thus deepen in future aging societies, but the potential for class mobilization seems to fade away. Generational cleavages may also deepen, not least through the current trends towards welfare state retribution. Whether they will lead to generational mobilization depends on the continued viability of the mediating institutions in politics and the family.

Does Inclusion Mean Everyone Every Time?! – Critical Reflection on a Popular Concept

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtle (and not so subtle) forms of exclusion that have developed over the years in our society? Is it really intended that each person in it’s unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and consequential topics.

Parents’ Home Ownership and Support for Adult Children Across Europe

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by a high level of defamilialization, Continental Europe follows a model of supported familialism. The Mediterranean countries are best described as adopting a model of familialism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children's own family projects.

The present paper, based on data from SHARE and SHARELIFE, examines how parents’ housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts. First, we will analyse the extent to which parent's home ownership status affects the likelihood that children co-reside with their family of origin. Our preliminary results suggest that, ceteris paribus, parents who rent their home are less likely to support their adult children through co-residence. Secondly, we want to understand how parents' housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts.

Friends, Comrades and The Aesthetic Melting Pot: Instagram As a Tool Of Propaganda

This paper examines the ways through which the aesthetic mechanism of Instagram, a social network application designed for media sharing, is used as an instrument of inclusion in society.
emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defense Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew).

I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, aesthetic, and affective emotional norms shared by the users (Chandler & Livingston, 2012). This frame of values is understood as a common ground for the Israeli users, who were raised on myths about the army and the value of deep friendship among warriors. The same frame of values serves them simultaneously as members of a social network which is based on fixed aesthetic norms such as chosen filters and the "artistic" square shape, which its similarity to Kodak Instamatic and Polaroid images makes the photographs "sentimentally beautiful" (Enquist, Magnus and Arak, 1994).

Also common are values of sharing, the meaningful dual concept of "friends", and the value act of posting, motivating, may it be the army's hierarchic system or the social network's "likes".

I will look into the ways through which the use of Instagram helps the sites' administrators and private users to activate a unified code of symbols, which blends individuality and nationality, the beauty of nature, the aesthetic standards of the application and the admiration of armed forces (Friedlander, 1984).

And last, seeing Instagram as a platform for individuals to perform and share their artistic creativity (Gye, 2007), goes along with another Israeli myth, which praises soldiers as sensitive individuals who fulfill their national duty, while being young "fighters and dreamers", who express their feelings in various forms of art.

RC31-530.2 KOIKKALAINEN, SAARA* (University of Lapland, skoikkal@ulapland.fi)
Free Movement and Serial Migration: Exploring the Lives and Motivations of Highly Skilled Finns Living Abroad

The European Union (EU) is a globally unique area, where it is possible for the majority of Europeans to study, work or retire in any of the 28 EU member states, as well Switzerland, Iceland, Norway, and Liechtenstein (Koikkalainen 2011). European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, or Eurostars (Favell 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the experience, qualities, and motivations of the serial migrants, those who had lived abroad in at least two different countries. Why did they move abroad in the first place, and why did they move again? Do they display a particularly European identity, continue to identify with their original home country, or see themselves as global citizens (Koikkalainen 2013)? And does the ease of mobility increase the likelihood of remigration?

Correlates of Work Behaviors Among Muslim Migrants in Japan, South Korea and Taiwan

This study analyzes correlates of work behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013).

The results of logit analysis for the correlates of employment status show that ages 35+, entry before 1990, South Asian origin, intermarriage with a local woman and high school education have positive effects on self-employment but South Asian origin has a negative effect. In Taiwan ages 15-24 and 30-34, entry before 2007, marriage with a local woman or a conscript, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects. Therefore, the positive effects of high school education is shared by the three societies, while the effects age, year of entry, national origin and the nationality of spouse do not have consistent effects.

As for being an employee, ages 35+ and entry before 1990 have positive effects, in Japan while ages 35+ entry in 2007-2008, Indonesian origin and high school education have positive effects in South Korea and ages 35+, entry before 2007, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects in Taiwan. Therefore, the positive effects of high school education are shared by the three societies. The results for employment type and job hunting method will be also presented.

In sum, there are some variables which have opposing effects in different societies. They seem to reflect differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in East Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim migrants in Tokyo, Seoul, and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants.

The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects, while the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Taipei shows that living in owned housing and very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins, white-collar employment, non-strict observance of Islamic rules and adaptation have negative effects. The results show more differences than commonalities among the three societies, possibly because of the differences in the composition of Muslim immigrants and in the availability of these facilities.

Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland

This conference paper focuses on two European tourism destinations that thrive on tourist labour which is often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the arctic borealis and reindeer safaris attracts just below one million tourists each year. While the profiles of these two places are very different, they yet share important similarities in terms of labour demand. In London the pubs, hotels, shops, and amusement parks rely on seasonal labour, often performed by young people originating from other European countries. In Lapland the hotels, skis resorts, wilderness safety-risk tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our understanding of the migration - tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience. Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. Is working at a tourism destination in fact a form of lifestyle migration? And how do circular migrant form workplace communities, develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?
"Alternative Unions" and Their Involvement in the Post-3.11 Disaster Politics

Labor unions I call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual membership-based unions, such as general unions and community unions. I call them alternative because from the standpoint of nonstandard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded. This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment issues, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live emmeshed in a complex web of individual and organizational ties, and they thrive by building new ties and their answer to the newly emerging crises. From the standpoint of individuals who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emergent crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crises by working with other unions and civil societies. Secondly, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

Depression, Work and Identity in a Neoliberal World: Perspectives from Australia and the UK

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at work, workers in these countries have been affected by some common trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007; Ehrenberg 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g. antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We locate our empirical findings in the context of theoretical debates about the impacts of neoliberalism on contemporary individuals, and draw explicit comparisons between people’s experiences in Australia and the UK to illustrate our points.

Preschool Teachers in a Changing Institutional Context: Reforms and Prospect of Professional Group

Results of this research are the initial stage of the “Processes of the Actual Russian Market of Preschool Education” project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining new positions of group, on the other hand. The cultural resource of occupation is very poorly popularized that making uncertain the symbolic capital of group in the opinion of clients (parents and educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions administrate. The professional organizations in estimate of experts received different treatment. Informants of the “pro-state” sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of “pro-market” organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classic “not bureaucratic” ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The current changes in an institutional context can potentially modify the structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

The Causal Effect of Another Sibling on Own Fertility – an Estimation of Intergenerational Fertility Correlations By Looking at Siblings of Twins

Researches have documented persistent differences in fertility between different socioeconomic groups. These differences could over several generations have important population level implications on the social transmission of socioeconomic status as the size of socioeconomic groups naturally are dependent on differential fertility. The reasons for intergenerational fertility correlations are however poorly understood. The current study attempts to differentiate between the causal role of another unexpected child in the parent generation, from the effect of other characteristics that are shared between parent and children, for explaining intergenerational fertility correlations. Thus it is possible to examine if intergenerational transmission of fertility is due to transmission of socioeconomic status, which on average is shared between individual. This is examined through an instrumental variable approach, using a twin birth as a source of exogenous variation in the parent generation. Data is drawn from the complete Swedish population using administrative register data on more than 2,000,000 parent-child links. Findings show that little or none of observed fertility correlations can be attributed to the causal effect of growing up with another sibling as such, instead shared characteristics between parents and children such as fertility preferences, ethnicity, religion or socioeconomic background appears to explain observed fertility correlations.

Development and the Transformation of Women’s Capabilities. – Sociological Study of Household Footwear Cluster in India

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows traditional system of footwear production which is more labor intensive and primitive designs of the footwear are the major reasons for the household sector to be considered as outdate. Indian women play major role in sustaining the footwear production activity. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of foreign and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production systems. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training.

Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has made significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.

In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those three factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 3rd grade junior high school students and their parents in that city.

Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors, 2) Experiences in nature are in correlation with only students' pro-environmental behaviors, but not with parents' behaviors, 3) As for students and fathers, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors. This indicates that doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

The “Classical” Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the “developed countries” due to formation of mass consumer society, 2) dynamics of alienation in “developing countries” that takes place in classic time of alienation. In a global framework, social and business networks among German origin Jewish bankers unite them all.

What Makes Junior High School Students and Their Parents to Do More Pro-Environmental Behaviors? - Results from Intergenerational Study in Minamata, Japan

Experiences in nature, sharing knowledge about environmental issues and environmental awareness are examined as the factors to prompt junior high school students’ and their parents’ pro-environmental behaviors. Based on the survey we conducted in Japan, we found that sharing knowledge is the common factor to promote students’ and their parents’ own pro-environmental behaviors. Other factors had different effects on their own behaviors.

Emergent Platform Stage of Japanese Civil Society after the Fukushima Accident: The End of “Winter of Social Movements” in Japan?

After the severe accident in Fukushima Daichi nuclear power plant, major campaign issues in anti-nuclear power have become variable. Before the accident, these issues were related to the anti-nuclear power plant construction in particular regions and anti-atomic weapon for the risk of causing radioactive contamination. However, this crisis broadened the range of these issues and changed the risk. Not only living environments in Fukushima were destroyed by the tsunami, but also the environments in other regions were influenced by the risk of the unseen health problem which may be caused by radioactive contamination. How did Japanese civil society organizations respond to the arising issues? What are the differences and commonalities of the organizations working through each issue? To investigate the questions mentioned above, we conducted interviews with leaders of civil organizations on related issues in Tokyo, Osaka, and Fukushima, and a questionnaire survey on hundreds of the organizations which appeared in newspaper after the March 11.

From these researches we find out that the wide range of issues in nuclear power which was caused by the crisis gave way to the emergence of, not only the anti-nuclear power organizations which passed through the “winter of the social movements” before the Fukushima accident, but also new comer organizations which keep sometimes ambiguous or neutral stance on nuclear power. But, for example, a new comer movement proposed a law request for the victims, which was finally got through, to the local government. In other words, a newcomer organizations can have the means of accessing Japanese society. So, these organizations can provide the alternative means to fight against the government for Japanese civil society organizations of the issues in nuclear power. These research findings must make important resources to predict the future of the civil society after the great earthquake.

