Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as weaves fiction in an attempt to explore the city as both lived place and fictional construct. This intriguing and beautifully written book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on topics; the subheading Fragments of Spaces and Times captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al., 1969). Due to the heavy impact of colonization and political power imperialism of the colonial powers – the role of languages in these nations starting from the 15–16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction.

Although there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as double speakers on the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education.

In many of these nations local / nature languages were not given any importance at the national international. They were treated under the banner ‘vernacular languages’, and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colonial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.

Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxymoron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumerist tendencies in the two-dimensional space defined by “Environmentalist” and “Materialist” attitudes. A large proportion of customers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirational. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirationalists may gain gratification from sustainable purchasing and sustainable consumption. Aspirationalists represent hundreds of millions of consumers globally. They are most prominent in countries with a tradition of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchasing might be introduced to Aspirationalists as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members’ demo- and psychographics. The segments’ attitudes will be causally linked to a broad range of socially and environmentally responsible behaviours, and communication patterns.

Multilingualism and Community-Building Among Brussels Based Civil Servants and Lobbyists: Perceptions, Practices and Power Positions

This presentation explores the multilingual and multicultural aspects of community-building, networking and communication in the EU’s political and administrative system with special attention to the effects of a multilingual and multicultural working environment on the actors’ identities. In order to track these aspects we investigated the networking and communicative preferences of EU civil servants and lobbyists based on broad-scale survey data (277 surveys com-
pleated) and thematic interviews (17 hours of recorded materials). We argue that the power dimension of the linguistic choices among EU bureaucrats is especially important, since as Mamadouh (2002) observes: Language(s) regulate access to political, economic, and cultural resources. Language matters to access the supranational political arena (for example, to acquire a position in an EU institution or a policy network), as well as to control political representatives and civil servants at the EU level.

The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by English. It also appears that in their professional action, our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more useful for those who do not always feel at ease with the linguistic standard.

“I Hope to Muddle through until the Retirement” – the Aging Workforce in Demanding and Dangerous Jobs

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation (pilots and controllers, railway operators) as well as in heavy industry (mining) and - though it may seem strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and self-assessment through questionnaires. Secondly, the paper discusses the influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security – including legal and economic issues. The individualisation of risks has serious consequences for quality of work and working conditions of workers who perceive that their retirement security is a result of their own efforts.

Europeanizing Social Science - the Case of the European Social Survey

This paper sketch out and analyze the historical development of the European Social Survey (ESS). In the 1996 a group of European social scientist under the auspice of the European Science Foundation initiated what became one of them largest social scientific projects, a project that now is seen as the golden standard in transnational social research. The first wave was launched in 2001 and has since been conducted biannually in an increasing number of European countries. From the first wave and onwards the ESS has been heavily funded through the European Union Frame Work Programs and National Research Councils. Simultaneously the ESS has been leading in developing and disseminating transnational surveys research techniques from items design through field works to data management and dissemination. Using documents and interviews, the paper analyses the case of the ESS shedding light two interrelate processes both very central to the analysis of social sciences in society. First, it can tell us about the current changes and developments of surveys research. Surveys research has been one of the most influential social scientific techniques, but the classical techniques of surveys research has in different ways been attached to the nation state. Thus, the paper asks which kinds of changes does transnationalization of surveys research bring? Secondly, the paper analyses the relations between the social sciences and the EU. The social sciences has since their first institutionalization been closely entangled to the nation state, but how is this entanglement changes in the Europeanization process and with what consequences for the social scientific knowledge?

Resistance to Mining in the Current and Past World-Historical Conjunctures: A Comparison of Mobilization Against Globalizing Capitalism Across Place and Time

This is an incorporated comparison of resistance to destructive resource extraction by mining in the current and past world-historical conjunctures. The analysis is based on long-term participant observation and field research in the most important mining investment areas in Brazil, India and Finland. The empirical quality of the analysis of the current conjuncture allows to test world-system theories often based not so much upon large-N comparative ethnography. The findings are related to historical ruptures and continuities in resistance, seeking causal explanations and reasons to why mobilization against globalizing capital has occurred in some places and times and not others. The mining industry's global and regional trajectories will be historicized and tied into the current events by historical institutional analysis.

Korean Environmental Sociology: History and Characteristics

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology was founded in 1998. Since then, the organization has become an important research and organizational body in the Korean environmental sociology field. The paper presents an overview of the development of Korean environmental sociology since the 1990s. The paper discusses the main characteristics of Korean environmental sociology, such as its focus on particular social problems, its emphasis on the importance of social movements and social change, and its emphasis on the role of the state in environmental policy-making.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize the following two key patterns: Simple inter-individual and path-dependent post-individual divergences. Simple inter-individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent inter-individual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Joint Impact of Paternal and Maternal Parenting Styles on Children's High-School Academic Achievement in Taiwan

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers' and mothers' parenting styles jointly influenced their children's academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father's and mother's parenting styles jointly influenced their children's development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children's academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being "yan" (strict) and being "tsi" (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children's academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children's development in Taiwan.

Renaisance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectivities, whether collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with naturalization assimilation, attachment both to the country they live in and its culture. We used the results of field surveys of several old housing estates which are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of "humanistic coefficient" was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state's integrating policy.

Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated a general theory. When Tanase studied abroad in 1970's, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parsons's theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodern theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons. Tanase frequently used Parsons' functional analysis uniquely to study law and society in Japan. He decomposed research objects (fort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons' general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons' general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase's application becomes a nice model of using Parsons' general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.

Tokyo as No. 4: A perspective from World City Ranking

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social problems have been threatened by suburbanization. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Questioning the Promise of English: Language Choice of Japanese Transnational Workers in Asia

English has increasingly been positioned as a global lingua franca in public and academic discourses especially in non-English-dominant countries like Japan. To guarantee their survival and view their attitude towards the English, the local language in order to fulfill daily survival needs (Blommaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

Conflict Management in Prostitution (性活者―Seikatsu) — the Structure and Meaning of Pluralistic Justice

“Conflict management in prostitution” have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kenya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as“性活者”—Seikatsu-sya, sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the “real” situation of conflict management in prostitution (I call it normally as“性活者―Seikatsu”, sex-practical use practical) . For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with “law” even “living law” in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against “law” finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is illegal or illegal. Because the “law” must be different for each in multiform prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990s, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gay, lesbians, and transgenders who are seeking asylum in the U.S. from the viewpoint of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers’ experiences and the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, the history and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

Gendered Innovations In Hospital Workforce Management: A Scoping Study

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of ‘gendered innovations’ that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare system into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are dramatic effective in hospital management, delivering increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

Mapping The Governance Of Care and Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamics approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-oriented approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on Western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system...
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) 'elitist professional development' was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) 'integrated professional development' emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study highlights the role of quality (economic) level of professions, in order to achieve transformative potential, must be connected and backed-up by (macro-level) health and social policy interventions.

*Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia*

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state's role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while paternalistic or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy their middle-class interests and values. A comparison of four South East Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

*Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology*

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas of beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu among others, that social norms relating to specific gender roles, self-control, race and other status and identity markers play a marked role in the repertoires Europeans use for assessing the bodies of both men and women.

*Processes of Economic Consolidation in Central and Eastern Europe*

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyse the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from the findings that in the years that followed after the fall of socialist regimes, most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which in in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

*Abortion Policies and Health Outcomes in Latin America: What Are the Relevant Lessons for Africa?*

Both Latin America and sub-Saharan Africa have high abortion rates (generally above 30/1,000 women aged 15-44) despite overwhelmingly restrictive moral, legal, and social sanctions. Although data are limited, enough is known to examine how Latin American countries are making progress in negotiating the challenges posed by abortion and compare it with the situation in sub-Saharan Africa. This allows identification of relevant lessons for improving health and social outcomes in much of Africa.

Several decades ago, many Latin American countries had economic levels similar to many African nations today. They have since achieved better contraceptive practice and social outcomes, and are now witnessing declining rates of abortion, unsafe procedures, and related deaths. In contrast, Africa accounts for over half the world’s unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for alleviating present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple interventions (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change and a broader policy reform, and better outcomes in this deeply controversial policy arena.

*State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?*

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly-acting intervention that accounts for 95% or 89% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injunctables are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. In contrast, Africa accounts for over half the world’s unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for alleviating present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple interventions (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change and a broader policy reform, and better outcomes in this deeply controversial policy arena.
most common method. We use survey data, documentary evidence, and key informant interviews to examine these developments further. With certain caveats, the Indonesian experience offers lessons for instituting more solidly founded contraceptive and population policies and for accelerating the path toward replacement-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing injectable use can help meet demands on the fragile state health system, make use of Egypt’s underdeveloped community-based channels, and may serve as a catalyst for other Arab states to help them reach more sustainable population and development trajectories.

**Depression, Suicidal Ideation and High-Risk Behaviors Among Underserved Youths in Central Mexico**

**Background:** The staggering cost of depressive disorders and suicide on the quality of life of patients and families, the increased mortality risk, and the high economic burden demand our attention. There is evidence suggesting that engagement in risky behaviors, development of negative habits such as using alcohol, tobacco, and drugs, and depressive disorders all begin during adolescence. Further, substance use, in particular smoking and drinking, has been linked to depression and suicide risk. The study aims to evaluate the prevalence of depression and suicidal ideation and identify predictors that could inform a prevention program.

**Method:** Using a cross-sectional study design with a probability sample, 702 adolescents in grades 8-12 were assessed. The study included a low-income, rural high school students in the central Mexican state of Guanajuato were surveyed.

**Results:** Almost half (49.2%) of participants showed some level of depression (CES-D >16), with 23.6% identified as suffering severe depression (CES-D >25). Logistic regression analyses indicated that controlling for financial status, symptoms of depression were predicted by female sex, low self-esteem, risky behaviors, conflictive parent-teen relationships, and binge alcohol drinking. The same variables with the exception of binge drinking predicted severe depression. In turn, suicidal ideation was associated with depression, low self-esteem, high-risk behaviors, and conflictive relationships with parents. A similar pattern of clustered behaviors among teenagers has been reported.

**Conclusions:** Predicting and ultimately preventing depression is of enormous public health significance. The findings can inform the design of interventions to prevent this early pattern of depressive disorders and associated risk factors among low-income, rural youth in Mexico and possibly in other contexts.

**Urban American Indian Youth Religion, Native Spirituality, and Well-Being: A Latent Class Analysis**

Most American Indians (AI) in the United States now live in urban rather than tribal areas yet little is known about their interconnected spiritual, religious and cultural worlds. This presentation documents ways that urban AI middle school students were involved with religious institutions and Native spiritual and cultural practices, and assessed how these differences related to cultural identities and risk and protective factors. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern USA metropolis. Latent class analysis identified distinctive groups of youth according to religious affiliations, attendance at religious services, adherence to Christian and traditional spiritual beliefs, sense of Native spirituality, and involvement with spiritually significant Native cultural practices. Five classes emerged. There were two Christian groups, one attending Christian churches and following Christian beliefs, but uninvolved with Native beliefs, spirituality, or cultural practices, and a nominal Christian group affiliated with but not attending church, and relatively unattached to belief systems. Two groups followed Native beliefs and spiritual practices, one affiliated with the Native American Church (NAC) and another unaffiliated with any church. The fifth, non-religious group, was unaffiliated, followed neither Christian nor traditional beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA indicated that the two Christian groups were higher in SES, had lived longer in the urban area, had fewer deviant behaviors and better development-making but also the most substance use friends. The two groups embracing AI spirituality (NAC, and non-NAC) had better school grades, more enculturation in tribal language and strong AI ethnic identity, and the strongest bicultural orientations. The non-religious group had the lowest scores on parental monitoring, closeness, and supportiveness. Findings indicate different ways of navigating these worlds for AI youth blend Native and Christian religious beliefs and spiritual practices, and their consequences for well-being.

**Gender and Medical Specialization: Segregation By Culture or Choice?**

Women taking to gainful employment and professional practice are on the rise in India and medicine is one such profession which by its nature, prestige and income and rewards are to be sought after most by women. It is precisely owing to these traits, the medical profession has been strongly aspired by their male counterparts as well, which might bring into play the forces of gender bias and gender discrimination as has been the case with the phenomenon of gainful employment in general. The paper seeks to ascertain empirically the considerations, motivations and preferences influencing women’s choices of specialty of medicine by women in medical profession. The findings are based on in-depth interviews with 237 women physicians in the City of Bangalore in India. The findings reveal that women doctors are inclined and constrained to avoid such branches that tend to be male dominated. It is further noticed that women doctors tend to opt for the soft specializations and are less sought after for certain male counterparts and hence are less expensive in terms of course fees and capitation, and also are relatively less paid on the one hand and provide less intrinsic satisfaction and recognition in medical circles and society on the other. The experiences and dispositions of women doctors appear to indicate that their decisions on specialization tend to be culturally conditioned and are outcome of their tendency to avoid areas of medicine over which their male counterparts are assumed exercise a cultural and professional prerogative and unjustified monopoly.

**Marginalized or Empowered? Conflict Induced Internally Displaced Kurdish Women's Experiences in Turkey**

This study is focusing on the conflict-induced internally displaced Kurdish women's experiences. There has been an ongoing internal armed conflict in Turkey since 1984 and one of the consequences of this conflict is the internal displacement that occurred in 1990s. In the displacement process, women and other family members were victimized. They did not only loose their homelands, but they also had to struggle in the city centers with poverty and discrimination. After they started to live in the city centers, women may become both marginalized and empowered. The aim of the study is to understand the situations that lead Kurdish women to be marginalized and/or empowered in the cities to which they have been forced to migrate. After the displacement process, which is one of the major victimization processes for these women, some of them may be trapped in ethnic and gender-based discrimination and may become more marginalized in the city centers. But marginalization and empowerment are not fixed categories and there is always a possibility for these women to transform their marginalized position into empowerment. By political engagement, working outside house and/or being head of the household these women may break the cycle of their marginalization and becomes empowered in the city centers.

Notifications and Expectations of Democracy Among the Participants of the OccupyGezi Movement in Turkey

The aim of this paper is to explore the notions of democracy and the expectations from the movement of Turkey expressed by the protesters of OccupyGezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul's rare central parks, developed to nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protesters and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in Turkey were also used as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protesters, along with their demographic characteristics.

This paper is based on the analysis of the participants' notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government’s policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and to examine how these car festivals provide leisure to its participants which further help to improve quality of their life through mental well-being.

Changing Trends In Demography and Family Structure In Asia: Japan, Hong Kong, Korea, Singapore With Reference To The U.S.A

Fertility decline and population aging are two of the most critical factors accounting for burgeoning family alternatives around the globe today. Asian families are no exceptions, but they present themselves as if their patterns are quite different from their western counterparts. Even among Asian families, they differ from one another, resulting in the different pattern of their family structures unique to their own. Therefore, now is the time for us to examine changing trends of population and fertility indicators which seem to result in Asian family alternatives such as lifetime singleness, elderly couple households, and elderly alone households.

Historical, archival, current, and prospectus statistical data for four Asian societies- Japan, Hong Kong, Korea, and Singapore-and the United States are examined. Following the footsteps of western nations Japan, among Asian nations, took the initiative to launch into the area of population aging and fertility decline. The rate for progress in Japan, however, has been much faster and unprecedented than other western nations. Nevertheless, today and the prospects on these dimensions in other Asian nations are much more striking than their Japanese counterparts. Fertility decline and population aging started relatively late in these three Asian societies. The prospects reveal, however, that they will be in the critical situation, i.e., the zero/minus population growth in the foreseeable future, in which Japan has currently been undergoing.

Asian elders must learn to adapt to independent living lifestyles quite different from those of the traditional ones. Making the best use of the modern ICT devices, various programs developed for the care of senior citizens would be significant implications for Asian societies that will soon follow the Japanese footsteps. Japan, especially for the care and health management of the elderly, may hopefully give a good guideline for other Asian families in the years to come.

History of Courtship and Dating in Japan

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsu-mado-ko-n (the groom commuted to the bride residence), to the muku-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men’s families) under the Bushi rule. It was only after the Meiji era that Japanese marriage changed to the Yorai pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (miao) and the romantic marriage (ren-ai). In the arranged marriage the go-between (nakou-do) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization miao was the predominant pattern, however the complete reversal has emerged today, and ren-ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singlehood of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various “kon-Katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-Kon (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year. However, marriage, however, is an emotional and personal matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

Car Festivals (Religious Yatras) in India: A Dimension of Leisure Tourism (A Case Of ‘Nanda Devi Raj- Jat Yatra’ In Uttarakhand, India)

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being.

changing trends in demography and family structure in Asia: Japan, Hong Kong, Korea, Singapore with reference to the U.S.A

Fertility decline and population aging are two of the most critical factors accounting for burgeoning family alternatives around the globe today. Asian families are no exceptions, but they present themselves as if their patterns are quite different from their western counterparts. Even among Asian families, they differ from one another, resulting in the different pattern of their family structures unique to their own. Therefore, now is the time for us to examine changing
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

**Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping-Some Illustrations from Western Himalayas**

Around 10,000 years ago human being had started domestication of plants and animals, even before this period, people had been altering plants and animal for their own benefit by using other means such as fire-stick farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and at least select three respondents from each village, 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, semi-culture and horticulture and earning very good income and experienced change in the amenities available in the household as well as those provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

**The Diffusion of American Football in Japan from 1930's to 1950's**

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers, publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies from the beginning of 1930s, American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.

**The Geographies Of Discontent**

The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-crisis in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined Habitus, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the Habitus as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

**The Roots of Horn of African Conflicts**

The Roots of Horn of African Conflicts

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of African states is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character is a characteristic of all known civilizations. Books on African history teaches us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing its neighbouring nations during the scramble for Africa. Using comparative historical analysis of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.
Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new events make cross-border marriages a significant phenomenon in Taiwan. Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan. The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan's limited living space. Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All of these sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People's Politics in Democratization Process in Thailand

This paper aims to explore the concept of people's politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 60 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People's participation has also been launched throughout the country. Both the theoretical and the practical points of people's politics in the political movement towards democracy will be examined in the paper. The grassroots' movement for human security, equity and opportunity will be studied as an example of the strengthening of people's politics in terms of deliberative democracy, civic education and democracy. The roles of the people's politics movement through the works of Center for People's Political Development Center supported by King Prajadhipok's Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people's politics development in the future.

Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society's acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system's ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

The ultimate goal of this study is to develop an assessment framework that is both comprehensive and feasible in the area of disaster management. The paper first reviews and analyzes the capability assessment systems carried out in the United States, New Zealand, and Japan. We then modify the US national preparedness system (e.g., core preparedness capability) and develop a framework based on Taiwan's experiences in disaster management. The resultant assessment framework is constructed with a matrix of 19 disaster tasks (e.g., risk assessment, evacuation, and housing) and 11 capability elements (e.g., planning, science and technology, and social capital). It assesses whether a local society has the required institutional mechanisms and resources to execute these tasks in three disaster management missions (i.e., prevention and mitigation, response, and recovery). The result of this capability assessment framework is expected to be applied further in disaster risk assessment and capacity building program.

Public Environmental Concern in Taiwan

One of the 21st emerging global environmental issues for the 21st century identified by the UNEP foresight report is 'Social Tipping Points? Catalyzing Rapid Behavioural Change for the Environment' (Rassam and Joly, 2007, p.4). It can be thus inferred that humans need to change original destructive actions and need to learn to adapt to changing climate and environment (with combined influences of both natural and human forces). Moreover, these actions need to be taken with a more rapid speed. However, the factors that trigger people's behavioral changes are often differentiated due to countries' different socio-economic contexts. Therefore, it is important to understand how individuals in different cultures think of, know of, and plan to respond to these environmental challenges and to investigate the interrelationship between people's environmental awareness and environmental behaviors. This paper aims to answer these two research questions.

The study reports the data (n=2209) derived from 2010 Taiwan Social Change Survey (TSCS)—a longitudinal face-to-face national survey project conducted each year since 1985. The results find that the Taiwanese public is concerned about environmental issues and they demonstrate a positive environmental value system in terms of protecting the environment, coexisting with the nature and other species, and respecting the earth. However, they show a level of inconsistency in the frequency of taking pro-environmental behaviors. While they often recycle for renewable resources, they rarely consume organic foods and drive less personal vehicles. The preliminary analysis suggests that there are deficits between pro-environmental attitude and actual environmental actions. To overcome this behavior deficit, it is perhaps necessary to provide net-benefit incentives to Taiwanese people.

KUPFERBERG, FEIWEL* (Malmoe University, feiwel.kupferberg@mah.se)

The Intellectual Advantages and Dangers of Borrowing. the Complex Relation Between Literature and Sociology

Literature and sociology are two types of intellectual games. Literature is driven by the rules of art. The latter foreground such aesthetic techniques as estrangement (anti-essentialism), meaning gaps ( let the reader guess) and the captive mind (manipulated emotions). Sociology is a scientific discipline and is hence bound by the rules of typological construction (essentialism), methodological reflection (transparent language) and distanced role-taking (critical empathy). This does not exclude intellectual borrowing of the insights, imagination and language produced by writers. A good starting-point to reflect on these issues is the methodology of Ervin Goffman. He uses literary sources mainly for their accurate ethnographic observations in particular from the French existentialist writer Jean-Paul Sartre and Simone de Beauvoir in order to investigate issues of identity and identity work and more generally the micro norms of interaction between ego and alter.

What Goffman tends to ignore though is that in particular Sartre in all his novels and dramas describes alter as “stranger”. There are never any close emotional bonds between ego and alter. In order to fully explore the imaginative possibilities of literature, other French writers such as Proust and Celine should be looked into as the latter suggest that social relations between strangers can change into intimacy but also return to the civility between strangers in public.

Nor should sociologists ignore how literary theorists analyze the works of fiction writers. Reading such work helps us better to understand both what is specific for the literary text but also how the techniques, imagination and language of fiction writers illuminate important aspects of issues that sociologists have tended to leave out in their interpretative work such as the importance of events, time, place, artifacts, representations, bodies, problem-solving etc.
by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal "chi" cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has inevitably led to the neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of "chi" and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xixiang City, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.

The Relations Between National and Global in Ukrainian University Rankings

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. Being initially national educational institutions (with a certain specific interpretation of "national" during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of "double pressure" from the ideology of nationalism and influences of globalisation. How intersection between "national" and "international" is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationships between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and cross-cultural analysis of each type of trust, loyalty and types of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees’ loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees’ loyalty, i.e. each component of organizational culture will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. The discussed results will support to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived

Ready or Not? California's Early Assessment Program and the Transition to College

Nearly one in three first-time freshmen in the U.S. are enrolled in some remedial/developmental course in English or math at their college or university (U.S. Department of Education, 2003). Rates of remedial course enrollment vary substantially across U.S. colleges and universities, with some institutions not offering any and others enrolling upwards of 80 percent of their incoming students in remedial classes. Part of the explanation for the large share of remedial students in American colleges and universities may be limited information. Students are often ill informed about what they need to do to succeed in college and subject to the (arguably) mistaken perception that everyone must at least attend, if not complete, college in order to succeed in the labor market. A majority of high school students, regardless of their academic performance, report that they will attend college (Rosenbaum, 2001). In fact, academic performance accounts for little of the variance in students' expected levels of educational attainment. Despite the pressing need to ensure that more students obtain a postsecondary degree, we know surprisingly little about what leads to college readiness and degree completion.

This study focuses on California's efforts to improve college readiness through the Early Assessment Program (EAP). The EAP is an intervention designed to increase the quality of information about academic preparedness available to high school students. We aim to understand how an increase in information about college readiness affects students' need for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.

Financial Support for Families with Children and Its Trade-Offs: Balancing Redistribution and Parental Work Incentives to Increase Well-Being of Families

Financial support for families with children implies inherent trade-offs some of which are less obvious than others. In the end these trade-offs determine the effectiveness of policy with respect to the material situation of families and employment of parents - two crucial elements for the well-being of families. We analyse several kinds of trade-offs involved using a careful selection of potential changes to the system of financial support for families with children. We focus on: 1) the trade-off between redistribution of income to poorer households and improving work incentives, 2) the trade-off between improving work incentives for better off and poorer households, 3) the trade-off between improving work incentives for first and second earners in couples. The exercise is conducted on data from Poland, a country characterized by high levels of child poverty, low female employment and one of the lowest fertility rates in Europe. We demonstrate the complexity of potential consequences of family support policy and stress the need for well-defined policy goals and careful analysis ahead of any reform.

The Disparity in Rate of Deductible of Social Health Insurance with Respect to Age and Gender and Its Resolution in Post-War Japan: Whether It Has Influenced Healthcare Utilization and Longevity?

In post-war Japan, healthcare system has been constructed so that every Japanese could utilize health service of modern medicine free of charge or at low cost. When this system started in 1961, the employed and their dependents were obligated to enroll in so-called “social health insurance” plans. The medical expenses not covered by the plans were covered by the individuals themselves. Those charged on their dependents were covered only by 50%. The other people such as the self-employed including farmers, retirees, and their dependents were compelled to enroll in so-called “national health insurance” plans, which covered 70% of their medical expenses. The disparity in rate of deductible was based on occupational status, which was closely related to age and gender. This disparity has been reduced bit by bit until the year of 2003 when irrespective of occupational status, the deductible rate for those 70 years and over of age was 10%, whereas that for those under 70 years of age was 30%; in either case, monthly total out-of-pocket expense was capped. In this paper, change in (a) disparity in out-of-pocket expense of healthcare service utilization, (b) health care utilization rate and rate of deaths in medical institutions broken down by gender and age, and (c) life expectancy at birth, 20 years of age, and 65 years of age broken down by gender, in post-war Japan will be examined, and by comparing between the patterns of chronological change of (a) and (b), and between those of (b) and (c), it will be analyzed how the change in (a) has influenced (b), and how the change in (b) has influenced (c).

Globalization in East Asia and Contemporary Situation in Northeast Asian Societies

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 – higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s. Although North Western countries share common economic interests, political tension both between Japan and China, and between Japan and Korea frequently occur in the 2000s, Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community. Japan and China's relationship is often described as comprising "Cold politics and hot economics". It can be said the same for Japan and Korea's relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of “Cold politics and hot economics”, as is recently observed in hate speech against foreigners from Korean.
This paper analyzes the link between gendered livelihoods and mobility patterns. It focuses on particular socio-economic and cultural contexts for maternal employment and, through a review of existing literature, differentiates between different dimensions of mobility. Based on Cresswell’s (2010) notion of political economy, the paper argues how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” involves using those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is used to problematize social phenomena, people, or events. For example, a discourse on immigration and come to live in the country on their own. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

**Vulnerabilities to Cyclonic Disasters in Bangladesh**

This paper aims at exploring the vulnerability factors affecting cyclonic impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin these population’s evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2007 and 2009 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation and enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

**“Individuality” As a Moral Expression in Japan**

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. We have to ask if there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse: a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “individualization” and “individualism” in Japan are a vocabulary often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku” (subversive or solitary on their own), and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.
Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is “a more sober political identity” that separates itself from the background of the past centered around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-transitional world will be successful only when traditionalism is overcome based on the choice of modern civilization. Dominant elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements’ composition. While the Soviet identity was mobile home communities in Florida, during the unfolding of economic struggles, as well as health and personal issues can compromise them by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of Mobile Home Park. This paper focuses on a community-type that has long been attractive to older people in the United States: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many middle aged residents and children. Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less stable, affordable, and personally fulfilling for older people than originally anticipated.

Between Lifestyle and Necessity: Senior Mobile Home Living in Florida

This paper focuses on meanings and practices of home among residents of a predominantly Latino mobile home park in Florida. It is based on an analysis of 30 qualitative interviews conducted with sixteen Latino/a, twelve White, and two African American community residents, follow up walks with fifteen interview participants, and ethnographic fieldnotes written by a Latino student researcher and community resident during 2008-2009. This research was part of a larger study investigating the communities and disaster vulnerabilities of working class families who lived in mobile home communities in Florida, during the unfolding of the last U.S. economic crisis.

The paper specifically discusses the meanings and emotions of home for the Latino/as, who were predominantly immigrants, and emphasizes differences with how white residents thought and felt about their places. Latino/as generally displayed great pride in their neatly decorated and customized mobile homes. They emphasized the (precarious) achievement of homeownership, the neighborhood community, and the park's safety and tranquility (especially when compared with surrounding areas) in their descriptions, which functioned as markers of decency, upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of “trailer” residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.

"Look At My House!" – Home-Making and Identity in an Urban Mobile Home Park

The massive process of reislamization of society that started to develop after the time of ‘Reformasi’ in 1998 has brought many social changes in everyday practice of social life in Indonesia. Today, Indonesia has to face almost everyday the problems related with the disruption of harmony of living-together. Besides religious-fundamentalism and terrorism, the intolerance among religious groups, violence against minorities and the demise of cultural diversity respect value have become a serious problem in society. Concerned with that situation, many young people in Yogyakarta in Central Java have built movements for bringing back social tolerance in Indonesian public sphere. As counter-actions and counter-discourses, the movement has successfully gained the public support and built larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global context.

From ‘L’intervention Sociologique’ to ‘Pendampingan Sosiologis’: A Reconstruction Of Social Movements Theory & Methodology Based On Indonesian Experience

The idea of ‘intervention sociologique’ (sociological intervention), introduced by respectful French sociologist, Alain Touraine, has been considered as one of the most innovative approaches to social movements. However, in the different social context out of European society, sociological intervention faced various challenges. My experience in doing sociological intervention to a group of young actors of ‘multicultural movement’ in Indonesia has allowed me to identify the limitation of sociological intervention and furthermore, to build alternative adaptation and innovation, which is more suitable with Indonesian society. As a consequence of theoretical and methodological reconstruction that I have made, I therefore introduce a concept of ‘Pendampingan Sosiologis’ or could be translated in France as ‘l’accompagnement sociologique’ and in English as ‘Sociological Accompaniment’. Although pendampingan sosiologis found its origin and inspired principally from larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global context.

Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the persons's perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

KÜNEMUND, HARALD* (University of Veche, harald.kuenemund@uni-vechta.de)

Life Expectancy and Retirement Age: Policy Options and Practice

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforce. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforce and increased inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of aging societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)

The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was not based on an honest and rational approval or disapproval of politics but on tribalism and ethnic affiliation than on policies. The glorious climax was the violence after the presidential elections in 2007 when more than 1’000 people were killed and over 300’000 displaced. It was thus remarkable when the newly aligned major political parties released programmatic manifestos for the 2013 elections. They included some claims in the field of arts and culture converging into a coherent vision on the role of culture. The financial feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalitions’ interest and capacity in implementing them. However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power theories have limited explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGS). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)

Faces of Uncertain Transitions to Adulthood – in Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its manifold fields of education are ideal cases for studying the phenomena in question. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will (a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances); (b) differentiate between forms of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone); (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In context of our research project, we link theories of interactionism (e.g., Meads processual concept of “self”; Strauss’ concept of “status passage”) with Bourdieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)

Orientations and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is a part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions), and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (art teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the significant others (like parents, peers, teachers) makes the decisions. The less privileged adolescents are more often rejected, and the opportunities to study at university are smaller. c) The access to different fields of life: For instance, students at art, teaching or engineering have different perceptions of orientation, strategies and decisions of adolescents upon leaving school.
Educational Inequality and Welfare State Patterns

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is their own. In recent years, this idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

LA BROOY, CAMILLE* (University of Melbourne, clabrooy@unimelb.edu.au)

Viscots and Villains: Exploring the Media's Representations of Gender in the British Press and the Impact of These Depictions on British Muslim Experiences of Belonging

A recent spate of “multicultophobia” in Europe has seen German Chancellor Angela Merkel recently pronounce the failure of multiculturalism, a sentiment further echoed by British Prime Minister, David Cameron and the then President of France, Nicolas Sarkozy. It has been suggested the continued existence of radical differences by Muslims highlights an “illiberality” about multiculturalism, since the latter is alleged to license these practices. This paper presents findings of content and critical discourse analyses based on the researcher’s doctoral thesis examining the media’s representations of Muslims around the period of the London bombings. It presents a comparison of how gender is represented in the British press, exploring in particular how these debates play out with respect to structure and agency. 503 articles were analysed in the six-month period preceding and following the attacks on London from five major national newspapers. It will be shown how belonging for Muslims can become a problematic negotiation as a result of these representations. While Muslim “differences” are recognised, their negative representation signifies that there exist limits to what can be tolerated in multicultural states. It is argued that alleged failure of multiculturalism is a reflection of multiculturalism’s inherent liberalty rather than illiberality. The fact that radical alterity beyond the spaces allotted by liberalism cannot be tolerated represents the failure of multiculturalism.

SANDOVAL, GERARDO (Social Weather Stations)

Gender, Work and Family: The Situation in the Philippines

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women’s domain as “homemakers”. Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometowns to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers to migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a village. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in this sense, it needs to be constantly reasserted and transnational practices and the surge of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villageness”.

Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organisations in France. The analysis of the Journal official, a registry of all associations created in France, shows a recent decline of hostland oriented organisations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGOs engaged into development projects and humanitarian action.

What are the relationships between this reorientation of Moroccan volunteerism and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10 000 people and focusing on both immigrant integration and transnational practices shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

L’Action Et Les Politiques Syndicales à L’Épargne De L’aide Et Des Services à Domicile En Europe. Le Cas De La France

En France, comme pour d’autres pays européens, l’aide et les services à domicile sont le lieu, depuis plusieurs décennies d’expérimentations discrètes en matière d’insertion de nouvelles formes d’emploi et de précarisation du travail. Dans le même temps, les avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de management et d’encadrement du personnel.

Dans le même temps, des avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies. Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de management et d’encadrement du personnel.

Cette communication propose de s’intéresser aux formes des politiques de l’action syndicale dans l’aide et les services à domicile en France, en articulant ces différentes échelles de l’action syndicale et en revenant sur les contradictions à l’œuvre. L’analyse documentaire, d’entreprises réalisée auprès d’acteurs syndicaux institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies de l’œuvre et de la façon dont elles peuvent peser pour changer le travail, qu’il s’agisse d’actions quotidiennes ou de formes d’intervention dans les services à domicile.

The Egypt Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufis in forging the political map change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political influence of the Sufis in
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

While it does not create a theory of cosmopolitanism it does deal with common ground. The listening approach to applied in the context of environmental issues. The recent work of Holifield will feel "safe" but rather to think about why and how we listen and to seek out listening subjects. He argues this subject will make an ethical listening subject. He argues this subject will make an ethical listening subject. Crawford proposes that emphasizing listening as an approach offers a counter participation, particularly online participation. Crawford, writing in the context of the digital age, argues that online participation has value in contributing to cosmopolitan ideas."

Across anti-terrorism policing following 9/11 not only reduced terrorist attacks but also this iconic event. In particular, we hypothesize that the unprecedented increase in 11, 2001, we also examine whether the determinants of terrorism changed after 9/11. In the second half of the 1990s, the anti-terrorism strategy in the United States. We use newly available data on terrorist attacks in U.S. countries from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorist activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. **Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing**

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are often represented in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions.

The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production.

The paper focuses on the World Social Forum (the WSF) held in Tunis 26-30 March 2013 from the local youth perspective. The WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the global South and North takes also place in the setting of co-authors, carefully reflected in the paper.

NIKUPETERI, ANNA* (University of Lapland, anna.nikupeteri@ulapland.fi)

**Producing Knowledge about Post-Separation Stalking from Children’s Point of View - Children As Social Actors?**

In this presentation, the post-separation stalking is understood as gendered violence from the children’s point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children's and their mothers’ wellbeing. Stalking is defined as severe, continuous, multidimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production.

The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life” by Ali Paasikivi Foundation. The aim of the project is to analyze the stalking in everyday life of Finnish children. The principle has been to enable safety spaces for children’s voices. The children's knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children's narration. The data is collected by children's groups based on interviews and focus groups with children and members of their families. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, patriarchy, violence, and the best interest of the child. Therefore the question is do we take into account children as agents who can redefine these issues?

**The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”**

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscernibly promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced threads within such discourse obscure a regime of institutional reification requiring interrogation.

The current technological phenomena of social media, texting, and camera phones bring with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonic relationships is also changing and accelerated changes. Research is challenging to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorized in the literature, interfering with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical and moral sensibilities mitigate efforts to nuanced, trouble, and frame discourse on this subject, rigidifying a project of patriarchal social reproduction.

This paper offers a theoretical framework for engaging issues of sexual coercion and consent, reconciling laws, policies and practices with RealPolitics of

Identification of Training Needs in Informal Sector for Street Vendors and Their Facilitators in Mumbai

Informal sectors are thought as a source of development. But these sources of development can be mislead by poor working conditions and poor management in these sectors. Where poor working conditions can include different problems in their day to day functioning which is also affected by poor management of the human capital engaged in the process. Therefore with increasing importance of development through these informal sectors needs to be more focused and organised, for which identification of training needs of its human capital is one major approach that needs to be addressed by different Corporate Social Responsibility (CSR) activities of organised sectors and other government and non-government organisations. Exploring the importance of Training Needs Assessment (TNA) this paper is an attempt to highlight the difficulties they face in their work life and the way they deal with. This paper also tries to identify their skill development techniques and strategies that links to their growth and descent survival of their family in the society. This paper is based on primary data sources where, structured questionnaires were administered among the Mumbai street vendors, Government and Non-Governmental Organisations and CSR activities of organised sectors including a few case studies. The data was analysed through chi-square test and cross case analysis. The findings supported that the group undergone any kind of training were able to speak about their future learning skills they require for better development of their families than those who were deprived of any kind of training for their business growth were keen to learn the skills required.

Issues of Atrocity and Discrimination Against the Dalits: A Study of Students Protest at the Premier Indian Educational Institutions

Even today Dalits are the victims of violation, isolation, atrocities, discrimination, untouchability, discrimination, ill-treatment, deprivation, social stigma, and the trap of the poverty in the society. Recent years that makes the state answerable before each and every Indian Dalities and Dalit women in particular. Needless to mention the two unfortunate incidents: Recently 30 Dalit houses were torched by the upper caste people in Lathore, Odisha. Earlier the most unfortunate incidence of Pilip gang rape to a Dalit girl in Odisha, Khairlanji massacre in Maharashtra and many more. Conceptualise the problems this paper tries to explore the combined protest efforts of students’ organisations and civil society in India. The second objective of this paper is to find out, how the students’ organisations take up the issues and strategies in the process of revolution or protest against the state for the justice. It also aims at to explore the militancy of the students’ revolution and its impact on the issue of disaster prone area. It this paper is also theorising the atrocities, discrimination and it’s consequences towards the Dalits in India. This study is based on both exploratory and content analysis research; data triangulation is the method for the data collection. Thematic analysis and descriptive statistics are the data analysis procedures for this study. The students sensitisation, organisation and strategy of the protest are the footprints of students’ movement in the sand of justice and struggle. The politicisation of the issues in the campus and the outside campus pulling the leg of success of this movement:Personal vested interest played prominent role to de-speed and de-lined the student protest from their founding motto. This study reflects how it impact the civil society, upper caste lobby and to the state silence in the atrocity and discrimination issues.

Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine if the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students.

Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointment individuals to the teaching profession were highlighted as resulting in situations of “brutal/ inhuman beating” in schools. These views expressed by teachers raise important policy implications.

LAMBERTI, MARÍA JULIETA* (El Colegio de México A.C., julietolamberti@gmail.com)
The Conflict over Mining in the Heart of the Universe

Mining is progressing over indigenous people’s land in Mexico. One of the holiest sites of Wixárika people, Wirikuta, has been conceded to mining companies seeking to revive mining in the region. This has caused a conflict. Visions of development can be mislead by poor working conditions and poor management of the territory.

This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective. I also seek to highlight the importance of nonhuman actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

LAMPIS, ANDREA* (National University of Colombia, olampis@unal.edu.co)
Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex world, moving locally and globally. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six nationalConditional Cash Transfers programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or longer-term improvements in the security of people’s livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household’s surveys, and on programmes assessments and internally available data through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.
Response Latencies and IRT Person Estimates Using CASI

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

Deferential Surrogates and Professional Others: Recruitment and Training Of Migrant Care Workers In Taiwan and Japan

When outsourcing care to foreign workers, a society must engage in discursive reconstruction and institutional reorganization of intimate labor. Should care be seen as a family duty or professional work? Should care be characterized as a culturally embedded practice or a market form of labor that can be easily outsourced to foreigners? This paper examines the operation of transnational care regimes in Asia by comparing the recruitment and training of migrant care workers in Taiwan and Japan. Although both countries seek migrant workers as a solution to the similar problems in aging population and care deficit, Japan and Taiwan have adopted distinct models which demonstrate varied ways of intersecting migration regime and care regime: Migrant care workers in Taiwan are positioned as “deferential surrogates” while their counterparts in Japan are seen as “professional others.” It is often assumed that East Asian societies share substantial cultural affinity due to their intersecting histories and common tradition of Confucianism. This comparative study not only shows varied institutional parameters of care that organize the family, market and state in distinct patterns, but it also demonstrates that cultural values and social practices such as familism and gendered division of care are subject to transformation under the influence of state intervention and global market.

Tiger Parents in a Globalized World: Class, Immigration and Transnationalism

The reductive image of “tiger mom” has overshadowed the changing practices of and class differences within Chinese parenting. Based on in-depth interviews with parents in Taiwan and Chinese immigrants in the US, my paper examines how globalization has differential impacts upon the styles of childrearing across class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is mediated by class inequality and reconstituted by the experiences of immigration and transnationalism.

Fifty Years after the Social Indicators Movement: Has the Promise Been Fulfilled? an Assessment and an Agenda for the Future

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to child care work, accept reduced working hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although...
the global economic downturn has affected well-being of all employees, the ramifications for individual employees' remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright's class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leinfrrud, Bison and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work-life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters' resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego's social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfacts. We can assess how the measured distribution of ego's network resources differs if the accessibility of resources is not taken into account; how well we approximate ego's resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego's network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting large-scale surveys, e.g. international survey projects which rely on clustered deducedness of egos. These results are of general importance to researchers conducting large-scale surveys, e.g. international survey projects which rely on clustered deducedness of egos.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the 'new middle classes'. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumption patterns.

Negotiating a Space to Rest: Denver's Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into "loft-living" condos, rundown streetscapes were intensely policed then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver's revitalization while exacerbating the city's problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public's field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of "protection against the elements".

Assuming that the camping ban did not eliminate homelessness and interested in how Denver's homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as a constitutive part of one's biography. In general, peer research that is aimed at exploring life worlds as an "insider" is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58...
Narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of sexualisation of the researcher occurred that focused on the researcher’s sexuality and his sexual biography. The paper addresses methodical ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytical concepts of inter-subjectivity and counter-transference it argues for reflexively bringing into the research process one’s own sexuality as a researcher as a means for a deeper understanding of the production of sexual life stories in the interview situation. The double-bind of being researcher and perceived peer that may lead to exploitations of the interviewee’s fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

Mobilitating for Dignity: Recognition and Social Movements

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy, how have such movements fared? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realm of subjectivity, emotion and motivation. Our analysis is rooted in Marxist critique of alienation, Lukacs critique of reification, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one’s identity also foster hope that leads people to social mobilizations.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban finance, and urban rebuilding projects. Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the « Japanese miracle » which occurred from the 1950s to the 1970s during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity. Two new phenomenons are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the edict of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of these elements help to rebuild a world class city in a context of urban maturity.

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank’s recommendations as a result of the deleterious consequences of neoliberal policies. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal politics (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments. Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests targeted the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

Teamwork Diversity

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production, which first appeared in Japan’s industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy. On the other hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today’s workplaces? Does teamwork represent a breakthrough from Taylorism or a strengthening of Taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec paper industry sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption represents a logics of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both Taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.
The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with these languages. In the case of migrants, the public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. In satisfying the three publics the public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization's communication with the various publics and what role they play in the legitimation work.

Dissolving Inequality? Changing Cultural Models, Education and Social Mobility in Ghana

In northern Ghana, cultural models of how to get on have changed drastically within the last generation. Coming from a part of the country that has been economically and politically marginalized throughout the colonial and post-colonial periods, people believe that formal education and modern professional careers - instead of traditional livelihoods centered around subsistence agriculture, labor migration and reciprocity within extended families - provide the only way to be successful and to achieve life chances comparable to those people in the southern part of the country have. Changing cultural models are the result of their understanding of conditions for happiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as subjective social class, self-assessed health, access to health care, unemployment, such factors as psychological distress have to be targeted as well. The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with these languages. In the case of migrants, the public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. (Dis)Placing Trust: The Effects of Job Displacement on Generalized Trust over the LifeCourse

The adoption of ‘flexible modes of production’ across much of the developed world has been theoretically posited to be a substantial driver of declining macro-levels of social capital and generalized trust. A key facet of ‘flexible modes of production’ believed to be particularly harmful for social capital are increasing rates of job displacement (e.g., involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the posited association, very little has research has investigated if, how and why job displacement affects social capital. This paper explores how experiences of job displacement can affect individuals’ tendencies to (dis)trust over the adult lifecourse, using two-waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job displacement - even when the age of 33 and 50, appears to significantly scar generalized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains highest amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work; the more central employment is to individuals’ lives the stronger the negative effect of displacement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spillover into the wider social sphere, both at micro- and macro-levels.

Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population (1), as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

However, these three countries differ profoundly in the way they have developed different patterns in terms of institutions and norms with regard to social protection schemes, labor regulations, and gender policies.

This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be constructed in order to determine the factors that most contribute to explain gender asymmetries in each country.

Financial Inclusion As a Basic Human Right? Reframing Inequalities in > the > South

A new wave of commodification “all the way down” (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-taking to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of decommodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-taking to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of decommodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-taking to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of decommodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller)

This presentation will compare the extent to which incomplete social protection schemes are being replaced by the provision of minimum income transfers and some basic services for the needy through the social protection floor (ILO and the basic universalism framework Heidenheimer et al. (2012) along with a process of “bankcarization” of the poor and the vulnerable. We argue that preventing market failures instead of promoting equality of opportunities and further public redistributive mechanisms to make market societies more homo- genetic strategies to enhance privatization and capital markets whose deployment has been long constrained by domestic market restrictions in the developing world. This trend is likely to reinforce duality and polarity and undermine strategies to achieve broader equality between developed and developing nations, between the wealthy and the excluded. The North-South divide will deepen and we will examine how developments of work and employment may also be seen in the aftermath of the 2008 crisis; we will scrutinize the profile of the public provision of welfare in some developing countries, through an overview of social spending (public and private).

Conseillers à L’emploi Et Politiques D’activation : Une Gestion Paternaliste D’Accompagnement à L’emploi ?

Le mode de gestion paternaliste s’est historiquement développé dans un contexte d’émergence du salariat au sein des pays industrialisés. Avec l’extension d’une législation dédiée aux rapports salariaux et la montée d’un Etat social (Castel, 1995) ouvrant non seulement dans le cadre d’une gestion de type assistantiel, en direction des populations les plus démunies, mais aussi de type assurantiel, à destination des travailleurs réguliers privés involontairement d’emplois, cette gestion reflectizes des rapports de travail, caractérisé par un contrôle social dis- cret, et personnalisé combinant sécurité et coercition, semble avoir perdu de son acuité, par l’établissement des droits universels.

Nous appuyant sur une enquête ethnographique menée en France auprès des conseillers à l’emploi, nous souhaitons montrer que ce mode de gestion discrétionnaire et personnalisé des rapports de travail et d’emplois peut également être observé au sein du service public de l’emploi, avec la montée des politiques dites...
New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession as an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized assistance) vis-à-vis the Montante Morely Custom, introduced in 2006) on the one hand, and the management streamlining (profiling, streamlining and tightening of supervision of unemployed on the ground) on the other.

By changing the standards, organization, this industrial rationalization of a new type of professionalism restructures the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the legitimacy of the asymmetry of the rapport between employers and chômeurs (unemployed) as a rationality supposée des entreprises, se situent donc à la croisée de deux visées, la subjectivation et la rationalisation. A partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination

The category of 'Leisure' as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reasoning and intellectual spaces that scholars must somehow shoehorn their ideas into and make a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work, in a call and argument about extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation’s commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrella.

Leisure, Justice and Economic Collapse

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emerging cultural histories including millennia of globalization.

The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx international collaboration – using common methods to collect and share rich and diverse narratives on patients’ experiences. This paper takes a look at the extent to which people, who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were striking similarities in participants’ experiences. Participants shared being able to help others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments, rehashing their experiences sometimes provided participants with a meaningful experience. Participating in qualitative research may contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent – and nature – of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unre corded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of financialisation. In an era of projected food, water and fuel scarcity, financial enti ties are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculation in land along with opportunities for more secure food production for oil-rich but land- and water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploiting the types of firms investing, along with their motives for investment. The paper concludes by theorizing the sociological ‘meaning’ of financialisation as it affects the Australian agrifood sector.

Negotiated Revolutions 2.0? The Arab Uprisings In Comparative Perspective

The 2011-12 uprisings in North Africa and the Middle East have helped to re-ignite scholarly interest in revolutions. But what kind of revolutions do these uprisings represent? This article situates the Arab uprisings within the context of post-Cold War revolutions, locating them within a cluster of ‘negotiated revolutions’ that have emerged over the past twenty years. ‘Negotiated revolutions’ differ from ‘modern revolutions’ in five main ways: they result from a relative rather than an absolute state crisis; their trajectories are characterized by negotiations rather than armed confrontation; their participants reject the utopian commitments of past revolutions; they are welcomed rather than disavowed by leading international actors; and they lead to the development of weak rather than strong states. The article assesses the Arab uprisings within this schema, arguing that compared to those who see the Arab uprisings as offering a new model of revolutionary change, their causes, trajectories, and outcomes are broadly familiar. Extending this point, not only do the 2011-12 uprisings sit within a family of revolutions that can be traced back to 1989, their focus on political justice rather than the ‘social question’ means that the uprisings share a family resemblance to previous instances of ‘self-limiting’ revolutions. This comparison illuminates both the strengths and shortcomings of the 2011-12 uprisings.

Socio - Economic and Health Status Of Elder Population: Some Empirical Reflections From Tamilnadu, India

The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental disorders and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their own family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come from the family members are denied resulting in their deprivation and desertions. Consequently, the welfare intervention form GO’s and NGO’s are looked forward to fulfill their basic needs. The health care and support systems promoted through GO’s and NGO’s provide some solace to their requirements. The condition of the elderly population in rural India is not properly addressed. There is a lack of care and support and status in rural community. This paper is outcome of the field investigations conducted on socio-economic and health status of elderly population in selected block in state of Tamilnadu, India. This paper analyses the status of the elderly population in terms of socio-economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

Is There a Medicalization of the Facial Appearance?

A partir d’une recherche au sein d’espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu’où observe-t-on une médicalisation de l’apparence, et par quels dispositifs se traduit-elle. On peut avancer qu’il existe des normes d’apparence que les institutions médicales et judiciaires encouragent. La problématique du normal et du pathologique imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne cherchaient pas à rendre la beauté mais à rapprocher d’une norme d’humanité. Une posture pouvant aller à l’encontre des associations d’aide aux personnes défigurées qui milite pour un élargissement des normes d’apparence.

Also, sans proposer de typification du rapport entre réponse sociale et réponse chirurgicale, en suivant des personnes touchées par une forme de défiguration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d’expérience de l’anormalité faciale dont les appuis institutionnels disponibles dans chaque pays.

Explored implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devalue responsibility for decision making to a point where the perceptions of government’s leadership and accountability reaches a critically low point.

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a focused word focused by the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tolls of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO’s. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

The idea of justice is connected with the distribution of natural and social resources among people and the criteria and mechanisms of correction of injustices. Putting together the theories of justice by John Rawls(2003), Amartya Sen(2011), Nancy Fraser(2009) and Martha Nussbaum(2011) that represent the political, economic and cultural aspects of justice, that are related to the justice found in the ways of life and not only in the legal recognition, we can extract elements characterizing the social justice in the plan sense. Then we can also allow investigating its presence in the free participation of individuals in the social networks.

Consequences of Alternative Feminist Approaches to Land and Housing Security

In September 2013, the Huairou Commission, an international non-governmental organization that works with grassroots women, and Espacio Feminista, who work with land defenders in Recife, Brazil, held an expert group meeting. Patricia Chavez, founder of Espacio Feminista, said:

We need to go deep into what development is; we are just accepting a process of urbanization; people are not obliged to live in riverbanks, hills. We are being forced out of fields, to open up space. [There is a] model of development that is being imposed... let us not be transformed into something that is not compatible with our needs.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the “diverse” economy as developed by J.K. Gibson-Graham, authors of The End of Capitalism (As We Knew It): A Feminist Critique of Political Economy (1996, 2006). The diverse economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist). On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

Global Cyberspace: The Involvement Problem

In the present-day information world the involvement of an individual in Cyber-space is an important social marker determining belonging to one or another social group. Your circle of friends, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren’t an Internet user. On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development and access to Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

Les Droits Du Patient Et La Dépénalisation De L'euthanasie Comme Lieux De Questionnement De La Médecine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépenalisant l'euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des professionnels de santé, la loi du 22 août 2002 sur les droits des patients et la loi du 28 mai 2002 dépénalisant l'euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient et la loi du 28 mai 2002 dépenalisation de l'euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d'abréger ses souffrances. L'application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l'entreprise de la notion de « clause de conscience ». La question est cependant plus complexe car si l'autonomie du médecin peut apparaître comme un frein à l'exercice de ce type de droit, elle peut aussi constituer le moyen de s'opposer à bien d'autres obstacles d'ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés suscité – et notamment autour de la redéfinition de la figure du médecin – et des tentatives entreprises dans les divers lieux de la décision politique en vue de les surmonter.
The Spaces and Times of Youth Culture in the New Century

It is starkly evident that in the new century young people's biographical constructions come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingent self-identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels:

- corporate level, characterized by an increased heterogeneity in terms of organization and performance
- institution level, characterized by a decay of previous forms of coordination and a revival
- social compromise level, characterized by a surge of multidimensional inequalities

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India

Cultural Heritage Tourism uses the remains of history which the traveler is emotionally connected to. The traveler is the tourist. Theorists have developed a variety of perspectives on tourism. From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollutions. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government, and so on. This paper presents understanding of Ajanta Caves as general descriptive and its significance of Ajanta Caves. Second part of this study analyses im-pacts of cultural heritage tourism on Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. Third part is part of summary, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to preserve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.

The Nfa Resistance to the KORUS FTA

Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses data from nations as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has usually been taken by development scholars. It focuses on stratification among countries. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as individual processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, I situate income earnings of South Koreans within a broader pattern of global income hierarchy, and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) based on achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received as much attention. In this paper, we look at the role of relational skill assets in explaining native workers’ attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrance skill barrier and the latter as a pulling factor that attracts skilled and unskilled immigrant work forces. Then, we create a new independent variable, “relational skill specificity,” which is a relative measure of interpersonal skills over instrumental skills in one’s occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over instrumental skills are less likely to hold strong anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings. We find that different levels of anti-immigrant sentiments between skilled manual workers (e.g. craftsmen), and skilled non-manual workers (e.g. professionals), originate not only from different levels of cognitive skills but also from varying levels (or compositions) of relational skills. Overall, the findings of this study provide a novel pathway of causal explanation of how native individual workers develop their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

LEE, CHOONIB* (Stony Brook University, choonib.lee@stonybrook.edu)

This paper will explore how the Black Panther Party (BPP) transformed its chief strategies for the Civil Rights Movement from violent to nonviolent throughout the late 1960s and early 1970s in the United States. The BPP has been infamous for Black Nationalism and armed struggles against racist violence, as opposed to the nonviolent methods for the Movement popularized by Martin Luther King Jr. In contrast to the well-known armed demonstrations of the BPP, there were in fact serious debates between BPP leaders and the leaders of the group promoted more nonviolent actions. After the FBI's count-er-intelligence activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and splinter off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group's relatively nonviolent strategies, such as their free breakfast programs. Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP's violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state's effort to destroy the BPP, as well as the two men's personal power struggle.

I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against violent strategies for the BPP, will be the key to understanding the inter-relationship between the social movement's militancy and the state's oppression.

Childhood Poverty Across Generations: A Trajectory Approach

Research on social stratification and mobility has established a strong intergenerational link in economic disadvantage, documenting the ways in which socioeconomic status is transmitted from one generation to the next. Childhood poverty is a critical variable in this stratification process, as it has been identified as a key obstacle to upward mobility. Ample evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper focuses on the intergenerational analysis that turns around the question of socioeconomic mobility: How is childhood poverty experienced by parents passed on to their offspring’s poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper expands the analysis of how parents’ socioeconomic standing affects parents’ childhood poverty, which in turn affects children’s childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of childbearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

The Alienated Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globally advanced industrial labor market, which legitimately acceler-ate universities as corporations. The neo-liberalist conception, to be called ‘the corporatizing culture’, by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by underlying structural thinking from corporate capitalism. The meaning of university autonomy is replaced gradually by market vocabularies and ideologies. The effect is that professors will be called to public accountability and make their performance accessible to the multiple stakeholders in society. Their freedom for doing research projects is restricted, and more and more academic freedoms are narrowed. In other words, professors seem to be weakened by the management of teaching quality assessments. The author hence pertains to argue in this paper that the alienated images of professors such as de-subjective, non-ethical, and disposable, distorted by neo-liberal discourses, need to be addressed seriously, if the last Professors as social conscience and voice of justice could last and fight back in the neo-liberal corporatizing world.

Gendering the Migration System in East Asia

This paper attempts to do gendering the migration system in East Asia by focusing on the interaction. Inter-Arrival migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FAI aids, trade and migration. Building upon Jones and Findlay (1998)’s work, I attempt to gender the regional migration system by examining feminized migration streams: labor remittances, care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

Cultural Policy and Urban Development: Cases in Korea

The urban agenda is shifting in South Korea from a politics of place to one of people. The Korean political agenda has shifted in the direction of welfare provision, but local government has limited flexibility in implementing a welfare agenda outside of the megacity of Seoul. Even so, innovative local efforts continue in the area of cultural policy, where local government has more flexibility to pursue a coherent agenda with broad benefits, including both ones that embrace data from local places and ones that transcend the prior association of cultural policy with place to deliver welfare benefits to people through cultural spending. This study uses pooled data from more than 200 local governments in South Korea across five years to investigate the factors involved in urban development. On the basis of the results in the area of municipal and district-level cultural spending, a number of cities and districts are identified where cultural spending has a clear relationship with local development according to different measures. This study will explain the dynamics of a number of these creative local efforts.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIR and the research findings showed that comparison of local governments with different levels of housing wealth inequality is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWI is MB (middle-bottom) section, and in HAP is TM (top-middle) section.

LEEE, JIYEON∗ (Yonsei University, jylee80@yonsei.ac.kr)

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean family law including the family head system was enacted in 1958, the status ‘head of family’ had been given to the male person-the husband or the eldest son in the legal family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on why the abolition of the family head system was possible in 2005 and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has oriented toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is ‘what social conditions created a new family discourse and brought about the abolition of family head system?’ The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between ‘gender equality vs. tradition.’ However, after the 2000s, the change of the family structure with the economic crisis has involved the risk on the class position of patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one’s family.

Globalization, Localization, and International Coproduction As an Emerging Form of Governance in the Global Animation Industry

This paper examines the interaction of globalization and localization and the rise of international coproduction as a noble governance form in global cultural industries. The expansion of Western media and cultural industries to emerging markets has been intensified since the 1990s thanks to worldwide deregulation and liberalization and the introduction of new media, such as satellite TV’s and the Internet, which facilitate the integration of national, regional and global markets. At the same time, the growth of cultural and media markets in emerging countries has presented new opportunities and challenges for both global and local firms. Global media giants have found their strategies should be adjusted to better serve local audience who is not solely satisfied with their global content, and local firms have become more ambitious in bringing their content to overseas. Examining the case of the global animation industry, this paper argues that as global firms seek to tap into local markets (‘localization’) and local producers try to enter foreign markets with their own products (‘internationalization’), international coproduction, a form of cross-national, inter-firm partnership for animation production and distribution, provides both actors with new opportunities to collaborate for

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
a project amenable in markets across different cultures, languages and regulations. It facilitates global leading firms to better address local markets and access talents in emerging economies, while local firms can benefit from newly acquired skills in creative development, marketing and distribution as well as expanding outlets for their content overseas. The paper concludes with discussion of the challenges faced by firms in understanding and reacting to cultural differences and the implication of this new form of inter-firm governance to the future of a global cultural economy.

LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and migration labor policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorial and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Industrial Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme were so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans' historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-regular workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’(‘minjunguipp’ in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2000. The ‘People House’ considers that labor market for non-regular workers is formed relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans’ historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – a Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undistinguishable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Breeter’s Free(2007-2008) and Lost Gen(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-)publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers but also new poor – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

Japanese Military ‘comfort Women’: Reconstructing Identities, Shifting Boundaries

This paper explores how Japanese military ‘comfort women’ (Japanese military sexual slaves) have de/reconstructed their own identities as negotiating boundaries of nation, state, gender, and political ideology. Based upon ethnographic field research, various documents, and women’s testimonies, I analyze how women, who suffered both from the Japanese military sexual slave system during Japanese colonization in Korea and from Korean patriarchy system that has continued even after national liberation, have transformed their own identities from victims to transnational activists and from hidden ghost to historical subjects, while have been actively engaged in transnational women’s movements against imperialism, colonialism, militarism, and patriarchy. Particularly, focusing on the Wednesday Demonstration and the Butterfly Fund led by former Japanese ‘comfort’ women, I will examine what made ‘grandma’(Halmoni in Korean) not a helpless victim but a symbol of peace and women’s rights across time and space.

Can We Hear Subaltern Woman’s Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea

The purpose of this paper is to illuminate the implication of feminist oral history as critically reexamining the relationship between hearer and speaker, presenter and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camps in South Korea (yanggongu), we tried to reveal the experiences of historically excluded and silenced ‘other’. In this research, various women’s testimonies of being, becoming, and encountering ‘other’ not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijichon (formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/coincidence, the enforced/voluntary, prostitution/intimate relationship, and have been engaged in transnational women’s movements against imperialism, colonialism, militarism, and patriarchy. Particularly, focusing on the Wednesday Demonstration and the Butterfly Fund led by former Japanese ‘comfort’ women, I will examine what made ‘grandma’(Halmoni in Korean) not a helpless victim but a symbol of peace and women’s rights across time and space.

Relative Social Standing and Support for Nativism

This paper explores the relationship between relative social standing and one's attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one's nativist attitudes by exploring the individual-level effects of education and
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality), unique cultural habits (both traditional and college-educated), and social and political factors in terms of urban congestion, social change, and the sophistication of epistemic stance of religions in order to actualize convergence. The current monopoly of religious market is the result of inter-play between religious influence on a society. What is significant in the public roles of religion, to different degrees, appears to secure its interest in the expansion of religious influence on a society. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophet-like charisma of religious leaders, have most number of social welfare centers for the migrant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers.

As a result, Catholic churches provide most various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Protestant churches, as well as Buddhist temples, have worked with civil NGOs for the social integration. Catholic churches include most various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Protestant churches, as well as Buddhist temples, have worked with civil NGOs for the social integration. Buddhism (Buddhism and Confucianism) and Western religions (Protestantism and Catholicism) contribute competitiveness to religious market. Although it is difficult to assess their achievements in reference to other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

LEE, SANGI* (Sogang University, ls4482@hanmail.net)
Religion, Civil Society and Multiculturalism in Korea

In this study, I examine the role of religion as a socially integrating force in the transition of Korean society toward multiculturalism. In this era of globalization, when most nations are becoming multiethnic or multicultural, arguments and conflicts over multiculturalism are topics of heated debate worldwide. Theoretically, I take into consideration civil religion as Casanova’s “public religion” and examine whether these social theories may have validity for explaining the roles of religion in multicultural social context of Korea. My research tries to compare the roles and functions of three major religions (e.g., Catholicism, Protestantism, and Buddhism) in their social works for immigrant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers.

As a result, Catholic churches provide most various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Protestant churches, as well as Buddhist temples, have most number of social welfare centers for the migrant workers in Korea. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophet-like charisma of religious leaders, have put little effort into these issues. However, every religion, to different degrees, appears to secure its interest in the expansion of religious influence on a society. What is significant in the public roles of religion should be engaged in the civil ethos of a “good society” (Bellah).

Contemporary Religious Landscapes in South Korea: From Diversity to Commonality in a Harbormasting Post-Secular Society

The contemporary religious landscape of South Korea is summarized with three major religions – Buddhism, Protestantism, Catholicism – that monopolize 95% of religious ‘market’ consistently. This paper explains these socio-religious phenomena with historical approach and tries to diagnose it’s implications through Habermas’ post secular theory. First, Korean religious field had been subordinat-ed and passively molded by exogenous socio-political factors such as Japanese colonial war, and military-dictatorial regimes, and democratization process. The current monopoly of religious market is the result of inter-play between internal dynamics of religion and external social forces. Although a highly competitive ecology of religions often causes social conflicts, it also makes positive conditions to reflect on Habermasian post-secular perspectives in the public space. Specifically, secular tensions between homes and religious organizations (Buddhism and Confucianism) and Western religions (Protestantism and Catholicism) contribute to its realization of the public common good. In particular, Habermas emphasizes the sophistication of epistemic stance of religions in order to actualize conversation between the religious and the secular. The highly competitive religious situation of South Korea eventually facilitates religious-secular conversation by revising and reinterpreting their own doctrines or social principles. This research includes many case studies focusing on social debates between religions, as well as between religious institutions and secular ones.

Privately Public Places: Uprootedness, Care Norms and Home-Making of Migrant Women in Korea

This paper conceptualizes the private/public boundary situated in ‘home’ as collective and the role of care work in defining this boundary. I delineate the process in which ‘unnatural’ or temporary homes of migrant women in a host country become a place where women run away from as well as a place women run to, and the implications of this process on their legal precariousness. For the purpose of this paper, I focus on two groups of migrant women in South Korea; those who are temporary or long-term visitors and those who are migrants. I draw upon field data consisting of participant observation and in-depth interviews with runaway marriage migrants and (formerly) undocumented domestic workers. For marriage migrants who have run away from homes (or gochul jiyu/dising), their absence from homes (or their husbands’ homes) becomes grounds for their legal precariousness. On the other hand, for undocumented...
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalist reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

Precarious Work and New Class in Post-Industrial South Korea

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, work style, occupation, or gender gap, however, we suggest that not only employment insecurity but also insecurity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition we include how individual workers perceive 'precariousness' and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will be also considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave - 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents

Due to South Korea's (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationships is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

Mobility of Chinese and Korean Migration Migrants in Japan Rural Areas

In this research report, we are going to look at mobility of South Korean and Chinese female marriage migrants in Japan from the following perspectives: (1) suspicion raised among people in the community by marriage migrants' temporarily returning to their hometown, (2) proportional growth of monolingual in their offspring generation. In rural areas, marriage migrants are still seen as 'escaping brides', and are under significant influence of this old paternalistic belief that 'Once married into a family, she belongs to it'. This idea has taken root in migrants' mobility negatively, and has worked as a mechanism which restricts it. This report will present our perceptions toward female marriage migrants' mobility through cases in Tohoku and Tokai districts.

Canadian Women's Perspectives On Disability, Underemployment and Health

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

The State's Role in Gentrification: Beyond the Co-Optation and Repression Dichotomy

This paper examines the local state's role in the gentrification process. I compare two cases where gentrification pressure is high and the state has a significant stake in gentrification—Downtown Los Angeles and the old neighborhoods within the city of Seoul. On a superficial level, the state seems inclusive in Los Angeles and willing to incorporate voices that rally against gentrification, and the state in Seoul seems to be exclusive, and at times violently repressive. These two cases share to align well with the existing social movement theory that projects a trend towards a “Social Movement Society”, exclusively, in the Western world, where social movements are much more prevalent, yet are contained and co-opted (Meyer and Tarrow, eds., 1998).

