**BACKGROUND**

- Writing research has seen an increased use of keystroke logging.
- Keystroke logging programs log the writing process in a continuous and non-obtrusive way.
- They enable researchers to collect fine-grained data because they log every keystroke in relation to a timestamp (in milliseconds), which indicates the time that a specific key was used.
- For the researcher interested in for example word-internal processing it’s important to know the degree of precision and accuracy that can be achieved by the program.

**METHOD**

- We propose a method of measuring the accuracy of keystroke timestamps using a recording of the sounds made by key presses.
- Sound cards fit the purpose well since they typically have much better **temporal resolution** than computer keyboards and they are **readily available** in most computers.
- Key presses produce noise patterns that are easily temporally located in an acoustic waveform.
- The timestamps of the noise patterns can then be compared with the corresponding timestamps reported by the keystroke logging program.
- Specifically, the differences between the two timestamps of each keystroke, provides an estimate of the accuracy of the program.

**RESULTS**

<table>
<thead>
<tr>
<th></th>
<th>point-by-point</th>
<th>interval</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>sd</td>
<td>range</td>
</tr>
<tr>
<td>ScriptLog</td>
<td>0.005</td>
<td>0.023</td>
</tr>
<tr>
<td>JavaScript prototype (Firefox)</td>
<td>0.003</td>
<td>0.012</td>
</tr>
<tr>
<td>Java prototype</td>
<td>0.003</td>
<td>0.012</td>
</tr>
<tr>
<td>C++ prototype</td>
<td>0.003</td>
<td>0.010</td>
</tr>
<tr>
<td>SoundCard†</td>
<td>0.002</td>
<td>0.0002</td>
</tr>
</tbody>
</table>

• We find significant differences between the variances of the prototypes and ScriptLog (example: for Java: F=0.287, p<0.001).
• This implies that a reimplemented version will provide improved timing accuracy.
• This method can be implemented as part of any keystroke logging program in order for the user to test the accuracy in his/her own computer environment.