The Influence of World War II-Experiences on Today’s Older Workers

Older workers are at the center of many current policies. These workers’ activity is essential for maintaining a sufficiently large and well-qualified workforce, and for ensuring a sound financial basis of pension schemes. Therefore, policymakers encourage older people to work. However, policies to this aim meet some challenges because older people are not only influenced by current development. Instead, they are also subject to life-course influences, meaning the on-going effects of past experiences. This presentation explores the life-course effects of World War II (WWII)-experiences on older workers. These experiences are, e.g., a soldier or a prisoner of war during WWII. The life-course effects of WWII-experiences can function through three main mechanisms. First, the career interruption created by WWII may have a scarring effect similar to the one of unemployment spells, and thus influence the further career progression. Second, generational membership influenced how individuals experienced WWII, and it also influenced which historical developments of the labor market people participated in. Third, WWII-experiences can influence health status, personality and world view, which in turn, influence the decision on when to retire. This presentation answers two questions: Do WWII-experiences affect workforce participation in old age? Does the effect depend on the timing of these experiences within the life-course? I conduct a sequence analysis with data from the “Survey of Health, Ageing, and Retirement in Europe” and the “English Longitudinal Study of Ageing”. The analysis determines life-course differences according to, e.g., gender, and generational membership. Moreover, the analysis explores how labor market structures and retirement policies modify life-course effects by comparing countries: Germany, Finland, Poland, Sweden, and the United Kingdom. Findings help to refine theories on old age, life-courses, and the labour market. Moreover, they help policymakers in countries that recently participated in a war to design more effective policies for older workers.

Retirement in Europe: The End of “Winter of Social Movements” in Japan?

A growing number of consumers are demanding alternatives to the globalized, industrialized agro-food system that fosters and relies upon social relations embedded in a particular place. The food localization movement is an unmistakable feature of the urban corridors of the U.S., where direct farmer-to-consumer relationships are becoming increasingly common. For instance, there has been a 4.6-fold increase in the number of farmers markets across the U.S. between 1994 and 2007, more than 12,500 U.S. farms reported marketing products using the Community Support Agriculture (CSA) model.

This article examines the development and current state of the local food movement in the Seattle metropolitan area of Washington State. We are particularly interested in the roles that different actors play, and how these actors formed connections with one another as the local food system development efforts, the challenges that were overcome and those which were not, and the emerging challenges and needs. We pay close attention to how income and generational influences shaped people’s involvement with the food system. Data are derived from interviews with local farmers, retailers, non-governmental organizations (NGOs), and government officials conducted between 2011 and 2012. Government statistics and documents, and other archival materials were also collected and analyzed.

Overall, our preliminary findings suggest that a local food policy initiative in Seattle helped not only promote local food consumption and support local farmers, but also provided opportunities to connect various actors in the food system. What is particularly noteworthy is that local food networks connected actors belonging to traditionally different sectors, and with a regulatory schema for the sale of local foods, the localization movement became in many ways institutionalized allowing for accelerated movement toward urban sustainability.

Movements and Counter-Movements in Korean Environmental Politics of Post-Fukushima

This paper intends to explain how the Korean social movements engage in the environmental politics after Fukushima disaster by focusing on the competition between two master frames, eco-justice versus green growth. We believe that Korean social movements have more actively developed zeal of nuke-free society through engaging in various nuclear issues after the disaster. Simultaneously, counter-movements based on green growth frame have more actively supported nuclear plants as an alternative to peak oil or climate change. Each movement tries to seize the so-called master frame, ‘eco-justice’ or ‘green growth’ respective-ly. As the former is strengthening its relationship with global and local NGOs, so the latter is focusing on the national and local governments, business and media groups. Divergent movements in Korea are converging again after the Fukushima incident with the flag of global justice frame with expanding their activism into transnational arena. Simultaneously counter-movements are also developing a strong solidarity with the master frame of growth. The Korean environmental movements engaging in such contentious politics pay more attention to regional collaboration in East Asia to cope with unexpected high risks at various levels.

Men Who Buy Sex

It is argued that a profound transformation of personal lives has taken place in late modern Western societies. In particular traditional ‘procreative’ and modern ‘companionate’ models of sexuality have been increasingly supplemented by ‘recreational’ sexual ethics. Hong Kong follows a similar but somewhat different path due to its Confucian Chinese culture, British colonial history (1842-1997) and the rapid advance of globalization. Departing from traditional masculine roles, Hong Kong men are struggling among different discourses of heterosexual male sexuality and are increasingly preoccupied with the construction of a new self.

This is under this background that I would like to explore the newly emerged scripts for Chinese masculinities. Based on 24 in-depth interviews and 2 focus group discussions conducted since 2012 of Hong Kong heterosexual men who buy sex, this paper examines these men’s involvement with commercial sex in relation to their male identity. Following Rofel (2007), I will argue that these men...
are a desiring subject with 'sexual, material, and affective self-interest'. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or McSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a 'sunken boat' or Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men's commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism.