However, this literature can inhibit scholars from taking seriously the double role the state that simultaneously co-opts and represses. In so doing, it can create a false dichotomy between the role of the Western and the non-Western state in governing gentrification. Contrary to this view, through participant observation in both cities, I come to unveil the underlying similarities of the two states’ roles in controlling dissent. I analyze how both states 1) mask their involvement in repression and 2) delegitimize dissenting voices to avoid a legitimacy crisis. Focusing on similarities on the abstract level will help scholars of urban sociology to better articulate the theories of the role of the local state in facilitating gentrification, which has been under-theorized despite the early attempt by Logan (1987) to bring the state back in with their ‘growth machine’ thesis. With comparative case study, the point is not to discern the degree of state’s involvement in various cases but to identify types of involvement of the state that will further serve as a stepping-stone for elaborating the theory of gentrification.

Erasing the Line Between Work and Leisure in Korea

This paper examines the blurring of the line between work and leisure in Korea, which is now in a highly industrialized, hard-working society prompted by rapid globalization. It also has a well-developed ICT infrastructure with a highly educated and skilled labour force, now evolving into an increasingly older society within a creative, service economy. In these contexts, individuals in Korea, both at work and at leisure, are facing diverse inequalities depending on their social structural conditions. This paper mainly regards leisure as un-coerced activity, while...
Resistance Up In The Sky: New Forms Of Labor Protest In Neoliberal Korea

The continued rise of Korean economy in the world stage is widely recognized by the presence of the global brand-name products such as Samsung Galaxy phones, Hyundai Sonata, and even by the popular world-hit of Psy’s “Gangnam style.” However, on the other side of this triumph story of Asian capitalism, there is Jin-sook Kim, an unemployed mother and animal rights activist, who protested on top of an industrial crane at the height of a 15-story building for 309 days. In a vibrant economy where automobile exports contribute a lion’s share, the massive layoffs at Ssangyong Motors pushed 24 auto workers to death either by suicide or by post-traumatic illness. These unparalleled cases of labor resistance, which merit a serious scholarly examination.

This study focuses on the sky struggle (hanuel toojeng in Korean), like the one staged by Jin-sook Kim, which represents a new form of labor resistance in contemporary Korea. In this paper, I first present data on traditional labor disputes and the new sky protest and introduce three major labor struggles - Kim’s sky resistance at Hanjin Heavy Industry, the suicidal protest of laid-off workers at Ssangyong Motors, and non-regular workers’ struggle at Hyundai Motors. Through these instances of labor contention, I discuss how the mode of labor protest has changed in Korea in recent decades. In the second section, I explicate the structural and political conditions that gave rise to this changed form of labor unrest by focusing on Korean economy’s neoliberal transformation, the deepening fracture in the labor market, and democratic institutions devoid of labor representation. The paper closes by discussing the theoretical implications of these labor struggles in Korea, especially in enlightening our understanding of contemporary class conflict and collective action in a democratic society.

Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained significance in Quebec, especially since 2006 (Lefebvre, 2008). The arrival of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities’ religious requests and the post 9/11 context contributed to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of healthcare, stands as an arena for more potential tensions and new needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal.

The inquiry pays special attention to the specific “reasonable accommodations” implemented to respond to religious requests of pupils and teachers—in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice—with the aim of disclosing the effects that the so-called Bouchard-Taylor report has had in such institutional contexts.
Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly influenced by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what specific educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system; large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1930s and those born in the mid 1950s, but subsequently rises for cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than the elasticity estimated for the baby boom cohorts but the difference is not significant. Changes in mobility mostly reflects the evolution of cross-section earnings inequality, rather than variations in positional mobility.

Leadership Research in Healthcare: A Realist Review

According to Gilman and D’Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren’t stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collaboration. Evidently, leadership routine is submitted to rules and constraints, particularly for international staff sharing house, office and meal. To a certain extent, these mechanisms of embodying the other operate as well with the local communities.

LEGRAND, JADE* (École Hautes Études Sciences Sociales, jlegrand@ehess.fr)

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team. Incidentally, the fantasy of kidnap and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technical workforce. This reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

PEARSON, JR., WILLIE (Georgia Institute of Technology)

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.). Scientists determine who will practice science in the future: academic scientists act as gatekeepers in terms of the production and training of scientists (admissions, funding, training and apprenticeships); and the design, implementation, certification and evaluation of curricular content. Moreover, access to and understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technical workforce. This reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

JS-23.2
LEGRIS REVEL, MARTINE* (University Lille 2, mart.revel@gmail.com)
Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues. Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research – to what extent, in which roles, for what purposes and to what effect.

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSO’s in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists.

LEGRIS REVEL, MARTINE* (University Lille 2, mart.revel@gmail.com)
Beyond Rational Dialogue: Alternative Modes of Participation

The stumbling blocks of the “dialogical” procedures spread in the political public place and in the service of the democratic participation of the citizens can be limited, by-passed even by the development of modalities and “post-dialogical” devices of sustainable cooperation in the public and “private” places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The “post-dialogical” way suggests that the “dialogical” devices in the service of the democratic participation are neither a necessary condition, nor a sufficient condition of the mobilization of the actors or the exercise of the citizenship. The passage of the models and the devices of participation of “dialogical” type in the models and devices of cooperation of “post-dialogical” type allows to envisage sustainable democratic methods of social exchange and governance beyond the public place and beyond the political space, by considering their development and their functioning in the “private” spaces, in particular those of the world of work and of everyday life. The way of the cooperation groups a big variety of approaches and experiences and suggest, beyond the devices of interaction, to question the transformations of the company and the State, as well as their possible evolution towards the forms of “the cooperative company” and of “cooperative State “, major partners, with civil society, of the democratic governance of our societies.

Our paper will include a theoretical approach and the synthesis of the results of our field work in the domain of industrial democracy and of citizen contribution to sustainable development in France and in Europe.

Marketization and Agency: Freedom and Self-Control in Low-Status Online Contract Work

How does the marketization of knowledge work and the associated creation of entrepreneurial subjectivities influence workers’ agency, or their control over their own lives? Proponents of marketization suggest that it provides workers freedom in choosing where, when and how to work. Critics fear that it leaves workers isolated, adrift and vulnerable to exploitation. In this paper, we approach the question through an extreme case: self-employed knowledge workers who contract with clients around the world through online labor markets.

The data is based on interviews of 25 online workers in United States, Nepal and Philippines, and on participant observation in online labor markets and in worker online communities. In contrast to earlier studies of independent online work, which focus mostly on relatively elite workers, we focus on workers who specialize in low-status digital tasks, such as photo labeling, sentiment analysis, and data entry.

The findings show that online workers celebrated their freedoms and cast the uncertainty inherent in contract work in positive terms, as variety and excitement. At the same time, the lack of structure provided by an organizational context left many of the workers struggling with self-control, resulting in underwork, overwork and ineffective time use. To cope with self-control issues, many workers participated in online peer groups and used sophisticated software tools to track progress and create goals and alerts. Since well-paying tasks were available on the markets only occasionally, some workers felt compelled to attend whenever these tasks alerted, even at night, and structured their daily activities so as to be constantly available. This suggests that, at least for some workers, the freedom of marketized knowledge work may be somewhat illusory: the iron cage of corporate bureaucracy is replaced with a self-imposed digital cage.

Certifying Practitioners and Accrediting Programs: The United States Experience

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice (applied, clinical and public sociology).

In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master’s or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their action oriented work. Certification is not licensure as granted by a state or commonwealth.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of certification for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under scrutiny. The main rational for the Greenbelt is not to protect green space from further land encroachment by Toronto's massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. In tandem with this legislation, a second provincial legislation came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the two municipalities - Markham and Barrie - in the first of the greenbelt and Barrie on the "outside" of the belt - and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of documentation and newspapers. It is hoped to draw general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

LEICHT, VERONIKA* (Promotionskolleg, Veronika.leicht@fau.de)

Inclusion and Structural Processes of Young Recipients of "Unemployment II Benefits"

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to "include" – due to their precarious status as recipients of "unemployment II benefits". I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative "metamorphosis" (Schütze 2001). In terms of biographical analysis a special focus is put on "structural processes" (Schütze 1981) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to the concept of "theoretical sampling" (Glaser/Stricker 1967). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

'Covering narratives' are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

Individual and Structural Causes of Neet - a Case Study of Austria

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of NEET be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect (labeled as structural or model inherent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. The presence of the model inherent interaction is owed to the restricted range of the outcome variable.

However, several scholars have engaged in a discussion whether the model inherent interaction has a meaningful interpretation. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g., Bowen 2012), others adhere to the interpretation of the total effect (e.g., Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn’t result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

“How People Recount Their Life”: Recording and Analysis of Individual Well-Being over the Life Course

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotyped and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative technologies for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considered efforts have been put in subsidising clean energy technologies with most of the emphasis on the environment and the challenges. Numerous technologies are “new” in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming - leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1989. Of the report’s (an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders’ identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in it and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm. Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think in this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entangled with methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

Contested Multiculturalism in Germany? - the Debate on Circumcision

In the words of Angela Merkel multiculturalism has “utterly failed” in Germany (16/10/2010). Although the former German President, Christian Wulff had stated “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children's rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced into the German Civil Code allowing parents to bring their boys for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the ‘boundaries of the social world’ (Luckmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This juxtaposition between secular interpretation and religious meaning, as a religious cutting back children’s rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

Maladies Chroniques, Transitions Professionnelles Et Changement Social

A l’occasion d’une recherche d’une durée de trois ans ayant pour thématique centrale les rapports entre maladie chronique et travail, cette communication s’efforcera de montrer que, à l’occasion d’un dispositif spécifique de recherche action clinique que nous présenterons, la rupture biographique (Bidart 2006, Grossetti 2006) se transmet en une dynamique de transformation sociale. La transformation personnelle débouche, « naturellement », sur une (dynamique de) transformation collective via la présence d’un groupe, qui sur un temps long, conduit chacun à quitter le récit de sa vie pour, pour mettre en commun ce qui dans son parcours individuel fait écho aux autres participants. Le récit de sa vie, de la simple vie, de ce que certains appellent la vie nue (Arendt, 2002 ; Agamben, 1998) ou la vie vivable (Butler, 2010) se transforme peu à peu en une réflexion sur ce qu’il faudrait transformer chez soi, chez les autres et dans la société afin de parvenir à une vie en santé. Ce sont alors les normes sociales du travail entendues comme « la représentation sociale du travail-emploi qui détermine l'accès aux ressources de base requises pour répondre au commandement contemporaire de l'individu maître d'œuvre de sa propre existence » (Castel 2011) qui sont questionnées. Quel que soit l'âge, le sexe ou le niveau social c'est bien la question de la centralité du travail dans une vie qui est mise en débat. Cette recherche montre bien à quel point les transitions sont des occasions de co-construction du changement individuel et social. Si les façons de penser changent, elles conduisent alors à une volonté de changement social qui se manifeste via différentes stratégies que ce soit dans le milieu familial comme dans celui des organisations et des institutions.

From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices of differentiating. The focus of this talk is on the possibilities of these practices of a special configuration these practices carried out: masculine software developer.

The argumentation will begin with introducing theories of practices as an instructive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The so produced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, “guarantees” the social order in the observed field.

Involving Fatherhood: Source of New Gender Conflicts?

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at the family’s work, the paper seeks to understand the complex dynamics of changing gender relations in the private sphere. Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic construction of masculinity does not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father’s uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man’s abstinence from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father’s engagement, but, on the other side, tend to defend the housewife role. The difference based gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The difference based gender order has been eroding by women’s educational and occupational career. The integration of women into the labour market has substantially changed the roles of fathers and mothers. Yet, although the difference based gender order has eroded, the role of mother and father is still assigned to the gender.

The difference based gender order has been eroding by women’s educational and occupational career. Emerging welfare states institutionalised this division of labour with the assumption that men would work outside the home and defined women as mothers and housewives. The difference based gender order developed as the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women’s educational advancements, by women’s movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibility of employment. Postfordist flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibility and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

Soft Power, Reciprocity and Guanxi: Temporary Business Migration, New Media and Belonging

This paper connects two contemporary bodies of literature surrounding the nation that appear to be unrelated. The first is what might broadly be termed, diasporic connections. Although the notion of long-distance nationalism relegates the participation of diaspora in home nations to interference, work on trans-
Duque de Caxias is a city located in Baixada Fluminense, a peripheral area of the Rio de Janeiro state occupied by many poor northeastern migrants attracted by work opportunities in the emerging 1940s and 1970s Brazilian southeast.

Transformed into national security area in 1971 by military coup d'état and administered by mayors chosen by the national government until 1985, the Caxias of today is visually experienced through massive images of floods, garbage and violence. Overshadowed by the beauties of the cidade maravilhosa (marvellous city), the neighborhood city of Rio de Janeiro, Caxias is, in the words of its youth, “a steamroller crushing all their dreams for generations”[1].

Against the trend we have outlined, a new scene erupts in 2000s Caxias: a youth who perceives the city as absolutely cinematic and responds visually to this counter-world view within the given world by the clash of heterogeneous elements that are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, political, cultural, linguistic, identity, religious affiliation and family formation practices), spatial (segregation), or political (electoral and non-electoral participation) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remedy this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of children and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the ‘neo-assimilation’ theories of the ‘new’ straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the immigrant experiences, as well as the pathways of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, political, cultural, linguistic, identity, religious affiliation and family formation practices), spatial (segregation), or political (electoral and non-electoral participation) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate to this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of children and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the ‘neo-assimilation’ theories of the ‘new’ straight-line assimilation theory and segmented assimilation. signals in these organizational platforms. Habermas’ model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making. Drawing from Habermas’ theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world interact to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Determinants of Effective Cross-Border Cooperation

The world over local communities broach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities’ capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community’s interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Implications of Generational Change for the Armed Forces

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs) on the urban fringe. How can a benevolent delivery regime coexist with forced relocations, shack eradication, and the introduction of veritable refugee camps administered by the same municipal state overseeing delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography is generally accepted in the urban studies literature. In this paper, I examine relocation and upgrading as antitheses, it is precisely through delivery that segmented communities are targeted and removed en bloc – what I call indiscriminate dispossession – post-apartheid removals entail a process of selective dispossession. Under the rubric of “meaningful engagement” and “participatory upgrading,” the City capitalizes upon factionalism within settlements to create a distinction between “deserving” and “undeserving” groups that successfully portray themselves as legitimate representatives are defined as “deserving” and gain formal housing, while contending groups are defined as “undeserving” and relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future

Despite the growing urgency of scientists’ warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries only a fraction of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible.

A recent increase in manifest and unpredicted climate disasters, which have at times struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute ‘substantial but affordable sums on a regular basis’ for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks ‘in the next two years’, ‘during your lifetime’ and ‘in centuries to come’, suggesting no progressive discounting of the future.

LEVER-TRACY, CONSTANCE* (University of South Australia, constance.lever-tracy@flinders.edu.au)

The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances. Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the introduction of disease into Haiti by UN forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee’s study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

Blurring the Boundaries: The Declining Significance of Age

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the culture of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of ‘emerging adulthood’. Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to ‘boomer changes’. The book thus takes a comprehensive life course approach to aging.

Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.a Da Fontinha (PORTUGAL – PORTO)

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequal urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporary religion, also arouse renewal urban struggles, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributes to the social processes analysis in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who moves these processes engage and what are fragilities and lines of flight can they offer?

On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a Brazilian urban slum habitation type – placed on Vila Olímpia Neighbourhood, and Es.Col.A. da Fontinha, a squat-eviction process of an auto-generated collective space. Immerged on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to oppose that path, almost heroically. Attempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.

Dispossession and Social Theory: Comparing the Politics of Land and Labor

This paper draws on over two years of ethnographic research on anti-dispossession struggles in India to analyze how the politics of land dispossession differs from the politics of labor exploitation. Based on this comparison, it tries to show how core features of Marxian social theory—including theories of the state, ideology, and historical agency—must be reconstructed in light of the recognition that dispossession is an ongoing feature, and not simply a historical precondition, of capitalist development. The paper concludes with reflections on the possibilities for creating alliances between land and labor struggles.

Narratives of Israeli Educators

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from ‘bottom up’ has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the oppression. In education, this implied breaking with the ‘old’ divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

Conceptualizing The Bereavement Hierarchy

The Open University in Israel

Conceptualizing the Bereavement Hierarchy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determines the behavior of collective actors from various social backgrounds, such as the extent to which the war is portrayed as successfully attaining its original goals. Scholars have challenged the dominant discourse and influenced the war's policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children’s lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subversive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group’s social status and its reliance on the military as a mobility track; (2) the group’s ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies-market-regulated vs. state-sanctioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subversive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operation environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achievement of challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as isolated units, but as parts of larger industrial symbiosis in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbiosis requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collective learning in complex operational environments? Numerous analyses concerning the performance of policy designs have ended up emphasizing the importance of such flexibility that allows steering the regulation based on regulated actors’ experiences. Such an opportunity may be called as a feedback between institutional and operational environments and it seems to be very important element also according to collective learning. Few studies, however, have analyzed the capability of policy designs to strengthen such institutional feedback in practice. Based on a case study of industrial region located in the northern Finland, I argue that institutional feedback is very important in industrial waste management. My preliminary findings point out that optimally institutional feedback allows the continuous learning and the development of industrial systems towards better material efficiency.

LEWANDOWSKI, ROMAN* (Voivodeship Rehabilitation Hospital for Children, rlewan@wp.pl)
Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment

Poland, like other European post-communist countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to performance for granted private medical organization in order to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communist system, costs control were made through a lack of access to expensive medical technologies, which abolished both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

LEWIN-EPSTEIN, NOAH* (Tel Aviv University, noah1@post.tau.ac.il)
Changing Circumstances in Late Life and the Relationship to Household Debt

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one’s health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two concepts central to social stratification: consumption and risk. With regard the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt.

Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-
The role of trade unions in relation to whistleblowing is frequently seen as reactive and defensive. They often have limited resources and regard their prime function as being to advise potential whistleblowers and to represent both those who feel they have been victimised for reporting concerns and members who are alleged to have engaged in wrongdoing. Research conducted by Public Concern at Work and the University of Greenwich in the UK suggests that trade unions are good at performing these tasks but are not particularly effective in ensuring that allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate whistleblowing policies and procedures at the workplace where employers were willing to do so. Research conducted in several countries consistently shows that whistleblowers normally report their concerns internally first and that line managers are often the first port of call. However, if this manager is not appropriate for any reason (for example, is the subject of an allegation or is regarded by the whistleblower as unsympathetic/antagonistic), the question arises as to whether, for trade union members, a lay or full-time official should be regarded as a suitable alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in relation to the whistleblowing process and will consider the ways in which they could use their collective strength to play a more positive role in dealing with alleged workplace wrongdoing.

The Unequal Structuring of Healthcare Choice: Perceptions of Australian Healthcare Consumers

The notion of choice in healthcare is a cornerstone of many western developed health policy settings. In the Australian context, choice has been integral to policy initiatives encouraging Australians to take out private health insurance (PHI). Promoted by policy makers and marketed by the health insurance industry, choice of specialist medical provider, hospital, and even complementary and alternative services has become highly valued. This private system coexists with a universal health insurance scheme for medical care and public hospital provision. However, despite the emphasis on healthcare choice, there has been little exploration about to the factors shaping, and unequal structuring of, healthcare choice.

Drawing on Bourdieu's theoretical framework of intersecting forms of capital (cultural, social, symbolic, economic, and spatial) we explored the structuring of choice by Australian consumers using indepth interviews. Purposive sampling ensured a diversity of perceptions and experiences of healthcare choice, as well as in capacity to draw on healthcare capital when exercising choice. Interviews explored use of healthcare; purchase and use (or not) of PHI; social networks and information sources drawn up when making healthcare choices. Interviews were thematically analysed.

We found that people have an unequal capacity to make choices in healthcare. Complex, interlinked forms of capital contribute to the unequal structuring of choice. While people's choices are most clearly enabled or constrained by economic sources and tradition, economic capital is strongly shaped by social relationships and networks, geographic location and interactions with healthcare providers. Choice represents an individualised rather than communitarian approach to healthcare service provision. Therefore the prioritising of individual choice in healthcare policy and markets contributes to the maintenance of unequal health outcomes across the population.

China in the British Imaginary: Coverage of Beijing Olympics in the UK National Press

Categorised as ‘mega-events’, the Olympics have long been an incredibly elaborated media spectacle in the guise of a purportedly idyllic and ostensibly shared global story, which uniquely reveals about host cultures, carrying real implications for international relations and domestic interests. Such a rich cultural repertoire shared in the media discourse becomes part of the popular imagination that constitutes the collective memory. It is in this sense that British media coverage of Beijing Olympics has shaped how a distant culture is discursively constructed and geopolitically defined. This article will answer the following questions:

-What themes are focused on in the British press coverage of Beijing Olympics?
-How does the character of reportage vary between different titles?
-What is the general image of China that emerges from the coverage to be analysed?

Does media narratives of Beijing Olympics relate to the wider context of an evolving repertoire of Orientalism in a discursive power struggle in the globalised context?

The Trend of Educational Inequality in China during 1940 - 2011

Because Hukou system has been existing for long time which resulted persistent and severe inequalities between urban and rural residents, including educational inequality. In today's China, urban-rural segmentation is the most
influential factor affecting educational inequality, and educational gap between urban and rural population is much larger than of class, race, gender and national- 
ities. This paper, based on national survey data of 2006, 2008 and 2010, exam- 
ines the change of the educational inequality between urban and rural residents 
over time. It concludes that educational gap between urban and rural children has 
been continuing to enlarge in spite of rapid educational expansion.

A New Cycle: Understanding the Current Life Course of Rural 
Families in Western China
Past research has proposed that with the urbanization process, Chinese agri- 
culture is faced with prospects of industrialization and mechanization. However, 
rather than such transitions, we see more evidence showing a lack of labor and capital 
investment in agriculture in western China. This article investigates what the 
economic meaning of agriculture is to the rural families, and describes a 
generational division of roles apparently stemming from reciprocity. Using logit 
models and qualitative findings combined, we show that (1) agricultural income 
is insignificant to rural families compared to what they may earn elsewhere, so 
only the less capable part of labor remains home and they will not spend much 
time and capital in agricultural management; (2) a part men. Sages in which 
peasant plays different roles at different ages: he is raised by grandparents in 
the country home where education is inexpensive, works in the city if possible 
supporting his children and parents, and returns home where livelihood is 
expensive, raising his grandchildren, hopefully with the support of his children who 
work in the city. We call this pattern the ‘new cycle’ as opposed to the peasants’ 
traditional life course which dissolved in the tension between rural-urban duality 
and globalization.

Gender and Power in the Primary Teaching Workplace: Women’s 
Fight Against Male Power in Taiwan
This paper aims to explore how gendered power manifests in the primary 
teaching workplace with reference to the context of the teacher surplus issue 
by analyzing the responses of the teachers in the campaign against male 
power. In addition to official statistical data, the data presented is derived from 
an ethnographic case study carried out in a primary school in southwest Taiwan. 
Non-participant observation and semi-structured in-depth interviews are the 
main sources of data collection. The non-participant observation included shad- 
owing six different class teachers, four females and two males. Semi-structured 
interviews were conducted individually with eight teachers, including the six 
teachers shadowed, one male class teacher and one female subject teacher for 
a gender balance.

The analysis of data from official statistics and state publications identified the 
seriousness of and impacts from the teacher surplus in the Taiwanese context 
and in the case-study school. The research evidence suggests the image of fe- 
male teachers as a silent majority in their workplace. However, while confronting 
difficult challenges rooted in the teacher surplus issue, women's image may be 
changing as empirical illustrations of women displayed their capabilities and ded- 
ication to fight against the male principal for their ideals. When compared to their 
female colleagues, the involvement of male teachers in the campaign seemed 
passive and obscure. More importantly, this campaign process calls attention to 
gendered power within this highly feminised teaching workplace and reflects the 
complexities of gender and power; that is, the relations between gender and 
power exist not only between men and women but also between men. As argued, 
female teachers seemed to suffer more negative experiences from the principal’s 
leadership or from the power relations, while male teachers were supportive and 
reliable allies of their principal to share power and to trust because of their gen- der.

Income Inequality, the Welfare State, and Economic Growth Across 
Time and Space
Sociologists, economists, and political scientists have studied the association 
between economic growth and income inequality, although with different foci. 
Some scholars have primarily studied the economic implications of inequality, 
while others have studied the distributive effects of economic growth. In both lit- 
eratures, the welfare state is implicated as a key mechanism although with differ- 
ent functions. Some researchers posit that high inequality generates public sup- 
port for social welfare which ultimately slows economic growth. At the same time, 
researchers contend that stronger economies with faster growth have greater 
capacity to reduce inequality via the redistributive effects of the welfare state. 
Yet, to date, no research has simultaneously tested these theoretical proposi-
tions. This paper examines the relationship between income inequality and eco-
nomic growth through non-revenue structural equation modeling by examining 
a cross-national, longitudinal dataset. We find partial support for both research 
traditions.

Parents' Commute to Work and Children's Social and Emotional 
Wellbeing in Germany
Based on a nationally representative sample from the German Socioeconomic 
Panel Data (SOEP), we examined the relationship between parents’ commute to 
work and five domains of child emotional and behavioral problems, using SDQ 
and controlling for family socioeconomic and demographic characteristics and 
child gender. The findings show that commute to work by both fathers and moth- 
ers when their children aged 3 to 4 years was associated with a higher level of 
emotional and behavioral problems in their children two years later. In both-par-
ent families, father's daily commute to work two years prior was associated with 
higher scores for peer problems and, to a lesser extent, higher scores for emo-
tional and hyperactivity when the children aged 5 to 6 years. Daily long 
distance commutes (40 or more km each way) in fathers was associated with the 
highest level of emotional and behavioral problems in children. Mother’s com-
mute to work either daily or weekly was associated with a lower level of prosso-
cial (positive) behavior in children. Analysis including single mothers showed that 
mother's commuting 20 km or longer each way was associated with a higher level of 
conduct problems but a lower level of prosocial behavior in children. This is 
one of two studies on this topic in the literature and much further research is 
needed to address causality in a more rigorously way, with more waves of longi-
tudinal data and to examine mechanisms linking parents’ commute to work and 
child outcomes.

Is the Preference for Men an Advantage or Gender Inequality?: A 
Case Study of the School Management in Taiwan
The aims of this paper are to explore whether and how men are preferred and 
advantaged in attaining managerial positions within the school context by draw- 
ning on the experiences and views of the teachers in a primary school. The study 
was carried out between 2008 and 2009 in a primary school in southwest Taiwan. 
Non-participant observation and individual semi-structured interviews are the 
main sources of data collection.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males 
(76.92%) held managerial posts, while only 25% of female teachers were in sim- 
ilar positions. 21 (18 class teachers and three subject teachers) of the teachers 
having no managerial jobs were female, whereas only three of them were male. 
That is, it indicates the persistence of gender segregation: male dominance in the 
higher tiers and a concentration of women in the domain of classroom teaching. 
Futhermore, there are three important points to suggest the preference for men 
in the school management. First, men are preferred and advantaged to take on 
the managerial posts because of men's abilities and availability associated with 
mastery. The second is the alliance between men, which were beneficial to 
their seeking upward mobility. Third, in contrast to men's advantaged position, 
women's domestic responsibilities and roles are suggested as hindrances for 
their access to higher echelons. Yet, the quotes give evidence that some male 
teachers did not agree the preference as an advantage, due to invisible pressure 
from gender norms. In addition, the findings also demonstrate that some male 
teachers in the study prioritised their family responsibilities, rather than their own 
professional advancement. Men's dissociation may imply that men can also enjoy 
working with children and the solid teaching profession.

Parents' Nonstandard Work Schedules and Child Wellbeing: A Critical Review of the Literature  

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information bias, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and an adverse child developmental outcome. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

Exploring the Sense of Justice about Grades in Group Projects  

The problem of free rider is ubiquitous in governing the commons. It often leads to injustice in allocating the rewards in any group projects. This paper investigates formal methods in which the instructor may adjust individual students' grades relative to grades earned on a group project that reflect group members' sense of justice. Data are collected from 77 college students enrolled in a sociology course. We estimate the just grade function for each and every rewardee student in each group, and show how to use these estimates to grade individuals' adjustments. We also engage a recent debate (Markovsky and Eriksson 2012; Jasso 2012) about how to measure the just reward.

This paper is motivated by two bodies of literature. The first one concerns the free rider problem ubiquitous in the social world when public goods are involved (Hardin 1968; Marwell and Ames 1979). Specifically, every instructor must have encountered the difficulty of how to determine individual students' grades when they assign assignments to be completed and evaluated in groups. While many instructors may have treated it as a nuisance in their grading duties and proceed in various eclectic ways as long as the students do not complain, it is indeed an important issue to address if one takes seriously the idea of justice and the authoritative duty an instructor/grader performs. The second one concerns the social psychology of distributive justice (Berger et al. 1972; Deutsch 1975; Jasso 1980; Konow 2003). Specifically, we argue that theoretical and methodological developments in this literature (Jasso 2007) may be applied to the free rider problem of allocating rewards to individuals participating in group projects. In this paper, we demonstrate such a particular application in the classroom context.

The Bureaucracy and the Construction of Risk in China  

There were three large-loss fires ignited by exterior-wall insulating materials which made the fire risk of insulating materials a hot topic in the past three years in China. Any measures for policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council of China that calmed the things down.

This paper is based on a qualitative research mentioned above, which attempts to elaborate the logics of the bureaucracies of China in the process of constructing and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict and then risk consensus among the three stakeholders mentioned above. From this research, we can get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segmentations of bureaucracy which all try their best of shifting their responsibility, and this leads to the “organized irresponsibility” which seems to be a classical logic in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public’s benefit and safety, it’s still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.

Impact of Conjugal Living Arrangement on Marital Satisfaction in China’s Rural Labor Flows  

In the context of rural people floating out for jobs, one of challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey “Population Mobility and Reproductive Health / Family planning Services”, which was carried out in Juchao of Anhui province of China in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction.

The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men involve in this paper, I will be working at hometown, only a few of their wives float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

Law and Rebuilding Community In Post-Disaster Recovery In China  

Law and Community in the Post-Disaster Recovery in China Abstract: The existing the emergency response act of PRC(2007) prescribes many issues with regards to the post- disaster recovery, especially the rights and obligations of governments of different levels, civilians, and NGOs, etc. The efficiency and effectiveness of these articles related to the recovery was not reviewed until the S.12 Wenchuan Earthquake in 2008. Especially in the period of recovery of the catastrophe, the rebuilding of local community is one of most important problems confronted by the disaster zone, but which cannot be resolved practically according to the above mentioned law and demonstrated there existed at least four shortcomings in the law. So the central and Sichuan provincial government took several active measures to make up the shortcomings of the law for rebuilding the community. Firstly, the State of Council made specially and comprehensively the post-disaster recovery regulation. Secondly, different governments were facilitated to build up mutual help relationship so as to restore and revitalize the economy and social development as soon as possible. Thirdly, government adopted many restoration disaster policies synchronizing with the planning and rebuilding disaster zone. Finally, in the process of rebuilding, the ability of self aid and help of individual and family was emphasized by the government and community which began to promote drastically to train and educate the civil society’s disaster response ever than before. In sum, the benefits generated from recovery practices of the Sichuan must be very helpful to amend and perfect the existing recovery articles of the act.

Diffuse or Enclosed? the Ethnic Communities of Taiwanese Migrant Workers in China  

This paper focuses on how the spatial characteristics of cities influence ethnic communities of Taiwanese migrant workers in China. Although Taiwanese migrants and Chinese both fall under a ‘pan-Chinese’ context, most Taiwanese migrant workers still see themselves as a different ethnic group and thus inhabit ethnic communities that are distinct from those of the locals. Within this context, this paper tries to answer two questions which are directly related to urban sociology and community studies. First, whether the spatial characteristic of cities affects the openness or insularity of an ethnic community and—if it does—why is this so? Second, in what degree does such pan-ethnicity affect the lives of those living in different cities.

By comparing data collected from 35 interviews, as well as by examining other factors such as the cultural practices of Taiwanese migrant workers in Beijing and Wenzhou, this paper highlights either the openness or insularity of such ethnic communities, derived from factors not only based on ecological characteristics (such as physical arrangements for work and leisure), or industrial differences, but also on how Taiwanese immigrants perceive and interact with the local Chinese in different cities.

In this paper, I will first define what I mean by the openness or insularity of an ethnic community and how the insularity/openness relates to life styles, social
better account for the rise of art districts.

We advance a relational conception of the state to explain why, on different occasions of environmental governance, the exercise of state power towards non-state actors in the face of environmental challenges. This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism. The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Dujianyang, Hangzhou, and Tianjin. It also draws from archival research in Beijing.

This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity in policy outcomes. In places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, it is no longer surprising that cities are more than just administrative units, but also social/ethnic relation, friendship network, and the perception of local societies.

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

Exploring the Meaning of Social Justice in Chinese Context

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work undergraduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province.

This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

China's class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendships ties across class boundaries. In particular, analysis of strength and diversity of cross-class social ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritative states relied on rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges. This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism. The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Dujianyang, Hangzhou, and Tianjin. It also draws from archival research in Beijing.

This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity in policy outcomes. In places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, it is no longer surprising that cities are more than just administrative units, but also social/ethnic relation, friendship network, and the perception of local societies.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers' Religious Experience in Tzu-Chi

The purpose of this paper is to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious 'conglomerate' within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organization's modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun's book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers' participations in the organization's volunteer's activities help to consolidate and coordinate lay followers' religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience respond to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious ‘conglomerate’ which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai’s prime-time drama (also known as Da-Ai Dramas). In 1995, Da-Ai TV established a network with CTI TV. From 2003, Da-Ai TV has been increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edutainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquiring sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous research on desirability bias has not paid much attention to the issue. The problem of social desirability bias is found to be more severe in telephone interview than in face-to-face interview when dealing with voting turnout (Díaz de Rada, 2011; Voogt and Saris, 2005). The issue of such responding bias with the consideration of mode effect is worth further examination. This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 presidential election in Taiwan. Data are drawn from two national representative sample conducted the same year after the election to eliminate mode effect on data quality is social desirability bias, which is related to voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.

Democracy and Education: A Strategic Alliance For The Exercise Of Future Freedom. The Case Of Argentina

Argentina today finds itself in the midst of a crisis, with a weakening democracy and an education system in decline. Any solution to the country's current problems must focus on not one or the other of these issues, but on the two together, as inseparable. The discussion presented here will first focus on the school as a highly planned and compulsory training institution for minors
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training. In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and "control". From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens. Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world. In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented. Next, an analysis of this situation will be given. Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision
In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care ("test and treat"), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 66.5% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to "test and treat" among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South
Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine’s (2007) call for a feminist geography on interactions between social categories and spatial ordering, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women’s foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of ‘women alone’ in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance
Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society, not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization. This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of collective action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons’ Conception Of Societal Community
On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed within the action paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, well over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative dimension of American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory
Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of modernity in particular. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today.

Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the 'true value' of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval of anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term 'Jews' is replaced by the term 'Israelis', and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatment). There are no significant differences between preferences for a so-called 'Peace product' (which is produced jointly by Israelis and Palestinians) and treatments. In a next step, the probability of taking up employment is estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers' labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don't have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection for those who will end benefit receipt at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

The Impact of Unemployment on Male Gender Role Attitudes in Germany

Germany has a long-standing tradition as a welfare state with a pronounced male breadwinner orientation in social and family policy. In the last decade there have been some reforms in the direction of a more gender egalitarian "adult market model", particularly for women.

In this paper we want to explore the impact of unemployment on men's gender role attitudes within this new policy framework, assuming that unemployment might lead to a more egalitarian view on gendered work-family attitudes. The new labour market policy in Germany has a general notion that assigns obligations to work to both male and female recipients of unemployment benefits which might lead to less pronounced male breadwinner attitudes among unemployed men living in a couple.

For women it has been shown that employment status has an influence on gender role attitudes. In explaining this phenomenon, it has been argued that there are two mechanisms at work: first, there is a selection effect implying that women with more employment oriented attitudes have a higher probability to be employed. Second, there is an adjustment of attitudes, that is, changing one's own attitudes in response to employment status in order to reduce "cognitive dissonance".

We conduct an empirical analysis of the relationship between gender role attitudes and unemployment for men and women who live in couple households. For our analysis we use the German panel study "Labour Market and Social Security" which is covering the general population. In a first step we analyse the impact of unemployment on gender role attitudes controlling for other covariates influencing gender role attitudes and unemployment status. We are particularly interested in the effect parenthood has on this relationship. Fatherhood, in particular, might lead to a persistence of male breadwinner attitudes among men as it fosters male responsibility for family income.

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release.

To assess the dynamics of age during incarceration and upon release, life-history interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a 'deep-freeze', prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to a greater understanding of subsequent desistance post-release.

LIETZMANN, TORSTEN* (Institute for Employment Research, torsten.lietzmann@iab.de)

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers' Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an "adult worker model", aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on active and inactive labour market participation. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers' child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probability of taking up employment is estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers' labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don't have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection for those who will end benefit receipt at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

Conflict and Economic Consequences: Comparative Notes on "Going to WAR"

Wars are beneficial some argue. Wars are costly others argue. Some experiences prove that technological development in warring situations (may) have positive spin-offs later on. Wars can be simultaneously costly and beneficial others argue. Some suggest that being a victor in one war can create a psychosis or collective social memory that propels the victorious state/nation into long term militarist adventures that eventually leads to its downfall. Against this background we are discussing four case studies.

These papers explores in some detail four economies in terms of preparations and consequences during the Second World War, namely that of Nazi Germany, the UK, the USA and South Africa. A look is taken at the economic state of these countries before the war, preparing for war, economic developments during the waging of the war and the socio-economic and political outcomes. It concludes with some lessons learnt and pointers for the future. In our conclusion the reader may find in his/her own deduction that going to war – even if coming out victorious – may be far costlier on the long term than we tend to think.

Theorizing Queer Temporalities

Traditionally, feminist research has focused more on the content and the supposed effects of gender norms and their relations to power, than how the gendered power relations may change. However, there has been a tenet within feminism and—more recently—masculinity studies, which more specifically discusses how to change these power relations. A further research specifically looking at such gender norms change is warranted. How might the gender stereotypes that surely inform the enactment of violence, transform into something new? In queer pedagogy advocates try to find solutions for resisting gendered norms, for example, through queering time. The question is what is mean by 'temporality' and 'queer'? What norms of temporality are queer supposedly challenging? Taking temporality in queer studies as starting point new strategies of resistance,
against different gendered power relations, prevail. This paper, discusses various resistance strategies in relation to different attempts to reach gender equality.

*Change of Basic Human Values in Europe 2002-2012*

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theoretical structure of basic values has created a robust framework for both cross-time and cross-cultural value comparisons. During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses use data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PQV-21). ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefor this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

**LILHRANK, PAUL** (Aalto University, paul.lilrank@aalto.fi)  
*The New Normal As a System Challenge*

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes. There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that "the low hanging fruit" of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Alpert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism.

Tyler Cowen argues that due to Internet, globalization and smart machines "av- is not channeled into productive investments, but absorbed by new corporatism .

Diary Cowen argues that due to Internet, globalization and smart machines "av- is not channeled into productive investments, but absorbed by new corporatism .

This study aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around Journalism and universalism have criticized their mainstream media for preserving a news frame confined to the national boundaries, which assumes the readership is ethnically homogeneous. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as a research interest in Japan. With increasing diversity of residents, however, a demand for minority participation in the media industry slowly emerges; considering effects of minority journalists as members of mainstream media may redeen an absence of approaching minorities as subjects.

Previous studies in America clarify that minority journalists have two nature called ‘duality’; one engages in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study redefines this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of ‘professional identity’ over ‘ethnic identity’ is observed in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue ‘ethnic identity’ as their foremost mission, however utilizing this ‘ethnic identity'...
Ciencia, Tecnología e Industria a Servicio De La Inclusión Digital y Social

En Brasil existe un terreno de 3 millones de PC’s, o sea, personas en sillas de ruedas con parálisis cerebral. Actualmente nadie puede decir que está inserto en el mundo y que puede interferir en el mundo si está fuera de las grandes redes sociales en el Internet. Para enfocar esta tarea se desarrolló una pesquisa de sociología integrada en la campañ delegación digital y la red aprendizaje en un ambiente que permita una red entre agencia de fomento de pesquisas, fábrica de producto de accesibilidad, Universidades, familias de los pacientes, terapeutas, escuela y poder político. El objetivo final de la pesquisa era un producto acoplado en una silla de ruedas postural y de procesos técnicos especialmente configurados para realizar inclusión digital y social de jóvenes en silla de ruedas y que no pueden mover los miembros superiores.

El artículo presenta una pequeña introducción teoría de la vida social simbólica que fundamenta la aplicación de la pesquisa, describe dos casos bien diferenciados de éxito de inclusión digital en la pesquisia: una joven con lesión neurológica congénita en proceso de alfabetización asistida por computadora y otra joven con lesión adquirida – ya alfabetizada. Ambas utilizan mouse de cabeza y recursos de vocalización computacional asistida integrada en servicios interdisciplinares de rehabilitación e inclusión digital y social. Destacamos la importancia de la red de compañeras montada entre terapeutas, Universidad y una industria de productos de accesibilidad y el impacto del medio de comunicación delante de los resultados positivos alcanzados con las dos jóvenes.

Por fin, desarrollamos una rápida inclusión.

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian's NGOs

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGO field: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach in order to interpret these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these institutions. Betinho’s biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan

For many children, high quality early learning environment can provide lots of the experiences and skills that help build a foundation for later school success. Among the numerous measures of early childhood education and care quality, some closely linked to later success in school are those which assess school readiness. Many researchers have been claiming that education subsidy is a significant factor related to children’s learning and development. In 2010, the Taiwan authority announced “The Free Education Program for Five-Year-Old Children”. This program which was expected to benefit a larger ratio of population revealed the importance that Taiwan government has attached to early childhood education. However, little information is available about “the effects of this program’s subsidy on preschool children’s school readiness” and “can this program’s subsidy really minimize the gap between disadvantaged and advantageous children”. This study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of children’s readiness. The results showed that subsidy of the free education program has significant influences on children’s school readiness development. Preschool children who are form lower family socioeconomic status are more likely to accept extra subsidy of free education program, and further will reduce the school readiness gap with their counterparts of non-lower family socioeconomic status. That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantaged and advantageous children. The implications of the findings for theory, practice, and preschool education policy are also discussed.

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian's NGOs

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGO field: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach in order to interpret these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these institutions. Betinho’s biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks.

The conclusions are as follows.

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and disadvantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students’ college life due to cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conception of performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and its Consequences for Social Inequalities

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The third one deals with the temporal dimension of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants' adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in global social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key topics: (a) to seek to determine what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and (un)intended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to consider the role of image management and youth’s responses to inequalities, (d) to understand economic insecurity, youth poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes apply or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibilization, and how the process of globalization has influenced life-course patterns and inequality structures in the local communities. Their author would like to engage in discussions on the results of qualitative and quantitative empirical research, but also focus on the theoretical concepts used in the analysis.

The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions

Rapid economic and social changes coupled with ever-changing social policies have had impacts on the ways in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by considering the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajectory.
There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound sex workers in Japan. A precious commodity and valuable export for their countries. The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A precious commodity and valuable export for their countries. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

Remppe and Polak (2010) have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A precious commodity and valuable export for their countries. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

This paper explores parallels and dynamic interplays between charismatic Christianity (Pentecostalism and Lutheran charismatic revivalism) and traditional understandings of mysterious power as related to an occult sphere in Iringa, a regional capital of South Central Tanzania. I discuss how notions of mystic power as constructive, defensive and necessary yet also dangerous and potentially destructive are adopted into and partly transformed by charismatic discourses on the realm of darkness and related ritual practices of empowerment, rupture and spiritual struggle. Attempting to move beyond a rigid continuity-discontinuity dichotomy I suggest that the relationship between Pentecostal-charismatic Christianity and traditional religion/culture may better be grasped in terms of coevalness, intersections and ongoing mutual influence than temporalizing difference.

Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management

During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function to a more dispersed and collaborative function. The opening towards an integration of technical and social systems is very relevant and necessary when emerging new organizational models in the market, market, organizational and institutional dimensions (Tidd, Bessant & Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et.al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need to not only all members of organizations but also external partners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burnes, 2009, Weick & Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz & Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include emergent structures that accommodate the nature of human interaction and the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Pesch & Funke, 2009). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hayz & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case

The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries’ capacity in maintaining sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors—where the movement is generally from the periphery/semi-periphery to the core market—has been understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz & Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include emergent structures that accommodate the nature of human interaction and the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Pesch & Funke, 2009). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hayz & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex challenge involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change 1. more flexibility in systems and infrastructure so the public could escape ‘path dependency’ including flexibilisation of large scale water supply, drainage and sewage systems and water governance systems including water policies and pricing 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account and involve water sensitive design and decision making. Enabling people to access alternative water sources and recycle water themselves 4. Attending to everyday practices and values around water including risk and trust. Enabling the everyday activities of achieving ‘cleanliness, comfort and convenience’ (Shove 2003) while using less water. I argue that we need to know more about the ‘meso’ level of the water sensitive practices of diverse communities and households to effectively promote and achieve change.

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one's life. The situation is definitely different when one is born into a religious community, i.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances. The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one's belief or actions. Socialization in religious communities is understood as a potential source of spiritual violence, with a specific focus on the socialization processes themselves. The focus here is on the effects of socialization on the individual's understanding of the community and the emergence of such violence. Empirically, the presentation focuses on two religious groups: the Jehovah's Witnesses and also Conservative Laestadianism, the largest revival group in Scandinavia. As dimensions of spiritual violence, the presentation examines themes of human rights, "non-alternativity" and the asymmetric use of power.

When Risk-Analysis Needs Hazard-Assessments - Is Risk-Based Regulation Actually Part of the General Risk Discourse?

Beck describes modern societies as preoccupied with the management of novel risks. Recently, this notion of risk was widened by the idea of risk-based regulation as a rational strategy of governance: risk assessments justify the selective spending of scarce resources on extremely harmful events, as well as withholding investments for less significant events. The focus on risk in decision-making represents a paradigm shift away from the idea that government ought to ensure 'safety'. Even if the notion of safety (as a dispositive of risk) is no longer relevant and is substituted by precaution. A second observation concerns the non-essentialist characteristic of risk: Michael Power has spoken of the "risk management of everything", meaning that any event can be transformed into a risk. The attribution of risk, damage and blame is concurred by observations which requires a new interpretation of risk-based regulation. The focus on efficiency on the one hand and the comprehensive use of risk assessment on the other, raises the issue to what effect probabilities can still be used as a governance tool. Methodologically, there is a tension between the all-inclusiveness of possible harms and the necessity for offsetting all single risks. As a universal tool of description, risk-analysis would need to be able to prioritize between different types of risk. The use of traditional hazard-based assessment strategies in risk-based regulation could be an indication to this unresolved tension.

In explaining and developing this position, the paper draws on empirical evidence from UK regulatory agencies. We review the basic statements of regulatory processes (e.g. Hampton Report and key political documents of regulatory agencies like the Food Safety Agency) to investigate whether the spreading of risk analysis actually hampers the use of risk-based management or if it contributes to the expansion of risk management.

LINNELL, MIKAEL* (Mid Sweden University, mikael.linnell@miun.se)

Managing Social Unrest through Risk: Reinventing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmo during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing calculations about probable futures in the present followed by interventions in the present in order to control that potential future (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective

The digital divide is a social side effect of the information age. The technological means that enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the “second level” digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The goal of this paper was to focus the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital and to characterize the link between the digital divide and social stratification. The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old. Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from significant to insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of public housing was also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects.

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decisional processes, leading the different agencies to transform their approaches and integrate what they call the “social aspects” (or the “problem of social acceptability”) of the waste into their research agenda. In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear or organizations and aims at facilitating the sharing of experience in order to “ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes”. Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2006). It is multi-level strategy that is almost impossible to disconnect the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists

This paper examines attitudes towards education and explores informal educational structures inspired by the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one of the parts of lifelong learning that implies the process of gaining knowledge and skills while individuals interchange with their social environment. Many anarchists tend to criticize prevailing educational practices and maintain the concepts of libertarian pedagogy and postmodernist critique of formal education. They suggest that governmental institutions reproduce social inequality and constrain people from getting knowledge in order to produce governable and disciplined subjects. Many anarchists tend to criticize prevailing educational practices and maintain the concepts of libertarian pedagogy and postmodernist critique of formal education.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations. However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to remonstration, a continuing institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.
The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a series of social and economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese increased, and real evidence shows the likelihood of marriage for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio is highly skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Conjectures on Labor-Environment Alliances

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as India and Brazil. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left—cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in no small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are likely to take the helm of social movement sector (cases such as the US, Japan, and Taiwan), and more likely to emphasize the purely ecological dimension of environmentalism and to jettison the class politics embedded in many environmental controversies. We close the paper with a description of some possible future paths of convergence and divergence of labor and environmental movements across the world sectors we have described.

Chinese Elite Higher Education and Reproduction of Educational Inequality

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through Gaokao examination only. This new strategy is called Independent Freshman Admission (IFA, or Zi Zhu Sheng in Chinese). Whereas ample evidence exists for the social disadvantages of people with low SES in the ability to access and complete elite higher education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Relationship Among Fathers' Occupation, Fathers' Parenting Behaviors and Children's Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children's education. By incorporating cultural capital in Bourdieu's theory of reproduction, this study, an empirical study was conducted by putting together a study concept of "economic strata of fathers (occupations) → fathers' parenting behaviors → accomplishment of children's education" by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shanxi Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the "father's occupation" on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu's theory of reproduction can be applicable to society in China, with a significant influence from fathers' parenting behaviors on self-esteem and academic performance of children. First of all, all parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher reliance on school education than home education. On the other hand, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar
the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.

Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also the result of the secularization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Gender, Law and Legal Professions in China

Based on surveys, interviews, and archival research, this paper attempts to analyze Chinese women's current status and impact in the legal professions. This paper introduces and compares the Chinese pioneer women lawyers and some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict. In the past, being educated and working as lawyers had a stigma, which some current model women judges have demonstrated that this is not necessarily the case.

Local Institutions and Historical Contingency: Divergent Paths in East Asia

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in the local state's evolution for decades to come.

Local Institutions and Historical Contingency: Divergent Paths in Local Economic

Cultural Stigma and Social Exclusion for Adolescent with Mental Illness: A Case Study in Guangzhou, China

Due to the prevailing stigma towards people with mental illness, adolescents with mental health problems are facing overwhelming social exclusion in mainland China. In order to respond to the lack of studies on the social exclusion for young adolescents with mental illness in Chinese context, this study tried to explore the process of seeking medical service and daily struggles for teenagers with mental health problems in China. A case study has been conducted to understand the social exclusion for a middle school student in her school life. The data was collected from researcher's one-year placement as a social worker in a junior middle school in Guangzhou, China. The girl, her classmates, her parents, and her teachers were targeted interviewees. According to the research findings, the cultural construction of mentally disabled people as violent and demonical from social media and Chinese traditional belief has profoundly affected the adolescent's mental well-being. The research also identified a dilemma faced by young people with mental health problems. On one hand, they are entitled to the social welfare; on the other hand, the labeling effect in social welfare provision and legal responsibility for school to take care of students' safety in Chinese social context result in an unfriendly environment for the young people in school, as being rejected by school and teachers once diagnosed. Chinese cultural value that emphasized family to take care of is member also leaves the family with great anxiety. A new model for mental health in China may need to allow for the social workers - teachers - families – peers' for social work intervention, which seeks to promote community understanding on adolescents with mental illness, reduce the labeling consequences of 'stigma', and initiate a more positive social support environment for young patients' rehabilitation was advocated.

Gentrification during the Redevelopment of Urban Villages in Shenzhen, China

Developing countries have witnessed unprecedented rapid urbanization process, whereas we are worried to see that most of the urbanization happened in the form of urban sprawl. It is the situation in most fast growing cities that on the one hand, urban land is expanding into rural areas without control; on the other hand, many distressed inner urban sites are left unused. During the new stage of urbanization, massive urban expansion is no longer encouraged, replaced by more sustainable and intensive utilization of urban land. Nowadays large scales of urban redevelopment have been taking place in China. Among which the redevelopment of urban villages has received substantial attention. Urban village is a unique phenomenon due to China's dual land system and residence registration system. Within urban areas, urban villages have unique social functions by providing low-rent housing for large amounts of low-income rural migrants. Under the risk of losing low-rent houses, the redeveloping activity will affect these migrants significantly. Right now in China, Shenzhen has become a leader among all the cities in the field of urban renewal, of which an important part is the renewal of urban villages. Owing to rapid urbanization on one hand and limited land resources on the other, Shenzhen has encountered unprecedented development bottleneck. Taking Shenzhen as a study area, this article investigates the gentrification process during the redevelopment of urban villages. The mechanism of gentrification, as well as the cause and effect of gentrification are analyzed based on typical case studies.

Social Capital, Resilience and Self-Efficacy in Promoting Psychosocial Development Among Senior Middle School Students in Zhongshan, China

Although social capital theory has been widely applied in western countries to investigate positive factors to children and youth's development outcomes, little attempt has been made to test the applicability of social capital theory to adolescents in mainland China, especially for those who are after the compulsory education in medium-sized cities. This research aims at understanding whether and how social capital from the family, school, peer, and community contexts relate to the presentation author. Abstracts are organized by first presenting author's last name.
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students’ interaction to school and teachers display significantly positive relation with adolescents’ mental health, behavior adjustment, clear and positive identity, but not with students’ social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students’ behavioral adjustment. Students with more encouragement and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students’ development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

**Educational Expansion of the Upper Secondary Schools in Taiwan**

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government has promised the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP. Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze the backgrounds and major factors of developments of those two structural issues through the literature and field study. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

**The Development of Inter-Firm Trust: Cases from the Animation Game Industry**

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more inter-organization and inter-firm collaboration takes place. Such topics as “how to select a trust-worthy partner”, “how to continuously maintain good relationships with collaborators” are of great value for both academic studies and business practice. This paper explores the inter-firm trust issues in business collaboration. It creates a trust development process model together with an evaluation system. From literature review, the questions of “how inter-firm trust is developed”, and “what the constructing components of trust are” need further investigation. With a theory building approach, a conceptual framework consisting of the dominating concepts – values of trust, and process of trust – are developed. Case studies into animation game industry in China, UK, USA and Japan are carried out to illustrate key issues of inter-firm trust, covering the crucial relationship between OEMS and outsource studios/operators/character manufacturers. Prioritized values are summarized from the interviews and observations, which are further developed into trust dimensions. The main findings are: 16 dimensions to assess three basic inter-firm trust dimensions to assess three basic trust areas – trust formation, trust types of trust – competence trust, reliability trust and goodwill trust; a 3-stage pro into trust dimensions. The main findings are: 16 dimensions to assess three basic trust dimensions. The main findings are: 16 dimensions to assess three basic trust dimensions.

**Disability and the Limits of Knowledge. Uncertainties of Expert Practices in Insurance Companies**

Disability is one of the most significant insurable risks in human life. Insur- ing disability, either statutorily or voluntarily, is not an easy task for insurance companies. Ability to work is more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entangled with each other. Experts of these institutions try to prevent disability, define it and con- struct the possibilities and resources in distinct ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before. This paper studies expert practices of disability insurance and rehabilita- tion in Finland. The focus is on finitistic disability insurance system. The main question is: how do different experts and institutions interact as they make deci- sions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabili- tation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phe- nomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

**Conflicts Between Artisanal Miners and the Government in Mongolia**

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Move- ment of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of “Gold Program” in 1994. As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate without any legal coordination and official registration for the last decade. The Government made an effort on dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the tow sides. Remarkably, not a comprehensive survey was conducted on this newly generated community in Mongolian society.

Accordingly, a research was carried out for determining forms and conse- quences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operation.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

**Leisure in an Unequal World: Gender Differences in Australia**

Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Develop- ment of gender equality in leisure has occurred through research studies; mea- surement of leisure engagement; and the diversity of recreation offerings and provisions. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contempo- rary eras.
Temporality of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the "Wild" Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while Indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, Aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, Aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and or/political self-determination often meet active state resistance.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach (‘Accelerated Experience-based Co-design’ or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients’ eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timeline from 12 to 6 months and halved costs.

Evaluation: An ethnographic process evaluation was conducted, including observations, interviews, questionnaires, and cost and documentary analysis (including comparison with previous EBCD evaluations).

Results: A total of 96 staff members and 63 patients participated in the four AEBCD projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improvements were similar to those in traditional EBCD projects. But the element of the intervention that has left both staff and patients feeling energised and empowered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBCD can reconnect staff with fundamental values of care and compassion. Patients, too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare providers. They also report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare providers.

Cyberspace: A New “Fieldwork” Experience For Sociologists

While cyberspace clearly is a new research field, scholars are just starting to study how to grasp the full meaning of social relations in cyberspace. This question puzzles numerous disciplines of social sciences. Traditionally, the explanation of the process of research means that researchers have to go back and forth between the theoretical perspective and the empirical reality. They essentially start from one of these two starting points to get towards the other. But how to do that in the digital world? This space shares characteristics of both theoretical and empirical worlds, but nevertheless, differs greatly from both. The paper proposes an ethic of research inherent to it. We therefore believe it is possible to say that cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a shortcoming found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a shortcoming found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a shortcoming found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research.
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutical tools are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of naïve or “crude” exegesis, combined with an aversion to theological conservatism. The underlying assumption is that biblical texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constructing the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by a constructed religious identity. The issues addressed, almost exclusively socio-political, of moral and spiritual capital, are presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

Embodying Another Self for Western Shamanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical wellbeing care the two basic components through which the argumentation about health is built up in contemporary Western world. Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and conjugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques. In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by Western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs. It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self. It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

Organizational Change and Performance in a Global Entrepreneurial Economy

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a socio-political, from a position of moral high ground, presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. Pharmaceuticalisation and Performance Consumption: Differences Between Young Workers and University Students

In the current modernity, the management of personal capabilities gave rise to a broad market and a booming performance industry. Medications play an increasing role in this offering, focusing mainly on cognitive/mental and body performances. In this context, young workers and university students have been exposed to new ways of thinking about the self, including the role of performance-enhancing drugs in their daily lives.
Socioética y Antropoética Profesional Para Una Educación Universitaria Contra La Desigualdad

La modernidad que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para transformar la realidad. La ética como mediador del ser humano fue excluida en el discurso de la ciencia y sus aplicaciones tecnológicas. En el cual, la ética como una disciplina que se ocupa de la reflexión y promoción del deseo estructural del ser humano por vivir para vivir, se eliminó.

A partir del principio fundamental de "exclusión de la exclusión" que sustenta la socioética y la antropoética que conforman la ética planetaria que propone Edgar Morin, existe una necesidad de revaloración de la ética como una disciplina que se ocupa de la reflexión y promoción del deseo estructural del ser humano por vivir para vivir (Morin, 2005).

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la imposibilidad de que una sociedad sustentada en el racionalismo elimina las desigualdades sociales que se han profundizado, produciendo la desigualdad y la injusticia en sus ámbitos de vida. Una de las necesidades morales de los educandos son preocupantes, si tomamos en cuenta el desinterés de la formación universitaria como medio para transformar la realidad.

La educación universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, la que produciría profesionales que en su práctica promoverían la sociedad igualitaria.

La formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain

Para el pasado decenio, el management y promoción de circular migration flow ha sido un elemento cuestionado por los migrant workers que laboran en sectores como la agricultura. La circular migration es un modelo de movimiento laboral que permite a los trabajadores reemplazar los puestos vacantes en su país de origen en un periodo de tiempo limitado. Sin embargo, esta forma de migración comporta ciertos desafíos, como la falta de plena integración social y económica de los migrantes en sus países de destino.

En este contexto, es necesario analizar los diferentes modelos de circular migration y entender su impacto en la economía y sociedad de los países que los acogen. La circular migration puede ser una estrategia eficaz para garantizar el equilibrio entre el empleo y la demanda de trabajadores, pero también puede generar desafíos para los trabajadores y sus familias.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to "inequality" level. The question that arises is how to generate a composite indicator, that we call "social distance", based in a multidimensional measure taking into account the principal factors components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will present the results based on the analysis of the Labor Force Survey of Argentina in 2012.
Cette communication se propose de présenter cette excesus de glissement socialisateur (Lorentz, 2013) en cours lors de cette activité. en associant ceux de Mihaly Csikszentmihaly (1996) et des chercheurs des Game à Strasbourg, Moscou et Abou Dhabi ont été interrogés. Puis dans un second cents collégiens âgés de 12 à 16 ans scolarisés dans des établissements français d’un succès sans précèdent (Sihvonen, 2006; Wirman, 2011). Ainsi près de deux vidéo le plus vendu au monde et ce depuis la sortie du premier opus en 2000. Son a plus particulièrement attiré notre attention. (Octobre, 2009; Donnat, 2009; Lorentz, 2012) mais ils ont peu à peu conquis les dans nos écoles, sur nos téléphones (IFSE, 2012; ESA, 2012; Brand, 2013). Long since the 1970’s, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWPs during the economic boom in the 2000’s. In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c), actors and multilevel governance. The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances. Aujourd’hui les jeux vidéo sont partout dans notre quotidien, sur nos écrans, dans nos écoles, sur nos téléphones (IFSE, 2012; ESA, 2012; Brand, 2013). Longtemps renommés en cause par les médias, leur légitimation a été longue et chaotique (Octobre, 2009; Donnat, 2009; Lorentz, 2012) mais ils ont peu à peu conquis les sphères institutionnelles. Parmi la grande diversité de l’offre vidéo-ludique, un jeu a plus particulièrement attiré notre attention. Les Sims® (EA, 2000-2009) est le jeu vidéo qui a le plus vendu au monde et ce depuis la sortie du premier opus en 2000. Son principe est pourtant simple: simuler la vie d’un foyer. Paraadoxiquement, très peu de recherches ont été menées sur cette « Digital dollhouse » hors ligne en dépit d’un succès sans précédent (Sihvonen, 2006; Wirman, 2011). Ainsi près de deux cents collèges âgés de 12 à 16 ans scolarisés dans des établissements français à Strasbourg, Moscou et Abou Dhabi ont été interrogés. Puis dans un second temps, vingt entretiens collectifs ont été menés dans les trois établissements afin d’approfondir et d’affiner les résultats mis à jour lors de l’étude quantitative. En partant des concepts développés par les sociologues de Chicago (Cool-ey, 2011a, 2011b; Mead, 1896, 1963, 2001; Goffman, 1959, 1967; Becker, 1970) et en association avec ceux de Mihaly Csikszentmihaly (1996) et des chercheurs des Game Studies (Kleijer, 2006 ; Bogost, 2008 ; Lankoski, 2010), nous avons dessiné l’odys- sée virtuelle que les adolescents ont relatée et qui nous permet d’expliquer le pro- cessus de glissement socialisateur (Lorentz, 2013) en cours lors de cette activité. Ce voyage à travers une multitude d’identités ponctuée par différents escales amènent les joueurs à vivre une traversée identitaire (Bartle, 2004; Turkle, 2005) qui participe à leur croissance grâce aux apports des activités de prise de rôle (Turner & Killian, 1972). Cette communication se propose de présenter cette exp- loration.
regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regular employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any potential gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general “adaptation problem” referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current "post-Civil Rights era." I begin with an overview of what I call the "civil rights mode" of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a "civil liberties mode," a race-neutral or "color-blind" strategy that has recently gained favor in advocacy circles. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining "primitive" homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequenced repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represented and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archived the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of social and moral marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noise acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociability in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the "spatial turn" in the social sciences, relational definitions of space have prevailed, yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relations between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of ageism. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with replication based on lineage, cohort and chronological age. It also demonstrates a critical psychodynamic understanding of social relations in so far as a preconscious ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.
Dimensions of Exclusion in the Lived Experiences of Adult Survivors of Childhood Liver Transplant: A Micro-Analytic Perspective

The first paediatric liver transplants were performed in the early 1980s and continue today, saving thousands of children's lives. Underlying syndromes, the transplant surgery, comorbidities and side effects of medication leave young people looking and feeling 'different' from their peers, especially in childhood. Through analysis of in-depth interviews with 27 now-adult survivors of the first cohort of childhood liver transplant recipients in Europe, we take a micro-analytic perspective in reporting how the process of feared, felt, and enacted exclusion began in early childhood for this group. Exclusion through liver transplant is an additional intersectional dimension to more recognized societal exclusions such as age or gender, and appears to be fluid throughout the lifecourse. Adapting Goffman's work on stigma and presentation of the self, we see that problems of exclusion are only slowly resolved in a number of social role interactions, whereas others appear to feel free to comment on the appearance of individuals' bodies. For example, felt exclusion of schoolchildren often occurred through physical education, where the transplant scar could be observed unless the child learnt to hide their body in communal changing spaces. Learning how to present oneself to others continues throughout the lifecourse. Narrative restarts, such as changing school or employment, appear a common way to 'pass' by losing the identity of a liver transplant recipient. However, this strategy is fragile, being contingent on the medical history not being uncovered. Positively revealing oneself as a liver transplant recipient was reported to result in inclusionary processes, more as an adult rather than a child. For most, a sense of inclusion appears to be reached by this 'new' ageing population only through growing older: the understanding that everybody has 'differences' and that being 'normal' is something not clearly defined for self or others.

Growing up with a Childhood Liver Transplant: Medical 'Pioneers' and Beck's Normativity of Diversity

The concept of a stable biographical narrative and its potential undermining by long term health conditions is one that underpins much medical sociology. This is particularly true of chronic illness rather than acute conditions constituting forms of biographical disruption. More recently, the influence of approaches derived from theories of reflexive modernity have started to challenge the salience of the modernist or standardised life course, introducing notions of indeterminacy and contingency into how individuals construct individualized narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the 'side effects' of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a 'normativity of diversity' which has replaced the more simple normativity of previous societies. This is not only witnessed in terms of the makeup of household structures, sexuality, marriage and employment but also extends to notions of disability and human embodiment.

This presentation will look at how social theory can help us understand the situation of the cohort of adults who were the first European recipients of liver transplants as children. The first childhood liver transplants took place in the early 1980s and this group has had to act as a 'pioneer' cohort all through their lives, dealing with the risks of transplant surgery, underlying syndromes, comorbidities and side-effects of medication as previously unencountered phenomena. Through analysis of in-depth interviews with 27 now-adult survivors of this cohort, we report how both biographical narrative is constructed in the face of ever present risk and how these 'pioneers' represent aspects of the normativity of diversity.

Evaluating Government's Environmental Performance: Evidence from China

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government's environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government's environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents argue that their government has done too little; while 6.17% of the respondents think that their central government has done too much. (2) Environmental performance of local government is worse than central government or local government become even worse in 2010 than in 2003 CGSS data. (3) As for central government's environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban respondents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government's performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government's environmental performance. These results suggest that government's environmental performance in China today are a mixed system, in which objective environmental problems and residents' subject perception and social characteristics coexist to determine how the Chinese evaluate their government's environmental performance.

