In the present paper, I would like to look critically at these different interpretations. I will, thus, argue that, although one can consider the existence of social classes as an outcome of important social dynamics, any theoretical explanation of social inequalities in the Latin American context must take into account the role of legal and political institutions. The paper also argues for the necessity of taking not only institutions into account, but also for the importance of bringing back the role of transnational institutional dynamics in the debate, although without stepping back into old culturalist traps.

#### *The Social Constitutionalization of Trade? the WTO-Trips and the Chances of a Reembedding of the Global Regime of Intellectual Property*

Since the financial crisis, the consciousness has grown that increasing social inequalities can have impairing implications for the functioning of institutions and for economic efficiency. Nevertheless, the tools that were known until now to tackle inequalities still seem to be ineffective on the transnational level. Mechanisms of tax & transfer, as well as the promotion of social rights, cannot be used in the same way as they had been in national contexts. For many scholars, the only way to face these problems would be a shift towards the transnationalization of social rights. Although much talk has been seen on the necessity of "constitutionalizing" the WTO, the fact remains true that the global regime of trade remains highly fragmented. Moreover, the rules of the many regimes existing in the WTO do not seem to be interpreted under the light of the so called "global regimes of human rights". Rather, it seems that they reproduce extremely specialized vocabularies, each of them taking for granted specific conceptions of how to balance property and social rights. As some authors argue, if it is true that the highly specialized global regimes of governance operate in close relation to economic knowledge, maybe they could develop some sort of "responsivity" to their non economic social environment on which they depend. In the present paper, by carefully analyzing 34 decisions of WTO dispute settlements regarding the Agreement on Trade-Related Aspects of Intellectual Property Rights, I try to assess the extent to which it is possible to identify in this regime internal elements of the constitutional semantics of social rights or possible functional equivalents of it. Hence, I will assert whether it makes sense to have any hope on transnational constitutionalization processes of trade carried out exclusively by the legal and functional mechanisms of economic global governance.

#### *The Neo-Liberal Knowledge Regime and the Displacement of Critique*

This paper will address neo-liberalism not as a theory of public policy, but as a theory of knowledge. It will argue that neo-liberalism favours the market as a mechanism for the generation of knowledge. In favouring knowledge under contract, neo-liberalism is explicitly hostile to those forms of social science that provide expertise precisely because that expertise might sanction political intervention. In this context, the forms of social science that are favoured are those that can be commercialised in the form of re-packaging 'big data' and 'behavioural' interventions. Sociology's traditional concern with social structures is displaced by anti-social (structural).

#### *Parents Against Radiation: Strategies Towards Advocacy*

To what extent do organizations within the larger anti-nuclear power movement monitor, interact with, and possibly influence (local) authorities in the policy making process? Thus in which ways, if any, do these organizations provide advocacy to their members? And how do these compare cross-culturally?

After the triple catastrophe of March 11, 2011 in Japan, as part of the upsurge of the larger anti-nuclear power movement, more than 300 citizen groups were formed throughout the country that joined forces within the "National Network of Parents to Protect Children from Radiation". Groups within this network use different strategies: Whereas some participate in highly visible protest activities such as mass demonstrations, others belong to the "invisible" part of civil society using less aggressive tactics to influence protective measures against nuclear power, contaminated food and playgrounds.

Our study has a multi-method approach: we combine field research through participant observation with semi-structured interviews and the analysis of our survey questionnaire, conducted among members of all 23 local chapters of the "Tokyo Union to Protect Children from Radiation", a post-3/11 network of parents social movement organizations. Using this network as case study, we analyze strategies and tactics of political participation which post-3/11 parental organizations use. In a second step, we compare these to the strategies and tactics employed by social movement organizations founded in response to the Three Mile Island nuclear incident in the US more than 30 years earlier.

For the Japanese case, our preliminary findings suggest that whereas strong social capital emerges out of the activities within the group, the impact of advocacy understood as influencing policy outcomes is much weaker. Whereas this result stands in line with existing research, we argue however that the parental groups shape their style of activities to build up sustainable relations with local authorities in the long run.

#### *Time, Money, Infrastructure: Young Parents' Needs and (dis) Satisfaction with Family Policies in Japan*

Generally, family policies can be categorized into the three pillars time, money, and infrastructure. This is equally the case in Japan. Differences between countries lie in the way how a country balances these three pillars. In the case of Japan, the longest running policies can be found in the arena of infrastructure (of day-care centers). Money policies like child-care allowance are newer, and time policies, such as childcare leave and work-life balance policies, have been the most recent addition.

In this paper we ask if parents of young children (up to age 6) are aware of the different policy measures, if and to what degree they use them and if and to what degree they are satisfied or dissatisfied with them. It is furthermore the question if there are significant correlations to be found with such demographic indicators as gender of the parent, their income level, employment status, regional stratification, marital status, and/or the age of their child(ren).

Data comes from a nation-wide survey, conducted by the German Institute of Japanese Studies Tokyo (DIJ) and Benesse Corporation. 2000 mothers and fathers throughout Japan were surveyed in early 2012. The survey data brings new insights into the well-being of parents. We model parental well-being to consist of seven dimensions, one of which is the well-being or satisfaction with family policies, a so far highly understudied dimension of well-being and the focus of this presentation.

[boris.holzer@uni-bielefeld.de](mailto:boris.holzer@uni-bielefeld.de))

*The Function and Uses of Society*

Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a reified collective concept; and in the wake of the globalization debate, the critique of 'container theories' of society has further decreased the number of those who regard society as an essential sociological concept. But 'sociology without society' not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the persistent popularity of the term outside academic discourse. This paper addresses the sociological and everyday usages of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this *functional* reconstruction of the concept, 'society' also continues to play a role in everyday discourse. Yet what kind of 'society' is thereby discursively constructed? The *usages* of the term 'society' in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that 'society' usually refers to an anonymously constituted and therefore not directly addressable social horizon.

*Reflecting on Work Practices: Possibilities for Dialogue and Collaborative Knowledge Production in Institutional Ethnography*

The presentation explores ontological and epistemological issues of institutional ethnography (IE) in relation to bringing together different knowledges and epistemic commitments. More specifically, the presentation addresses the possibilities for dialogue and collaborative knowledge production between research participants' practice-oriented, experience-based ideas about their work and researchers' academically informed concepts. The issues are explored through analysis of how participants in an IE project, namely researchers and maternity nurses, engage in reflection collaboratively on the care activities. The material analyzed are fieldnotes produced at workshops arranged for joint reflection on the nurses' own work practices as documented on video.

The analysis shows that the possibilities for, and the difficulties of, achieving dialogue emerge from three sources. First, conflicting knowledge interests between researchers and research participants may lead to complementary projects in situations where all parties align themselves with the other's interests. In such situations, experience-based knowledge may be co-produced through storytelling motives. Second, doing IE is about the researcher moving from one setting to another and taking up different positions accordingly. These fluid positions create constraints and possibilities for dialogue. An outsider expert/administrative power position and circumstances that reinforce it are not conducive to the articulation of multiple voices. However, it is possible to shift the overall positioning so that the participants may co-produce knowledge. In my case this was done through working with videos and researchers' provocative commentary that bore 'responses' that the nurses quickly picked up and reflected on. Third, presenting theory-based interpretation that addressed an organizing element of care provoked accounts that addressed the organizing element from a different angle and specified how such organization is actually realized. Reframing the ongoing analysis through such dialogically produced experience-based knowledge means that theoretical concepts are used not to make generalizing statements on commonalities in the material but to put them to test.

*After the Dream of Medicine As a Versatile Solution, What Comes Next?*

Since ancient times, Japan has had an unusual self-care culture. Following Japan's nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for promoting medicalization. Modern Western medicine is currently the national standard in Japan's system of universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people's high level of interest in health does not exert an influence at the institutional level. Thus, medical discourse still has prime influential power.

We have studied illnesses that lack objective abnormalities, especially the awareness of fibromyalgia, with respect to both patients and physicians. Although

medicalization has prevailed in all fields in Japan, disseminating the concept of fibromyalgia and incorporating its treatment in the health-care system has lagged markedly compared with other countries.

This paper presents four phases of medicalization for descriptive purposes: cultural basis and prevailing healthism; explanation of specific conditions using medical terms; institutionalization and dissemination of medical categories; and demedicalization of untreatable conditions. We discuss the issues related to each phase using the data from our previous survey. We especially address the situation after medicalization has progressed with respect to fibromyalgia diagnosis: when fibromyalgia is being diagnosed but social awareness does not follow or effective remedies do not exist, how do patients and physicians interpret the diagnosis of fibromyalgia? We describe the process of demedicalization, whose characteristics in Japan may differ from those in Western countries. Namely, following the excessive expectations of biomedicine and distrust in medicine, it is possible that the Japanese are currently seeking greater faith in traditional forms of medicine, as a form of "regression." This analysis presents a basis for rethinking the question of what comes after medicalization.

[anutah@gmail.com](mailto:anutah@gmail.com))

*Blocking the Road to the Future: Biases and Misperceptions of Chinese Youth*

The future of Asia will be highly influenced by the current opinions of its youth and bilateral relations between China and Japan. The current perceptions of the Chinese youth have not been explored to their full extent and there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers' opinions.

Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents' feelings as well as how they believed themselves to be perceived by the other nation.

Therefore, to improve the relations between the two countries in the future it is imperative to identify the feelings and the perceptions of the Chinese youth concerning Japan and opinions on the controversial issues. Preliminary analysis of data collected from 261 college students indicates that, on average, Chinese students rate themselves and their peers to be more knowledgeable than the average Japanese student on China-Japan relations; what is more, they perceive the Japanese to have more amiable feelings towards China than their Chinese counterparts feel toward Japan. There is evidence to suspect the false-consensus bias is present and the possibility of naive realism which has conflict resolution implications. Though numerous social scientists have focused on the past and the historic issues between Japan and China, my goal is to focus on the current perceptions and their implications for building a better future.

[hommerich@diptokyo.org](mailto:hommerich@diptokyo.org))

*The Advent of Vulnerability: Socioeconomic Insecurities and Feelings of Social Isolation in Contemporary Japan*

Over the past two decades, topics related to social inequality have come to dominate public discourse in Japan. Over the same time span, the number of Japanese who experience socioeconomic anxiety in their everyday life has increased. Analysis of data of a nationwide survey carried out by the author for the German Institute for Japanese Studies (DIJ) in 2009 shows, that an increase of social risks is not only perceived as something affecting others, but that socioeconomic anxieties and fears of social isolation spread throughout all strata of Japanese society. The data indicate that such negative emotions have a strong negative impact on subjective well-being in the Japanese context.

An analysis of who is most likely to be affected reveals objective differences in social status to be only weakly associated with a variation in insecurities. Instead, resources of different forms of trust and individual coping competences – in particular a sense of coherence – are decisive for an experience of status anxiety or social isolation.

However, trust levels, especially in governmental welfare, prove to be low in Japan, and, thus, cannot fully develop their protective function. Japan has not yet managed the transition from a society based on assurance to a society based on trust. Most of all the young generation is vulnerable and ill-equipped to cope with the new social risks it faces in present-day Japan.

### *Who Feels Powerless? : An Examination on Self-Attitudes of Japanese Youth*

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCSJ), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCSJ data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the stalemated social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

### *Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles*

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizo, from southern Mexico and Guatemala.

Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with *la tierra* (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks.

The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacies that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchy, power, duty and conflict. So it is with the urban community gardens. While there are Edenic aspects, these are not new Edens of Nirvana, and the conclusion of this paper discusses difficulties in the new governance and the top-down hierarchies of professionally-operated urban community gardens.

### *A Special Way of Modernization ("Sonderweg") or Methodological Cosmopolitanism?*

Since the IMF crisis of 1997, Beck and Beck-Gernsheim's "individualization thesis" has attracted much academic attention in Korea, for it was seen to explain the important social symptoms that have already manifested on the peninsula in the early 90s. An important feature of the discourse on individualization in Korea is its intensive focus on the transformation of family forms. Unlike the original German approach of "individualization thesis" as a critique on researches of social inequalities, Korean academic analyses, when employing the same model, are limited to areas of gender and family.

Another important feature of the discourse is Beck's "methodological cosmopolitanism". Beck and his Asian colleagues seem to consider the values and institutions of strong Confucian family as unique characteristics of the Asian path to modernization. This is one important reason why in Korea discussions on individualization are exclusively concentrated in areas of gender and family.

Industrialization developed in Germany significantly later than in other Western European countries, and for many decades thereafter, the country's path to modernization was considered as a special way ("Sonderweg"). Beck's individualization theory, however, aims to explain Germany's modernization as a typical process of Western development.

With the above introduction in mind, I propose to investigate the historical context between "Sonderweg" and the methodological cosmopolitanism of Beck as an initial step necessary for the analysis of the special ways of Asian modernization. I will proceed to make a further comparison between Germany's Sonderweg and Korea's path of modernization as a mean to evaluate Beck's methodological cosmopolitanism, and the implication this has for Korean sociology.

### *The Power of Expectation: Apply Wisconsin Model in China's Educational Stratification*

Besides Blau-Doncan's Status Attainment Model, Wisconsin Model is another important model in US to explain educational and occupational stratification and mobility. However, the Wisconsin Model is relatively ignored in Chinese stratification studies. Drawing upon data from a national survey conducted by Tsinghua University in 2012-2013, this paper distinguishes two kinds of educational expectations of Chinese parents: idealistic educational aspiration and realistic educational expectation, and then examines the effects of parental educational aspiration and expectation on children's educational achievements.

In this paper, first, I describe the distribution of educational expectation levels across different classes both in urban and rural China. Second, I analyze the formation mechanisms of the gap between idealistic aspiration and realistic expectation, examining feasible influencing factors. Third, I adopt a family capital framework, mainly including social and cultural capitals, to explain how educational expectations work in household level. In sum, this paper attempts to reveal the cognitive and behavioral processes of how educational stratification occurred in current Chinese society.

### *Social Emotional Stability Facing Disaster Warning*

Social emotion is a complex system, with a dissipative structure. When the carriers of social emotion percept threaten from a disaster warning, the initiative dissipative structure of social emotional system will be broken down. This study presents the evaluation methods of social emotional stability under disaster warning from the aspect of a complex system. Firstly, we analyzed the dissipative structure features of social emotion and used Social Emotional Entropy (SEE) to measure the changes of social emotional stability, which was explained by the example of the Bird Flu H7N9 events in 2013. Secondly, we considered that social emotion is not simply the totaling of individuals' emotions, but results from both the combination of individual-level affective factors as well as from the group or contextual level. In that way, we used the Cellular Automaton modeling method integrated with the Social Network Theory, in order to present a dynamic dispersal process of SEE from both aspects: "bottom-up" and "top-down". Finally, we used a case study to verify the effectiveness of the integrated method. Our results indicated that the social network properties and population characteristics are key determining variables of social emotional stability.

### *Golden Age - Ageing, Well-Being and Tourism*

Population ageing is likely to affect the tourism movements especially in Western countries. The importance of seniors for the tourism economy is growing. Nowadays seniors are expected to be more active in domestic tourism and traveling more often abroad than previous generations. However, there are several reasons why ageing people are not traveling as health problems and lack of resources.

The paper clarifies how active travelers ageing people are and it identifies reasons why seniors are not participated in tourism. The main research question is how well self-estimated health predicts the propensity to travel and travel activity is compared with other leisure activities.

The survey questionnaire was distributed to inhabitants of North Savo region (Finland) who turned 60 and 70 in the year 2012. The response rate was 31 %. In total 1827 inhabitants participated in the survey. The survey was named as Aging and well-being in North-Savo as part of the Age Innovation 2012-2014 Project.

According to preliminary results, only 4 percent of respondents answered they did not participate in domestic tourism but 20 percent were not traveling abroad.

The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents' self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

### *Child Investment in Youth Care Services: Dilemma's and Consequences*

Welfare states have (re-)invented family policy as a response to the notion that children are the social, cultural and economic capital of societies. Consequently, the healthy development of children is an important aim in policies regarding child care, and the role of parents in safeguarding their children's development is stressed.

For professionals working in the field of youth care this change in policy aims has had its effects on the way their profession is organized and carried out:

1. more attention is directed towards preventive and early interventions—in order to ensure the best possible developmental trajectory—as opposed to curative interventions.
2. There is a stronger emphasis on effectiveness and evidence based practices and its concurrent emphasis on protocols and guidelines. At the same time however, professionals are expected to adjust their work to the demands of parents, and to serve parental expectations and wishes.
3. In line with this, professionals find themselves balancing "distance" and "control": working with parents presupposes that professionals can't be directive and should refrain from being too authoritative. Yet, professionals are also expected to intervene when children are at risk, and policy measures emphasize risk-assessments and inter-organizational information exchange.