KONIECZNY, PIOTR* (Hanyang University, pjo@hanyang.ac.kr)

This paper contributes to the discussion on internet mobilization and on international social movements' ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The day's first International Strike of 18th January 2012 against the SOPA legislation proposed in the US. Wikipedians from all around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedia editors are shown to share values with the international free cultural movement, through experienced Wikipedians were also likely to be conflicted about whether taking part in a protest action is violating the site's principle of encyclopedic neutrality. Wikipedia's participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation (24 hour site's blackout) was a major factor that led to a creation of an international political opportunity structure (worldwide awareness of and protests against a proposed American legislation) enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements have pluralized and become more heterogeneous since the 1970s, while life courses desstandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of desstandardization by investigating which social strata are driving the process. We examine differences in desstandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Survey (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents' 15th and 35th birthday using sequence analysis, which allows examining complex life course patterns. The empirical results show for all countries that a) 'traditional' sequences of family formation are diminishing and b) life courses of the lower educated have pluralized. We know that various social entities in our social world are not mere aggregates of individuals; they are more than the sum of their parts and transcends the individuals who form them. These entities act like other individual actors, welcome or reject us, ask us to act for them, and give meaning and a sense of direction to our lives. Investigating the existence of such a step outside the everyday world. Viewed from the outside, collectives seem to be more aggregations, or relationships among individuals, the simple sum of their parts. Unlike its individual members, a collective itself cannot have a material body, a thinking brain, or a warm or cold heart. If collectives exist, they cannot exist in the same sense that an individual body does.

How can we reconcile these two perspectives? This paper argues that such a reconciliation is possible by revisiting the history of our social world, which is essentially a field of meanings. In this field, collectives exist as "ideational entities" in the words of Japanese sociologist Seijama Kazuo. They do not exist in the same way as a material entity exists; instead, they exist as elements in a particular field of meanings. To the extent that this field is intersubjective, the collective acquires a unique ontological status for those sharing it. Thus, collectives are ideational but, nonetheless, real.

KONNO, MINAKO* (Tokyo Woman's Christian University, konno@lab.twcu.ac.jp)
Toward a Sociology of "Sexuate" Beings

Although biological factors underlie human sexual behavior and interaction, sexuality is a distinctly sociological phenomenon, as it is part of the social world that is endowed with and constituted through meaning. In this regard, sexuality does not differ from other aspects of social experience. However, its close connection to the biological body presents an especially interesting challenge for sociological theorizing.

The meaning of sexuality has been explored widely in the social sciences and humanities. One notable theoretical strand in these inquiries is gender theory. Gender theorists share a sociological perspective in that they view sexuality as part of the meaning structure that we constantly create. Another important approach to the theory of sexualities is social constructionism. Our sexual status creates the materials with which we construct our social world, which is shaped through this process. A more adequate theory of sexuality must be based on an understanding of how the real and fictitious possibilities of attraction and repulsion among human organisms are acknowledged, used, and acted upon, on the one hand, or organized and coordinated, on the other, in various social contexts. Building on Cornell’s concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

KONNO, MINAKO* (Tokyo Woman's Christian University, konno@lab.twcu.ac.jp)
The Collective As an Ideational Entity

As actors in a social world, we are well aware of the existence of collectives. Families, communities, organizations, social and political movements, business entities, states and so on can be considered collectives. We know that various social entities in our social world are not mere aggregates of individuals; they are more than the sum of their parts and transcend the individuals who form them. These entities act like other individual actors, welcome or reject us, ask us to act for them, and give meaning and a sense of direction to our lives. Investigating the existence of such a step outside the everyday world. Viewed from the outside, collectives seem to be more aggregations, or relationships among individuals, the simple sum of their parts. Unlike its individual members, a collective itself cannot have a material body, a thinking brain, or a warm or cold heart. If collectives exist, they cannot exist in the same sense that an individual body does.

How can we reconcile these two perspectives? This paper argues that such a reconciliation is possible by revisiting the history of our social world, which is essentially a field of meanings. In this field, collectives exist as “ideational entities” in the words of Japanese sociologist Seijama Kazuo. They do not exist in the same way as a material entity exists; instead, they exist as elements in a particular field of meanings. To the extent that this field is intersubjective, the collective acquires a unique ontological status for those sharing it. Thus, collectives are ideational but, nonetheless, real.