The Reproduction of Intangible Heritage Successors in Heritage Tourism

With the development of heritage tourism, intangible heritage became a kind of tourism attraction, which holds a fascination for the tourists all over the world who try to touch the landscape, human heritage, and customs of other places. In this process, intangible heritage successors became attractions, for there can be good guides for the tourists. They can tell the legend, the origin, the meaning of the intangible heritage and they can also show some skill about the intangible for the tourists. What's more, they can get some financial support from the government because they have the duty to pass the skill on. Gradually, the way of selection of the successors, the explanation of the intangible heritage and the inheritance of the intangible heritage are changing. For they will inherit the heritage within the ethnic group, they will deal with all kinds of relations outside the group, and then another kind of reproduction within themselves can be seen. In this article, the writer will discuss the reproduction of the modern science but that this is not the whole story. The Formation and Change of Taiwanese Young Adults' Attitudes Toward Gender-Rule: From Adolescence to Adulthood

This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants' willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, para-data on time and changes of answers were collected. The results and experiences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents' performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of high relative for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes as consist with socialization perspective. The study also suggests that the parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that occur along the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literatures conceptualized women’s transition through stratification in family businesses, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneur and patriarch. The market uncertainty and the firms’ adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneurs’ entrepreneurial capability, the nature of their specific industry, and family relationships. Wives’ adaptive entrepreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a strong patriarchal culture, particularly those in an extended family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions.

The observations further reveal that wives’ entrepreneurial identity is shaped by the power of patriarchal culture, particularly those in an extended family environment, which can increase their self-empowerment and improve women’s agency. However, lack of opportunity to cultivate their entrepreneurship assert their gendered identity and reinforces marginality.

Communication As A Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. The usual contributions of social networks to the organization at the internal level are not clear enough because it is considered that the commercial issues tend to prevail. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization?

In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a “brand new” type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others’ sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen as the particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research and safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers).

Length of time of researcher’s immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research and safety in both the given nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers).

The Beauty Of Advertisements. Searching For Ultimate and Proximate Causes In Cross-Cultural Study

The presentation summarizes the results of empirical research conducted simultaneously in Poland and in the United States in 2013. The main research questions were related to taste for some aesthetic forms used by the advertisers. 240 subjects from both countries filled out a questionnaire concerning 45 different images. All images were chosen on the basis of a content analysis of five Polish color magazines addressed to various audiences.

Theoretical underpinnings of the presented study stem from the works of Pierre Bourdieu, but they are not limited to this perspective. The other important perspective is evolutionary theory informed by modern biology. Thus, presentation focuses on both proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste.

The main research hypothesis states that individuals with folk cultural capital (inhabitants of rural areas with low educational level, and low income) exhibit different preferences described by sociologists as “low” (i.e. visual expressions drawing on the so-called “Hudson River Biedermeier” style characterized by realistic and emotionally marked landscapes). Such preferences resemble to a large extent the “universal aesthetic predispositions” discussed in the evolutionary theory. These preferences can be also referred to as ‘conservative’ (or ‘collectivist’). However, according to evolutionary theory, these preferences should be found across all social strata. Contrary to this belief, building on Pierre Bourdieu’s class-based understanding of taste diversification, I presume that a natural aesthetic taste is related to folk-type of cultural capital. In other words, my intention is to verify whether the aesthetic universals as described by evolutionists and cognitivists are subject to diversification based on cultural capital.

Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Bamako with more than 30,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment. Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academics cope with a situation characterized by uncertainty and unpredictability? Achieving individual life goals demands decision-making processes characterized by the evaluation and revaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, facing these constraints, some individuals employ strategies to break the social and spatial segregation by using information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

Power without Representation: The Coherence and Closenesses of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain these claims, they must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that arise from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we represent the membership of the NAS in North America’s transnational arena. Second, we focus on the agendas of the NAS’ annual regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily successful in expressing the views and interests of a powerful elite, it fails to articulate the diversity of North America’s public opinion. Ironically, a network that promotes the use of “soft power” in the international arena—a power founded on opinion, rather than on force and material interests— heavily depends on the hard power of established hierarchies.

LUND, REBECCA* (Aalto University, rebecca.lund@aalto.fi)
The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explored the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the presentation; and as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

Social Science and Alienation In School

School can in many ways be seen as a place distant from life in general: in classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seem to put their real life on hold. Social science class ought to be one occasion where life in school became more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society, through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

LUNDBY, ERIKA* (Linnéa University, Erika.Lundby@linu.se)
Young Consumers In Sweden

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particular importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed has gradually changed, from being viewed as the ‘other’, being shaped towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceive possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children’s social relationships. If children perceive peer pressure of having “cool” things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

Survelliance often sparks responses relating to “privacy.” The era of state survelliance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for survellance are far-reaching—from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate survellance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale survellance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, experience economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the revolution and the new governmental regimes at the work place. The results show that change is undisputable but unequally distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

**Transformation – Reality or Simulacrum?**

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post Transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

**Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context**

The paper is aimed at examination of the difference of nature and characteristics of alienation and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

**Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy**

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unequally distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies of emerging on the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Why Should I Know? the Reluctance of Absorbing and Sharing ERP Knowledge

In an ERP (Enterprise Resource Planning) system, all necessary business functions, such as financial, manufacturing, human resources, and distribution, are tightly integrated into a single information system with a shared database. Such a system potentially allows firms to manage their integrated business processes and associated knowledge, and to have more control of information and data in the organization. However, ERP systems are very knowledge intensive and require high levels of knowledge absorption and knowledge sharing between organizational members in order to be used successfully.

In the military organization we study, ERP systems are aimed at improving supportive, secondary processes. This means that many military employees prioritize efforts related to the primary process of the military over actions connected to the ERP system. Still, top management mandates employees to use the ERP system and perform these secondary tasks, leading to tensions/user resistance including the reluctance to incorporate or share ERP knowledge. In turn, this lack of knowledge exchange can become dysfunctional since it prevents the use of IT that could benefit the organization.

We applied qualitative methods including 40 semi-structured interviews with ERP users and their managers in three separate business-units, who have been using the ERP for two years. In the study we assess why and how users of the ERP system become averse to the exchange of knowledge and how military organizations are able to overcome tensions between primary processes and ERP implementation/knowledge sharing as a secondary process. By combining theories about user resistance and informal/formal knowledge structures we grasp the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barry, 1986).

Cybercultur @ and Cultural Management For Development

México is a multicultural and mega-diverse country. With this richness and abundance in natural and cultural resources, Why Mexico is a country with a high index of poverty and low social development? How could we work in terms of community development? This paper focuses primarily on a proposal for the development of a thinking culture development as a large system formed by multiple sub-systems. We argue how Sociocybernetics let us understanding and explaining the culture as an ethno-ecosystem. In this proposal, Central System is the culture for development, and each sub-system is related and complemented with each other in building concrete procedures of observation and analysis units, as the elements of a larger system analyzed from a constructivist operational methodology. Specifically each subsystem may have different value and processing degree, and they are part of “culture for development” system. Each subsystem invites communities to making decisions and taking actions with a methodological model by the Sociocybernetics proposal and from a cybercultural perspective. Then, we explain how sociocybernetics allow us to construct a methodological proposal based on an Emerging Community of Local Knowledge system, CECL’s, in order to understand culture and development as an ethno-ecosystem; we explain how the ethno-ecological processes in a community are multidimensional and multi-relational processes. These processes permit the culture to appear as a fundamental component of a sustainable development.

MABUCHI, HITOSHI* (Osaka Jogakuin University, mabuchi@wilming.ac.jp)
Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what Intercultural Education Society in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barry, 1986).

Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle-class and its perception of the socioeconomic elite. The global emergence of the middle class is also similar to other contexts (González 2010, Kletti 2011, Franco et al. 2011, Dobbs et al. 2012, Ferreira et al. 2012, López & Ortiz 2012, Oliveira 2012, Chunling 2012) has created a renewed interest towards “new” middle classes in social globalization due to its rapid growth and the socio-political challenges that this poses. How do those who belong to the middle classes in emergent countries feel and think everyday about one of the more salient expressions of world inequalities, the socioeconomic elite – i.e. “the 1%”? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen – or not? Our team conducted a study using an experimental methodology based on games that replicate real exercises applied by social scientists through studies in different countries: “unknown persons” and “dictator” games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was located in three cities of different sizes in Chile. In each city, six simulation games were conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and grow meaning to middle classes, reproducing or challenging inequalities. The paper will present on topics that are relevant to stratification in the context of globalization, such as different discourses in middle classes, their feelings, perceptions of justice/injustice, discontent and critique towards the socioeconomic elite.

MACAMO, ELÍSIO* (University of Basel, elisio.macamo@unibas.ch)
Science and Technology Studies, Africa and the Long Shadow of Unspoken Assumptions

Science and technology studies have injected new blood into social theory over the past 20 years. Their assumption that the workings of science and technology are a good guide into the constitution of (modern) society has played a central role in sharpening sociological thinking over the notion of modernity and its analytical relevance in research. A paradox underlies the importance of science and technology studies: on the one hand, they seem to negate a very specific type of society, namely highly technological modern society. This would seem to rule out the possibility that STS might have anything to say about societies which do not fit this description. On the other hand, however, and because STS produces social theory, i.e. a vocabulary designed to make the social world intelligible, it can lay claim to the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a ‘ceteris paribus assumption’ - legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

Is the Concept of Patriarchy Useful to Comparing the Gender Relations through the World?

Is the concept of patriarchy useful to understanding and comparing the gender relations throughout history and the world? To answer this question affirmatively we must accept that patriarchy not as a system of main determinants that characterizes itself upon all human societies but instead, by adapting Erving Goffman’s concept, as a specific form of “gender arrangement”. From this standpoint two things can be shown. First, that gender arrangements such as those that exist within the European Union are not patriarchal arrangements but post-patriarchal: they are the result of the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a ‘ceteris paribus assumption’ - legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security, climate change adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity - may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, salinity and erosion. Smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women’s role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent...

The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – if at all. Solving this puzzle requires understanding of the trajectories of state movement interaction from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crises in each period defined or adopted the democratization claims of the syndicalists reveals the key differences of state movement interaction to be conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation. Existing social movement theories of democratic movements have been too both enriched and reconfigured to provide a long-term perspective. In addition, this study reveals how the movement's rights claims to economic democracy (both inside and outside the workplace) un-of this long-term perspective. In addition, this study reveals how the movement's structures of dependency and exploitation. Existing social movement theories of forward much narrower sets of rights claims. Studying the manner in which crisis of the Eurozone. The focus is on examining how syndicalist-state structures divergent functions despite similar institutional forms. Some work-coped or adopted the democratization of economic rights; the crucial test of such rights in periods of crisis becomes the degree to which workers and carriers have democratic input on policy and thus avoid “cost shifting.”

MACHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)

Uneven Development, Austerity and Worker Organization Response in the Eurocrisis

The response of labor federations and left parties to the Eurozone crisis has provided a stark demonstration of the ways in which these organizations can perform widely different roles depending on the democratic input at the union and institutional levels. Some workers organizations have become willing participants in the imposition of austerity, while others have sought to modify or protect their interests via formal political channels. Yet others, most especially the Communist and social democratic federations, have continued to resist the tendencies towards both the rhetoric and implementation of labor oppression and labor control via austerity. Moreover, some organizations have forged links with other federations such as the indignados via the use of unorthodox tactics and democratic organizational methods. Traditional social movement analysis might look to the ideological or organizational aspects of the organizations themselves, and the more recent political opportunity structure and political mediation approaches would seek to explain these outcomes by laying out the local state context in which they contended. In reality, neither of these approaches can explain how labor oppression and mobilization are affected by the international organizations across the continent. Instead, formal comparative methods such as QCA and ESA can be used within an incorporating comparative method in order to address these outcomes from a world-historical perspective. Only an analysis carried forward on multiple temporal and spatial scales can properly situate the worker organizations of Europe and the crisis itself within the history of the world-economy. The results of long-term processes of capitalist development such as the Eurozone’s neomercantilist core-periphery structure and the global financialization of late US hegemony can be related to, and thus become essential to understanding, how worker organizations come to aid or resist capitalist attempts at crisis management.

MACHERSON, ROBERT* (University of California Irvine, rmacpher@uci.edu)

The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, Legal consciousness of Japanese, in 1967, theories of legal consciousness and legal culture have kept the issues of scholarly controversies in various fields of socio-cultural studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints for socio-cultural studies on globalization and local adaptation. I would argue that theories of legal consciousness and legal culture serve for studies on globalized law and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal adaptation to globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, they would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories. I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-cultural studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-cultural studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organizational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulatory environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using material from our five-year research project focusing on sense-making processes at sector and organizational level, we can show not only that there is a new discourse related to the labour-related issues but also how this discourse is reflected by evolving employment policies. Overall, ‘market accountability’ puts long-established regulatory concepts under strain. However, the ‘sense-making’ differs between different
regulators and those who have to implement regulations. This suggests that the rationale of hospital employment is changing bottom-up, often against what reg-
ulators conceive as an adequate design for hospital work.

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegat-
ed to women to sustain its members. Such model had strong influences on women's lives. Bologna has one of the lowest fertility rates all over Europe and will be suffering in the next years from an increasingly higher old age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare system has been able to attract also women workers and has been the first to introduce childcare services in the 60s, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labour mar-
ket in Italy. However, the financial crisis and the consequent reduction of public funds have put in question the sustainability of Bologna's model in recent years.

In the present paper, we will show results from a series of 8 focus groups in-
volving 34 working women conducted in Bologna during 2013, which have been selected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the life-work bal-
ance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50s will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

Possibility of Area Management Organizations for “Bulwark” Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific pur-
purpose (such as area management, or historical and business management of his-
torical market), equipped with business specialist-staffs, and also it is governed by volunteer citizen board members. “Half private, half government”entity is run or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood’s core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown Internation-
al PDA (initiated “IDEA Space” project for assisting local small businesses, using “visioning”method). These trials are expected to be effective “bulwark” in diverting impacts of neoliberal developments. This presentation concretely gazes at the PDAs’ efforts and the like’s of area management organizations to keep local core of cultures, local “life economy” with concrete devices from the stand point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall by volunteer citizen board members.

Just for accessing the present big picture in terms of area management organ-
izations in neo-liberal trends in US, Japan etc, CDCG (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental ac-
tion in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishs an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persua-
asion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving differing degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the delib-
eration as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson’s paradox and, in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the con-
cept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.

Social Norms and Policy Influence on Family Formation in Sweden

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equality and low fertility in postindustrial societies. The theoretical framework is derived from the way in which family- and gender-role norms, institu-
tions, and economic context intertwine with the family formation intentions and behaviors of young adults. We focus on two sets of social norms (family- and gender-role norms) in influencing individuals’ intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the “normal” family, and the second dealing with the appropriate roles of men and women in the family and in the public sphere, especially the labor market. Our analytical model seeks to attribute equal explanatory power to men’s as well as women’s opportunities for engaging in positively viewed activities in the spheres of family and work. In our empirical analyses we rely on a mixed-methods ap-
proach. In this paper, we combine a quantitative analysis based on data extract-
ed from the Swedish Young Adult Panel Study on attitudes to work, family and gender roles and their possible impact on family formation (intentions) among Swedish young adults in the first decade of the 21st century, with a qualitative analysis of focus group and in-depth interviews (N=80), carried out with women and men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings for the qualitative part indicate that young adults view Swedish family policies as good even when having little first-hand knowledge of them. We discuss similarities and differences across gender and family status, as well as the implications of our findings for research and for policy design.

Development, Modernity and Nanotechnology: The Challenges Of a Time

This paper aims to raise some thoughts on the present time and the relation-
ship between modernity, environment and development, starting from some questions: if we continue to follow the current economic model, of neverending development and capital expansion, what awaits for us? Is there a future? Will the human species take part in it? How to divert the course of this rudderless ship guided by a commandant called Progress? In search of clues that point to the possible answers, we walk at some tracks left in late 1960s and early 1970s, by Josué de Castro, on the changes that had already been felt in his time and the threat that hovered in the world due to environment imbalances arising from the development model based in the expansionary logic of capital, the rampant belief in science and technology, then to reflect on the reality of our time and the progress and achievements in the field of science and technology, and the chal-
lenge we face against the advance of new technologies - and this is the case of nanotechnology. Nanotechnology is a technology that can have and already has numerous applications. It’s, in the point of view of the market, a safe investment for the future. In this sense, we must discuss the ethical and legal issues that should regulate the use of nanotechnology. There is no certainty about the pos-
sible impacts that the use of nanotechnology may have, regarding the health of people and the environment. This paper is the result of the research “Nanotech-
ology applied to food and biofuels: recognizing the essential elements for the development of indicators of risk and regulatory frameworks that protect health and the environment” (898/2009), funded by CAPES, a government agency linked to the Brazilian Ministry of Education.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psychological studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batters, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculation, and the role attributed to social discipline. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

MAHI, LARA* (Université Paris Ouest Nanterre, laramahi75@gmail.com)

*Sentencing : ‘health Determinants’ of Criminal Sanction*

Des travaux en sentencing ont mis en avant les inégalités face à la sanction pénale. Que l'on soit une femme ou un homme (Mary-Portas, 1996 ; Cardi, 2007), que l'on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l'on ait un travail ou non (Herpin, 1977), ou encore, que l'on ait un nom à conso- 

Viceroy léger ou non (Jobard, Névanen, 2007), on n'est pas égaux face à la sanction pénale.

En matière de santé, la question de l'impact de l'état de santé somatique des justiciables sur les jugements est systématiquement étudié au profit de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laberge et al., 1995 ; Cartuyvels et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l'existence de formes de sur-penalisation des maladies. Y a-t-il un lien entre l'état de santé des justiciables et la peine que l'on leur inflige ?

À partir d'une étude de 412 procès correctionnels au tribunal de grande instance de Paris, nous avons analysé statistiquement les liens entre l'état de santé du justiciable et la sévérité de sa condamnation.

Nos résultats font état d'un contrôle particulièrement coercitif, par l'institution judiciaire, des justiciables malades faisant part d'une absence d'engagement dans un processus de soin. Au cours d'un procès pénal, ces derniers sont sur-con- 

dannés à de la prison ferme et à de plus longues peines.

Au-delà de la chaine pénale, ces résultats nous invitent à repenser la définition que donne Parsons (1951) des rôles du malade et, plus largement, à interroger les formes du contrôle social qui pèse sur les malades.

MAHIEU, CHRISTIAN* (CNRS, christian.mahieu@wanadoo.fr)

*The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices*

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under which individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collectives of actors and social entrepreneurial communities. We should better know these collectives in order to differentiate their actors at the same times social activists and entrepreneurs. My second hypothesis is concerned with the roles devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and conditions of their malevolent to the social fabric of solidarity economic initiatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collectives and their acting and learning devices are developed at the very heart of co working
spaces and other “third places” described by Oldenburg but also through collaborative web sites and their acting platforms.

OLIVEIRA, SAULO BARBARA DE (Federal Rural University of Rio de Janeiro)

Urban Waste and Our Day-to-Day Chaos

There is litter on most streets of the more privileged neighborhoods of the city where there is cleaning services comparable to the first world; in the underprivileged neighborhoods, urban sanitation is on par with African or Indian quality levels: this is the reality of Rio de Janeiro and the majority of the 16 Brazilian cities with populations of over one million inhabitants. Rio de Janeiro is a city characterized by enormous inequality in income and in geographic distribution of the population, as well as in public services. Erratic urban expansion has made Rio de Janeiro one of the hallmarks of segregation and social degradation, which makes the populace’s standard of living a challenge to manage. Due to this inefficiency, most the city’s periphery has open sewage that runs in ditches, rivers, the sea and on the streets. The system of rainwater drainage does not undergo periodic maintenance where there is a system at all, causing frequent floods and public damage from heavy summer rains. Litter clogs drainage pipes and exacerbates flooding and the contamination of rivers and the sea. It is still possible to see the accumulation of garbage in outlying areas. In favelas, present throughout the entire city, the habitation conditions and urban infrastructure are precarious, and environmental degradation leaks out of control, thereby contaminating the sea and making it impossible to swim and go to the beach in many important parts of the city. Ocean pollution has exceeded the 1970s. The objective of this article is to present a diagnostic of the impact of urban waste on the city of Rio de Janeiro. The research was conducted using quantitative methods, as well as secondary data from official sources.

MAHMUD, HASAN* (University of Sociology, Los Angeles, hm77@ucla.edu)

Migrants Remittances and the Family

Abstract:
Contrary to the perception of the relationship between the individual and the family as a structure, this paper offers a conceptualization of this relationship as a process whereby individuals selectively identify with various available forms of family. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic act whereby they invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants’ relationships to their family in Bangladesh as central to their remitting practices. It recognizes multiple forms of family and community organizations to which the immigrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants’ emotional involvement and collective orientation, this study recognizes the mingling of the immigrants’ self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

Migrants Sending Money and the Family

Abstract:
To know why migrants send money to home, this paper introduces a new conceptualization of the relationship between the migrants and their families. It builds on 30 in-depth and unstructured interviews, complemented by ethnographic participations, with the Bangladeshi immigrants in Los Angeles. Conceiving migrants’ remitting as a socially motivated economic act whereby the migrants invest both financial and emotional resources to maintain and further develop social relationships, it recognizes migrants’ relationships to their family and origin community in Bangladesh as central to their remitting practices. Unlike the NELM approach’s assumption of economic rationality, or the cultural approach’s emphasis of cultural factors, this paper finds the immigrants’ relationships to the remittance-recipients as central in determining their remitting. It recognizes multiple forms of family and community organizations to which migrants simultaneously identify themselves. However, it finds this identification as a process whereby the immigrants choose to attach to certain forms among a range of culturally defined social aggregates, which causes their remitting to be selective. Emphasizing the immigrants’ emotional involvement and collective orientation, this study recognizes the mingling of the immigrants’ self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

MAHNE, KATHARINA* (German Centre of Gerontology, katharina.mahne@dza.de)

Contemporary Grandparenthood in Germany: A Perspective Of Social Inequality

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociology of ageing, the study aims to demonstrate the usefulness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualised in the form of unequal access to the grandparent role (e.g. the transition to grandparenthood). On the other hand, social inequality is conceptualised in the form of unequal outcomes connected to grandparenthood (e.g. levels of subjective well-being).

Based on data from the German Ageing Survey (DEAS) and applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced social support as a prospective grandparent does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grandchildren for grandparental subjective well-being are unequally distributed across educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued societal position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

MAHON, EVELYN* (Trinity College Dublin, emahon@tcd.ie)

Reconciling Work and Motherhood: Class and Access to Childcare in Dublin

The ‘motherhood penalty’ is invoked to explain the lower labour force participation of Irish women. Mothers with low educational levels were more likely to rely on their unemployed partner to provide childcare, or both parents worked part time. Grandparents or siblings also provided care. These constitute a mixture of reconfiguration strategies not easily replicated. Childcare policies in a neo-liberal society can considerably reduce equality of access to childcare places and offer an explanation for the education penalty. Overall participation rates are unlikely to rise unless this inequality is addressed.

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1974 in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ development programs. Although ROWITE was disbanded in 1998, its concerns were, in part, picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes

Annsofie Mahrs Träff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden.

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The part of my studies that will be presented have a phenomenographic approach was used to analyze semistructured interviews with elderly people living on residential homes and with staff. This took place in four residential homes in two municipalities in Sweden.

The interviews show that the older people often describe physical activity in on physical approach about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff do not really understand what physical activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

MAIA, JOÃO* (Fundação Getulio Vargas, joao.maia@fgv.br)

Global Arenas of Knowledge: Perspectives from the Brazilian Case

This paper aims to present the major guidelines of the project ‘Global Arenas of Knowledge’ and its first results. The project involves theoretical work to reframe the sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or in world-system terminology semi-periphery, but which are not part of the impoverished ‘third world’, and where knowledge institutions are well established: South Africa, Brazil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic work, interviews, documentary work and quantitative methods of citation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain. I discuss the following aspects of the proposed session: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)

Legislation and Its Discontents: Consequences of the Peruvian Household Workers Law

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the capital yet meanwhile Lima moves ever so forward by pushing costly modernization projects, developing its booming tourist industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital's growth and yet (arguably) further marginalized through labor regulation, which grants few benefits, offers no minimum wage, and lacks real enforcement in practice.

When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

RC32-554.5
MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)

When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes

Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom. This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Limaño society.

I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar ten years ago, though with negligible improvements in the lives of its household workers as the law offers no minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privy to capital's growth and yet (arguably) further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limaños.

My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limaño homes, with serious consequences for a future, more egalitarian, and ‘modern’ Peru and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

From Political Protest to Sectarian Violence: A Sunni-Shiite Split in Lebanon?

The year 2005 has been a turning point in the history of Lebanon. The assassination of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of people went to the streets to denounce the Syrian presence and the political corruption with which it is associated, as well as the sectarian divisions that have characterized the country since the end of the civil war in 1990. The international community and the Lebanese political elite responded to the political protests that followed the assassination of the former Prime Minister Rafic Hariri turned into sectarian violence that has been framed as “Sunni versus Shiites”. More precisely, I look at the shift in the political salience and representation of political, communal as well as national identities. I use the data of the largest protests that followed the assassination. When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
assassination was a "political earthquake" that shifted the attention of the Leba-
nese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of
the sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

**Australian Carers' Income Support Since 1983 – Changing Frames and Persistent Gender Inequality**

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to be
the main ‘carer’ in these circumstances. A dedicated income support payment for
some Australian carers has been available since the 1980s. Unlike many other forms
of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fio-
nella Williams’ analysis of the claiming and framing of European care policies (2010),
we argue that changes to Australian carers’ income support have developed with-in
competing frames of social justice and social investment. The social investment
frame, which prioritises paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of social support, such as unemployment benefits. In the context of
sole parents, however, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people for
whom they care.

**Middle Class Women’s Work and Childcare in Paris**

Today, France draws attention from neighbouring countries because of its high
birth rate. French women are also relatively active in their labour force participa-
tion. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to
the issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare is the registered childcare, the so-called
“Assistants maternels”, and not nurseries as in Sweden. The paper will put the
emphasis on this French registered childcare system.

According to a French national report on childcare, in 2011, 37 % of children
under three whose parents worked full time were left with registered childminders
who were approved by the local authorities and received children mainly
under three whose parents worked full time were left with registered childminders
for sole parents. However, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people for
whom they care.

Japan’s economy entered a long period of stagnation, known as the ‘Lost Two
Decade,’ after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
about self-consciousness and good moral culture of Japanese youth. But we can get another figure
of Japanese youth from the outcome of the research of Japan Youth Study Group,
conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
 selves, and feel senses of themselves. They are anything but fragile. By the way,
 our merit of comparison of three or more time point is that we can distinguish
between temporary trend and long-term trend. For example, the ratio of re-
 spondents of feeling sense of oneself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfi-
ciality have increased from 2002 to 2012. These means long-term trend of diver-
sification of the self. On the other hand, the ratio of loving oneself had increased
from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What
causes for these? We can consider two matters. First, the cultural-social change
underpinning long-term trend, for instance, the diffusion of mobile media and
social network service accelerating the diversification of the self. Also, we need
consider what happened in 2002 (about temporary trend). We try to explain
the structure of self-affirmation by comparing the determinant and related item
of self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

**A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia**

Why does the water resource problem in Bolivia remain despite the victory of
“Water War”? “Water War” in 2000 was an anti-privatization movement towards the public
water service and it changed the water law and forced a private company to with-
draw. The goal of the social activists who had played a main role in “Water War” was
to improve water resource accessibility. However, the success of “Water War” did
not solve the water resource problem in Bolivia. Does it mean that the other issue
was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the
water situation not mentioned. In order to investigate a real driving factor that
had caused the problem, analysis of the Water War should be revisited from dif-
ferent angle. A water shortage is classified into two factors: “Real scarcity” and
“Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of
volumetric quantities, incurred mainly from population growth, industrialization
and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the
exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards man-
ufactured scarcity, it prevented its focus from real scarcity, which is also pivotal
in order to solve the water resource problem. This study uses the original data
of fieldwork and local newspapers from three times of fieldwork by the author. I
will use discourse analyses to expose the process of why social activists chose to
focus on “Manufactured scarcity” in order to gain the civilian support. I present
the importance of recognizing the each characteristic of water scarcity to improve
the water resource problem. This research intends to provide a new framework
for equitable water distribution.

**Pathways Of Aging: Old Women’s Gendered Narratives and Cultural-Historical Locations**

**Pathways of Aging: Old Women’s gendered narratives and cultural-historical location**

Gendered ethnography has moved away from a focus on old age per se to the recog-
nition of old age as part of the life-course, and more importantly, as the result of a
lifetime’s experiences. In this paper I explore the themes that old Mexican women
themselves identified as important in shaping their pathways towards old age. I
do so by employing a thematic-narrative analysis of multiple in-depth interviews
with 41 women aged 60 to 89.

Throughout their life-course the women’s personal biographies, their current
social, cultural and economic locations have been informed by a range of struc-
tural factors, institutions and personal attitudes, choices and opportunities. My
interest is to stress the importance of structural and personal mechanisms that
underpin the socio-cultural construction of aging and old age; the relation be-
tween the objective reality and subjective experiences of aging. By making refer-
ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering ‘liberating’ narratives, become more evident in the experience of their daughters and granddaughters. The women’s – formal and informal – participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

The Complex Adaptive Systems Approach. a Sociocybernetic Reading
Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal character, its mainly methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia. We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that system and complexity are primarily attributes of an observer, an operation of “punctuation” in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an “invented reality” (von Foerster) and the system that simulates the real system would be doubly so. CAS-epistemic limits become more evident in its sociological models called “Artificial Societies”. The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, “self-referential” (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg
Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival,arend, and self-generated. The book is the result of documenting and gathering material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections. Bettina Malcomess and Dorothée Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, Not no Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on the city. As the authors explain in Fragments of Spaces and Times and captures what well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Mattering Difference Cervical Cancer, HPV Vaccines and Global Health
Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman’s disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the “developed” world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the “developing” world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia
Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even “normal”. The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military’s involvement in disaster management.

MALETZKY, MARTINA* (Ruhr University Bochum, martina.maletzky@rub.de)

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration-decision by the disaster victims is not only individually based – it is a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and the extent to which that in turn dictates rethinking governance rules and responsibilities in shrinking cities.

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. We have observed a long-simmering and internally varying uneven development within United States shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for both individual strategies and an environment of severe resource and policy constraints, and the extent to which that in turn dictates rethinking governance rules and responsibilities in shrinking cities.

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improve in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problem in raising questions of equity, sustainability, justice – distributed as well as cognitive. Further, productivity based on green revolution strategy has increased but the dependency on the powerful classes in the society.

Our findings are based on quantitative and qualitative data: the archive of the SU (630 entries) and in-death, longitudinal interviews of 50 members that started in 2008, during and after their mobilization in the « Union of the Youth ».
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflicts related to ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of the Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters. The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

MAMADA, ROBERT* (University of California, Irvine, himamada@hotmail.com)

A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement transfer to another area? When is the movement likely to emerge? The paper formulates, negotiates and institutionalizes. The emergence of the field has been the result of interactions among actors responding to numerous challenges initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

Social Housing in Sustainable City

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the participation of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, specifically borders of rivers and hillsides. The results of urban land regularization processes of social interest are unimpressive considering the researches on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46,000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregular, or because there are areas not surveyed in the census; inconsistencies in the definitions of program indicators, whose main focus is on the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook

The authors aimed to analyze the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey prove that their possible level of socio-ecological tension in this region of explosion even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conception of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of unified federal unified information system on nature protection;
- introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

Education-Inequality Trap: State Contributions to the Vicious Cycle

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always never fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to higher-earning sectors of the economy is limited by one's social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education — access to it and its outcomes — form a trap that leads to the reproduction of initial inequalities.

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities.

In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state's role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths through which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of "education for all." Viewing high inequality negatively as not only impedes growth but also restricts people's exercise of their freedoms, the paper also attempts to partake in the discourse of inequality and its relation to development.

MANCILLA, ROBERTO* (UC Berkeley School of Law, robi357@hotmail.com)

Paradigms Of The Social: Current Vis à Vis An Alternative

The idea of the "social" is the foundational paradigm of sociology, one which has been stated, understood and restated several times through its story. In the realm of Sociocybermatics Niklas Luhmann's social systems theory defines them as based on communication, with society being the most encompassing form. To this author human beings don't and can't communicate, only communication can do so, this means that society has to be described on the basis of events. Social systems are autopoeitic because they produce their own components and their growth can be explained on terms with second order cybernetics; unlike living systems, which are closed, social systems are cognitively open and operationally closed.

This posthuman theory of social systems has been widely discussed and some of its criticisms are that it ignores the law of requisite variety (as it only underestimates the reduction of complexity), empirical evidence that social systems are indeed open, and the fact that it does not comprehend human behavior in micro scale.

The purpose of my participation is to expound the merits of Luhmann's theory, to criticize it and to propose a new approach to social systems.

Strategies for Change: Immigrant Women Confronting Dekilling and De-Professionalization

This paper is based on empirical data from a research study[1] on the experience of highly educated Chinese and Indian immigrant women who were professionals in their home country. In particular, this paper aims to discover how the women utilize their agencies to mobilize a myriad local and transnational strategies to confront and change their situations in the context of neoliberal restructuring and the concomitant dekilling and de-professionalization of immigrant women in the new country.

The study found that despite their education, immigrant women professionals are routinely being deskilled, and are channeled into precarious positions which are low paid, part-time, flexible, with no security nor benefits. In order to survive in a racialized and gendered globalized labour market, some women lowered their employment expectations, and took on menial, precarious employment in the new country in order to gain “Canadian experience” and to make ends meet. Others tried to improve their situation through formal retraining processes by returning to college/university so as to gain formal Canadian education, knowledge and skill. Our research also found that the immigrant women were actively participating in transnational practices. For examples, some immigrant women who were unable to juggle their paid work and looking after young children, sent their children back to their home country to be cared for by extended family members so they could focus on their job search or engage in paid employment to make ends meet.

(1) The data for this paper is derived from the project “Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family” (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tania Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).
As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonmocical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contradictory hypotheses on occupational life course related with work uncertainties:

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education-work-retirement.
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to:

- Model individual trajectories of occupational status related with job uncertainties (identifying different typologies of risks).
- Assess the social conditioning of these trajectories, namely the influence of socio economic status, educational level, family structure and birth cohort.

Optimal Matching Analysis is applied to model time-related processes in order to identify labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existent labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existent labor trajectories typologies.

The results of the analysis suggest:

- The tripartition model exists but it is gendered and different for each cohort.
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: 1. Family and occupational constraints; 2. Social resources and; 3. Institutional performances in each country.
- These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.

The aim of this paper is to analyze, from a life course perspective, changes in certain transitions related to occupational mobility during labor trajectories of young men and women of three generations, in Mexico.

The analysis is based on the study of:

1. The first entry to the labor market and the number and duration of occupational transitions between 20 and 30 years old.
2. Mobility tables at the same ages between five specific occupational transitions:
   - Between “formal” and “informal” jobs.
   - Between salaried and non-salaried position at work.
   - Between manual and non-manual occupations.
   - Between full time and part time jobs.
   - Between jobs in industrial and service sector.
3. Discrete time regression models associated with these same transitions.

Through the analysis of mobility tables for each of these transitions and the study of the weights associated to their constraints, the objective is to test a hypothesis of social change related with the precariousness, outsourcing and de-salarization processes of work force at early ages in this country, coupled with increased “heterogeneous” labor trajectories in younger cohorts (where the “determinants” factors are more diffuse). Under this hypothesis, we admit that the processes of globalization and internationalization of the economy enable greater heterogeneity in certain occupational transitions and an increase in the diversity of youth work trajectories.

Role Of ICT In Mitigating Social Problems

In India children from poor families get enrolled in free government primary schools. However, due to poor quality of schooling majority of them drop out without completing primary education. To address this problem the present research explores the use of ICT to provide web based quality teaching by developing and also customising already available teaching materials in the internet. The project also aims at identifying potential teachers from among the aged who otherwise felt left behind from the modern advancements.

We have made trials in web based teaching making it very interactive, in a tribal boarding school for girls, with very positive results which is discussed in the paper. After few more trail runs we will arrange for regular supplementary teaching to different schools to improve the teaching quality and assess the learning outcomes and aim at replicating this model for wide impact.

Rethinking the Paradox of Welfare States and Gender Inequality

Although most comparative studies of welfare-states and gender inequality highlight the favorable effects of work-family policies on women, a growing number of studies, including my own, provide evidence of the unanticipated, and negative, consequences of work-family policies. The conclusion from these findings is that state interventions to reconcile paid and unpaid work, which are considered “mother-friendly,” have, paradoxically, negative consequences for the labor market attainments of working women.

In this work, my aim is to locate these findings within a wider context – not to close the loop on our own findings but to question the conclusions that arise from them. My arguments are twofold: First, I argue that the impact of work-family policies is conditioned by class. The negative implications of family-policies for women’s labor market attainments, found in previous studies, are, in fact, a consequence of their impact on highly skilled and highly educated women. Among low-skilled women, these effects not only diminish, but also reverse. Second, I argue that when the focus is shifted from a single aspect of gender inequality to multiple aspects that are analyzed simultaneously, the implications of work-family policies for gender inequality no longer appear paradoxical, for it becomes possible to see the inherent tradeoffs between the different aspects.

These arguments are examined using a wide range of country-level indicators, aggregated from the ISSP data, of 14 welfare states. The indicators encompass most aspects of women’s economic activities that have been investigated in comparative research. The indicators are divided into two groups: one that is relevant to advantaged women (e.g., women’s representation in managerial positions), and the other to disadvantaged women (e.g., poverty rates). The relationship between welfare-state policies and each group of indicators will be examined and discussed in light of the tradeoff between participation and occupational attainments, and the class divisions among women.

Role of ICT in Mitigating Social Problems
through the analysis of ca. 200 essays on the future, written by young boys and girls. The capacity to aspire has to be seen mainly as the ability to project into the future. In this presentation I try to explore the very complex “capacity to aspire” that is to say the set of cultural resources shaping the ability to change.

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia. From 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfullness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

What does it mean to have a habitus? How do we socialize the young generation to live in socially relevant narratives? These ideas are explored through ethnographic observations and from interviews that I conducted, I will study the sequencing of these rituals and the verbal and non-verbal performative practices that happen during these rituals, as well as the representations of the participants related to them. Thus, I will consider what social conditions allow for effective performance.

The social discourse on sustainable development not only focuses questions of intergenerational and global justice, but also increasingly questions of social ecological inequalities in industrialized countries (keyword: environmental justice). Within this framework, a society’s consumption of resources is associated with inequalities. When it comes to climate change, the focus is on questions of responsibilities and persons concerned, inevitably bringing up the issue of social inequalities and thus a central field of sociology. Likewise, when management tools towards sustainability are discussed, social inequalities are addressed (e.g. in carbon taxes, with environmental and sustainability research on consumption of resources and social inequalities is still at its beginning regarding both, theoretical conceptualisation and empirical research.

This contribution addresses the issue of the performance of contemporary French municipal rites of institution. I will start from the findings of my doctoral research in political science which is related to municipal rites of institution. In France, these are, like civil weddings and Mother’s Day, citizenship rights, which include naturalization ceremonies, coming of age ceremonies, conscription rituals; honor rights providing municipal or national medals; and work rites, which encompass welcome receptions and retirement ceremonies.

The price of fuel has been a heated issue for many years, and it has been a central topic in political discussions. The problem of fuel poverty is a significant concern in many countries, and it affects millions of people. In some cases, the situation is so severe that it can lead to serious health problems and even death. What can be done to mitigate the effects of fuel poverty and ensure that everyone has access to affordable energy?
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances in network sociology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wm264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements fell dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—; it is the second world producer of copper and zinc, and multinational corporations control 85% of the country’s mineral resources.

In this context, miners have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contentious bargaining and the labor conflicts. Using unique quantitative data of all the state’s interventions in the mining industry’s conflicts between 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries--; mining is the most important economic activity; and more than 70% of this industry’s workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted miners organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relation between labor practices, temporary work contracts. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers’ mobilizations produced divergent outcomes. In Chile, subcontracted workers organized their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers’ struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers’ organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

**Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt**

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in constructing and contrasting the Iranian Green Revolution of 2009 with the Egyptian Revolution that started in 2011 through the use of ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimating the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in that the latter occurred is characterized by the diffusion of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak's National Democratic Party (NDP) of Egypt was more closely characterized by Patronymic bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

**Patterns of ICTs Using and Information Flow: A Study of Rural India**

Patterns of ICTs Using and Information Flow: A Study of Rural India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain un reached by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not appear to include “all” (Chiumbu 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exist in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

**Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities**

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of these communities’ emigration span a considerable historical period. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have ideas of ethnicity or political loyalty, and national and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei in America? The Nikkei abroad bears the potential for rethinking the meaning of diaspora. As the Nikkei’s return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the tension of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

**Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn's Park Slope**

The transformation of New York City into a global corporate city and the consequences of effects on social firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups. Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lees et al., 2000) as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

**Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn**

Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘coolness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

Letting the concept of cool as a framework understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the way gentrification interconnects with the development of an individual habitus as a
spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae.

This exploratory paper describes the relationship between aesthetics, symbolic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed in terms of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York's wealthy and educated people. As I have observed, their street practices sometimes overlapped with working class people. The super-finders and sometimes do not. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are 'no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class' (Osman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

South Africa within Brics: Emerging Society and Sociological Discourse

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant influence on regional and global affairs. In 2010, South Africa was the last country joined the BRICS and currently holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa’s strategic position in Africa, facets of the social structure as well as critical processes act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to – in terms of social structure – critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues, for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/AIDS, etc.), as well as other issues related to sustainability will be touched on. Interwoven with the above-mentioned, the normative component of culture, namely values, norms and sanctions will also be part of the picture.

Closely linked to social structure, the following critical processes will in an integrative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, nationality, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to – from the South African perspective – analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

Can the Racialised Other ‘Belong’? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among skilled ‘black’ African migrants, we argue in this paper that experiences of racism and racial discrimination influence with accretions of ‘otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ ‘invited’ into Australia to fulfill an identified ‘need’ in the labour market co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

Social Innovation in the Housing Policy in Spain

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to analyse the impact of social movements on innovations in social housing policies, in public housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have opened a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation

Greece has turned in recent years into an immigration region. While immigration started in the early 1990s, it was only in the early 2000s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment. With regard to the integration problem of migrant women many studies indicate the need to include the role of women from social goods and welfare national system and the non-active participation in social and political life in the countries of residence are of paramount importance. Thus, access to welfare goods is associated with citizenship, while social security and health system use are key in the early 1990s international means to measure the degree of social integration of transnational migrants. At the same time, active political participation highlights the level of their integration.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrants in our country. based on the results of the above survey. More specifically we will analyze the access of migrant women to social-welfare services, investigating issues related to social security coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

Depuis la fin des années 1980, les syndicats dits ‘minoritaires’ (Jobin, 2006) ont émergé dans le contexte japonais où les syndicats d’entreprise sont dominants et recrutent parmi les employé-e-s ‘régulier-e-s’ (Kawanishi, Mouer, 2005). L’accompagnement des emplois atypiques au cours des années 1990 a ce-
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more "the condition of being transparent". It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is the global ICT system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors involved in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a "policies processing software" for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a "barcode" to reveal who proposed an action and how it was designed, implemented and evaluated.

Multigenerational, Demographic, and Spatial Aspects of Stratification and Mobility

This paper reviews three closely related developments in research on social stratification and mobility: (1) studies of a broader range of kin connections in the reproduction of social status; (2) studies of the interdependence of social mobility processes with the creation and dissolution of families and other social groups that are related to stratification; and (3) studies of the interdependence of socioeconomic and geographic mobility. The review will touch upon conceptual, empirical, and methodological issues involved with the study of multigenerational effects; the interdependence of stratification and demographic processes (including two-sex marriage markets, assortative mating, fertility, and mortality); and how geographic and spatial mobility contribute to socioeconomic and other forms of spatial segregation. The paper will use empirical examples from the author's own research on China, Sweden, and the United States, as well as related work by other researchers.

Against All Odds – First Generation Immigrants in Upper Secondary Education

The paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of "late arrived students" enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and foreign-born residents. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students. An initial survey study in Malmö, Sweden's third largest city, showed that a majority of late arrived students had entered the same upper secondary school. The additional material consists of interviews with school personnel as well as interviews with ten students at this school who arrived to Sweden between the ages of 16 and 18 years old. In this study, however, I am interested in those examples that are exceptions to the rule – first generation immigrant students who against all odds make it to the college preparatory track. The object of the paper is to investigate aspects that contribute to school achievement and success for this group of students.

Openness, Transparency and Traceability of Public Policies

The power of openness is seemingly obvious and simple, however, in political terms openness is more "the condition of being open". It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is the global ICT system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors involved in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a "policies processing software" for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a "barcode" to reveal who proposed an action and how it was designed, implemented and evaluated.

The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing is a profession, and operates with standardized practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers leading to the creation of image campaigns. Therefore, one’s perspective of how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are discussed in the local media. Lastly, the picture analysis displays what and how local peculiarities are condensed to a coherent image and what stays unaccounted.

Cities around the world try to attract almost the same audience. Within their image production they carefully observe other cities, which are perceived as role models and competitors. This paper presents a comparative in-depth analysis of the image production of Glasgow and Frankfurt, and shows how globally communicated ‘self-representations’ refer to the ‘cumulative texture’ (Suttles 1984) of the local urban culture.

MARIANO, DANICAR* (National University of Singapore, danicar.mariano@gmail.com)

The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs – one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also denies access to certain people, gays and lesbians, women over 40-45, singles, and women who cannot gestate. The BAC’s ban on donor payments reveal a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting “weaker classes” and “not importing Singapore’s fertility issues to other nations.”

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place. For instance, Singaporean fertility brokers and hospitals are lobbying to the government to revise some of the stricter regulations or else “lose out” to neighbouring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and most importantly, loose regulations and “bioavailable” citizens are their major selling point and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

Rethinking Environmental Movements In Developing Nations: The Case Of Cameroon

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the “mainstream” environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon’s ten regions. We conclude that the relative absence of large scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, has mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizens’ groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although they lack a mass support base, they enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important questions about how environmental movements are to be defined, which we explore in the conclusion.

The Problem of Opportunism in the Changing Conditions (A Case of the Relationships between Retailers and Suppliers in Contemporary Russia)

The rules of market exchange do not only distribute the value added [Gereffi, 1994] but also reduce uncertainty and control opportunism in business partners’ relationships [Kelly, 1991]. In Russia in the 2000s retailer-supplier contracts included different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for retailers’ services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners still have to reduce uncertainty and to control opportunism in their relationships even in the new conditions. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of unallowed requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other’s behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

MARKLUND, CARL* (Södertörn University, carl.marklund@sh.se)

Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy [Scharpf 1999]. Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunsson [2002] – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s concept “social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-

*Shaping the Things to Come: Concepts of Planning and European Modernity*

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaking of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis.

Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

*Foundational Political Myths in Divided Societies: The Case of Montenegro*

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial politicialogical investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explains their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of “constructive foundational mythology and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

*Post-Nationalism in Practice: European Citizens’ Initiative*

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

*When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies*

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incomparable) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservators to adopt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformations, seeking insights about ways to preserve the integrity of the work. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

*Environmental Trust: A Cross-National Study*

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains underspecified. This research examines environmental trust using the International Social Survey Program Environment data from 2000 to advance the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

**MARQUART-PYATT, SANDRA** (Michigan State University, marquart41@msu.edu)

*Pathways to Environmental Activism Across Time and Place*

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the theoretical foundations of the model while raising questions about the robustness of the model across the courses investigated. The model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.
MARQUES, ANA CRISTINA* (CIES, ISCTE-IUL, anacristica.hmarques@gmail.com)

Families’ Control and Youth Sexuality As Meaningful to Young Peoples’ Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered as a normal, pinnating event. However, some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young people’s trajectories, sexuality is often forgotten or, even insignificant to their transition into adulthood. Thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children’s play. Based on 60 in-depth interviews conducted in Central Portugal, with 60 white young adults, aged between 18 and 29 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead, aspects related with family control, as: pinnating, gender and gender can have implications on the ways (some) young people go from young to adults, especially in what concerns educational paths, leaving home, conjugality and parenthood. This happens especially in two main ways. First, the maintenance of some control concerning young women’s leisure time, sociability and sexuality can be associated with a smaller period of sexual experimentation for these young women and with some of them leaving home, entering into conjugality and/or parenthood earlier than the others. Second, the problem of “coming out” and/or assuming a non-heterosexual identity can be related with the need to lie, being (or being afraid of being) kicked out from home, the search for autonomy and the difficulty of becoming a parent.

MARQUES, ANA CRISTINA* (CIES, ISCTE-IUL, anacristica.hmarques@gmail.com)

“Is Heterosexuality That Bad? Questioning Some Presuppositions and Asking for a Sociological Analyses of Sexuality”

“Is heterosexuality all negative? Why is heterosexuality so dangerous or bad? Are heterosexual women all submissive, victims and passive subjects? Should people be ashamed of being heterosexual? These are some of the questions that come through my mind as I was working on my PhD dissertation and attending conferences about sexuality. Giving credit and importance to the work of feminist, as pioneering in the analysis of gender relations and sexualities, and as those who called attention for problems related with power in gender relations, male dominance and women submission, commodification of sexual female bodies, sexual double standards or sexual violence, and that brought the personal into the political agenda, I still felt that something was missing in those discourses. Notwithstanding, simultaneously I was reading the work of some social scientist that problematized “my concerns”: I felt more reassured. I have to say then that this presentation is also personal. But from a personal unease I wanted to insist on the sociological problematization of sexuality and gender, following the analytical tools given by authors like Gagnon and Simon, Weeks, Thorne, Connell, Richardson, Jackson or Bozon, as well as some other sociological authors like Archer, Mouzelis or Lahire, and using a critical realism perspective. The idea here is not to deny all the problems with living in a hetero-normative world, dominated by ideals of masculine supremacy, but to ask for a sociological approach into gender and sexuality, where categories, identities, norms and values are not taken for granted, but subjected to scrutiny, taking into consideration the multileveled and interconnected social world where they are constructed and enacted, and where individuals should be thought of as socially positioned, action as conditioned and categories critically analysed as relational and contextualized.

Returnees, Knowledge Spillovers and The Family’s Role In International Migration - The Case Of Brazilian Families Returned From Paraguay

The complexity of family arrangements that constitute the return migration of Brazilians from Paraguay can be identified as an important element in maintaining the circularity between the two countries and the consolidation of transnational space brasiliense. The return plays an important role in migrants’ direction and in the daily interpersonal relationships between migrants and non-migrants, either in Brazil or Paraguay, forming a web of friendship and solidarity that sustains this intense cross-border transit of people, goods and information. Thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and/or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. This paper describes the changes in volume and composition of family arrangements of Brazilian returnees from Paraguay in the five-year period 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. Information from the Brazilian Demographic Censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

H1: It is expected that in the period 2005/2010, there is greater diversification of family participation in the migration projected for Brazil, both of returnees, as well as international immigrants from Paraguay.

H2: Although a structural pattern persists, given the nature of family ties, we expect a change in the roles of families in the return to Brazil and in the entry of foreigners from Paraguay, given changes in economic and political contexts of the two countries.

MARQUES, JOANA SOARES* (University of São Paulo (USP), joana.marques@usp.br)

Social and Solidarity Economy As a Real Utopian Design: A Comparative Perspective

Social and solidarity economy (SSE) presents a collective project for another way of organizing the production and the society, in which the economy is subordinated to its social function. Thus, the paper discusses SSE as a real utopian proposal (Wright 2010): its institutional design is desirable in terms of egalitarian emancipatory ideals, such as privileging the collective ownership and control of economic resources and integrating solidarity in the core of economic activities as a means to achieve common goals; it constitutes a viable, and to some extent achievable, alternative to capitalist arrangements, since it has been partially implemented and is active on the political agenda worldwide; it contributes to a pathway of social empowerment, as it involves collective actors taking control of the economy over the capital or the state. However, SSE is also a complex field pervaded by tensions and conflicts. If, on the one hand, it embodies a normative vision for overcoming the hegemony of the dominant system, on the other, some experiences have become complementary or even functional to the capitalist world. The paper results from ongoing PhD research and its purpose is to critically examine SSE, in light of an empirical comparative analysis based on one case from the North (Portugal) and one case from the South (Brazil).

Out of Time: Uchronian and Dyschronian Devices in Social Theory

Social Theory has conceded an important place to utopias, and utopian thought, either as a device to envisage new and just worlds or to imagine dystopian counter examples. However, and despite some brave attempts by Max Weber, Durkheim or Talcott Parsons to integrate uchronia (imaginary times) in their theoretical frameworks, the use of Uchronian thought in Social Theory (CIES, ISCTE-IUL, RC06-121.18) has never seemed to enjoy the same attention as other utopian thought (CIES, ISCTE-IUL, RC07-136.1). Nevertheless, despite the limitations of recent contributions, Social and Solidarity Economy As a Real Utopian Design: A Comparative Perspective (CIES, ISCTE-IUL, RC16-280.5) is not the only one trying to integrate Uchronia (the realm of the nowhere in time) never seemed to enjoy the same attention as other utopian thought (CIES, ISCTE-IUL, RC16-279.13) in Social Theory. However, the use of uchronias is particularly helpful in the study of Social Theory (CIES, ISCTE-IUL, RC16-300.5)
Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological-reflexes or emotional expression, theorists began to see disgust as an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating In- terdictions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of resulsion. Terror and horror movies, tend to epitomize this kind of moral purity. The question of the home-animal partition, the mutilated, raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demigurc role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as one of the essential boundaries of the artificial-natural divide or the human-animal partition. Cronenberg's filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexplotation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable and archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature's patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns.

The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for researchers to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No.1142510.

MARSCHNER ALVES DE BRITO, MURILLO* (São Paulo University, murillemarschner@yahoo.com.br)
Social Origins and the Access to Public Higher Education in Brazil

According to the well known MMI hypothesis (Raftery and Hout, 1993; Shavit and Blossfeld, 1993), the class inequality on the distribution of educational opportunities tends to decline only when attendance rates reaches saturation at given educational levels for the upper classes. Lucas (2001) challenged this view introducing the EMI theory which proposes that, even when saturation is reached for a given educational level, inequalities tend to persist in a qualitative sense, with children from privileged socio-economic background having more chances of going to the better schools or universities. This means that IEO had to be analyzed not only in reference to attendance to a certain educational level, but also in reference to which segment (or track) in the educational system the individual accesses.

This proposal aims at analyzing the association between social origins and educational destinations through the selection process of a prestige public higher education institution in Brazil. Drawing on the notion of tracking, we want to
evaluate (a) given the high competitiveness of the selection process, how is the association between social origins and chances of obtaining a place at this elite institution; and (b) if this association varies depending on which undergraduate course option the student applied for. Research has already shown how students from private schools have more chances of progression in all educational levels (Ribeiro, 2011; Montalvão, 2011) in the country, but the IEO between different tracks in public higher educational institutions in Brazil has never been analyzed before. Also this proposal relies on the use of data collected in the moment that the application is made, and it contains information on the entire universe of candidates in the selection process of this specific institution, which is another contribution to the empirical literature on the theme in Brazil, based mainly on cross-sectional household surveys.

*Examing the Long-Term Effects Families: Preparing La Nueva Generacíon, a Culturally-Specific Mexican American Parenting Intervention*

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called *Families: Preparando La Nueva Generación (FPNG)*, designed to increase the effects of *keepin’ REAL (kiR)*, an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition -receiving only *kiR*, and (3) parent + youth condition -receiving *FPNG* and *kiR*. Youth and parents completed a wave 1 pre-test prior to implementation, a wave 2 short-term post-test after the last lesson, and a wave 3 long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in *FPNG* were examined. Findings indicate that participation in *FPNG* and *kiR* had a significant direct effect on lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only *kiR*. These effects, however, were completely mediated by anti-substance use norms - youth whose parent also received *FPNG* had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communion of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthening the efficacy of youth-only classroom based intervention. Because *FPNG* was designed with Latino parents and for Latino parents, *FPNG* is emerging as a curriculum that can positively influence familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

*Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin’ It REAL in Guadalajara, Mexico*

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, *keepin’ REAL (Mantén’ REAL)*, a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation, a short-term post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in *keepin’ it REAL* compared to youth in the control group. Growth curve models indicated that over time the effects of *keepin’ it REAL* are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group, however, showed a relative reduction over time in the amount of marijuana used. This pilot study provides support for the global applicability of efficacious substance use prevention programs originally developed in one country, but also the importance of assessing for cultural fit and adapting the programs to achieve maximum efficacy. The results indicate that *keepin’ it REAL* can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

**Ethics As a Professional Responsibility From a Higher Education Perspective**

Se presentan reflexiones provenientes de dos investigaciones doctorales en responsabilidad social universitaria. Por una parte el desarrollado en la Universidad de Valladolid en el cual se indaga sobre la percepción de la sociedad (stakeholders) acerca de lo que esperan de la Universidad. El segundo estudio desarrollado en universidades de 4 países iberoamericanos (Colombia, España, Perú y Chile) realizó una evaluación del aporte de la educación universitaria a la formación de una ciudadanía responsable. El estudio mostró datos que cuestionan el fomento de unos valores prosociales desde que accede a la academia el estudiante hasta que finaliza su grado.

Es de interés para esta ponencia el resaltar la necesidad de confluir en la denominada responsabilidad social de las universidades, aspectos que conllevan a la relación de diálogo con el entorno, y promueve en su mismo seno para ser una institución agente de cambio social en conducir a profesionales con sentido ético de responsabilidad y una ser instituciones que promueven un desarrollo socioeconómico sostenible y que favorecen la progresiva disminución de las desigualdades no tan solo a nivel global si no también en su entorno cercano.

Junto a la presentación de reflexiones sobre los estudios doctorales, se señalarán algunas de las directrices internacionales emitidas por organismos como la UNESCO o la OECD en base a las cuales se señala el necesario rol de que la educación superior se alinee con los objetivos del milenio, y capacite en competencias no solamente técnicas sino de carácter transversal y valores solidarios. Considera la perspectiva del presente trabajo la necesidad de progresar en valores no solamente a nivel global sino también en su entorno cercano.

**Managing Organisational Religious Diversity in Finland**

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state’s involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularisation. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not fit the historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states’ aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

**MARTIN, CLAUDE** (CNRs, claude.martin@ehesp.fr)

**Impacts of the Financial Crisis on Family Trajectories: The Case of Living Together Apart Couples**

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these "living together apart" situations in France with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation, France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

**L’appropriation Des Réseaux Sociaux : Des inégalités Sociales Et Culturelles ?**

Dans le cadre de la thématique « Technologies de communication et inégalités », nous proposons d’analyser les inégalités sociales et culturelles révélées dans l’appropriation des réseaux sociaux par les usagers.

Pour repérer certaines de ces inégalités, un focus est réalisé sur quelques situations extrêmes de violence et domination sociale dans l’élaboration du processus interactif de construction de l’identité numérique sur Facebook et Spotted/Facebook. Grâce à l’analyse de profils, commentaires et tags, diverses formes de stigmatisation sociale, injure et diffusion (espace à la fois privé/public) sont classifiées, et interrogées comme autant de traces marquant la rupture dans ce processus de construction identitaire.

En quoi l’ordre de l’interaction (Goffman) est-il opérant et reproductible dans la négociation de cette mise en scène sociale ? Comment articuler le concept de face à face avec cette représentation de soi soi-techniquement contraînte ? Le profil de ces usagers en termes de capital social et culturel – ses définitions ? En ferait-il les nouvelles victimes sacrifiées dans l’affirmation du lien social ? La complémentarité online/face-à-face est importante. Ré-explorer le concept d’empathie (avec son corollaire, le partage des émotions et affect) interroger l’éthique du visage (Levinas) et son devoir de responsabilité permettent de comprendre l’évolution de ces interactions à distance. Et si les TIC participent de la montée de l’urgence généralisée (Jauréguiberry, Aubert), nous montrerons combien l’injonction (la fatigue ? à participer à ce flux informationnel génère diverses formes d’instabilité dans le travail sans cesse renouvelé de cette construction identitaire)

Exploitant l’hypothèse selon laquelle la colère est plus influente pour s’exprimer sur Facebook que la joie ou la tristesse, nous avons ouvert un blog pour recueillir des témoignages d’usagers victimes ou témoins. Ces données empiriques sont complétées par des entretiens semi-directifs (n= 20) et des focus group.

**God Is Argentinean, and Also the Pope!" Catholicism, Popular Religion and the National Imagination**

The arrival of Jorge Bergoglio to the Holy See has introduced a number of changes in the relations between the Catholic Church and the State in Argentina. While traditionally, these relations have been characterized by the preferential status of Catholicism as quasi-official religion and its active presence in the government’s decisions, in the last decade it was noticeable a succession of conflicts between the Church and State. However, a few days after the inauguration of Pope Francis, government discourse changed radically, emphasizing the importance of having “a Argentinean Pope.” The media and various forms of popular expression (graffiti, jokes, cartoons, montages on Facebook, etc.) express how unprecedented and unexpected this situation was, from a key that combines various representations of national culture.

In this new picture, the traditional and conservative homology between Argentina national identity and Catholicism, acquires new features, especially at the level of popular religion.

In this work, I will observe a specific matrix that allows to relate to the sacred and the idea of nation: soccer. Soccer appears as one of the matrices that model the relationships with the sacred: not as metalanguage, nor as religious meta-
Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices, which participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayal, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual. We argue that these visual representations, and participant narratives discussing their daily practices, indicate that the body is a process of ‘becoming’, a continual bodily ‘project’ (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants’ negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing and the body.

**Indigenous Female Farmworkers in Northern Mexico: Workers’ Rights Violation Under the Veil of Better Jobs**

In Mexico the implementation of macroeconomic policies has resulted in the indigenous population experiencing great disadvantage, being deprived of benefits and subject to profound inequalities. Despite the fact that in the northern Mexican states living conditions are generally better than in the rest of the country, development is unequal and inequitable. This situation particularly impacts the female indigenous population that works in the agricultural fields in northern Mexico, as reflected in their low educational levels, unemployment or unstable employment, inadequate housing, poor nutrition, lack of social support and great poverty.

This paper discusses the point of view of female indigenous farmworkers in terms of social inequalities and their effect on living conditions. It is based on research conducted over three years in an agricultural valley of the state of Baja California, regarding working conditions, workers’ rights and the health of indig-
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpressive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions and precariousness. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

MARTINEZ, MARIA* (Universidad del País Vasco, maria.m_g@hotmail.com)

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women's situations in a time of crisis, we need a longitudinal analysis that shows us the weaknesses of the data and the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women's living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complex the research around that hypothesis. In a first moment, we will analyse women as a precarious group as a whole and after the recent wave of squatting in Madrid (connected to the M15 movement). Finally, the overlaps and distinctions of this process will be discussed.

Contemporary Japanese Migration Process in Spain: Cultural Boundaries and Social Networks

The relationship between flow and fixity in globalization literature, leads to questions about how a sense of belonging is achieved, especially when given concepts such as home, family and nation are becoming detached from physical boundaries. In addition to the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

The project employed a grounded theory approach and collected data through semi-structured, in-depth interviews with 44 Japanese living in Spain. The preliminary outcome suggest that Japanese who have created solid support networks with predominantly non-Japanese clusters have a firmer grasp of their Japanese identity. Conversely, immigrants with few Japanese links are more willing to identify their home in the host society. As a result, a Spanish-Japanese identity based on the reminiscence of Japanese traditions and the willingness to become part of the host society is rising. By focusing on the experiences of Japanese immigrants within the host community the research results provide insights into the construction and consolidation of social networks and how they contribute to a new sense of Japaneseness. Understanding this process and the relevance of identity within the Japanese community can help prevent inter-group and social conflicts as well as promote a multicultural society.

Protest Cycles and Squatting Practices: Socio-Spatial Structures or Activist Agency?

There are several public myths about squatting houses and social centres. One consists in ignoring the long lasting history of squatting practices and movements over the decades. A second one considers squatting as a simply legal issue which should be either persecuted either legalised. Finally there is a general image that depicts squatters as the unique agents, authors and responsible of the squatting movements. This paper aims at providing empirical evidence against those three myths. First, I recall on a complete data base of all the squatted social centres publicly visible in the city of Madrid since the decade of 1970. Urban location, duration of the squats and types of ownership of the buildings, shed light over the patterns and socio-spatial conditions. Second, mass media coverage before and after the recent wave of squatting in Madrid (connected to the M15 movement), serve to identify new and external conditions. Additional documents and interviews help to understand the deep political tradition and the experiences that created a favourable scene for squatting. Usually hidden legal tactics and the predominant kind of interaction between squatters and local authorities also shaped the explanatory context of the evolution of the movement. There is a more general consensus about the role of the housing shortage and urban speculation in the legitimation and motivation of squatting, so I won't develop it here. Instead, I will analyse the theoretical framework about socio-spatial structures of opportunity and protest cycles as the best way to overcome the shortcomings of the abovementioned myths and also to provide comprehensive explanations of this and similar urban movements. Finally, the overlaps and distinctions of this approach in relation to previous theoretical reference (Castells' The City and the Grassroots and different authors about The Right to the City) will be discussed.

MARTINEZ QUINTANA, VIOLANTE* (Profesora, vmartin@poli.uned.es)
From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social Social network play an important role both in the decision to emigrate and the choice of location. Related to migrants and its social networks, very little is known about patterns of integration and community participation in rural and low population density contexts in Spain.

This communication explores these issues and is based on a study, in the province of Teruel (Spain), using a sample of 324 Latin American migrants over the age of 18, selected by sex and place of residence. A standardised test - the Musitu
and Gracia AC.90 Community Social Support Questionnaire and open questions were employed. ANOVAs analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations, the immigrants. Prejudices and stereotypes are easily fixed and in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain’s immigrants require support in the development of the processes of integration and peaceful coexistence.

MARTINEZ-IGLESIAS, MARIA* (Universitat Rovira i Virgili, maria.martinezi@urv.cat)
Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men’s international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the 1970’s, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are related. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrated men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that son’s and brother’s migration along with other family members is a new trend that has broken down traditional gender and family system based on son’s inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improved their situation, without establishing direct causality relations as women’s paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men’s migration to USA and finally uses y costumbers (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPFAR

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver’s metaphor on communication as exchange of information and develops Buber’s and Peters’ ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness. This openness is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyond preachment. Extreme cases of annihilation of others can be connected with deterioration in social reproduction, and they have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implants, involvement of the ego, dehumanization, isolation of larger contexts, dramatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

MARTINS, CARLOS BENEDITO* (University of Brasilia (UnB), carlosb@unb.br)
Science without Borders: An Academic Mobility Program from the Brazilian Government

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a postgraduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduates and science/ technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented analyzes how the results of the program as well as the possible difficulties it faces in achieving its goals.

Collective Rights to Life and New Social Justice: Lessons from Latin America

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is a condition that the federal government created the Global Development Program, which wants to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented analyzes how the results of the program as well as the possible difficulties it faces in achieving its goals.

Intellectuals and Development: Reflection from Diverse Latin America Statements

Intellectuals and development: reflection from divers Latin America statements

Paulo Henrique Martins
Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of other national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic relations creates that question the general rights of privatization. Additionally, they suggest a new social justice hierarchy that underline the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia’s, are interesting ones to reflect about this change of development paradigms.
Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional support. Their financial aid at critical junctures is not uncommon. In the absence of one’s ability of parents, the adult grandchildren generally provide care for their grandchildren. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interview method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandchildren than with maternal grandchildren. Likewise grandparents have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of inter-generational relations.

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies practice regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promoting interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork, hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Pakistanis Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social placement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The diffused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relationship between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economic structure, political and cultural tradition. International migration has become relevant here since the early ‘90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the highest concentrations of Pakistani citizens in Italy. Immigrants found employment as both unskilled and skilled workers in the small services which stretch out over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistan Punjab.

The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place trough ethnic and non-ethnic forms of incorporation shaped by administrative and non-state actors, like associations and NGOs of a catholic background. The data collected (through ethnographic fieldwork and qualitative interviews with immigrants and privileged observers) show the ambivalence of such forms of incorporation, in which different features of the immigrant population – such as status and socio-economic gaps, habits, cultural traditions and migratory paths - together with the local government practices and discourse, coalesce in defining different trajectories of immigrants’ emplacement in the local society as well as transnational social spaces and urban fields.

Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK

Contemporary studies on intra-EU (European Union) migration have paid increasing attention to forms of secondary mobilities, either in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants’ hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizenship, they settle in the UK because of repeated initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precariously workers in the UK.

La problemática de los liderazgos presidenciales (LP) constituye un eje de estudio relevante para la Sociología y la Ciencia Política, situación que se ha acentuado en la abundante producción bibliográfica en el temática. Empero, la relación entre construcción de LP y E-Government (EG) ha sido trabajada en forma insuficiente, advirtiéndose un vacío académico en el análisis del impacto de la tecnología sobre los sistemas políticos en general y la construcción de liderazgos en particular. Las actuales políticas públicas, académicas sobre liderazgo se han focalizado en el abordaje de la disponibilidad de recursos de poder (institucionales, sociales, financieros, de estrategia política y apoyo ciudadano) que un presidente posee o es capaz de generar, pero no han aportado categorías analíticas innovadoras que aborden el impacto del EG en la construcción, consolidación y debilitamiento de sus LP. Esta investigación apunta a corroborar el EG supone no solamente un cambio de paradigma en la teoría existente sobre liderazgo, sino también el surgimiento de un nuevo recurso de poder (RP) al que apelan los presidentes latinoamericanos con el propósito de obtener legitimidad en sus iniciativas políticas. En esa dirección, el EG deviene un mecanismo que supone toda una renovación de los canales de comunicación política, permitiendo a los Jefes de Estado el acceso

Risk Management: The Effects of Militarization and Surveillance within the Canadian Context

Since the inception of the ‘war on terror’, Canada has been among the group of countries with a democratic and constitutional governing structure.

Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have highlighted that incentive structures for senior executives worked against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime.

Financial incentives have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivation beyond self-interest. This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations try to manage complex and interrelated objectives, and the way people respond to financial incentives in this environment, the potential for perverse consequences, and approaches that most appropriately focus attention on major hazard risk. This analysis is based on qualitative interviews and document analysis on the incentive schemes in oil, gas, chemical, and mining companies. We argue that despite discomfort with the concept that safety decisions might be influenced by money, financial incentives do influence priorities and behaviours. We conclude that financial incentives matter in corporate environments because they do not rely for their effect on economic self-interest alone. Instead, they tap a number of human motives, among them the need for approval, the need for recognition, the need for affiliation, and the need to belong and the need to be recognised as making a valuable contribution.

Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia's Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia's civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups' violence and rule: the Peace Community of San José de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, they differ in the form this strategy took: while the PCSJA unilaterally negotiated its noncooperation strategy with armed groups, the ATCC declared itself neutral without any bargaining with armed groups, the ATCC nego-tiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to choose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The choice is overcome “the ick factor – the eyes, the wings, the legs... people won't accept it beyond novelty,” one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into “mini-live-stocks,” ones that are interpreted as not merely edible but as desirable.

Coping with Risk and Uncertainty in Civil War. Community-Based Noncooperation Strategies in Colombia's Civil War

Although commonly portrayed as either mere victims or resources to be plundered, civilians in warzones face a wide number of possible responses to armed groups’ demands and war strategies. Studies dealing with the micro-dynamics of civil war have informed us extensively on some of these responses, such as displacement, obedience and active collaboration. However, other responses such as resistance and defiance have attracted scant scholarly attention. Despite of the high risks involved and the high levels of uncertainty outcomes are subject to, unarmed civilians have chosen to defy armed groups through different strategies of noncooperation. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to seek protection from armed groups’ violence and rule: the Peace Community of San José de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what drives these communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops with members of both communities, inform the analysis of the emergence of non-cooperation in warzones.

Noncooperation Strategies in Colombia’s Civil War

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlin's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlin (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logics of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlin was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into objects connected with ingestion, pleasuring, even en-souling. An insect on an American dinner plate, except in rare and select places, represents “matter out of place” and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming “the ick factor – the eyes, the wings, the legs... people won't accept it beyond novelty,” one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into “mini-live-stocks,” ones that are interpreted as not merely edible but as desirable.

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Sustainable development aims at environmental protection, social well-being and economic development. Over the years, corporate houses have realized that it is in the interest of business to operate within a healthy environment and economy and that sustainable development must be incorporated into the vision, mission and policies of business. This paper highlights the initiatives taken by leading corporate houses for sustainable development. These corporate house include Apple, Cipla, McDonald, Philips, HUL, Reliance, Tata Group, Panasonic, ICICI Foundation and Bajaj Group. The study reveals that environmental excellence has become a part of corporate strategic thinking. However, in spite of all the initiatives with respect to sustainable development, the picture is dismal and shocking, not only in India, but world over. The three goals of sustainable remain unachieved to a significant extent. It is reported that 40% deaths globally can be attributed to air, water and soil pollution. 925 million people are under nourished. 30 trillion kg carbon dioxide-equivalent greenhouse gases is released into the atmosphere. Further, rural-urban inequality is increasing while 15% of the world's population goes to bed hungry. The author suggests the need for adopting a holistic approach towards sustainable development and the relevance of Mahatma Gandhi's Universal Trusteeship concept. The culture and mission of the business enterprise must be aligned to gether. A sense of mission and social goal for the organization needs to be developed. The paper suggests a model which takes into account the economic, technological, social, environmental, value-based society, learning and adaptability aspects of sustainable development which rests on the belief that sustainable development is a pervasive philosophy to which every participant in the global economy (industry, community, government, NGO's etc.) must subscribe. The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist and women's movements encompasses the civic participation of Brazilian women through involvement in non-military or in support to domestic conflict resolution or a democratic regime as well as participation in the transnational women's movement and Brazil's rati fication of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive policies for such policies; at the national (the National Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism –currently reflected in the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad international agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

Informal Support Networks and Female Career Continuity

Informal Support Networks and Female Career Continuity

Female Japanese workers who have chosen to play multiple roles, such as those of wife, mother, and paid professional, often experience difficulty in career continuity. Some research and theory suggest that public policies that promote gender equality, childcare, and nursing leaves have positive effects on the career continuity of working women. Nevertheless, the impact of informal support has not been empirically evaluated.

In this exploratory study, I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies or associations. My major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering...
emotional support in times of trouble, and providing role models for working women. Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan

The issues related to care-giving conducted by male.

-Relevant example of a husband and the son caregiver participating in the self-help group- Matsu: Yuka

Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male. Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems. Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family. And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

MATSUMOTO, MIWAO* (The University of Tokyo, ghc03207@nifty.ne.jp)
Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanisms of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, this paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of SPEEDI (The System for Prediction of Environment Emergency Dose Information), of the organizational structure of the Governmental Examination Committee on the Fukushima accident, and of the siting of facilities for the disposal of HLW (high-level radioactive waste). Firstly, the social mechanism by which “institutionalized forbearance” to secrecy causes serious damage to third parties without breaking laws or moral ethics is revealed. Secondly, the paper illustrates the way in which the organizational structure made up of both investigators and stakeholders tends to carry over structurally originated problems and reproduce them. Thirdly, the paper highlights the possibility that social decision-making, with a very long horizon and high degree of uncertainty, can bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, it found that the relationship between religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

MATSUMOTO, NORIKO* (Tokyo University of Foreign Studies, matsunaga@tufts.ac.jp)
Postrevolutionalist Islam or Traumatic Resecularization? What Does Historicizing the Religio-Political Unity Offer in the Post-Khomeini Iranian Context?

The postrevolutionary Iranian “Islamic revivalists” (who now call themselves “principlists”) still evoke an early twentieth-century event that—in their collective reconstruction of the past—crucially gifted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hasan Madarres (d. 1937), the prominent Shi‘i mujta‘hid and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded postrevolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrnomen and a June 2013 principle political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

Use of Paradata in Non-Response Bias Adjustment: Application of Sequential Propensity Weighting on Dutch Reluctant Respondent Sample in the European Social Survey

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxy for all types of non-respondents - this paper obtains calibrated propensity weights in sequential steps. Two types of propensity scores (i.e. focus is on ‘contactability’ and ‘survey cooperation’) are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on attitudinal variables tested between unweighted and weighted samples. These evaluative items are also compared with the effects of post-stratification weights to provide information on the trade-off (eg. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.
Deciding 'Quality' Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they 'know' what constitutes a 'quality' cord blood sample?

These important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish 'clinical expertise' around cord blood treatments would impact upon perceptions of 'quality' cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by their inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sakakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive 'quality' in cord blood in a global context, and what factors influence their perceptions, will be presented.

Collapse Of Vacant Japanese Accepting Migrant Care Workers Policy

Why has most Japanese migration policies ended in failure? Since 1990 the Japanese government have argued that they will positively accept highly skilled workers for competing economic globalization. By 2006, the Japanese government had concluded EPA agreements with the Philippines, Indonesia and the other East Asian countries. The Japanese care industry strongly disagreed with this agreement and asked for the abolishment of the EPA agreements. The Japanese government is suffering from a serious labor shortage, Japan has designed an absolute strict immigration law to protect the Japanese workers in the Japanese labor market after return as well as for business communication with Japanese companies abroad.

At the beginning of this program, hundreds of candidates came to Japan and trained for the National Nursing Examination which is the same for a Japanese candidate. The first examination was held in 2008, 82 candidates took this examination but no one could pass. The next year, three candidates could pass this exam from 254 candidates. In addition to this low pass rate, nurse candidates can take this exam three times in three years and care workers have only one chance in the fourth year. Obviously candidates who can't pass the exam must return to their country. How can they keep their motivation?

Five years have passed since this program started, the number of candidates is declining each year. The most significant problem with this program is foreign care workers were unwanted by the Japanese care industry. Japan takes no account of their former job careers, even if they have a nurse license in their home country. These skills and experiences are just a prerequisite for being a candidate. Even though Japan has the most aging population coupled with lowest birth rate in the world, Japanese government are still lacking a long wide vision in regard to migration policy.

Beyond the Skill Migration: Middle Class North-South Mobility in Asia

Favel's famous work, Eurostars and Eurocities(2008) arouse wide academic interest in mobilities in EU. Under the popularization of international migration, migrants' social background and migration flows from/in North has been diverse. As Scott(2006) claimed, it has "become a 'normal' middle-class activity rather than something exclusively confined to an economic elite." However, these works are limited on the research area. This paper tries to theorize the middle class North-
This paper presents analysis of interview data from a study of ‘knowledge mobilization’ as a social process. In doing so it contrasts concepts of ‘knowledge transfer’ with those of ‘knowledge mobilization’ which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cuchfeld-Jacob Disease, Alzheimer’s Disease, ALS, Parkinson’s Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

MATSUZAWA, SETSUKO* (The College of Wooster, smatzusawa@wooster.edu)
A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China’s fragmented bureaucracy. Despite TNC’s race to save one of the World’s ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key local stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC’s rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC’s inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its “Growth Machine” (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC’s wish to emphasize community participation.

Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday uses of new media technologies and practices. In large and rapidly increasing numbers, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. In large and rapidly increasing numbers, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet- ing and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news? And how may the various affordances of differing and fragmented web and mobile apps impact the discourses of everyday users?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affording or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

MAUNAY, EMMANUELLE* (Université de Rennes 1, emmanuelle.maunay@univ-rennes1.fr)
L’Accès Au Logement Des Jeunes Français : Pour Quelle Indépendance ?

Les jeunes français doivent faire face à des difficultés d’intégration de plus en plus aigus dans tous les domaines de la vie sociale : accès au travail, dans des conditions stables et en rapport avec leur niveau de qualification, accès au loge- ment, accès aux droits sociaux, etc. Ces difficultés en font la population la plus en butte à la vulnérabilité sociale et à la précarité.

De ce fait, les enjeux qui pèsent sur les politiques publiques de jeunesse apparaissent importants : les nécessités sont grandes de voir se développer des actions publiques permettant de sécuriser les parcours, de garantir un égal trait- ément des différentes générations, notamment en termes de protection sociale.

Pourtant, le paysage des politiques publiques françaises laisse plutôt appa- raitre des actions éparpillées, relevant de tous les niveaux de décision, comportant peu de réflexions sur les façons de dégager des valeurs, des objectifs communs, des modes d’accompagnement en conséquence.

Dans ce contexte, notre communication s’attaquera à analyser l’accès des jeunes au logement indépendant. Nous partirons d’une première approche objec- tive présentant les manières actuelles des jeunes de s’installer dans un logement. Les données financières apparaîtront comme un obstacle sévère et indépen- dante. L’aide économique de tiers comme la famille et/ou des acteurs publiques est souvent requise ; ce qui n’est pas sans créer de profondes inégalités sociales.

Cette première approche objective sera complétée par une entrée comp- rhensive qui abordera les liens subjectifs que les jeunes entretiennent avec le logement. Les jeunes apparaîtront ancrés en différents lieux : le logement indépendant ; lieu d’apprentissage de l’autonomie ; la maison familiale ; vécue comme un lieu d’ancrage. La construction des espaces d’autonomie ne signifie pas absence de liens. L’analyse de la fonction de ces liens permet de requestionner la notion d’indépendance et de dépendance juvénile, autrement que sous un angle économique.
The PhD Degree and Weber's Concepts of Rationality

The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and political sciences. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of that knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900. In this paper, I will examine the two-fold translation of knowledge: The first is how academic social science knowledge diffuses into politics: I will examine how the idea that society is a structured entity, that was put forward by early sociologists such as the Historical School of Economics in Germany, informed social policy experts. Social science knowledge contributed to the insight that the Social Question could not be solved by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens in multiple fields of entrepreneurship. But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or is it a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnectedness of the presence of ICT services in a certain area with the economic growth and the development of this specific area. Finally, it examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

The PhD Degree and Weber's Concepts of Rationality

The PhD degree has a dual character: as an institutionally based course in which students acquire a set of new skills and knowledge, and as a performance that allows them to treat and study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this pull of multiple rationalities.

Technology and the (re)Making of Work and Family: Towards a Performative Approach to Visual Practices

Our paper presents a set of arguments about visual practice in family research, as well as the possibilities that technologies and technologies offer for understanding families and their practices. We draw on the work of several scholars who have studied how visual practices can be used to understand families and their practices, and how these practices can be understood in terms of visual culture. Our paper explores the ways in which visual practices have been used to understand families and their practices, and how these practices can be understood in terms of visual culture. Our paper explores the ways in which visual practices have been used to understand families and their practices, and how these practices can be understood in terms of visual culture. Our paper explores the ways in which visual practices have been used to understand families and their practices, and how these practices can be understood in terms of visual culture.
In the course of the nineteenth century, epidemics and contagious diseases proven to be a considerably threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was "Social Hygiene", as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or "Volkskörper". Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hurled at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied a lot, and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi-polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangoes, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Social Systems Form Simulation to Observation

The cognition-computing short circuit is still affecting both neuroscience and computer science today. Social systems theories, on the one hand, and agent-based simulations on the other have once more pinpointed the traditional socio-cultural duality between macro and micro-sociology. However, the advent of ‘Big Data’ has paved the way to new techniques of investigation based on the study of new types of data, such as conversations taking place on popular web sites, like Twitter and Facebook, traces left by our mobile devices or data generated by wearable sensors. Thanks to these techniques, we can go beyond simulation and observe the operation within the social “black box” in the same way that neuronal functional magnetic resonance imaging (fMRI) does as regards to the brain. This paper discusses the potential as well as the limitations of these new methods of sociological investigation and their spiller effects on the theoretical development of the discipline.

Career Advancement for Women in the UK Military: Opportunities, Risks and Responses to Gain Acceptance

The number of females holding senior posts in the United Kingdom’s military is around 1% compared to an average of around 30% in the rest of government. This paper reports on a study which sought to examine why the rate was so low using an entrepreneurial lens. As there is a paucity of research on female entrepreneurial leadership in the public sectors and none in the UK military, this study helps to provide some fresh insights into an issue which to date appears to have been intractable.

Using entrepreneurial literature, a model was developed to research the potential barriers faced by female officers in the UK military when seeking promotion to the most senior ranks. The model was designed to examine the relationships between institutional and individual determinants in relation to promoting outcomes. These determinants included structure and agency, social capital, homophily, support and how women deploy a series of other strategies to accommodate institutional and network orientated logics and norms to gain promotion acceptability.

Semi-structured interviews were used to gather data from 48 female officers and a sample of 5 male officers over a four month period in 2013. Candidates were drawn from a stratified sample at the senior ranks. The overall research paradigm was critical realism. All interviews were recorded and transcribed and then analysed using Miles and Huberman qualitative methodology for coding and analysis of data.

The findings from these interviews demonstrated that the interplay between structure, policy and played a major role in women’s promotion. Factors such as emotional support, conflict resolution, reputation and legitimacy also determined the contextual social capital perceived to be necessary for promotion by deeply embedded bespoke male networks.

The originality of this research is in the use of an entrepreneurial framework to examine promotion within a government agency.

Hercutage, Culture and Politics of Tourism Along the New Silk Road

After twenty years of the UNWTO’s Silk Road programme, there seems to be a new impetus to revive and re-envision the project to bring the heritage and cultural attractions along this ancient set of trading routes to a new prominence. A recent conference in Dunhuang in August 2013, the addition of a third generation to the Silk Road project, together with an action plan for the future that will build a sustainable and competitive tourism product suggests a fresh impetus and a desire for collaboration and tourism development. But to what extent does the Silk Road project offer real potential for sustainable tourism development? And what lies behind the rhetoric of the Silk Road Action Plan? This paper seeks to address the politics and discourses of international collaborative tourism marketing projects with a focus on the Silk Road initiative. Whilst the aims of the project are laudable, the paper seeks to understand the power dynamics at play between these nations and the role of the UNWTO. The countries along the Silk Routes that have signed up to the project include some of the most politically unstable in recent history and the paper hopes to shed some light on the tensions between an ideal of peace and intercultural understanding through tourism development and a political, economic and social reality. The papers approaches the issues through the adoption of discursive analytical perspectives on texts: policies and planes, strategies and media items.

MCCALL, VIKKI* (University of Stirling, vikki.mccall@stir.ac.uk)

Who Negotiates The Relationship Between Leisure and Quality Of Life?

Increasing user’s quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user’s quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship between quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user’s outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative...
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individuals' quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework called the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and policy development in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are ‘implmented’ locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshal Ganz calls ‘strategic capacity.’ This paper demonstrates how GFAs are used in different ways depending on local circumstances. In doing so, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, India, and Brazil. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework called the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and policy development in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity found in small and rural America is expected to continue for the next 30 years. The Hispanic immigrant communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory predicts that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant newcomer and long-timers in order to take advantage of their strengths. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller’s patter, square dance encodes an idealized version of heteronormative, “old time” gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, flouncy skirts and puff-sleeved blouses for the women. In the present day, these “invented traditions” coexist amidst a range of self-presentational options, as well as frequent urgings from within the square dance community to “update the image” of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors’ club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as infirm and unlovely.

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Duel of the Dualisms: Production and Reproduction Reconfiguring

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family, has led to another separate sphere of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author’s current research programs, on care migration and on life course effects of the Great Recession of 2008+, the duel and dance of the dualisms of production and reproduction in comparative contexts are explored.

MCDANIEL, SUSAN* (University of Lethbridge, susan.mcdaniel@uleth.ca)

Global Ageing in Precarious Times

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public squares – all contour ageing as a macro, meso and micro process. As the coup d’etat in slow motion, as population ageing has been termed, sweeps across all regions of the world, within and in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of potential paid caregivers. In this proposed talk, McDaniels draws on her extensive research on the policy implication of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.

Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which the idea of professionalized action, violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a Japanese form of identity. The contrast in values between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

If It Weren't for Rugby I'd be in Prison Now: Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific Island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of islander identity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders' enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such sports, instead positing them as exemplars of individualism and self-governance.

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodiment of a range of discourses of identity and culture. Embodied experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective struggle to a more ethically grounded understanding of displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident in the experiences of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collective struggle to a more ethically grounded understanding of displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

Organising Celebrity – Social Mobility and Symbolic Violence In England's Green and Pleasant Land

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and ‘noble’ is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of mental breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper drawing on Bourdieu’s Distinction and Giddens’ writings on ‘distanciated instances’ suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency for cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-person interactions because objects can't engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonance to meaning over time. Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns (McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, displacement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the growing field of materiality by specifying how material qualities of objects have independent effects, beyond falling back on the symbol-driven work of material culture studies.

An Unequal World: Class, Leisure and Health Outcomes in Older People
In this presentation, we look beyond the direct physical and social effects of leisure activities on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of social class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieusian terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement, than the specific occupational capitals that marked their work during working life. It appears that during retirement, the people may maintain their former lifestyles (tastes and leisure activities) but may also develop new activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their ‘space of possibilities’ for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, leisure activities and health status, conceptualised within a Bourdieusian framework. This study used panel data from the English Longitudinal Study of Ageing (2002-2010) with variables lagged at different time points to maintain temporal/causeal order. The findings show that the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status. In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that activities such as museum-going life, returning the people may maintain their leisure activities.

Territoriality and Roma Nationalism in Europe
The Roma community is one of the most marginalized and persecuted minority groups in Europe. Facing hostile policies at home, the rise of right-wing populism, and widespread negative stereotypes about an individual personality thought to possess, Being an ideal type of opposition, charisma may seem to have nothing to do with bureaucracies but, ideal type generalisation does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organizational forms encouraged division with egocentric bureaucratic organisations incorporating charismatic forms of leadership in adapted forms. These developments have not made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to ‘qualify’ products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endowing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceeded this role. Through agents, insurance and home credit companies acquired an adaptive, active ‘grooviness’ by virtue of the channel they established between company and customers. In both sectors, the main economic benefit of the ‘collection herd’ as important was the quick and accurate giving of information since information was the key to product sustainability. The challenge was that agents’ capacity to get and transmit useful information was closely related to their personal qualities, their personal charisma.

An Unequal World: Class, Leisure and Health Outcomes in Older People

Fighting Complacency and Retrospection: Reawakening Gender Equity Activism in New Zealand

Fighting complacency and retrospection: reawakening gender equality activism. New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women’s suffrage in 1893 and scores highly in international indexes such as the World Economic Forum’s Global Gender Gap at sixth out of 135 countries. In recent political history women held the top four constitutional positions: Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman(2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the State party accountable for the implementation of women’s human rights and their retrogression. The paper explores and analyses the re-awakening of women’s civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand’s seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party’s response to concluding observations and recommendations. It also reflects on the patterns of response of women’s groups moving from complacency through frustration to mobilisation legally, politically and at the community level.

**The Challenges For Social and Environmental Justice Posed By The Global Panoptican, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World**

Facing up to an Unequal World has praxic implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter-related ways in which the challenges can be addressed requires not merely transdisciplinarity and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, ecological and environmental indicators of wellbeing. In order to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggest an alternative form of governance and democracy that spans communities of interest at a planetary level.

The study aims to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;

ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not determined.

iii) Strengthening self-determination of people based on participatory democracy and the ‘absence of domination’ over others

iv) Monitoring based on democracy and governance;

v) Participation management of the global commons as the fabric of life. Currently the role of the state in Western democracies acts as protector of the environment of the problem and the range of inter-related ways in which the challenges can be addressed.

**When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging**

After a change was made in Germany’s census categories in the year 2005, who is called ‘German’, and who is called ‘the Other’ has become a much narrower group than German citizens. Germany’s population was divided into ‘Germans’ and ‘persons with a migration background’. The latter category captures, in one basket, some German citizens—born and bred in Germany—along with immigrants newly arrived to the country. What makes one German? How does one come to belong to the national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher’s person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I— a dark-skinned, native English-speaker living in Germany — interviewed Germans (German citizens) in a mid-sized city in Germany to take part in the study. Participants’ perceptions of the everyday practices of Germanness. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germanness. My ‘otherness’ seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarities of the data produced through the interviews.

**Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment**

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport re-creates valued—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann-2008), it is unclear whether such benefits extend beyond the college years to affect young American career trajectories or subsequent educational attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Educational Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income through-out young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the individual level, female sport participants earn more, report higher lifetime earnings, and report larger incomes than their peers. While male sport participants report the highest individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.
older cohorts. One of the objective health markers considered in this study inflammation, a significant predictor of chronic diseases such as coronary heart disease and type II diabetes. Early results suggest that gender differences in employment histories remain fairly entrenched across cohorts, and that educational attainment has a stronger relationship with inflammation in mid-life than the subsequent life course work and family trajectories it sets people on.

MCNAMARA, DENNIS* (Georgetown University, mcnamard@georgetown.edu)
Asian Developmental States: Innovation, Industry, and Investment in China and Japan
- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan as a “plan-rational” polity initially challenged the neo-liberal assumptions of development in the West. State intervention to discipline companies where necessary to achieve national goals of development proved similarly successful in the Asia’s newly industrializing countries (NICs), leading to a mid-range theory of state/market ties termed the “developmental state.”
- China followed a far different trajectory, but again with a prominent state role. I look here to the current status of the developmental state in China and Japan, to assess continuities in Asian capitalism, I focus the study on the coordination of beautiful women and in national innovation systems, where both nations have excelled. Innovation offers perhaps the best indicator of future competition between capitalisms of the East and West.
- The paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two nations, and the role of foreign firms in innovation systems.
- The reach of industrial policy evident in NIS efforts suggests three major differences in the state role. As might be expected, China’s party/state plays a far more directive role than that of the Japanese state. Secondly, the Chinese party/state continues to evolve, with curious discrepancies between central and regional governments. We find more continuity in central government policy in Japan, which tends to favor a more suspett interaction with foreign participation. Thirdly, inward FDI plays a major role in China’s NIS, in contrast to Japan where outward FDI links them to innovation network in the U.S. and Europe.

MCSORLEY, KEVIN* (University of Portsmouth, kevin.mcsorley@port.ac.uk)
Visceral Militarism: Embodiment, Intensity and Experience
-This paper provides a critical reconstruction of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of military attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices that constitute warfare. The book’s primary argument is that militarism is felt to be normal and desirable, through which militarism becomes assumed, and examined, as an ‘abstract social norm’ that may inhabit within the deepest fibres of our bodily being’ (Shilling 2007: 13).
- Drawing upon empirical analyses of contemporary phenomena ranging from the growth of ‘British Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective capture of immersive military video-gaming, and the intimacies and intensities of helmetcam footage recorded by soldiers in the ongoing conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily transformation increasingly articulate with wider military imperatives and corporeal practices to produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialised flows of affective experience associated with contemporary transformations in warfare.

MEDINA, MARIA CECILIA* (University of the Philippines, ceciliatmedina@gmail.com)
Indigenous Religion, the State and Civil Society in Bukidnon, Philippines
- The paper describes the religion of an indigenous case community in Bukidnon, Philippines from participant observation, interviews, focused group discussions and content analysis of documents from government and civil society organizations and other secondary materials. It analyzes the diversifying role of indigenous religion in the public sphere amidst social change in the uplands with the entrance of migrants, logging companies, the state and civil society organizations. The paper also intends to shed light on how indigenous religion contributes to communal adaptation and sustainable development as well as efforts to protect ancestral domain in the face of increasing commercialization of the economy, as well as cost and environmental conflict. The increasingly complex religiosity of religion and the strategies of religious leaders to position themselves in the changing context has implications as well for the relations between religion and the state and
civil society. Theoretical perspectives examining the role of religion in the public sphere as well as political ecology will be utilized as frameworks for analysis.

Poverty and Unequal Development in Central America

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it excels Costa Rica, which some have considered the Switzerland of America, for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent’s poorest nations.

This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

Social Investment at Sub-National Level in Mexico: The Role of Actors and Institutions

Sub-national governments have been largely considered to be better equipped to respond to local preferences and needs more effectively than central governments. While this capacity has been mainly associated with the role of sub-national governments in delivering social services, their role in as policy innovators has been scarcely studied, especially in the Latin America context. Nonetheless, as the case of Mexico shows, in the context of increasing political and financial decentralization, sub-national governments have been more active in implementing their own social policies. This paper explores the most important factors that may explain the increasing activism of sub-national governments in the social policy realm, measured by the size and type of social investment, apart from their spending in health and education services. To do so, we produce a qualitative comparative analysis that comprises three different states in Mexico; state-level is centralization, sub-national governments have been more active in implementing their own social policy initiatives. This paper explores the most important factors that may explain the increasing activism of sub-national governments in the social policy realm, measured by the size and type of social investment, apart from their spending in health and education services. Globalization and Human Rights

The concern for the human rights becomes popular particularly in the twentieth century, though it had its roots in different forms since time immemorial. The horrors of the Second World War led to the birth and recognition of the modern human rights. The global framework of human Rights was laid down by the United Nations General Assembly on December 10th, 1948.

The idea that the protection of human rights knows no international boundaries has gradually captured the imagination of mankind. After the Vienna Declaration (1993), there seems to be a global consensus on the fact that all the Human rights are universal, inseparable, interdependent and interrelated.

The respect for Human rights is enormously essential for achieving the global priorities of peace, development and democracy. Today, the concept of human rights has assumed universal proportion, accepted virtually by all states and societies regardless of historical, cultural, ideological, economic, or other differences. Almost all the countries of the world have clear provisions about the human rights in their respective constitution.

Human rights are rights which the individual has, or should have, in his society. Though the International Human rights imply rights for the individual against society, but they are not seen as opposed to the interests of society.

Despite human rights becoming the subject of concern to the legal fraternity, the Asians countries criticize the western concept of human rights is that there are no universal human rights as there is no single human nature, and thus no universal moral law to which appeals across cultures can be made.

Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan(India)

Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)

Abstract

Dr Alok Kumar Meena

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions. The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy. Group- oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc.

Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi playing cards and chaupad have been replaced by modern games like cricket and football.

Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere. Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

The Impact of Social Structures on Adolescents’ Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran’s society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals’ behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents’ deviant behaviors. The paper is drawn up on theories of Durkheim, Giddens, Putnam and also the examinations related to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors’ behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Dans Un Contexte De Crise économique: Tensions Sur L’emploi Et Le Marché Immobilier. Quelles Conséquences Spatiales ?

In the wake of the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround in energy policy of recent years has been paralleled by a shift from a fossil fuel to a renewable energy dominated system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid (“smart grid”) has started. In this project the exploration of how certain narratives act as social and cognitive resources is started. The project explores how certain narratives act as both social and cognitive resources. A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only alludes to the inequality that is produced due to financial speculation, while leaving its concrete practices and instruments unquestioned.

This paper forms part of a research project that applies anthropological and socio-semitic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.

Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective. The presentation will present the results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

Ways to Uncover Cognitive Processes: A Comparison of Cognitive Interviewing and Online-Probing

Cognitive processes shape the way respondents answer survey questions: how they understand a question, retrieve the relevant information, form a judgment and how they communicate it. At the different steps of this process respondents can encounter problems. Cognitive interviewing is a technique which aims to uncover the cognitive processes of respondents when answering a question and to detect problematic items in this regard.

In the last years the number of international survey programs increased. Cognitive interviewing is a valuable tool to reveal differences in the item interpretation across countries. The application of cognitive interviewing in cross-national surveys has so far been restricted, due to, e.g. restricted availability of cognitive interviewers across countries (Miller et al. 2011).

One additional inexpensive solution is online-probing which implements probing techniques from cognitive interviewing within online surveys. Although online-probing has been developed only recently, both techniques, traditional cognitive interviewing and online-probing, have been applied successfully. In particular, it will show what type of cognitive problems the different techniques are able to detect and in which context which of the two techniques proves itself more useful to improve items for future use.

Trust and Social Classes in Russia and Nordic Countries

Trust and Social Classes in Russia and Nordic Countries

Sociological studies have shown that economic and social inequalities are increasing everywhere. Studies have also shown that there is a strong connection between generalized trust and equality (Wilkinson&Pickett 2010). Comparative evidence indicate that strong social institutions prevent free riding and other similar problems. The Nordic countries are in many respect good examples of generalized trust, well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? what kind of differences there are between social classes and trust? Can we find one Nordic model, or are there different models? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.

MELLO E SILVA, LEONARDO* (University of São Paulo, leogmsilva@hotmail.com)

Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism (E Alger 2005). This study examines the scope of such initiatives, their tools and how effective they can be in addressing issues of social movements and the means (the use of social networks) due to the “old” internationalism. In Brazil, there is a widespread belief among unionists that the constitution of trade union networks based on mutual interests can function as a counterweight to the advancement of neoliberal globalization. The supporters of that view bear that such initiatives could eventually update the notion of international solidarity, which is part of the labor movement historical heritage. The global union networks of multinational companies are nowadays relatively well organized in some branches (chemical, metalworkers), though many accuse them of encouraging an enterprise microcorporatism at the expense of any collective wider interest. Additionally, the labor law reform initiated by the State promotes wage flexibility and encourages subcontracting. The picture is one where “internal” front points to a worsening in both employment conditions and use of labor force, while the “external” front is open to experiences of deliberate participation within corporations. The paper aims to explore this apparent paradox. Evidence brought are: the quantitative dimension of the union networks, their distribution across economic sectors, their guidelines and prospects, all captured throughout available secondary data, as well as interviews with managers and workers. The deepest reach of the union networks is intended to be sociologically measured in a scenario of restructuring, privatization and attacks on social rights. Thus, the paper seeks to raise the point that, in fact, the gap between the “old” and new labor internationalism unveils an underlying material and symbolic cleavage which opposes an “old” to a “new” working class.

Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “serality” of the festivals devoted to living history or the new culture of slowness, as well as the inability to properly manage edutainment, are stiving not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

**Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity**

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, of societies most influenced by the Western consumption patterns. This attention involves — and at the same time reflects — a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects. This change entails effects that appear to be particularly significant in the field of cultural and, even more, archæological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archæology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical themeing, are profoundly transforming our relationship with heritage and the past. However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, "liquid" and post-modern orientation could be overcome by a return of "solid" and material aspects. With specific examples, this paper outlines some characteristics of the new cultural and archæological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Educación inconsistente, ejercicio profesional desigual. José César Mendoza-Cornejo.

[1] Profesor investigador. CUCBA-UdeG. México

Email: cesarm@cucba.udg.mx

En la historia del hombre educativo, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta "diferencia". Este dominio es desigual, el rico aprovechándose del pobre, el estudiante del illetrado etc. términos que provocan divergencia y estancamiento. Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas. Se debe inducir una educación con sentido humanista, con ideas que convengan en la solidaridad y por consiguiente, hacia una visión de interés colectivo.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud aniquila las posibilidades de que se formulen los principios que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

Con el objetivo de evaluar el comportamiento -simulación- de productores y trabajadores, el INEGI 2010 concuerda con la indagación, el esfuerzo por hacer más esfuerzo, retribuir, provocando desigualdad y falta de oportunidades. Este actitud aniquila las posibilidades de que se formulen los principios que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

Cross-Border or out-of-country Voters? Citizenship and Elections Across the Frontier Between Brazil and Paraguay

Brasil and Paraguay are the largest immigrant groups in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in local elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favor of cross the frontier into Brazil to go to the polls on elections days. Furthermore, the Paraguayan residents in Brazil cross the frontier into Brazil to cast their ballots in Brazilian elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

**The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds**

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociologists by consists of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was the time Turner did his study. Around 25% are overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Ingehardt on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/ Western societies orientations of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

**Drifters and Boringine: From the Filmic Subject to the Historical Subject**

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Miseria ou Borinage (1933) from Joris Ivens. The first one show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second one show the very arid and difficult life of the Belgian miners of Borinage, focusing in their hard conditions of work that has lead to a major strike in 1933, after the world-wide crisis of 1929 in the USA. Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by questioning the “natural” approach of a film like The Battle of the Sexes. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capital also reproduces the miners in the worst living conditions. This arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop making life and labor consequently stop making goods and profits. So, if Drifters is remarkable as the first documentary film in history to put the working class in the central place as a film subject, Boringine is the first one to show the working class in the process to become a historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of...
in the world in the form of feminicides.

In its own believes, it's always a jump into itself. We want to discuss these issues on their own terms, constituting them more than making them dialogue. In general terms, this paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such crimes. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of crimes are ever prosecuted and an even smaller share result in convictions.

In recent years, there is an increase of extremist activities in different countries in the world. Terrorist organizations skillfully recruited new supporters. Internet is one way of attracting people to the organization of extremist activities. Information on how to become a terrorist is placed on websites explicitly or implicitly linking actions aimed at destabilizing the political situation in the country and poses a threat to the health and life of many people. Internet users are not always able to clearly define which kind of information they receive from different sites is really extremist information.

In 2013, we conducted the research in a large industrial center of Yekaterinburg (Russia). The method of research is case-study. The aims are to examine...
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believe that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believe that extremist information means call for terrorist acts. In this case, 17 % of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

MERINO MARTINEZ, SUSANA* (National Autonomous University of Mexico, sus62164@unam.mx)

Local Development Agencies

LOCAL DEVELOPMENT AGENCIES

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility.

The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and POs (producers' organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of setlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development.

This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90’s to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

Magic in Social and Natural Worlds: Planting New and More Colorful Technologies in South Africa

Scientific knowledge and technological artifacts travel with experts from centers of knowledge production to the places where they are translated, over an un-even global terrain and amidst a social history of technological failures and coercive public policies. While global in their extent and consequences, however, techno-scientific facts are emplaced and co-constructed within specific sociological circumstances and cultural conditions. As a consequence, accounting for a techno-scientific practice can only be made with regard to processes of local social and institutional transformation. Within a context of risk and uncertainty about water resources – real or perceived – South Africans are faced with a variety of technological options that will affect the nature of these arrangements. Focusing on a ‘disaster mitigation’ approach in a United Nations World Heritage Site in South Africa, I have positioned myself at the access points at which ‘experts’ and ‘lay people’ meet to discuss the “green economy”. Considering the various ways in which a “green technology” is conceptualized, I probe at the concept of ‘trust’ and how it mediates societies relationship with science and technology. In the process I ask: What makes an expert an expert? What empirical factors make-up and account for conceptual innovation? When does an object become a technology? When does it become a problem? And might the object of that problem offer any analytical and methodological tools that are interdisciplinary and area specific?

Indigenous Pathways in Social Research: Addressing Inequities

Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that Indigenous people from many different countries have successfully negotiated the Northern educational system without losing their indigenous cultural heritage. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways to social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation will be on Indigenous Knowledge Systems by Motheo Koitsiwe, a member of the Bathlhako tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a research from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be on “Coloniality of Knowledge and Indigenous Researchers” by Cesar Cisneros from Mexico. The presentation will focus on the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

Japanese Artistic Traditions: Mimēsī, Politiea and Re-Interpretation

My paper analyses the representation and perfecting of reality (mimēsī) by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for Japanese the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultured life of people or the idea of cultural rights of a people are rather foreign to Japanese society. However, the whole idea of ‘being Japanese’ is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions. The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has all along been a tendency also to protect the “Japanese” cultural traditions. For instance, nihonga was seen by the early modern policy makers as more Japanese than yōga, regardless of the theme of painting and without much of critical discussion whether nihonga really is that uniquely Japanese. After all, both Japanese nihonga and yōga are marked by foreign and Japanese influence upon each other. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.

TG04-947.6

MERVIÖ, MIKA* (Kibi International University, mmi@lintti.net)

While the Japanese state has used its power and financial resources without hesitation in some fields such as public construction it has conserved resources, by making people face many social risks, such as most family-related risks and unemployment, the best way that they can. If people fall ill or face other individual problems Japanese society often has surprisingly little room for such values as social solidarity and compassion. On the other hand, there have been social practices that have sought to soften the image of Japanese working life practices, as such the strong emphasis on lifelong employment and relatively small wage differences among employees, especially among the elite salarymen (sarariman).

The characteristics of the Japanese model of risk society are that the weak political leadership muddles along with the rest of the societies with globalisation and while the postwar sectors of the society need to adjust to the changed realities the best way they can. On the one hand Japanese society has its cultural values emphasising the merits of social harmony and virtues of interjective practices. However, conflicts have always existed openly or been managed under the facade of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
harmony and the new era of even weaker national governance, accelerated by the process of decentrallisation (chihô bunken) and deepening fiscal crisis (making politicians powerless and leaving people on their own) have imposed individualisation on Japanese people from above. This individualisation has already encompassed every corner of Japanese society and the impact has been drastic for families. While the Abe administration has shown determination to address foreign, defence and economic & trade policies, the issues of social policy have clearly not been given priority and have been left to traditional institutions, especially to families.

Supported Housing for Young Adults: An International Comparative Perspective (Germany/England) on Housing Related Social Welfare and Social Inequality

In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. However, the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, special housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. Therefore it is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labour market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

Hooliganism and the Dark Side of Football Events

Sport events in general and football matches in particular are often clouded by acts of violence. Hooliganism is a problem that is widely feared and thus is communicated throughout the media weeks or months before the actual event. Descriptions of fighting stones, lighted flares and wounded innocent victims dominate the coverage. At the same time the term “hooliganism” has very little analytical power, as it is used for all kinds of violent acts that occur during football matches including right-wing extremism. The underlying purpose when speaking of “hooliganism” is to make sense of seemingly “senseless” violence, to produce a surplus of order over disorder. From the hooligan’s own perspective the violence is by no means “senseless” but is restrained by a diffuse moral code. These rules are similar to former ritualized – and thus “fair” – duels, in which the combatants could achieve or restore their honor. In this paper we want to address the phenomenon of “hooliganism” from a cultural sociological point of view. We contrast the “public” perspective and the media imagery of violent acts of hooliganism with the self-concept of the subculture in question. This comparison shows that hooliganism is a deeply ambivalent phenomenon. It is both playful and serious, sport and “war”. Hooligans are peaceful and “invisible” in everyday life, while they are violence-prone as long as the “moral holiday” (Randall Collins) lasts. We argue that this in-betweenness makes hooliganism so hard to grasp by science, politics and the media.

Transformations Of Cultural Identity: Japanese Mothers Raising Intercultural Families in Australia

Abstract:
Stuart Hall argues that identity is not about ‘who we are’ or ‘where we come from’, but about ‘becoming’ something. This paper explores Japanese women’s changing cultural identity by focussing on those who have chosen to leave their homeland and settled in Australia to raise a family. Selected from a larger study of mixed marriage, this paper focuses on three case studies of Japanese women who settled in Western Australia with their European migrant husbands and raised children in the third culture are the focus of this paper. It examines how these women adjusted their cultural values in relation to their husband’s culture and the new host culture, how they raised their children in a foreign land with a foreign husband, and the manner in which they retained elements of their Japanese identity, re-creating themselves through different stages in life. While their experiences demonstrate challenges, not least of which is culture shock, and racism, they also offer evidence of resilience and creativity in the negotiation of cultural adaptation. This paper demonstrates the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family and the historical and political background of the society in which these women live.

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency’s “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational capital benefits the individual organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organizations (Bryson et al. 2003). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kapucu et al. 2006; Kapucu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations. This study explores organizational capital in two networks of networks for disaster situations (Boerfel, Lai, and Chewning 2010). In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the ‘Whole Community’ is practiced as well as contribute to the organizational theory about social capital’s effect on organizational and community outcomes.

JS-60.4

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resiliency is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individual members and the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to measure the availability and source of disaster-specific resources in individuals’ social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family results in extreme racial homophily of disaster social capital networks. Further, older family members are more often indicated as sources of financial assistance, which results in further pressure on their often limited resources. Finally, low-income and high-income respondents have similar disaster assistance networks, but high-income respondents will only use family for nonfinancial assistance and
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogeneous.

**Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism**

The concept of “fields” has a lively history. Starting as one of the crucial concepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of practice (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of modernity (Lukmann 1980, Foucault 1984, Luhmann 1984, Meyer/Jefferson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

**Modern Times: How Organizational Time Structures Influence Society**

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timeframes, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical ways which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.
imposed in the 19th and 20th centuries while (re)producing indifference, and re-
sulting in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred-
ible. Should a space which can bring back the current evolutions carried by the
acceleration of globalisation exist, the best option would be the one that carries
the resistance against this process. In a situation that is characterized by the
disqualification of the absolute and the passage of ‘sameness’ to plurality, there
should be no surprise to the fact that we are witnessing some actions towards the
reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations
(and the successive reorganisation of these relations) maintained by the catholic
church towards the nation. In an orientation to follow the sign of the times (if not
to transform it, at least to inhabit it), religion and the nation are both categories
which share with intimacy the avatars of legitimacy, that is the rebuilding (and the
partial over-imposing) of complex dispositions to organise the religious. What it
play around religion and the nation can only make sense when dealing with the
contemporary redeployment of these devices.

The Isomorphism of Practices and Discourses Between the
Corporate Realm and the World of Culture in the Flexible
Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a “resource”, as a way of generating economic value. It is in this context that arise no-
tions bringing together seemingly antithetical terms, as “economy of culture” and
“creative economy”. The study aims to show that in this new isomorphism of spirit”,
the world of culture seems to incorporate both practices and discourses from the
new corporate world, which in its turn seems to feed on the cultural sphere. In
this increasingly intricate intertwining between economy and culture, it seems to
be an isomorphism between the practices of companies of the flexible capitalism
and certain agencies of culture. Under the rhetoric of “organizational innovation”,
these agencies replicate business models such as the networking, horizontal, an-
ti-hierarchical organization, based on crowdsourcing and/or crowdfunding, etc.
In these new models of “cultural business”, content producers find themselves in
precarious situations by the promise of eventually monetize their creative capital,
they experience temporary and outsourced contracts. As Max Weber teaches us, each form of capitalism needs a corresponding “spirit”, so that will also be a discourse isomorphism between the world of flexible economy and the
sphere of culture. The discourses about the non-separation between profes-
no- nal and personal life, between work and leisure that flexible capitalism took
from counterculture is easily extended to current artistic and cultural activities
because such ideas refer to the historical separation between art and work that
founded the very category of “artist”. Through the analysis of similar practices
and discourses into the corporate world and in the cultural sphere, the study will
show how the precariousness has been rhetorically transformed into flexibility
and freedom and how, even under the rhetoric of alterness, culture in the
flexible economy has contributed to the reproduction of an unequal world.

Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social
policy analysis in the past. Nowadays the nature of inequalities and types of
inequalities are changing. The paper aims at analysing the inequalities in subjective
well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the pa-
ger: Does the welfare state reduce inequalities in people’s overall subjective
well-being? Does the welfare state reduce inequalities in people’s satisfac-
tion in various domains of life such as health or work-life balance?
2. The goal of the paper is to measure and compare, across European coun-
tries, inequalities in overall and domain subjective well-being (SWB) based
on subjective indicators of well-being. Doing so allows for the evaluation of
effects of policies that have been implemented in societies and to provide
information on well-being of different groups in the European societies. So
the first question asked is of diagnostic nature: what are the inequalities
of well-being of parents and non-parents among European countries? Are
there cross-national differences in the level of inequalities in subjective
well-being belonging to the vulnerable groups due to specific life
course stages (parenthood, marital status)?
3. The paper considers the broadly defined cross national, comparative analy-
sis of contemporary family policy as well as gender regimes. The paper will
assess if the cross-national differences in the level of inequalities in sub-
jective well-being of parents and non-parents can be related to the welfare
state regimes or to specific policies.

The Effects of School Racial and SES Composition on K-12 Reading
and Language Arts Outcomes: A Meta-regression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as
organizational features of schools interact with students’ individual characteris-
tics. The organizational feature of interest in this paper is school racial, ethnic,
and social class (SES) composition. This paper asks the following question: “Does
school racial and SES composition affect individuals’ K-12 reading and lan-
guage arts achievement?” To answer it, the authors conduct a metaregression of the US
social science literature published in the last 20 years on the relationship between
reading and language arts outcomes and the racial, ethnic, and SES composition
of the K-12 schools students attend. The authors employ a two-level hierarchical
linear model (HLM) to synthesize approximately 75 primary studies with 200 re-
gression effects. The tentative answer to this research question is a qualified yes;
students attending schools with concentrations of disadvantaged racial minority
and/or poor peers achieve less academic progress than those with otherwise compara-
ble composition in more racially integrated or low poverty schools. Preliminary
results indicate that attending a racially isolated disadvantaged minority school
has a statistically significant negative effect on reading and language arts achieve-
ment. This relationship is moderated by the size of the sample in the primary
study and by the way the independent variable (school racial/ethnic composition)
is operationalized. Effects vary for different racial and ethnic minority groups
and the effects are stronger in secondary compared to elementary grades. The
emergence and widening of the race gaps as students move through the grades
suggest that the association of racial and social class isolation with reading and
language arts performance compounds over time, illustrating how school compo-
sition effects reflect the dynamics of structural vulnerability theory.

MICELSON, ROSLYN* (University of North Carolina at
Charlotte, RoslynMickelson@uncc.edu)
The Role of Integrated Schooling in the Development of Social
Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-
ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US
and other multiethnic democratic nations this responsibility is complicated by
the growing demographic diversity among students, a diversity fueled by internation-
al migration. The central argument of this paper is that integrated schooling is
a necessary, albeit insufficient, condition for developing the social cohesion
that just, multiethnic democratic societies require to flourish. Using the United States
as a strategic case study, the paper synthesizes the US educational, social, and
behavioral science literatures on the effects of school and classroom racial, eth-
ic, and social class composition on short- and long-term academic and nonaca-
demic outcomes across the life course, with special attention paid to immigrant
youth. The preponderance of the extant US literature on the topic links integrated
schooling to improved academic and non-academic outcomes, and suggests in-
tegrated schooling is also a necessary, though, insufficient enabling condition for
fostering civic engagement in multiethnic democratic societies. Ironically, despite
this growing corpus of evidence, US schools are regressing by race, ethnicity,
and/or social class. To be sure, because of international and internal migration
trends, the nature of US school segregation has changed so that today it is much
more ethnically complex than the Black-White or Brown-White binaries of the
past. Nonetheless, studies indicate that today, as in the past, schools with concen-
trations of poor disadvantaged minority students generally fail to educate their
students. The paper discusses the implications of its findings for 21st century edu-
cation in the US and other multiethnic democratic societies (especially OECD
countries), facilitating the understanding that the demographic diversity and
international migration pose for delivering educational excellence and equity to
all students.

Property, Patrimony and Territory: Autochthony and the Politics of
Immigrant Place-Making in Peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthonous framings to unravel the socio-spatial transformation underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations are experienced by the former as imposed by unequal conditions of exchange, power relations and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarious livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

MIDHEME, EMMANUEL* (University of Leuven, emmanuel.midheme@astro.kuleuven.be)
The Mismatch Between Planning Practice and ‘Actually Existing Urbanisms’: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and proliferation of a class of urban poor. Moreover, the phenomenon is closely linked to empirical social psychology. Redefining Weber’s ethic of responsibility linked to empirical social psychology. Redefining Weber’s ethic of responsibility as a framework for professional ethics

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and ends of one’s actions. Weber contributed to neoliberal development policies in Kisumu, the increased presence of street traders in urban public spaces has however fomented a ‘clash of cultures’. On the one hand are private property interests (of capitalist investors) and the planners’ modernist vision of an orderly city, while on the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses as devised by municipal authorities and the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders’ claims to urban public spaces. The central argument in the paper is that planning is not only a street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu, official planning practice is still steeped in prescriptive ethos aimed at producing the ‘modern’ city. There is thus a mismatch between official planning policy and the practical realities of what Shatin calls ‘actually existing urbanisms’. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

MIKAMI, NAOYUKI* (Hokkaido University, miki@high.hokudai.ac.jp)
Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of “National Debate” after Fukushima Accident

This paper explores the possibility of public participation in decision-making on nuclear energy policy through a case study of “National Debate” on energy choices after the Fukushima accident in Japan. Japan has been pressed to fundamentally reform its national energy policy in order to break away from the excessive dependence on nuclear energy. In the summer of 2012, the DJP (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DJP government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the deliberative poll through the prism of the deliberative poll, approximately half of the participants supported the complete phase-out of nuclear energy, and it was reflected on the government policy decision to some extent. Some of the major findings from the participant observation of the deliberative poll are as follows: first, the public participation and deliberation substantially impacted on the policy formulation, producing a complementary effect to a wide range of direct actions such as demonstration and public comments. Second, the deliberative poll provided ordinary citizens with opportunities to question the existing authority of experts and make informed judgments about national energy policy. Third, however, the result of the deliberative poll was abandoned once the conservative coalition took power at the end of the year, and there still remain many challenges

Family and Non-Family Support during the Transition to Parenthood

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Even-son and Simon, 2005, Umberston et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahneman et al., 2004) is in conflict with parents’ leisure, free-dom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003).

Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, ad-vise and information, as well as material support, see: Bengtson, 2001, Chan and Ermisch, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviate the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers’ wellbeing.

We use the Swiss Household Panel to observe a sufficient number of transi-tions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2).

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

MIKUCKA, MALGORZATA* (Higher School of Economics, mikucka.m@gmail.com)

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States sug-gest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corra et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000; Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular, I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic special-ization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Mul-tilevel regression allows me to distinguish between the cross-country differences and the within-country differences across time. Results show that the life satisfaction gap between the married and the never married decreased over time at a rate that could close the well-being gap between the married and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed form configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond its boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a litera-ture, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support net-works, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be addressed and asked for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample – 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuanian.

The investigations were accomplished in a frame of the four years research project “Trajectories of family and non-family networks: intergenerational di-mension”, financed by the European Social Fund (ESF).

Changing The Subject: Occupy Wall Street’s Achievements and Prospects In Comparative Perspective

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Eu-rope, and soon after its critique of inequality gained traction with the slogan “We Are The 99%,” it helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the re-sults of a representative survey we conducted of New York City Occupy Wall Street participants in a May 2012 protest march, we analyze the movement’s character-istics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such move-ments before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. the case of Mexico

The paper is based on a national survey that will be made in Mexico next No-vember by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the conscious of free-dom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the medium level, it will explore two dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic...
and political). At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with both patient outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

Dark Shades of travel: Death Tourism with its Legal and Social Implications

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of orchestrating travel that culminates in assistance to end one’s life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing digital media, the paper nonethless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was adverse implications for sustainability. While fertility and survival are high, traditional patterns of land inheritance can lead to the progressive sub-division of land with long-term adverse implications for sustainability. While inheritance in Kenya is male-dominated, the paper nonetheless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was found to be the reality for the overwhelming majority of the participants in the study. The practical implications of this for safeguarding the property rights of women and their children is discussed.

Mō Tātou: Doing It for Ourselves. Developing Indigenous Māori and Pacific Marine Scientists in Aotearoa / New Zealand through Tino Rangatiratanga (Self-Determination)

Persistent ethnic disparities in tertiary success have been experienced by indigenous and minority students globally, especially in the sciences, and more so at postgraduate level. Nevertheless, Te Rōpu Äwhina (Äwhina), a programme based on the Māori (indigenous people of Aotearoa / New Zealand) concept of whānau (extended family) at Victoria University of Wellington (VUW), has substantially increased the number of Māori and Pacific undergraduate and postgraduate students in the science, engineering, architecture and design disciplines. The kaupapa (goal) of Äwhina is to produce Māori and Pacific scientists who contribute to Māori and Pacific community development and leadership. An important Äwhina initiative, the Äwhina VUCEl Incubator (AVI), is based at VUW’s Coastal Ecology Laboratory (VUCEl). The kaupapa of the AVI is to develop outstanding Māori and Pacific marine scientists capable of advancing scientific understanding and, critically, contributing to leadership and development in their communities in meaningful and significant ways. Māori and Pacific marine science capability is built through direct involvement in research that benefits those communities. Key aspects of our work and kaupapa are exemplified by two recent activities discussed in the presentation: (1) The Äwhina Summer Cybrospace event where
years 12 and 13 rangatahi (youth) from Ngāti Kahungunu and other iwi (tribes) and Āwhina local community clusters participated in hands-on activities including marine laboratory and field-based activities, and (2) a project developed by Ngāti Kahungunu iwi Incorporated (NKIL: the tribal entity for Ngāti Kahungunu) in partnership with the AVI, to increase Māori capability around marine resource management and provide pathways into marine science for Ngāti Kahungunu rangatahi. We describe the partnership approach taken to develop the project with NKIL, evaluation of the Summer Cybospaces event, and research being undertaken to demonstrate that Āwhina and the AVI are having a positive influence on Māori and Pacific success in science-related disciplines.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx. 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care has remained very low. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequality in post-separation parenting responsibilities leaves many mothers reliant upon welfare payments. This study included 'tone' fathers and mothers – 'primary time' parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The socio-political policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in 'doing family'. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own 'rights' while mothers shoulder a disproportionate burden of everyday 'responsibility' for children (even in 'equal shared care' situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within 'intact' families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan’s ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo’s recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourse in international tourism promotion amongst these organizations. The appeal to support both Japan’s and the disaster-region’s recovery through tourism activities was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed visual and textual methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggested the central importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their usage by participants point to a complex interweaving of absences and presencees cross-cutting the private and public spheres, (and often reflected and reproduced by academic disciplines). In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that divert attention from the structural inequalities that often underlie them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

‘Taking Photos? I Don’t Do That Anymore’: Critiquing the Photo- Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (Mitchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects (Luttrell and Challen 2010: 197). Little has been written, however, about how participants regard or (dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age www.livablelives.org.uk. The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne’s diary method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audial (sound diaries) or textual (written or text). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making method and an exploration of its limitations.

MILSTEIN, DENISE* (Columbia University, denicham@gmail.com)

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged artists, and members of musical ensembles, were not only restricted in their ability to produce political messages, but also in their ability to produce music that could be used as a tool for sustaining anti-authoritarian identities and supporting mobilization. Countercultural re-actions attacked authoritarianism from a different angle, challenging established national identity by fostering foreign youth cultures and thereby also threatening the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing new forms and political identities. This paper examines these three cases: the collective in Uruguay, the local, national, and international dynamics that impacted the Brazilian music scenes, and the patchwork pattern of stable and impoverishing neighborhoods. The author argues that this uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise, this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a small-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families, the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead, 20 years after there can be observed a small-scale patchwork pattern of stable and impoverishing neighborhoods. The author argues that this uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise, this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families, the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead, 20 years after there can be observed a small-scale patchwork pattern of stable and impoverishing neighborhoods. The author argues that this uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise, this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author argues that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Recent trends recognize national discourses redefine the relation with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the nation. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how public opinion is tolerant of them. However, the public image of the USA's liberal modifications help to implant a multicultural ethic on its national image while Japan's transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

MINATO, KUNIO* (Ritsumeikan University, minato920@gmail.com)

Nationalism, Exclusivism, and Purism: An Analytical Description of National Identity in Mongolia

In recent years, Mongolia has witnessed the rise of ultra-nationalists and even neo-Nazis. Their campaigns pillory foreigners, especially Chinese and Koreans, as threats to the “purity” of the nation, and are often accompanied by vandalism and violence. Their target is not only limited to foreign people and enterprises but also to their fellow citizens. In light of these trends, researchers have started to question the role of citizenship in national identity. This paper aims to fill this gap by examining the role of exclusivism and purism in the construction of national identity.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, the public image of the public opinion in Mongolia is conflic ting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists is gaining popularity, against the backdrop of public fear that Mongolia, the country with so small population, might be easily swallowed up by the massive influx of foreign people, investments, culture, and others. Meanwhile, others explain that these ultra-nationalist groups do not represent the majority of Mongolian people, and that their activities are still in the margins. Which is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of issues on the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of “national purity.” Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-socialist ones. This study aims to explore and discuss its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organizational systems. The new strategies require the incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relations. The paper also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space, but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city's largest public spaces, which are mostly fenced off and where entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skateboarding, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

MIRANDA, DANIEL* (Faculty of Social Sciences, P. Universidad Católica de Chile, damiranda@gmail.com)
Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimize the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Schlozman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/ strengthen the impact of the social background on student s’ citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as demographic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ and school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities, civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Leisure Unites and Strengthens Family Bonds — A Case Study on Families That Spend Quality Time on Holidays Together

Family will always continue to remain in one form or other as the basic building blocks of society. Todays world is one that is riddled with competition deadlines stress. With high profile jobs to be managed and education degrees to be attained by children to secure their future it’s so important that families make quality time for leisure.

The Researcher tries to unfold the following objectives:

*To identify the growing problem of families dispersed due to job/studies constraints
*To identify the importance of making time for leisure to be together
*How quality leisure time binds groupsand contribute to bonding and unity
The impact of leisure on the family life today and the need for families’ world wide to do the same

With the above objectives in mind the researcher is analyzing the role leisure plays in building tight family bonds
The study will select few cases where girl students who reside far away from homes in hostels but are still close to their family members and share a strong bond.

Migration and Gender Inequality ---a Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small business, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize available capital productively. With the expansion of microfinance facilities credit is also now available to many of these small business, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women’s empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The Researcher tries to unfold the following objectives:

*To identify the growing problem of gender inequality in cities.
*To identify the need for micro financing.
*How micro financing contribute to support and empowerment.
*How marginalized women’s lives are impacted by micro financing and the importance of replicating this phenomenon.

Exploring a Model of Inter-Disciplinarity Based on Collective Action Theories

The objective is to develop a theoretical model to analyse and facilitate trans-disciplinary dialog and collaboration between art, science, engineering and humanities (SEAD). The model is inspired in key concepts taken from sociological Theories of Collective Action, which usually are applied to analyse different kinds of collective actions. We propose that these theories can be pertinent to understand the interaction between the main dimensions, agents, resources, contexts and strategies of trans-disciplinary action.

The hypothesis is that interdisciplinarity action can be considered as a form of collective action according to the following definition: Collective action is “the result of a social action (or collective challenge) carried out by the set of formal and informal interactions established between (1) a plurality of individuals; collectives and organized groups and (2) other social and political actors with which they come into conflict. This conflict is triggered by the appropriation (of), participation (in), and transformation of relations of power to achieve social goals, and above all, through the mobilization of certain sectors of society” (Tejerina, 2010).

When collective action forms groups it is crucial to understand how these collective entities are shaped by means of discussions, negotiation and re-negotiation processes and not take their existence for granted. There is a need to develop a typology of different kinds of interdisciplinarity collaboration in which the emergence of that structure it are reflected. This paper will focus on the key elements to construct a theoretical model for interdisciplinary action and intend to contribute to improve the vision on how interdisciplinary actions change knowledge production and how the aims, motivations, and interactions around interdisciplinary problems synchronize and find resonance (or not) in an environment of limited resources and changing opportunities in which there are collaborators and opponents that need to dialog. Supported by the National Science Foundation under Grant No. 1142510.

Methodological K/Not: Designing Research on the Enforcement of Labour Standards

This paper takes methodological considerations in designing a research project which aimed to challenge the enforcement of labour standards in Ontario, Canada. It documents the discussions of a multi-disciplinary team, situated in both universities and community settings, which met over a three year period to develop the project design. Discussion of methodological possibilities often began with “nots”; that is, consensus on methodological approaches the team collectively rejected. Out of these discussions emerged suggestions and approaches through which we navigated dilemmas in research design. Three such “knots” are presented in this paper, specifically: (i) epistemological tensions around mixed methods and the politics of mixing, (ii) the attempt to capture the relationships between policies and their practice/enactment, as well as research and its impact (iii) the need to develop interviews which both establish respondents as knowers, and simultaneously focus on that which is unsaid/normalized in life history accounts.

New Gendered Practices in Auxiliary Services in India’s High Tech Firms

Abstracts are organized by first presenting author's last name.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

**Rethinking Pharmaceuticalisation from the View of Japanese Context**

Medication is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as the process by which social, behavioural or bodily conditions are treated as the need for treatment, with medical drugs by doctors or patients (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousands hits for “pharmaceuticalisation” in Google, and only seven for the topic of “pharmaceuticalisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in sociology, the discussion of Japan in particular is limited, and in this report, by considering the reason for lack of discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalising pharmaceuticalisation without the point of social system would be hard. However, given that a lot of Japanese people use dietary supplements, pharmaceuticalisation might affect individual healthisation. Therefore, by using pharmaceuticalisation that is associated with individual healthisation and social system, it might be available to analyse social phenomena of pharmaceuticals better.

**Reclaiming the Skin: The Tattooing and Piercing YOUTH Revolution and the Body-Skin-Mind Problem**

All modern countries have recently experienced a “tattoo Renaissance.” This has become an essential part of what is here termed a *movement for self-rights*, the main driving force of which have been adolescents and young adults. Although tattooing and piercing, even in their more extreme forms, are generally not regarded as signs of social deviance, they are still viewed as “self-sabotage” since they not only pose a threat to physical and mental health, but also matter in recruitment for a range of jobs, especially those involving a business brand.

This paper examines the relationships between self, social roles, tattoos as self-brands, and business brands. Only after attention became directed to the employment problems that people with extensive and visible body modifications sometimes encounter did it became obvious that an individual’s skin is a contested territory that is as much a part of an individual’s body as it is a part of the role, over which the employer rules. Tattooing as a social phenomenon is thus an appropriate object for the study of the *individual-society* controversy, where the battle for the primary self, which is as much individual as it is social, becomes a form of rebellion in the name of self-rights and the reclaiming of the skin. The revolutions of previous centuries may have liberated the body, and even the mind, but they never included the skin.

Studying tattooing as a new social phenomenon, coupled with new developments in psychoanalysis (Anzieu), may radically advance the theory of self. The body-mind problem remains a philosophical problem because philosophy has not thematized the third party in the relationship, which both divides and unites them—the skin. The body-skin-mind problem thus provides a new starting point and philosophical platform for socio-psychological discussions of self.

**Institutionalizing Community Participation and Sustainable Irrigation Management: A Case Study from India**

Community participation has become a key method in contemporary development projects. Most of the projects have given emphasis on community participation. Learning through experiences for proper operation and maintenance of irrigation systems and supply of irrigation water in adequate quantity according to a farmer’s need on time in a predictable, reliable and equitable manner, decentralised governance of irrigation infrastructure have recently been emphasised as an essential pre-condition. Centre as well as some States in India has adopted various Acts to encourage farmers’ participation in irrigation management. Using anthropological techniques, the present paper attempts to see the villagers’ participation in traditional system of irrigation management among the tribal communities in kalahandi district of Western Orissa. It also critically examines the intervention of new institutions in irrigation management and their impact on age-old traditional system of community management.

It is observed in our study that the collective action or community participation was quite prevalent in the traditional system of irrigation management of tribal communities. The local knowledge, community cohesion, social capitals, traditional practices, values and beliefs were playing the most important roles in the traditional system of management. The government sponsored Water Users’ Association, which is not devised based on the local culture and needs of the local tribal communities, is not able to evoke their participation in the Water Users’ Association. The culture of ignorance, drinking alcohol, feeling marginal, poverty, illiteracy, the improper co-ordination between irrigation officials and beneficiaries, physical structure of canals, dominance of head reach, higher caste large farmers have influenced the participation of marginal farmers. Moreover, some of the factors like social norms define domestic works and childcare as women’s work and social perceptions discount women’s abilities and opinions restrict women’s participation in WUs.

**MISHRA, SHASHI** (Ramniranjan Jhunjhunwala College, avms@godrej.com)

**Gender Inequality and Education for Women**

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society’s women have lower status, no access to education, less food and no health care. In the work longer hours, have lowered incomes and little or no access to ownership of property. Normally in developing countries, the proportion of women literates is less than that of literate men.

Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors’ where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Due to the heavy workload this heavy workload leads to high rate of absenteeism and drop-out of women from literacy activities. Cultural patterns or customs also force negative attitude to daughters’ education. For parents, investing in girls’ education is perceived as a waste of time and money, as after marriage she will be leaving her parents and live with her husband and in-laws. Further women in general are paid less in labour market.

Present study will explore the dropout’s girls from schools and how it affects their future life and in turn loss to nation.

**Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E-Health**

Abstracts are organized by first presenting author’s last name. * denotes a presenting author.
“Health for all” is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the peoples of rural and remote areas of India who are not able to afford good healthcare facilities.

San Francisco and The New Economy Of Desire

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the cultural specificities in which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by the nomens like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile reality studies, sources on urban gentrification, and digital media investigations this paper provides.