The international research project "Governing New Social Risks" centers on this turn to parenting. In our paper we will discuss how these changes and dilemmas have affected the way in which professionals define and organize their own profession, and their relation with parents and families. Based on interviews with (academic) parenting experts, relevant policy makers and professionals themselves, we will present our findings on how professionals give form to these policy changes. Although the turn to parenting takes place throughout welfare states, we will focus on the Netherlands as a case example. However, data from the other European countries included in this international research project, will be taken into account.

[m.hopman@uu.nl](mailto:m.hopman@uu.nl))

**KNIJN, TRUDIE** (Utrecht University, The Netherlands)

### *Defining Children in Youth Care Interventions*

Within welfare states, attention for the development and upbringing of children is increasing. On the one hand, scientific disciplines such as developmental psychology have professionalized child development and concurrently, a proto-professionalization of parenting has taken place. On the other hand, the same attention for development can be found in governmental policies, resulting from the influence of child investment theories. Consequently, parenting support interventions—aiming at parents in their central role as child raisers—have gained in importance. These interventions mostly respond to the child rearing questions of parents. Also, interventions are often selected based on their effectiveness. Although these issues are essential in organizing youth care, this approach fails to acknowledge how these interventions perceive and define children and childhood, and how this affects the ways in which children are raised and develop. This paper addresses two of the theme-related questions:

1. What are the dominant definitions of children's problem's and which ideas of social order do they respond to?
2. How do stocks of professional knowledge as well as the practices of intervention on children's problems evolve over time?

The questions are addressed by using both quantitative and qualitative data from the international research project "Governing New Social Risks", which centers on the turn to parenting from the 1990's onwards. In the quantitative part, results of the analysis of parenting support interventions are presented. For example, changes in scientific theories underlying the interventions help us in understanding how children are being defined. In the qualitative part we discuss data gathered through interviews with (academic) experts and relevant decision makers about dominant views and changes in the perception of children and families and of state-family relations. We focus specifically on the Netherlands,

but information from the other countries included in this research project will be addressed as well when applicable.

### *Gender Differences in Happiness: The Effect of Marriage, Employment, and Parenthood in 33 Countries*

Happiness remains an important measure of psychological well-being. Given the current challenges of struggling global economies and political conflict and unrest, psychological well-being has never been more important. While previous studies have found that females, the young, the unmarried, and people with lower socioeconomic status are more likely to suffer from lower psychological well-being, they fail to fully capture societal-level conditions' impact on individual happiness. Although previous studies have focused on how societal conditions affect individuals in a given society and shape perceptions of their personal conditions, in this study I focus on gender. Utilizing hierarchical linear modeling on data from the 2002 International Social Survey Programme, I examined gender differences in happiness and how country-level gender stratification affects the relationship between happiness and family-related predictors in 33 countries. The results show that there are clear and significant gender differences not only in the level of happiness between men and women but also in the factors affecting their happiness. While, on average, women evidenced lower happiness than men, results indicated that there were gender differences in the effects of being married, not working, and the number of children individuals had on happiness. However, despite expectations that country-level gender equality and egalitarian gender norms would improve women's happiness, the measures of gender equality and gender ideology at the country-level showed mixed results in the cross-level interaction and therefore suggestion are made for future directions in this important area of research.

### *« Utopie » Dans L'enclos, Ou égalité Ségréguée*

Cette communication a pour but d'avoir une meilleure connaissance sur la mentalité de l'époque sur laquelle reposait la société moderne du Japon dans la première moitié du 20ème siècle et de montrer que l'on poursuivait au niveau national un idéal d'« égalité » non seulement dans la vie politique mais aussi dans la vie quotidienne. On connaît bien que l'égalité sur le plan politique a été partiellement mise en œuvre lors de la réforme des lois électorales qui ouvrait la porte aux scrutins universels en 1925. De l'autre côté, il n'en est pas demeuré moins que la misère et l'inégalité sociale n'étaient pas encore déracinées dans la vie quotidienne, c'est-à-dire dans celle des vulnérables comme des ouvriers, des malades, des handicapés etc. Ce sont encore des problèmes d'aujourd'hui. La résolution s'est réalisée à cet époque d'une manière ségrégative: tout en séparant les pauvres des riches, les malades et les handicapés des personnes en santé, on a mis les précédentes dans l'enclos. On voudrait donc dans cette recherche historique montrer un aspect peu étudié sur la mentalité de l'époque qu'on pourrait appeler une « utopie dans l'enclos » en jetant une lumière nouvelle sur en particulier la vie des ouvriers d'usine et des lépreux dans la léproserie avec le changement de la conscience sociale en perspectives socio-historiques.

### *A 'Ritual' of Surgical Mask Wearing in Japan: A Short History*

The practice of surgical mask wearing in Japan has been adopted by a significant proportion of the national population and has become embedded in people's everyday lives. This paper studies the practice as a 'ritual' and outlines its history in Japan. The notion of ritual is employed in this paper, not analytically, but operationally, in order to highlight the structural/functional aspect of the practice, by which individuals come to terms with invisible threats. In the 1920s, the practice of mask wearing, introduced from the West and conveying the symbolism of modern science, replaced pre-modern 'superstitious' rituals against flu in Japan. It started to be worn by healthy individuals in order to avoid infection, and spread as a matter of social etiquette to the infected, so as not to infect others. In addition to this usage, which continues up to the present, by the 1990s masks had become widely used by cedar pollinosis sufferers to avoid inhaling pollen. Some people wear masks in order to prevent their throats from drying up or to keep their faces warm, while others hide their faces behind masks for cosmetic or psychological reasons. More recently, radioactive particles from Fukushima and air pollution spreading from China have been added to the list of health risks to be minimised by wearing masks. Wearing a mask appears to provide peace of mind amidst uncertainties. Its instrumental value in reducing health risks is scientifically

inconclusive. What is certain is that the practice precedes scientific discussions. The practice of mask wearing absorbs anxieties and uncertainties and restores a sense of security and self-control.

### *The Invention of Religion Category and the Formation of the Secular in Japan*

This paper examines the social construction of the categories of 'religion' and 'the secular' in Japan. This is a preliminary analysis of how the term 'religion' was imported into and translated in Japan, how it was indigenised, how it has been employed by the state to establish the secular, and how the term 'religion' is used strategically by people in their everyday language. The Japanese concept of 'religion' *shūkyō* was invented amid the power struggle of international diplomacy against the Western colonial powers in the mid-nineteenth century. It also played an integral role in the formation of non-religion (or the secular), more specifically, the modern Japanese nation-state. After the fall of the shogunate in 1868 and throughout the modernisation process thereafter, the invention of the religion category, in turn, demarcated the modern Japanese secular, the category of non-religion, where the centralised state legitimated its authority over the population. The secularity of the state enabled the government to mobilise various groups classified as 'religious' for political purposes, while suppressing so-called 'pseudo-religious' groups, in order to achieve the ideological goal of the Japanese nation-state. After the Second World War, these categories of 'religion' and 'the secular' were reformulated under the influence of American-style liberal democratic values and sensitivities, which delimit the post-war Japanese secular. The boundary between these two realms, however, has always been ambiguous and often contentious. This paper argues that sociological studies of religion should critically analyse the social construction of the religion-secular dichotomy, by focusing on the social process in which particular meanings of the terms of 'religion' and 'the secular' have been constructed and the ways in which the two categories are demarcated from each other.

### *Managing Complex Organizations In A Global WORLD*

Modern business organizations are complex dynamic systems in a complex dynamic environment. This environment has the properties of an eco-system rather than those of a controlled and steered system. This holds for the economy and for its particular subsystems like the health care system, both constituting the complex and dynamic environment of internally complex organizations like hospitals. Such organizations often move at the edge of chaos and sometimes beyond. In their operations they need to be understood as actor-systems at different internal levels.

Examples from hospitals will illustrate management problems resulting from the combination of high internal and high external complexity and dynamics. This requires to clarify the concepts of both complexity and organization from a socio-cybernetic perspective. A generic reference model of organizations will be used for the subsequent analysis.

Central to this is Luhmann's dictum, that only complexity can reduce complexity. It will be analyzed how this could be achieved by taking a sociocybernetic approach.

For this purpose concepts will be used like: open information, teamwork, task forces, leadership styles, subsystem autonomy, problem-orientation, staff-line organization, matrix organization, Web 2.0 leadership, organizational culture, mediation, etc.

Any activity, also informational, requires energy. Increasing the efficiency of an organization when facing complexity can be achieved by: (a) Changing objectives, (b) reorganizing structures, (c) reorganizing process, including management, (d) depleting stocks (material, financial, but also health and motivation of staff).

The strategy chosen has to be sustainable without unduly reducing the internal complexity of the organization, essential for its capacity to cope with external complexity. This both according to Luhmann and according to Ashby's "Law of Requisite Variety".

Hypotheses will be presented, how a sociocybernetic approach to managing complex organizations can help to avoid problems and failures.

\*) Apart from this, the paper will present a sociocybernetic but non-luhmannian approach.

### *A Birthright to Belong: Hereditary Claims and Religious Authenticity Among Converts to Judaism*

This paper examines individuals who convert to a new religious identity as adults and the ways in which they use perceived sources of external validation to make claims to religious belonging and authenticity. This study on which this paper is drawn includes 100 in-depth interviews with converts to Judaism in three metropolitan areas representing distinct regions of the United States: New York City (Northeast), Atlanta, GA (South), and the San Francisco Bay Area (West Coast). Respondents employed various methods of making hereditary or genetic claims to Judaism, including discussing evidence of Jewish ancestry discovered in DNA tests (taken post-conversion) and telling stories of distant relatives who family members believe may have been Jewish. When paired with respondents' belief that others often do not see them as authentically Jewish because of not being born into a Jewish family (particularly as stated by those who did not make genetic/hereditary claims), it is clear that the perceived ability to make genetic/hereditary claims is meaningful to converts, providing a sense of having the right to belong to their new religious community. I further explore how the language of belonging becomes racialized, showing how the conceptualization of race in the United States is applied in a context outside of race (i.e. religion). The sample, moreover, is notably racially diverse, with approximately half white and half non-white (e.g. African American, Asian American, Latino/a, multiracial) respondents, allowing for a comparison of traditionally recognized ethnoracial identities in the context of a racialized understanding of religious identity and belonging. By addressing the role of genetics and heredity in making claims to religious belonging, this paper sheds light on the complex intersection of race and religion as categories of identity in American society.

### *The Myth of Multireligiousness: Assessing the (Im-)Possibility of Identification with Multiple Religions*

The rate at which people of different family-origin backgrounds (race, ethnicity, religion, etc.) form romantic relationships and have children continuously increases in the United States. Scholarship has provided compelling accounts of the experiences of the children of inter-racial couples and their construction of "multiracial" identities. This study explores whether a similar form of identity construction with multiple religions is possible for children of inter-religious couples. Through in-depth, semi-structured interviews with children of inter-religious parents, I examine the mechanisms most salient in religious identity formation and their effects on the possibility of identifying as "multireligious." I explain the relationship between parents' choices in the religious upbringing of their children (or lack thereof), their influence on cultural/religious exposure, and how these together affect one's ability to feel a sense of "fitting in" in a faith community. I claim that these mechanisms serve to make self-identifying as "multireligious" a modern impossibility.

### *A Life-Long Response to Talcott Parsons: The Global Sociology of Goran Therborn – a Critical Yet Friendly Appraisal*

Talcott Parsons represents the culmination of sociology as a paradigmatic science, its high tide during the late interwar and early post-war period. Goran Therborn is a still active global and public sociologist, a proponent of "world knowledge" which in his own words makes him more of a social scientist than a sociologist. This mix of presentation and self-presentation is challenged in this paper which outlines the amphibology of Therborn's career as an academic sociologist and public intellectual, his occasional poems as well as his main oeuvre from the mid-1960s to the first decades of the new Millennium. In focus of this paper is his relationship to classical sociology as epitomized by Talcott Parsons and C Wright Mills as well as the movement the latter early on gave a strong voice. After a brief biographical note on his socialisation in the pre-university environment of Southeastern Sweden, Therborn's face-to-face engagement with on the one hand the first generation of domestic sociology in the form of the eminent Swedish class analyst Gosta Carlsson, and on the other hand the internationalist new left movement after 1956, is conveyed. Thereafter follows a step by step close reading of Therborn's major works whereby his main sociological motifs are portrayed: the discipline itself and its problem to identify its research object ("society"), and contrasting subject matters of closely related academic disciplines (economy, ide-

ology, state, modernity, family and kinship, civilizations, and human inequalities). A tentative re-interpretation of Parson's AGIL-scheme in light of Therborn's life-long preoccupation with the same themes ends the paper. This brings us to the present state of the discipline, its relationship to the outer world and prospects for its future.

##### *Miracles, Giants, Dragons and Small Tigers: Beyond the Unique, Hybrid, World and Model – Asian Welfare States on the Move?*

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the foreground of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transformations going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular western researchers have flocked to this lump of sugar and interacted with the growing stock of domestic comparative scholars in this field. So far, this stream of research is only in its infancy and the outcome is still uncertain not least regarding its impact on the larger picture of comparative research. On the other hand, in the shadow of the rise of China, a fair amount of research of specific cases in particular in Southeast Asia has completely been neglected by both the comparatists of the traditional cases and contemporary Chinese developments. Recent social policy developments in countries such as Indonesia, Malaysia, the Philippines, Thailand, Vietnam and to some extent also India have become a growing concern among social welfare researchers interested in a particular case. Again, this is another stream of research still in infancy, the outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

CARVALHO, ANABELA (University of Minho)

##### *Climate Change in Portuguese Media: Global Politics and the Vanishing National Reality*

Portugal is highly exposed to risks and vulnerabilities related to climate change, such as a continuing increase of average summer temperature, more frequent and intense heat waves and a reduction of rainfall, and, as a consequence, floods, droughts, fire hazards, air pollution, erosion and changes in water quality and availability (Santos and Miranda 2006). Climate change is therefore a vital issue for the country's future, and media debates are likely to play an important role regarding the choices that have to be made. In fact, the framing of climate change in the media guides public perceptions of reality and offers hints for thinking and acting (Entman 2004) from the individual to the policy-making level. In line with the COMPON research protocol, newspaper articles were selected by searching for the keywords "alterações climáticas" (climate change) in all items published in three dailies (Público, Jornal de Notícias, and Diário Económico) from 2001 to 2010. A random sample of 25% of the articles published between 2007 and 2010 by each newspaper was selected, and the sample was stratified by year. Results show that the Portuguese press tends to reproduce the global political agenda on climate change, mainly focusing on international events associated with global political decision-making processes, while typically reducing the debate to climate change mitigation. Adaptation's low visibility may be explained by a dependency of Portuguese newspapers on the international political agenda and by the news sources used. The lack of mobilization of national leaders for adaptation may also play a part. This type of coverage tends to obscure local and national realities and responsibilities, though they are key to addressing climate change.

##### *Changes in ICT Usage in Times of Scarcity*

The information and communication technologies (ICT) market has been showing a remarkable expansion. Considering the severe financial and economic crisis some countries are currently facing, and the restrictions in several forms of consumption due to scarcity, what changes may be affecting ICT usage in everyday life? This presentation tries to address how are individuals adapting to new challenges related to inequity of (material) access to ICT and a growing digital divide in ICT usage opportunities, which may emerge and become particularly relevant in a context of scarcity such as the one Portugal is now experiencing.

The research adopts an approach based in recent theoretical developments in sociology of communication, which consists in analyzing media as practice. This perspective enables media research to move beyond a narrow focus on audience

practices in order to understand the complexity of contemporary media-saturated cultures (Couldry, 2004). Studying the whole range of practices focused directly or indirectly on ICT allows understanding how ICT are embedded in everyday life and are constitutive of routines (Couldry, 2004; Pink and Mackley, 2013). By focusing on social practices, attention is shifted from the individuals' agency and choice to the processes whereby structural elements such as materials (things, technologies, physical entities), competences (skills, know-how, techniques), and meanings (symbolic, ideas, aspirations) are connected and enacted in the form of patterns of practices, thus allowing to explain the dynamics of reproduction and transformation of social practices (Shove, Pantzar, Watson, 2012).