Expansion of Vocational Education and the Social Reproduction of Working Class in China

In post-reform China, the value of education is heightened in the country's development of a market economy. Driven by a neoliberal ideology of human capital and the Chinese concept of education as a motor of economic growth and has implemented a series of education reforms. In parallel to the adoption of an export-oriented growth model, the role of vocational education is emphasized in the past two decades – to train secondary school graduates with skills to match the needs of the developing industrial sectors. This paper describes how the expansion of vocational education in China responds to the neoliberal idea of human capital development. It also investigates its impact on the life chances of students with rural background, who previously had limited chance for post-compulsory education. Based on the fieldwork data collected in three vocational schools in Chongqing, we find the students have an urge to craft themselves through the acquisition of educational credentials. Earning degrees in vocational schools is motivated by their aspiration for upward mobility. However, many students show their pessimism after working side-by-side with other factory workers on the production lines during their internship. This paper argues that under the developmental mode in a globalized market, China relies heavily on labour intensive manufacturing-based economy. The state-capital alliance has already shaped and structured the types of jobs that available in the labour market. The expansion of vocational schooling operates in the guise of training and skill development; but, in reality, these educated youth only becomes members of the new generation of migrant workers for the use of the export-led industrialization.

The human capital argument for national development has failed to deliver on its promise.

World Civil Society and Activist Identity in Japanese Environmental Smos

Globalization can standardize the way people interpret their social worlds and act in them. Norms such as environmental protection, human rights and democracy have become more widely accepted. The concept of World Civil Society describes how increased civic communication across boundaries generates political opportunities for citizen groups by creating pressure towards national governments to abide by international norms in a variety of fields.

In this paper, the formation of activist identities within the Japanese Environmental SMos is studied against the backdrop of global diffusion of norms, ideas and forms of action as well as Japan's role in the international community. Globalization supports activist identity in Japan; Japan's wish to become a recognized and actively contributing member of the international community creates ties with a normative community that many activists can readily relate to.

As Japanese social movement organizations have traditionally derived their strength from their unique ties with the local communities, it is important to ask how the activists interact in the processes of civic mobilization and formation of activist identities. Are we observing increased globalization, or the development of genuinely cosmopolitan ethos and global mentalities?

Awareness of global environmental problems transformed significantly during the so-called environmentalboom of late '80s and early '90s. The 1990s have at the same time been called the era of the emergence of Japanese civil society. My paper discusses how the Western-style environmentalism influenced the Japanese environmental movement at two points of time: the environmental boom of the '90s, and post-3/11 era-and how it interacted with the indigenous elements therein. The approach is micro-sociological; I study how environmental activists represent themselves and their role in society in life-story interviews. What role does the juxtaposition of Japaneseness and foreignness have in these discourses?

Is there room for cosmopolitan identities?

KOO, ANITA* (Hong Kong Polytechnic University, ssakoo@polyu.edu.hk)
ness: where a movement occurs when POS closes. This leads to a new light on political threat structure(PTS). While POS refers to favorable political environments, PTS presumes the opposite like repression. In this regard, this paper focuses on PTS and argues that PTS influences mobilization in the case of Japanese conservative movements. When observing conservative movements after the 1990s, movements were triggered though POS closes.

In order to support the argument, this paper first addresses the relations between POS and PTS and what constitutes PTS: threatening Cabinet’s ideology and formal speeches like the Murayama Speech, unfavorable remarks and behaviors by politicians. Next, by selecting three 'major' conservative civic groups and through discourse analysis of these groups, it explores how they were mobilized under PTS. Lastly, this paper attempts to find whether certain combination of PTS factors exist to stimulate movements.

This paper intends to contribute to understanding the mobilization of conservative movements - Japan in particular - and to the academic discourse of the relation between POS/PTS and movements.

**Immigrant Occupational Attainment in Japan and its Determinants; Is it a “Structured Settlement”?**

Japan as a “post-transitional society” has recently shifted into a “new” country of immigration as southern European countries. However there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to reveal immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed; to the first question, we answered that socioeconomic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees and Japanese. In addition, there is a gender gap in a return of educational attainment, which tends to be smaller for females than for males. To the third question, we can argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in western developed countries. However, it is also revealed that Japan has experienced multiple mode of incorporations of immigrants simultaneously, or a “structured settlement” as a feature of “new” country of immigration.

**Refugee Returns - Experiences of Inclusion Here and There**

My doctoral study looks at refugee returns applying Rosenthal’s biographic-narrative interview as the interview method. This interview approach is the production of the biographer as a result of the returnee’s interview and a concept coined from the field of intercultural communication denoting the immediate experiences of people returning, the applicability of the method is being elaborated on in reference to different types of interview participants, returning from Finland to the region of origin, e.g. the case of three voluntary returns to Iraqi Kurdistan in 2013. In three interview participants held a legal status of a refugee in Finland, stayed there for at least 2 years, and returned under the auspices of an IOM programme of assisted voluntary returns in the beginning of 2013. In order to examine the return processes as a whole, with special emphasis on social relations and networks, and the impact of the time spent in Finland in the participants’ lives, the biographic-narrative interview was chosen as the most applicable method to elucidate the genesis of return, key turning points characterizing the participants’ lives, the various salient social and cultural dynamics concerning the return decision, and what the future looks like from the participants’ present perspective. The matter of looking at “the experiences preceding and following the phenomenon in question” (Rosenthal, 2004: 53). For the analysis, the procedure of biographical case reconstructions is followed step-by-step: biographical data, text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of an “intelligible” text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of an “intelligible”. Challenges are apparent regarding other types of biographical data. That said, both the levels of narrated and experienced life history fall within the scope of my study.
Patterns of Substance Use in Entertainment Venues in Latvia:
A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to EMCDDA). Monitoring surveys carried out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the models of drug use were identified: young people try these substances at a very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug use is made to suit particular entertainment purposes and driven by desires of achieving known effect. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marijuana); at the same time drugs in pills or plasters are in favour. We can speak as about the prevalence of substances with stimulant effect that offer effect appreciated by some users: catching unexperienced energy, feelings of parallel realities etc. Another alarming trend is poly-use that increases the risk of over-dose and intoxication. Poly-use combinations can include alcohol, legal medica-
tions, and various illegal drugs.