Reconsideration of Isigami Research By Aruga Kizaemon: Based on the Tutiya Takao's Field Notes

We aim to reexamine both the distinguished monograph “The large family system and the Nago (serf) system at isigami hamlet, Ninoohe county, Nanbu district” written by ARUGA Kizaemon in 1939, who is one of the founder of Japanese rural sociology, and some field notes and documents by TUTIYA Takao, who is a professor of economic history and participated in this research as a coworker but withdrew from it in midstream.

In this monograph, the serf system which was present at Isigami was investigated and analyzed in detail. From this monograph, ARUGA was going to form the “Douzoku(cognate groups) theory”, which is the base structure of Japanese society.

However, when we read this monograph, we feel Aruga did not pay enough attention to the lacquer ware which a head family of Isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the charcoal was important for the cash income, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?

On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA. In this report, we try to consider the following points in reference to these notebooks and other documents. 1) Why did TUTIYA abandon a joint investigation? What was the critical issue for him? 2) In this critical issue, what position does the data of the lacquer ware business occupy? 3) Can we see something new when compared to the monograph by ARUGA?

Through these questions, we try to relativize the Douzoku theory and to examine the dispute over the Japanese capitalism.

MISURA, RAJESH* (University of Lucknow, rajeshsocio@gmail.com)

From Agitation to Political Autonomy: Interlinks in Three Movements in a Northern Province of India

This paper attempts explore the impending continuities in people’s mobilization by identifying the inter-linkages in three contemporary movements in a northern province (Uttarakhand) of India. In an empirical study of the three movements; the movement against felling trees (chipiko i.e. hugging trees), the movement against alcoholism (Sharab-bandli) and the movement for a separate hill state, it has been found that these movements are entwined in terms of issues, leadership, organizations and ideologies. The present paper highlights the role of the middle class in contributing to evolve and articulate the issue/demand of the protection of a customary right of the local populace into a demand of political autonomy and the right to self-development of a regional community. Secondly, the paper focuses on pathways of the growth of specialized organizations from a spectrum of a people’s groupings. Thirdly, the paper explains the nature and role of leadership and intelligentsia in creating and articulating symbols, discourse and narratives of a distinct identity. Furthermore, it also pinpoints the role of middle class youth in dissemination of partial and total ideologies and new sexual ethic and is changing moral patterns about monogamy and partner.

Net-Base Theory of Social Capital

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theoretic theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social capital
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the 'net-base.' Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and grids embedded in the individual social structure. Network research by Luhmann makes it possible to locate 'social capital' in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

MISZTAL, BARBARA* (University of Leicester, bms50@le.ac.uk)
The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals' influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through personal communication and their connection to the audience. The paper introduces the concept of 'net-base', which is defined as the set of all the people who share a particular topic or idea, and how it facilitates trust-based social encounters. It is argued that in today's society, increasing external regulation of behavior is leading to an interconnection of social networks, complexity of the system and the need for new ways of defining selfhood and otherness and visions of the past and the future. The paper's theoretically informed empirical exploration of the intellectuals' prime function, that is, the elaboration of these symbolic configurations, focuses on the fate of East European intellectuals who assumed the role of the creators of the post-communist state. These intellectuals turned politicians did not even dream of trying to prove that they could 'live in truth', approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectual's role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underly structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

RC20-356.1

MISZTAL, BARBARA* (University of Leicester, bms50@le.ac.uk)
Trust and Modes of Cooperation

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivities gain – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today's society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today's society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices, and increase of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal regulations and informal means, such as trust, to secure conditions for social beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.
issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan’s political system acts as a second-order observer of these observations. By understanding political social systems which act to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan’s economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been driven by larger global and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little influence on the use of alcohol and tobacco than on the use of illicit drugs. The quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People’s Perception in the Perspective of Community Policing

Apposite police-community relationship in India is still in a nascent stage owing to the assorted attribute of the Indian society. Caste, communal and religious discord acts as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people’s perception of police-community relations in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by large cities in the capital cities of north east India have been successful in bridging the gap between the police and the public. The north east of India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has suffered discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community development programmes of which community policing is surely a must. In this regard, the findings of the present study can contribute in analysing the nature of police-public relations and the impediments to stronger police-community interactions in the north east of India.

I Was Not Really Imagining Myself in Terms of Becoming a Big Scholar or Academic... Academic Mothers: Power and Powerlessness in Academia and in Homes

Power and powerlessness are two poles of the continuum of life that Academic mothers inhabit by virtue of simply playing these roles in convergence with each other.

There’s is a double edged problem. Traditionally women are denied the thinking and reflecting acumen and are seen as substandard contributors to the academic discourse. Interestingly, mothering is defined in many cultures as a full time responsibility and one that is the most treasured attribute of women. One the one hand, thinking and emotionality are seen as opposed traits that logically imply academic mothers to be lacking in the basic requisite of mothering, on the other, women’s intuitive emotionality is seen as coming in the way of a scientific approach required of women as Academics. This study seeks to understand women’s experiences, positive and negative in terms of transgressing these straight jacketed boundaries and combining the role of mothers and academics in India, Brazil and South Africa and seeks to explore how strong traditions of family values in these cultures influence and impact women in the Academia. Some of the questions it seeks to address are as follows:

In what ways do women live these roles which are very demanding and challenging, also satisfying and fulfilling? What are women's obstacles, what are their strengths? How do academic mothers do a different kind of academics, maybe or a different kind of mothering, so as to satisfy their aspirations from these two roles, two lives? What are their tensions, how do they resolve them, what kind of adaptations do women make? What kind of a philosophy on life and work do these mothers and academic mothers live? Do they evolve from living these different responsibilities simultaneously? The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15 women Academicians in India.

Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Therefore, they attempt to illustrate an unprecedented harmful doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace social investment strategy. A large gain in social benefits seems possible with the rethinking of an inter-generational redistribution. Yet, social investment strategy has been weak both in discourse and in practice. Although the Democratic Party of Japan (DPJ) government (2009-2012) pursued some policy innovation in the area of childcare and youth programs under the slogan of “children first,” a paradigm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in Japan despite the fact that its social and economic conditions should provide a fertile soil for such a strategy. We shall explore the political conditions which preclude the full-fledged development of the ideas and practices of social investment strategy. In so doing, we show how the dominant force of neoliberalism constitutes a stumbling block in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and “career education” from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statism, and the persistence of traditional gender roles.

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today’s highly informative society.

At a socio-economic dimension, Big Data (and data-mining technology) is expected to rediscover the information marketplace as a rich untouched field, and that it will produce industrial reorganization and activation, just like fossil fuel (and mining technology) accelerated the Industrial revolution in the 20th century.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing.

At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to clarify people's decision making and mechanism of action selection, and help predict people's behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people's free will and humanness, and may seriously change the relation between an individual and a society.

These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today's antinomies of information technology could be considered by using Bourdieu's sociological methods of overcoming dualism.

The Effects of Child Birth on Marital Satisfaction in Contemporary Japan

Marital satisfaction has been studied in family sociology all over the world. In Japan, many empirical findings regarding the determinants of marital satisfaction have also been accumulated. However, most prior researches in Japan have limitation of data quality because they use cross-sectional datasets or panel datasets without longitudinal data. Recognizing the relationship between child birth and marital satisfaction by longitudinal analysis would be important for Japan in an era of low birthrates and high rate of unmarried people.

We examine how child birth, years from marriage, amount of time of conversation with spouse, occupational career, and socio economic status affect the levels of marital satisfaction. In this study, the effects of marital satisfaction on child birth points are whether or not the finding that first child birth just has an impact on marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

Datasets from the National Family Research of Japan, 2008-2012 Panel Study (NFR-JP0812) are used. Fixed effects regression models are applied to analyze that panel datasets.

Our analytical results show that the expected relationship between child birth and marital satisfaction. As the same with findings by prior research, first child birth has negative effect on marital satisfaction while second or later child birth do not necessary affect. Then, we can observe the significant interaction effects between gender and first child birth on marital satisfaction. Male respondents are more likely to decline their marital satisfaction by first child birth rather than female respondents.

These findings indicate the necessity of detailed research on the changing of life, behavior and attitude by first child birth among Japanese men. We discuss the implication of gender difference in the fluctuation process of marital satisfaction.

The Formation Process of the “National Orthodoxy” Regime in Contemporary Russia

Through dramatic domestic and foreign changes over the Soviet Union's extinction, Russia has historically reappeared on the world's stage. Although contemporary Russia does not have a firm unification principle, a “National Orthodoxy” regime is being formed. The “National Orthodoxy” corresponds to “the state religion” as the core element of national unification. The Russian Orthodox Church should unify with the people of Russia and is a state religion“ as the core element of national unification. Separate from “the National Orthodoxy” regime is being formed. “The “National Orthodoxy” corresponds to “the state religion” as the core element of national unification. The contemporary Russian nation-

Doing Occidentalism through Margaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular cultures. Japan is characterized by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (JS-61.1). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationalism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/ periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the country with the highest number of anime series broadcast on television outside Japan (M. Pellitteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be explained through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984).

Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the margaesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that in the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles.

My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka’s performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and on the stage. Even on women-only stages, there is an unequal construction of gender.

I will also discuss the audience’s approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society's gender consciousness.

MIYAKAWA, SHINICHI* (Soka University, hgwpdp816@yahoo.co.jp)

Musicology in Post-War Japan: German Influence and Social Context

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan.

Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicians was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Dahlhaus’s social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the ‘great German music’ from the country’s guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

**New Urban Childhoods: Globalisation, Socialisation and Urban Informality on Children in Ghana**

Globalisation has fuelled rapid and unprecedented levels of urban expansion. The consequences of which for children’s socialisation have been profound. Urbanisation without industrialisation is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear to be cause and symptom of lasting economic and social decline. It is emphasised here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do this, the paper considers the experience of structural adjustment in Ghana – a ‘poster-child’ for globalised market development strategies – and traces through its impact on urban development in terms of ‘informalisation’ (Meagher 1995) and its corollary the growth of wageless life (Denning 2010). Particular attention is given to the implications of these developments for children as both dependents and workers, and the impact of this on processes of socialisation. As structural adjustment finds a parallel in processes of domestic re-regulation, this paper argues that children’s value to their household is progressively being re-configured. The consideration of the informal – activity outside the regulative ambit of the ‘formal’ – is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of ‘slums’ and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

**The Effects of the Ethnic Business Enterprise on a Local Shopping Mall in the Central Tokyo**

This paper is concerned with the way the development of global migration has made its impact upon Japan’s urban communities. Nowadays, in Japanese metropolitan cities it is common for individuals from various backgrounds to be found living together and in recent years the rate of such interaction has been growing constantly. The major focus in this paper will be upon the Ikebukuro district, one of the major transportation terminals in the central Tokyo. Previously, the district surrounding the City centre was descending into urban decay as this community confronted a serious shortage of appropriate local labour combined with its ageing population. Since the late-1980s, this district has attracted newcomers, among workers in the 20 to 30 age-group, from foreign countries owing to its business development, offering many jobs especially in service industries. Subsequently, and particularly since the 2004-2005, the district has become the subject of media investigation of plans to establish a new ‘Chinatown’. But this is a new kind of ‘Chinatown’. Here we do not see the traditional Chinatown gates that can be seen elsewhere in Japan’s other major Chinatowns, such as Yokohama. Nor do we see the concentration of Chinese shops, though there is that background of Chinese business development that is evident in selling Chinese cuisine and groceries. Rather, the unique character of this area is ascribed to the numbers of Chinese commuters who travel to and from the precinct, as well as to the various free Chinese newspapers which inform Chinese residents of applications for visas or accommodation, and apart from various skills are there a lack of backdrops of fashion or cuisine. This area is the place for publishing the many Chinese community papers with considerable circulation, and hence this district has become the location of an ethnic town for commuting compatriots.

**The Sociology of Food and Consumption: Empirical Evidence from Soon-to-be Parents in Japan**

Japanese society has undergone tremendous transformations in recent years. There is the change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the-field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation based services provided, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

**Institutionalization Among Older Adults in Japan**

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver’s capability, rather than the older adult’s declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have been often examined from the perspective of its impact on risk for institutionalization. Using ordinal logistic regression, we analyze the claims data on LTCI service use in one city in Japan from 2000 to 2006. The preliminary results show that: 1). after the launch of LTCI, the caregiver’s preference for services is the significant risk factor for institutionalization, among other predictors related to risk of institutionalization, such as living arrangement, characteristics of both the care recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. Despite the home-based services provided, the key risk for institutionalization is the primary caregivers’ preference—whether they prefer more involvement of LTCI services or not, and whether they prefer the services at home or in institutions. Therefore, we conclude that the LTCI services have a double-edged effect on family aging care, and the family has great influence on whether the older adult will be institutionalized or not.
The Sleepy, Slow Moving and Traditional Indian Society Which Has a Historical Past of Several Thousand Years Is Undergoing Through a Process of Rapid Social Change and Unprecedented Social Transformations. The Biggest Change Has Been the Emergence and Strengthening of Democracy. While People in Several Countries All Over the World Are Still Struggling and Clamoring for a Democratic State and Institutions, the Indian Citizens Are Exercising Their Democratic Rights Strongly Whenever Occasion Arises. The Civil Society in Turn Is Also Becoming Stronger and Empowerment of the Marginalized Sections of Society Such as Women, Tribals, Dalits and the So Called Backward Classes and Communities Is Also Taking Place. Indian Society Moved from Three Percent “Hindu Rate of Growth” to Eight Percent in Recent Years, Which Was One of the Highest in the World. This Unprecedented Economic Growth Not Only Led to the Emergence of a Massive Middle Class But Also Created Lot of Confidence in the Masses about the Capability and the Strength of the Indian State as Well As Their Own. However, This Sudden Economic Growth and the Consequent All Round Development While on the One Hand Raised All Round Prosperity and Riches, It Also Led to the Growth of Inequality in Society and to the Marginalization of Certain Other Groups Which Until Recently Did Not Feel Marginalized. It Is Commonly Said That While the Rich Are Becoming Richer, the Poor Are Becoming Poorer. Such a Situation Has Also Led to the Increase of Corruption in Societal Life and Increased Political Marginalization of Certain Groups Which Until Recently Did Not Feel Marginalized.

The Middle Eastern Origins of Dictatorship and Democracy

How do we assess Arab Spring/Occupy almost 3 year later—how do we assess the movement? The answer to this question is not straightforward. There are several factors at play, including the historical, social, and cultural contexts of the region.

The study is based on a sample of twenty couples living in various family configurations, with the aim of understanding the unique challenges faced by each family unit. The research employs qualitative methods, including interviews and focus groups, to gather in-depth insights into the experiences of these couples.
Living Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguérout, 2010). The major-nty of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class. Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds in the South African provinces. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live inde- pendently. Another factor is the cultural and subjective attitudes towards inde- pendent living that the young people share with their parents (Hamel et al., 2011).

This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. It then looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the diffi-culty of forming a nuclear family life is a major obstacle for young people’s entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government insti-tuted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion lead-ers still view the quality of education in South Africa as deficient, as dis-advantaged, as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring frame-work through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises of the generic mentoring framework, can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of sustained transformation which gravitates towards whole school development and culture that envisions quality education for all.

Exploring the Socio-Economic Coordinates of Tourism: A Case of Kashmir

The state of Jammu & Kashmir being the abode of Himalayas represents an epitome of natural beauty and, hence, has emerged as one of the top most tourist resorts of the world. The tourism in states tourism sector in the form of nature, cultural, adventue, pilgrimage, leisure tourism etc. has attracted tourist of every nature irrespective of space as a result of which, this sector has been the mainstay of state’s economy. Pertinently, all throughout the turbulence when the valley was reeling under the cycle of violence and when life virtually went into sabbatical, this sector, especially through the pilgrimage tourism remained the only viable option with the people to relieve themselves from the imposed aganies. Further, in the absence of a well established private sector and given the fact that this sector has been the main agency of employ-ment generation, a complex sociology of tourism has shaped up in the state involv-ing administration, hoteliers, houseboat owners, etc. and the tourist. Unfortunately, the unscientific management and irrational interaction of the public with such tourist places has jeopardized their very delicacy which, in turn, immensely harmed the states otherwise rich diversity of flora and fauna. This has generated a need towards a proper organizational structure in order to sustainably harness the tourist potential in the state. In the absence of inadequate infrastructure and specific and sound in- terventional measures at place, the state couldn’t secure properly at many counts be that guest-host relationship, conforming to the environmental norms or drawing the expected dividend. This paper endeavors to explore the sociology of tourism in Kash-mir with a due focus on socio-economic dimensions of tourism besides highlighting the need towards the eco-tourism in the state so that the tourist potential can be optimally realized that too, on the sustainable basis.

Cultural Capital and Educational Inequality: A Lesson from India

Cultural Capital and educational inequality: a lesson from India

MOHAMAD, BYASA* (Tata Institute of Social Sciences, bitmitb@gmail.com)
THAKUR, SAI (Tata Institute of Social Sciences)
CHOUBEY, SHWETA (SRP Samajik Sansthan)

Education is supposed to play a major role in bridging the gap between the haves and the have-nots through generating cultural capital. In case of third-world countries such as India, the quality of education that is provided to the poor has been grossly inadequate for the purpose. As a result the gap between the elite and the masses is increasing every passing decade. With liberalization of economy in India since 1990s, the state is increasingly withdrawing from welfare sectors, and therefore, the quality of education has suffered. While the elite de-pend on the private schools, the rural and the urban poor depend on the poor quality of education in government schools. In terms of content of the syllabus and the pedagogical methods adopted to teach them, schooling is not a pleasur-able experience for the children coming from disadvantaged backgrounds. Thus they drop out from the school or are poorly qualified to receive higher education.

While this is the dark reality, there is a ray of hope as some of the organiza-tions have stepped in to help tackle the situation primarily through alternative pedagogical intervention. These new methods of teaching science and mathe-matics etc. have helped the poor students to perform better in schools and get motivated for higher education. In fact, the program was adopted by one of the provincial governments in all schools, but later discontinued due to pressure from World Bank.

Analysing field-based data, the authors argue that these methods, though not the only solution, are one potent way of providing an enabling platform for gen-eration of cultural capital for the rural and urban poor to compete with the elite students.

Assessing the Measurement of Science Knowledge in the Wellcome Monitor Surveys: An Item Factor Analysis

The Wellcome Trust Monitor Surveys (2009 and 2012) are fielded to two samples: adults (aged 18+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with biological sciences: adults (aged 18+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with biological sciences:

- MOISE, PASI* (National Institute Health & Welfare, pasi.moisio@thl.fi)
- LEHTELÄ, KIRSI-MARJA (National Institute for Health and Welfare (THL))
- MUKKILA, SUSANNA (National Institute for Health and Welfare (THL))

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013: Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased even more in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty risk rate. The focal point in our analysis is the role of tax and benefit systems in poverty reduction. The analysis is based on the microsimulation models of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have reduced the poverty risk rate. Changes in taxation had a considerable larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Medicine. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35-49 and 50-64). For low scorers, the reverse pattern holds true, and for young people, 14-16 year olds were high scorers while 17-18 year olds were low scorers. A possibility is that a given knowledge item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age-related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate science knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subpopulation. The second stage is to look at evidence for DIF/measure non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

Examining the “New Normal” and Inequity in the Housing Transitions of Young People in Canada

In Canada, young people’s housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the “new normal” in the transition to adulthood. However, young people from lower class backgrounds, those who leave home, and those who exit child welfare systems at the age of 18, often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on young housing transitions and the housing policy environment. The second part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these young people depend upon and influence housing markets, services, and supports, and discuss how these types of housing trajectories contribute to the structuring of inequity over the course of the transition to adulthood.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

Included By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland

The language of diaspora communities and minorities can be considered as a boarder-making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority-or diaspora language media can as well function as mechanisms or mechanisms of border creation, borderer maintenance or inclusions.

The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as “German minority” partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belongings?

My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self and which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how it is possible, if German is positioned as “mother tongue” which is “to be learned first”.

WG01-887.1

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local identity as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households’ relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progression, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household’s relative income. This research fills a gap in the literature because there are surprising few studies that examine inequality by both family structure and education, and even fewer that examine inequality cross-nationally and longitudinally. Theorically, our contributions are to structural vulnerability theory. Structural vulnerability theory aims to consider how the individual, or the household, is structurally located within a context. Our analysis provides a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

Rethinking the “Exploitation of Self-Realization” Model in Japan

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honeda has called the same problem the “exploitation of “Yarigai” (the word “Yarigai” refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “exploitation of self-realization” has become so popular in Japan even though the number of young people who consciously look for self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “exploitation of self-realization” model.

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact.

Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

The Symbolic Representation of Borders in the Protest Against ‘Fortress Europe’: The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now operate across countries and territorial levels.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed.

This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stressors, and Mental Health in Older Japanese Adults

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stressors, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey on Living Conditions (CSPLC) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, working status, equivalized disposable household income, disease (the five responses chosen by each group), psychosocial stressors (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stressors of “one’s disease/long-term care,” “dis-ease/long-term care of other family members,” “income/family budget/debts,” and “motivation in life” were found to be significantly related to mental health. In young-old men, equivalized disposable household income, working status, and the psychosocial stressor of “one’s job” were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalised disposable household income, eye diseases, lower back pain, and the psychosocial stressor of “relationship with family.” In old-old men, the psychosocial stressor of “relationship with family” was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of “relationship with family” were related to mental health.

This study was funded by a research grant from the Ministry of Health, Labour and Welfare (H22-seisaku-shitei-033). We thank Kenji Shibuya and Hideki Hashimoto for their academic support.

New Forms of Participation in the Social Welfare in the City of Barcelona

A new form of intervention is emerging in local welfare systems. This new way requires a change of attitude and involvement from citizens, public authorities—at all levels—and private organizations. It can be defined as a “social innovation” in the sense of the implementation of an idea that is new and that breaks with the prevailing routines and structures in a given system or setting. “Social Innovation” is widely used from many academic, political and social perspectives. No wonder that, in a context of uncertainty and transformations, becomes essential to search for new policies. In particular, in the field of social welfare the experimentation of new policy proposals and social practices has begun in a lot of countries.

The paper will analyze new participation forms in the field of social welfare in the city of Barcelona from the theoretical perspective of social innovation. The research is the result of work carried out within the European research project WILCO (Welfare Innovations at the local level in favour of cohesion).

The paper has three parts. First, there is the discussion of the concept of social innovation and proposes a methodology to use them. Secondly, following the conceptual and methodological proposal presented, discuses one policy of the City Council of Barcelona, the program: “Citizen’s Agreement for an Inclusive Barcelona”. This program is an example of Social Innovation that increases the co-responsibility of different actors in providing services and fosters the participation of citizens in social innovation in the city of Barcelona. The research is the result of work carried out within the European research project WILCO (Welfare Innovations at the local level in favour of cohesion).

moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (PAD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created a set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II° World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is one of three great empires, together with the United States and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable to not be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing aspirations .

At the national level. The role of Pentecostalism in the articulation and re-composition of the different identities among Spanish Gypsies and non-Spanish Gypsies (above all Romanians) after the intensification of the arrival of transnational migratory waves of European Romanians to Spain in the 21st century. This paper forms part of the doctoral thesis of the author, funded by the Spanish Government (Subprogram FPI-MICIN) as part of the Groupe Europees de Recherche Interdisciplinaire sur le Changement Religieux (GERIRC) research program

Post-Repatriation Careers of Japanese Knowledge Workers

A key element of the globalization of knowledge work involves the international transfer of executives. Yet despite the importance of this process, the repatriation of business people is still an under-researched area. The majority of existing research into the phenomenon is based on cross-sectional surveys and interviews of North American and European business people. The emphasis is typically on how to make the process more effective for companies, for instance, by improving failure rates, and largely assumes the existence of Anglo-Saxon style labour markets for the management of talent. Consequently, certain empirical and theoretical insights remain unexplored. We don't know much about repatriates from other nations, and more specifically, about their career perceptions post repatriation. This paper addresses this gap by looking two Japanese business people and asking how they make sense of their unfolding careers. To do this, the author followed their subsequent careers and career perceptions after their return from assignments in North America, interviewing them over an extended time period (seventeen months and twenty four months respectively). The main finding of the research is that (these) Japanese repatriates do not have explicit and pre-planned career paths. Furthermore, this lack of career path does not concern them. Instead, their careers are subject to a fuzzy career logic that depends on circumstances. Given the extensive literature on protein and boundaryless careers, as well as the need for individuals to take charge of their own careers, this is a significant finding. The theoretical contribution of this research is the idea of fuzzy career logic, and the paper will show how it not only provides a useful framework for understanding how Japanese repatriates navigate their careers, but also how it offers an important alternative to, and critique of, the view that careers should be planned in a strategic manner.

Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older people and their quality of life. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successful ageing, ...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

Transnational Aging in Mexico. the Experience about Elderly, Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de envejecimiento retro Grupos de dos grados y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guanajuato y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración en el periodo de retiro laboral, los cambios en su identidad y el alegato al lugar, redes sociales y prácticas culturales. La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

MOON, KATIE* (University of Canberra, katiegmoon@gmail.com)

Policy Advisors and Scientists' Mental Models Of Policy-Making: Validating An Elicitation Method

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals’ mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists’ mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists supported evidence-based policy (risk management and scientific authority mental models), while policy advisors supported more community-oriented approaches to policy-making (political and community acceptability mental models). Network analysis of the influence diagrams supported these results: the majority of policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more influential and connected. We triangulated these results with the quantitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. Our results suggest that policy advisors’ mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and how they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative ‘labor’ more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition...
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ farmer that has informed indigenous knowledge for generations. This has resulted in growth and change for many small farmers. This paper combines a standard attitudinal analysis of mindsets with findings from social network analysis (SNA) to explore network and mindset relationships within eight agricultural communities in Kenya, Uganda, Lesotho, and Mali. The questions to be addressed include: (1) how do agricultural production networks vary by region (2) how do network relationships affect shared mindsets and (3) how does an actor’s position and power within a network promote conservation agriculture perspectives?

MOOREHEAD, ROBERT* (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)

Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth’s parents’ experiences in Japan play in shaping the youth’s ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of ethnic identities (half Japanese, half Peruvian, Japanese, Peruvian, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is tied to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monocratic. Immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect of the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia, and respond to it with a sense of rejection and detachment. Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being committed to building a cohesive society in which they want to live.

Emergent Multi-Cultural Identities and Practices of Immigrants: Toward the Recognition of Yet Another Integration Trajectory

The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control

Comparative data from Latin American countries in 2006 locations Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use.

FACIAL EXPRESSIONS, EMOTIONS, AND SOCIAL RELATIONSHIPS

The Effects of Socio-Economic Background and Parental Involvement on Children’s Early Cognitive Development: The Case of Chile

Children’s development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style, among other variables, are important predictors of the level of cognitive skills at earlier stages of life. Using data from the First Longitudinal Survey of Early Childhood (ELPI in Spanish), this study implements regression models to estimate the effect that socio-economic conditions and parental involvement have on the scores obtained by Chilean children aged between 36 and 60 months in the Spanish version of the Peabody Picture and Vocabulary test, also controlling for parents’ and children’s characteristics as well as geographical location of the household.

From these results, it is possible to assert that parental involvement has the potential to contribute to reducing the gap in the cognitive skills achieved by children according to the level of income of the households they live in, which can be of particular relevance for reducing the inequality-related gap in later life outcomes.

CULTURAL IDENTITY

The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control
Political satire programs on television are experiencing a small boom in democratic societies. One of its themes is the economic crisis star, centered in ridiculing not only the protagonists but also in their victims, explaining what were the causes and what could be the ways to tackle the crisis. Through humor, these programs reach millions of viewers, presenting serious issues of political communion.

The advance of digital communications has triggered the exodus of digital nomads and an emerging culture of self-management and adventure seeking. The aim of this paper is to analyze the effects of such programs on the public to know whether these programs are fundamentally comical dimension or can have a formative role and public mobilization. Analyzing data from studies that have been made in some countries to measure the impact of such programs, and presenting the results of a survey conducted in Spain, one of the countries hardest hit by the economic crisis in Western Europe, this paper will try to test the possible impact of such programs on public opinion.

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns in different countries based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Petit and Hook, 2005). However, very few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the life cycle, specifically in different local contexts and among different groups of women (Steibler and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Faist, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to take as a case study a qualitative methodology which explores how women's education partly explains differential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the form of these preferences and values.

MORGAN, CHARLIE* (Ohio University, morganc3@ohio.edu)
International Couples Shaping Migration to Japan

The Japanese are living longer and having fewer children than any other industrialized nation in the world. Immigration is seen as the key long-term solution to a shrinking tax base and a shortage of workers. Despite the reluctance of the Japanese to allow a large number of foreigners into the country, immigrants have been integrating into Japan via international marriages for decades. Whether arriving via international dating in the 1980s or for love (dating back to 1600), these couples are important because they represent the most intimate relationship possible and are an indicator of social distance and integration, both in how the couples cope and how other Japanese view these couples. I interviewed 40 individuals involved in international marriages in a rural area of Japan (joetsu, Niigata). I transcribed the interviews and coded them using a computer software program called Dedoose. I analyzed the data using the guidelines of grounded theory, namely coding and memo-writing. I focused on the differences and similarities between those international couples who married for love (typically Western males and Japanese females) and those that were arranged (typically Western males and Southeast Asian females). There are important differences between the race and gender of these two types of couples, as well as the reasons for why they chose to marry a Japanese national and live in Japan. On the other hand, there are many similarities between these couples when it comes to having to adjust to living in a new culture, learn Japanese, raise children, and deal with extended family members. These similarities and differences offer a unique and intimate window into how the Japanese view foreigners living in Japan.

The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members conflate legal status with nationalism, culture, and race, whereas other members maintain clear distinctions. It is the accumulation of symbolic boundaries that defines the social boundary.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions. The centrality and compatibility of religious beliefs with organ donation varied between ethnic/faith groups and generations. Although few regarded organ donation as a religious scripture there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and a belief that the body and soul remain sensate for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

Correcting Errors without Undermining Students' Individuality in the Classroom

Classroom education is an institutional interaction meant to transmit the knowledge considered “right” by our society to children. However, recently in Japanese schools, emphasis has been placed on respecting students’ “individuality.” How are educational interactions organized to accomplish these seemingly incompatible tasks? We intend to answer this question in the paper.

We analyze video data of a lesson on national language in a Japanese first-grade elementary school classroom from the viewpoint of ethnmethodology and conversation analysis. We focus on the organization of “correction” and “repair” in conversation. Correction is applied to errors of utterance, and repair, to inaudibility or incomprehensibility of utterance. According to Doug Macbeth, correction and repair often cooperate in classroom interaction.

Based on the above, we can rephrase our initial question as follows. As teachers must teach “right” knowledge, they must correct students “wrong” knowledge. However, this correction threatens to undermine students’ individuality. How can teachers organize the process of correction so as to avoid this undermining as much as possible?

The results of our analysis are summarized as follows. In the analyzed video data, a student read out his imaginary story. There were two errors in the story. However, the students corrected these errors without undermining the student’s individuality: on the one hand, by conducting “repair” with use of a preference for affirmative answer (“correct” instead of explicit correction and, on the other hand, by configuring a cooperation of correction and repair in the order of “repair-applause-correction.”

World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of

artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.

MORI, KEISUKE* (Hitotsubashi University, k.k.japan@hotmail.com)

Toward the Post-Colonial World Connections: Relativizing the Eurocentric Social Movement Theories to Assemble the Citizenship Beyond Nation-States

This presentation examines the Eurocentric social movement theories from contexts of the genealogies of decolonization, demilitarization and anti-development movements on Okinawa Island. Okinawa has its history of the marginality...
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnsha) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-aptic artifact by the US-Japanese homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoy, Kokichi, 2006, Shokoukoku no Sharei, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990’s, mainly in advanced countries, policy makers have been paying increasing attention to terms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized. In contrast, in recent Japan, the advent of an aging society combined with a low birth rates has caused a serious impact on the whole public education system, making it increasingly important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abandoned schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interaction with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how have older Danish and Japanese couples experienced care giving and care taking over the life course? How do they perceive these experiences? How do older Japanese and Danish couples experience mutual support and communication with children, grandparents and friends? How do their understanding of their social networks change as they age? The empirical material is based on a study of 23 older couples aged 65 and over in Denmark and Japan. The interviews are ongoing and will be concluded by February 2014.

Transnational Mobilities in Europe: ‘Living Apart Together’ and Gendered Outcomes

Historically women have been associated with immobility and passivity, for a long time invisible or regarded as dependents rather than migrants in their own right, their migration tied to migration of men. Restrictions to autonomous wom-

Transnational mobility still persist in some countries or they function as a form of migration at some stage in the migrant trajectory. The capacity to be mobile is sometimes easier available to women than to men because of labour demand in specific eco-

nomic sectors. Being a woman becomes even an advantage so they increasingly become mobile family breadwinners, sometimes pioneering migration even in societies with traditionally male dominated patterns of migration. Women are therefore exposed to contradictory pressures, relating to their double role: as breadwinners, requiring emigration and absence and that of family carers habitually assuming physical presence in the vicinity of those they care for. They are therefore typically the first ones blamed for the social costs of migration and the disruption of a gender order.

While for both men and women crossing of borders can lead to more autonomy and challenging of established gender norms, more opportunities in using the acquired social capital within a broader migratory space, it can also lead to new dependencies and reinforce existing gender boundaries and hierarchies. Gender order seems resistant to change in migration, even in situations of apparent adverse, when women become main breadwinners. Rather than speaking in terms of gains and losses this presentation looks at the ways contradictory outcomes are negotiated. In several examples of transnational mobility, it will be shown how the gender order is challenged, apparently preserved, but also how “handicaps” are turned into advantages and traditional patterns relied on in pursuit of own objectives.

MORRIS, ALDON* (Northwestern University, amorris@northwestern.edu)

W.E.B. Du Bois was one of a handful of scholars of the 20th century with a sustained global impact on sociological, literary, and political knowledge. In this paper, Morris will draw on evidence from his forthcoming book with the University of California Press to demonstrate that Du Bois was the founding father of scientific sociology in the United States; that is, American scientific sociology was founded in a segregated black university by a black man. This paper disconfirms the accepted wisdom that American scientific sociology was founded solely by white sociologists in elite white universities. This paper will explore the methods Du Bois pioneered and his novel theorizing that laid the foundations for subsequent sociological analyses. The paper will offer an account of the dynamic forces that generate scientific schools of thought and that undergirded knowledge production in social sciences during Du Bois’ era.

Negotiating Safety in Relationships: Children’s Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Aus-

tralia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or step-father and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenomenology, ethics of care and dialogical ethics.

The aim of the study was to hear children’s voices in primary care research about children’s safety and resilience in the context of family violence. The re-

search questions sought to understand children and mothers’ perspectives on children’s safety and resilience; establish how children’s safety is realised in the context of family violence and determine how children’s voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’ informed by the model, implications for policy, practice and further research will be considered.

Moving Through Space
Spaces in urban geography are rich with signs and symbols related to nation- al as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society. I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring actions of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers - and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates have emerged within the context of a restructuration of the nature of na- tion and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic con- cepction of the nation. The dechristianization and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ relat- ed to the measures adopted to promote this conception of such a nation. Of par- ticular focus have been the practices of ‘reasonnable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The proposed paper examines the manner in which these two seemingly oppo- sitional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

MORRIS, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

Modern Morality? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grand- parents/parents, and children. For example, there is clearly a rapid process of marketing and consumption, with consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Thus, three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived bringing risks to children. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers - and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

Between the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobi-ographical memories and they are used as anchoring points and time landmarks for temporality, identity, and other social differences. The paper questions the utility of the concept of ‘transition’ and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe more parental academic behavior. The second approach posits that prior parental pathways matter. Children who have been exposed to academic behavior may provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and G2 and G3 triads, providing a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Oden’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”: Translating IE Research to Community, Government and Academics in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct populations were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interview frontline staff. In addition to interview, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my three main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg’s inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a ‘vacuum of belonging’ (Gott and Simon 2005) and a hyper-ghetto, home to prostitutes, drug dealers, community violence and crime (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the inter-relatedness between urban and social regeneration as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able to or prevented from exercising their spatial imaginaries and abilities to appropriate spaces in the inner-city and the effects this has on the formation of community and notions of belonging. Particular focus is on residents living in social and low-income housing’s perspectives about what community, security, appropriation and belonging mean in a situation of urban transition, social decay and insecurity, as well as what the limits of community are in these conditions and how these boundaries are drawn and reproduced.

Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg

In academic literature, urban regeneration is more often than not treated as a catchword for gentrification or dismissed as a term developers use to sugarcoat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannesburg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and contextually sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu’s notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision.

Cities are part of broader social contexts or milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impasses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource.’ This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been conducted within Europe, there has been very little research which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, this paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, institutions, ideas and international environment. It examines the major ‘actors and agents’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, demographics, culture(s) and others economic, and social system. However, there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one’s non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to one’s parents. On the other hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does “family crisis” mean to the parents of a non-heterosexual child? This paper explores how gender influences a parent’s reaction to coming out in these social contexts. It examines how mothers assume gender roles in coping with their children’s disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological. As secularism takes on the “holy alliance” of social scientists and cultists, the former often imposing on the latter. The West, leaves out many issues around which movements in the Latin America have been contending. There are many other factors differentiating the cases, but also similarities between them. Frames were similar; because movements participate in transnational advocacy networks, where frames circulate. Different from many conflicts in the Global North against GMOs, in these countries there were not only issue-oriented groups, but also identity politics, as peasant movements were important. The CPM and its allies also exist, in greater or lesser degree, with the Catholic Church. Highly emblematic of this tendency are the graduate students and chairs, research programmes, articles and books are clearly dedicated to sociology of language. Moreover, linguists have developed their field aimed at investigate language. Nowadays, “sociology of language” is explicitly identified in the research groups within the I.S.A., although the sociological associations all over the world don’t seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to sociology of language. The cause is probably that it is difficult for sociologists to work on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonic principles of Saussure for whom language has to be studied beyond the social context; it is significant that a scholar as influential as Thomsky still follows the « saussurean dichotomy» and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain theories are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social
recency is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

Homogenous or Not?

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period 1954-1970. Several observers have noted that Japan’s nuclear arms were opposed for a variety of motives which could be characterized as either universalistic or particularistic. Further differentiation is observed on contextual issue positions such as aid for hibakusha, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

Active Citizenship and Rights Awareness Of Roma In The Czech Republic

The goal of this paper is to question the reasons for low participation rates of the Czech Roma in political and civil society organizations considering such participation is theoretically perceived as crucial for excluded minorities’ empowerment. Issues related to active citizenship and rights awareness are somewhat low on the public agenda compared to other themes of social inclusion.

Segregation Of Roma Children In The Czech Educational System

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities even one third of Roma children have received education in these type of schools.

The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s access to education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose the discriminatory practice I hope to explain in this paper how it is possible in the CR) to assist the work of pedagogical and psychological centers (which have to diagnose the discriminatory nature of such segregation). Without being diagnosed the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination.

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people’s transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people’s choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the concomitant social and economic transformation that is happening among the rural population as their lives are affected by it. These are striking developments whose effects remain largely unknown and unstudied but the practices were non-existent in Canada five years ago. However, they have the potential to fundamentally alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada? Is there a transfer of ownership and control of farmland in Canada, with the resultant loss of agricultural identity? What are the implications for the ecological condition? What effects, if any, will this have on land quality, use of land and long-term effect of this development on agriculture in Canada? Is there a mental alter the relationship of people with the land. What will be the medium and long-term effect of this development on agriculture in Canada?

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatised in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged.

My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a bucket of business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift.

By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests of the broader public and the disadvantaged, in particular.

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Hayaniwits of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. So on one hand, scenario reflects the dynamics of continuity of such marriages with differences in age and denial. On the other hand, the embedded mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time.

The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as ‘inferior others’. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society, this much can be expected by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to engage the leaders of non-profit organisations themselves in the research process. The paper draws on earlier work on the hybridisation of social housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences on their strategy and operations. This method involves collation of responses to scaled surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up depth interviews to explore and interpret the meanings of their responses.

Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the within-firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

MUNIA, RAFAEL* (Waseda University, ndebud@hotmail.com)
Resistance or Alternative Alienation?
This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneseness. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the rigidity of its job-hunting system; the curriculum of homogeneity and individuality suppression that begin in the school and echoes in society; the rigid gender roles presented in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born

The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of outmigrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education. Moreover, the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

MUNOZ-GOY, CELIA* (University of A Coruna, munoz@udc.es)
Effect of Economic Crises on Work Orientations Among European Countries

An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing emphasis on personal fulfillment and self-actualization in detriment of the expressive work orientations, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources -in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an intrinsically meaningful experience that allows one to enhance their personal development and self-expression.-

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental views of work. In this context, our study seeks to test the assimilation thesis in a segmented labor market during a recessionary economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporal contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

Evaluación Del Uso De Edublogs Desde Una Perspectiva Comunicativa

Nos proponemos analizar exponer los principales problemas y las ventajas encontrados en la aplicación de edublogs en la docencia universitaria. Recogimos la existentia de las experiencias prácticas desarrolladas en el marco de una red de innovación docente, formada por un grupo interdisciplinar de 43 profesoras y profesores de 9 universidades diferentes, en un proyecto financiado por la Universitat de València. La principal herramienta desarrollada en esta red han sido los edublogs (destinados a asignaturas diferentes), orientados hacia el aula: una experiencia colaborativa, tanto del alumnado como del profesorado.

Focalizamos la atención en los edublogs en tanto que canales que median en el proceso de aprendizaje colectivo, facilitando la colaboración en un entorno comunicativo. Desde esta perspectiva, describimos y analizamos las cuestiones problemáticas relativas al dominio del emisor (quién crea el mensaje), el mensaje (los diferentes tipos de contenidos), la recepción (relacionada, entre otros aspectos, con la gestión de los contenidos), el contexto (cómo se inserta el edublog en el programa docente) y el feedback o retroalimentación.

Esta revisión de la dimensión comunicativa es imprescindible para superar la posible emergencia de situaciones cercanas a lo que Adorno y Horkheimer llamaron aislamiento por comunicación: las disrupciones o simplemente las dificultades en el proceso comunicativo dificultarían la efectividad de los edublogs. De este modo, nuestro trabajo pretende aportar una mejora, desde la práctica, del uso...
In this paper we explore the influence of linguistic inequality on the vitality of two related Otompane languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants represents the second biggest Japanese descendant group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. The Japanese food has been assimilated by Japanese immigrants and, by this way, other Brazilian individuals can enjoy this delicious Japanese food. This research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, property attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The ladder technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionate relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and a relocation of wide areas as a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying damages to victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers' involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

MURESAN, CORNELIA* (Babes-Bolyai University, cmuresan8@yahoo.com)

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study: What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

GGS data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

Knowledge Workers' Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on, according to the different lines of the neo-liberistic logics, that juxtapose to the current precarisation processes phenomena like under-payment and misalignment between subjects' education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Semenza, 2012). Which relation does it hold between educational levels and possibility of effectively developing knowledge workers' competences and skills? How do knowledge workers represent and face their precarious conditions?

Our reflections are based on results obtained in two recent researches conducted in Italy (Armano, 2010; Murgia et al. 2012) – in the areas of Bologna, Milano, Torino and Trento – during which narratives of about 70 subjects, aged between 25 and 45, have been collected in reference to the trajectories between education and employment. All interviewees were holding high degrees of education (bachelor, master or PhD) and at the time of the interview were employed with autonomous or dependent temporary contracts. The research inquiries on the one hand the risks of depauperation of knowledge and deskilling of highly educated young workers; on the other hand, the strong lack of adequate forms of representation and of policies aimed at facing the specific precariousness of knowledge workers.

In the present article we discuss the precarious and invisible face of the condition of knowledge workers, that collides with the official one, that superficially considers them as “independent and professionals”, though they are experiencing the effects of the further precarisation brought about by the crisis, without a union or political representation.

Nature, Time, Space, and Scale: Confronting the Challenges of Global Environmental Problems

Non-humans in the form of nature’s dynamics have prompted human agents to modify their social practices: earthquakes shook the Japanese population into reinforcing building codes and recently questioning nuclear reactors. For many global environmental problems, such as anthropogenic climate change, there are however enormous time lags and/or spatial distances between causal social practices and environmental consequences and there are issues of scale where-by any one cause can be dismissed as minor. People can discount the future to gain immediate economic benefits and may not experience serious adverse consequences until it is too late to avoid disaster or tip the environment into a new state less beneficial to humans. This is what Giddens labelled as his paradox and what disaster sociologists call the incubation of disaster. Disasters are best conceived of as focusing events that can prompt action, but they can on the contrary be dismissed as Acts of God. Moreover land, water, and atmospheric space on our planet are huge, so it takes an enormous accumulation of pollution and may well take them many years. Some anthropogenic problems are resolved by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory by non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life.
Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalization is not a key factor in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a source, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt; how does this change impact youth power and position in the oPt; how do different types of organizations provide different strategies, forms, and youth engagement?

Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The “comfort” women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting reactions from right-wing politicians and influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universalism that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan’s issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize.

This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current “rape myths” and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettable, tolerance of sexual violence against women penetrates even the law. Consequently, CEDAW, in its 2009 Concluding Observations urges Japan to revise and change for the better the sections of the Penal Code on sexual crimes against women (Paragraph 33-34- CEDAW/C/JP-C/CO/6, 7 August 2009). The Government did not address this point in its response issued in August 2011. Furthermore, in recent years the Supreme Court of Japan has overruled several judgments by the lower courts in rape cases, usually deciding that the victim’s witness was not reliable.

My paper will examine in detail the connection between the reactionary response to the issue of comfort women and the reluctance to uphold women’s rights in cases of sexual crimes, and will discuss the deeply rooted misogyny in Japanese society.

A Game Theoretical Analysis of Heterogeneous Network Formation

Jackson and Wolinsky (1996) using information value is a typical game theoretical model to explain network formation, however they assume homogeneous actors while real world actors are various. Real world actors choose their friend homophically, then they form diverse communities. Actors are often familiar to each other in one of these communities inside, but they tend to have no relations mutually on inter-community. This kind of communities are often called Tokutsu-bo (octopus pots) in Japanese. Moreover ranking and inequality often arise in such a community. However few game theoretical models explain the community formations. Therefore, I propose a new approach to these models.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

Music As Youth Culture: Case Study in Japan

NAGAI, JUN’ICHI* (Kobe-Yamate University, nagaijunichi@gmail.com)

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people’s trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.

Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway

NADIM, MARJAN* (Institute for Social Research, Norway, mna@socialresearch.no)

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women’s reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather, they are challenged and reinterpreted in ways that support mothers’ participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

A Transnational Movement In Local Context – The Occupy Movement In Germany

BRINKMANN, ULRICH* (University of Trier, brinkman@uni-trier.de)
NACHTWEY, OLIVER* (University of Trier, nachtwey@uni-trier.de)

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy – it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominately positive attitude towards the movement, shared links, etc. but didn’t participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of “Blockupy”, a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

The main findings are first, the proportion of “jobless people who have a desire to work” increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male “jobless people who do not desire to work” were most likely poor or suffering from a mental illness. For women, however, “job-seekers” and “jobless people who have a desire to work” were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women in Japan.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority’s media? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education’s subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration’s history and contact of immigrant descendant’s advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various ‘applications’. It facilitates exchange of data between two networks: ‘network’ by examining at the nature of the data extracted by the API and its use of the data in defining the utility of the ‘application’ we can produce a critical appraisal of the nature of the techno-social interaction afforded by the ‘networked/networking’ society.

The promise of communications technology among other things is the democracy and the user defined nature of interaction of players constructed by it. But the use of ‘bubble’ (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

The paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the ‘bubble’ generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of ‘cultural’ capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the the hardwiring of inequality in the era of big data.

Costs for Survival

The necessary cost to continue the life increase year by year. It is said a baby weighs about 7,000 grams at birth, then we have to spend about 7,000. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal resources. Besides, even if a nation is not, without people, the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = (welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance), for Incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a worker. We understand and that the cost for survival increase according to the nation: expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens’ perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen's life differently according to one's industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap
by analyzing what determines "what amount of income people think that they
should earn." To be more specific we investigate whether actual income gaps be-
 tween social groups such as gender, those with different educational levels, oc-
cupations and employment status, are reflected by Japanese perceptions of 'just
income gap' between these groups. As a result, we find that gaps of perceived ap-
propriate income between different employment statuses and between different
firm sizes are larger than actual income gap between these groups. Furthermore,
employment status and firm size play more, or at least equally, important roles
than occupation. It shows that Japanese people assume disproportional distribu-
tion of income according to firm sizes and employment status is more legitimate
than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure ac-
tivities, and also about the overall experience of leisure activities. The results show that the women valued leisure, and it is not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is con-
cluded that leisure and mental health are all embedded in the surrounding social con
texts and, indeed, that leisure activities in general are inextricably entwined with
their boarder cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South
Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring "a better life for all", it has also embraced an approach to macro-economic policy largely
neoliberal in character that has resulted in the enforcement of the duty to pay for basic services (water and electricity), in particular amongst the poor. Between
1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed so-
cial movements to demand that the municipality put an end to its experimenta-
tion with different forms of punishment and prevention of non-payment for the
consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the mu-
icipality acknowledge their inability to pay due to being unemployed or indigent
by other means. Growing from illegal reconnections and mass marches and pick-
ets, to include legal interventions and a constitutional court case, these struggles
forced the municipality into its own series of policy formulation processes in re-
sponse. This paper will explore the culmination of these processes in the City of
Johannesburg's most recent indigent management policy, which it will show, puts
forward a "pro-poor approach" that brings together a targeted model of partly
decommodified access to services for those identified as "the poor", that are never-
theless delivered within a system that is run along market principles overall.
It will argue that the nature of this differentiated system perpetuates inequality
even though it might address poverty by encouraging a particular form of life for
those identified as "the poor".

Examining the Impact of Health and Housing on Poverty Among Older Australians

As with most OECD countries, the Australian population is ageing. It is predict-
ed that by 2050, over 20 per cent of the Australian population will be aged 65 and
over, compared to 13.4 per cent in 2010. The Australian retirement income sys-
tem is heralded as an exemplar of the World Bank's three tiers approach, with the
means-tested government-funded age pension complemented by occupational
pensions subsidised by taxpayers. Home ownership is also widespread among
the current generations of older people (the 'fourth pillar') and the government pro-
vides a range of additional supports to those in old age, including provision of
health and aged care services. Existing studies indicate that Australia performs
below the OECD average in terms of poverty, defined narrowly in terms of in-
come, but these studies ignore the critical role that home ownership and health
care provisions play in maintaining a decent standard of living for older people.
This paper compares a range of alternative approaches for estimating poverty be-
yond the conventional income approach by taking account of the role of housing
wealth, housing costs, health costs and health needs in affecting the poverty rates
of older people – relative to general living standards and relative to the risks fac-
ing other demographic groups. Attention is focused on comparing poverty rates
before and after allowing for housing and health care costs and the sensitivity of
these findings to poverty line variations. The results are based on integrating
reported and imputed data from two national household surveys: Wave 10 of the
Household, Income and Labour Dynamics in Australia survey and the 2009-10 Survey of Urban and Housing Costs. The findings highlight the roles that home
ownership, public housing provision and free access to public health services play
in alleviating poverty among older Australians and point to the limitations of a
narrow income approach.

The Centrality of Housing Tenure: Further Perspectives on the Lives of Older Public and Private Renters in Australia

Recent estimates indicate that around eight out ten older Australians are homeowners, with 70 per cent outright homeowners. Much research has focused on exploring the implications of this high rate of homeownership. However, research
on older public and private tenants has been limited. This paper is part of an
ongoing investigation exploring and comparing the life circumstances of older public and private renters and the centrality of housing tenure. It is based on
in-depth interviews with older renters in the private rental market and in pub-
lic/social housing and a quantitative analysis of socio-economic household and
individual data from the Household, Income and Labour Dynamics in Australia
(HILDA) survey. The study focuses on the relationship between the cost of the
accommodation, security of tenure, type and quality of accommodation, location
and characteristics of the neighbourhood and financial stress, income manage-
ability, physical and mental health and subjective well-being. The results highlight
the central role housing security and cost play in ameliorating or exacerbating the
well-being of older tenants and their ability to lead a decent and valued life. The
older public housing tenants because their rent is fixed at 25 per cent of their
income and their security of tenure is guaranteed are able to lead a decent life
and their subjective well-being is high. However, the subjective well-being of older
private renters is generally poor. This is mainly due to their negligible security
of tenure and the high cost of their accommodation.

A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New
Delhi, in 2011, striking workers imolated a human resource manager. These mi-
grant workers, who were employed informally in the formal industrial sector,
demanded the right to represent themselves through independent unions. The
insurgency has been one among a series of protests in the automobile sector in
India, starting with the contract workers-strike at the Honda plant in 2009. In
Pricol, an auto part plant of the Toyota in Combarante, and in the Graziano Trans-
missioni unit at Greater Noida, the vice-president and CEO were killed by agitated
workers. Bloomberg news termed these protests as evidence to a ticking labor
time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. These protests were remarkable for the show of collectivism, use of disruption and violence, and demands that pertained to the
workers as a whole. They implied a move from conventional union-based articu-
lation by formally employed workers, to new demands for independent unions
by migrant laborers. These protests were organically linked to production and
socialization processes in the formal automobile sector in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and
suppress them, compared to local owners. Finally, these protests were cellular in
nature, rarely extending beyond the factories to become industry wide associa-
tions and coalitions.

From Analysis of Jjime (Bullying) in Japanese Schools to Constructing Theories of Psycho-Social Orders

In this paper, we examine jjime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo’s experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, jjime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of jjime can be ascribed to the psycho-social order imposed on the students’ everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

NAKA, NORIO* (Toyo Eiwa University, naka@toyeiwa.ac.jp)

Clarification and Visual Representation of Concept of Power

Key Words: two ways of inference about power, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power

During the last decade, discussions about concept of power became unnecessary complicated and confusing. Some arguments on power such as one of M. Foucault are “philosophical-sociological” theory rather than empirical-sociological theory. This state of affairs resulted in confusion about concept of power among students of sociology. In addition to this, there is not much effort to visually represent concept of power so that students may conceptually and easily understand power. Therfore, there is a need to reorganize and clarify concept of power. The purpose of this presentation is fourfold. First, two ways of inference about power will be suggested; a “prospective way” that indicates “power as potential” and a “retrospective way” that indicates “power as an effect on the outcome.”

Second, a “situational-process” model will be suggested to understand power conceptually. In this model, an actor means a person (or a group), structure means symbolic-systems, social rules such as customs and laws, and organizational structure in addition to physical structure. Situation means a state in which persons or groups are placed in. Process means interactions processes and communication modes.

Third, “conceptual formula” on power will be suggested as below:

-Simple Power = (power resources (knowledge) + communication skill + interaction power) = (power resources (knowledge) + communication skill)

Fourth, a visual diagram on power will be made to make it easy for students to understand concept of power.

These four, i.e., distinction of two different ways of inference, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power, will enhance understanding of students about power.

NAKAGAWA, CHIGUSA* (Research Institute Humanity & Nature, chigusanakagawa@chikyu.ac.jp)

The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result. The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as “an economic forest” producing firewood. Therefore it is important natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the mangrove activity flocks from the foreign country as the urgent matter.

However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier.

In this paper, we examine ijime (bullying) in Japanese schools and, so doing, propose hypotheses about bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against the bullying in school; (2) Several findings about psycho-social types of violent and persecutory phenomena among human beings. We can examine ijime which is potentially applicable to various types of violent and persecutory phenomena among human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

NAKAGAWA, KAZUAKI* (leisure, gawacyan@gmail.com)

Positive/Negative on Leisure: From the Perspective of the Difference of Enjoyment and Pleasure

This presentation aims to examine positive / negative on leisure we participate in. In the examination, we helpfully apply flow theory described mainly by Csikszentmihalyi. He has found out the significance of Intrinsically Reward leading to Enjoyment. As the result examined the case studies such as rock climbing and everyday work. This study distinguishes the positive from the negative, applying critically flow theory. The main issue is the difference of Enjoyment and Pleasure. According to Csikszentmihalyi, enjoyment is useful for the growth of self. Pleasures useful just for keeping the order of self, it exists just on time.

On the one side, we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand Pleasure when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective on the growth of self, we can take positive parts in leisure. So is the chance which we create Enjoyment.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating Enjoyment.

Women On Top: The Temporal Status Of Gender In Elite Professions

The recent growth of women’s integration into “high-status” professions over time has been documented around the world, but stark variation exists across fields of education, government and corporations. However, while there has been much focus on women’s labor force participation generally, the literature on the surrounding hubs of elite workforces is more fragmented. As a result, we lack a holistic view of the experience of gender in high-end professional spaces where women continue to permeate in new and diverging ways from the past. There is of course important research that explores the experience of women in specific industries and organization types, but there remains a need for more studies using comparative frameworks. For instance, across the world, most governments have far less than 50 percent of women members making critical decisions in their countries. In corporations globally, women have progressively taken over greater numbers of high-status positions, but case studies such as continue to be dominated by men. While industries in each country have unique drivers of inequality, common mechanisms lead to the overwhelming lack of women in high echelons of professional organizations cross-nationally. In this paper, we provide a meta-analysis of existing literature describing the mechanisms that perpetuate gender inequality within and across international professions. Building on existing sociological research examining gender in the legal profession, consulting and academia, we ask: (a) What kind of changes have we seen over time in these elite professional spaces? (b) How are these changes different from findings in the labor force more generally? (c) What does this emergent say for how we think about inequality and stratification in these professions more generally?

NAKAGAWA, MARI* (Caritas Junior College, nakagawamaricosmos.ocn.ne.jp)
Effects of Wives' Relative Resources on Husbands' Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands' gender role attitudes among dual-earner couples with children are associated with their wives' relative resources, namely, their educational levels, occupational status, and earnings. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives' economic contributions to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives' educational levels or managerial posts are higher, wives' incomes will be higher. The wives' higher incomes are associated with the husbands' more egalitarian gender role attitudes. However, the wives' educational levels or managerial posts are not directly associated with the husbands' gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives' social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands' gender role attitudes concern their wives' provider roles within the family, but not with their wives' social roles in public. Second, it is speculated that the smaller the difference between husbands' incomes and their wives' incomes, the lower the level of husbands' tendency to adopt traditional gender role attitudes.

First World western societies and the Japanese New Left that were influenced strongly from the Third World revolutions and aimed for global revolution through international hijacking and terrorism. My socio-historical investigation of the movements in the 1960s, which I consider as the beginning of the contemporary global social movements, therefore will reveal the way in which external political factors, differences in terms of network structure and culture as well as capitals, ideology and taste of the activists influence the making and unmaking of transnational actions and thereby shape the distinct characteristics of the global movements.

The Self Measuring Radiation Movement for Alternative Food Networks

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990s, the localized agro-food movements have spread in several countries; the United States, European countries and East Asian countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11, 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because some of farmers, consumers or coordinators between them have to check the food secure by themselves. Since the writer of 2011, so many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government. This report is based on the author's participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the movement can judge the level of the 1960s and 1970s based the Japanese Anti-Vietnam War movement, which created alliance with the movements in the

The Impact of Intra-Party Democracy and the Party-Membership in Japan: The Interaction Between Parties and Citizens

In the literature of comparative politics, there is a growing interest on the causes and consequences of the intra-party democracy such as the adoption of primaries for the leadership selection. Our paper examines the dynamics and developments of intra-party democracy in the main political parties in Japan and its impact on citizens' political participation and partisanship, based on the newly constructed comprehensive dataset on the party-member selection in Japan.

The paper consists of 3 main sections. The first section briefly presents the theoretical framework, including the definition of key concepts as well as the causal relations between the intra-party democracy and the party membership or public support, drawing upon the theoretical debates and empirical findings in the existing literature. The second section demonstrates the contextual information about the Japanese party politics, including the electoral system, the party system and the party organizations, as well as the summary of the development of intra-party democracy in the main political parties in Japan. The third section then investigates the impact of the intra-party democracy on the citizens' participation and partisanship, using both quantitative and qualitative methods. This section examines how the change in the method of party-leader selection, such as the adoption of primaries, affected the citizens' party support and party membership, based on the empirical data such as Japanese monthly-based opinion survey. It also presents some compelling case studies on the impact of intra-party democracy on the party support and party membership.

This paper has interesting implications on the changing nature of the party membership in Japan and will be able to contribute to the discussion on the party membership from the Asian and comparative perspective.

Mutual Cooperation Due to TFT Strategy Observing Fixed Number of Cooperative Players

Reputation theories that give a solution to 2-persons Prisoner Dilemma have a common assumption that all players observe what happened in all other players. However, the assumption that a player has to observe all others seems to be unrealistic. To overcome this problem, Nakai and Muto (2008) proposed us-TFT For Tat (TFT) strategy that requires a player to regard another player who did not cooperate with himself/herself and his/her “friends” as a friend, and they showed emergence of a mutually cooperative society. They assume that the us-TFT player doesn't have to observe all other players and observe him/herself and his/her friends. However, when all players become mutual friends, they observe all other players, and hence us-TFT suffers from the same weakness of previous studies. To solve this, we propose a new us-TFT strategy with which a player observes a small fixed number of other players. The players to be observed are selected based on how cooperative they are toward the us-TFT player. We performed evolutionary simulations with ALL_D, ALL_C, the us-TFT etc and found emergence of a mutually cooperative society. Especially, in case that the number to be observed is two, mutual cooperation is the most likely to emerge. Therefore, it is concluded that mutual cooperation can emerge without observing all others and it is a new finding. In addition, we examined what mechanism works. The takeoff begins when a player changes into an ALL_C player by an accident. After that, there appear us-TFT players between the ALL_C players and us-TFT such that the ALL_C player is positioned at center of the network, and us-TFT players surround the ALL_C player. Therefore, the network looks a star-like one and grows into a mutually friendly network.
To Solve Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free rider. The norm requires that persons be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can't play both roles, and examined whether the division can solve the problem of free rider. So in a simplified two-person model, two kinds of players: One is a person who doesn't engage in a production (that is, he/she doesn't pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and presents a payoff to the other role. We call the player the "guardian." The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the "tributary." With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians accounts for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epistemological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents. The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care in the health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCV), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpretation between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

Involvement in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of re-organization under the tourism context their beaded adornments or their “traditional” appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons’ social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of conve ion – the factor of which is taken for granted on family formation – how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, illustrating a distinct contradiction to such conventional gender stereotypes. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, illustrating a distinct contradiction to such conventional gender stereotypes.

The Effect of Education on Society Reconsidered: Positive and Negative Consequences

This research investigates both positive and negative effects of society on people seeking and achieving a higher educational level. For individuals, the result of greater educational achievement has been well studied and documented. People seeking and achieving a higher educational level, for individuals, the result of greater educational achievement has been well studied and documented. For society, however, it may not be universally positive. The economic cost-benefit may differ, as there would be a greater number of capable individuals available to assume highly skilled jobs such as those in high-tech industries. Greater innovation might be a result, also. But as the number of highly educated individuals increases, the competition within the job market at higher levels grows. As well as, as individuals reach higher educational goals, they will become reluctant to work at a lower tech or lower paying job. What will eventuate, particularly in a poor economy when the number of jobs would be reduced? Is competition always a positive dynamic?

Motivated by such questions, we began to look into unintended negative consequences of society. We will present these in the context of a poor economy. We need to consider a country’s industrial structure, using data at the macro as well as micro levels. Also, we need to look at the effects on different age groups. Additionally, we will need updated data.

We started analyzing the data using the Japanese General Social Surveys and other datasets on society. We will discuss additional results obtained. Further, we will compare Japan and Taiwan to consider how each country attempts to address this issue. Japan and Taiwan share many social dynamics such as the importance of education for social mobility. Yet, they differ in industrial structure, which in turn affects individual job-seeking behavior. Thus, it will be a meaningful comparison.

Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOs) have put more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as in the physical environment and the economic circumstances on a temporary basis. The data used in this presentation will be documents on GOs/NGOs' activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Social Care at Japanese Snack Bars

Snack bars is a special statutory place, where a female attendant (usually there is a female owner called “mama” by customer) is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day's hard work.

Most of the customer is married and belong to companies. They go to Japanese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It's possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more incinerators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Principle. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators to realize In-Ward-Waste-Disposal was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of incinerationism as the policy paradigm in waste management, while the siting became stagnant when the urgency vanished as the economy became sluggish and the influence of incinerationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequity began.

NAKAZAWA, WATARU* (Osaka University, wnokazawa@hus.osaka-u.ac.jp)

Impact of the Long Recession on Japanese Careers

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman Brothers crisis of 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered as regular workers. Governmental organizations (NGOs) have been faced with the social security system because welfare services provided by the government are fragile, and companies only provide regular workers with welfare services. Therefore, it is inadequate to focus only on the duration of stay in a workplace. In this presentation, I propose to use the data from the Japanese Life Course Panel Survey that was started in 2007 and is followed up annually. The data includes information on occupation, working conditions, and educational backgrounds, and will help examine the frequency of change of jobs, the duration of stay in a given workplace as well as the other abovementioned issues.

NAM, SANG-HUI* (Chernitz University, sang-hui.nam@soziologie.tu-chemnitz.de)

Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum

In Korea, the gap between the poor and the rich has become a serious social problem since the economic crisis, 1997. Income distribution has been equalized until 1997, but income disparity has taken sudden turn for a worse after the economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disadvantages of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one’s socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore, we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one’s future. The economic deprivation such as difficulties of earning daily bread, unstable housing condition, and overdue educational expenses as well as worsening family financial situation are the critical independent factors which negatively affect on one’s social relations and subjective ethos. The economic deprivation has a bad effect on the social aspiration and upwardly mobile expectation. Thus the financial predicaments have been deepening the social gap among the people in Korea. The decline of social capital and lowering self-identified social stratum and social aspiration. We utilize the national survey data which conducted by Institute for Social Development and Policy Research, SNU in October 2012. Interviews were conducted with male and females age 19 and above. The total usable sample size was 1,000. The sample was selected through a process of multi-stage area cluster probability sampling.
Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new common communication technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag still behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. A study stresses that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough pre-planning for cross-border interviews is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely connected to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thai- land, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State about “Viet Kieu”, including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them as a part of Vietnamese community. In doing so, the researcher will holistic view of the “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefits from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and locally-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squat settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-
NASWEM, ADOLPHUS* (Nigerian Rural Sociological Association, angolnaswem@gmail.com)

Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the mainstay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by small holdings, low technology, little value addition and massive wastages. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened ‘Agricultural Transformation Agenda’ which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-a-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that characterizes the implementation environment. The paper concludes by observing some disturbing signals associated with the policy.

NAUCK, BERNHARD* (Chemnitz University of Technology, bernhard.nauck@soziologie.tu-chemnitz.de)

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (“anchors”), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multi-actor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data for the longitudinal study of family and living arrangements in Germany. Its (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (“anchors”), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multi-actor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014. The paper will (a) explain the scope and the design of the German Family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

Corporate Interlocks and the Specificities of Indian Capitalism

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative perspective. The paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSU); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:
1° The 1991 liberalization policies had an impact on the shape and density of networks.
2° Networks are still very much shaped by the stakes the State has in PSU companies.
3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.
4° Connections between firms are likely to be structured by caste and family networks.
5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

NAVARRO, PABLO* (University of Valencia, pablo.navarro@uv.es)

Social Objects As Tokens for Social Eigen-Behaviors

This paper puts forward the concept of ‘Social Object’. A ‘Social Object’ would be a sort of imaginary hanger (or better, an imaginary hanger shared by a community of social individuals) which works as a referent consistently targeted by a particular family of social actions and interactions. This set is somewhat fuzzy, and it would be made up by the actions and interactions that satisfy some acceptable degree—such social object. For instance, the social object we call ‘greeting’ would be the ‘hanger’ or ‘imaginary shared referent’ of the (fuzzy) set of actions and interactions which satisfy that specific object (namely, which accomplish an acceptable greeting) in a given situation. That set of actions and interactions would exclude those solving (accomplishing) the act of greeting in that situation and would exclude those failing to do so. In other words, a social object would be the ontological assumption that enables and orients our interactive success (or our interactive failure, in case we misfire and act in a way unacceptable for our interactive partners).