The analysis draws upon data from in-depth interviews conducted with people from diverse social groups in terms of age, education and socio-economic status. Results show the complexity of the relations established between individuals' practices, motivations, knowledge and material conditions related to ICT use.

##### *Bringing Science and Academia to the Population: Activities to Raise Questions and Make People Think in Vulnerable Urban Contexts*

The university role in society has been increasingly framed by models aligned with academic capitalism, institutional competition and the quantification of activities/results. These, associated to decreasing resources and public funding, are placing the integrity of the university as a social institution at risk. The roles in society that universities are expected to pursue have also multiplied and substantially increased the burden placed on these institutions. One of the new dimensions of intervention of universities in society is through the service mission of the university – also dubbed as the 3<sup>rd</sup> mission. This has been gaining increasing relevance in more recent years as a form to open the university to society. Yet, in most countries, this latter mission of the university is somewhat understood as a fuzzy concept, and there is a tendency to associate it with knowledge transfer activities associated with commercialization of science. In this article, we argue that this may be a simplistic view of the service mission, and that this mission in fact can encompass a range of activities that can not only benefit the university – orienting it to fulfill its social mandate and consolidate its legitimacy – but also contribute directly to the benefit of populations in vulnerable urban areas. Through the use of two cases studies focused on activities voluntary developed by academics of a school of engineering in Lisbon, Portugal, we analyze two strategic activities that aimed at bringing the university to vulnerable populations and if not solve, at least raise awareness about risky phenomena and vulnerable situations. These cases represent an overhaul of the more narrow thinking on the service mission of the university, as they combine activities that interact public understanding of science purposes, with hands-on teaching that applies engineering theoretical principles to real life cases, while fostering interdisciplinary research.

##### *Differentiated Rights, Segmented Labour Markets: The Emergence of New Guestworker Regimes and the Making of Marginalised Precarity in Western Europe*

This paper contrasts current labour migration with post-WWII guestworker programmes and argues that hierarchical differentiation and exacerbated precarisation for some migrant groups are the main characteristics of current labour migration regimes. My main objective is to show how both low-wage and 'elite' migration programmes are structured by (i) the securitisation of migration and (ii) racialised boundary making. These processes are disguised by the hegemonial notion of migration management. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid industrial jobs has given way to a simultaneity of (i) even more precarious forms of employment mainly in agriculture, tourism, and construction and (ii) relatively privileged elite migration linked to the transnational mobility of capital and goods. These new labour mobilities are regulated by complex legal frameworks that are marked by a radical deprivation of fundamental rights for some migrants, while other groups face hardly any mobility barriers. Second, in all three case countries the establishment of these new frameworks was dependent on a securitised discursive context in which migration was mainly discussed as an existential threat to social security, cultural identity, and public order. This context was used to establish policies that would have been considered illegitimate under 'normal' circumstances. Third, I explore the ways in which the differentiation between migrant groups is linked to new forms of racialised boundary making, mainly in the context of EU-integration. Developments are very similar across all three countries – although they represent different "varieties of capitalism", party systems, migration histories, and welfare regimes. Together they illustrate how the neoliberal political-economic project structures life chances of millions of migrant

workers throughout Europe, many of them living under conditions of radicalised precarity.

**HORVATH, KENNETH\*** (University of Education Karlsruhe, [horvath@ph-karlsruhe.de](mailto:horvath@ph-karlsruhe.de))

### *Enforced Temporariness – the Interplay of Securitisation and Economisation and the Emergence of Temporary Migrant Worker Programmes in Western Europe*

Focusing on the level of migration politics, this paper enquires into the logics and processes underlying the formulation of temporary migrant worker programmes. Based on Foucault's analysis of liberal governmentality and Jessop's strategic-relational approach, I argue that the governing of temporary labour migration in liberal nation-states requires sophisticated political technologies. These technologies entail the differentiated deprivation of fundamental rights and are therefore neither unproblematic nor self-evident. Developing and establishing the necessary legal categorisations along skill levels, nationality, employment status etc. requires a complex interplay of two political rationalities that are often conceived of as contradictory: the securitisation and the economisation of migration. Once established, differentiations and measures introduced under securitised conditions can be invested in utilitarian migration policies. The interplay of these two rationalities depends on and is mediated by wider political-economic and societal transformation processes. In order to illustrate this general argument, I, first, give an overview of temporary migration policies introduced in Western European nation-states from the early 1990s onwards. Similar policies have been implemented in nation-states representing different "varieties of capitalism", party systems, migration histories, and welfare regimes. In a second step, I focus on developments in the UK and Austria to show how the securitisation of migration changed the strategic setting and thus enabled some actors to push their agenda of enforced temporariness and radicalised precarisation. Finally, I discuss how these political developments are linked to changes in the political-economic context – and argue that the interplay of securitisation and economisation has allowed to adapt migration regimes in line with new labour market needs.

### *Grass-Roots Healthcare Reforms: Collaboration Between Patient Support Groups and Medical Professionals*

Healthcare reform that responds to unmet needs is a most urgent challenge. While many individuals and agencies, including governments, associations of healthcare professionals and lawyers have worked to solve these problems, the collective action of people with illnesses and disabilities and their families is just as important. The aim of this study is to examine how patients' support groups change and help to create healthcare services that satisfy what they want and suit their needs, by examining the activities of two organizations: one for people with sarcoma (a sort of cancer), and the other for ME/CFS (myalgic encephalomyelitis / chronic fatigue syndrome) focusing on their advocacy activities. The advocacy activities of these groups can be called Health Social Movements.

According to my previous survey, patients expected that the groups' activities would change governmental healthcare policy, provide adequate medical and social services and eliminate discriminative perceptions against their disabilities. But there are so many obstacles they must face until their expectations are realized. However, these case studies showed that the advocacy activities of patients groups have actually achieved their goals to change the healthcare settings. The sarcoma support group persuaded medical professionals to establish a sarcoma center at hospitals to provide appropriate medical access for the patients. The ME/CFS support group has convinced medical professionals to conduct scientific research on the disease and government workers to set reasonable social services.

This study suggests that the advocacy activities of the groups are becoming increasingly important for both the patients themselves and healthcare providers. A sign of social transformation of the healthcare structure, from a bureaucrat-driven one to a civilian-driven one, can be seen in this study. This process of people's involvement should be a key factor in the design of a more effective and sustainable healthcare system in the future.

### *Institutional Entrepreneurs in Multi-National Corporations: Embedding the Managers' Networks into Organizational Fields*

This research focuses upon the institutional systems which have been constructed by the regional head-quarter managers of Japanese multinational corporations (MNCs) in Asia-Pacific. Theoretical frames for dealing with these systems or conditions are notably conceptions of institutional entrepreneurship.

The activities of Japanese multinational corporations in the Asian region are now in transition. They over decades have been characterized by a tradition in which managerial control has been centralized by its home base in Japan. But this has changed with the expansion of production-consumption in the Asian region. Contemporary MNCs are much more sensitive to local conditions. Such changes have induced new organizational forms with the formation of regional networks surrounding these headquarters with active and energetic horizontal exchanges.

These institutional systems effectively function when activities in regional networks are appropriately embedded into related organizational fields. In many cases, such regional activities are initiated by headquarters in Japan, however they require appropriate and realistic organizational procedures. In general, Japanese expatriates who are delegated from the head office in Japan have played vital roles in such system-construction as institutional entrepreneurs. They utilize their positions and authority derived from the head office, and at the same time they have made efforts to advance their local networks and use resources and relationships in the host community so as to develop a new institutional scheme which is responsive to the perceptions of members who are involved in these networks.

For some reasons, their efforts have not always led to successful outcomes. In this research, the entrepreneurial characteristics that have been shown in the construction of appropriate relations between their networks and the fields are presented in order to identify the factors which determine success and failure.

### *Elderly Prisoners' Life World - Comparative Study in NZ and Japan*

The Elderly Prisoners' Life World-comparative study between NZ and Japan  
In Japan and NZ the crime rate of the elderly persons (up to 65) is dramatically getting upward since 1990s. I and John Pratt(NZ) have engaged in the comparative studies to make clear the backgrounds and reasons to put the elderly persons committing crimes. Both countries did a lot of effort to prevent them from doing crime and take care for them after release from the prisons. Nevertheless, such kinds of crime policy and the welfare trials were found out ineffective for the decrease their reoffending.

Therefore we make our ideas to understand the elderly people in terms of their life world such as their life plans in childhood, dreams, hope, political needs, religious consciousness, love, alterism, family networks, crime and violence aspirations and satisfactions etc.

Based on the research findings (600 prisoners in Japan and 66 prisoners in NZ), here, we would like to construct their life worlds to get some suggestions to step forwards for them in their future without the criminal lives.

**HOSOKI, RALPH\*** (University of California, Irvine, [ittonen@hotmail.com](mailto:ittonen@hotmail.com))

### *The Determinants of Cross-National Variation in Migrant Accessibility to Rights*

Nation-states vary largely in the degree to which the economic, social, cultural, civil and political rights enjoyed by the native citizenry are conferred upon foreign nationals, and rarely do non-nationals fully enjoy equal rights unless they naturalize. There is considerable cross-national variation in accessibility to the legal institution of citizenship, but extant studies on the determinants of such variation are fragmented, revealing contradictory findings. Comparative studies, though informative, are largely qualitative and geographically limited to Western liberal democracies, making it difficult to make generalizable claims about other parts of the world. Furthermore, there has been limited theorization on the impact of international exogenous pressures on citizenship and nationality laws. Using the 2001 *Citizenship Laws of the World* dataset to obtain data on the minimum residency length requirements for naturalization as a proxy measure for migrants' accessibility to rights, this cross-national study utilizes OLS regression to compare the explanatory power of world culture variables against domestic economic, political, and demographic variables commonly used in studies on the determinants of citizenship laws. Results show that international non-governmental organization (INGO) membership best predicts cross-national variance in the minimum residency length requirements for naturalization, thereby suggesting that extensive linkages with INGOs and the resulting diffusion of world cultural scripts on human rights into the domestic society and polity influence a state's willingness to confer the ultimate means to legal membership and rights.

## JS-20.2

**HOSSEINI, S A HAMED\*** (University of Newcastle,  
[hamed.hosseini@newcastle.edu.au](mailto:hamed.hosseini@newcastle.edu.au))

*Many 'Post-Modern Princes'? Rival Cosmopolitanisms in the Global Field of Justice Movements*

In this article, Hosseini reflects on the recent organizational and ideational shifts in the so-called global justice movements. While some recent studies conceptualize these movements as ideologically mature and coherent, other inquiries, highlight growing disorganizations, fragmentations, disappointments, and disputes. The former argue that underlying global solidarities are coherent cosmopolitanist or globalist values, whereas the latter claim that the global justice movements lack the necessary ideological vision for uniting the masses behind a global project for changing the world capitalist system. Alternatively, by drawing on his research project (2002-2006) and examples from the post-GFC uprisings including the Occupy movements in 2012, Hosseini argues that there have been four major parallel trends of ideological changes, dividing the global field of transformative practices between rival camps in terms of their orientations towards cosmopolitanist values. There are however significant potentials for traversing the divisions between the cosmopolitanist camps. Among them is the rise of a new (meta-)ideological vision, coined here *transversalism* by him. Transversalism assumes the possibility of creating common grounds for dialogue, collective learning or actions among multiple progressive identities and ideological visions in the global field of resistance. It appears in two forms: (1) the extension of any the above mentioned camps to accommodate some of the principles of the other camps, such as regional Bolivarian cooperation between socialist/populist states in Latin America in recent years, or the idea of democratic global Keynesianism that attempts to improve the conditions for democracy within societies by adopting democratically developed international regulations; (2) in the form of independent integrative projects based on pragmatic adoption and combination of transformative practices from the camps, such as Economic Democracy.

*Relationships Between the Components of Sense of Coherence (SOC) and Stress Responses Among Upper-Grade Elementary School Children —Differences in the Level of SOC—*

In terms of the health status of upper-grade elementary school children, previous studies have indicated that pupils with a high level of Sense of Coherence (SOC) have less stress responses. However, it remains unclear how each component of SOC (comprehensibility, manageability and meaningfulness) is related to stress responses according to the level of SOC. Therefore, this study investigated the relationships between the components of SOC and stress responses among upper-grade elementary school children according to the level of SOC.

An anonymous questionnaire survey was conducted on 402 pupils in 4th to 6th grade at a public elementary school in Kanagawa, Japan. Based on data from 312 respondents, the SOC scores (total score and each score for "comprehensibility", "manageability" and "meaningfulness"), the stress responses scores (each score of "physical symptoms", "feelings of depression and anxiety", "feelings of displeasure and anger" and "apathy symptoms") and individual attributes (grade and sex) were used for analyses. The pupils were classified into three groups (high, middle and low) based on their SOC total score. The relationships among the scores for each SOC component and the stress responses scores in the three groups were assessed by partial correlation analyses controlled by attributes.

The findings revealed that the component factors of SOC related to stress responses varied according to the level of SOC. For pupils with high or middle SOC, the sense of meaningfulness was related to reduced increases in unpleasant feelings and the loss of vigor or motivation. In contrast, for pupils with low SOC, the sense of comprehensibility was related to reduced increases in sluggishness, headache, depression, and the loss of vigor or motivation. To reduce stress responses among upper-grade elementary school children, it is important to strengthen specific components of SOC, depending on each pupil's level of SOC.

*Mending the Master Programmes: An Effort to Improve Progression and Completion Rates in Graduate Education*

Generally, studies of dropout and completion in higher education have been concerned with undergraduate education and little attention has been paid to graduate level.

The Bologna process has led to an introduction of reforms in higher education in several European countries. In Norway a comprehensive reform in higher education – the Quality Reform – was implemented in 2003. Two of the aims with this reform was to improve the students' progression and completion in higher education. To achieve this, a number of changes regarding the structure and pedagogy in Norwegian higher education system were introduced.

This article addresses completion and dropout in Norwegian university graduate higher education before and after the reform, using register data consisting of the total population of students in one cohort before the reform was implemented (the 1999-cohort) and one after (the 2005-cohort). The aim of the article is two-fold: to investigate if there are changes over time in completion rates and dropout rates in graduate university education, and if the changes can be interpreted as an effect of the comprehensive reform in Norwegian higher education implemented in 2003. To what extent can national translations of international reforms make changes in national completion rates?

Preliminary analyses, including important independent variables such as SES and gender, indicate that there has been an improvement in completion rates after the reform, but that the dropout rate might not have changed significantly over time. There is an improvement in the proportion of students completing on estimated time (2 years). Moreover, the process of completing a graduate university degree in general is more rapid after the reform than before.

*Social Innovation: Driving Force Of Social Change*

The importance of social innovation in successfully addressing social, economic, political and environmental challenges of the 21st century as e.g. poverty and inequality is recognised not only within the Europe 2020 strategy but also on a global scale. However, despite this growing awareness of the significance of social innovation, there is still no sustained and systematic analysis of social innovation, its theories, characteristics and impacts.

Since Schumpeter, the concept of innovation has focused predominantly on economic and technical developments, whereas social sciences were particularly interested in the corresponding social processes and effects. This may explain why social sciences, to this day, have been conducting empirical work on social innovations quite comprehensively, but without labeling them as such and, with few exceptions, without a concept of social innovation informed by social theory.

In light of the increasing importance of social innovation the paper looks at the theoretical concepts, areas of empirical research and observable trends in the field of social innovation on a global scale. It gives an overview of the current situation and the perspectives of socio-scientific innovation research that have greatly contributed to the development and spread of an enlightened socio-scientific understanding of innovation.

It will present the objectives and the concept of the global research project SI-DRIVE (7. Framework programme of the European Commission) which intends to extend knowledge about social innovation (SI). Facilitating empowerment within innovation processes driving social change can and shall be a main result of social innovations. Thus, social innovations need to mobilise citizens to take an active part in innovation processes and thereby enhance society's generic innovative capacity. This requires new models of governance in favour of self-organisation and political participation, allowing sometimes unexpected results through the involvement of stakeholders.

*Food Markets of Oaxaca (southern Mexico); Culinary Heritage, Gender and the Slow Food Movement*

In 2010 traditional Mexican cuisine - ancestral, ongoing community culture - was inscribed on the Representative List of the Intangible Cultural Heritage of Humanity of UNESCO. Significant element of the indigenous culinary heritage of Mexico is the pre-Hispanic institution of a food market (*tianguis*).