A Challenge for an Expert: The Management of Acute Psychosocial Support

According to Finland’s Health Care Act, municipalities are responsible for organizing the acute psychosocial support in crisis and special situations. Typical of these situations is the need for immediate and simultaneous help, where obtaining the necessary resources is challenging. Acute psychosocial support includes psychological, social and mental help to the victims, their families and communi-
ties. All these parties should be considered in managing the acute psychosocial support. Strategic management is required when psychosocial support is organized for different groups, so that the general view is not forgotten and no one is left without the offered help.

The purpose of this study was to find out what helps the expert to quickly become a crisis and special situation manager and what helps the employee to change back to the expert role. In addition, the study sought answers to crisis and special situation manager’s decision making and what kind of abilities crisis man-
agement requires? Both quantitative and qualitative methods were used includ-
ing for data analysis. The data consisted of initial mapping and a theme interview made at Vantaa City social and crisis emergency department.

This study showed that the feel of being in control of a situation as well as being in control of oneself are factors supporting the management of acute psychosocial support. Both the employee and the team should have special skills to control the situation, as well as the feel of being in control personally. Crisis and special situation management consists of management support, structures, capacities and the support of various parties. These factors can be influenced by education and training. Education and training should be planned carefully, for example, by skill mapping to find weaknesses in skills so that training would be targeted correctly.
A World-Systems Methodology for the Study of Inequality

Drawing on historical data on inequality within and between regions of the world-economy, we indicate that inequality within regions in both the core and the semiperiphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributional arrays—a global income distribution that is both systemic and historical—that has shaped the geography of winners and losers both over the long term and in more recent decades. This depiction suggests that (i) Schumpeterian cycles of innovation and creative destruction in the global production of goods and services have been key to shifting patterns of within- and between-country inequality, as these innovations have included (ii) the deployment of shifting and unevenly successful institutional strategies aimed at facilitating mobility and change for specific regions and/or nations within the world-economy. This exercise allows us to raise new questions for further research, but also to propose some empirical and methodological innovations to better advance future social science inquiry on inequality.

Global Migration and the Contentious Politics of Citizenship

Our understanding of migration changes fundamentally once the relevant unit of analysis is shifted from the nation-state to the world as a whole. Elsewhere, we have argued that migratory processes have been shaped by the modern nation-state, and the relevant state policies emerging thereof, have served as a fundamental basis of stratification and inequality in the world since the sixteenth century. Moreover, we have indicated that the growth of between-country inequality through most of the last two centuries became a driving force for the migration of labor and capital: growing income disparities between nations over time generated strong incentives (e.g., drastically lower wages in poor countries) for both the migration of workers to higher-wage markets and the “outsourcing” of skilled and unskilled jobs to peripheral countries. Both trends exercised “a market bypass” that over the last two decades have been overcoming the twentieth century institutional constraints on labor flows that characterized the development of the world-economy. In the proposed paper, we further specify and expand our arguments by developing a new model that identifies the main forces driving migration across the world-economy. We test this model by drawing on an original cross-national dataset on population flows: this exercise allows us to more precisely identify country- and region-specific patterns of outgoing and incoming migration, and to assess the relative weight of specific variables (e.g., wage differentials, income inequality, civil war, famine, geopolitical location and migration policy regimes) in explaining these patterns. Finally, we consider the social and political tensions that have accompanied recent changes in these migration patterns, discuss how these tensions are shaping the politics of citizenship across the world, and draw some theoretical implications for rethinking how Karl Polanyi’s concept of the “double movement” might be used to understand contemporary patterns of migration and its regulation.
work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT.

This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems.

The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

KOSMINSKY, ETHEL* (Queens College/CUNY, ethelkos@hotmail.com)

Mayume’s Life History: Between Japan and Brazil

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese, her Japanese-Brazilian appearance is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn’t understand what they were talking. However, she adjusted very well to the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That’s when Mayume faced a difficult adjustment: “I wanted to come here to see the town. I didn’t want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself.” She compares the Japanese town where she lived to Bastos: “Japan is a difficult society; it looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that’s too much land!” Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor building, lack of respect toward the teacher, lack of discipline. Mayume’s dream is to return to Japan and attend college there.