This notion of ‘Social Object’ is cognate to the conception of physical objects as “tokens for (eigen-)behaviors”, put forward by Heinz von Foerster. From this viewpoint, objects are not realities independent from our actions, but assumptions that guide the cognitive and practical processes of the subject—on whose context constructs such objects through his actions. Different types of societies are structured by means of different kinds of social objects. And the sort of social objects that are emerging as typical of today’s global society are Social World-Objects (namely, social objects which define their dynamics as unitary systems on a global scale). Many of those Social World-Objects are being generated within and by the Internet.

Gestion DEL VALOR E Identidad De La Mujer Mexicana

Los procesos de agencia y resistencia de la mujer mexicana se dan dentro de una cultura de la colonialidad que configuran un modelo centro-europeo-norteamericano; pero las nuevas condiciones de la globalización planetaria hacen que se generen perfiles que rebasan esta primera clasificación por lo que habla mos de una “cuarta mujer”, después de Lipovetsky (1997), que responde a las categorías de contemporaneidad y en tránsito de construcción. La cuarta mujer en tanto objeto sostiene posiciones de liderazgo que van más allá de la división del trabajo y sí establece soportes de sus propuestas de vida como un sistema decisional dentro y fuera de la pareja. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades. Las desigualdades de la cuarta mujer están delineadas por tres estructuras que obedecen a la educación, productividad y empoderamiento que configuran un perfil estándar del comportamiento social contemporáneo; el ir sorteando las diferentes construcciones de esos tres sistemas las hacen una mujer flexible, educada, ocupada económicamente y con pretensiones de empoderamiento en base al éxito profesional. Es capaz de regresar a valores como la maternidad, pero busca embarazarse sin requerir de la presencia permanente del hombre; es una “mujer emancipada”, “dueña de sí misma y de la situación”; sin embargo, la condición de resistencia a los peligros de regresar a la tercera mujer hacen, como tercera, se transfieren en negociaciones con la pareja. En este proceso ¿dónde queda la masculinidad? La masculinidad que funciona con la cuarta mujer es que ha abandonado el disfrute del poder total o del goce de la dominación.

This induces changes on actions which delay or prevent illness, and also allow early diagnosis and the efficiency of the health care system will improve, without appropriate expendi-

The database includes information on several educational and cognitive outcomes measured at different ages; socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations both between number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties.

We hold at ages that precede the measures of outcomes is more detrimental to its ability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Violence Against Women: The Indian Scene

This paper examine violence against women emanates from the social hypoth-

esis of superiority of men over women. Insubordination of women legitimates gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

Prevent or Cure? – the New Philosophy of Health Care

We believe that now in force , with sufficient clarity migration policy came into

According to most of the school is the main element in the process of becom-

ing a person , is to teach people to think, to respect labor, to encourage children tolerance, and to develop entrepreneurial skills to real life, and not just theoretical knowledge.

The Dynamics of Migration Processes in Modern Russia: Analysis, Problems and Prospects

For the present stage of social and socio-economic transformation in Russia is characterized by sharp increase attention to the migration processes, the dy-

amics of which every year is losing its momentum, a negative impact on the demographic situation in the country. The immigration influx is now no longer a compensator for the natural decline in population - as it was in the 90s. However, in today’s globalization world for the skilled work force Russia to seri-

ously compete. Thus, according to the UN, the total annual immigration resource in the run up to 2050 will be approximately 2.2 million people. Half of them will qualify for the United States , 200 thousand - Germany and Canada , with 130 thousand - United Kingdom. Moreover, a number of European countries are already developing programs to attract highly-skilled immigrant Russian citizens . Russia left more than the 100 thousand scientists involved in such traditionally strong areas of the country, such as mathematics , chemistry , physics , biology . This is mostly educated people aged 35-45 years.

We believe that now in force , with sufficient clarity migration policy came into

According to most of the school is the main element in the process of becom-

ing a person , is to teach people to think, to respect labor, to encourage children tolerance, and to develop entrepreneurial skills to real life, and not just theoretical knowledge.
similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

Financialization and (Global) Class

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global "market culture", emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a "global financial class".

Defence and Security Policies in the EU: From Decision Making to Political Culture

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is involved in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European “Security Research” activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in “civil” security. The research was conducted through the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

MOREAU, NICOLAS (Université d'Ottawa)

Les Représentations Sociales De La Dépression Et L’accès Aux Services De Santé Mentale Des Jeunes Dépressifs : Une Question D’Identité?

La question de l’accessibilité aux services de santé mentale ne peut se réduire à celle de l’offre. D’une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l’âge. Les études démontrent ainsi que les jeunes en pédiatrie ont généralement moins tendance que la population adulte à demander de laide. C’est dans cette perspective de tenter de mieux saisir la question de la demande de soins des jeunes en prie à des troubles dépressifs que nous avons analysé des entrevues effectuées auprès de 31 répondants âgés entre 18 et 30 ans qui ont rapporté avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative pancanadienne a été réalisée dans quatre sites : Moncton, Ottawa, Sudbury et Winnipeg par la méthode du réseau d’associations et des entrevues individuelles semi-dirigées. L’analyse des résultats obtenus a été effectuée selon la méthode d’analyse intégrée de contenu des représentations sociales.

Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux : désespoir et stéréotype négatif. Ces éléments renvoient à des dimensions descriptives et sociale de la dépression. Le discours activé par ces deux dimensions contraste avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.), ainsi qu’avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de nature normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in many shrinking cities around the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) out-migration was accompanied by de-population: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical impacts are the results of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5.6 million units, of which almost 90 per cent belong to the target group of poor households (with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing developments and interventions on socio-spatial structures). The objective of the study is to discover which prerequisites assist housing policies' implementation to counteract urban fragmentation and which parameters (i.e. value of lots, decision-making structures) or/and original specifications (planning procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments' and housing policies' potentials to better the attendance of intense urbanisation-processes observed internationally.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001, four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industries and service sector. Factors that affect their recreation in 1995 & 2001 are long working hours, absence of relative supervisor on the job. Similarly, child workers in 2001 with long hours of work affect their recreation as well as work that provides little illumination. Children working in farming, fishing, and mining have less free time than those children working in other industries. However, regardless where the child works it reduces the playing time since in some cases sleeping is preferred than playing.

Globalization and Philippine Labor Migration Phenomenon

Globalization and labor migration from the Philippines accelerated almost at the same time. Three revolutions contributed to Filipino labor migration phenomenon: communication technology, economic integration and widening demands for labor in the developed and developing regions. The Philippines has long been a source of remittances and the World Bank regarded the Philippines as the second largest remittance country in the world. The study shows that the lives of Filipino labor migrants are complex and influenced by both push and pull factors. A shrinking population in the Philippines amounts to approx. 5.6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. Family Policy and Child Poverty in Global Perspective

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from unilinear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes: leaving unexplored the ‘black box’ of program specificity. Almost four-fifths of the world’s population live in the low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (US) and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labour force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be

Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associ- ated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the of- ten “implicit” generational welfare contracts that are embedded with social policy- making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPID) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union’s Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches based on a life course perspective and the risk of ‘policy crowding out’ in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medi- cal and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to actual health problems which radiation may cause, people frequently suffer from anxiety, fear, and distress about the possible effects of radiation. Moreover, their reality of radiation and its effects are often socially constructed through their in- teractions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narra- tives and life-stories of Atomic Bomb survivors from Hiroshima.

This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Sec- ond, by drawing on the survivors’ life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
However, little is known what the effect of such policies is: Do policies which fa- vour the traditional marriage family increase marriage rates and stability of mar- riage families? Do policies with a focus on single parents, patch-work families etc accelerate the trend to more instable family relations? Do social policies as an alternative to family security increase cohabitation and divorce rates? The analysis is based on official national statistics for OECD countries and cov- ers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy

Debates on processes of democratization create the impression that the middle- class and/or the civil society are the drivers of democratic change and the backbone of democracy. Seen from this perspective either these groups fight for democratic change or once they have a basic political freedom they will quasi automatically take possession of democracy. This was the expectation in the USA before the Iraq invasion (what we may call the "Rumsfeld Utopia"). However, we have learned that in Iraq, after the Arab spring and in many countries that under- went processes of democratization during the 1980s and 1990s there was no au- tomatic process towards democracy. In these transitions the middle-class played an important role and many of the civil society associations, social movements and especially their political leaders had a middle class background. But the po- litical groups and the leaders that opposed the idea of a liberal democracy also had a middle class background. At least in Africa and the Middle East the middle-class-based civil society represent competing concepts of socio-political order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic rule (or socialism in Latin America). The claim for democratic elections may be used to legitimize any of the socio-political orders.

Can Teacher's Gender Explain The Growing 'Boy Crisis' In Educational Attainment?

Gender inequalities in education have seen much change, with females gaining advantages over males in ways that have not been anticipated just two decades ago. At the same time, the share of female teachers has grown in almost all countries of the western world. There is an ongoing, contentious debate on whether this growing "feminization" of the educational system, in particular at the lower levels, can account for the growing educational disadvantage of males. In this talk, I review the literature on the "feminization of teaching" argument and present findings from two empirical large-scale studies conducted in German elementary schools which allow me to identify the effect of having a same-sex teacher for different scholastic outcomes (gender-blind test scores and more subjective teacher's grades) and across different subjects (Reading, Literacy, Mathematics, and Science). My findings suggest that the popular call for more male teachers in primary school is not the key to tackle the growing disadvantage of boys.

The Validity Of Response Latency Measurement In CatI Surveys

There is agreement among researchers that the measurement of raw response times from surveys requires a treatment for baseline speed of respondents and interviewers. There remains disagreement about the appropriate procedure to transform raw response times to response latency and there is no study that evaluates the different approaches with regards to their potential measurement error, which may have an affect on modeling and causal inference. This article fills this gap by examining the measurement validity of different ways raw re- sponse times from surveys requires a treatment for baseline speed of respondents and interviewers. We apply a Mul- titrait-Multimethod approach to examine four different operationalizations for response latencies and their relationship to attitude accessibility and indicators of response quality. We conclude with remarks about the levels of validity and potential biases when latencies are used as independent variables.

NEUMANN, ROBERT* (Technische Universität Dresden, robert.neumann@tu-dresden.de)

Trustworthiness As Rational Belief or Unconditional Propensity to Trust – Evidence from a Telephone Survey

While research on trust and trusting behavior is abundant, less attention has been paid to the study of trustworthiness itself. This seems to be at least a bit sur- prising, especially with regards to the theoretical claims about trustworthiness as „the crucial variable“ (Hardin 2001) for understanding and explaining cooperation based on trust. While several authors share the definition of trust- worthiness as a belief, a probability assessment or an expectancy of Person A about Person B to do X, distinct measurement approaches exist depending on the mode of data collection (survey vs. experimental approach) and strategic outset of the study (one-shot vs. sequential games). Additionally, different hypotheses can be derived depending on whether one treats trustworthiness as incentive
based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI survey (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a ‘new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording’s electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

Mainland Chinese Sex Workers in Hong Kong: Multiple Forms of Inequality Both in their Pasts and the Present

Purpose: This research aims to understand the lives and views of sex workers from Mainland China working in Hong Kong. Design: This research appropriates the theoretical tools of Pierre Bourdieu and uses an ethnographic approach to explore the issue Hong Kong, including expert interviews, interviews with sex workers, participant observation and field documents. Findings: Results point to gender inequality and various other forms of oppression weaving together to form the past and current experiences of sex workers in Hong Kong from a Mainland Chinese background.

Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve the understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

Fighting Against Youth Unemployment: The Hong Kong Experience

NGILA, DOROTHY* (Stellenbosch University)

Enhancing Employability Through Youth Training Schemes? The Experiences Of Non-Engaged Young People In Hong Kong

The process of globalization, the rate of technological change, the convergence of information and communication technologies, and major changes in government policies are leading to the development of a “weightless” economy, to rapidly growing skill requirements, and to what some call the “knowledge economy.” Certainly, the labor market is tilting toward extensive increases in the demand for higher skill levels and the labor demand for low skill levels is weakening. In this environment, young people are hit disproportionally hard, obstructing paths to adult statuses, identities, and activities. As such, many young people have been left to the transition from school to work, with more and more of them not in education, training, and employment. This paper seeks to investigate the school-to-work experiences of non-engaged youth – young people aged 15-24 who do not participate in education, training, and employment. Based on data from focus groups involving 50 non-engaged young people in Hong Kong, it seeks to: 1) examine how these young people are being systematically propelled to the edges of conventional pathways to adulthood; and 2) assess the efficacy of governmental training schemes that aim to develop employability as a strategy for engaging this population. The paper concludes by outlining prospects for future policy development, focusing on gaps and weaknesses in current provision and practice. It is suggested that effective guidance to non-engaged young people must pay adequate attention to the social context within which the individual operates. Assumptions behind the government’s individualistic lifelong learning policy are called into question. This paper has direct relevance to Theme I.II “Youth Unemployment/Underemployment and Precarity” of the RC34 Sessions at the XVIII ISA World Congress of Sociology as more and more young people worldwide are now living in economic disadvantaged circumstances and facing problems in their school-to-work transition.

Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa

The importance of documenting data on the inclusion and participation of women and girls in a society’s science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality
and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa’s reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender machinery has been put into place and operates in all the realms of government. A lack of funding, human resources’ constraints and insufficient coordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematics at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women’s participation in the STI system in South Africa. South Africa has an aging, predominantly white male scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country

NGUYEN, CHARLES* (University of Hawai’i at Mānoa, charlesg@hawaii.edu)

For Our Children’s Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam’s growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government to investigate the rural communities to develop urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza and coupled Anthropogenic systems. My findings show that there are key differences in how traditional, transitional and modern farming communities are affected by and understand rural development. Particularly interesting findings include significant perception differences found between the men and the women surveyed. I predict that the cognitive differences of Vietnamese citizens would not simply be due to differences in resources or education; however, a gradual process in which cultural practices becomes embedded in everyday behavior

Self-Employment in Tourism Business among Japanese Expatriates in Bali, Indonesia

Migration and Tourism
Self-employment in Tourism Business among Japanese Expatriates in Bali, Indonesia

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five nationalities visiting to Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran, Tabanan, Canggu, and Ubud. The result of this study showed that: 1) The primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after setting- ting; 5) To maintain a peaceful lifestyle is a higher priority than to extend their business. Entrepreneurial activities among Japanese expatriates community in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese expatriates and local community.

Ecological Disasters: The Political Economy of Floods in Pakistan

“Ecological Disasters: The Political Economy of Floods in Pakistan” in 2010-11, Pakistan was struck by two successive flood disasters that wrought massive destruction all across the country, especially three of its provinces that sit ashore the Indus River—Punjab, Pakhtunkhwa and Sindh. Thousands of people were killed, while twenty million, mostly rural residents of Pakistan’s farmbelt, were displaced from their homes and hearths. The dollar value of these losses was estimated at $20bn, which is 8% of Pakistan’s GDP. The state and its institutions failed to uphold their obligations to protect the citizens during or after the disaster. Their role, however, goes back to the very making of the disaster that arose from the flawed pattern of development. This project, thus, explores the economic and power relations in society that “manufacture” such disasters. In particular, it explores the “man-made” aspect of Pakistan’s floods that were presented by the state and its institutions as a “natural” disaster. The paper seeks to embed the disaster in Pakistan’s political economy that broadly manifests in its development patterns. In this regard, three empirical indices are chosen to document the development pattern that best explains the flood disasters: (a) level of the Indus waters in monsoon months; (b) wetlands and riverbeds of the Indus; and (c) deforestation in the mountainous regions of northwest Pakistan, which was caused by development as well as timber industry.

Violences and Gender Relations: Women in Brazilian Polices

This research is being developed by a team of the Violence and Citizenship Research Group of the Federal University of Rio Grande do Sul, beginning in January, 2013 and expected to end in December 2014. The aim is to comprehend and explain the dynamics of production and exercise of the violences within police institutions based on the power relations amongst men and women. The focus on such a male and use-of-force oriented space is still not well framed in gender studies. The dimensions of analysis cover working conditions, the career of police women and the institutional violence of the ambient. Therefore, the study uses mixed methods, specifically, surveys and focus groups involving 13 states in the Brazil. The fieldwork is pointing out many challenges for the insertion of women in the Brazilian police forces. The working conditions and environment show that the institutions were not properly adapted, as demonstrated by the lack or precariousness of spaces for women, like bathrooms or accommodation. Regarding the career, many limits related to the professional development can be perceived as well. The data from focus groups also allows for the identification of institutional violence based on daily practices, which sets, sometimes, situations of moral harassment.

NICHOLAS, LUCY* (Swinburne University, nicholas@swin.edu.au)

The shape of Selves to Come: Selfhood without Sexual Difference

What can the historical persistence of gender tell us about possibilities for future selfhood not defined by gender? Is a more purposive way of being possible that is not reliant on the restrictions of binary sex/gender and if so, how? This paper continues work that proposes that a particular dominant mode of thought (or ethos) about the self and others maintains compulsory sex/gender. This is an ethos of oppositional difference and closure. I extend this theoretical work here to the practical consideration of what a post-gender and queer mode of thought and being, not premised on difference and closure, might look like. Drawing on a combination of Simone de Beauvoir’s existentialist ethics and Judith Butler’s ontological and normative impulses, I propose that a non-oppositional, non-gendered alternative mode of thought and being is ontologically possible or potential (although not inevitable). I sketch the ontological justification for this, and then move on to more practical implications for social life. This considers what this ontological picture means practically for attempting to re-form identity or selfhood according to more radical and open-ended ethos. I argue that it would entail a particular ‘queer’ subjective mindset, an inextrusably reciprocal approach to relationships and the identity of others and sexuality, and enabling social contexts that foster these.

I demonstrate how some of these are already apparent in certain queer social practices. I consider how such social practices may ensure efficacy in their intend-
ed aim of fostering more intentionality in the collective project of selfhood and evade closure or imposition of identity.

**Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases**

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

**Aging and China's Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012**

By 2012, China's population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) the population by 2050. At this rate, the 65+ age group will equal 14% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society. While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China's central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to take active measures to foster a society which meets the needs of the aging population. Preferential measures and tax benefits for private investors in the senior care industry have also been implemented. The industry is wide-ranging with new opportunities surfacing and growth is expected. However, China's senior care industry, situated in the largest consumer society worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population. From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.

**Current Social Welfare Conditions in China**

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform. We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities within and outside China to examine how the system has affected the economic conditions of seniors. Finally, we'll suggest ideas for how existing issues could be resolved.
Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhod effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Neighbourhood Socialisation of Youth's Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers and undercontrollers. Resilient respond relatively more adaptively and flexibly to situational demands. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhod effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

Polish in the Hague: The Stories of Long Term Migrants

Different sources estimate the Polish population of The Hague around 5% of the city's inhabitants. Images portrayed in media and by politicians give the impression that this group is a cause of social unrest and negative stereotyping is common. In this paper the stories of migrants themselves are told. They live, work, and have started their families in The Hague. The respondents have all lived in The Hague for more than five years; most of them migrated before Poland be...
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

**Space, Time and Symbol in Urban Indonesian Schoolboy Gangs**

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habits of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt’s (1993) argument about the conditional and compensatory nature of collective masculinity. Second, alcohol plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth crowds (*gengs*) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

**Using Local Cultural Forms To Talk To Youth In The Global South**

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of *talanoa* as a decolonising methodology has become popular in the Pacific, *talanoa* refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is *veivosaki-yaga*, which in Fijian literary parlance means ‘worthwhile discussion or conversation’. The term *veivosaki* connotes a neutral sense of conversation and dialogue rather than storytelling. *Yaga* literally means ‘useful or worthwhile’. By engaging in *veivosaki*, Indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of *nongkrong* (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom *nongkrong* is their favoured leisure practice with age peers. *Nongkrong* is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like *talanoa* research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

**Discovering Ideological Codes in the Professional Work of Daycare Personnel**

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what it is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel's appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children's cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardised mapping and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

**The Practice of Control in Risk Activities**

This paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this shift in focus on control, participants in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

**Legalizing Internet Piracy through State-Invented Religion? a Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopism As Religion**

In 2011 the Swedish Kammakrogellet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopism (Det missionerande kopismfunderslaget) as a faith based community (trossfond). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, such as it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

**A Discourse on Transnational Crisis of Legitimation**

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in response to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite difficult and is characterized by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be constructed (or mis-construed) as acts of “terrorism”.

Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people's practices while referring to the contemporary transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (+trainees) from East Asian countries have been introduced to the urban and rural areas as temporary labors under the foreign trainees' system. We focus on these trainees, called ‘Kenshusei/ Jisshusei,’ at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism,’ in parallel to ‘actual transnationalism’ and ‘ideal transnationalism.’ While recalling ‘methodological cosmopolitanism’ as a critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required to investigate transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators,’ regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the case to accept both society beyond a nation-state along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture-- the Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characterize of larger recent women's culture that it is part of. Specifically, through an analysis of articles (text and images) of male idol oriented magazine media, I will clarify how the image of male idols is constructed by the media. Building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from ‘Johnny’s Entertainment’ were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendship and relationships of mutual trust between the members of the group are represented frequently. “The every day” of idols, including events at school and coming home, friends, or family are depicted, and many of their physical contact and conversation are made to look like expressions of homosexuality. Situations that consist of silly tomfoolery and play by these idols are quite different in comparison to transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be constructed (or mis-construed) as acts of “terrorism”.

Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy.

Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse – “anti-nuclear”, by relating various points at issue with anti-nuclear disaster after Fukushima. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has stated from ten years before. Is the community wind power still popular today? If it’s, why is it still popular today?

The results are as follows: The participants in community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, they strongly and consciously felt that this small collective action would contribute to the building of sustainable society, and they shared the same vision of environmentalism.

If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustenance of social movement. If the administrator of community wind power movement can share the same vision with participants, the renewable energy movements related with “anti-nuclear” is too simplified.

Re-Entering the Labor Market after Childbirth Among Japanese Women

This study explores the women's working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on the issue. However, most of them focus on the getting a job for the first time after childbirth. This study further explores what happens in women's career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPSC). This study uses data collected from 1993 to 2008. Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of it. Results of investigation show that method show that their method shows that the marker they get a job when their first child is ten years old is 65%. Results of Cox regression model show that university graduates are less likely to get a job compared to those who completed high school, however, it seems that husband’s income is more influential than education on whether a woman get a job or stay out of labor force. Then, focusing on the women who started their first job after childbirth, non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to change their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women’s career development there will be discussed.

Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of ‘no immediate harm,’ others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, many have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrand 2012), is an important sites where laypeople’s experience, knowledge, and logic are contested and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1987; 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Karmoto Tarō, an activist politician who was elected to Upper House in 2013 by centering his campaign around an enhanced scales. We finally discuss the implications of these results.

“With a Little Help from Outside” – “Outsourcing” of Domestic Work in Germany

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decade the mainstay of household management has undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to produce these commodities by themselves or to buy services on the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations. From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing process itself is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision-making processes of households.

Mobility Decisions of Dual-Career Couples- New Evidence on the “Co-Location” Problem

Working couples in general face a “co-location problem”. Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. Since research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantage with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outbalanced more easily. However, with the rise in women’s employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couple types. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasizes the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

Institutionalizing ‘Living Heritage’: Ecomuseum Development In Rural China

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as ‘museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management, and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage protection initiatives. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become involved in a new heritage tourism discourse that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guangxi in the Yao village of Huaili. Given the emphasis on the community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community’s view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape their system of identity as multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

Blurring Work-Home Boundaries and Their Impact on Work-Home Conflict and Enhancement

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disintegration altogether. Among the various reasons for these tendencies is an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internet, commoditizing phones and laptops, which make it possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact? Data for this study were collected through an online survey among employees in a German research and development (R&D) and technology sector (n=321, response rates between 65 % and 95.5 %). Work-home/work-home conflict and enhancement were measured using the four scales of the Survey Work-home Interaction—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to nonwork permeability (e.g., “I am also available during my time for work concerns e.g. via cell phone”). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both enhancement scales. We finally discuss the implications of these results.

Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. Based on interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs' strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist's prescription; 3) assessing ability (how comfortable is selecting alternatives with regards to patients drug prescription). I show how these strategies are shaped by professional qualities, including: terrain of responsibility (who’s responsibility is it to discontinue), prioritizing ability (how comfortable the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome). I conclude with recommendations for how to support appropriate discontinuation in primary care, including suggesting guidelines to explicitly acknowledge multimorbidity in patients and the importance of medication prioritizing, creating discontinuation alliances for GPs, e.g. with clinical pharmacists and gerontologists, and developing positive metaphors for ‘discontinuing medication’ to enable better communication with patients, e.g. drug holiday or medication pruning.
objection of this communication is to present the GENIND project and its major results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

Geographies of the European Spring: The Case of #Spanishrevolution

Along the week prior to the past local and regional elections in Spain celebrated 22-M May 2011, many Spanish citizens took several places on the streets to denounce political corruption and national economical situation that are deteriorating democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the eternal Two Spains have bumped into themselves. This paper will show how the so-called #Spanishrevolution of the present history of Spain which the urban, modern and young Spain has raised their voice against the rural, traditional, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spanishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to lie in their country houses without showing any sign of entrepreneurship, awaiting the arrival public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the #Spanishrevolution is a cry for the modernization of Spain.

Le Travail Migrant Temporaire Au cœur De La Dynamique De Centrifugation De L’emploi Vers Les Marchés Péripériques Du Travail: Une Perspective Canadienne

La communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l’essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés péripériques du travail: 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS); 2) les aides-domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PFR); 3) les travailleurs migrants temporaires dits “non qualifiés” embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une “armée de réserve, que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — “externalisables”, tout en préservant l’un des plus grand paradoxe du “libéralisme réellement existant” qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services et non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment les travaillleurs migrants temporaire ont également été instrumentalisés lors de la récente réforme de l’assurance-emploi au Canada. Nous mettrons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclatement d’un régime de travail de type universeliste. Ultimement, nous montrerons que l’approche, la logique de démolisation place le travail migrant temporaire au cœur d’une dynamique de précarisation par la centrifugation de l’emploi vers les marchés péripériques du travail.

NOISEUX, YANICK* (Université de Montréal, yannicknoiseux@gmail.com)
Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have triggered a “jobs’ centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance of unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Noiseux, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different “industries” i.e. domestic services, canteen workers, embroidery, garment industry, street vending), this paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Comeau (2005). It will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties who pre-referendum campaignes highlighted the signal effect of the legislation as a means to contain the “Islamic threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and to discriminate Muslims.

This perception motivated a group of young Muslims to institutionalize their efforts in countering the anti-Islam activities of the far right. Thus, in 2009, the Islamic Central Council Switzerland (ICCS) was founded.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a “conspiracy” of the far right political channels to “subjugate” the Muslim community.

The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call “production of normality” – namely the recognition of Islam as a “normal” religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly aims at eliminating the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it. It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normalcy of Islam in Switzerland.

The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

Post 3.11 Movements in Japan: A Mental Map Approach

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality.

On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralysed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination sent a majority of Japanese “heads into the signal effect of the pro-referendum campagnes” (Comeau, 2005). It will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.
explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significaton from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

**Social Movement Transformations in the 20th Century: Japanese Experience**

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan. Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively calm up to the present. Japan also witnessed huge transformations in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and perceptions toward social movements.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

**Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism**

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less performance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing professionalism” (i.e. medical professionalism that includes organizational and managerial capabiliities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, including collaborative and managerial roles. We take another approach; we see competency as something distinct from similar blocks for core and the periphery. Using pre-determined core-semiperiphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-sys tem analysis.

**Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System**

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in the discourse. Gender equality in the higher education sector is still unrealized. Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between heterogeneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These unforeseen consequences arose out of conflicting institutional logics and were never intended by any of the institutional actors involved.

NORKUS, MARIA* (Technical University Berlin, marianorkus@gmx.de)

**The "Invisible Hand" of Oppression - Symbolic Violence in the Precarisation of the German Labour Market**

Although the trichotomy of the world-system often is specified in terms of positions of each stratum, particular the global division of labor, an increasing number of studies specify and define such strata in relational terms. Parallell to this, the core-periphery concept has also been specified by network scholars as a structural template that captures some of the original relational connotations. However, even though the semiperiphery has a distinct role in world-system analysis, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel heuristic that identifies dependency and dominance in core-periphery structures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, has its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and the periphery? Using pre-determined core-semiperiphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-system analysis.
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and how this causes and reproduces social structures of domination. Symbolic violence, this "gentle violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimatises itself. It contributes both to the recognition of oppression and at the same time to the misrecognition of its arbitrariness.

This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development.

To theorize the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its invertebrate persistence.

NORSTEDT, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its multi-methodological practice, including the relative influence of understanding of their material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long questioned paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals' bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

"What Do I Do Now?" Post-Retirement Leisure in Japan

Japan's dankaisedai, the generation that was the foundation of the country's "economic miracle," are retiring. As their careers come to an end, Japan's "greatest generation" seem at last to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure cleaves along lines of class, gender, and age. This paper first reviews leisure trends during the past 50 years, noting how they conditioned inequality in leisure expectations and practices. Three main factors affecting variation in leisure are then investigated in detail. 1) Class. Who actually retires and how? Analysis highlights the roles of retirement bonuses, pensions, and savings, as well as government supports. Japan's elderly control much of the nation's privately held wealth and many who are not rich have been lifted out of poverty, but poor elderly continue working out of necessity, while other carry on because their work gives meaning in life. 2) Gender. In Japan's strongly gendered society, retirement often finds two people whose leisure ideas have grown quite apart looking at each other across the breakfast table. The gendered nature of social participation remains evident in post-retirement leisure activities for men and women. Although "retirement divorce" is a danger, couples with sufficient means may find shared post-retirement leisure activities to be grounds for renewed mutual appreciation and affection 3) Age. Japan's retirees exhibit significant variation in age (the so-called young olds, middle olds, and oldest olds), which influences leisure practices. As with gender and class, age-related leisure trend differences seen in Japan have parallels across East Asian societies. The paper concludes by considering the usefulness of the framework deduced from the Japanese case for studying leisure other Confucian catch-up economies.

Who's the Terrorist?: Humanism and Moral Ambivalence in the Discourse on Terrorism

Although fathers' roles have been adapting over the last three decades financially provisioning remains the essence of 'good' fathering and the work schedules associated with fathers' employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers' and mothers' employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents' organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father's involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, the facilitating influences of employment, and other reconciliation measures have been played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grip on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanitarian ideals are cast aside in the ultimate concern. Terrorist groups, meanwhile, also cast their activities in terms of humanitarian and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of such phenomena. This study would focus on the expansion of the terrorist phenomenon from a historic and structural perspective, this study would account for access, resulting in educational progress and reducing inequality in educational opportunities among students in Tehran.

Network analysis theory holds that inequality transfer of resources and opportunities leads to inequal educational opportunities. This means that people have inequal opportunities in achieving social possibilities and maintaining relationship with others who control the resources like information and bureaucratic influence, which makes the educational opportunities inequal. Having information about actual risk and the unknown and unexpected fostered. The study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran. Reproductive theorists believe that strong solidarity exists between family background and the level of access to the educational facilities. They claim that the lack of educational opportunities for low-income families is due to a lack of social resources. The survey method and questionnaire technique were used for this study. The sample is 300 students (low-income and upper-income families) and 300 teachers.

Evaluation of the educational system revealed that the quality of the educational system in Tehran is not equal. Low-income families have problem to access appropriate schools while upper-income families have no problem. According to research data, Tehran school are run 5 ways: heyat-e-omanaye-e-people specimen, governmental specimen, non-governmental and normal government. In recent years, normal government schools that had more facilities or better quality of education became heyat-e-omanaye or governmental specimen. Low-income families have problem to access appropriate schools while upper-income families have easy access. According to the data, 17 low-income students were selected from low-income families and 17 upper-income students were selected from upper-income families. The sample is divided into two groups of low-income and high-income students. The results showed that there are significant differences in the quality of education between students from low-income and high-income families. The quality of education in low-income families is lower than in high-income families. The findings are consistent with previous studies. The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (such as among Finnish ones). The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (such as among Finnish ones). The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (such as among Finnish ones). The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (such as among Finnish ones). The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (such as among Finnish ones). The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (such as among Finnish ones).

The focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervisory, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76) organizations were selected for comparison.

Summary of preliminary statistical analysis demonstrated that the respondents' average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader's gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index (respectively, Lithuania and Finland), but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. in a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

More than two years have passed since the Fukushima Dai-ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, "collective moral confidence" (Petryna, 2013), suggested that the existing system will overcome the crisis, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making. This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Post-Disaster Literacy of a Japanese Local Community

More than two years have passed since the Fukushima Dai-ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, "collective moral confidence" (Petryna, 2013), suggested that the existing system will overcome the crisis, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making. This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens’ civic education is carried out. What is more, this paper provides what Charles Tilly called the “repertoire of collective action,” in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome psychological and risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

NOVIKOVA, SVETLANA* (The Institute of the Social and Political Researches of the Russian Academy of Sciences, s_novikova60@mail.ru)

Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a “Notes of the Fatherland”, “Business”, “Knowledge”. One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the “Notes of the Fatherland” was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2-nd Petrograd State University. Only in 1916 was an attempt to create a “Russian Sociological Society name M.M. Kovalevsky”.

The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: “In Russia the need for scientific arguments for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible”. Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

Emotional Work During Biographical Research: A Researcher’s Personal Reflection: Researcher’s Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers’ engagement could influence on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured returning mission abroad, both in terms of these constraining, and the ways in which people manage and negotiate them. My paper focuses on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

Locating the Materiality of Music Artefacts

This paper aims to reissue states of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hieps of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite musics, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the Tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg. “My house is located at altitude but the 1st floor was flooded.”). But in the process of regional development, this risk awareness changed (eg. “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor”).

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women’s Life Trajectory: Views from the United States and Japan

Title: Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women’s Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women’s access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women’s higher education enrollment changed over time in the context of higher education system devel-
opment, transition, and expansion? How are men and women distributed across higher education? Which fields of study remain predominantly female (or male)?

The study then proceeds to explore the persisting patterns of gender segregation across different academic and professional fields of study, and considers their meanings from the perspectives of women's labor market participation and the shifting forms of marriage, childcare, and other familial roles. It argues that we should take both labor and marriage market forces into account in order to understand women's agency to make their own education and career trajectory choices.

* A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-

Climate change has received growing attention in both political and public areas, and now, it has become one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPN. This project explores characteristics of decision-making process around climate change policies and the Japanese team conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to comparative analyses between companies and industrial associations. Careful examination will show a roll of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its own opinion and measures toward global warming issues. On the other hand, industrial associations have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word ‘Wa’, which means ‘harmony’, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

* A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido*

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty-first century. Accordingly, many of nation states have shown a great interest in promoting wind energy. However, when wind farm construction project is proposed involving local places, different interpretations, values, and meanings are expressed for wind farm construction by local people. Therefore the rejection and approval of wind farm construction in local places are based at different logics depending upon specific context of local situations.

In this paper we present two case studies for successful wind farm construction projects in South Korea and Japan. Our observation was made for Jeju island province, located at southernmost part of Korean peninsula and Hokkaido prefecture, the island located at northernmost part of the Japanese Archipelago. In order to collect information as to locally involved process, we have interviewed leaders of local communities and NPOs from the winter of 2012. In this paper we demonstrate that wind energy can mean different things to local people than anti-nuclear and mitigation measure of climate change. The local people accept or reject the construction plan and its operation according to their economic situation and social, historical contexts.

* Territorial Behaviours As The Regulators Of Interpersonal Space*

Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable ‘mapping’ of such types of behaviour as expressed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain space and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can phenomena be understood as a social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociofugal character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

* Socio-Demographic Factors Affecting Women’s Fertility Preferences in Nigeria*

This paper examined socio-demographic factors associated with fertility preferences of women in Nigeria. Women of reproductive age in the country prefer more children than men and women's preferred family size is close to children ever born for women aged 40-49. The country's population is currently estimated at 174m, with the current 2.8% rate of natural increase and Total Fertility Rate of 5.7, Nigeria will be the third most populous country in the world by 2050. The overall aim of this study was to contribute to research, for more effective fertility-related policies and programmes in the country. Socio-demographic factors examined as independent variables were age, marital status, education, religion, husband's desire for children, level of autonomy measured in certain household decisions, number of respondent's siblings, number of respondent's co-wives, age at first birth, and age at first marriage. Dependent variable was reproductive preference measured by a single indicator - ideal number of children. Result of multinomial regression analysis showed that the odds of pre-
The Extent of Socio-Economic Factors and Its Influence in Mental Health Condition of the Sixth Batch EPA Nurse and Care Worker Candidates

The migration of skilled workers such as health care workers has been inextricably linked with globalization process. Although migration can be a stressful event for migrants (Stillman et al, 2006), people migrate to improve their well-being through an expansion of economic and social opportunities. This research aimed to figure out the extent of socio-economic background and its influence in mental health condition of the sixth batch EPA nurse and care worker candidates.

A six-pages long questionnaire has been distributed to 42 nurse and 106 care worker candidates, during pre-departure orientation. Questionnaire contains of: socio demographics background (education, age, gender, education degree, socio economic status), degree of preparation to migrate, degree of knowledge about Japan, language proficiency, satisfaction with pre-departure Japanese language training program, motivation to go to Japan and number of social support. The General Health Questionnaire (hereafter ‘GHQ’) was used as a marker of mental health status of the respondents.

The result of this study indicated that the 6th batch EPA candidates indicated healthier mental health in care workers than in nurses (p<0.05), being younger (p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unemployed at the time they applied for the JP-EPA program (p<0.05), having better degree of knowledge about Japan (p<0.01) and having larger number of social support (p<0.001). While language proficiency, satisfaction with pre-departure language training and degree of preparation to go to Japan, had no significant correlation with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates mostly influenced by socio-economic status of the candidates prior to the departure to Japan. It can be noted also that sufficient number of information as well as social support must be provided for maintaining a good mental health status before leaving for Japan.

Politics of Representation of the Workers’ Movements in Indonesia

The paper will discuss the politics of representation of union and different categories of its constituency in the post authoritarian Indonesia. Amidst the pressure of labour market liberalisation that erodes the union power in the workplace, union starts to develop the strategy of community unionism and tries to play a broader political role through local electoral politics. The purpose of such experiment is aimed for mobilizing broader support to increase union political bargaining position in front of the state and employers. The union includes other local social groups such as urban poor, informal workers, and peasants as new categories of constituency. Consequently the integration of workers and the non-workers groups into union constituency results in increasing heterogeneity of the constituency. Workers are not a homogeneous category, let alone the non-workers groups. While the union is mobilizing the constituency, groups within constituency are actually still fragmented within their partial identities and interests. The relations between them and the union are vulnerable to contestation. This condition creates vulnerabilities within the body of constituency. This paper will show the interplay between the strategic homogenization and the heterogeneous realities. It will analyze the power relations within the process of mobilization in dealing with the problems of representation gap. On the other hand, it will also look at how the labour process as well as external social context influence the dynamics. The discussion in the paper is based on a case of study on a workers’ movement in one industrial city in the province of Central Java, Indonesia.

Let Go and Remember. Collective Memories and Narratives of Mass Violence in Finland

Due to its inescapable and inconceivable nature, mass violence causes a considerable sense of insecurity, the impacts of which are felt far from the center of the incidents. They extend out to those who are indirectly affected, and even people who are not personally disrupted by the events. Bystanders to these incidents are involved in the complex process of making sense of violence and death through collective memorialization practices and narratives recounting the incidents. These practices provide a sense of community while also being a source of conflict. Should the community remember and memorialize the incident, or try to bury it out of the minds and move on?

In this presentation I explore the bystander experience in two school shooting cases in Finland that occurred in 2007 and 2008. The analysis is based on qualitative interviews with residents of the targeted communities – people who vicariously experienced the shootings. The presentation is especially focused on how these bystanders formed memories of the incidents and recounted their personal experiences in the interviews. To understand how the bystander experience is constructed through collective practices, I examine the collective narratives, recollections, and emotions shared in everyday interaction and the media. Public memorialization, such as attending vigils and contributing to spontaneous memorials, is identified as a defining feature in the bystander experience.

NUSS, SHIRLEY* (Nuss & Assosciates, nussphd@yahoo.com)

From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This meant I give up professional activities for specialized UN agencies and become a full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to a rural community with 8,000 residents. As I traveled from east to west, I entered a community where I never lived and where I knew no one. A new socio-culture came into view as I saw road signs cautioning drivers about a United Nations take-over of the country. My new responsibilities would be complicated by this environment. In order to care for my parents, I would be forced to employ my sociological imagination while also drawing on all skills I learned while working, living and traveling alone in more than fifty countries.

This paper uses participant-observation as its methodology and, thereby, draws on extensive notes documenting this transition from international professional to caregiver. It discusses methods used to organize support and outreach beginning with the few adult children who also became caregivers for elderly parents. Medical responsibilities and demands for better nutrition leading to improved health, I used the internet for overcoming obstacles to quality care as well as to address legal remedies for limiting their financial exploitation in this rural community.

Some of my findings may be shocking, but most surprising is the revelation that the elderly are not dependent in this rural community; to the contrary, they form the hub of economic activity and income for a wide range of entrepreneurs. The paper concludes with recommendations for caregivers and policy-makers that take account of the elderly as increasingly forming this emerging economic hub of rural areas, rather than viewing them as economically dependent.

*Predators, Parasites and Ambulance Chasers: Financial Exploitation Of The Elderly In Rural America*

This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents - predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age groups. The parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.

*Stumbling over Emotions When Researching the Czech Feminist Scene*

Since the fall of state socialism in what is today's Czech Republic (CR), a feminist scene has emerged. It consists of sometimes contradictory activities on the level of (limited) grassroots activism in the form of zines and festivals, NGOs (such as the Gender Studies, o.p.s., Czech Women's Lobby, Czech Women's Union) and academia (a BA programme in Brno, an MA programme in Prague and a research centre within the Sociological Institute of the Academy of Sciences of the CR). The theoretical stances of those constituting the scene via their various, sometimes contradictory and conflicting activities has become the focus of my research. It consisted of a discourse analysis of materials produced by the scene as well as of interviews with the scene's representatives.

Despite having been driven to the research mostly based on my own long-term interest in feminism and familiarity with the omnipresence of emotions in all walks of (not only) social research (e.g., Hesse-Biber 2012), the share of emotions manifested in the research was surprising. In my paper, I try to address the different emotions as they emerged in the research process in order to show how they impacted on the analysis. Besides the emotions informing the focus of the research and its design, three main sites were detected. Firstly, there were emotions showing up in the process of conducting the interviews. Secondly, there were emotions revealed in the coding process. Thirdly, there were my own emotions in response to the former two areas. Positive emotions are related to successful cooperation and achievement. Frustration and vanity stem from tensions and perceived unequal distribution of power and agency across the feminist scene as well as from the resulting limited potential to protest.

*Facing Potential Failure: Men, Masculinities, and Self-Worth Protecting Strategies in Highly Competitive Learning Contexts*

The aim of this qualitative project is to explore how male students’ self-images and self-worth are negotiated in higher education and, particularly, in an elite program and in relation to potential failure. How do masculine and student identities intersect in a context signified by class privilege and high ability and achievement? How is failure/success constructed and what kind of implications does it have socially and in terms of male students’ identities and engagement?

Research on boys and schooling pinpoints how high-status masculinity is associated with ‘effortless’ achievement, and diligent work and anxiety with femininity in Western countries. To explore if such discourses influence students’ identities and practices in HE, or are contested, is thus of interest. While a large proportion of research on education and masculinity has focused on students-at-risk or subordinated groups, there has been a call for more research on privileged groups for a deeper understanding of educational and societal inequalities. Law studies are among the most prestigious and competitive higher education programs, in Sweden and internationally, and are dominated by high achieving students with privileged backgrounds. Prevalence of test anxiety, antisocial and manipulative behaviour has been reported as a part of avoiding failure and striving for top-positions in such high performance oriented and competitive learning cultures.

The study has an interactionist approach; consequently, identities are examined as relational, situated and accomplished in interactions. The design of the study, both theoretically and empirically motivated, is to reside on interviews law student counsellors and Swedish law students. The project is work in process, and expected to contribute to knowledge on how students and staff construct masculinity and student identities in privileged and performance-oriented contexts, particularly how gender and class informs strategies of avoiding potential failure. This small scale study is partly funded by SRHE’s New Research Prize 2013.

*Neoliberal Postcolonialism in Skilled Labor Mobility - Filipino Nurses Coping with Deskilling, Discrimination and Ethnic Hierarchies in Finnish Elderly Care*

European societies are facing the crucial question of who will provide care for the ageing populations in the future. In many European countries the answer has been migrant worker force, and Finland has recently started to follow suit. Since 2007, private companies have been recruiting registered nurses from the Philippines to work as practical nurses in Finnish elderly care homes. The paper has two parts. First it argues that the recruitment is based on a neoliberal postcolonial logic according to which the Philippines is perceived an endless source of labor force for the needs of ageing Finnish society and international mobility as individualized risk taking based on economic calculation. Secondly, the paper analyses how Filipino nurses cope with the deskilling inherent to the recruitment process and with the everyday discrimination and ethnic hierarchies they encounter in the work places. Moreover, the paper explores how the nurses find dignity in their everyday work (Stacey 2005). A common strategy is to create a moral hierarchy based on ethnic differences according to which Filipino nurses have a better work ethic based on fictive kinship, while the Finnish nurses are claimed to have an instrumental approach to their work. The old discourse of care as ‘labor of love’ is then given new meanings in the global hierarchies of care work. The paper draws on ethnographic case study of the Filipino nurse recruitment including qualitative in-depth interviews with Filipino nurses working in Finland (N= 20), representatives of the recruitment company and the private care companies employing the nurses (N=14) and a content analysis of the media coverage of the phenomenon (2007-2012).
O’DIA, ROBIN*

Inequality and Emotion Management in Parental Caregiving By Chinese Daughters

In the past, normative values in historically Confucian societies strongly demarcated the roles of sons and daughters with regard to the care of elderly parents. Whilst sons were charged with responsibility for parents’ wellbeing, daughters-in-law or daughters carried out the hard work of caregiving.

Today the rigid family hierarchy is undergoing change due to ubiquitous education and professional employment of women. Asian daughters are becoming self-sufficient. Their dominion by and dependency on the family has diminished to a great extent. Gender based roles and obligations associated with family membership have nonetheless not abated. Though daughters may now contribute as much as sons to parents’ financial support, culturally sensitized norms suggest caregiving remains within the woman’s purview. And, perhaps surprisingly given their modern lifestyles, daughters continue to be committed to this familial obligation.

Within the framework of Hochschild’s theory of emotion management, this paper explores the emotion work Chinese daughters undertake to justify and sustain their caregiving activities. Specifically, it examines the importance of emotional investment in caregiving and how daughters overcome unhappy feelings related to son favouritism in order discharge kinship responsibilities.

In furtherance of this research, fifty-five Chinese women born between 1946 and 1960 participated in semistructured, in depth interviews in Hong Kong and Singapore during 2011 and 2012. Findings indicate feelings of affection rather than duty may mediate the quality and length of care daughters are willing to provide to elderly and disabled parents. If feelings of affection are absent or weak, caregiving may be unsustainable and alternative behaviours may be result. The ability to manage emotions, therefore, may not only be critical to the relationship between caregiver and care recipient but determinative of whether care is subcontracted to foreign domestic workers, parents and in-laws are placed in nursing homes, or parents are abandoned or abused.

O’REILLY, JACQUELINE*

Strategic Transitions For Youth Labour In Europe: The State Of The Debate

We examine how different comparative frameworks for international research have defined the ‘problem’ of youth unemployment. Reviewing national and European policies we argue that increased labour market flexibility in the context of an expansion of higher education and the legacy of long-term unemployment results in increasing polarisation for youth. Understanding youth unemployment cannot be limited only to the sphere of economic production and a narrow focus on skills attainment; it also needs to incorporate the role of families and social reproduction to understand how differential trajectories for young people have been created and are being reproduced. What distinguishes this phase of youth unemployment in comparison to the 1980s are family legacies inherent from previous recessions and the growth of work-poor households, the consequent decline of traditional employment careers as a result of labour market flexibility, and the very significant role of the European Union in funding new policy initiatives. This paper draws on the EUPF7 large scale projects funded by the European Commission on ‘Overcoming Youth Unemployment’.

The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group Shirōto no Ran in Tōkyō, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeter-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless employ the means of the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban sociality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their cooperative and creative commitment beyond the constraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalism. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

OBINGER, JULIA* (University of Zurich, julia.obinger@uzh.ch)
Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan’s societal norms but also from its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the use of public space, they introduced a countercultural infrastructure of small “autonomous zones” in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before “Occupy” even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnavalesque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homeless rights to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalization and deliberate externality to the mainstream social and political institutions. Tackling this seeming contradiction, my paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of “social movements” in Japan on the basis of concepts like subpolitics, prefigurative politics, and DIY-politics.

Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. The current network of social media influences in communicating among families with OFW members.

The birth of modern technology and its advancements, in this day and age, bridges the proximity between families who are separated in an attempt to improve their quality of life. It is argued that there are inherent tensions in this process of communicating with their families becomes a challenge. A specific purpose of communicating with their families through social media is a factor that needs to be identified.

Using data from the quarterly surveys of Social Weather Stations among Filipino adults in the Philippines, the following questions are asked: (1) What forms of social media do migrant workers use to communicate with their families in the Philippines? (2) How often do migrant workers communicate with their families in the Philippines? (3) What challenges do families encounter when communicating with their families using social media? (4) How does mediated communication affect the dynamics of family relationships? (5) If a member of the family is non-digitally-literate, how then do they communicate with one another?

Here, utilizing empirical research and Filipino familial theory is analyzed to explain the benefits and disadvantages of communicating among families with migrant workers through social media.

Care Regimes and De-/Familialization in Asian Seven Societies

As the first paper of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women’s employment, changes in family life and welfare re-trenchment are the reasons behind people’s growing concern on care. However, these are phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies the background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care diamond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialization, face-work, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the societies under consideration. The major findings are;

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.

2) The role of the market is increasing dramatically in most societies.

3) People’s expectation for the community is increasing in many societies.

4) Socialist countries are showing different paths from other countries. The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

OCTOBRE, SYLVIE* (Ministère de la Culture, sylvie.octobre@culture.gouv.fr)
GALLANT, NICOLE* (OJS, nicole.gallant@uocs.inrs.ca)
From Cultural Globalization to Aesthetic Cosmopolitanism

‘Cosmopolitanism’ is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday consumption (Cicchelli and Octobre, 2013). Recently, research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

Do young people become cosmopolitan via the globalization of the cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.)?

This perspective enables a reformulation of the question of “distinction” (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivoresm (Peterson, 1996), or individual plurality (Lahire, 2006). Second, its calls into question the “social distinction”, through the reconceptualization of the boundary factors which mark new lines of fragmentation in young people’s cultural universes (Octobre, 2010). This talk will address these question through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research project.

ODA, AKIKO* (Kyoto University, okatsuki1123@gmail.com)
Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender identification and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capitals, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males’ wages go up and females’ wages fall.

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnational approach that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants. In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist and ethnic or national categories that are rather essentialist at a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life story interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Dealing with Multiple Roles As a Medical Worker, and a Hemophilia Patient with HIV and HCV

Objective: To describe the difficulties of dealing with multiple roles in a work setting experienced by a haemophilia patient with HIV and HCV, who is also a medical care provider, and to identify the ideal behavior of medical providers towards patients with a positive HIV/AIDS status.

Method: A narrative interview that was conducted in 2009 with a male hemophilic in his 30s, who had HIV and HCV and who was working at a hospital was analyzed.

Results: At first he concealed his hemophilia, HIV, and HCV status after receiving notification of HIV status, because of prejudiced and discriminatory public perceptions about AIDS at the time and worries about restrictions at work or dismissal. Then, after two hospitalizations for the side effects of interferon treatment, he quit his job, because he had experienced “a sense of crisis about revealing his HIV status,” which became necessary because he used public health insurance and medications. Also, he had experienced “medical workers’ true feelings” and noticed “the prejudice of other professionals.” However, at the same time, he had begun to reconsider living with HIV, and began to selectively reveal his hemophilia and HIV status. When working in a different medical institute, he talked about his illness experience and revealed his HIV status. Here, he was “accepted by professionals.” This was a turning point for him. Revealing his status enabled him to work flexible despite his condition.” However, he faced new difficulties caused by “confusion about his multiple roles as a patient and a medical worker.” This case study identified the characteristic difficulties faced by patients working in medical fields. To solve these problems, medical workers should develop a deeper understanding, more profound than the level of understanding seen today.

Interrmarriages and Inclusion. Time and Space of Love, Laws and Norms

Based on a number of case studies of women and men involved in intermarriages in Europe, the intervention explores how these marriages and their consequences could challenge the concepts of inclusion and exclusion. “Intermarriages” refers here to couples formed by a European Union citizen and a “Third Country National” (TCN). A TCN is a citizen of a non-EU country who resides in a European Member State, and is thus affected by some specific regulations and administrative practices. Furthermore, the distinctions found in migration laws and administrative practices seem not to be limited to citizenship (e.g. dichotomy of EU citizens/TCNs), but extend to features that differentiate certain TCNs from others on the basis of categories such as ethnicity, religion, gender and social class – all of them included in anti-discrimination laws. The requirements included in compulsory integration tests for TCNs who apply for residence or naturalization (Strik & al., 2012; Hajat, 2010) display an overlapping of these categories (Groenendijk, 2006).

Moreover, if laws and family codes (e.g. Personal Status code, civil codes) influence the legal definition of inclusion, other unwritten norms that normalize homogamy may affect the sense of inclusion and modify the concept of “otherness” according to the configurations in which the members of these couples act (Sasik et al., 2011).

Bi-national family biographies suggest that what is “normal” for the members of these families vary according to time (e.g. before or after 2000) and to space (e.g. European Union vs. outside).

The method of “biographical policies evaluation” (Delcroix, 2013; Apitzsch et al., 2008) allows understanding the effects of categories as citizenship, denization (Bosniak, 2001) and dis-citizenship (Wedak, 2013) on these families and the
The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue people today are faced with severe ecological and demographic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man’s activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggravated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three dominant institutional complexes that foreshadows particular institutional trade-offs. There is the enlightened context of sports practices, and there is the resistant context that sees forms of resistance against such ‘elitism’ of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it’s organizational base is low, universities see a growth spurt in sport due to their academic departments developing sport. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Experiment Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, ActiZ, the Utrecht University of Applied Science has carried out an Experiment of Workplace Innovation in Elderly Care to develop a new innovative organizational design that is intended to improve the quality of care, work efficiency, BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar process in their own organization. The experiment was finished in the summer of 2013. The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. However, the paper shows that further acquired during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psychological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individual differences in Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Economic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled. In a second step, I apply random-effects logistic panel regression models to 39,833 observations of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model specifications. Contrary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impact training, whereas the trained part of Conscientiousness is more complex. I also show, regarding reverse causality, that further training does not lead to significant changes in psychological functioning. I conclude that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize how psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.

Transitioning through Recession? Labor Market Entry Patterns for Hard and Soft Fields of Studies before and during the Financial Crisis

OEFEI-MANU, PAUL* (IGES, ofei-manu@iges.or.jp)
Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality education/ learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (RCEs) selected from East and Southeast Asia and the educational/ learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent translation of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative educational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environment for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.
Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It shows that the pathways into employment are more diverse during times of economic paruity such as after the Great Recession; however, this should not be the case for all subject areas. Instead, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, while graduates from softer areas suffer from the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by difference in human capital specificities which favors specialized over general skills. Economic fluctuations have a stronger impact on demands of general skills which translates into more fractured transition patterns.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of “social sorting” shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. I report its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated by using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers’ own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and inter-active features of electronic technologies disguise equality and democracy. Yet, unmonitored or unrecorded sites highlight the unequal landscape of surveillance society before social sorting starts.

Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates and why they make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers' preference and employers hiring decisions by using partial observability probit model(Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicitly. Using a nationally representative data, we analyze how high school graduates' attain their first jobs. Previous studies have shown the importance of long-term networks among schools and employers(Rosenbaum and Kariya 1989). We examine whether employers in fact highly appreciate such institutional linkages.

Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers' hiring decisions, rather than students' vocational skills or academic achievement. Moreover, the result doesn't confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded(Granovetter 1985) in the labor market.

Coping with the Ageing Society: Migration of Care Workers to Japan and Taiwan

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performs the intimate space in the home in Taiwan and Vietnam, which not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. The presentation will compare Japan and Taiwan as the different way regarding its policy to introduce migrant workers to undertake long term care. As the population aging accelerates care work has been increasingly undertaken by migrants who constitute an integral part of the care workforce in East Asia.

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed . Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three
were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working period, is a difficulty common to working women and, unfortunately, it remain current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of past-present-future, straight-line perception of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of history. Modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women’s Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle for significantly improved maternal health. Annually, an estimated 50,000 to 59,000 Nigeria women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of reproductive health issues as their prerogative, issues in which the compliance of their wives is taken for granted. The study employed the women’s data from the 2008 NDHS to examine the relationship between women’s decision-making autonomy and exposure to mortality risks. Given that the study was interested in the risks of maternal mortality in the country, the analysis was restricted to only the women who had at least a birth in the last five years (preceding the survey). A total of 4,833 women interviewed nationwide in the 2008 NDHS, met the inclusion criteria. The analysis was done at univariate and bivariate levels. Also, using logistic regression models, multivariate analyses were performed to estimate the odds ratios for each of the predictor variables in the models. The study shows that 36% of the women did not make a single antenatal visit to a hospital during the duration of their last pregnancy; as many as 63% did not deliver in a health facility (government or privately owned); and about 60% did not deliver with the assistance of a skilled provider. After controlling for the confounding influence of some other independent variables, the study suggests that the “lack of autonomy” of women in household decision-making gives them a voice that is heard in the house and ability to initiate moves to obtain healthcare without necessarily waiting for “administrative clearance” from adult males within the husband’s family.

OGURO, MEGUMI* (The University of Tokyo, karuugen@yahoo.co.jp)

Students’ Learning and Career Choices in the Vocational Course of a General High School in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school.

Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground.

There is still a serious problem that must be addressed here. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education. However, previous studies have lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient skills and knowledge. The idea of retrieving the vocational significance of secondary education is becoming more necessary.

In this study, the authors aim to consider the new concept of vocational education that bridges the dichotomy described above.

Change of Employment Structure and New Labour Movements in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practices are confronted with major implications for the future of work. The employment security is becoming more difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on shrinking union membership and its bargaining power in Japan.

Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government's efforts to decriminalizing bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. School counselors and policymakers hope for "deviant" families to transition into a "normal" condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as "deviant." In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as "normal" in the healing program, but this is a context outside of school. Therefore, after they complete their course in the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

RC42-716.1

OH, HELEN* (Sogang University, helenoh1@daum.net)

Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e., the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.

What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively affect on the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what factor influences most positively on harmonious parent-child relationship during the process of child's future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. No significant difference appears on the side of the child, on the other hand, does not appear significantly. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

Religion, Trust and Public Society in the United States

Social integration beyond constituents' diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jurgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into questions. Therefore, focus on "trust in immigrants" as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

This study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) theological (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnosticists, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<.05). Neither religious pluralism nor moral liberalism appears significantly related to religious experiences. Religious experiences (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences) lead to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation -- not merely prayer alone -- appear to be highly related to trust in immigrants.

CROSS-BORDERING JAPANESE CULTURE IN THE CHANGING MEDIA ENVIRONMENT: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No.1 on the Internet hit list in Korea and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998–2004, meanwhile Internet has rapidly proliferated in 2000s, young users shared manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industries, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existing fandom and extends throughout the new-media as Attack on Titan case indicates. Moreover, the phenomenon has observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Hangeyori-donge.

Recently, Japanese popular culture can be seen through formal platform IPTV or Internet contents-store beside pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is necessary to promote interface with flexible diversity contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.
Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care workers from abroad in order to fill the shortages of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care especially in the case of the Japanese government’s project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines, and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation to research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan’s EPA project based on the research team’s various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard of recruitment and employment system for border-crossing nurses and care workers.

---

Stigmatization is here studied through interviews with HIV treatment activists and voluntary HIV treatment counsellors in an urban township in South Africa. While being also patients, the counsellors form a support and advocacy group within the clinics where they volunteer, as well as in the community and society at large. I will examine how they talk about their views on expertise and knowledge, health care, authority, biomedicine and community. These patients describe their lives, care and survival as an entangled net of different relations that sustains them, a net of relations that produces healthier embodiment including both health care, authority, biomedicine and community. These patients describe their lives, care and survival as an entangled net of different relations that sustains them, a net of relations that produces healthier embodiment including both

This paper examines different responses to the activist group Femen’s practices and messages by young activists in different political alliances, including feminist groups, in Tunisia in 2013. The Tunisian Femen context is especially interesting as it captures so many contemporary tensions regarding social change, young women’s political engagement, transnational movements, cultural conservatism, generational clashes, politicized embodiment and shame, public sexualization, and changing fundamentalisms. While Femen has challenged global feminist movements and provoked unusually explicit anger, ridicule and dismissal among women’s movements and conservative religious authorities alike it could potentially evoke other types of responses from activist youth, especially in the aftermath of the initial revolution and later frustration in Tunisia, where a generational conflict on issues of rights and freedoms and bodily integrity is often explicitly politicized. The paper analyses the ways the Tunisian responses frame the socio-political meaninglessness of global feminism, explicitly agendas and the followed media turmoil. The first interviews were conducted during the first on-line appearances of the Amina Tyler’s internet action in March 2013, and continued in several phases as the event received international media attention and analytical narratives became consolidated. The Western responses provoked counter-reactions that the Femen event can be seen to have become one analytical window to self-understandings of gender politics among youth in the aftermath of the Revolution in contemporary Tunisia.

---

This paper examines the acquisition of body techniques in a ballet studio from the perspective of social control theory (Hogetsu 2004). To achieve this objective, I conducted participant observation at a ballet studio in Takasaki, Gunma Prefecture, Japan, and interviewed 3 teachers and 10 students who belong to this studio. There are three notable characteristics in the institution of the ballet studio. Firstly, students are divided into classes according to their skill level. This division is practiced primarily as the prohibition of students from joining classes intended for higher skill levels. Secondly, since there is only one instructor in each class, the instructor does not always pay attention to every student, but normally addresses particular individuals to correct her posture with words and gestures. Thirdly, even when the instructor is addressing individuals, those who are not addressed responds and reacts as if she were addressed individually each student responds as if, even though, in reality, another student being the focus of attention by the instructor, the instructor is personally addressing her. On the basis of these dimensions, students acquire ballet technique through what we might call “over-understanding” of teacher’s coaching.

---

In Japan, food and people’s eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children’s unhealthy dietary habits has arisen. Furthermore, some studies have found that mother’s food consciousness or dietary behavior affect the related dietary habits at home. However, few empirical studies have examined the correlation between women’s dietary habits and whether they have children or not. This study examines the effect of childcare experience on women’s dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children “eat all three meals” more regularly but are not conscious of “avoiding eating snacks.” Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a high standard of living. The result revealed the following points. First, women equate the responsibility of nurturing children to disciplining them rather than caring for their children’s physical health. Second, childcare experience has both positive and negative effects on women’s dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women’s dietary habits.

While Femen has challenged global feminist movements and provoked unusually explicit anger, ridicule and dismissal among women’s movements and conservative religious authorities alike it could potentially evoke other types of responses from activist youth, especially in the aftermath of the initial revolution and later frustration in Tunisia, where a generational conflict on issues of rights and freedoms and bodily integrity is often explicitly politicized. The paper analyses the ways the Tunisian responses frame the socio-political meaninglessness of global feminism, explicitly agendas and the followed media turmoil. The first interviews were conducted during the first on-line appearances of the Amina Tyler’s internet action in March 2013, and continued in several phases as the event received international media attention and analytical narratives became consolidated. The Western responses provoked counter-reactions that the Femen event can be seen to have become one analytical window to self-understandings of gender politics among youth in the aftermath of the Revolution in contemporary Tunisia.

This paper examines the acquisition of body techniques in a ballet studio from the perspective of social control theory (Hogetsu 2004). To achieve this objective, I conducted participant observation at a ballet studio in Takasaki, Gunma Prefecture, Japan, and interviewed 3 teachers and 10 students who belong to this studio. There are three notable characteristics in the institution of the ballet studio. Firstly, students are divided into classes according to their skill level. This division is practiced primarily as the prohibition of students from joining classes intended for higher skill levels. Secondly, since there is only one instructor in each class, the instructor does not always pay attention to every student, but normally addresses particular individuals to correct her posture with words and gestures. Thirdly, even when the instructor is addressing individuals, those who are not addressed responds and reacts as if she were addressed individually each student responds as if, even though, in reality, another student being the focus of attention by the instructor, the instructor is personally addressing her. On the basis of these dimensions, students acquire ballet technique through what we might call “over-understanding” of teacher’s coaching.

**Social Exclusion and Health Outcomes of Single-Mother Households in Japan**

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined for control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has a positive effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow up.

**Structure of Cultural Rejection**

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals' perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identifications correspond with individuals' perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

**The Relationship Between Financialization and Accounting Standards: A Japanese Perspective**

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is reconsidered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japanese accounting regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

**A Comparative Study of Effort and Examinations in Japan and England**

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.”

It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture reflects the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

**OKBANI, NADIA*** (Science Po Bordeaux, nadiaokbani@yahoo.fr)

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Suddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this paper is intended to analyze how organizational context, economic crisis, and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explains how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some perspectives for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outcomes for beneficiaries.

**Australia’s Temporary Migrant Work Programs and Its Neighbouring Regions**

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a ‘migration and development’ styled program with some nations in the Pacific (the Seasonal Workers Program). TFWPs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific working in low paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese diaspora and more recently migrants from African countries, influence the contemporary mix of people. Migrants' engagements with more than one society and in various forms of transnational networks are an evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational networks. Participation in networks of Asian commerce is demarcated in shops through the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market.

Migrants' transnational experiences, connections and networks are part of the uneven resources available to different groups and individuals as they become embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnic worlds" (Werbner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks "criss-cross" and in doing so interact, challenge and shape one another. To take economic examples, transnational connections provide some migrants with access to capitalisation. But for other migrants their embeddedness in one society is a financial constraint, as the payment of remittances can be temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was sourced from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment of persons without character, poor salary, embarkment and lack of good pension scheme. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV’s agency in shaping the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: ‘cultural immunity’ and ‘rights-based’ discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, ‘modernisation’ and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma at individual and collective levels. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants’ reconstructions of HIV through narratives of ‘injustice’ and ‘neglect’ are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

NARRATIVE INTERPRETIVE METHOD (BNIM) and with 32 key informants, including doctors and civil society workers providing services to PLHIV.

Biographical narratives of PLHIV are analysed to understand the implications of the discursive structures around HIV/AIDS in Turkey for PLHIV’s construction of social identities. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV-stigma.

PLHIV’s biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma is being reconstructed through PLHIV’s interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of ‘the state’. The paper focuses on three types of narratives, with respect to these three milieus: Narratives of ‘uncertainty and distrust in medical profession’, the ‘positive reconstruction of being HIV-positive’ and the narratives of ‘injustice and neglect’ reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.