The southern state of Oaxaca - characterized by its ethnic and cultural heterogeneity and rich biodiversity - is famous for its regional cuisine considered to be the most sophisticated in Mexico and well established network of traditional markets. Nowadays, those lively, highly gendered spaces are not merely tourist attraction but still form a crucial part of local economy and communal life.

At the same time, new styles and spaces of food consumption have emerged in the region due to advances of globalization and intensified processes of human mobility (migration, tourism, growing expatriate communities etc.). One of them

is recent, western trend of 'slow food' markets, shops and cafes established in gentrified urban spaces as well as middle class suburbs of the state capital.

Based on the results of fieldwork carried out in 2011 and 2014 in the central part of the state of Oaxaca (*Valles Centrales*) this paper analyzes the ambiguous relation between two seemingly similar, but heavily diversified along gender, class and ethnic/national lines patterns and ideologies of consumption that can be observed in contemporary marketplaces of Oaxaca City: traditional, indigenous/*mestizo*, peasant usage of food versus those promoted by the local branch of slow food movement connected with new, transnational urban lifestyle. Moreover, it points out the implications and dubious outcomes of the ongoing changes in Oaxacan urban foodways for indigenous communities and especially those who traditionally produce, cook and sell food at local markets – Indian women.

### *From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond*

In this presentation, I will draw from the lessons of Taiwan's local environmental history in 10 counties and cities over the past 60 years to assess the possible future for sustainable development.

First, I will sketch the overall and particular historical trajectories of how local environment has been affected and become deteriorated by human actions and government policy factors such as ill planned industrialization and over urbanization in many localities.

Second, I will look into the rise, development, and effect of green local civil society forces in the forms of anti-pollution, nature conservation, and anti-nuclear power protests that have tried to stop the pro-growth path and reverse the environmental injustice in various counties and cities..

Third, I will then assess if the slow yet steady paradigm shift facilitated by the green movements has been effective enough to change the government-business collective mindset and even lead Taiwan to a sustainable and just development future.

### *The Struggle for a Sovereign Taiwanese Sociology: History and Lessons*

The Struggle for a Sovereign Taiwanese Sociology: History and Critique  
I. The modern political history of Taiwan and its political limits to and shaping of Taiwanese sociology

1. Under the Japanese colonial rule: 1895-1945 ( non-existence of sociology in Taiwan)

2. Under the Chinese Nationalist authoritarian rule: 1945-1980 ( suppressed sociology of Taiwan)

3. After the political liberalization and democratization: 1980-2013 ( indigenization of sociology for Taiwan)

II. The true beginning of localization of sociology of, by and for Taiwanese society and its people

1. The moderate turn

2. The critical turn

3. The radical turn

III. Is there a self-reflecting and self-criticizing "Taiwanese theory" for the making of Taiwanese sociology for sovereign Taiwan people?

1. Critical assessment of the limits of localized Taiwanese sociology so far

2. Critical assessment of the limits of globalized Taiwanese sociology so far

3. The struggle of solving the «problematic» of the sovereignty of Taiwan state, Taiwanese people, and Taiwanese sociology.

IV. What can the Taiwanese experience contribute to the making of a truly global sociology?

### *The Unspeakable Shame – the Politics of Memory during Cold War in Taiwan*

How do political victims recall and deal with their pasts after prolonged grievous state violence? This is a research aims to account for the way in which the politically victimised ones in Taiwan look back on their pasts during the Cold War from the present point. Whilst conducting interviews with the victimised individuals, as former state enemy, informants are prone to conceal their pasts as to their treason crimes, and even tend to deny the pasts in public. The attitude highlights the impasse of transitional justice work in Taiwan, while the society has not pro-

vided the former state enemies enough rooms to voice their deeds that had once seemed to be committed crimes. In addition, informants of the research express an emotion of shame that they even have never voiced to the loved ones. Yet, after the fieldwork for years, the informants disclose their unspeakable shame to researcher such as I during interviews. It is salient to denote that the emotion of shame that has intertwined with their memories is not remnants of the state violence or political stigma. In stark contrast, a shame was derived by the depression of not revolting the regime successfully. As the society see these individuals as victims, they tend to see themselves as revolutionaries instead.

The research aims to elicit the hidden context of the collective state of mind of the former state enemy in Taiwan. With in-depth interviews and collected data, the paper manages to analyse the subjectivities of these individuals through their memories. By unraveling the way in which the victimised individuals remember their life stories, the research aims to deliver another perspective of the politics of memory in Taiwan.

### *"My Girlfriend Said She Won't Live with My Mom in the Future": Online Discussion about Relationship in Taiwan*

The contemporary self-help culture raises scholars' interest, through it to investigate whether the discourse and imagination of intimate relationship or biographical pattern and life decisions. However, although people still rely on advices and counsels from self-help books and manuals written by experts and professionals when they are troubled by a problem about relationship and life, more and more people login to online forums to ask for advices from other ordinary people. Not only in new media but in non-western context is the self-help culture significant and prosperous, though in different ways from western societies on which most studies concentrate. Therefore, this study aims to inquire the advising interaction about intimate relationship on an online forum (Boy-Girls) of Taiwan's largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I examine the discourses about intimacy in Taiwan and compare with what have been suggested in the previous studies based on the Western self-help literature in printing media. The online advising discussion shows different concerns and discourses about intimate relationship, and has a different relationship between advisers and advisees. First, family issues, gender difference, and ethics of relationship are main themes in the discussion. Secondly, comparing to what have been indicated in the past, the discussion in virtual forum concerns less self-centered than ethics-centered, less /value of self than equality between genders. These discourses may promote a perspective of intimacy based on rather mutually dependent partnership than ego-centered atomic individuals. Finally, the pattern of the production of discourse in online forums is different from the way structured in mass media which allows only one author/expert/advisor preaches their ideas/ experience/strategies to the mass audience. In this sense, the different relationship between advisers and advisees in new media, I argue, is the reason resulting in different discourses about intimate relationship and self.

### *Big Data: The Concept in the Next Society*

In our society, each social phenomenon leans on every new concept to clarify. Concept of "Big Data" reveals the novel route to further illustrate our society. Confronting endless possibility in the society nowadays, connection produces innumerable different situation since they are highly correlated. These variable contexts currently become a huge complexity than within the modern society in the sense of Niklas Luhmann. Therefore, the aim of next society is finding a way to construct the order of the system (in the sense of Dirk Baecker), not reducing the complexity

instead. Facebook demonstrated a solution, which has been developed by the society. By algorithmic programming in Facebook, each loose coupling (uncertainties) click of the user is now referring to different distinction and building up the boundary of meaning. Every time user clicks "like" on status that it means he understands something. Following understanding and meaning, the uncertain state will soon transform into certainty, namely stable state or the order. Thus, using the endless uncertainty is possible to construct the order or coexist with other systems. The novelty of "Big Data" isn't itself but clarify the targeted question. The paper illustrated how Facebook reveals the solution to the problem of the next society, computer society, as Dirk Baecker said.

### *Living Arrangement, Intergenerational Support, and Life Satisfaction in Japan, Mainland China and Taiwan*

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but this also forms a basis for promoting intergenerational exchanges between older parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support and individuals' life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that coresident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn't live with children.

Results from logistic regression models suggest that while living with own parents does not appear to affect adult children's life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction of female adults in Mainland China and male adults in Taiwan. Japanese males who didn't live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn't live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life. While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

### *Sociology As Social Memory: Narrative Identity and Knowledge Construction in the Study of "Chinese Modernization" in Cold War Taiwan*

Man is a story-telling animal and sociologists are not an exception. Sociological works are often more informed by historical narratives that function as particular forms of collective memory than sociologists would have admitted. My article aims to show how sociology may be a major agent of collective memory and identity formation by analyzing the sociological study of "Chinese modernization," especially the case of Kwan-hai Lung (1906-1983) as one of the major founders of sociology, in Cold War Taiwan. The study of Chinese modernization in social sciences in general and in sociology in particular were promoted mainly by scholars of Chinese Mainlander background who exiled to Taiwan, where the Japanese colonial rule just ended, after 1949 owing to the Chinese Communist Party's victory in China's civil war. These scholars dominated Taiwan's social sciences in the Cold War era up to the 1980s. The Mainlander sociologists in exile were haunted with the bitter memory not only of their displacement, but of modern China's cultural trauma caused by foreign oppression. Embracing Chinese nationalism and the modernization theory imported mainly from the U.S., they hoped that China could become a rich and powerful nation by modernizing itself. By integrating the metanarrative of global and Chinese modernization and the metanarrative of Cold War into their sociological works, they became a major story-teller who endeavored to narrate post-colonial Taiwan back into relationship with the Chinese nation. As an important source of public narratives, the sociological study of Chinese modernization helped in the construction of collective memory and national identity in Cold War Taiwan. Situated in the context of the political and cultural inequality between the Mainlanders and the local Taiwanese, however, their historical narrative and their study of Chinese modernization *per se* were ready to be co-opted into the ruling ideology of the Chinese Nationalist Party.

### *The Effects of Sibling Structure on Fertility Decision in Taiwan*

Drawing from theories of son preference and family resources, this paper attempts to construct a sequential fertility model, and then uses it to estimate the probability of parents' fertility decisions of their first few children by the sibling structure and to elaborate the effects of various socio-demographic factors in Taiwan. The data used in the analysis come from the PSFD (Panel Study of Family Dynamics) in which respondents were born between 1934 and 1986 in Taiwan. The main findings are as follows. Firstly, the sibling structure has a significant effect on fertility decision. Secondly, the gender-balance hypothesis is rejected, whereas the son-preference hypothesis is supported. Parents with daughters in their first two or three births have a great likelihood to have a next child. Thirdly, son preference and son investment have an opposite effect on fertility decision. The number of sons tends to reduce the likelihood of parents to have a child.

Fourthly, the hypothesis of social stratification is rejected. Parents of different status groups make similar fertility decisions. Fifthly, the data didn't support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

### *Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered*

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the "developmental state". Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the impetus of post-war East Asian development stems from the external big bang that shook up the existing social orders and molded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous factors in bringing change tends to overlook the conjunctural forces and becomes ahistorical. This paper joins the debate through a reinterpretation of the origins of the post-war political economies of Taiwan and South Korea. While acknowledging the importance of conjunctural forces in shaping the direction of development, I argue that the existing social structure matters: its interaction with the state shapes and constrains state choices and thus can account for the variations in strategies.

I make three claims to explain the divergence between Taiwan and South Korea: First, I illustrate how different configuration of state-society relationships (the state-business relationship) responded differently to similar historical conjunctures. Secondly, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationship, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.

### *Constructing a Quality Regime: The Origins of Taiwan's Export-Led Capitalism*

Two key features of East Asian capitalism are the predominant involvement of the state in the economy and success via "export building". This paper revisits one of the original successful tigers, Taiwan, by examining the mechanisms of state involvement and the processes of integration into the world market at the firm level. The conventional explanation of East Asian development focuses on the state capacities in shifting to export-led industrialization (in contrast to the lack of such state capabilities in Latin America and India) and the emphasis on industrial policies to induce entrepreneurship. A direct implication of this interpretation is that when the state intervenes, it tends to produce large firms and encourage industrial concentration. Yet, the Taiwanese SMEs as key exporters has run against the evidence elsewhere. If export-led development is an important element in understanding East Asian capitalism, and if the state-centric thesis is to have any explanatory power, we need to show how the East Asian states escort firms in the world market. Specifically, how has Taiwan, as an example, coordinated a system of SMEs in its quest for integration into the global economy?

Through in-depth case studies of the 1970s key export industries, this paper illustrates the patterns and ways in which the Taiwanese state coordinated and interacted with the decentralized SMEs. The linkages between the state and SMEs were through varieties of technology and export promotion programs carried out by various kinds of semi-governmental organizations with an emphasis on technical standardization (at the firm level) and ensuring quality control. These measures were crucial in overcoming export barriers and establishing economies of trust, and they had an impact on the formation and patterns of firms' subsequent technological learning.

This reinterpretation of Taiwan's post-war experience is relevant to debates on models of Asian capitalism(s).

### *On Appropriation and Japanese Sociology: The Case of Postmodern Social Theory*

What does it mean to appropriate a social theoretical approach—initially developed elsewhere—into a different social context? The aim of this paper is to interrogate this very question through the prism of contemporary Japanese sociology. While some social commentators have suggested that the practice of appropriation indicates a lack of creativity, others have suggested that something more intricate and innovative has been at work in Japan (Elliott, Katagiri and Sawai 2013: 11-12). In this paper, I substantiate the latter interpretation of Japanese sociology by exploring how postmodern social theories have been used to generate insights about contemporary Japanese society in new and unconventional ways.

Although postmodern social theory is now regarded as a largely defunct—if not also unproductive—area of study in the Western world (e.g., Ryan 2007), Atsushi Sawai (2013) describes how the field continues to remain relevant in the Japanese context. This may be because Japanese scholarship on the postmodern has not remained overly fixated on the issue of epistemology, as a sizeable portion of postmodern social theory in Japan has sought to analyze various social transformations and events.

It is also crucial to note that the scholarly debate on postmodernity and postmodernism in Japan has not unfolded in the same way as it has in the West. What is unique about Japanese postmodern social theory is that it has not simply held a 'diachronic' view of postmodern culture (Koto 2006). Some scholars have noted that it is possible to detect postmodern features in pre-modern periods of Japanese history, and thus, postmodern culture may be more 'indigenous' to Japanese society than otherwise thought (Katarani 1985).

**HSU, KAN-LIN\*** (Tunghai University, [kanlin@thu.edu.tw](mailto:kanlin@thu.edu.tw))

### *Post-Developmental State with the "Therapeutic" Turn: The Case of Taiwan*

The East Asian developmental states fell for decades due to global economic restructuring and their respective contradictions and dilemmas. Political exploration of post-developmental scenarios remains ongoing. In Taiwan, this exploration could be termed as "therapeutic turn" in three respects. First, the development of "welfare state", as shown in the implementation of National Health Insurance, wherein population health became a new ideology of legitimization. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the descending information and communication industry, for a new mode of growth. Third, there is a 'managerialistic-developmental' creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, profitization of health promotion on the one hand, and intensifying workfare regime on the other, contribution to a disjuncture among current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the 'welfare turn' is in fact a political project and illustrate how the therapeutic turn of Taiwanese post-developmental state runs into crisis.

### *Is There a Motherhood Penalty in Taiwan? the Effect of Childcare on the Wages of Women*

Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital theory, neoclassical theory of compensating differentials, and statistical discrimination. First, scholars employing human capital theory have assumed that many women spend time at home caring for children, interrupting their job experience. This interruption is likely to reduce the accumulation of human capital such as work experience, seniority, and formal skills. Therefore, the loss of the human capital may have an influence on later wages. Second, the neoclassical theory of compensating differentials suggests that mothers may trade off higher wages for "mother-friendly" jobs that are easier to accommodate their responsibility of childcare and employment. Finally, the main argument of statistical discrimination is that employers may discriminate against women because of their motherhood status. Compared to the rich evidence of childcare wage penalty in the United States, the relationships between motherhood and the wages of women have not been well investigated in Taiwan. Therefore, this paper aims to examine the wage penalty for motherhood by using data from Panel Study of Family Dynamics with fixed-effects models. The research analyzes whether the effects vary by different marital statuses.

### *The Knowledge Inequity in Hidden Curriculum of Taiwanese Higher Education Under the Trend of Globalization: The Comparison Between Private General University and Technology University*

The knowledge condition in higher education under the trend of globalization has been moving toward post modern universities, which is consistent with the argument of Lyotard (1984) – the rise of performativity. Under the dominance of performativity, the curriculum with practice, efficiency, performance or productivity has undoubtedly become the important strategy for universities. Moreover, the vocationalization of curriculum in higher education and the hidden curriculum of performativity are also being formed, especially in private universities.

It is worth studying whether there remains knowledge classification in terms of management and skills among students between the hidden curriculum of performativity in private general universities and those in private technology universities. The inequity as well as the corresponding consequence in the workplace is the main issue of this research.

This paper aims to explore the relevant arguments about vocationalization and hidden curriculum of the higher education under the trend of globalization. Samples for case study include two private universities, one general university and one technology university, from which the knowledge classification and the inequity in the hidden curriculum of performativity will be explored.