Mayume and other children face ruptures in their socialization process due to their parents’ labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

KOSNÝ, MAREK* (Wroclaw University of Economics, marek.kosny@ue.wroc.pl)

Pension System Based on Sharecropping and Economic Security of Families

Decisions about giving birth and upbringing of children imply consent to finance the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on sharecropping – one of schemes of incentive systems under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk.

The main advantage of the proposed solution is a convergence of interest of the participants to share both costs and benefits, what results in sharing the risk. The idea of the new solution is based on the sharecropping – one of schemes of incentive systems under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk.
Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social division’ (in the context of democracy). In the context of educational choice this touches upon the discourses around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and vision of the so-called ‘lines of social division’ (in the context of democracy) are consciously value-centered, where insight into an analyzed problem is the basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children in a school, and investigate how these parents negotiate risk and fear regarding their children’s education. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and France. In contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Expressing the Inexpressible. Japanese Artists about the March 2011 Tragedy

The number of “Shinchō” a monthly Japanese literary magazine, issued in March 2012, published short diaries written by 52 Japanese artists to commemorate the tragic event that took place on the 11th March 2011. The purpose was to understand if the media role, and as contrasting data, interviews with parents with no international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Living Between Tongues. Elements of Evocative Autoethnography in Tawada Yoko’s Writings

Autoethnography can be described as an approach to research and writing that seeks to describe and systematically analyze (graphy) personal experience (auto) in order to understand cultural experience ethno(Ellis, Adams, Bochner 2011). The value of autoethnographic method lies in the possibility, it offers, of having an access to an inner emotional reactions, feelings and thoughts of a respondent not revealed otherwise insight into an analyzed problem. Consequently, this methodological paradigm recognizes forms of writing research — amongst which also literary works such as biographies etc. – which are consciously value-centered, where the searching subject is visibly present and her/his voice is of equal importance in forming statements about the social reality. If a literature is to be considered an object of sociological interest, an autoethnography, especially its evocative genre, entrusts it with playing a significant part in describing the social world. Given the above, in my presentation I would like to discuss elements of evocative autoethnography in literary works of the Japanese writer Tawada Yoko to see how the knowledge, which is acquired from literature, can be applied to an analysis of a social phenomenon, here: a professional career of a migrant writer, who works and lives between two languages: Japanese and German. Tawada Yoko left Japan at the age of 22 and at that time her knowledge of German was limited to grammatical rules. Ever since, she successfully writes and publishes in both languages, experimenting with the borders of language and public discourse. She is associated with the term “exophony”, which may be defined as a voice from the outside resonating in the world of literary culture in a given country. In my presentation I will focus on the social condition of the writer in exile, while questioning the universality of the notion of artistic genius (Elías 1994).

Functional Differentiation and the Public Sphere: An Attempt in Theoretical Formalization for Historical and Comparative Research

This study elaborates on the concept of functional differentiation as a structural feature of modern society. Methodological criteria to judge whether society is functionally differentiated functionally remains elusive, although these must be presupposed when discussing the concept of functional differentiation as a universal property of societies. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logic. However, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the cases where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, courthouse, market, and educational system, does not guarantee a functionally differentiated structure. To exploit
It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true that Michael Oakshott has to say about this topic: "Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains" (quoted in: Jay 2005: 9). Although this paper sees itself in the tradition of this 'recklessness', it does not aim to escape the ambiguities of 'experiences'. On the contrary, ambiguous is not only the word, but also what it stands for. But it is precisely this ambiguity of experience, and the acknowledgement of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman).

In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the already mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. And I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolívar Echeverría. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity.

active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

KOZYREV, GENNADY* (D. Mendeleyev Univ. of Chemical Technology, genkozyrv@mail.ru)
Creating an image of «Victim» As a Way of Creating Controlled Conflict Situation
For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.
An image of “victim” may be classified on the follow types: “victim-hero”, “victim-loss”, “victim as belonging”, “victim-tragedy”, “victim-country”, “victim-nation”, “multi-functioning victim” and other.
Constructed “victim” has to meet such characteristics of real victim as inno-
tualization, (mythologization), objectivization, legitimization, sacralization, “privatization”, heroisation, humanization, institutionalization, historicization ( mythologisation), objectivation, legitimization, sacralization, realization of “victim’s” image in the social and political practices.
Generated image of “victim” presuppose execution following functions in the real and potential conflicts:
- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;
- upbringing of “new heroes”;
- determination of people behavior in critical situation;
- image of “victim” is becoming the elements of culture.
Deliberately thrusting of “victim” problem generates disadvantageous situation for all alleged “enemy”. Direct of potential oppressor’s image constructed, with ne-
cessity to oppose or annihilate it. The most important “enemy” characteristic is its mortal threat for person, group and society. Next distinguisher of “enemy” is dehumanization.
Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.
Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia
Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called “emancipatory ecological cosmopolitan commonism (EECC)”, aimed at ending repressive domination. The equitable meeting

of needs is given priority, based on “synergistic satisfiers”, with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEs) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEs is currently underway in Tasmania, Australia to progress towards positive ecology and EECC will comprise the final part of this paper.