Pharmaceuticalization and Social Inequalities: An Examination of Problems Relating to Depression in Japan

The growing number of people suffering from depression has become a social problem in Japan. Over the last decade, the number of those consulting medical institutions about depressive symptoms has more than doubled, and the number of those taking sick leave from work due to depression has increased. Accordingly, mental health strategies have become an important issue for both the nation and companies. The problems associated with depression in Japan have been influenced by the pharmaceuticalization of mental health. This trend further promotes the individualisation of social problems and encourages people to seek hospital consultations. Since selective serotonin reuptake inhibitors were introduced to Japan’s pharmaceutical market in 1999, demand for anti-depressant medications has rapidly expanded. It seems likely then that the efforts of pharmaceutical companies, as part of their marketing strategies, to increase people’s awareness of mental illness have led people who are not actually depressed to have medical consultations and drug treatments for it. This phenomenon is known as ‘disease mongering’ and has been reported on. Problems exist from the medical perspective also and include the following: expansion of the diagnostic criteria for depression as formulated in the American Psychiatric Association’s Diagnostic and Statistical Manual of Mental Disorders; treatments that rely heavily on drugs; and biomedicalization. Another reason for the increase in medical consultations is the declining function of communal bodies such as companies and local communities, a move that has left individuals to deal directly with organizational and social pressures. This has resulted in individuals struggling psychologically, for example, with anxiety, worry, and depression. In summary, this sociological research has analyzed the problems of depression in Japan and revealed how the pharmaceuticalization of mental health accelerates the individualization of social problems, thereby creating new social problems and social inequality.

A Variation Study of Dialect Contact and Obsolescence in Japanese Community in Mexico City

Ever since the first migration to in 1897, Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been contact between the Japanese regional dialects among them. This study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 5000 minutes of collected through my field research in 2012 and 2013 in Mexico City. The informants are more than eighty of Japanese immigrants and their families. The linguistic variable examined in the analysis is negation suffix. The negation form is realized in different forms according to dialect. The major variants are –na and ~n, the former is mainly used in...
eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negotiation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negotiation system in this diaspora variety of Japanese.

**Edgewise Community: Real Estate and Asian Settlers in Tokyo**

After the latter half of the 1980's the number of Asian people has increased as "new comer" in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called "edge-wised community." Edgewised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents' motives in acquiring the housing and in having relationship with the network and other surroundings. Especially, focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes(1931): Chicago School third term, in his research of "Chicago real estate Board" housing land and building dealers are classified in five groups. In this report, combining both Hugh's classification and the reporter's classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between "cooperative channel" and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to "cooperative channel" centering housing land and building dealers in "edge-wised community," improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

**The Medicalization of "Depression" Across the Globe**

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical stance. While data exist about the cultural conditions across societies, construct the set of symptoms that are used in formal psychiatric diagnoses. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what attributions they construe what constitutes an illness and what are appropriate responses to potential illnesses. However, we know little about these cultural toolboxes of scripts, schemas and habits for depression. Here we ask: How do individuals construct the meaning and response to a set of behaviors that are consistent with DSM-IV diagnoses of major depression? And, how do individuals' past experiences with mental health problems shape these patterns? Using data from the Stigma in Global Context – Mental Health Study (SGC-MHS), we examine how national representatives of individuals in 17 countries label and suggest what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

**Housing Well Being and Social Inequality in Europe: A Comparative Analysis**

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Though around the European Union's citizens own their homes and maintaining a home have continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects. The paradox is that home ownership does not exclude housing deprivation.

The hypothesis is that households' social class plays a role in enabling owners to combine home ownership and well-being. On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergent social housing transitions in different countries, by combining the analysis of trends of living/housing conditions throughout Europe.

To support this claim, two main dimensions of housing inequality are identified: tenure and housing well-being. A micro level data analysis is performed, in order to take account of individual family costs and access to maintenance of ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners should be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

**Social Mix in Deprived Areas: A Solution to What?**

**Social Mix in deprived areas: a solution to what?**

The research study refers to the results of a housing mix policy in Turin (Italy) based on the conversion of the real estate complexes built at the time of the 2006 Winter Olympic Games into mixed housing and aimed at creating a housing mix capable of generating a social mix.

Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers' expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesions, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment. Starting from those expected results, hypotheses and outcomes of this specific attempt have been investigated. In the observed neighbourhood social mix has not produced all the hoped-for effects. The greatest benefits have been
in limiting the negative effects. The effects as regards developing resources have been more disappointing, both at the neighborhood level and in terms of interaction. It is possible that these latter effects need more time to make themselves felt. Or, perhaps, social mix is at most effective to curb vicious circles, but not to "automatically" a source of virtuous circle.

Representations of the Social in Digitalized [and Cyber] Domains of the Non-Dedicated

The paper is a part of the Author's project focused on creating new kinds of the natural by the social. The main thesis is that the social creates autonomy of the natural. Communication is abounding with symbolizations enough to force out traditional perception of the natural as something external. Civilization and culture are abounding with symbolizations enough to construct the autonomous natural. Up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author analyses presages of constructing of the natural as representations of the social non-natural. That forms an autonomous domain of the social because it does not create the dedicated. The dedicated has been a kind of exaggeration, exemplification, and preservation of meanings. Creating-the-natural individual human beings are not referred to any non-verbatim external. Physical, digital, and cyber acts of creation of the natural are representations of the social and they are not participating in something given as unknown. In other words, acts of [self-]lunecovering are connected with acts of [self-]creation of social subjects.

The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be by rejection of the dedicated and it will be directed towards creations and constructions of the natural. An individual human beings become autonomous-as-non-dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non-dedicated absorption will re-define—but without reference to ethics—Socrates' cognitive valuation. The subject is the reason.

Handling Money in Close Relationships in Young Family Households in Poland

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Polish who consider the “free market generation”. Young adults (18-32) who are growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subject to new kinds of risks and uncertainties.

In order to show the social context in which young family households' monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions (“common knowledge” and “taken-for-granted” issues) about money in young family households and on identification of language patterns related to the issue.

The research has identified money and “monetary rules” as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working full-time? How many bank accounts should a cohabiting couple open? one that is shared, two where each has a separate one, or three where each has a separate one and there is an additional one for household expenses? With a wide range of existing patterns related to the monetary practices in young family households the paper focuses on the process of rules establishing in the making.

OLESEN, ANNELITZE*S (University of Southern Denmark, ool@sam.sdu.dk)

Ex-Prisoners Debt: An Indirect Criminal Risk Factor

Studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path.

However, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. According to the Danish Administration of Justice Act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, DNA-tests, technical and academic investigations etc.). Denmark is the only Scandinavian country, and the only country in the European Union, who does not take the income level of the convicted into consideration, when calculating the legal costs. Nor do they have a common practice of remitting convicted’s considerable legal costs.

Thus, we must regard most ex-prisoners in Denmark as highly indebted to the state. The ex-prisoners debt is generally understood as causing dynamics of regime problems, but legal regulation, as an unintended consequence of the indebtedness, is still poorly explored. My research is based on interviews and follow-up-interviews with 41 ex-prisoners. The interviews and follow-up-interviews have been carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners’ indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners farther from the legitimized socio-economic advantaged affiliations because of their debt to the state.

OLESEN, ANNETTE*S (University of Southern Denmark, ool@sam.sdu.dk)

The Al Capone Method in the Danish Police

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method).

The Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method in general has an impact as desired by the Danish Government. However, research has not yet shed light on the unintended consequences associated with the method in a Danish context.

Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow-up-interviews with 16 gang members, carried out in Denmark during a 2.5 year period. Additionally, the underlying basis of the research consists of a six months long field study of two gangs in Denmark.

The (re)invention of the Al Capone method in the Danish police force is based on a close interdisciplinary cooperation with the Tax Authority, Prosecuting Authority, Danish Financial Supervisory Authority, Danish Bar and Law Society, Public Prosecutor for Serious Economic Crime, Ministry of Justice, Ministry of Foreign Affairs, Danish Business Authority e.a. The interdisciplinary cooperation manifest
itself when policemen and staff members of the Tax Authority e.g. execute visita-
tions and confiscations, try to levy distress and conduct stop-and-search zones 
in high-risk areas.

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video, 
recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dy-
ing from a gunshot inflicted by a regime related shooter during protests against 
the fraudulent Iranian presidential election. Neda almost instantly became a 
transnational injustice symbol representing the unjust nature of the Iranian re-
gime. The case of Neda is interesting for social movement scholars for a variety 
of reasons, including the role of new media and the power of photography and 
citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptu-
al as well as methodological questions about the transnationality of transnation-
al movements. Because while Neda's televised death, motivated various activist 
organizations and interest organizations to act and criticize the Iranian regime, 
the activities around the Neda injustice symbol was much broader. Apart from 
activists, three categories of actors in particular were vociferous and active: poli-
ticians/political parties, media, and networked citizens all expressed outrage and 
demand for action on the basis of the injustice of the facts.

This propels us to ask how we can best conceptualize the activities surrounding 
Neda's death. Was it a transnational social movement – or something else? In the 
paper I argue that it was in fact a social movement. Accordingly, I contend that the 
defining element of a movement is not the actors involved, but rather the kind 
of action expressed. I propose that this understanding social move-
ments may be especially pertinent in a transnational context where information 
circulates rapidly and where actors are increasingly networked, connected, and 
visible and able to engage in numerous and often different political issues at the 
same time.

On Policy-Making and Legitimation of the Law in Contemporary Pluralistic Society

The paper's aim is to discuss the substantive dimension, quality and content of 
current law-policy making and socio-legal legitimation of law in present-day 
highly mobile, complex, multiethnic society. A special focus will be devoted on the 
coupling of the epocheal crisis of formal-official State-nation law and the rising dif-
erentiation of social and legal sub-systems. Most relevant problematic variables 
related to this issue are placed on the basis of the concept of pluralism.

The quest for new models of citizenship and representativeness related to 
the search for new participatory rituals and institutional ceremonial events and 
high-tech interactions will be analysed also in relation to their current reliability 
and accountability.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with 
worrisome suggestions on the health of its citizens. In fact, the current economi-
situation threatens to undermine all dimensions of well-being of a population.

The situation is still ongoing, the timing and outcome is impossible to predict, but 
that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin 
et al., 2010; Cylus et al., 2012; Avanzini et al., 2004) and data made it possible 
to substantiate the effects of unemployment and increasing poverty on health 
inequalities.

In this paper we will try to verify the consequences of the economic crisis on health 
in Italy, what is the state of health inequalities and what are the risk factors for 
proximal (material, psychosocial, occupational, environmental and behavioral), 
most affected by the economic situation.

Using data by “Health for All Italy” will rebuild the health status of the Italian 
population in the last 10 years to demonstrate the changes and estimate the 
consequences of the current crisis, as increase social inequalities.

In time of crisis it is even more necessary to ensure access to health services, 
especially to the weaker member of society, since the health needs may grow 
rapidly. Moreover, given the particular situation and conformation of Italy will 
place the focus on geographical differences between the north and south of the 
country.

The first results show that, indeed, in recent years are increasing cases of sui-
cide and depression, and all diseases related to the area of mental health (Costa 
et al., 2012). Health outcomes that are affected by an economic crisis ranging 
from subjective health, physical health, mental health and may vary in relation to 
socioeconomic status and place of residence.

OLIVEIRA DIAS, PATRICIA* (PUC-RS, rappatiro@gmail.com)
Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemoc-
ratization have strongly impacted relational and material conditions of low-class 
families. Acute transformations took place especially in the realms of mother-
tendence and women’s participation in the labor market, division of domestic labor 
and domestic violence throughout the last decades, as reflected in the life course 
of women. This paper presents results from qualitative research with two or three 
generations of women in urban, low-class families in Brazil. The interviews were 
conducted with several families as part of two research projects in recent years.

The reconstruction of women’s life stories and biographical self-presentations 
will highlight the reproduction or transformation of social patterns against the 
backdrop of new socioeconomic configurations and social policies. This recon-
struction will trace, on the one hand, the changes in the perception of women’s 
role in society as it relates to gender equality. On the other hand, it will be 
discussed how women experience their embeddedness in family structures as 
influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities 
in Southeast-Brazil will be presented. The analysis of the narrative interviews, 
following the reflexive-reconstructive biographical method, focuses on how the 
interviewed women define their life course between opportunities and constraints.

This is seen in close relation with the social developments taking place around the 
subjects, as postulated by the biographical policy analysis. The research results 
can also cast a light on different patterns of generational intercontingency found 
in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel 
Honneth's Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important pro-
ponents of a theoretical paradigm for the social sciences centered on the idea 
of “recognition.” This notion has, of course, entirely different meanings in the 
various contexts in which it is called upon. In Honneth's specific case, it is of decisive 
importance the fact that his theorizations around the centrality of recognition 
relations for human self-realization are rooted precisely in the negative expe-
riences of denial of recognition: disrespect or misrecognition. Despite the more 
than twenty years that separate us from the publication of Honneth's Struggle for 
Recognition, however, it seems that the theoretical genesis of this important book 
has not yet been grasped in its full potential for understanding today/modern 
societies and for a revitalization of the social sciences in general, and of Critical 
Theory in particular. This is due, as I see it, to the misreading of Honneth's works 
as much as to the author's insistence on making the philosophical work of Hegel 
the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated the 
formulation of this recognition-theoretical critical model, aside from the Hege-
lian works from the period of Jena: namely, the sociological and historiographical 
studies that convinced Honneth of the undeniable moral character of social strug-
gles, that is, the American and especially British Radical's, the Weimar Class-
less that flourished in the 1980's. This influence reveal a closer relation between 
Honneth's work and empirical social research than is made visible in his books . I

There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor performance of SSH research has been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation (ex-ante, in itinere and ex-post) and comparison of the impact from SSH research, taking into account the large variety of qualitative and quantitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

Recently, this “immaterial” conception has been problematized by conceiving materiality as physical objects – “stuck” matter. Scholars have analyzed how technology affects and is embedded in institutionalization and institutional change. This ontology, however, fails to perceive the human influence on the environment. It belongs to the human exemptionalist paradigm, in which technology is seen to have any pro-lbm that the “progress” might produce. I propose to integrate physical matter required to run social practices (e.g., food, energy, raw materials) and transformed within practices (e.g., to waste, pollution) to institutional theory. Without “loose” matter institutionalism cannot perceive the growing “rifts” that humanity is producing, most prominently embodied as climate change and the depletion of raw materials. The ontology of “loose” matter has direct implications on institutional change and indirect ones on inequality.

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition -from a seven decades hegemonic party rule to a right wing government- Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral frauds and social unrests. 2012 elections erased any possibility of improvement, when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was the cornerstone of social polarization, because it deepened inequalities both in opportunities for access to education and the struggle for democracy. Part of the explanation is a differential educational discourse, between public and private. This makes perceptions on democracy and social justice impact contradictory the identity of student groups.

Thus, in the middle of the election campaign the student movement #yosoy132 emerged. It claimed the defense of democracy and faced the imposition of the old-regime candidate, due to his intricate web of complicity. The movement, originated in private universities and extended to the public, could articulate a new understanding of social justice and democratic liberties: radical transformation of mass media, for better education and against neoliberal economic model. It was expressed in a wide repertoire of demonstrations, rallies and plural networks with working and middle classes.

The differential impact of this movement on the national politics and media democratization, based on the previously discussed, is in the present debate contradictory. These are the aspects that will be developed in this paper.

**Ontologies of Matter in Sociological Institutionalism**

I study ontologies of matter within sociological institutionalism and discuss their political implications with regard to environment and inequality. I categorize these ontologies in four distinct classes: 1) materiality as action; 2) materiality as a stage for social interaction; 3) materiality as tools employed in social interaction; and 4) materiality as required and transformed within social interaction. I refer to these ontologies as, “immaterial,” “solid,” “stuck,” and “loose,” respectively.

Marx saw materiality as technology and metabolic “rifts” – “stuck” and “loose” matter. In Veblen and Weber materiality takes mainly the form of “solid” matter to which technology adapts through habitualization and cultural refraction. However, they certainly also saw humans as affecting this materiality. For Durkheim material was mainly physical objects – “stuck” matter. Due to the cultural turn, materiality was subsequently neglected; at best, materiality was the “solid” background of institutional impact. Materiality was rejuvenated in the end of 20th century as actions that together with cognitive dimension constitute institutions. This ontology left physical matter outside the picture.

**Austerity amidst Affluence: Cross-National Contrasts**

**Background**

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the processes involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

**Study and methods**

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and nurses rates doctors part of their work as more compared to the doctors rates nurses to doctors.

**Outline of paper presentation**

The purpose of the presentation is to describe how different modes of expert knowledge give rise to relational independence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

OMENMA, J. TOCHUKWU* (University of Nigeria, Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)

This paper is premised on the nomination of 17 council chairmen (not Chairwomen) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party's policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties do not have inclusive membership. The candidates nominated for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political 'godfather' and women underrepresentation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria

This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military entity, which sacrificed liberty over a large spectrum of Yorubaland by the end of the 19th Century. Ibadan developed a unique patronage structure based on the babaogun clientelistic system. The babaogun system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the babaogun system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general can be traced to the political economy of colonial patronage and succeeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in Ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of 'unfavourable inclusion' suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of different categories of people within a society. This paper looks at the implications of the activities of micro-credit institutions as a mechanism of deprivation, even when people are included in the form of being actively employed. In result such certification schemes provide alternative regulatory mechanisms beyond borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

The “Romantic Love” of Young Adults in Japan

Since the 1980s, the late marriage and non-marriage action has become remarkable and decrease-in-the-birthrate problem has started gaining people's attention in Japan. In these social backgrounds, the importance of research on “romantic love” with sovereignty was also started recognizing. However, the study accumulations of “romantic love” are still not enough in the area of family sociology. This study aims to consider how young adults in Japan meaning their “romantic love” by focusing on their rhetoric and gender perspective. The research data are based on 4 group discussions and 4 semi-structured interviews with hetero-
ceremonies requiring no monetary exchange. While the traditional forms of these customs have almost disappeared from modern life, they can still be clearly identified in all three societies. This paper reports the results of an interview survey and fact-finding fieldwork of South Korean and Chinese contemporary mutual help and shows that systems of mutual help arising from indigenous conditions have continued to contribute to sustainable communities in the evolution toward full modernity. The paper concludes that modern societies might do well to take note of such mutual help networks and incorporate them into official strategies as they search for solutions to both public and private social problems raised by the reconstructing of communities in East Asia.

Life Experiences of the Children of Marmara Earthquake and Adults of Today: An Example from Adapazari

Study will be focusing on the impact of disasters to the life experiences of adults of today but who were the children at the time of Marmara earthquake in 1999.

There are inadequate number of studies basing on merely findings which were derived from children of disaster periods. The coexisted studies reveals that there are differences in the impacts of disasters on children in disaster processes. Survival rates of children according age, gender and accumulated disaster culture may differ according to different factors (cultural, economic, social, political etc.)

This study aims to find out post earthquake impact of disaster on children up to their adult ages.

Methodologically study bases on a field work which will be conducted on a student group of a primary and secondary school teacher’s classes at the time of Marmara earthquakes in 1999. Students will be traced 14 years after through snowball sampling in the Adapazari, Turkey in 2013.

The data will be derived from questionnaires, interviews and video records. Literature reviews and visual data analysis will be used. Qualitative and quantitative approaches will be used together in triangulation. SPSS program will be used for quantitative analyses.

The findings will be presented within comparative perspective, through references to findings from coexisted studies and examples from the world.

The study will be consisted of five main parts: namely introduction, methodology, review of coexisted studies, findings and conclusions.

The Second Group of Keban Dam Studies in Upper Part of Efrat Basin

The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later an similar to many projects in the world. However, there are on going high dam projects in many countries on the neck of main rivers and river basins. Kariba, Aswan, James Bay-I, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focuse of future development projects. Therefore second, third and many more studies can be named in relation to known dams.

Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).

This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues. The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project and recent developments, rural-urban and environmental policies in the upper part of the Keban and upper part of the Firat Basin. The findings will be discussed separately. A specific focus on urban and natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

International / Military-Public-Private Cooperation in Disaster Relief | Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the view point the MOD and JSDF. First, it was discovered that there was considerable room for improvement in the MOD’s bilateral and joint cooperation operations in the event of a large-scale disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

In cooperation with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster kept them from exercising their normal disaster relief functions. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake.

A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODERA, HENRI* (University of Helsinki, henni.onodera@helsinki.fi)  
Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak’s Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called ‘Arab Revolutions’ in 2011. Some attribute the young protagonistic role to the absence of an older generation, while others consider that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as a one-dimensional social actor.

This paper argues that locating young people’s activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck’s concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of ‘outsiders’ across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state. Beck’s argument has important implications for conceptualizing the future of modern society by drawing attention to the ways that bounded communities are involved in religious (Islamic) activities. This implies that people are involved in religious (Islamic) activities.

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the regions. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (FHHs) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in a conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impasstable obstacles of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women’s vulnerability to conflict and conflict resolution.

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the regions. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (FHHs) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in a conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impasstable obstacles of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women’s vulnerability to conflict and conflict resolution.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and industrial areas and new workplaces due to the effects of new practices governing the interactions between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

OSTERVEER, PETER* (Wageningen University, peter.osterveer@wur.nl)  
Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Stew-
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the reputational risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislatures through lobbying, thus limiting the national Government's possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population's involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, region and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of populations when governments with the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsic symbolic value of CEDs. The paper considers the vulnerability of marginalized communities as growth professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimization are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a trifecta of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

ORMOND, MEGHANN* ( Wageningen University, meghann.ormmond@wur.nl)

Intermediaries, Facilitators, Agents, Guides: Steering International Medical Travel to Malaysia

Malaysian authorities’ desire for foreign patient-consumers from higher-income countries and the spectacular medical tourism infrastructure being developed to cater to them exists in contrast to the actual everyday flows of intra-regional lower-income patient-consumers who, comprising the bulk of medical travellers to Malaysia, have been fundamental in both constituting and sustaining the country’s medical travel destinations. This paper draws on interviews with medical travel companies in Malaysia and Indonesia that promote Malaysian private health care to prospective patient-consumers from both higher-income and lower-income countries. It compares and contrasts the relationships of these companies, their relationships with patient-consumers and the ways in which they represent and negotiate the differences between health care in patients’ countries of origin and in Malaysia.

The Migration and Development Nexus: Gender Insights

Research on development and migration has mostly stemmed from an economic perspective (assessing the volume, cost and contribution of remittances to the local development), largely overlooking women and gender issues. The New Economics of Labour Migration (NELM), the transnational paradigm and the lived experiences of women have paid little attention to women and gender issues. The New Labour Economics (NLE) of the 1980s stressed the existential security. On the other hand, trusting based on the inter- and intra-group membership creates trust to members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values. Thus, generalized trust has the predictive and moralistic aspects. We can call this the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the inter- and intra-group membership is moral and can be rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative-analyses based on the questionnaire survey data in Japan.

**“New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities”**

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandoned conscription, there are almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training aims at giving participants an insight into Swedish military life and the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with separate facilities. The SAF and the SPES share 50% of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training.

The paper assesses the effectiveness of this new and original project.

**Comparative Analysis of Regional Governance**

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional authorities and those who were engaged in the porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions.

Comparative analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19th century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

**Les Protestations Brésiliennes De Juin 2013**

Cette exposition a comme objectif présenté une morphologie critique des protestations brésiliennes de juin 2013 pour mettre en cause les sens politiques qui ont été dévoilés à partir de la visibilité du pouvoir des formes d'organisation horizontale et de l'action directe. Un des sujets plus significatifs est la question sur la mobilisation tant des militants que des gens qui, en général, sont allés à la rue sans aucune unité idéologique claire. C'est-à-dire, il s'agit de situer le problème des émotions et des passions impliquées par l'action dans une perspective non seulement focalisée sur les justifications politiques mais principalement sur la dimension pratique du procès qui les a conduit vers une expérience subjective plus concrète et plus intensive. Dans cette direction interprétative, il faut reprendre l'histoire du Brésil contemporain, surtout les trois dernières décennies, qui correspondent au périodes démocratiques. L'héritage de la résistance au régime dictatorial a été potentiellement par l'invention et dissémination pour toute la société civile organisée, aussi dans l'État et le monde du travail, des dispositifs de participation sociale, «à la gauche», et de mécanismes de responsabilisation individuelle, «à droite». Les «journées de juin» ont démontré le carrefour et la massive intensification d'un process mobilisation de la subjectivité, qui a été accumulée par les savoirs et technologies créées pendant la consolidation de la démocratie. Cependant, ceci a été produit à côté d'un déclin croissant des mouvements sociaux et des organismes de classe ouvrière. Les «journées de juin» présentent une problématisation stratégique pour comprendre mieux la centralité de cette injection généralisée à la participation et responsabilisation, de laquelle la mobilisation subjective est son principal effet politique actuel.

**Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan**

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called "Tansei Ferau." These reforms was intended to enhance the lawyer's access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead’s study on the quality of legal aid lawyers in U.K. One of the
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

*The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria*

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women's participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports. Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the Special Agricultural Policy (OPUL). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Meister status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

*Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere*

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries maintain substantial advantage to convert local natural resources into their own wealth. On the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a “structure” to be changed by any institutional reform, however, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-Itai disease caused by untreated industrial wastewater under rapid economic growth in 1950’s to 70’s, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting “dialogue and cooperation” as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of “community roundtable meetings” in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by “micropolitics” among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

*Gender Pyramid Politics: Trends of Global Changes*

Gender Pyramid Politics: Trends of Global Change Nowadays in the contemporary world the gender pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place. At the same time we can speak about some changes in the presented social scheme. Over the past decades, some states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women’s rights has not existed, and the women themselves do not consider their political advancement as “the social breakthrough.”

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can’t be noticed. In this regard, the following questions rouse great interest:

What are the social, cultural and legal reasons caused this situation?

Does the economic aspect of the pyramid change with the political advancement of women? Or is the stay of women in the authority only the question of formal equality?

What are the prospects of gender equality / inequality in the epoch of globalization?

*Subsided Housing and the Concentration of Poverty in the U.S.*

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing policies aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

*SARC (Scientists/Artists Research Collaborations)*

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well-established, international electronic festival called ISEx, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support on the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no policies related to SARC’s forensic programmatic life and works, though. This White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sci world as it develops at break neck speed. What are the dangers art-sci collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science? Should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science?

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; and yet we know little of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government's environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council's target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and Internet hubs are, for instance, now part of our everyday scenarios. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society can reduce it. Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by attempting to ‘re-engineer’ the ways in which electricity is provided to so-called end-users: for example, voltage reduction. Focusing on the proposed socio-technological aspects of these solutions, this paper discusses how engineers conceive of the problem of ever-increasing carbon emissions, investigating the framework and assumptions about socio-technological provision and usage. This includes, for example, an analysis of how transformation processes in energy systems are understood and configured. We will present our findings from interviews with engineers who are involved in a large-scale European research project that seeks to offer a solution.

Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan

According to Japan's National Police Agency, 30,133 businesses were reported to act in sex industry in Japan in 2012. The number of CSWs are estimated to amount to at least a few hundreds of thousands. Japanese Anti-prostitution law establishes in 1950 prohibits paid sexual intercourse. As a result, many kinds of sex work which avoid this law have been created. Most of them offer a variety of sexual services except for sexual intercourse, such as “Fashion health” and “Image club”. But there also exists sex work which includes “unpaid” sexual intercourse, such as “Soap land”. In soap lands, CSWs have sexual intercourse with their customers without their own free wills, not as a part of service, though it is an unspoken agreement that sexual intercourse is included. We conducted semi-structured interviews with 17 CSWs who work for a soap land in Tokyo mainly in order to study their psychological tendencies and problems. We found that all of them had experienced other kinds of sex work not including sexual intercourse before they began working for the soap land and that they liked a soap land job best. Despite a lot of social and psychological disadvantages due to sex work, they gave more importance to advantages. It can be said that Soap land is illegal, but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about “Should prostitution be made legal?” in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law systems. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In A Racist Public Discourse?

The results of our empirical studies about male young people in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take our racist experiences, but also to deal with the young men’s discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants' successful integration. In these discourses often two racialised images are constructed: the native 'own people' is contrasted by 'Muslim immigrants'. While the former constitutes the ‘tolerant’ side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to ‘their’ homophobia which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

In our paper we will present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

Sociality and Individuality of Language in Durkheim and Bergson

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and others, and the phase of the sociality and individuality which language has. With this intention, I’ll compare the category theory of Durkheim with Bergson’s language criticism.

Human being differs from animal in that he uses language. The man synthesizes the special, the individual and the by reason, and he thinks by means of universal forms. He can understand the empiric things in the framework of abstract concept and, by exchanging these concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is a social fact. He thinks that the concept is essentially an empirical representation. The sign is a system preceding the individual’s birthand given by the society. Not until he thought abstractly by the sign did a man became a human being.

Bergson, a contemporary of Durkheim thinks that the self is socialized itself, and the soul of the society is immanent in the language supporting our thinking.

But Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with something else. In opposition to it, he considers that what is gotten by the analysis of the outside

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state.

In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a ‘pro-mining’ coalition against environmental protesters, developing common strategies and tactics against the protests. The intensity of conflicts between the environmental protest movements and the pro-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In those cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant party in the Artvin case, the pro-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and pro-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

Radical Left Wing Groups and Environmental Mobilizations in Turkey

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations proved decisive in the generation of these grass-roots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.

What Does Gezi Park Resistance Mean in Turkish Democracy?

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion about secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained prominence. Consequently, widespread popular dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force.

Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian- ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de- nominations and churches in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pas- tor Sunday Adelaja in Ukraine.

Regulation: The Third Party in the Transformation of Patient-Professional Relations

Regulatory arrangements have the capacity to codify elements of the relationship between patients and professionals. They can articulate the expectations that patients can reasonably have of their treating health professional, and also provide a mechanism to notify and address instances where defined standards of professional practice are not met.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates an analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia’s eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflect- ed through the legislative requirement for community members to sit on all decision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of single register of practitioners that provides improved transparency with patients now able to directly access information about the registration status and qualifications of their health professionals.

The Culture of Women’s Soccer in Senegal: Reconciling Dissonance Among Representation

What does it mean to be a “footballuse” (a soccer player) in Senegal? In Senegal, women’s soccer is more than a game; it is a counter culture that promotes provocation and antagonism of mainstream social norms and conventions. It is a culture framed by the shared experience of struggle that embodies strength, aggression and unconformity. In this paper, I show how the “footballuse” culture is often in conflict with the dominant gender ideology, religious beliefs, sexual norms and social practices of mainstream Senegalese society. I then discuss how this dissonance creates perceived dilemmas in the experience of the footballuse around questions of identity and religion. My analysis explores these dilemmas and demonstrates how these women reconcile inconsistencies among cultural representations by constructing new flexible meanings of femininity. Finally, drawing on Jacques Rancière’s theory of dissensus, I show how the “footballuse” in Senegal use this space of dissonance to claim a stake in society, to break the current order of governance, making the practice of women’s soccer in Senegal profoundly political. Data was collected through nine months of participant ob- servation, 40 in-depth interviews as well as analysis of secondary sources such as print, online and televised media.

PADRON INNAMORATO, MAURICIO* (Universidad Nacional Autónoma de México, mauriciodpadron@gmail.com)
Conciliación Entre El Mundo Laboral y El Mundo Familiar Con Un Enfoque De Derechos. El Caso De México Como Un Ejemplo Particular Para Una Discusión General

Cuando se habla de la necesidad de conciliar o armonizar la vida laboral y el mundo de la familia, se asume que se habla de un tema que involucra solamente a las mujeres, específicamente aquellas que trabajan fuera del hogar. Pero la real-idad resulta mucho más compleja, no es solo una cuestión del ámbito de lo privado, del mercado de trabajo o de las políticas públicas, es un fenómeno que si se aborda de manera integral puede ubicarse en el terreno más general de la justicia social.

Su estudio desde la perspectiva de los derechos, implica partir de un paradig- ma de justicia que lleva al reconocimiento y a la creación de mecanismos para la exigibilidad y justiciabilidad de los derechos económicos, sociales y culturales.

La perspectiva asumida implica retomar varios ejes de análisis: las transforma- ciones demográficas, sociales y económicas ocurridas en México en los últimos años, el impacto que estas han tenido en la división sexual del trabajo y en los roles tradicionales de género, así como la responsabilidad y/o correspondibilidad del Estado en los procesos de reproducción social.

El trabajo permite vislumbrar, discutir y (re)elaborar el marco de referencia para el estudio del fenómeno de conciliación entre trabajo y vida familiar, para dar una respuesta más adecuada a las necesidades relacionadas con la reproducción social; enfoque que al que algunos autores denominan políticas para la armonización trabajo-familia de segunda generación.

Si bien el trabajo contiene un aparato teórico – conceptual importante, también muestra desde lo empírico los cambios y las tendencias ocurridas en el país en los últimos años, en relación con los ejes centrales definidos. Para esto se utilizan básicamente tres fuentes de información: la Encuesta Nacional de Ocupación y Empleo, la Encuesta sobre la Dinámica de las Relaciones de los Hogares y la En- cuesta sobre Uso del Tiempo.

PAETAU, MICHAEL* (Center for Sociocybernetics Studies, michael.paetau@sociocybernetics.eu)
Bitcoin: Network Based Currency and Its Self-Organizing Emergence

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are based on an open-source cryptographic protocol that is independent of any central authority like a Central Reserve Bank or another administrative institution. Bitcoins are created and administered decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for worldwide Internet transactions. In June 2011, Wikileaks and other organizations began to accept bitcoins for donations.

That became very important after Master-Cards, Visa, PayPal and other tried to block WikiLeaks from money transfers obviously because of political pressure by the US-government.

In my contribution I want to analyse this currency-system from a sociocyber- netic point of view. After presenting the basic mechanisms of Bitcoin money cre- ation, the value regulation etc. I want to focus the basic processes of self-organi- zation in this high-complex system.

PAETAU, MICHAEL* (Center for Sociocybernetics Studies, michael.paetau@sociocybernetics.eu)
Social Media, Open Government and “Liquid Democracy”

More than 10 years ago André Gorz argued that the use of the term «knowl- edge-society» would only make sense if one were able to demonstrate that relevant radical changes in society somehow related to changes in the handling of knowledge in society. Such a demonstration concentrated on the area of democ-
racy will be the object of my contribution. In my paper I want to unfold the thesis that the present form of giving people more participation within political processes and providing more insights into documents of governance is an intermediate step to change western style of democracy fundamentally. I want to focus the question how new media, especially so-called «social media», may overcome the traditional dichotomy between parliamentary representative democratic tradi-
tion and grassroots oriented plebiscitary democratic elements. Since some years this question has been primarily debated under the term of «Liquid Democracy». It stands for the idea to make democracy more liquid, more transparent and more flexible. People should have the opportunity to participate in political affairs com-
prominently to delegating the powers of the sovereignty to a body of human elect-
et from time to time for four or five years. "Liquid Democracy" will give people the possibility to campaign effectively and collaboratively for the issues they are con-
cerned about. The paper will show which social, political and technological concepts for such a liquid democracy exist. Which discourses in different areas and scientific disciplines occur, and which experiences and evaluations are available.

PAGLIUSO REGATIERI, RICARDO* (University of São Paulo, ricipagluso@hotmail.com)

Dialectic of Enlightenment's Critique of the Civilizing Process As Aufhebung of a Debate

During November and December 1941, the Institute of Social Research deliv-
ered a series of public lectures at Columbia University on the question of how National Socialism should be characterized. The positions within the debate could roughly be divided in two major groups: on the one hand stood the conclusion that capitalism had gone through major transformations, leading to a new order, that of State Capitalism (Pollock); and, on the other hand, a depiction of the cur-
cent capitalist system as a totalitarian-led monopoly economy (Neumann and the others). Dialectic of Enlightenment – written by Adorno and Horkheimer in 1944 in exile in the USA but first published in 1947 by the small and actively anti-Nazi Querido Publisher in Amsterdam – followed this debate and is, in a way, a re-
sponse to the questions posed in 1941, developing however yet another inter-
pretation. I would like to argue that the book does not make use of the State Capitalist thesis, as forwarded by most literature, but can rather be understood through two largely unexplored keys: the racket theory and dialectical anthropol-
yogy. As early as the 1940's, one can recognize a growing emphasis on a critique of the civilizing process in Horkheimer and Adorno's texts. Dialectic of Enlightenment condenses these efforts and can be considered an Aufhebung (sublation) of the Columbia debate from 1941. This paper will go about reconstructing the 1941 debate, follow various texts written by Adorno and Horkheimer in the late 1930's and early 1940's, analyze letters between them and approach Dialectic of Enlighten-
ment in order to analyze its political answer to the Columbia debate, which is itself based on a critique of the civilizing process founded on a theory of rackets and on dialectical anthropology.

PAIDAKAKI, ANGELIKI* (KU Leuven, angeliki.paidakaki@astro.kuleuven.be)

Analyzing the Socially Transformative Capacity of Post-Disaster Reconstruction

Traditional theories of disaster management have neglected the role of com-
munity organizations in building urban resilience to natural hazards. They assume instead that the state, often in coordination with market forces, is the most im-
portant agent in dealing with disaster risk. My aim is to challenge this assumption. By studying the emblematic moment of post-disaster reconstruction, I intend to deal with the political and governance issues. My working hypothesis argues that local community struggle for permanent housing provision during the rehabilitation period contributes significantly to transforming multi-scalar disaster governance and building resilience to future hazards. The paper will start with a zoomed-out investigation of the urban socio-envi-
ronmental problems. I aim to identify and untangle the interconnected economic, political, social and ecological processes that together form uneven and unjust urban assemblages, b) trace and clarify the concepts of vulnerability and resilience and c) uncover their underpinning discourses. This “zoomed-out” identification of the socio-ecological urban problematics and vulnerabilities and the discourses behind them will be instrumental to “zooming-in” on possible entry points for new discourses for disaster resilience and institutional change in disaster intervention. Through the lens of the long-
term reconstruction period, I will analyze the potential of the development and implementation of alternative housing policies in a) enhancing empowerment and social resilience, b) promoting integrated modes of urban development, and c) revealing new institutional perspectives in dealing with disaster governance.

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sus-
tainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

TAYLOR, PETER* (Northumbria University, crogfan@ymail.com)

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generat-
ed by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide operations networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESON) which set out to examine Europe's position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization for Europe and its Regions.

Europe provides a unique contemporary territorial frame through which to ob-
serve the success of policy transfer and upscaling relevant to sustainable cities in globalisation. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state / regional level.

The authors identify two intersecting spatial processes in European APS-gener-
ated city interdependencies: A process of intensifying city-network links and func-
tional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-re-
regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

Positive Aeging and Leisure: Role of Leisure in Healthy Aeging of the Elderly in India

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines health as "a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity". Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related condi-
tions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypothesis constructed to direct the study are:
1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in healthy ageing.
3. Every Leisure activity does not have a positive role in healthy ageing.

206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sam-
ping. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:
Health has two broad parameters, mental health and the physical health.
Type of the leisure activity affects the mental and physical health differently. Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

La Transferencia Tecnológica Como Problema Político En América Latina

La transferencia tecnológica como problema político en América Latina

Una de las cuestiones que viene causando importantes polémicas en la región latina, es el establecimiento de alianzas estratégicas internaciona-
les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China. No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el deterioro de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de dependencia en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciban la transference tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia donde debería apuntar la transference tecnológica en estos países.

**Technological and Political Illiteracy: Its Effect on Social Change in Latin America**

**Technological and Political Illiteracy: Its effect on social change in Latin America**

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where are trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the political power the need to interact all areas in which acts the capitalist model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

**From Self-Management to Representative Democracy – The Case of Two Kibbutz Industrial Plants**

Theories of new organizational forms usually assume that in the 21st century the official trend in the majority of small industrial organizations in Western Society is more worker oriented, more democratic, with flatter hierarchical structures and more worker oriented.

In this paper we would like to show when and why an organization abandons its self-management praxis and changes from a neo-organizational structure into an almost Weberian structure. In order to do so we will show the parallelism between praxis. Thus, occurring in many kibbutz communities by analyzing two case studies of kibbutz plants. This is done by studying the interplay between changes in the kibbutz culture and changes in the plant through life cycle theories and organizational culture theories.

Our research methodology was qualitative and ethnographic interviews were held with kibbutz members employed by the organization, with kibbutz members and with CEOs that had held jobs in the past. The interviews were conducted between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

**What Are the Opportunities for Social Investment in the Continental European Welfare States ?**

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways. In the early 1990s, the Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child care support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

**Feelings of Ambivalence: Ageing Labour Migrants in Vienna**

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for later life.

Vienna's labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

**Informalization of Labour : Recent Trends in India's Urban Economy**

Informalization of labour : Recent trends in India's Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in 'informal' economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
out in last twenty years, which depict the miserable working conditions of India’s informal sector workers.

While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world's labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially provide and understand this issue. The author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese Class. Apart from that, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers' career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students and their activities; an opportunity to re-identify one's own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride business. It is generally assumed that, when women from developing countries turn to intermarriage after data, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the latent function, extensive adaptive function that Japanese classes could potentially provide and understand this issue. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Market reforms in China beginning in the late 1970s have initiated the transformation of China’s citizenship regime by restructuring the triadic configuration of relations between the state, the market, and an emerging civil society. The gradual erosion of that institution which defined and structured China’s bifurcated citizenship—the hukou system—by market forces is increasingly shifting the responsibility of distributing resources from the state to the market. Yet insofar as the dissolution of the hukou system is incomplete, the access to certain resources, such as higher education, remains legally restricted by the hukou system. Using the petition campaign of a group of internal migrants in Beijing seeking the rights of their children to sit university entrance examinations locally as both coalition parties were trying to get this inscrutable voters, comprised 40% of the electorate. 12,912,590 registered as voters and the 40% belong to the 21 to 39 years old age group. Before the election, almost 65% of them were labelled as ‘fence sitters’ who were mostly non-partisan and were seen as the decide. National Youth Survey by The Asia Foundation indicated that the political thinking of the youths in Malaysia are not static but have changed accordingly. This new shift allows this paper to discuss the position of the youth in Malaysia’s 13th General Election: which party benefit from their role and whether youth were the deciding factor or kingmakers in Malaysian politics as reflected before the General Election.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia's largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between Thai conglomerate and Tesco PLC, the world's second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of sixty-five union members and refusal from management to further negotiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an analysis of the struggles confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

PANTUMSINCHAI, PENN* (University of Hawaii at Manoa, ppantum@hawaii.edu)

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the consumers. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdfunding has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009 and dubbed "the world's largest funded platform for creative projects" (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask for donations for creative projects, Kickstarter puts the power in the consumers' hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems simple, yet it is rife with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the backers' (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on over funded projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or independent creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are to attract more new customers to their products than in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the interrelations between immigrant associations and voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solely based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

PAPAKOSTAS, APOSTOLIS* (Södertörn University, apostolis.papakostas@sh.se)

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of “neighbors war against neighbors”, in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few to many people and for the creation of a space of trust. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

PAPASTEFANOU, GEORGIOS* (Leibniz Institute for Social Sciences, georgios.papastefanou@gesis.org)

The Day after: The Effect of Diary Timing on Time Data Analysis

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random housework-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

From the Global South to the Globe: Pathways to Participatory Budgeting

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In 1989, the city of Porto Alegre in southern Brazil implemented the world’s first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States’ (US) first experiment in PB in the city’s 49
dward in 2009. Over that time, PB has spread to over 1500 municipalities in countries
cross Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming).

1) Narratives about traitors, spies, and other “foreign agents” actually or potentially
trespassing real or symbolic external borders of the Soviet space. These were used for excluding foreigners-emigrants, certain national minorities, Russian
re-immigrants, Soviet diplomats and spies; people who contacted foreigners or simply spent holidays, etc.

2) Narratives about saboteurs, “socially dangerous elements”, and anti-Soviet
conspirators, terrorists, and propagandists acting from beyond the symbolic
borders of the ideal Soviet social, political and ideological structure. These were used for excluding “kulaks”, criminals, tramps, “bourgeois” engineers and scient-
ists, openly religious people, former members of the long-defunct Russian political
parties, former members of oppositional groups within the Bolsheviki party,
suspended officers of the secret police, and others.

3) Narratives about “monsters” and “scum of the earth”, who trespassed all sorts of symbolic borders. These were used for excluding suspended high-rank Bolshevist party leaders, both opponents and proponents of Stalin. Narratives
of this type were built in the framework of the special ideological meta-narrative
based upon archaic mythological imaging of witches and shape-shifters – appar-
ently innocent creatures that turn out to be demons.

**PAPP Z., ATTILA*** (Hungarian Academy of Sciences, pappzo@yahoo.com)

Hidden Ethnic Inequalities. a Possible Global Educational Exploration Using PISA

The international educational evaluation programme PISA analysis the variances
of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social backgrounds
can be overcame. In the PISA framework educational opportunities are distrib-
uted equally if the student’s education is independent of their own family background. Based on PISA reports one can have a detailed picture about the
class integration of migrants, the factors which have impact on their educa-
tional outcomes.

It is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some coun-
tries the results are presented following the (regional) minority language of test
(e.g. Belgium, Spain, Canada), however a comprehensive analysis of native nation-
al minorities is failed.

Using PISA databases one can gain some relevant information about national
minorities’ school outcomes (in at least 20 countries). By a cross-tabulation of
the language spoken at home and of the language of test (state language or minori-
ty language) one can distinguish at least three main students groups: minority
students who learn in their mother tongue (language spoken at home: minority
language) and majority students who learn in state language, and majority students
(who learn in majority language, of course).

Having these students subgroups one can test two basic research questions:
1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or
majority students outperform? These comparison could tend us to interpret the
variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can
assume that exists hidden, ethnic-linguistics inequalities among students.

The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic

This presentation discusses the challenges experienced in using Institutional
Ethnography (IE) in a context other than Global North. I discuss the challenges
in attempting to translate both linguistically and culturally some of the important
concepts of IE into Spanish and the culturally different institutional structures
of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this pre-
sentation discusses some of the difficulties in conducting a national study of the
child protection system, when institutional structures were not clearly identified,
and when institutional texts were not clearly defined outside the legal discourse
–Child welfare Act. The team of researchers used different IE means of data col-
lection: 1) Mapped out the “fluid” structures of the different child protection
institutions working toward the protection of children and youth; 2) completed textual analysis of the rules and regulations –or lack of; 3) completed six months of direct observations
and finally interviews of different actors within the system. What characterize
the child welfare system in different provinces in Canada is a highly regulated
and clearly structured system with standards of practices. What characterized the
child welfare in the DR is relations of ruling in constant flux where practices
were not based on any written forms of protocols of practices, but in personal
experience and political influence of those engaged in the protection children
and youth.

Since the team of researchers are now engaged in new project both in the
Dominican Republic and working toward future projects in other countries of
the Caribbean and Central America, the questions of applicability and universality
of IE outside the Global North becomes very important.

The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of “overmanagerialization of academic work” (Todd, et al 2013). Academic programs that continue to engage on progressive issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. “Internationalization” of programs has become a buzz idea that most universities in North America are pursuing, but the question remains “What kind of internationalization? And who is benefiting from this process?”

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an “international Youth Right project” during the past two years. The author discusses the steps taken to textually transform the ‘local realities’ of the everyday experience of youth advocating for the protection of their rights into textual instruments of control-financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different “project managements processes” required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project –children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restored and legitimated. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples’ everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol(conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebol and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol's construction companies and ‘Apart’ became a typical dwelling form of middle class in Korea. The middle class people dwelling in the ‘Olympic village’ invented their own consumer culture and lifestyle. That is, ‘distinction’ in Bourdieu’s term began among the citizens.

The middle class's everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

A Sequance Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college(college/university) in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collected in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth’s work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(university) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering second labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-jentry and exit labour market. Especially, it is distinct between Seoul*male group and Non-Metropolitan areas*female group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by gourp characteristic.

Precarious Politics: Struggles Against Insecurity in the Global North and Global South

My discussion will complement Standings’ general analysis by focusing on the collective struggles of two insecurely employed, low-income groups at opposite ends of the globe: low-wage immigrant workers in California, United States, and citizens living in poor communities in Gauteng, South Africa. Both groups compensate for their lack of economic leverage by organizing around demands for recognition, dignity and inclusion. Because these demands are largely directed towards the state, their struggles for economic survival become entangled with struggles around citizenship status. These cases affirm Standings’ emphasis on the importance of citizenship and recognition, but paint a more optimistic vision of the precarious’ capacity for struggle, and underscore the need for greater attention to differences between the Global North and Global South.
Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support

Very low fertility is regarded as a serious social concern in South Korea. Korean government has contrived diverse policy approaches to provide various incentives for reproductive behaviors. More or less, the public response to low fertility tends to be basicistic framework of rational choice and assumes that reducing the constraint and cost for reproduction would increase fertility rate. In this regard, the new government of president Park Keun-Hye pledged to provide financial support for child birth and education more extensive than ever before. Setting aside the question whether the promise could be fulfilled given the limited budget, this study aims to discover characteristics of family changes and modernities in Korea.

In-depth interviews were then followed for the cases with importance in the study and collected considering age, gender and economic status of the elderly. In-depth communications were organized by first presenting author's last name. Abstracts are organized by first presenting author's last name.
social patterns of low-carbon energy consumption would not be found in develop- ing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconomic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on quantitative and qualitative empirical sociological research recently conducted in Chile.

'Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters'

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject’s on those who purport to be their masters. With this reformulation of Spivak’s classic question from 1988 set alongside the anthropology alluded to by a version of James C. Scott’s book title from 2008, the paper focuses on the subaltern’s alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of ‘power over’) and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effectively shape the power which is ostensibly exercised ‘over’ them.

How can a ‘power to’... be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of Indio, CA, to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily in the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginaries, Zebravale’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes toward sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves three diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria in the aftermath of the 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from disaster.

Violence provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring men’s interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold: (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Argentina and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected reduction in support ratios. The results show that mortality improvement has the greatest effect on support ratios in Japan and in East-Central European countries. Anticipated mortality improvement is of far lesser significance to Northern and Western European and English-speaking countries. The paper discusses the dependency of the estimated effects of mortality improvement on support ratios on assumed levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.
Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Parvez@soc.umass.edu

This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It draws specifically on two-year ethnographic comparative study of religious communities in France and India. Over the course of this comparative study, the term 'symbolic violence' is used to describe a range of practices that involve the use of power and authority to impose a specific understanding of reality on others. These practices are often used to maintain or challenge existing social and political structures, and can take many forms, including but not limited to, linguistic, educational, and political practices.

The paper explores the conditions under which symbolic violence is enacted and the ways in which it is resisted. It argues that symbolic violence is not simply a product of power relations, but is also a result of the way in which ideas and beliefs are constructed and transmitted within society. This perspective is particularly relevant in the context of the Middle East, where the role of religion in shaping political and social relations is of particular significance.

The paper concludes with a discussion of the implications of these findings for the study of religion, politics, and society more broadly. It suggests that an understanding of symbolic violence is essential for developing a more nuanced understanding of the complexities of religious and political life in the Middle East and beyond.

He Is Not Clean: an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores how emotional phenomena of the modern state’s security agencies can shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting “collaborators” (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents’ reputation, and support for the physical expulsion and even violent death of alleged “informers.” City residents experience political informing as a form of “symbolic dirt” that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predicament of former “collaborators” who were relocated by the state’s security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state’s security apparatus in shaping emotional relationships and responses among targeted people.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the ‘Bologna process’.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four-to-six years courses - to a new sequential system of 'bachelor/master/doctoral programmes'. Bachelor/master/doctoral programmes have been accompanied by the introduction of long courses ('Ciclo Unico'), which lasted five years and reflected the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelors are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT- 2011 'Survey on the transition to work of University graduates' to examine the early labour market returns of young graduates from bachelor's, master's and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor's graduates enjoy greater rewards than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master's programmes.

Literate and literate tribal Youth and Leisure

Literate and illiterate tribal Youth and Leisure

The Education is the one which teaches the educing many ways of spending his leisure usefully and constructively. The various objects of culture such as literature, music, art, religion and philosophy are the creation of leisure. But it is not developed automatically, it should be cultivated from the very beginning. The role of Education will be seen here. One can perceive the difference if one observes the different ways in which the educated and the uneducated youth around one spend their leisure hours. The uneducated can be seen consuming their leisure in useless gossiping, smoking, quarrelling, sleeping, indulging in alcohol, or at the most spending their time in visits to the cinema. On the other hand, the educated individual puts his leisure to better use. Evidently, then it is only the educated person who can utilize his leisure properly. I have kept this concepts and select so tribal youths for sampling. In this fifty tribal youths 25 are literate and 25 are illiterate. Those who are literate mostly do negative activity and thinking negatively. Literate youth mostly meet in a public places like bus stand, grocery shops, near by schools, near by temple, etc. when literate youth meet mostly their parents house. Where parents can watch their activities and some time guide them.

Colonial Legacies, Low and Discourses of Inequalities. An Analysis of Poverty Alleviation

The paper uses the example of a revolutionary poverty alleviation programme (which is now given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a language to comprehend the problem of poverty. Instead, the language of cultural forms and processes that organize inequalities in India at three levels. First, the attention of the Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. The Act cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further froze a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehensions of these differentiation and cultural practices as these remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary interactions that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women's Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk periods in their lives are early childhood and reproductive years. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women's productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistance in proportion of moderately skilled workers by automatic systems, task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India where technological change, and the improved skill structure of the workforce, is explored using organisational survey data.

The findings show that technology upgradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that technology upgradation in their plants in the recent past, employing organisational survey schedule. The findings show that technology upgradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that technology upgradation leads to greater work force polarization through skill bias and has positive implications for highly skilled sections of the workforce.

Globalisation and technology transfer and growing inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of the workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automatic systems, of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities.

The category of women needs to be defined and determined within the confines of home. It is essential to undertake a critical analysis of such politics of representations particularly in the Hindi cinema because it has the potential to highlight the plight of such women. The paper would like to draw attention to these issues against the backdrop of recent cases of banning dance-bar girls in Mumbai hotels, reluctance of the government to legalise prostitution, where it has almost become a source of livelihood for several poor women and most importantly not recognising the rights of the sexual minorities i.e. lesbians. Based upon a critique of Laura Mulvey's theory of male gaze, the paper goes beyond simplified versions of patriarchy to a more nuanced approach to understand the political, religious and cultural nexus behind such portrayal of women in Hindi cinema.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon'ble Supreme Court, all the citizens are to segregate garbage at source.

The waste generated in Kolhapur city per day is 150-165MT. The contract was signed in May 2012. KMC had given a contract of collection and transportation of solid waste to Patil'suk. The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

Causes and Social Implications of Educational Inequalities in Indonesia

Educational inequalities in Indonesia has been existed for many years. Two major challenges with respect to educational inequalities are access to and quality of education. Access to primary education is almost universal, while access to quality of education is not.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon'ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon'ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e., the drift toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to missings of western industrial technologies and their non-sustainability. Noteworthy is that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations and that are based on traditional and indigenous knowledge systems and are mostly to transform those grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well-known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGOs) for which they have taken plethora of initiatives following both top down and bottom up approaches. Some of those initiatives succeeded while others failed. But no programme for socioeconomic development was so widely reached and popular than the Self-help group approach. Self-help group (SHG) is a small, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision-making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives. It examines why this phenomenon is a social movement at all and the applicability of different theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha helps to explain much supportive to make the movement wide spread. At the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descend-ants in Thai society through the understanding the meaning and religious sym-bols” aims to investigate the existence of Chineseness in Thai society focusing on the emergence and development of Chinese festivals and traditions among the Chinese community in Thailand. This study is an applied research integrating both quantitative and qualitative data which collected by question-naire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors, Chinese New Year and Chinese Autumn Festival are two Chinese tra-ditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God’s Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation relates to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes through prioritisation of regulatory resources. Risk-based governance has not been without controversy and has been labelled as self-regulation and public self-regulation is by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG rela-tively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going economistic crises are widening the gap between upper and lower strata of urban society further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of demarginalization and community-oriented police practices in urban areas that were minority people lived. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continental European Civil Law societies can be observed very clearly as a common denominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

The Immigrant Childhood As Subject in Social Policy in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities. The study is based on the Sociology of Childhood that defines the childhood as a three dimension concept. The first one, as a social construction, which is distant from the essential idea of the childish being, and expressed in different ways across the history in every sociopolitical context. The second one, as a permanent sociological category of the social structure, although its members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open generational and gender relations of power with other actors, in their families and other social areas. Nevertheless, that social action is not often recognized in the society and in the academic field, due to the adultcentrism that discriminates them against because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2010).

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of international actor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinctiveness as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hofp 2002, Laclau 1991, Törnig 1999, 2005), and taking the EU as the model case, it then looks at the normative aspects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic discourse, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.

Doing Social Sciences on the Military Field: A Special Operation?

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations - and their effects - between: • the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)

- the researcher’s academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his/her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology has been required for medical “thinning” and marginalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process. In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not know their place in a hierarchy, and detailed knowledge of the extent inequality was shared. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women’s bodies and homes. Most striking was a discourse of no legitimate dependency - an often painful discourse, where all aspects of dependency were disavowed and self-reliance valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifest in the holding of the self to impossible standards of non-dependence, and through the “othering” of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodology to the local accomplishment of the social with a Marxist insight into people’s active participation in extended social relations that can ‘overpower’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography in Ireland now in a high level headquarters, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to understand within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possibilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

Backbreaking Work: Female Food Vendors, Globalization and the Legacies of Indigenous Systems in Southwestern Nigeria. In the interests of the well-being of women in Africa comes from a longstanding concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalization. The data come from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors’ lives. I take my lead from Sassen’s (2006) use of the term ‘capabilities’ and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which female economic and reproductive roles were central. With colonization, women continued to work, but with less public assistance than men. Independence brought the promise of increased services: health, education, electricity, etc. However, the quality of life declined and development policies have enabled both the holding of the self to impossible standards of non-dependence, and through the “othering” of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.
The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has failed to explain health problems. The motivation for this article is to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and is increasingly widespread in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients’ trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2006 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbalet 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that situated trust in the alternative encounter comprises relational, bodily as well as material aspects.

The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospital managers, individually and collectively, are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: ‘KRAM screening & intervention’, that is registration and detection of patients’ so-called risk factors to strengthen the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals in Denmark, which is offered to all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical problem. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical problem. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical problem.

Performance Consumptions, Sleep Management and Risk Perceptions

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about “healthy lifestyles”, sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement.

The investigation that shape consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weight between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. What transnational experiences may signify for a music culture, which travels between places and spaces, are discussed through case studies. Bolivian/Andean urban folk music is used, which contributes to the construction of a relationship between folk, popular, rural and urban music and a relationship between a local and a global scene is studied.

I study virtual rooms as leisure spaces where old and new meanings of identity and social relationships based on a sense of community can be observed. Processes of staging social and cultural identities in cyberspace will be described. Attention is paid to how contemporary social issues and changing identities are juxtaposed in complex collages in the virtual rooms, by musicians and their audiences, through affective links in processes of social production of music. Issues such as the deferred benefits regarding these consumptions.

Eating Organic, Growing It Yourself

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security.

In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers wildly use chemical inputs without proper skills and State control.

Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is normal. It is what they produce or source locally in the village. Instead, their important questions are about feeding their land remains fertilized and cultivable for the younger generations. They have become more concerned about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and produces a surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

**Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia**

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

**Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific**

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting “care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers and worldwide migration to industrial towns.

In the case of diversification agriculture activities, it is particular for poor smallholders interviewed in Kamp Long in Anthong province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

**The “New” Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion?**

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address ecological and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and social status. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support.

This study addresses these issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has no impact on perceived support. However, poverty-reduction and disaster-related relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support.

These findings support the view that relocation reduces older adults’ perceived access to social support. This is particularly evident with regard to poverty-reduction and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.
The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguin-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman’s (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has entered a new context for youth labor market and mobility. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduates, and by a dual youth policy discourse of promoting the enterprising subject and protecting the ‘at-risk’. Based on a study of the life experiences of young Cambodians, the authors write that the urban male, middle-aged, and UK-born workers in Cambodia in 2011-2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youth in managing their transition toward adulthood. The rural youth rely heavily on their social network and embodied cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embodied cultural capital, for mobility and successful adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an altered structure of inequalities broadly tantamount to the emerging working and educated middle classes.

Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia

The generalized ‘late’ modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial ‘normal’ life course. This paper attempts at a complex exploration of the embeddedness of opportunities and risks in the individual’s social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the varieties of modernity (Chang 2010; Eisenstadt 2000) to make a case for a more specific examination of change toward a modern society. I will then reconstruct the processes of Cambodian transformation and how they feed into the opportunities and risks for new life courses. A theoretically informed but empirically grounded typology of biographical management, based on a study of the life experiences and expectations of different social groups of Cambodian young people (n=51), will be used to illustrate how the opportunities and uncertainties in the new life course are differently managed based on socio-cultural and individual resources during the transition into the labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both new risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence”, “gender identity”, “gender equality” among others appear everyday in mass media. Such discursive proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call “gender studies” was developed at the universities of the central regions (United States and Western European countries). In Latin American circle, the topic has not been an exception. As for the cases of Argentina and Brazil, both the objective circumstances that they experience at their jobs and workplaces and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that uncovers how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of work

Who Settles For Less At Work? Subjective Dispositions, Job Characteristics, and Job Satisfaction

In recent years there has been growing interest in individuals’ self-perceptions of their wellbeing on the grounds that these complement well-established objective indicators of welfare. Wellbeing in relation to work, captured for instance by measures of job satisfaction, has not been an exception. The discourse on work in post-industrial societies has shifted from perceiving labour as a means for subsistence to conceptualising it as an important aspect of individuals’ identity and self-realisation. Consequently, the utility people gain from their work has become an important feature of modern working life and subject to increasing academic attention. However, individuals’ assessments of this utility depend on a multiplicity of factors, including one’s job and workplace, and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that uncovers how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of work.
The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organisational frameworks in which local sociologists have tried to set their professional and academic issues. Third, it presents some data from a research that focuses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974; it had an early and successful professional insertion, linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and requests for sociological knowledge at academia, state and private sectors. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.

Le Pouvoir émotionnel: Entrepreneurs Et Leaders

En donnant continuité à la recherche présentée dans le World Forum of Sociology de Buenos Aires, où j'ai abordé le thème de la normatisation des émotions des travailleurs et leur responsabilisation concernant leur propre souffrance pensée comme manque d'intelligence émotionnelle, je voudrais maintenant discuter de la normatisation des émotions des entrepreneurs et des leaders d'équipe par la bibliographie du management. L'objectif est de comprendre comment ces qui sont dans des positions de pouvoir dans l'entreprise font un travail émotionnel sur eux-mêmes en visant manager les émotions des subalternes et conduire leur comportement émotionnel conformément à des finalités économiques.

The Potential of Telecare/AAL Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany

The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to ‘ageing in place’ in two regions in Poland and Germany: with a particularly high share of older people — the Malopolska region surrounding the city of Cracow and Upper Lusatia (Oberlausitz) — to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people. This research analyzes the potential of telecare/AAL technologies for improving older people’s quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL application in older people’s homes. In the Malopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

A European Mining Boomtown Case Study. Toward a Sociological Theory of Boomtowns in a Global World?

By mean a case study, this paper aims to test many of the William Freudenberg's theories on boomtown phenomenon. Apart from his contributions to the understanding of the social impact during and the following years after the construction of large scale projects, his theory has been extending to describe the long term social consequences in the so called boomtowns. Judging by the results, the apparently boom experienced might not be such in many cases. It might be simply a rapid urban growth in the vicinity of the large scale project, but in contrast, the region as a whole, i.e. including municipalities around, might suffer in term of deterioration of the human environment. This is reinforced by the fact that the mining activity, from shrinking. Secondly, results confirm Freudenberg's theory on the additive character of the natural resources dependent economies. Judging by the in-depth interviews conducted among social actors, the concept of development is truly limited to the hope of a new boom as those lived in the past. This hope is nurtured by political institutions and trade unions who despite the closure of the mine and the fewer chance to repeat such boom, still struggle for attracting large scale industrial projects. The forms know about the electoral benefits and...
the latter would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or cellulosic. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of changes. These are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business idea”, the highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the prominence and dominating discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

PÉREZ-AGOTE, JOSÉ M.* (Public University of Navarra, jose.perez.agote@unnavarra.es)

Mobilization and Performance in the Public Space in 2011: A Comparative Approach

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidences of social change. Young people, who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off social and cultural change, is generated. These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (MYWD). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, means of symbolic production, mise-en-scène and power

The Values Of Scientific Ethics: A Way To Face Inequality

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subject to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitive-ness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the social responsibility of those individuals, communalities and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Duller et al, 2103) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper presents a methodology for investigating teachers’ everyday prac-
tice that draws on Institutional Ethnography, Critical Discourse Analysis and On-
tological inquiry as a means for uncovering, not only the being of social relations in
everyday practice but also how that relation can be understood ontological-
ly. It addresses, in particular, how the mediation of teachers’ work relates to the influences
and interests of others by tracing the constitution of social relations
in relations that emerge between teachers’ perceptions of practice and
their enactments. In doing so, the being of the social comes into view.
IE’s recognition of being in practice is acknowledged. To better understand the impacts of
this ontological dimension on practice, analysis of data, extends IE by
drawing on Heidegger’s (2005) conception of ontological inquiry. This has been
chosen for its dual focus in explaining the significance of Being, itself, and to re-
veal explicitly the Being of people and equipment in teachers’ work.
Analysis of research data offered by practising teachers, confirmed textual me-
diation in everyday practice. It revealed, too, teachers who practised circumspectly.
In doing so, the ontological significance of who we are to how and why we enter
into social relations was exposed.

Women’s Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries

This paper examines the critical relationship between women’s education and
infant mortality. This relationship is a key to the demographic transformation of the global
South. This quantitative study examines the relationship between
female education and infant survival in 80 developing countries. It is found that the
relationship between women’s schooling and infant survival is shaped by a
set of social and health-related variables. These variables have been rarely stud-
ed simultaneously. Evidence in the paper is drawn from datasets some of which have
only recently become available from agencies including UNICEF, UNDP and
UNESCO. The data is controlled by income level, population size, as well as by the
extreme epidemic or political instabilities. Missing data is replaced by regional
averages. The path-models on infant survival provide new estimates showing the
extent to which women’s education influences infant survival in the global South.
The study also shows that the most powerful societal covariates determine the
relationship between infant mortality and women’s schooling, are
income poverty, child health services and breastfeeding. Women’s education ex-
plain 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance.
This global update is in line with what smaller N country-studies and survey based
community studies have shown. The results stress that the universal social poli-
cies including women’s education, poverty alleviation and multiple health policies
intersect in fundamental ways for better infant survival. And that universal social
policies are fundamental in explaining the pattern of demographic transition in the
global South.

The Making Of Obedience To Authority: From Binet To Asch To Milgram

The design of Milgram’s Obedience to Authority can be traced back through
Asch’s classic experiment on conformity to Binet’s experiments on memory and
suggestion. Binet and Milgram used what is now termed exploratory experimen-
tation which is not guided by theory or hypotheses but consists of carrying out
suggestions. Binet and Milgram used what is now termed exploratory experimen-
tation which is not guided by theory or hypotheses but consists of carrying out
suggestions. Binet conducted two experimen-
tations. Binet and Henri (1894) wondered what would happen if school children
were given a suggestion so slight that they did not notice its existence? Children
were shown a model line on one board and then had to identify the model line on a
second board that contained a set of lines including the model line. When the
student picked a line on the second board, the experimenter would quietly ask,
“Are you really sure? Is it not the next line?” In a second experiment Binet (1900)
showed a group of three pupils six objects on a poster board for a few minutes and
then asked them a series of questions about what they remembered about the
objects recently seen. It was revealed that the students performed this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would
combine Binet’s two experiments in his classic study of conformity to groups.
The group viewed a model line and then the naive subject would find himself dis-
agreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a
one-on-one situation. The Binet and Henri experiment with its questioning of
the choice of line provided the bridge between Asch’s group conformity and Mil-
gram’s (1974) researcher/experimenter prodding the teacher/learner “to please
continue” and “the experiment requires you to continue.”

Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis

Trade unions and labour movements have emphasized solidarity as a universal
principle based on common interests of all workers, regardless of borders and
boundaries. Despite this rhetoric they have primarily organised national or sub-
national collectivities and contributed to establish common identities and moral
norms in these contexts. Modern notions of solidarity are thus firmly established
at the national level, while at the European level liberal market principles and
social indifference predominate. This prevailing social indifference has been chal-
 lenged by at least two developments: (1) the introduction of a common curren-
cy, and (2) European economic governance in response to the Euro-crisis. Both
developments have led trade unions to transnationalize their strategies: (1) As
monetary integration abandoned the option to devaluate currencies as a strate-
gy to improve international competitiveness, wage setting institutions have come
under pressure. This in turn induced trade unions in some sectors to coordinate
their wage bargaining policies across borders, (2) Far reaching austerity measures
in EU countries had a big impact on labour market and social policies - trade
unions responded to these developments by organizing and mobilising resistance
at transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest move-
ments) is guided by the following question: What constrains and opportunities
have trade unions in Europe encountered in their strategic attempts to create and
maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classic sociol-
ogist G. Simmel (1908): He states that conflict is an important step from mutual
ignorance to social integration. However, the integrative impact of conflict is de-
pendent on legitimized institutions and practices of conflict resolution (Vobroba
2013), which themselves are contested. To explain union strategies in multi-level
fields we use sociological institutionalism (Scott 2008; Lawrence/ Suddaby 2009)
and power resource theory.

Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between “old” members and experts proposing other resources and legitimacy.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of a less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intra-extra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weakness the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately useable without being “real” members. Secondly this concurrence of intra-extra party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplinised or that they are more prone to defections or change of party affiliation during their mandate.

Socio-Geographic Effects On Higher Educational Choices

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can't be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habitus. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of of blue-collar jobs. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in such group most of the students are applying and attending low prestige higher educational programme at local private universities despite the possibility of pre-university possibilities. This goes for students with middle-class backgronds as for students from working class. One suspicion is the existence of a sociogeographic effect on higher educational choices that makes it possible to talk about a sociogeographic habitus, collective in the same way as class-habitus but also unique in relation to other geographic areas. In this paper this is discussed in relation to in-depth interviews with students representative to the above described group.

Internet Chess and Chat As Interaction Order

Abstract. While playing Internet chess and at the same time using a rudimentary chat function with fixed lines, I have also been observing the chess and chat as a rudimentary interaction order. In this paper I will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Erving Goffman. My point of departure is that individuals interact with each other as if they were playing a rudimentary interaction order. In this paper I will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Erving Goffman. My point of departure is that individuals interact with each other as if they were playing a rudimentary interaction order.

who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this 'new' political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the 'colonial' period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - it is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identitary terms) highlighting the continuities and changes observed.

RC31-526.11

PESSOA, INES* (ISCTE - IUL, inespessoa@yahoo.com)

Portuguese Youngsters on the Move after the Macao's Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included. In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2 behavior on self-reported behavior were used to estimate households' carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the "Schwartz value inventory", people's perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or "milieu" segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different "social milieus", i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

PETERSSON, FRIDA* (University of Gothenburg, frida.petersson@socwork.gu.se)

The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients' lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals' talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, "drug-free" and "drug-abuse" are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals' talk, it is possible to live a "drug-free", "normal" life with methadone, as long as it is distributed by the clinics and ingested according to the staff's recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as "drug abuse", legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients' modes of resistance, such as subversive interpretations of staffs' arguments or "narratives of resistance".

PETERSSON, KARINA* (Linnaeus University, Sweden, karina.petersson@lnu.se)

How and When Belongings and Living Conditions Is Made (in) Visible in School

This paper explores how and when principles of categorizing groups related to residential area and living conditions, are present and are of importance in educational and social relationships in school practice. The background to the study is that on the one hand, there is openness and a welcoming of immigrants in Swedish society and in schools, for example, through policy and political objectives. On the other hand, there are clear structural differences and segregation in schools related to the area affiliation and ethnic origin. Interest in gaining an understanding of and explanations for the ambiguity that emerges between policy and what happens in the school's daily life have contributed to the study's aim. The aim of this study is to investigate and analyze whether, and if so, how and when students in a secondary school in a medium-sized town in southern Sweden, are identified and categorized in relation to the belonging residential area and living conditions within education and social relationships, as well as its relevance for pupils in school practice. The focus is on how the changing demands and social relations are managed, organized and perceived by different actors, when school is becoming a common arena for students from different areas and with different living conditions. The analysis is based on an ethnographic study based on observations, interviews and informal conversations in school practice. The study's result show that pupils belonging and living conditions is made visible and contributes to categorization in certain contexts in school practice, while it is made invisible to categorization in other contexts, where other factors connects pupils to a group or network. It is also found that the different categorizations overlap each other.

Does Social Economy Really Constitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.

The research question is: "Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?"

The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faced character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the connection between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-defeating form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

High Quality Education: Globalization and Problems of National Educational Systems

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the operation of systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia.

While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local educational programs is necessary. Particularly sensitively should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)

Abstract
The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on gender, health status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-countries comparative analysis of income and wealth from an intergenerational perspective.

Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

The Impact of Contractual Relationships to the Identity and Values of Religious Organizations – A Pilot Study in Sweden

Part of the growing impact of new liberal economic market rationality is an increasing demand of religious organizations to establish partnerships or contracts with the state. Deregulation and liberalization of (public) welfare services in Sweden during the 1990s resulted in greater attention to civil society as a resource in welfare provision. While the previous state-based welfare model advocated financial solidarity and equal rights to welfare services, the new marked-based model is based on the idea of the individual's right to freedom of choice and accepts different individual financial capacities. From being advocates for a comprehensive welfare system equal for all, religious organizations are presently invited and enrolled as contracted parts of a system accepting inequality in welfare provision related to the financial capacity of the individual. Indications from previous research show that tensions between their identity and the implicit values of contractual relationships are found. This study aims to identify the specific profile and qualities of religious organizations which at an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for tuning down the religious profile or a demand for accepting values in conflict with its core values. This paper discusses the short term and long term consequences for religious organizations identity and freedom by entering into partnership or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religion in a European Perspective (WREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.

Corporate Social Responsibility Practice in Russia and in Western Countries

The aims of study is to determine the dominant practices of corporate social responsibility in Russia and to compare them with the features of the model of corporate social responsibility of business companies in developed countries. We quantify the nature of corporate social responsibility in Russia and to find the advantages and disadvantages of the domestic model of corporate social responsibility. The empirical base of the research was information on websites of 570 largest companies in Russia. In study it were examined sections of sites about the activities of companies in the field of social and environmental responsibility, as well as the characteristics of company's interaction with stakeholders in social networks. Content analysis of the data published on the Internet allowed to identify three areas of social responsibility of Russian companies: operating in welfare provision. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Seeking a Voice: Muslim Organisations in Australia and Germany and Their Struggle for Civic Recognition

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, and more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasingly political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community organisations have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care

Our main interest is the professional use of “social assistive robots” (Kolling et al. 2013). We call them “emotion simulating & stimulating robots” as they are designed to fulfill “experiential aspects of belonging” (Klein et al. 2013). Our empirical subject is Social Factory, a German company, which developed and produced Paro, the interactive robot with highest therapeutic effect praised machine is getting usual in Japanese private households, in Germany it slowly finds its way into Elderly Health Care Institutions. According to that we are interested how the robot becomes embedded in the carer-resident relationship.

To which aim use carer the robot in their caring activities and routines? Which meaning is transferred with this special usage? Not only the singular performance but also the object with which the action is carried out is a carrier of meaning. However, not only the subjective sense but also the objective meaning of people, places, actions and material things recurs to interpretation (and interpreters). In terms of sociology of knowledge we are interested in the process of objectivation and institutionalisation of technical artefacts which is embodied in the communicative processes of the distribution of knowledge. The robot as an in fact pressive technical artefact neither is a social actor or a “sociofact” but an integral and powerful part of social action with the potential to change culture (i.e. of caring). According to that and in regard to the zoomorphic design of Paro which looks like a pet toy we are especially interested in the haptic use of Paro. As touch and tactility is referred to as special need of the elderly and persons with dementia the impact of this technology may lay in a climate change of the Caring Culture.

From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives

At least since the founding of the A4M (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way.

Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical life plans for aging.”

The interviews show the profound impact of anti-aging on the individuals’ biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? And how is it possible to explain cross-national differences? The paper introduces the theoretical approach of the “gender arrangement” of the author as an explanatory framework for cross-national differences. This approach is grounded in the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actors’ constellations and action, which form the societal context for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European countries. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.

Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with regard to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself. Welfare states have established new, paid forms of semi-formal and formal care work within the family household. This change has led to an erosion of the boundaries between the two spheres. These new forms are also connected with a new type of social rights. It is argued that in order to capture this change appropriately, the care work can no longer be viewed as a shift within a dualistic model; as a shift from private to public care, or as a formalisation of care. Instead it must be understood as a multidimensional change.

In the paper, a conceptual approach for analyses will be introduced. Moreover, it will analyse the development of the new forms of paid semi-formal and formal care work in childcare and care for senior citizens in a cross-national comparative perspective. Finally also it will explain the development with social change and cultural change.
Over the past decades social inequality has grown in France, as in many other countries. Paradoxically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent clever words and expressions to describe the structure of French society. However, these substitute discourses were soon gainsaid by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had far reaching consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

Women’s Empowerment As a Determinant of Fertility Change in Southeast Asia

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries who experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women’s empowerment has not reached a consensus. Women’s empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women’s empowerment include the percentage of women’s education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women’s holding manager’s positions. At individual level, women’s empowerment can be measured by women’s educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women’s empowerment. Most studies have been looking at women’s empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women’s empowerment and the framework of relationship between women’s empowerment and fertility changes will be reviewed. Furthermore, the current situation of women’s empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women’s empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women’s empowerment plays a role in the regional demographic change.

Violent and Non-Violent Logics in Contemporary Greek Protests

The research is focussed on crisis ridden Athens as rationalisation becomes accentuated during economic and political turmoil. I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces; migrants, anti-nationalists, anarchists, neighbourhood activists, and radical leftists. From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and reflextions on violence performed by themselves and others.

In the context of Athens the consequences of increasing cleavages and precarization by the ‘Euro-Crisis’ are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a hub for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

Athens experiences a militarised zone (Kurtovik 2013). The government is perceived as EU-dependent by most citizens, and chooses to demonstrate its strength by democrating different groups as ‘deviants’ (Dalakoglou 2013: 30). Radical left and anarchists, as well as migrants and refugees, are constructed by the ruling parties as threats (Zenakos 2013): for public security (Philipp 2013), or as dangerous ‘hybridic bombs’ national health (Pasanoglou 2012). Newly-deployed and heavily-armed police forces are ordered to fight the ‘undesired’ objects. The increased establishment of far right discourses and neo-nazi-activism support this development (Philipp 2012).

The atmosphere of austerity and oppression has deeply influenced activist logics of this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

With its extensive ethnographic material, my research contributes to fill the desideratum (Andronikidou & Kouvaras 2012) of empirical in-depth analysis of contemporary contention in Europe.

Kāpō Māori Counter Narratives: Transformative Research Practice

Recently a research paper on the eye conditions of Māori children was published in New Zealand. The paper sensationalized the reasons for non-accidental eye injury by highlighting the role physical abuse plays in vision loss and blindness in Māori children which in turn was picked up by the media. Not surprisingly, the kāpō (blind and vision impaired) Māori community was not only unhappy with the authors’ conclusions but also with the way the ‘story’ was covered in the media. The community’s view was that this was another example of ‘Māori bashing’ that could potentially undermine kāpō Māori whānau engagement with science. The twin aims of this presentation are to: 1) critically reflect on the methodological implications of doing research bereft of its socio-political and cultural contexts and undertaken by ‘outsider’ researchers who persist in deficit theorizing to produce a ‘standard story’ of isolation, marginalization and disability, and 2) argue for a kāpō Māori approach by kāpō Māori approach to research that leads to socio-politically and culturally nuanced readings and understandings of the issues that face kāpō Māori and their whānau. We do this by discussing the methodology and outcomes of the recently completed research project ‘Growing up kāpō Māori: accessing paediatric ophthalmology services’. This project provides a counter narrative to the standard story and as such is more likely to transform social spaces and health practices.

Social Inequality & Academic Achievement Gaps in Developed Countries

International comparisons of cognitive skills suggest that equitable educational performance is just as important as high performance. Therefore, minimizing achievement gaps between wealthy and poor students is important for countries’ economic growth (Hanushek, et al. 2008; Couloumb and Tremblay 2006). Even within high-income countries that share similar levels of economic development, socioeconomic-based achievement gaps vary in size and shape. Nevertheless, the direction of these achievement gaps is consistent—with wealthier students having both greater opportunity and greater achievement (Hampden-Thompson and Johnston 2006).

This study offers a cross-national examination of the relationship between socioeconomic achievement gaps, societal-level inequality, and the role of social safety nets in reducing inequality in both income and cognitive skills. The cross-national variation in income inequality, social safety nets, and academic achievement gaps facilitates a direct examination of societal-level factors that are hypothesized to be important in determining the shape and size of country-specific achievement gaps.

To create country-level measures of income inequality, social safety nets, and academic achievement gaps, we use data from the OECD Programme for International Student Assessment (PISA) as well as the Luxembourg Income Study (LIS). In an attempt to draw comparisons between countries at similar levels of economic development, we restricted our analyses to 26 countries that belong to the World Bank high-income group (World Bank Country Classification 2013) and also participated in both PISA and LIS.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other status est (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper explores various issues as to whether this might be the case. In addition, it considers whether this tells us anything of wider significance about the way in which social gerontology has developed. Would a fuller appreciation of social class add anything to our understanding of later life? To develop these points the discussion will focus on the role of class to reframe existing ideas in which the role of class has been minimised in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalisation and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

PHILLIPSON, CHRISTOPHER* (University of Manchester, christopher.phillipson@manchester.ac.uk)

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground to a halt during the 1980s and have continued to be affected by a combination of austerity and accelerated globalisation. The paper will examine how a combination of globalisation and long-term economic change is re-structuring core social relationships in old age. The consequences arising from this include: the weakening of the idea of generations as a meaningful unit of analysis; the emergence of new political and social identities in later life; and the growing importance of divisions operating within generational and related social groups. The paper will explore the implications of these developments for theoretical work in the sociology of ageing.

PIATTI, CINZIA* (University of Otago, cinzia.piatti@otago.ac.nz)

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often perceived on the basis of a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognise the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thévenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone-who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research

This presentation bears on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectorial panels for scenario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what may happen and what may not. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?” In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

 PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Austerity and The University In Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst it is often argued that higher education is the key to the British economy, the situation has been exacerbated by government policy changes, such as the introduction of a 18-to 30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

 PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participants in EDL actions provide young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of disruption’, in which legitimate differences between policies are blurred and the social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumscriptions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ of the political system, the paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘reconcile all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3)?

PILLAY, KATHRYN* (University of KwaZulu-Natal, pillaykat@ukzn.ac.za)

“Nation Under Siege from Foreigners”: Exploring Notions of Belonging and Exclusion in Post-Apartheid South Africa

South Africa finally became a democratic country in April 1994 after the first ‘free and fair’ general elections took place. A commitment was made by the ANC led government to ‘non-racialism’ based on a Constitution which was inclusive of all the ‘races’, accepting shared citizenship. In this paper I contend that even though the democratic state acknowledges South Africans of Indian descent as part of its national discourse, and continually affirms ‘their’ part in the national democratic revolution, it nevertheless still perpetuates the notion of essential ‘differences’ between ‘peoples’ which originated in colonialism, was entrenched further after the formation of the Union, and legitimised through various policies during apartheid. Even though the Population Registration Act (PRA) was repealed, the racial categories that were reproduced and legitimised by the Act still exist. ‘Race’ then continues to be an axis around which South African society revolves. I argue that the continuation of ‘race’ classification through legislated and bureaucratic guises perpetuate racialisation and ‘race thinking’, which is evident in self-perceptions and the perceptions of others. The argument is demonstrated by empirically examining how South Africans of Indian descent are homogenised and labeled as a separate and distinct group, and in addition how they are perceived as ‘a people’ or ‘community’ with fixed and essentialised identities and ultimately ‘belonging’ to another country, to which they could easily ‘return’, as evidenced by calls to ‘go home’ voiced at various points in time during the post-1994 democratic era. Empirical evidence will be provided to reveal how, as a result of this perpetuation of difference based on ‘race’, similar processes of othering and anti-‘Indian’ sentiment, reminiscent of the political eras prior to democracy, persist in public and popular discourse in contemporary South African society, and is exposed at various junctures.

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different ‘Bolivarian Missions’ offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezu-
elation. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphers, consistent with the public discourse around the existence of the so-called “Mission Sucre”. This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many “Aléidos Universitarios” that operate throughout the country’s regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

From Exclusionary Meritocracy to Differential Inclusivity: What Has Changed in Venezuelan Higher Education?

Since the beginning of the Bolivarian Revolution in 1999, a constant comparison between the so-called “4th Republic” and the rise of the Bolivarian Revolution has divided the history of Venezuela into two major periods. When it comes to the education system, since 2003 the government has implemented a variety of educational programs and a constant process of unprecedented expansion has taken place. At the higher education level, the system has been expanded through the municipalization of higher education. This process occurred in the framework of a political project that aimed at tackling social inequality and its educational repercussions. These reforms and initiatives worked under the assumption that the previous organization of the educational system was meritocratic and exclusive. Although some official statistics suggest that the participation of students in higher education in Venezuela has been widened for all, I argue that the inequalities have not been addressed, given that the current higher education system is divided into two parallel systems of education with different quality standards and student conditions. This paper will reconstruct the creation of Venezuela’s Mission Sucre and will analyze the paradox of inclusion in the Venezuelan context from a sociological perspective using insights from Bourdieu’s work. I conclude that the implementation of a parallel offer to include students from disadvantaged environments or backgrounds may exacerbate the educational gaps, as well as, the social and political polarization in a system like the one under consideration. This analysis is based on my ongoing doctoral research and presents some reflections coming from the literature review, as well as my empirical work in Venezuela.

Elements for a Grammar of Revolt: Comparative Sociology of the September 1991 Lootings in Kinshasa, Zaire

Popular politics and resistance, in Africa as elsewhere, take shape both through the ordinary (Asef Bayat, Life as Politics) and the extra-ordinary. This paper focuses on one extra-ordinary case of popular unrest: the riots and lootings that occurred in Kinshasa, Zaire (now Democratic Republic of Congo) on September 23rd and 24th, 1991.

Contrary to previous studies that focused mainly on the historical context, this paper sets the analysis in a broader context through a comparative approach. Drawing on both primary (media and testimony) and secondary sources, it intends to scrutinize these two days of lootings while confronting them to the mirror of contemporary Latin American riots: the Caracazo (Venezuela, 1989) and the Santiagueñazo (Chile, 1998). The challenge of lootings as the oldest pattern of social life.

This allows to delineate elements of a shared grammar of revolt: lootings always occur in a temporal breach (Martin Breaugh), they are akin to carnival both because they are festal and because they momentarily invert the ongoing power relations: they oppose groups of actors whose positions on both sides of a social frontier appear with more accuracy during this cathartic moment. In Kinshasa, the lootings opposed people who considered they hadn’t benefited from the distribution of resources and privileges made by President Mobutu Sese Seko, and those who profited as having benefited from them. The discourses made by the protagonists claim that direct action was made both necessary and legitimate by social inequalities, injustice and deprivation, as noted by E. Thompson. Through the comparison of two different contexts ("The Moral Economy of the English Crowd", 1971). Finally, the collective violence unleashed in the lootings expresses a desire to put an end to a situation deemed unbearable – the generalized use of fire is symptomatic of the kind of social composition or the emergence of gated communities. Various social mobilizations and social movements are trying to oppose these tendencies and the squatting is the most radical amongst them. It is particularly interesting as it usually tries to combine down-to-earth problem solution (i.e. campaign to save a park or against privatization of a public space) with radical anti-capitalist ideology. The critique of property (through squatting abandoned buildings), consumerist way of life (through D.I.Y. lifestyle) is particularly problematic in the region where cap-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
itism is new and was desired and such movements are not deeply rooted and emerged in the last 25-30 years.

This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed media coverage (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznań and Warsaw implementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

PIOTROWSKI, GRZEGORZ* (Södertörn University, grzegorz.piotrowski@sh.se)

Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggregation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement slowly shifting to (neoliberal) positions and loosing the touch with the workers base as well as with young people whose demands (i.e. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way.

The popularity of these youth movements partially lies in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moroever this subcultural-political connection seems to have an impact on today's radical movements making them mostly a young people's domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements' publications (printed and online) collected over the years.

PIRK, REELIKA* (Tallinn University, reelika.pirk@gmail.com)

The Role of Social Movements in Youth Political Participation

In the debate of youth political engagement social movements have a crucial role to play. In many contemporary democratic societies political culture is facing a crisis of legitimacy. Scholars around the world have stated that the level of traditional political participation is decreasing, especially among young people. On the other hand, there are opposite views, claiming that instead of being politically disengaged, young people are looking for (new) forms for participating in society, as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism etc.) are considered to be new platforms for young peoples' political activism.

This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the society. The paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people conceive their participation and role in society. Secondly, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes open-ended interviews and informal conversations as well as participant observations and secondary data sources.
be divided into four groups: communities of general orthodox theme, communi-
ties where the main content is presented by the quotations of revered fathers
and modern members of clergy, and also parables and cautionary tales, issue-re-
lated communities (question to priests, for youth, family, devoted to beneficence,
etc.), and at last territorially united communities (the communities of bishops, 
youth orthodoxy, parishes, dioceses, etc.).

Each orthodox group in VKontakte and its only unique target audience on the
basis of which the group administration chooses content: by format (articles, 
news, fillers, quotations), by form (text, photo, audio, video), by the functionality of
VKontakte social net (discussions, meetings).

In orthodox communities VKontakte the model of social interaction ‘online-of-
line’ is actively developed. Within the framework of this model the participants
of communities are informed about offline events running (rapidly erected tem-
ples buildings, beneficence, meetings with interesting people, etc.) via VKontakte
functionalities (messages, meetings). Due to communities participants high degree
of loyalty the information about future events is spread by ‘virrus’ method by the
means of likes and repost system.

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitas@gmail.com)

The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to the
end of the last century and the very beginning of the 21st lead to some radical
epistemological changes at the crossroads between communication sciences
and sociology. This paper on one side reconstructs the key paradigm shifts in
system theory from the whole /part one (P1) to the system /environment one (P2)
and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather
unlikely in systems theory and still the key global economical, technological, so-
cial challenges of our times required revolutionary shifts. The other side of this
paper is essentially focused on theorizing a fourth paradigm shift which selects
the fragments of the late XX century epistemological debate turning them in
a systematic (in the Mertonian meaning of the term) redesign of the concept
of system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it”

“Some increase in plasticity is to be expected [...]. It represents the extrapolation
of a trend toward variability already apparent in the babies, chimpanzees and other
cercopithecoids what is really surprising however is the extent to which it has been
carried. Why are human societies this flexible?”

(Barah 2008: 25)

(Wilson, 2000: 548)

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitas@gmail.com)

“Hypercitzenship” and the Evolution of a Global Identity

The idea of the paper moves from the consideration of autonomous agents
and global flows eventually converging by means of autoepiotic systems.

This work reframes the topic of the reconfiguration in the evolving social sce-
narios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a
multidimensional and multipolar convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic
attitude of those areas in which capitalism is turning into turbogenetic capitalism.
Its main features are the following: Cosmopolitan, scientific, societarian and en-
trepreneurial.

The Hypercitizenship concept is focused on the fact that communication about
key challenges of our times is increasingly meaning communication and public
understanding of science and technology for governance and policymaking on a
global, global and cosmopolitan scale.

From this point of view, law becomes one of the à la carte products to be
bought by browsing a global “catalogue” (Mundus) surfing on a technological
global platform (Globus) of which the internet is the best metaphor and which
can be seen as the most important platform for convergence developments and
as a driver of several, key, changes. This new media platform is cosmopolitan and
local while the mass media often still fall into the methodological nationalism
trap. Indeed, the emerging scenarios are more and more shaped by supranational-
(al, UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s...) entities and
by new localisms which cannot survive outside a global network.

Thus, the emerging glocality is witnessing that the “national state” citizenship
is too big -bureaucratically speaking,- but too small -in competitive terms-, to be
strategic in the merging scenarios.

Hence, the importance of a new notion of citizenship in the glocal age is
rising, which we refer to as “Hypercitizenship”.

How to Tether an Investment Banker: Observing Innovation and
Control in Islamic Finance

Scholars of alternative economies have noted that financial markets are par-
ticularly resistant to social experimentation due to the absence of institutional-
ized dialogue between finance industry insiders and outside critics. A noteworthy
exception is the recent development of Islamic investment banking in Malaysia,
where (external) Islamic scholars are in an institutionalized dialogue with (insider)
investment bankers.

This dialogue has created an ongoing experiment to create “sukuk,” a novel fi-
nancial instrument designed as a moral replacement for sovereign and corporate
bonds. “Conventional” bonds are understood by many Islamic scholars as immoral
because they are unthethered from “real” economic activity and produce reve-
 nue streams based on “interest.” In contrast, sukuk are alternative asset-backed
securities (ABSs) putatively tethered to the real economy and generating moral
revenue streams without recourse to interest. This intervention is ambitious and
global: in 2012, $137 billion sukuk were created (issued) world-wide in a number
of currencies.

To theorize the social mechanisms and governance structures that enable such
dialogue, this paper investigates two questions centered on how theologians un-
derstand and control investment bankers. How do Islamic scholars and financial
engineers speak with one another with sufficient expertise so as to co-construct
new asset-backed securities that conform both to theologians’ interpretations of
Islamic law as well as to bankers’ perceptions of marketability and profitability? More
over, how can religious scholars control financiers sufficiently to enforce mini-
mum standards of moral compliance?

To investigate these two questions, this paper draws on 48 focused, ethno-
graphic interviews conducted in 2012 and 2013 in investment banks with financial
engineers and Islamic experts who co-produce sukuk. The paper and presenta-
tion summarizes the case, theorizes social mechanisms and governance struc-
tures, and hypothesizes implications of the case for other morally-committed fi-
nancial reform projects seeking to dialogue with and control investment bankers,
such as Occupy Wall Street.

PITTI, ILARIA* (University of Bologna, ilaria.pitti@gmail.com)

Contemporary Adults: Understanding Youth through
Intergenerational Comparison

Although sociology has already deeply analysed the profound changes oc-
curred to youth and paths of transition to adulthood in the last decades, it is
often possible to notice two glaring deficiencies in many sociological works:
firstly, young people are frequently conceived as a category of its own, a spe-
cific social group that is somewhat isolated and studied separately, making it
as most a comparison with the previous young generations; secondly lit-
ttle attention has been payed to adulthood, the final destination of youth.
Adults should be a model for young people's transitions, but within the contempo-
rary context this stage of life’s standard model is threatened by contemporary trans-
formations and late-modern processes (individualisation, flexibilisation, globali-
sation, juvenilisation) and it become more and more complex to define what is
‘young’ and what is ‘adult’, where youth finishes and where adulthood starts, which
functions characterise these two ages and which are their reciprocal connections.
All that has huge consequences on the (individual and social) identity both of young
people and adults, on their intergenerational research and on youth transitions.
The intent of the proposed contribute is to think youth in a generational
way by studying young people in relation and in comparison to the co-pre-
sent adult generation, lighting up the contemporary features of adulthood.
The proposed contrbute - based on an empirical research which involved 30
Italian young people aged between 18 and 24yo and their significant adults
through semi-structured interviews - aims at contrasting the specific inter-
predictions of adult identity emerging from the representations and practic-
es of adulthood of two generations: the baby boom and the millennial one.
Through this comparison the presented research highlights the processes be-
nath contemporary intergenerational dynamics inside and outside the family,
allowing a deeper knowledge and understanding of contemporary youth.

The Embodied Mind and Epistemic Difference: Lessons from
Disability Studies

Embodied mind theories in neurocognitive science and philosophy of mind
are increasingly cited as a conceptual bridge between neuroscience and social
* denotes a presenting author. Abstracts are organized by first presenting author's last name.
scientific epistemologies. Theories such as enactivism, embodied realism, and extended cognition share a preoccupation with grounding mind and consciousness in the lived, active body, with situating these in environment, and with challenging the abstract, disembodied Cartesian subject. In this sense, they echo sociological and feminist views on the epistemic significance of the body. Yet sociologists and feminists argue that an embodied view of mind must involve the recognition of differences between knowers, while neurocognitive theories assume a generic or universal body and pay little attention to epistemic multiplicity. In this paper I argue for the importance of epistemic multiplicity in forging interdisciplinary theories of embodied mind. I also put difference in more literal terms by addressing corporeal variation. How neuroscientific embodied mind theories come out on the epistemic significance of differential variation can be gleaned from the debate over multiple realizability, or the idea that the same mental state can be achieved through multiple physiological processes. This debate focuses on difference only to reinstate epistemic sameness. For more considered reflection, I look to disability studies, particularly the work of Jackie Leach Scully, Tobin Siebers, and Rosemarie Garland-Thompson, to consider what epistemic variance teaches us about the embodied mind. Disability scholarship shows us that all bodies are variant in some way; this work puts pressure on assumptions of biological universality. The example of disability also shows not only how problematic it is to assume a generic body, but also a generic fit between body and world. I argue that embodied mind theories can best grasp epistemic difference by resisting an *a priori* body-subject whose relevant properties are fixed in advance.

**Central Bank 'Independence'**

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an 'unfair game', as Hyman Minsky said years ago. This paper investigates 'independence', not only as a sociological misnomer, but also the effects of central bank quantitative easing since the crisis. The Fed's QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes behind which lie coalitions of interests that defend the status quo ante. So far few effective oppositions have risen to urge a firmer path for the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms' bluff; in contrast the Bank of Japan is under some 'control' by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

**Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach**

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment has been the less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habitability of housing and urban space should be provided allowing ageing in place as long as possible. Until lately elderly people in Chile have focussed in providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering than more than 80% of seniors in Chile own their homes(SENASA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mortality figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues.

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provision in the State of Chile, using objective and subjective techniques. (Direct observation of performance of Basic Activities of Daily Living, (BADL), focus groups regarding findings and dimensional evaluation both of users and spatial conditions), Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and architectural design mostly related with height, presence of uneveness or lack of elements.

**Corps En Mouvement : L'expérience De La Marche Chez Les Femmes aînées Immigrantes à Montréal**

Dans le cadre d’une étude en cours sur les « femmes aînées immigrantes et leur mode au vieillissement » menée à Montréal, les expériences du vieillissement dans le rapport à soi et à son corps sont notamment interrogées. Les données présentées dans cette communication sont issues de 15 focus groupes, soit 90 femmes d’origines et de communautés culturelles différentes et ayant des parcours migratoires variés. A partir de ces données, le quotidien de ces femmes immigrées est présenté à travers une pratique commune : la marche. Les analyses comparatives des verbatims ont en particulier permis de saisir l’importance accordée au mouvement. La marche en particulier atteste d’une volonté unanime dont elles font preuve, celle de rester autonomes et indépendantes. Il s’agit là d’un résultat de recherche que l’on retrouve dans tous les focus-groupes. En effet, quel que soit l’âge de la personne, son autonomie, son origine culturelle, ses pratiques religieuses, son parcours migratoire ou son statut familial, la marche est une façon de pratiquer et de vivre son environnement – son espace vécu. Au-delà d’une vision qui pense le vieillissement en termes de limites et d’incapacités, nous mobilisons le prisme du mouvement des femmes immigrées pour s’adapter à leurs corps pour rester autant que possible en cohérence avec leur environnement. Nous mettrons en évidence dans cette session que si le fait de vieillir et de connaître des limites physiques peut représenter des obstacles dans les déplacements de tous les jours, cela ne les remet pour autant pas en question de façon définitive. Par ailleurs, nous montrerons ce que cette attitude de la marche dit de la personne qui la pratique. Les déplacements et les mouvements au quotidien permettent par exemple d’activer les relations sociales.

**Trends and Challenges in Care Policies Development in Croatia and the Czech Republic**

Care for dependent family members has become an important policy area which requires substantial reforms in many European countries. Care policies are increasingly restructured, where the trend towards new forms of care governance can be recognised, with a sustainability of care system becoming an important driver of reforms. Still, the policy answers countries opt for and their modes of implementation fairly differ. These are reflection of country specific institutional, political, socio-economic and cultural circumstances, and transnational ideas. There is care policies an interdisciplinary field for further comparative research.

This paper addresses the main reform trends in care policies in Croatia and the Czech Republic. In socialism both countries predominantly relied on state provision of eldercare and childcare, however, due to the lack of care facilities, the informal/family provision of care was quite widespread. With economic, social and political changes during the transition period new ideas and principles become present at the political level such as growing tendency towards increased pluralisation of care providers and enhanced family’s responsibility in care. Nevertheless, they varied between the policy areas and countries, and were not fully realised in policy reforms, what resulted in different consequences for both, persons in care need and care providers.

In order to unravel similarities and differences in care policies development in Croatia and the Czech Republic, the structural, organisational, quality and financial aspects of childcare and eldercare are discussed as well as the main discourses and principles behind the reforms. They are additionally placed in the context of accessibility and affordability of services. The paper aims to explain what circumstances led to the reforms and under what logic were the child and eldercare systems redesigned and reorganised since the 1990, and what were the reform consequences regarding the access and delivery of care services.

**How Can We Characterise National Sociologies?**

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified (in ways not specified) as leading national social thinkers, though there are also some cases where the contents of leading national journals (identified in such ways not specified) are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a national sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understudied, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system levels. It examines four key dimensions of trust – fidelity, competency, integrity, and global trust – and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among health care providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%). Discussion: The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Understanding the nature of the public’s skepticism and uncertainty about the risks and benefits to themselves and their communities of interest can inform future development of information governance and data brokerage.

PLEYERS, GEOFFREY* (Université de Louvain(UCL), Geoffrey.Pleyers@uclouvain.be)

Concepts and Practices of (Counter-)Democracy in the 2010s Movements

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists. Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four democracies can be isolated in young activists’ discourses: direct democracy, responsible democracy, argumentative democracy and protest democracy. Direct democracy at the local level is notably connected to experimentation in horizontal and participatory deliberation processes as well as democracy leads to stress citizens’ responsibility, whether in their consumption practices (the local transition movements) or in monitoring elected representatives and civil servants (often mentioned in Russia and in Brazil). Argumentative democracy is mobilized by committed experts, who trust in the impact of rational and well-developed arguments and popular education. Finally, many activists insist on protests, popular movements and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of these findings. Two things are clear: it is not that counter-democracy and representative democracy. Together, they offer concrete ways forward for a multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

PLOWS, VICKY* (Victoria University, vicky.plows@vu.edu.au)

Reducing or Reproducing Inequalities? Ethics and the Researcher’s Role in Negotiating Power Relations Between Young People

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young research participants (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for youth researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001).

For youth researchers concerned with and committed to challenging issues of injustice and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth centre for a 12 month period, I analyse the balancing of my actions, reactions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflective engagement with ethical issues as they emerge in the research journey (Sime 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

PLUSS, CAROLINE* (Nanyang Technological University, pluss@ntu.edu.sg)

Cosmopolitan and Essentialized Socialities in Transnational Spaces

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several countries. These two forms of characterisations are new and encompassing characterisations of access and non-access to the resources of different contexts-of-interaction in different places and societies because they merge both, the two basic forms of culture contact (adaptation or differentiation), and social relations of reciprocity, trust, collaboration, and exchange. This presentation will show that the Chinese Singaporeans’ explanations of their practices (or lack of practices) of these two forms of accounts for how they perceived of changes in their own characteristics, in the dominant cultural characteristics of their transnational spaces, and of the cultural characteristics of processes of globalization that the Chinese Singaporeans were carriers of. Emphases are on the role of the cosmopolitan cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan socialities in their contexts of work and friendships in Hong Kong with English-speaking people who were form the West, and Asians who had lived in the West; and ‘cosmopolitan’ work socialities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans mostly maintained essentialized socialities in their families, and they were largely excluded from the (differently) essentialized socialities of local Hong Kong people, propelling them—paradoxically, to more highly values cosmopolitan socialities with other non-locals in their contexts of work and friendships.

The Models of Orthodox Christian Parishes within Post-Soviet Russia: The Influence of Social Environment

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Vast reconstruction and building of orthodox churches in Russia is a new architectural landscape of modern Russian cities as well as forming of separate social establishments - parishes and their communities. Such communities are variated and have own features demanding on different factors (mainly of territorial and administrative character).

The sociological research within Kashirskoe and Nikolsy deaneries afforded an opportunity of distinguishing the orthodox parishes models, which develop as a result of religious activity of last several decades.

1. *"The churches with elderly communities unclosed in soviet period"*. The core of such communities is formed by aged people - as a rule, women and old-timers of church who remember the life of parish in soviet and relating to perestroika periods. The characteristic feature of such churches is a presence of several generations of congregants: those who were in the church in soviet times and those who came there in post-soviet period;

2. *"The parishes with constantly varied community"* are typical for churches at hospitals, shelters and prisons where there is a frequent change of congregants looking for mysteries and services of Church;

3. *"The churches in holiday villages with cottagers communities"* and *"The guide church"*;

4. *"The parishes with the community of "the active"* are formed around an enthusiastic and active priest, who unites people of the most diverse age and social rank;

5. *"The parishes of specific destiny"*. There are parishes which are known for their unparalleled features, as for instance one of Sati-no-Russkoe of Nikolsky deanery: here we find both the deposition of respected warrior Evgeny Rodionov (numerous groups come to his resting place), and complicated reconstructed building of the church atop a background of luxurious houses raised around and even its own parish tragedy - the murder of a priest.

POHN-WEIDINGER, MARIA* (Institute of Sociology, maria.pohn-weidinger@univie.ac.at)

'seduction': A Pattern of Interpretation

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically; an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real – and fantasized - potential of their National Socialist parents to annihilate experienced by children. The biographical case construction I want to present concerns the life story of a woman born in 1928. Her socialization took place in a family with National Socialist values and within Nazi institutions, and she experienced sexualized violence as a child, by her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be on the reproductive pattern of 'seduction', which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of 'seduction' allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

Asian Prosperity and Inequality: Gains and Injuries of Success

During the past decade or so, the Asian region has experienced rapid growth and expansion. While rising prosperity has led to poverty reduction, social inequality has also widened within and across societies. This paper will interrogate and differentiate the drivers of growth and inequality and its varying consequences to different income groups in the region. In particular, a sizeable lower middle class is fueling the growth of urban economies. By examining the differential gains of economic success within and across income classes, particularly among the emerging middle class, the paper characterizes the intersecting/interwining social injuries of prosperity, poverty and inequality. In doing so, the paper extends the understanding of injuries of income inequality from the physical to the social and political.

Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region's high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region's challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

Cellular Globalization and the Environmental Awareness in Rural Communities

A multidisciplinary team of social scientists (sociologists, economists, social geographers and demographers from main Moscow universities under the auspices of the Society of Professional Sociologists) works in the Russian region of Kostroma. This region is similar in size to West Virginia and has a population of 800,000. 70 percent of its territory is virgin forest. The Soviet era agricultural plants in Kostroma have gone out of business, leaving Kostroma's environment as the region's main asset. Despite the region's seeming isolation from the flow of globalization, a process of "cellular globalization" (Pokrovsky, 2008) is subtly but inexorably changing the character of the region. This process is changing traditional rural 'solidarity in despair and poverty' towards recognizing wealth as a value. Against this social background one can indicate the growth of rural communities made up of the migrant residents from big cities who decided to move out from megapolises in order establish a new environmental Utopia based on the value of ecological balance and downshifting. In the countryside 'new re-colonizers' continue their basic professional work through Internet and telecommunications, they make use of all modern commodities of life, they travel much on business—they are on the move or in the condition of 'liquid mobility'. Those new 'infocommunication settlers' (ICS) exemplify a much higher degree of social solidarity and vitality as contrasted to the deteriorating solidarity of the traditional population of the region. Is this an early evidence of the forthcoming general turn to 'infocommunication ruralism' in the spiral trajectory of social change?

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voicehovsky-Katchalov Estate Project in the Vologda Region and the Ugory Environmental Project in the Kostroma Region

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the "Abramovich's case" is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyzes the visual indicators of the " Manor Khvalevskoe" - restored by the famous financier Yuri Voicehovsky-Katchalov ("Standard bank"), the family estate of the 19th century in the Vologda Region in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region, which is on wealth than in the past. But the most advanced villagers already realize the significance and value of the 'old style' living. A new migration force is about to radically change the profile of local community life but tends to preserve diverse 'indicators' of old times. The dramatic crisis of urban life enables sizeable groups of middle-class professionals and IT-experts to consider moving to environmentally balanced areas in the North of Russia.
Informality and Policy Making: Evidence from Post-Socialist Spaces

Informed by participatory observation in public places, informal interviews and a large scale survey this paper explores the way informal practices may impact policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a “culture of corruption” to introduce the concept of “(non-) state socialism”, defined as a system for redistribution of welfare based on human interaction within the state agency, replacing state agency where and when this latter is in effective or absent. (Non) state socialism referring to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harking back to state (like fiscal fraud or bribing) and those harming the citizen directly (trafficking, narco-traffic). Although both “illegal” the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regularises itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

Renegotiating Social Policy through Informality: A Post-Socialist Perspective

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation (at the formal and informal level) of social and welfare policies in postsocialism.

Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialised ones. As a result, research has been preoccupied with possible areas of interventions, and steps to take, in order to speed this convergence. This assumption has been challenged by an emerging body of literature that, starting from a post-structuralist perspective, suggests that developments in postsocialism are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallelly to state-driven welfare distribution. When a substantial number of actors engages systematically with informal economic practices, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harking back to state (like fiscal fraud or bribing) and those harming the citizen directly (trafficking, narco-traffic). Although both “illegal” the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not effective, the society re-regularises itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

The study explores trajectories of migrant inclusion and exclusion in Belarus, Estonia and Ukraine – three of the economic centres in the transition 2004 migrant destination countries. Northern Ireland (NI) and Scotland became new in-migration countries in the early 2000s. A significant share of their immigrant population is composed of workers from Poland – a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers’ subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with different shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy.

The research is set in several political economy contexts of new immigration destinations. Being part of the UK, Scotland and NI share many features of liberal welfare states and liberal economic systems. However, NI has been characterized as retaining strong elements of Keynesianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The study is funded by the European FP7 Marie Curie Training Network “Changing Employment”. Website: http://www.changingemployment.eu

The 1978 World Cup in Argentina, from within its Political Prisons and Clandestine Detention Centres

Situated at the crossroads between the study of political repression and the media coverage of a sports event, this paper focuses on the reception of Argentina’s 1978 World Cup among those who were imprisoned in clandestine detention centres, in a political context that some have described as state terrorism.
developed throughout our research is based on depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance, as well as to lead to a change in the perspective where protests are seen.

POMA, ALICE* (UPO and EEHA-CSIC, alice@poma.com)
Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riaño valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolás) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Images des latino américains dans la direction de la composante militaire de la MINUSTHA (Mission des Nations Unies pour la Stabilisation en Haïti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH), which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism between these two sectors of Haitian society.

The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neocolonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thought currents with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the «imagined Haitian nation.»

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercial advertisements has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television advertising does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in terms of gender of main character, voice over, age, and roles of male and female character in television commercial.

Young College Students and Their Values: A Comparative Study Between Brazil and China

Young college students and their values: a comparative study between Brazil and China

Marilena Nakano
Marilia Pontes Sposito

This is a quantitative sampling research held within the scope of the Brazil-China Agreement. It compares the Brazilian college youth with the Chinese, in the 17 to 24 year-old age bracket. The data was obtained in 2012, by means of a same questionnaire in both countries.

The paper will privilege the data related to values and visions about the best and the worst aspects of being a youngster. It will analyze the differences between young men and women. In spite of similarities, what attracts most attention is the configuration of the two distinct modes of being young: a Brazilian and a Chinese.

There will also be some reflections about the research conduction process and the interactions between the researchers and the different cultures and countries are also to be considered.

With regard to the results, the peculiarities of each group are being identified. Thus, for example, for Brazilian college students, the best thing about being young is to have “dreams and objectives” and the worst part is to “not be able to be self-supporting”. On the other hand, for the Chinese youngsters that were interviewed, the best thing is “to be healthy and fit” and the worst is “to be insecure regarding the future”. It is interesting to note that they fear they can be “easily influenced”, whereas this fear is not strongly representative among Brazilians.

Notwithstanding the singularities observed between the youths of each society, it can be observed that there are some transverse points of contact that allow us to go ahead in drawing up the contemporary juvenile condition, incorporating the differences of genders as a fundamental aspect.

POPA, IOANA* (CNRS, ipopa@u-paris10.fr)
An “Area Studies” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connexions between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions have been less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6e Division of the Ecole des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Des articles issus de la presse quotidienne et hebdomadaire française sont ainsi étudiés à travers la méthode de l’analyse du discours. Nous tenons par la suite de mettre en évidence les liens qui s’établissent entre des catégories d’individus et les actions et les caractéristiques qui leur sont attribuées.

Nous observons ainsi que l’individu handicapé est celui qui bénéficie d’une prothèse et dont les performances sont augmentées par ce dispositif. Au final, la personne n’est plus proprement dite déficiente. Elle est “en situation de handicap”, mais elle est capable de s’autodépasser, devenant de cette manière un membre de plein droit de la société néolibérale.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproductive decisions of women in four countries (Pakistan, Indonesia, the US, and Germany) and the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negotiating ideas about sex and reproductive health between three generations of families in the province of Newfoundland in Canada. The oldest grandmother participated in 1910 and the youngest granddaughter in the mid 1980’s, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

Sustainable Consumption Among Brazilian Young: Daily Practices and Political Participation

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil, Rio de Janeiro and São Paulo; and (2) a focus group with a total of 51 young with the same socio demographic characteristics, conducted in 2012.

The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. For instance, the environmental and political movements are perceived as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people.

PORTILLA, HILDA JOYCE* (University of Ottawa, hportilla@hotmail.com)

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member’s strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it’s hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions, diversity of family members’ strategies) and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. For instance, the environmental and political movements are perceived as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people.
overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a posteriori perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and paternity are essential. Also, we must include the contribution of gender studies in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

PORTILLA, HILDA JOYCE* (University of Ottawa, hjportilla@hotmail.com)

"Transnational Families" Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for “unskilled” workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants’ activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families’ lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

Encrucijada Latinoamericana en Bolivia: El Conflicto del TIPNIS y Sus Implicaciones Civilizatorias

El presente ensayo busca interpretar las implicaciones civilizatorias que vis-emos presentes en el conflicto del TIPNIS (Bolivia), resaltando la importancia que para el continente y las luchas territoriales, sociales y ambientales tiene el desarro-
lllo del conflicto del TIPNIS. En la primera parte se hace un análisis desde ló-
múltiples espacio-tiempos que están implicados en el conflicto. En segundo lugar se centra el análisis en las actuales presiones desde dinámicas socio-espaciales, especialmente de ampliación del capitalismo en frentes de expansión/invasión, que constituyen tensiones territoriales sobre y alrededor del territorio y territorio-
alidad de los pueblos indígenas del TIPNIS. El estudio resalta el papel de los movimientos sociales bolivianos en la con-
figuuración de las nuevas luchas políticas emancipatorias en el mundo ancladas a los procesos globales, entrelazando los conflictos y la capacidad de resistencia de los sectores marginados y desfavorecidos. En este sentido, los avances que se书画utinen en proyectos de desarrollo sostenible, la defensa de derechos indígenas y la lucha contra la explotación y el despojo del territorio indígena se entrecruzan y se entrelazan para construir una nueva visión de futuro donde la dignidad de los pueblos indígenas y su autonomía sean reconocidas y valoradas.

POSSAMAI, ADAM* (University of Western Sydney, A.Possamai@uws.edu.au)

The i-sation of society and post-secularism: towards new inequalities?

In Jameson’s classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritzer wrote about the McDonaldisation of Soci-
ey which refers to the permeability of (what Weber made reference to) rational bureaucracy into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of ‘denotionalised’ capitalism, and that with the help of new i-technologies, this penetration of rational bureaucracy has filtered further from everyday life to our personal biographies. Linking these two theories, this paper will present the argument that we are going through a process of i-sation of society (1) in which capitalism is not only dominating our outer life (e.g. global capitalism) but our inner life as well through its expansion on the internet facilitated by various i-technological applications and (2) in which the McDonaldisation process has now been normalised and religion has been standardised. This paper will address the new inequalities at hand in this i-society, its impact on Habermas’ project of post-secularism, and will project the role that various religions will have in supporting and/or countering this process.

POSSAMAI-INESEDY, ALPHIA* (University of Western Sydney, alphia.possamai@uws.edu.au)

Public Religions and Same Sex Marriage

It is widely recognized that marriage, and more generally family life, has changed profoundly in the last half century. The causes of change are very diverse
but one important issue has been legal change. The introduction of no-fault di-
vorce in the post-war years contributed to the rapid increase in divorce, and more
recently the idea that same-sex marriage will be sanctioned by law has stirred up
significant public controversy.
Debates around the legal recognition of same-sex marriage and other related
matters such as Jewish circumcision, gay marriage, and Shari’a into the public domain –
over creationist teaching in schools, veiling in public, cir-
cumcision, gay marriage, and Shari’a law – illustrates the ideas of ‘public religions’
(Casanova, 1994) and appears to confirm recent commentaries on post-secular-
ism. The argument presented by Habermas (2008) of post-secularity will be used
net of independent commissions. Through the NTC, the Brazilian State takes upon

> **Political Decisions in the Area of Public Security and the Action of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil**

The purpose of this communication is to present our findings of an original
research that is being conducted at the Center for the Study of Violence of the
University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the
public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected
from the media. According to it, during the second semester of that year 30 state
agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations – hooded men, shooting their victims from a motorcycle
or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the
organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions,
around which a dynamics of action-reaction seemed to be installed. For now, our
main hypothesis is that previous policy decisions, taken in the realm of public
security policies, worked as the main trigger to initiate a process of mutual killings
between members of the State of São Paulo Military Police and members of the
PCC (First Capital's Command) organized crime group.

**Truth and Politics: The Case of the Truth Commissions in Brazil**

This presentation will seek to clarify the underlying principles as well as the
routines and different sources of tensions surrounding the politics of truth com-
misions that are currently convened in Brazil by systematically cataloguing them
and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions in
Brazil did not occur at the onset of the emerging democratic regime. Instead, they
are a late phenomenon, appearing in the context of an already mature democracy,
and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of
organization of civil society. Established by Brazilian president Dilma Rousseff
in May of 2012, the National Truth Commission (NTC) forms the main axis of a large
net of independent commissions. Through the NTC, the Brazilian State takes upon
itself the responsibility of investigating the human rights violations that were per-
pered by its own agents during past military governments (1946 to 1988), but
does so without revoking the Amnesty Law of 1979, which explicitly prevents any
criminal investigation or punishment of any transgressions of human rights that
may have occurred during this period. Therefore, the NTC holds the clarification
of the historical human rights record as a value in itself, and not as a means of
informing judicial action. However, this paradigm is not uncritically accepted by all
the auxilliary commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform
and judicial action remains the topic of much controversy, and forms the main
analytical thread of this presentation.

**Ranking Regimes, “World Class” Universities, and the
Imposition of Intellectual Life**

This paper considers the pressure felt by scholars publish in journals that are
highly ranked according to their “impact factor.” A world-wide movement has
pushed scholars to publish in English-language journals, to the detriment, we ar-
gue, for intellectual life at the national level. We first document evidence for this
pressure, then discuss the consequences of funding mechanisms and research
assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic
authority; 2) the politics of higher education regulation and control, as manifest
in the new managerialism and university audit cultures; 3) the privatization of fi-
cance of commercial scholarly publishing, which takes the advantage of the
preceding developments by charging high prices to maximize profits; 4) de-
cisions by editors and their journals to play by the new rules even when they are
personally opposed to them and when they value journals for a different purpose.
We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the
UK, and South Africa.

**The Overseas Chinese Population in Circa-2011**

In circa-2011, there were over 40 million Chinese people living outside China
(broadly defined). We discuss the data on the overseas Chinese; we show their
distribution among the world's countries and regions. We discuss their patterns
of change in past decades. We present recent data on the larger of the non-Chi-
inese diasporas to enable us to better evaluate the significance and importance of
the Chinese diaspora. We discuss the major patterns of previous Chinese emigra-
tions. Then we present our data on and analyses of the overseas Chinese around
2011. The overseas Chinese population in the world in 2011 is larger than the
population of Poland and Canada, and almost as large as Argentina. The Chinese
diaspora is the third largest in the world, behind Ireland and Germany. The over-
seas Chinese continue to have important and significant influences in many host
countries and are certainly not an inconsequential population.

**The Residential Segregation of Homosexual Households from
Heterosexual Households in Metropolitan Areas of the United
States, 2010**

Residential segregation is a major area of research in demography and sociol-
ogy. Most of the research has focused on the segregation of racial/ethnic minori-
ties from the majority race/ethnic group in cities of the United States and several
other countries. Few if any analyses have dealt with the spatial segregation of
sexual minorities from the majority. In our paper we analyze homosexual-to-het-
erosexual household segregation. There is a void in the literature about the ex-
tent to which gay men and lesbians are residentially segregated from heterosex-
ual households. There are some studies of “gay spaces” and enclaves, but most
are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves
and political force and activism. There are no systematic empirical studies of met-
ropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and
lesbian households are residually segregated from heterosexual households.
Our paper addresses this void. We use two dissimilarity measures of residential

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that gay male households are more segregated from heterosexual households than are lesbian households. And we show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, educational and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, evidence on gender differentials is important for education policies.

We base our analyses on a unique global dataset on educational attainment — encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex — developed at the Wittgenstein Centre for Demography and Global Human Capital.

POWELL, BRADLEY* (Case Western Reserve University, bradley.powell@case.edu)
HIV, Dating and Mating: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration of Human Rights counts among its fundamentals the right to marry and found a family (Article 16), it is often informal societal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their stigma prior to sexual activity, in essence moving them directly to what Goffman (1963) calls discreditation. Despite overwhelming evidence that sero-discordant couples can effectively manage HIV transmission risk through safer sex practices, positive men must negotiate their status in a dating landscape often characterized by stigmatizing language that polarizes gay men into “clean” or “dirty” states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discredited, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website craigslist.org, the advertisements are qualitatively analyzed for stigmatizing language such as “clean only,” “drug and disease free (DDF),” and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenging and opportunities for institutional and special education systems can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified German education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Thus, this neo-institutional analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen Bundesländer authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast “leader" Schleswig Holstein with “laggard" Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the law’s intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to state the human rights revolution in education (UNCRPD in particular), and to research on inclusive and special education, long marginalized in the sociology of education.

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the re-emergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies. This paper analyses through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show that in the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices. Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis show that these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a ‘Commons’ Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption. This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and the energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens who act both individually in the private-domestic sphere and collectively through socially innovative experiences. The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it developed different strategies to ensure its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logics. These experiences demonstrate the limits of technological innovation in moving towards a post-carbon society. Urgent changes in how socioeconomic activity is organized are also claimed.

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping subjective and collective subjects. Those narrative structures are figured and refigured to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press (“Die Presse” and “Der Standard”) did discuss potential futures in relation to international terror from 2001 to 2011 and how those futures were continuously included into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do these reference those figures built within their national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamenta-

ry members, and activists in both countries have inserted issues of gender equal-

ity and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, work- conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it? The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. HUANG, SHIH-KAI (Texas A&M University)

Residents’ Responses to the May 1-4 2010 Boston Water Contamination Incident

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, bottled water, bottled water, and bottled water. An in-depth survey of foreign worker programs during the May 1-4, 2010, Boston water contamination incident. Most residents received warnings from news media and peers and these warnings mentioned 2.3 of five recommended elements of a warning message—most commonly the threat and the recommended protective action. Consumption of untreated tap water declined, consumption of personally chlorinated water remained negligible, and consumption of bottled water and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This finding calls attention to the need to recognize that, although increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

Families Apart: Long-term Implications of Canada’s Live-in Caregiver Program for Filipina Migrant Workers and their Families

Canada’s Live-in Caregiver Program (LCP) is one of Canada’s largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global expansion of foreign worker programs. The majority of those coming through the LCP are Filipina women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 34 months of live-in care work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada’s top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came through the LCP. I report on research carried out in collaboration with the Philippine Women Centre of BC that documents the long-term effects of this program on Filipino families settling permanently in Canada, with a special focus on the challenges faced by Filipino youths reuniting with the mothers in Vancouver.

PRATT, GERALDINE* (University of British Columbia, gpratt@geog.ubc.ca)

Testimonial Theatre, Transnational Debate and Filipina Labour Migration to Canada

I have for many years worked with the Philippine Women Centre of BC to document the experiences of Filipina migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care and need into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to deal with since the crisis and the strategies they adopted.

Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands

Based on ‘Netherlands Employer Work Survey’ data this paper investigates the consequences of workplace innovation for employee and organisational performance in the Netherlands. The NESW is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management. Workplace innovation is defined by Pot (2011) as “the implementation of new and/or combined interventions in the fields of work organisation, HRM and supportive technologies. Workplace innovation is considered to be complementary to technological innovation”. Taking this definition, which is rooted in the theory of ‘modern sociotechnology’ (De Sitter), and the ‘job demands - control model’ (Karasek), as a point of departure, we constructed a Workplace Innovation Index that consists of the following characteristics: ‘active jobs’ (flexible but tailor-made employment relations), ‘employee voice’ (dialogue and autonomy), ‘flat organisation’ (limited hierarchical levels and teamwork), and ‘innovation orientation’ (openness to renewal and seeking new knowledge externally).

The relationship between this WPI-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined. Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation, organisational outcomes and the economic time path has been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

RC47-769.17

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)

Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed democratic politics, as practiced in social movements. Riots, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallize into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and extended protests in Greece in November 2008 was one of these instances which, although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktismenoi’ (Indignants) responding to the economic crisis in Greece in 2011.

RC47-766.5

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)

Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now

The use of social media during the first wave of protests responding to the crisis and the lending agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktismenoi’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prentoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organizational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.

What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labor market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a mother is employed in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.

Being Active As a Route to Health and Happiness:

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One particular consequence of recognizing such a transition is that the health policies of rich nations have incorporated a concern to promote ‘healthy lifestyles’ and a personal sense of ‘wellbeing’ with the ultimate aim of reducing mortality and morbidity rates across the life-course.

One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what ‘activity’ is and what might promote or discourage it. In an exploratory study using qualitative data gathered from 14 focus group discussions the data were collected in the course of researching the use and potential use of a linear park designed for an inner city area stretching across
a range of deprived and affluent neighborhoods in Belfast (Northern Ireland) - see: http://www.communitygreenway.co.uk/. Using novel methods of data analysis that focus on semantic networks and how ‘things’ are connected, we explore lay views about the use of the park as a ‘therapeutic landscape, and indicate the implications of our work for health policy and civic governance in general.

PRIOR, NICK* (University of Edinburgh, UK, n.prior@ed.ac.uk)

Vocoidals, Virtuality and Vocality: The Case of Hatsune Miku

Where does the voice go in contemporary culture? How is it composed, decomposed, constructed, reconstructed and made apparent? What are its signs and dislocations, its logics and movements? What are the expectations and reasons for the voice’s presence as a particular kind of expression and information? In exploring how we might set out to answer these questions, this paper is divided into two parts. In the first part, and drawing on insights from the sociology of culture and technology, it argues that the birth of modern popular music is also the birth of a permanent coalescence of the voice and technology. For the voice does not sing alone, it is always accompanied by, is implanted in and mediated by technologies. Paradoxically, just as it attains the status of a unique expressive carrier and index of the multiplicities of social practices, identities and by a whole plethora of machinery that reveal that carrier to be radically hybridised.

The second part takes the form of an exploratory scene assigned to a particular vocal modality. It aims to show how, in the case of the Japanese virtual idol singer, Hatsune Miku, complex entanglements of human and non-human entities are not only radicalised, but also played with, ironised and turned into aesthetic forms that unsettle the foundations on which the voice sounds out. Here, not only does the voice become a pliable object of information, enmeshed in machinic vocalisations and subject to the microscopic transformations of digital technologies, but it also represents a simulacra of the hyper-sexualised female body as a performative object and act. From the Miku phenomena we learn much about how the body, the voice and digital technologies fold into one another in an era of global transformation.

Negotiating Masculinities in the Context of Transnational Bolivian Families

The transformation of gender identities and family models within migration projects increasingly highlights the gender perspective as an elementary variable of migration patterns. The most prominent varieties of practices, identities and by stitutions (“Hondagneu-Sotelo, 2000). While scholarship on Latin American migration and gender has concentrated on women, less research has been undertaken on migrant men; particularly in the research on transnational families.

Thirty Latin American immigrants to Brazil are Bolivi- an. Based on the theories of intersectionality and hegemonic masculinity, the paper draws on my research project aiming to understand how transnational Bolivian migrant men residing in the Brazilian capital Brasilia negotiate their masculinities in a context of transnational family relations. To explore this issue, the paper draws on D’Aubeterre’s (2001, p.32) observations to understand the transnational family as “a locus of social and emotional support but also as a field of conflicting movement of power relations between different members that constitute the family.”

Moreover, according to Sinatti (2013) an intersectional understanding of family relations allows researchers to grasp how masculinities may be redefined as people move across cultural, social, and national borders, and as they encounter and cope with different regimes of power at the intersection of other social categories. The different dimensions the masculinities are negotiated in challenges as sociocultural settings, with other variables such as ethnicity and class. In the context of the Bolivian migrant men and their families, the multiple localities they are finding themselves in influences the negotiation of the masculinities involving family, care, intimate relationships, fatherhood- not only within their family structure but from multiple perspectives.

Wellbeing of Return Migrants in Rural the Northeast Thailand: Acquiring Material Wealth to Maintain Subjective Wellbeing

Abstract

There has been a popular view concerned with negative impacts of migration of rural people to seek jobs in modern economic sector. This type of arguments emulated family breakdown, loss of land, environmental degradation, increase indebtedness, etc. This notion therefore suggests that migration will result in ill-being of rural dwellers. This paper explores the implication of migration on wellbeing of return migrants in the Northeast of Thailand. This paper argues that while migrant leave their village in seeking material wealth, they continue to maintain a high value on bonds and relationships to their natal village. The bonds they have to their rural village limited their objective wellbeing, because of low returns of agricultural and low wage works in rural. But the limited seeking material wealth through migration on the one hand also enhances or fulfills their subjective wellbeing. This study also found that the rich seems to be experienced higher happiness after returning to the village, while the poor do not experience subjective wellbeing in the same manner.

Key words: wellbeing, migration, the Northeast of Thailand, Development

Symbolic Freedoms: Physical and Structural Violence Toward Christianity Through Peace and Conflict Within Japan, 1549-1952

The history of Christianity in Japan has been fraught with tumult since the religion’s formal arrival in the 16th century. In order to properly assess the degree to which structural and explicit violence against Christianity was immanent in the sociopolitical landscape of Japan since its introduction, this paper provides a theoretical examination of scholarly literature regarding several historical periods of note through a chronological “grand narrative” structure. It is necessary to take into account the political climate surrounding the repression of Christianity during each of the eras mentioned in this text. In Japan, if there indeed lies a pattern of immanent quality in the violence toward Christianity across these eras, then as Etienne Balibar states, we witness a “systematic use of violence to prevent collective movements of emancipation that aim at transforming the structures of domination.” The evidence examined is thereby directed to the question of violence toward Christians as an institution or a matter of political expediency immediate to each circumstance up to the end of the proscription in 1873, with additional considerations of the subsequent years until the postwar Allied Occupation.

The derived conclusion is that the multiplicity of factors behind the violation at each stage of history elucidates certain specific goals for achieving power on behalf of the oppressor in each case, and not general qualities of the Christian faith being targeted. Thus, the continued repression of Japanese Christians is seen to be a bias of political convenience rather than ideological conviction.

PROZOROVA, YULIA* (Russian Academy of Sciences, yulia.prozorova@gmail.com)

“Intercivilizational Encounters” with the West and Modernizing Moves in Post-Soviet Russia: Civilizational Perspective

The present paper considers civilizational analysis as an appropriate theoretical framework for the study of transformations and modernization in the post-Soviet Russia. Unlike the conceptions of linear westernization, ‘transition’ or modernization theory and its variations (‘catch-up modernization’, ‘convergence’, etc.) civilizational analysis and multiple modernities theory do not disregard in-depth historical traditions, sociocultural settings, internal contradictions and historical background. The changes in contemporary Russia and the distinction of Russian modernity are mainly shaped by the post-Soviet encounter of the Russian society with its legacy of the “soviet project of modernity” (I. Arnason) and imperial traditions with Western modernity. The first post-Soviet decade was a period of the ultimate ‘encounters’ to the western modernity and the domination of Westernism in political discourse. Acquired Western institutional models and cultural ideas (capitalistic free-market economy and democratic policy with liberal ideology, to name few) have been originally interpreted and mutated while being assimilated into the Russian context. Following Arnason, the encounter between the West and the rest is seen as a ‘global projection of the problematic’ that remains open to diverse alternative interpretations. To illuminate the outcomes and impact of the Western borrowings and reveal factors affecting their adaptation, the paper proposes to conceptualize contacts between the post-Soviet Russia and the West as “intercivilizational encounters” (I. Arnason and J. Nielson and J. Arnason) with a focus on the interaction between different “civilizational complexes” (B. Nelson). The post-Sovi et “encounters” induced changes in cultural orientations, interpretation of power,
institutional forms and design, patterns of reciprocities and “structures of consciousness” (liberal world-views, new concepts, rationales and logic of action, market rationality, individualism, etc.). These borrowings are considered with the regard to the peculiarities of the Russian civilizational complex (inclination toward the organization of political power in a centralized, authoritative manner, role of political and ideological/religious orthodoxy, distinct rationality, etc.).

PRUISKEN, HENRIK* (Bielefeld University, henrik.pruisken@uni-bielefeld.de)

Locus of Control and Cumulative (Dis-)Advantage in the Labor Market

The relationship between Locus of Control (LoC) and occupational outcomes has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to a decrease in the employment opportunities and the worse employment opportunities lead to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio-Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of “Fixed-Effects-Models” I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase in the external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

PRUISKEN, HENRIK* (Bielefeld University, henrik.pruisken@uni-bielefeld.de)

The Effect of Inequalities within Families on Work-Values of Adolescents

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents’ development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the present paper investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social par-entings it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a “de-identification” is harder within these pairs.

The analysis is based on household panel data from the German Socio-Economic Panel (SOEP) for the years 2000-2011. In the SOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of “Sibling-Fixed-Effects-Models” I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

Neoliberal Rationalities in Vocational Higher Education

The increasing function of universities as institutions for mass education might affect democracy and the universities’ contribution to society. Students as choice-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of coexistence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

New Alternative Masculinities Against Gender Violence

This paper presents a South’s contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian do not promote a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Homes en Diàleg (Men in Dialogue), a men’s organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 2012), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

PULA, BESNIK* (Princeton University, bpula@princeton.edu)
From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state’s inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while the level and inherited ties to the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India

*Dr. P. Koteshwar

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in the post globalized era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequent the Government of various Nations have been liberalizing the higher education and imparting education formal and non formal means. India is one of such countries which have been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society.

However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.