This a qualitative research and the method includes text analysis and interviews. It is expected that the vocationalization of curriculum and the inequality in the hidden curriculum of performativity can be unveiled for the reflection of the undergraduate curriculum related policies in higher education.

Key words : the vocationalization of curriculum in higher education, globalization , performativity, hidden curriculum, sociology of knowledge

**HSUNG, RAY-MAY\*** (National Chengchi University, [hsung@nccu.edu.tw](mailto:hsung@nccu.edu.tw))

### *Social Capital, Civic Engagement, and Political Efficacy in East Asia*

This study attempts to explore plausible mechanisms among social capital, trust, civic engagement, and political efficacy in four East Asian societies. The data are from the 2012 East Asia Social Survey on Social Capital, including data from Taiwan, China, Japan, and Korea. This study differentiates social capital into individual social capital, organizational social capital, and trust. Individual social capital is measured by the diversity of accessed position-generated networks, and organizational social capital is measured by the diversity of voluntary associations people participated in. Trust is classified into three types of trust as well: trust to personal contacts, trust to public agents, and general trust. This study attempts to examine the effects of individual and organizational social capitals on three types of trust, and then furthermore examine the function of all types of social capitals in terms of civic engagement and perception to political efficacy. One dominant and more universal mechanism is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated individual social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy even are stronger except for those in Korea. Trust to government agents and trust to personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.

### *Green Home for Whom? Estimating Green Housing Opportunities of Various Socio-Economic Groups in Nanjing China*

Although sustainability is considered an integration of society, economy, and environment, it is criticized that the concept of sustainable city is not necessarily accessible or affordable to the majority. The improvement of the quality of life after sustainable plans leads to a significant market premium which can only be afforded by the minority rich. Take Nanjing China as an example. In the transition from an industrial to a post-industrial city, Nanjing government attempts to build a sustainable city by constructing green apartments, improving metro networks, and replacing heavy industrial lands. However, the current green apartment buildings are mainly built in places with good accessibility and neighbourhood quality. The high prices make green apartments as a symbol of luxury for the upper-middle class. To involve different socio-economic groups in developing a sustainable

city, it is essential to understand the role of housing affordability playing in it. This article estimates green housing opportunities of various socio-economic groups in Nanjing China according to their affordability and housing preferences. It analyses the effects of sustainable plans on housing opportunities by comparing three urban development circumstances: the current situation, after improvement of the metro network, and after relocation of heavy industry. Results indicate that in the current circumstance, the lower-middle class has slim chance to have a green home across the city. The improvement of metro network can increase the green housing chances for the lower-middle class in the central areas only if they sacrifice their housing size. The relocation of heavy industry can dramatically increase the green housing opportunities of the upper-middle class in the central urban areas, but will push the lower-middle and middle class moving to the suburbs due to the high prices. To ensure social equity in developing a sustainable city, policy makers need to consider affordability and sustainability simultaneously.

#### *Parental Migration and Adolescents' Transitioning to High School in Rural China*

The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals' lifetime status and the society's educational stratification and social inequality. Educational reforms beginning in 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China. Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?

This paper investigates how parental labor migration influences rural adolescents' transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more demand on children's time and labor on housework or farming, access to parents' information and networks on migrant work opportunities, and changes in parents' values and attitudes about children's education. These mechanisms will in turn affect children's aspirations, motivations, academic performance and educational outcomes in different ways.

The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

#### *Profesiones Sin Fronteras? Las Trayectorias Profesionales De Los Ingenieros Mexicanos Que Migran a Estados Unidos*

Con los procesos de globalización, la migración calificada se ha incrementado de forma importante en las últimas décadas. Se advierte un interés notable de países desarrollados por atraer a profesionales, sobre todo ingenieros, que a su vez aparecen como protagonistas de la denominada sociedad de la información y/o sociedad del conocimiento. Aunque en México se observa un crecimiento importante de este tipo de migración, no hay muchos estudios que se ocupen del fenómeno. En este trabajo exponemos resultados acerca de las trayectorias profesionales de los ingenieros mexicanos que trabajan en Estados Unidos.

El trabajo se basa en las teorías de la migración internacional y de las profesiones utilizando dos herramientas metodológicas: La primera consiste en una revisión de las bases de datos de Estados Unidos y México con el objetivo de calcular la importancia cuantitativa del fenómeno. Sin embargo la herramienta analítica principal se fundamenta en una metodología cualitativa con entrevistas en profundidad a 30 ingenieros mexicanos.

En la ponencia se muestra la heterogeneidad de las trayectorias de los ingenieros en función de cuatro dimensiones principales: a) su capacidad de agencia a lo largo de la trayectoria b) la espacialidad en la que se desenvuelve su trayectoria c) la legitimidad de su condición de ingenieros en un país extranjero y d) la forma en que se adquieren nuevas competencias profesionales o se transforman las que había adquirido en México.

Los resultados muestran que los ingenieros mexicanos encuentran en general oportunidades de desarrollo profesional en Estados Unidos con la excepción

de algunos grupos de jóvenes ingenieros con trayectorias en fases tempranas que sufren graves condiciones de precariedad. Las trayectorias con mejores condiciones laborales son las de aquellos ingenieros que estudiaron una maestría o un doctorado en Estados Unidos.

#### *Passive Revolution: The Retreat of the Taiwanese Developmental State Since 1990s*

Since the late 1980s, under the "double squeeze" of democratization and globalization, it is undeniable that the developmental state in Taiwan has undergone significant transformation along the course of economic development. Yet a nagging question remains unanswered is how to comprehend this transformation. It is to illuminate and conceptualize this transformation of the developmental state to which this paper is devoted. More substantively, based on the policy regime approach, the main research objective is to investigate the changing role of the state in fulfilling the dual and often contradictory function of accumulation and legitimation (especially since the 1990s). Three strategic research sites can be chosen: accumulation regime, welfare regime and fiscal regime. Whereas by examining the accumulation regime helps us understand how the state involves in promoting capital accumulation, the welfare regime characterizes the state's pursuit of legitimation. And in order to decipher the tension of accumulation/legitimation nexus, the fiscal regime is accordingly examined. The main concern of fiscal politics are to discover the principles governing the volume and allocation of state finances and expenditures and the distribution of tax burden among various economic classes. Fiscal regime is therefore the linchpin among all the three policy regimes to help us identify the action of the state.

#### *Institutional Divergence in Petrochemical Industry of Mexico and Taiwan: Combined Effect or Failure of State Intervention and Liberal Marketization?*

This paper examines the shift from interventionist state to market-led growth in petrochemical industry for both Taiwan and Mexico since 1980s, which leads to the formation of mixed-market economies (MME) in these two countries. Despite the similarity, Taiwanese petrochemical industry demonstrates a backward and forward linkage in a full scale of privatization, whereas Mexico comes to a rupture in backward linkage and importing a large quantity of immediate chemical products with huge trade deficit while implementing privatized contractors.

This paper argues that despite the transition of state policy from interventionism to neo-liberalism in the 1980s, the differences in economic performance of these two countries' petrochemical industries are determined by the different kind of market institutions-building and state-business collaboration, a result of respective path dependence in Taiwan and Mexico.

The initial finding shows that the Mexico's model of state-business coordination via "PEMEX and contractors" and strategic alliance have failed to create incentives for public-private partnership as well as attract investment due to state ownership of oil in the upper stream and oligopoly among big corporations dominated by a few business groups in the middle stream of Mexican petrochemical industry. By contrast, in Taiwan's case the effectiveness of state intervention lies in developing a state-business co-evolution model, featuring not competing with business but rather complementing to business needs in the market. It seems that the continuity of state intervention in Taiwan has penetrated into the era of neo-liberalism, while lacking monopoly and oligopoly in Mexican case.

#### *Teacher Quality Vs. Social Justice: Issue and Status Quo in Taiwan*

Teacher quality is taken as the strategy to social justice in the trend of standard-based teacher education. In the accountability of the interpretation of social justice is about student learning opportunity that let every student can learn depends on teacher quality. Especially, all students in every school can receive teaching from qualified, knowledgeable, and capability teachers that means school success. The assumption of the relationship of teacher quality and student learning is worth to investigate. Why the relationship is about social justice, what kind of social justice in the assumption, and how about the context in Taiwan. Is its meaning in Taiwan the same in the concept of standard-based teacher education with globalization? Therefore, this paper would like to find the relationship of teacher quality and social justice. Second, this paper would like to understand the meaning or perception of social justice in the case. Third, this paper would like to

analyze the relationship of teacher quality with social justice in Taiwan context. Finally, this paper provides some findings and suggestions.

##### *The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan*

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examining foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Food is not only a necessity in daily life, but also a contested site where gender, class, and ethnicity intersect. Chinese marriage migrants are often depicted as opportunistic gold diggers in the Taiwanese society. Not only do they suffer various forms of discrimination from the general public, but even more unbearably, within their own family. This research shows that living arrangement has a great influence on Chinese marriage migrants' agency. In a "three generation cohabitation" setting, the dining table becomes a battlefield between Chinese immigrant wives and their Taiwanese in-laws. Chinese immigrant wives' food preferences and cooking habits such as the general usage of oil, salt, MSG, and other condiments are associated with their national origin, further classified as the lack of modern knowledge and inferior. In the name of a "healthier" diet, Taiwanese in-laws often despise Chinese marriage migrants cooking habits and ask them to adapt. Food consumption and cooking styles not only draws a subtle ethnic line between Chinese marriage migrants and their Taiwanese in-laws, but also serve as a marker of status and class. Facing such difficulties in the domestic sphere, Chinese marriage migrants often claim that unlike many restaurants in Taiwan, what they cook are the real "authentic" Chinese food. They develop a nationalist discourse as a means of asserting their subjectivity and the legitimacy of being a good mother. With limited agency in food consumption in their own household, Chinese marriage migrants, despite they come from different regions, have collective memories and establish a special bounding, a sense of belonging through food making and sharing.

##### *"I Want to be a Breadwinner Too": Chinese Marriage Migrants' Narratives of Gender, Identity, and Family in Taiwan*

This study aims to explore the intricate gender dynamics in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Gender is not only a major element to immigrant identity, but also a vehicle for minority groups to claim cultural superiority over the dominant group. Taiwanese men and Chinese women have very different expectations of gender roles in marriage. Taiwanese men and their parents expect these Chinese women to behave in a traditional way – be a good stay-home wife/mother/daughter-in-law. Yet Chinese women, who grew up in communist China, consider such expectations outdated. Most of these Chinese women anticipate Taiwan as a more modern and Westernized society before getting married, but only to find out that patriarchal ideology and practices still prevailing. In contrast to stereotypes portraying Chinese marriage migrants as lazy and opportunistic "gold-diggers," many of these immigrant wives, despite external immigration policies and their lack of local networks, express a strong desire to work. Being confined in the domestic sphere, these Chinese women long for part of their old identity – a financially-independent working woman. Facing stigmas in the Taiwanese society, Chinese immigrant wives criticize that their Taiwanese in-laws are under Japanese colonialism and feudal Confucianism's influence, thus they are backwards and lack of modern concepts of gender equality. This research argues that these Chinese marriage migrants develop such discourse as a strategy of resistance – a means of asserting their progressiveness. At the same time, gender dynamics in the household (private sphere) has become a public issue – the Taiwanese government launches programs to "teach" Chinese women how to be an "appropriate" Taiwanese wife/daughters-in-law. This study elaborates how the conduct of micro private life is deeply tied to macro social structures.

##### *History and Text: A Study on the Changing Forms of Governmentality of the Communist Party of China*

Following the traditions of New Historicism, this paper explores the historicity of text and the textuality of history through a case study on the changing forms

of governmentality of the Communist Party of China (CPC) before and after the foundation of the People's Republic of China (PRC).

The paper focuses on two social movements initiated by CPC: Land Reform before the foundation of PRC and Patriotic Hygiene Campaign afterwards. The former movement intended to classify 'class backgrounds' of people in rural China in order to distribute private properties to create an egalitarian society. While the latter aimed to arouse awareness of public health so as to win an alleged germ warfare and raise people's standard of living.

The first part of the paper uses two literature texts to analyze the change of governmentality. One is Ding Ling's award-winning novel *The Sun Shines on Sang-gang River* which portrays the Land Reform. The other is *Clear Sky* written by renowned playwright Cao Yu which tells the story of how an American-sponsored hospital transformed during the Patriotic Hygiene Campaign. Under CPC's ideological influence, both texts served the purpose of political propaganda. While the structure, character and storytelling reveal the change of CPC's governmentality from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse.

Second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, the paper uncovers the changing meaning of the idiom 'class enemy'. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatum of the same word unveils the fact that history is more of a narrative open to various interpretations than a solid causality between events.

##### *Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China*

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong's Jiangmen city, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of "Jiangmen nuclear crisis" on Sina Weibo revealed two important oppositional frames: risk of radioactive contamination and its hazardous effects on health; untrustworthiness towards the local government and the attendant low level of acceptance of the sitting plan. The framing process was facilitated by the Internet and shaped by contextual factors as well as interactions between government and opponents. The sense of risk has been heightened after the Fukushima Daiichi nuclear accident frequently referred to in the framing process. Yet, unlike the previous literature emphasizing the importance of confidence in "technological fix", the risk was framed as a social issue associated with the lack of confidence in authorities' supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials' inappropriate responses, ill-prepared feedback channels, and more importantly the micro-blogging censorship. As untrustworthiness levels increased, the sense of risk was also enhanced. Besides, the Internet played an important role in revealing the procedural flaws and demonstrating the potential widespread fallout through digital mapping system; it also helped activists counter officials' discourse head-on. These findings echo previous conclusion that limited public participation in decision-making process is a significant cause of environmental activism. However, the interactive framing processes suggest that the public's perspectives on environmental issues are inevitably intertwined with government's responses and the public's general perception of the government.

##### *The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers*

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. The data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second,

in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers' human resource management in Kaohsiung and future studies were discussed.

#### *Inclusionary Housing in China: Achievements and Challenges*

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban land and local governments' right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What are its social, economic and political costs and benefits? 3) What kind of mechanisms needs to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

#### *Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China*

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when intersecting with such institutional hurdle as *hukou* (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai *hukou* and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 per cent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called "group renting" (*qun zu*) in which existing medium-end even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city centre where job opportunities lie. The local government has taken measures to stop 'group renting' which leaves many young non-locals nowhere to find a home. The second case is about a recent regulation issued by Shanghai government in which non-local unmarried people are denied the right to buy a home in Shanghai. The effects of this regulation are gendered and have resulted in protests. By analyzing these two cases, this article aims to show how the right to the city of the young non-locals has been contested through the unequal citizenship regime which is institutionalized with the *hukou* system and further reinforced and complicated along lines of gender and class; how the state has infringed on their private life decisions particularly marriage choice (to get married or not) by regulating on their housing right, in order to refrain housing prices.

#### *Breaking the Cycle: Inequality, Social Investment, and Human Capital in Latin America*

Latin America has long lagged behind the East Asian Tigers in investment in education. In particular, Latin American countries failed to invest heavily in public

secondary education. This has had costs both in terms of economic growth and inequality. After some 20 years of democracy and particularly with the turn to the left, social investment in the form of increasing expenditures on education and health care and the spread of Conditional Cash Transfer Programs has received unprecedented attention. The CCTs are based on the recognition that investment in the human capital of the next generation requires that poverty in the present generation be addressed. We argue that in Latin America social investment, human capital stock and inequality and poverty are linked in a feedback causal process and present quantitative and qualitative evidence supporting our argument.

#### *Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professions in Occupational Health and Safety Regulation in Germany and the United Kingdom*

Risk-based governance provides, inter alia, the means to target regulatory interventions by the probability of the occurrence of 'bads' and their impact. For example, in 2005, the influential British *Hampton Review* suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based OHS regimes raises tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored.

Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the professional receptiveness towards risk-based OHS governance across institutional settings, focusing on occupational physicians and safety engineers as two influential professional groups in the domain. We compare and explain their role in German and British OHS governance. We argue that variation in treatment of occupational illness across countries depends -- apart from historical and legal conditions -- on the organisational structure of professions (e.g. regulatory agencies vs. professional associations) within the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the UK, while the medical profession in Germany treats each case as particular and largely rejects risk-based targeting as non-compatible with their professional norms. Eventually, major tensions for professions are located between the efficient use of resources and equal treatment norms.