KRACKE, NANCY* (Institute for Employment Research, Nancy.Krackle@iab.de)
Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics
Women’s labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified than men.
If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one determinant - such as gender (migration status). But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.
In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia
This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the ques-
tion, this research takes discourse analysis combined with a semiotics of materi-
ality Actor-Network Theory approach; giving new emphasis to non-human entities interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions among the regulatory process of governing industrial risks from hazardous industries. The entry point is technical-
ally-informed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as long as reasonably practicable - ALARP); and how regulators interpret their responsibili-
ty in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g. a concept of respon-
sive regulation) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed: e.g. how do regulators perceive the roles and participatory actions of workers and the public in reducing regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regula-
tory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States
* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico’s Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles—such as business, religious, or educational organizations—above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels—local, state as well as national—in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information on parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Multilevel models are computed in order to account for variations within schools and between schools and to disentangle the complex causal process that determines adolescents’ aspirations and expectations. First descriptive results indicate that adolescents’ expectations reflect actual cross-country differences in age at first marriage and first birth.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

This paper is based on two qualitative research projects conducted ten years after the fall of the Wall and the creation of the self-administered institutions, and the development of the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds new light on how and why some uses of consensus seem to fall flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.

This paper analyses the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “independent left”), one such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds new light on how and why some uses of consensus seem to fall flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the "international community", many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights, humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate traditions of practice have emerged - one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)
Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural development emerges in different ambivalence and clash of values within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared "normal accidents" (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Uryy, L. Beck). Taking into consideration these realities of new catastrophism I argue for a 'humanistic turn' in sociology, whereby societies should be examined through the patterns and character of their complexity-dependence and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robertson), synergetically takes into consideration paradoxes, risks, and dispersions of socium, searching for new forms of humanism, based on men's existential needs.

The notion ‘praxis’ should be rediscovered: it should mean humane praxis - humanistic creative agency, the main aim of which is to preserve the human capital that is adequate to the urgent need of a humanistic component of all the generations and to maintain the balance between scientific, technological innovations and key environmental processes.

WG01-895.1

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)
Vulnerabilities to the Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its "normal accidents" (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the human capital. Until recently in the history of mankind in the implementation of modernization the question about the humanitarian ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should take the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintended traumas lead to different ambivalence and human agency. It is necessary to consider the layered hazard as derived from the scientific research and innovation: the effect of "normal accidents" should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

KREISSIG, VOLKMAR* (Taita Taveta University, vkreissig@gmx.net)
Participation, New Forms of Corporate Governance and Social Responsibility –, History, Discussions and Realities – Industrialised Countries, Central and Eastern Europe and Developing Countries

Discussions to "participation" started in Germany within labour movement & workers councils in 1910s. Main questions were how workers & representatives can participate in the production process, in works force organisation, decision making etc. The promoters were socialist parties & left wing circles, trade unions & works councils.

In France in the 80s the "participation" was that base-democratic right which should stamp the "socialism in the colours of France". Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90s went around Japanese participation offers in production processes. Predominantly was - 'japanisation'. The following "flexurity debate", had the idea to exchange "flexibility of working regime" into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ies in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bears of debate were less in trade unions or left political circles. Targets were common responsibilities of stake- and shareholders for environment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Trade unionists in supervisory boards and works committee member's support this course; however, they were not any more the sole or key players of debate.

The discourse wins in social and changes away only from conditions of employment to the responsibilities and the consequences of the application of products. ISO 26000 is asked from the supervisory boards, the shareholders' meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European countries.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)
Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day's expenses but also people's perception of how their effort and performance is valued by others (the employer), which can be a considerable aspect of mental well-being.

In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)
Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people's lives are from diverse perspectives, which together form their 'objective living conditions'. As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one's own life, such as life satisfaction or happiness. The life domains that are included in the index are:

- income / standard of living
- health / duration of life
- social participation / social integration
- social security
- physical and psychological well-being
- safety / security
- home / place of residence
- social network / social support
- education / occupational status
- consumption / material well-being
- subjective perceptions / satisfaction
- housing area
- health
- social relations
- work

Each domain incorporates a number of single indicators that describe this aspect as thoroughly as possible.

Constructing an index based on micro data has the advantage that the computation of the index for subgroups (e.g. by gender, age groups, etc.) is possible. In the lack of a micro data base for Europe that covers information on all the domains mentioned, the index combines three data sources: the EU-SILC, the ESS and the EU-LFS. At present it can be computed for a limited number of European countries for the years 2006, 2008 and 2010 (severely limited also for 2004).

First results of the index indicate that there is a high correlation between macro indicators of the economic strength of a country (e.g. GDP/capita) and the index as a whole. Whereas certain domains of the index seem to be unrelated to those macro indicators. Particularly, this concerns the domains housing area and health. Hence, the indicator can give differentiated insight into the “performance” of countries concerning their population’s objective living conditions.

KREMESS, DANIEL* (University Halle-Wittenberg, daniel.kremer@gmx.de)

Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges the discussions about the migrant labor and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domistcated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sôhyô, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NGO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.