#### *Social Movements and The Citizen-Consumer: Evidence From The Canadian Sustainable Food Movement*

The proposed presentation builds on the established limitations of the citizen-consumer hybrid through a study of key actors in the sustainable food movement. While others have focused on how consumers are mobilized to purchase ethical products as an expression of citizenship or social agency, we examine the motivations of social movement actors and their tactics for engaging others. Using the case of food, we examine how movement actors seek to engage consumers through food products, while encouraging movement towards citizenship responsibilities and political change. Data are derived from a qualitative case study of 45 leaders from civil society, the state, and the market in two Canadian cities. Findings are used to scrutinize the concept of the citizen-consumer hybrid as this entity relates to environmental social movements. While advocates of shopping for change suggest that ethical consumption creates opportunities and discursive spaces that encourage individuals to develop collective identities, the actors interviewed were not brought into the arena of social change via consumption activities. Interestingly, these individuals continue to advocate for greater consumer education and opportunities for ethical consumption as tactics to enlist greater citizen engagement. Moreover, in contrast to their own discourse around the need to influence the state, participants locate possibilities for citizenship in the consumer marketplace, largely eschewing the role of the state in social movements. Implications for theory and practice are discussed.

*Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care*

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden of care on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventer medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents'/carers' children's and health professionals' understandings of asthma and their perceptions of the barriers and facilitators to good asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasises the dynamic, multi-dimensional and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses using this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

**Funding acknowledgement and Disclaimer:** This project was funded by the NIHR-HSR programme (Ref 09/2001/19). *Bio-Sociality and the Negotiation of Diagnosis in Cross-Border Infertility Treatment*

The expansion and globalisation of medical technologies for the 'treatment' of infertility has taken place at a rapid rate. Solutions to an increasing range of fertility-related concerns (chromosomally abnormal gametes and embryos, immunological disorders, reduced ovarian function) have been marketed to an affluent, engaged, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as 'reproductive tourism' is one product of the ever-expanding field of medical possibilities offered by ARTs (assisted reproductive technologies).

Recently expressed concerns about patients who travel overseas for fertility treatment have helped to embed the notion of the 'fertility tourist' in the public imagination. The categorization of this group has seen them variously constructed in the media as selfish, vulnerable, irresponsible, or desperate. Outside of sensationalist media reporting, little is currently known about the motivations or experiences of those who seek infertility treatment across international borders. Drawing on findings from the first UK study on this issue, which specifically addresses this absence in our understanding, this paper presents patients' accounts of the demands and dilemmas involved in seeking a medical solution to unwanted childlessness across international borders.

The paper specifically explores the use of online networks and support communities, a form of technologically mediated bio-sociality, in the development of biomedical literacy in relation to infertility. Reproductive travellers described active participation in the production of a 'diagnosis' in relation to their infertility which was achieved via virtual networking with other patients and direct negotiation with fertility experts. Shared virtual identities, connections and allegiances positioned users of overseas fertility clinics as a 'biosocial collectivity' (Rose & No-

vas 2003) which enabled them to navigate the global ART landscape and to seek resolution to their fertility quests.

**HUGHES, JASON\*** (University of Leicester, [jason.hughes@le.ac.uk](mailto:jason.hughes@le.ac.uk))

*Analysing Culture in Long-Term Perspective: Documents and Artefacts As 'Figurations'*

In this paper, I explore Norbert Elias's sociological practice as a model of analysing culture and the media in long-term perspective. I centrally argue that embedded in Elias's work is an approach to historical and cultural analysis in which documentary and cultural artefacts are treated as part and parcel of human 'figurations'. I propose that Elias's approach to social analysis raises a series of methodological questions concerning the status of documentary/cultural artefacts as sources of evidence. Principal among such issues is the question of whether medieval manners texts; literature and art works; and, by extension, television and film can be treated as reliable informants on the social universe. I suggest that, using conventional methodological standards, notably those expounded in John Scott's seminal *A Matter of Record*, the value of such sources should be checked against such criteria as *authenticity*, *credibility*, *representativeness* and *meaning*. As such, serious questions are raised concerning the extent to which documentary and cultural artefacts can be used as sources of evidence for social/historical analysis. However, this approach to assessing the worth of particular sources of evidence against, what we might loosely call, 'standards of truth' is itself problematic in key respects. While such criteria have their place, they ultimately lead towards a series of questions which are profoundly at odds with processual/relational thinking. Again using Elias's work as a case in point, I explore as an alternative an approach to diachronic cultural analysis in which both discursive form(s) and content(s) become simultaneously 'objects' and 'subjects' of investigation. In this way we might re-consider the value of cultural/documentary artefacts not simply as sources of 'content', but in terms of what such sources might be used to tell us about the unfolding relationships, human interdependencies – the broader social conditions under which such materials 'came to be'.

**HUGHES, KATIE\*** (Victoria University, [katie.hughes@vu.edu.au](mailto:katie.hughes@vu.edu.au))

*Massification Meets the Knowledge Economy: Are They Compatible?*

This paper begins by outlining the 'education revolution' policy direction of the recent Australian federal government, and the ways in which it envisaged meeting its goal of having a 40% of the population between 25 and 34 with a Bachelor's degree by 2025, and ensuring that 20% of tertiary students came from LSES backgrounds. This is contrasted with the achievements of the UK government's 'Widening Participation' strategy. It then discusses the institutional and policy challenges which broad social inclusion goals generate for the tertiary sector – challenges designed to fundamentally reshape universities forcing them to become partners in a national educational mission.

It explores the discourses about 'diversity' and 'social inclusion' which have driven this policy development, and which presented as a moral imperative. It argues that they obscured a neoliberal impulse to increase the commercial orientation of the tertiary education sector where universities compete in a free market to provide clients (students) with products (qualifications) that meet a market niche – thereby meeting the needs of both the economy and the educational consumer.

The paper then examines the foundation of the arguments which employ both social and individual benefits of mass tertiary education, and discusses the impact of massification on universities themselves. What happens to elite institutions that traditionally catered for young, white, independent male students when they are required to accept 'diverse' students? Do the universities who welcome 'diversity' lose status? Are elite, conservative universities able to successfully resist equity policies? Should they?

Finally, the paper makes a judgment about the responsibility universities should have for the promotion of democratic benefits and social justice – and the likely success levels of government-led equity initiatives.

**HUGHEY, MATTHEW\*** (University of Connecticut, [Matthew.Hughey@uconn.edu](mailto:Matthew.Hughey@uconn.edu))

*Alienation and the Crisis of White Racial Identity*

The lion's share of contemporary research on alienation remains couched in Marxist and neo-Frankfurt school foci on the separation between the subject and labor, the product of the subject's labor, other subjects, and the subject's ability to grow and develop. Moreover, this paradigm's application to gender, sexuality, and race, have left us with understandings of these social categories as distractions from the "true" basis of social reality—the inherent conflict between owner and worker. In breaking step with this tradition, a modicum of recent scholarship

effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identity is continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distractions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

#### *L'Innovation Contributive Au Service d'une Résilience Urbaine? Pratiques et Moyens (Numériques) de Transformation de la Ville de Détroit*

Détroit illustre aujourd'hui assez bien l'Amérique des laissés pour compte : une métropole ouvrière noire et difficile à situer sur une carte tant elle illustre les attermolements, les échecs de l'American way of life et la mémoire d'une ségrégation socio-raciale importante. Dans ce contexte urbain en faillite, nous souhaitons explorer le lien entre crise économique et apparition de pratiques socio-politiques alternatives mises en place par la société civile. Ces pratiques conscientes orientées vers une économie fondée sur la valeur d'usage traversent le quotidien des gens par nécessité ou par persistance de formes sociales non marchandes. Elles correspondent notamment à des projets de partage des technologies de la communication qui révèlent à la fois une diversité de moyens modestes pour faire face à la crise économique, et un ensemble de pratiques innovantes permettant de penser la possibilité d'un mode de vie alternatif, voire anticapitaliste. Notre contribution, fruit d'une enquête au cœur de cette ville, rendra compte de ces pratiques numériques visant à la réduction des inégalités d'usages et d'appropriation, à la création de nouvelles solidarités et au renforcement des communautés à l'échelle du quartier. Elle visera également à montrer comment ces initiatives mettent en lumière des questionnements relatifs aux rôles que jouent les usagers dans l'organisation et le fonctionnement matériel d'un réseau social numérique. Car, selon nous, ces moyens qui émergent dans cette ville sont effectivement à l'image d'un mouvement de contestation récent qui révèle de manière plus ou moins directe les enjeux de la démocratie Internet et ceux des publics « forts » et/ou « faibles » du Web. Detroit et ses pratiques de transformation basées sur les mondes du numériques illustrent un vivre Internet différent et le développement de l'économie de la contribution, vecteur d'empowerment des citoyens utilisateurs nécessaire à une émancipation citoyenne.

#### *Exploring the Role of Labour NGOs, Rights Lawyers and Intellectuals in Workers' Collective Actions*

In the wake of the economic crisis in 1970s, the western capital needed a new site for investment (Silver 2003). China has taken advantages of this to turn the country into a global manufacturing hub; foreign-owned factories have thus mushroomed in South China. Because of meager wages and poor working conditions, increasingly more migrant workers from these factories have taken collective actions to advance their rights (Lee 2007; C. Chan 2010; A. Chan 2011; Chen and Tang 2013). Various actors involving in migrant workers' collective resistance have been well-examined. For instance, Chen (2010) highlighted the role of the government, trade unions, employers and workers in the strike settlement. He and Su (2010) pointed out that judges were requested to go to the protest spots to mediate industrial conflict. Pun and Smith (2007) considered workers' dormitories an important site for cultivating labour resistance.

However, one gap concerning workers' collective actions is yet to be filled: what role does civil society actors, such as NGOs, right-lawyers, and intellectuals, play in workers' collective resistance? According to the authors' fieldwork, increasing civil society actors have intervened into workers' collective actions in the Guangdong province. This paper argues the fact that workplace trade unions are subjected to the dual control of the enterprises and the party-state (Chen, 2003) has created room for other social actors to intervene into labour resistance. Their involvements have taken the forms ranging from invisible to visible: provision of advice, knowledge-transfer, legal representation, open endorsement, advocacy campaign and so forth. This paper also discusses the potentials and challenges of civil society actors' engagement into workers' collective actions.

The data of this paper is collected through triangulated sources, including interviews with workers, NGOs staff, rights-lawyers and intellectuals, participant observations in workers' collective actions, as well as documentary research.

#### *Legal Consciousness and Labour Insurgency: A Comparison Between China and the U.S.*

This paper seeks to examine the effects of legalization of labour relations on workers' insurgency in China by comparing to the 1935 Wagner Act of the U.S. Some U.S. scholars pointed out that the Wagner Act has deradicalised the U.S. labour movement by imbuing legal consciousness that built upon contractualism and private property rights into workers and by confining their actions within the legal institutes and practices (Klare 1978, 1982). Similarly, many scholars in the field of Chinese labour studies highlighted that the labour laws system is used by the party-state to channel workers' protests into bureaucratic procedures (Lee 2007; Gallagher 2007; Friedman and Lee 2010; Chen and Tang 2013). However, little is known about the grievance-diversion mechanism vested in the Chinese labour laws system. For example, how does the party-state make workers believe that the legal system can protect their interests so that many of them do not launch an insurgency? To what extent do workers trust the legal system? Under what circumstances will they bypass it?

This paper aims to fill up these gaps by analyzing how the Chinese party-state construct the legal consciousness of workers, the characteristics of this consciousness, and when and how workers would act beyond the legal consciousness. I answer these questions from two approaches. First, while not many current studies examine the Chinese labour laws from the perspective of workers, I have conducted 60 in-depth interviews with workers in the Guangdong province in order to find out the agential viewpoint on the juridico-political structures and the characteristics of their legal consciousness. Second, by comparing to the Wagner Act in the U.S., I aim to investigate the impact of this legal consciousness on labour insurgency in China and the possibility of overcoming its effects.

#### *How Parental Absence and Social Capital Influence the Psychosocial Development of Left behind Children Whose Parent(s) Work Abroad? - the Case of Yanji City, China*

As a major supplier of migrant labor, China has a large number of people who are moving from rural to urban cities and even crossing borders to search for better opportunities and wish for a better future for their families. This paper focuses on the left behind children in China whose parent(s) work abroad (LBCPWA). The reason is that these children are largely ignored in the country, and such cohort of children are encountering the crisis of care troubles within the context of globalization, which has threaten the qualities of life for this vulnerable child population.

Previous literature shows that when compared with children of non-migrant families, the psychosocial development of LBPCWA due to parental absence is mixed. Some studies indicate a significant difference between LBPCWA and children of non-migrant families, while others show identical results. In this vein, this study employs a resilience perspective that regards social capital as protective mechanism, which can buffer or mediate the impact of parental absence on the psychosocial development of LBPCWA. It adopts a quantitative research method, uses a cross-sectional survey design to collect information from a sample of 1000 LBPCWA and children of non-migrant families in Yanji city, China—an ethnic minorities area, where international migration is a common phenomenon. The findings and policy implications are discussed.

#### *The Mapping of Leisure Value in Chinese Cultural Tradition*

In the 5000-year-long history of Chinese culture, leisure culture has played an important role in passing on Confucian, Daoist, and Buddhist culture.

From ancient times to the present day, leisure, as a special cultural form, has often permeated people's lifestyles and behavioral patterns widely as a force that is direct, intimate, free, sentimental, and humanizing. Not only has leisure aided human beings in a biological sense, helping them to recover their physical strength and energy, but through meaningful leisure activities people have brought forth many beautiful fruits -- spiritual sublimation and the release of humanistic concern and creativity. This kind of wisdom helps us to realize that "the leisure life is not a privilege limited to the rich and the successful only, but a product of a carefree mind...."

But, China is entering a new historical stage: a stage of rapid changes when material wealth has been greatly increased, a stage when human beings are not

in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires.

Unfortunately, Today, traditional values of leisure have in this multivariate social transformation been mutilated more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and shopping, or with what is fashionable that the rich like to boast about.

This article attempts sort out Chinese traditional leisure culture and style from Confucianism, Buddhism and Taoism, as well to reflection on contemporary Chinese face to the confusion and difficult due to the loss of leisure value and cultural traditions.

#### *Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom*

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variegation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back' neoliberalism) differ from those found in the following 'roll-out' or embedding phase of neoliberalism implemented by Third Way Labour governments in both countries. Indeed, continuing public support in many policy areas arguably contributed to the internal crisis that provoked an adaptation of the neoliberal project. Moreover, the paper explores what has happened to public support for the welfare state following the external crisis provoked by the financial meltdown of 2008-2009: do New Zealand and British public attitudes show signs of resistance against austerity measures or do they indicate a third, 'roll-over' period of neoliberalism whereby the public accepts not only a neoliberal economic agenda but also the need for further retrenchment of the welfare state? Conclusions about the politics of social policy at the level of public opinion are drawn from a qualitative analysis of both survey data over three decades and interview/focus group conducted in New Zealand, offering both good and bad news for welfare state advocates.

#### *Lack of Universal School Education: A Potent Agent for Preservation and Propagation of Inequalities in Developing Nations*

Education is said to be a social institution that eliminates inequalities through its individual (formation of social personality, social placement, social mobility etc.) and societal (social stability, division of labour, social change etc.) functions. Multitier educational systems in developing capitalist economies like India pose challenges to its functions and marginalise masses. States run schools with school teachers in the possession of unprofessional values catalysing this phenomenon. This paper is based on a preliminary study to investigate the prevalence of unprofessional practices among school teachers. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between government and private school teachers.

#### *The School: A Nurturing PLACE for Inefficient Work Force*

The health of various social institutions is based on their value system. Some values (truth, justice, equality, humanism, tolerance, peace, etc.) are necessary for the survival of the social institutions and other are desirable (excellence, commitment, studiousness, honesty, empathy, industriousness etc.). According to Emile Durkheim, the value system is passed across generation in the school and the agent of the society for this job is the school teacher. For that he/she should be in the possession of various values. Numerous reports and studies have highlighted the prevalence of undesirable values among the school teachers. Transmission of undesirable values to the generations could lead to inefficient work force. This

paper is based on a preliminary study conducted to investigate the prevalence of undesirable values among the school teachers of Roopnagar district of the state of Punjab in India. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

#### *Generational Orders in Azerbaijan and Kyrgyzstan - Young Adults Between Independence and Interdependence*

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents' will, to support parents financially, to support them with care work or just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well by a generational and gendered order as they may be especially strong towards daughters. These strong expectations young adults are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context. Various solutions are worked out in such conflictive constellations, some being more, some being less realistic planning, and most of them maintaining the validity of an age hierarchical order. By comparing the two countries and the various groups in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

#### *Sexual Rights In The UK: The Christian Right and The*

In recent years the United Kingdom, much like other western democracies, has seen the proliferation of sexual minority rights largely through equality legislation (especially Equality Acts 2006, 2010). As a consequence many faith communities are now challenged by such legislative enactments that advance the equality, citizenship and social inclusion of sexual minorities (and heterosexuality) and prohibit discrimination in various economic and social spheres. This paper will explore attitudes and views of conservative Christian churches that have come out strongly against such developments on moral grounds and advance freedom of speech to express their vehement views. Christian Right campaigning groups are however more strident in their attitudes which have tended to have become increasingly polarized. This paper considers the key issues in the context of, firstly, the result of increasing marginalization of conservative Christians in a post-Christian environment and, secondly and relatedly, the narrative of rights and the philosophical underpinnings that they adopt in the opposition to sexual rights. The paper will also consider how such narratives also engage with religious rights that are simultaneously advanced by the Equality Acts 2006, 2010 and which generate contradictions and conflict/potential conflict between sexual and religious rights.

#### *Sidewalk Cafes: Formal and Informal Negotiation of Public and Private Space*

##### **Abstract Text Guidelines**

##### **Sidewalk Cafés:**

Formal and Informal Negotiation of Private and Public Space  
in the Creation of a Parochial Social Order

Albert Hunter

Northwestern University  
Abstract

Sidewalk cafés are a venue for exploring the intersection of public and private space in the urban environment. Drawing on the work of Duneier, Goffman, Hunter, Lofland, Sennett, Whyte, Zukin and others the research defines the way in which the transition between the public space of the sidewalk and the private space of a restaurant are symbolically negotiated and defined. The result is a new social order -- a parochial realm -- that selectively draws on and amalgamates elements of the public and private realms. In addition to the *informal* negotiation

of norms defining this space among patrons, proprietors and passers-by the research also explores more *formal* mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. We also trace the mutual impact of the two levels of informal and formal negotiations on one another. The research explores variations in these negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a "consumer" and at the formal level as a city plan commissioner.

#### *A Reflection on Social Class Differences in Australian Mothers' Experiences of Full-Time Employment and Family Life*

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers' experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, I will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the increasing demands of middle-class employment create a 'time deficit', which may deplete women's capacities to genuinely attain 'the good life', associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of 'good motherhood', regardless of a woman's social class location.

#### *Older Canadian Men's Perceptions and Experiences of Ageism in Everyday Life*

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from in-depth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogeneous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual).

Our analysis of the data revealed three key findings: **a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalized ageism.** Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalized elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of preferences for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, 'dirty old men', or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age relations.

#### *Constructing Online Identity Via Picture Sharing: Malaysian Youths' Experience with Social Networking Sites*

By taking the position that youths' identity is fluid and dynamic, this paper aims to look at the ways in which Malaysian youths construct and manage their online identities through visuals posted on popular social networking sites. A sample of 20 youths aged between 18 to 25 years old residing in urban Penang participated in this ethnographic study. Preliminary results show that these youths own sever-

al social networking sites with Instagram and Facebook being the more popular ones. While the medium may differ, the identities presented are almost the same and more importantly these visual identities feed from their offline identities. They are engaged in constant picture taking, usually using their mobiles. Uploading pictures on their social networking sites, and by extension, sharing these pictures with friends and followers online, validates their online existence. As these social networking sites can be used publicly, inviting a wider range of followers, pictures that are uploaded are managed (through a process of selection and editing) so as not to disrupt the presentation of online selves. More personal pictures are shared in closed sites among trusted friends where one can "let loose". From these preliminary results, it can be concluded that online identity construction among this group of urban Penang youths is a reflexive activity. Furthermore, the identity that is portrayed online as well as the interactions that take place through the visuals posted need to be managed well so as to ensure that the preferred identity is not disrupted.

Keywords: Online identities; social networking sites; visuals

#### *Advancing Gender Equality in Nordic Academia: Political Will and Persistent Paradoxes*

The Nordic countries – Denmark, Finland, Iceland, Norway, and Sweden – can be characterized as global leaders when it comes to overall gender equality of society (World Economic Forum, 2012). Political will to advance gender equality in academia is evidenced by the gender equality promotion that has been actively on the national policy agendas since the late 1970s-early 1980s, through various national level interventions, especially so in Finland, Norway and Sweden. Gender equality is addressed in the university legislation in Norway and Sweden, and universities are legally obliged to engage in equality planning. These three countries show the highest proportion of women on scientific boards in the European Union, approaching gender parity, and the highest proportion of women among university Vice-Chancellors in the EU (EC, 2013). Even if many key gatekeeping positions in shaping the academic and scientific landscape show greater gender equality, unequal gendered structures in academic careers prevail. If the proportion of women among full professors is used as an indicator of gender equality in academia and science, Norway and Sweden do not excel in a European comparison, having only reached the same level as the European (EU-27) countries on average, while Denmark has among the lowest, whereas Finland among the highest proportions of women among full professors within the EU. This paper interrogates the Nordic paradox of high overall gender equality in the society, political will and active policy regulation to advance gender equality in academia and science, on the one hand, and the persistent unequal gendered structures in academic careers and inequalities in resource allocation, especially in research funding, on the other. Accordingly, differences and similarities between the Nordic countries will be highlighted and discussed, along with historical developments, policy landscapes and continuing resistances to greater gender equality both within and outside academia.

#### *Artistic Valuation and Growth in the Creative Economy*

Highly elaborate valuation practices enable judgments of value on unique, constantly new artistic creations. They combine collaborative and contentious processes of agreement on aesthetic qualities with market exchanges of original works, measured in monetary units. This particular hybrid structure is an institutionally grown, historical accomplishment that fosters future growth in the consumption of aesthetic experiences.

Section 1 of the paper develops the theoretical argument, based on Luc Boltanski's "sociology of critique", Luc Karpik's "economy of singularities" and my own work on "familiar surprises". Section 2 demonstrates, in four historical vignettes, the slow historical development of judgment practices in the Visual Arts. Section 3 contrasts contemporary practices in the global art scene and its high-end market with recent online aggregations of common opinion in the creative industries, particularly OCRs (Online Consumer Reviews). Section 4 argues that both developments make it possible that total value generated by products of the global aesthetic experience economy will continue to grow.

#### *New General Unions: Trade Union Mergers and Labour Movement Renewal in Canada*

The crisis of organized labour has given rise to an extensive literature and various policy ideas for trade union renewal. One proposal has been to call for union mergers to create new types of labour organizations better equipped to conduct campaigns to increase union density and influence. Are such mergers an indication of union weakness or, if undertaken strategically, do they hold promise for a reinvigorated labour movement?

After reviewing past union mergers in selected industrial relations systems, the paper focuses on a recent new union formed out of the merger of two large private sector unions – the Canadian Auto Workers and the Communications, Energy and Paper Workers Union of Canada. The paper provides the background to the merger and offers an assessment of the possibilities for labour movement revitalization.

Objectives for the new union include the organization of non-union workers, especially in private service sectors characterized by a concentration of younger employees who make up much of the difficult to organize precariat. New organizational approaches include building union associational and community chapters. These tactics require innovative union philosophies, organization structures more appropriate to the new general unions, and political campaigns to change legislation. Having critically considered these and other ideas on reshaping unions, the paper makes more far-reaching proposals for recasting unions to advance class perspectives that can provide a counter-hegemonic political culture to that of neo-liberalism.

The paper contributes to theory and policy by arguing that an increase in the size and complexity of working-class organizations need not necessarily compromise democratic and militant worker campaigns.

The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author's involvement in research and education programs for one of the two unions involved in the formation of the new labour organization.

**HUXLEY, CHRISTOPHER\*** (Trent University, [chuxley@trentu.ca](mailto:chuxley@trentu.ca))

#### *Thirty Years of Lean Production: The Making of a New Managerial Ideology*

Employers have been implementing lean production (LP) outside of Japan for more than 30 years. This production system has been researched, debated and contested throughout this period, while the concept has been applied well beyond the automobile industry to other work environments.

The paper critically surveys the literature with an emphasis on empirical investigations of how workers, and where they have existed, unions, have responded to LP. The author was a co-investigator for one of the first longitudinal research studies of a transplant joint-venture LP automobile factory in North America.

30 years of LP allow for a comparison with three managerial ideologies discussed by Reinhard Bendix (1956, 1974): scientific management, human relations, and the communist party and trade-union sponsored "worker-activist movement" in post-Second World War East German industry. Bendix views each of these movements as both organizational and ideological. Those in authority advanced each technique as a way to improve efficiency, while simultaneously presenting the policies as having redeeming social value. Each ideology also identified a role and mission for managers.

Based on research in Canada, the United States and Mexico, the paper applies Bendix's framework to consider LP as a new managerial ideology. First, managers assert the superiority of LP, as measured by efficiency and quality of output. Second, proponents point to the success in transposing LP techniques from the Japan prototype to work organizations around the globe. Furthermore, managers of non-union and unionized enterprises alike have been able to introduce LP into their workplaces. Third, LP supporters have claimed that their system provides for skill development, increased employee participation and an enhanced quality of work life.

The paper assesses each of these three sets of claims. Finally, the paper gives consideration to how worker resistance has sometimes brought about change in the operation of LP.

#### *Social Class, Age, and Identity in Later Life*

This paper will present a comparative analysis of social class identity and age identity in later life in the context of social change. First, the paper will address gerontological approaches to class and later life alongside key theoretical approaches to identity and social change. Second, the paper will consider the methodological and data issues associated with cross-national research and review evidence, at national and cross-national levels, for a relationship between class identity and age identity. Third, the paper will present an analysis of (i) global comparative data from The International Social Survey Programme (ISSP) and (ii) changes in identity over time using the UK Citizenship Survey. Findings show relatively wide cross national differences in the salience of class and age for identity in later life. Moreover age and class identities operate independently of each other suggesting, from a relational sociology viewpoint that other forms of identity and identification need to be examined. However, overall, neither appears to be a particularly important aspect of identity. There is some evidence (in Europe at least) of a relationship between GDP and class identity lending some support to Inglehart's post materialist thesis but there is no evidence of a generational effect. Analysis of UK data suggests higher levels of class and age identity among this sample of retirees raising both methodological questions and the possibility of greater variation within samples. The paper will conclude by discussing the salience of class and age identities at national and international scales.

#### *Socio-Economic Differences in Health Trajectories Around Retirement in the USA*

There is increasing concern about possible widening inequalities in health amongst the older population. There is a growing body of work on the relationships between patterns of labour market participation in later life and health. However the results are equivocal and little has been done to explore socio-economic variations in the impact of retirement on health. To redress this data from 10 waves of the Health and Retirement study in the USA were used to analyse trajectories of poor health and retirement for different socio-economic groups. Repeated-measures logistic regression with generalised estimating equations were used to analyse data up to 7 years before and 7 years after retirement from 1992 to 2010. The results show that for the sample as a whole the prevalence of sub-optimal health increases sharply in the years before retirement, from around 16% four years before retirement to 23% at retirement. Following retirement the prevalence of poor health remains high but the rate of increase slows down. Educational differences are evident throughout the period. Those with a lower levels of education have higher rates of poor health for all years and show a more rapid increase in poor health up to and beyond retirement compared to those with higher levels of education. Four years before retirement 25% (95% CI 20.0-30.0) of those with a lower education reported poor health compared to 12% (95% CI 9.8-14.1) of those with a higher education. At retirement this had risen to 36% (95% CI 31.5-41.2) and 19% (95% CI 16.7-21.3) respectively. The analyses suggest that poor health is a main driver of retirement in the USA. Also those with lower levels of education continue to be at greater risk of poor health following retirement which might contribute to growing health inequalities in later life.

#### *Environmental Gains and Social Losses? Critical Reflections on the Sustainability Potential of Telework*

Anthropogenic climate change and its environmental and social consequences are of increasing concern worldwide. Approaches that advocate a 'greening' of current economic and social systems through technological innovation and development tend to dominate policy responses, especially in resource-intensive sectors such as transport. This position is labeled as shallow Ecological Modernisation (EM) thinking whereby technology is preceived in (over)optimistic terms, with limited evidence of challenges to contemporary growth-centric models of development, production, and consumption that cause climate change.

Work takes up a considerable portion of people's lives whilst travelling to and from work has become a key feature of everyday mobility in many development and developing countries. A significant contributor to Greenhouse Gas (GHG) emissions, transport in its current form is deemed to be unsustainable. In a Eu-

ropean context, telework - an arrangement that enables employees work from home - has been suggested as a virtual mobility option with the potential to reduce the 'consumption of distance' associated with regular commuting. Given its emphasis on the application of technology to solve environmental problems, the uncritical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impluses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

I would like to address risk governance in crime control by illustrating the development and implementation of so called "smart" CCTV systems in Germany. These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms. Since this technology is not based on the psychological or criminological analysis of deviant individuals, but on the analysis of situation and space classified as dangerous, it comes with an expansion of risk perception: everyone who is monitored by these systems is a potential risk. Hence smart CCTV can be seen as a signature of a new rational of crime control, described by scholars as situational crime prevention, new penology or neo-liberal governmentality. In this new rational, smart CCTV is seen as an efficient and effective tool for security measures. In accordance with this view both, advocates and critics of this technique draw a picture of new powers of control, that stretch from terrorism and incivilities to mass events. This vision of technology based security yet faces technological problems (how can indexical behavior be translated into software algorithms?) and the often divergent interests of prospective users (police, public transport, private enterprises). Drawing from empirical research conducted for the German FMER-funded MuViT project and the EU-funded Videosense project I want to show, that the development of smart CCTV is on the one hand part of a new rational of risk governance in crime control since it comes with a re-coding of risk and security. On the other hand its practical implications correlate with a multitude of social factors.

#### 

**HÄNZI, DENIS\*** (TU Darmstadt, [haenzi@ifs.tu-darmstadt.de](mailto:haenzi@ifs.tu-darmstadt.de))

#### 

A century ago, Max Weber concisely brought Switzerland's character as a "Wilensnation", a nation forged out of will, in a nutshell: Only on grounds of a shared belief in the unique nature of their habits and morals, the identity of the Swiss could emerge and consolidate. Based on a mythology of rural-alpine nativeness and isolation, this "belief in commonality" entails both the construction of boundaries vis-à-vis the threatening outside world and corresponding semantics of resistance. Given the recent discussions on foreign "attacks" on the Swiss banking secrecy and the increased charismatisation of the Swiss mountain guide (an idealization of the laudable Swiss) at the present time, it becomes apparent that this architecture of "Swissness" still provides important symbolic resources.

Yet, what about those Swiss who do not live on the very "Helvetic island" but are dispersed all over the globe? First, the paper aims at discerning how the "Swiss abroad" ("Auslandschweizer") is integrated into the overall imaginary of Swissness. It will be stated that the Swiss expatriate is being drawn as a distinct social figure through which, paradoxically enough, the imago of a typical Swiss character is being reproduced, yet reinforced. Second, by means of a longitudinal comparison, it will be shown that since the mid-1970s the social construction of the Swiss expatriate is, although subject to narrative alterations, relying on one basic scheme of Swissness. The paper is based on an interpretation pattern analysis of the "Auslandschweizer" as a figure constructed within editorial writings of the magazine "Schweizer Revue" (a publication of the Organization of the Swiss Abroad and the Swiss Federal Department of Foreign Affairs). The paper can shed light on the phenomenon that, even in a period for which the term "global age" has prevailed, social constructions of expatriates stay bound to historically grown, nation-specific interpretational frameworks.

#### 

Attempts to understand the "real" world drawing on theatre metaphors have a long tradition. Not only Goffman's *Presentation of Self in Everyday Life* opened respective lines of sight, already Calderón's *Gran Teatro del Mundo* implied this nexus. Again, the question of good or bad "performance" seems to be crucial in our late capitalist days: be it on the stock exchange, be it in TV-casting-shows or the context of resource allocation in the academic field. But what do we know about the reciprocal relationship of the performing arts and theories of performativity, as they experience a real boom in the wake of the performative turn?

In this presentation, it is assumed that the theatrical art world is a universe of discourse and practice *par excellence* not only allowing to observe performative phenomena and develop new theoretical approaches to performativity – but especially to shed light on the interrelationship between scientific paradigm shifts and changes regarding the fight for recognition within the field of performing arts. As will be shown, the performative turn in theater studies and sociology of art is attended by transformations of theatrical creation. Thus, the paper aims at discerning in what way this interrelation fosters a new logic of artistic recognition. Within the framework of the latter, it headmost is the mastery of "performative pirouettes" that will be awarded: Artists more and more have to assert themselves as virtuosos of a somehow "reflexive" performativity.

In order to go to the bottom of this phenomenon, two theoretical reconsiderations will be proposed: First, referring to Michel Foucault, it will be argued that one can speak of a "discursive explosion" around and apropos "performativity" within the theatrical art world, producing new forms of artistic mysteriousness. Second, drawing on Max Weber, this latter proposition will be linked to a charisma-theoretical model of artistic performativity.

Family policy in continental welfare states strongly reflected the male breadwinner model at the beginning of the 1970s. This model has become increasingly ill-suited with regard to new social structures and values. This paper studies the impact of new social needs and demands on family and care policy and politics in Germany and Switzerland. The power resources approach falls short of explaining the recent continental care policy "modernization", since the labor movement has no strong interest in care policy and the mobilization of women's organizations has remained weak. The paper argues that the politics of reform must be analyzed with a coalitional approach in a multi-dimensional policy space. Indeed, the adaptation of the male breadwinner model to new needs and values can be achieved along different paths, namely via a) the recognition of care work (recognition model), b) increased female labor market participation (working mother model) or c) an overall rebalancing of work and care for both men and women (social transformation model). Both the working mother model and the social transformation model contain elements of the social investment agenda. Each of these reform directions gives rise to different conflict lines that foster specific actor alliances.

Based on an empirical analysis of actor positions in all family policy reform processes since the 1970s, the results show that in both countries, social-liberal value alliances and cross-class alliances between employers and the left have become important drivers of the working mother model, whereas social-conservative alliances tend to advocate the recognition model. This multi-dimensionality of care policy modernization has led to sequential waves of care policy reforms in Germany and to reform stalemate in Switzerland until the end of the 1990s. Recently, social-liberal and cross-class alliances have become successful drivers of family policy, mostly in the direction of a working mother model.

*To Govern Artfully. Linking Relational Public Art to Urban Governance Toward New Forms of Civic Participation*

The paper describes preliminary results of an interdisciplinary research (involving sociologists and architects), funded by the Autonomous Region of Sardinia. The analysis focuses on the experiences of relational public art (or community art), studying the strategies that artists activate to enable citizens' engagement in the transformation of urban spaces. These strategies are able to "revitalize" models of urban governance in which participation often translates in a mere consultative process. We are facing emergent phenomena that are not only "counter-cultures", but could also feed into processes of policy formation and decision making. Indeed, the "new genre of public art", represents a new way in which citizenship is practiced: artists ask the audience to become co-actors in the construction of their works, taking in charge problems/conflicts related to urban spaces, intercepting needs and experiences of people who live in these spaces, and activating citizens' awareness of their role in the transformation of urban spaces. Starting from a background analysis of significant national and international case studies, the research focuses on Sardinian experiences activated in the urban "border areas". The aim is to investigate – through interviews to the "citizen-artists" and the other actors involved in the artistic intervention – the practices of production and consumption (active/participatory); the shared meanings of participation, politics, community, territory; the representations of the other actors; the discourses related to objectives and results; the communication strategies; the interaction with the reference contexts. The process of analysis will conclude with the production of three outputs: a "Participatory Research Laboratory" which involves artists and other actors of the urban governance (architects, sociologists, public administrators, stakeholders); an online platform containing informations (texts, video, images, georeferenced maps) about experiences we analysed and the modalities to activate similar participatory processes; a procedural tool for administrators, oriented towards a participatory territorial planning.

*Women in Men's Worlds. Strategies to Overcome Job Segregation By Gender in Six Occupations in Spain*

The sexual division of labor, the cornerstone of patriarchal society, remains in paid work. After more than 30 years of active employment policies for equality, gender segregation of work is still dominant, and is one of the significant explanatory factors in understanding the wage gap between the sexes. The research group "Women in Men's Worlds" seeks to understand the career paths of women in traditionally male occupations, because through their life stories we can analyze what factors or social actors are positive and / or negative in these processes. Specifically, we present the first results of a research project funded by the National R + D + i Spanish (MICINN-12-FEM2011-25228) which explores the career paths of women in six very male dominated professions: construction painters, car repair, repair of computers (hardware), police and security guards, airline pilots and train drivers. In-depth interviews with these women are accompanied with the vision of entrepreneurs and male workers, in order to understand the processes of change within patriarchy, and especially to identify the factors that help to foster this change.

At this point, the ongoing investigation has already developed typical career paths of women in these very masculinized jobs (Weberian ideal types). In these trajectories, patterns of training and access to employment have been central, differentiated by the business structure of each occupation. (Consider the institutional context of airline pilots, mostly working in Iberia, or of railroad engineers - all working in the state railway company). In addition to institutional context of the occupations, the human profile of the occupation, ie the type of colleagues,

bosses and clients of each occupation have also been important factors. The research also examines how work attitudes, especially reconciliation of work and personal life, are explanatory factors.

*Celebrating Multiculturalism: Multicultural Fairs and the Art of Consumption*

In countries like Spain where transnational immigration is a relatively new phenomenon, it is not uncommon the celebration of multicultural fairs and events sought to represent the cultural diversity brought by transnational immigrants. Yet, as I will show, those fairs are not so much a celebration of cultural diversity but a reification of culture and of cultural production. In this paper I will pay attention to three interrelated set of issues: first, I will analyze the (institutional) discourse behind the organization of such fairs as well as the processes through which only certain cultures are invited to participate; as I will show, the choice of cultures invited to participate reproduce the idea of otherness and alterity of immigrants in so far as the 'exotic' element (food, music, dance) seems to be a decisive aspect in defining who will and who will not participate. Second, I will examine the extent to which these fairs are organized around consumption and how the reduction of culture to a set of market commodities further contributes to reproduce the image of alterity and otherness in so far as these commodities are not integrated within the contexts where they are produced; and third, I will explore how and to what extent the fact that these fairs are organized in terms of 'national' cultures contributes to homogenize and to erase the cultural diversity within each nation-state reproducing the 19<sup>th</sup> century ideal of (culturally) homogeneous nation-states. As I will show, the way in which these fairs are organized emphasize the processes of exotization, commoditisation and homogenization of the cultural productions of immigrants to the expense of issues of citizenship and of immigrants' rights contribute to reinforce the social imaginary that regards cultural production as an impediment to full citizenship instead of viewing culture as the vehicle through which citizenship is constructed.

*Filling up Discontinuities in the Urban Landscape: Alternatives and Strategies*

The end of the so-called housing bubble with the current economic crisis is having dramatic effects in the urban landscape as construction companies have declared bankruptcy and have left many unfinished buildings and empty lots in the urban space where garbage is being accumulated while no one seems to be responsible and neighbours suffer the consequences. Thus, it is urgent to develop initiatives and alternatives that provide an answer to the deterioration not only of the urban landscape but, more importantly, to the everyday lives of the citizens who suffer the consequences of years of speculation with the urban space.

In this paper I will show the preliminary results of the research project FUTUR (Filling Up Territorial Discontinuities in the Urban Landscape) that has been carried out in the Spanish city of Burgos with the goal of promoting citizens' participation in the elaboration of proposals and alternatives that activate sustainable forms of participatory engagement for a better living in urban areas. This research is based on ethnographic fieldwork research with neighbours, independent artists and local authorities (participant observation, interviews, life stories, discussion groups) as well as archival research (year of construction/demolition, name of the constructor, original project). More specifically, in this paper I will discuss the following issues: (i) how neighbours perceive these empty spaces and abandoned buildings in terms of risks (garbage, physical injuries, gang activity, depreciation) and what alternative projects and uses they proposed; (ii) what are the intended projects developed by the local authorities in order to fill up these discontinuities; (iii) examples of successful projects developed from below. The presentation will also include a dynamic chart where I have mapped out both these territorial discontinuities or 'spaces-in-between' and the alternatives suggested by neighbours and other actors of the civil society (independent artists).

*Skills and Professional Values in Teachers and Postgraduate Students of Public and Private Universities*

Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in their field, but it will also demand to carry out this work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curricula - either as knowledge discipline or transversal axis - it is recent and even more so when it refers to specific aspects of this discipline. The research analyzes the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about devices for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of the instrument validated by Hirsch (2005) from National Autonomous University of Mexico (UNAM), about professional values; the questionnaire for the assessment of the competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according with Alcoberro, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law: it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use their transgression to save life at the expense of an unequal relationship between the physician and the patient.

*Urban Conflicts As Spaces of Politicization of Collective Action Around the City: Notes to Think the Continuities and Discontinuities of Urban Social Movements in the City of Santiago (Chile)*

Over the last 40 years the city of Santiago has experienced deep transformations, which have been linked to the implementation of neoliberal policies. Also, the city has been not only the stage, but rather the protagonist of a variety of conflicts around urban issues, such as urban growth, use and appropriation of urban spaces, environmental, demand for housing. This has been the scenario in which old and new forms of collective actions have emerged to propose new forms of appropriation and use of urban spaces, transforming the urban space into an object of political action.

In this context, this paper aims to study the processes of politicization and depoliticization that have been developed in these frameworks of action, understanding that the politicization goes beyond the mere mobilization and involves the generation of new spaces for the production of reality, in this case realities and socio-political imaginaries around the design, management, use and appropriation of urban space and urban goods. However, preliminary data analysis on urban conflicts in the city of Santiago suggest that not all collective actions around urban issues develop the same levels and types of politicization. Therefore, in this paper I will try to address the following question: what are the factors that can explain the trajectories of the process of politicization or depoliticization of collective action around urban issues? To answer this question I will study the collective actions that have been developed around the problems of access to housing, inquiring into its politicization paths from the mechanisms and strategies that develop as part of their urban struggles (configuration of their social networks, identity, organizational structure and action strategies). Finally, I will try to establish the relationship between the processes of politicization and the construction of imaginaries and collective discourses around the city and urban issues.

*Culturalism: Its Circulation In East Asia, Development and 'Clash' With Nationalism*

The paper examines the migration and development of culturalism, 'a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself' (Duara 1996) in East Asia and its supposed 'clash' with nationalism as the face of modernity. Culturalism can be seen as one of models of political communities which was in circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate,

it stimulated various intellectual responses such Kokugaku, a 'nativist' school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in China and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism's takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

*The 'Overcoming Modernity' Symposium: Modernity, Japan and East Asia*

The paper aims to address the theme of the session by using the 'Overcoming Modernity' symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as 'infamous' or even 'notorious', not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium's position as part of wartime propaganda is not denied, its contribution to Japanese political and cultural thought has been sporadically re-examined starting with Takeuchi Yoshimi's essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt at 'overcoming modernity'. He appreciated the intellectuals' concern with 'overcoming modernity' as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals' failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

*Another Way of Modernization and Sociology?: A Critical Assessment of the "Japanistic Sociology" in the 1920s and the '30s*

During the late 1920s and the early '30s there was a movement among the Japanese sociologists to establish the "Japanistic sociology" that should differ from the western sociology.

Concerning the social & international context in which this movement emerged, three points should be mentioned at least. First, in the 1920s social inequality and social conflict were more clearly recognized than before in Japan. In 1919 the Japanese Ministry of the Interior established the "social" section for social policies. There also arose a "social science" movement among the university students in the early 1920s. This was strongly affected by the Marx-Leninism, and therefore oppressed soon. Many Japanese sociologists tried to separate sociology from this kind of "social science".

Secondly, the political orthodoxy in Japan shifted its orientation gradually from the westernization to the asianism. The Japanese proposal for the racial equality was rejected at the Paris Peace Conference (1919). And the new Immigration Act of USA (1924) raised antipathy among the Japanese. These experiences made them to seek another way of modernization which they had equated simply with westernization until then.

Thirdly, after the brutal and bloody suppression of the *Samil* (March 1) Movement (1919), the Japanese Governor General of Korea changed its colonial policy from "*Budan*" (hard power) to "*Bunka*" (soft power). Also, the Japanese government tried to camouflage its colonial domination in *Manshukuo* (established in 1932) with the ideology of "mutual harmony among the 5 peoples (*Gozoku-Kyowa*)".

It was in this social & international context that the movement for the "Japanistic sociology" emerged. What was it? What kind of sociological theory can we make today from this history? This presentation considers these questions.

*Ageism and Social Integration of Older Adults in Their Neighborhoods in Israel*

**Purpose:** The paper aims to examine the extent to which ageism is connected with the social integration of older adults in their neighborhoods and to identify factors that explain social integration.

**Design and Methods:** A convenience sample that included 300 older adults aged 65 and over and 300 younger people under the age of 65 who resided in three neighborhoods in Tel-Aviv, with varied socio-economic status were interviewed. Kogan's Attitudes toward Old People scale was used to probe ageism. Social integration index included three dimensions: frequency of participation in activities in the neighborhood, familiarity with neighbors, and sense of neighborhood. Hierarchical regression analyses examined three groups of independent variables: older adults' socio-demographic characteristics, their perceived health and outdoor mobility, and neighborhoods' characteristics including level of ageism.

**Results:** Neighborhoods varied by levels of ageism and social integration. Higher level of social integration of older neighborhoods' residents was explained by a combination of factors: younger age, better self-rated health, and fewer limitations of outdoor mobility, lower levels of ageism reported by a sample of younger respondents, and higher socio-economic status of the neighborhood.

**Implications:** To enable better social integration intergenerational programs should be developed to decrease ageism and in order to make communities more age-friendly there is need to facilitate accessibility to services and public spaces

*Nurses' Attitudes Toward Migrant Care Workers In Hospitals In Israel*

**Aims.** To examine nurses' attitudes on tasks that paid carers of older patients should or should not be allowed to perform and to examine the factors that best explain nurses' attitudes towards the involvement of paid carers in providing care during the older patients' hospitalization.

**Background.** Many older patients who are hospitalized are functionally dependent and employ paid carers who perform a variety of tasks during hospitalization. Yet, this issue has been barely examined.

**Methods.** The study included a combination of qualitative and quantitative research methods.

Five key persons in two general hospitals were interviewed and 265 nurses in internal medicine and geriatric wards were surveyed.

**Results.** There were no formal policies and guidelines regarding the tasks that paid carers should be allowed to perform. The majority of nurses perceived that paid carers should be allowed to perform a variety of tasks except for professional nursing tasks. Type of hospital and ward and nurses' education were significant in explaining nurses' attitudes towards involvement of paid carers in providing care to their older care recipients.

**Conclusions.** Attitudes of nurses towards paid carers are determined mainly by local organizational characteristics and nurses' education. There is need for explicit policies and practice guidelines and their enforcement with regard to paid carers.

*Positioning and Counter-Positioning in an Institutional Setting. the Role of Children's Active Participation in Managing Conflicts*

This paper presents some videorecorded episodes of conflicts involving children and adults at school. These cases describe the multidimensionality of school community work and point to: 1) the distinctiveness of the interactional construction of the conflicts in schools; 2) the ways institutionalized organizational narratives become cultural resources for framing, scripting, and revising problems as plots; and 3) the interdependence of micro- and macro processes. The approach construes conflicts as a dynamic part of classroom social life in which personal expressions are affected by and affect teachers' and students' classroom norms of conduct. Conflicts are observed in discursive practices that interactively construct social positions and diverging/shared narratives. Drawing from work on organizational narratives, positioning theory, and conflict analysis, this presentation focuses in particular on the role of children's active participation in managing conflicts in an institutional setting.

*The Promotion of Agency in a Conflict-Affected Context. the Social Participation of Children and Adolescents in the West Bank*

One of the most challenging narratives in the past few years (and probably one of the most stimulating for the future) has been the importance of children's active participation not only in terms of having the right to say, but of the right to choose among alternatives in communication systems, i.e. in terms of practicing agency rather than simply having voice. Supporting and improving children's capabilities means promoting children's participation beyond their right to speak and to be heard, to a wider concept of active citizenship, which means contribution to the structuring of social systems. In this approach, therefore, children's capabilities assume the social form of children's agency. In other words, the idea of agency emphasizes that children can condition the actions of their interlocutors in communication with them, above all in interactions and can, in this way, transform the social structures.

This presentation tries to examine how children's agency and participation can be promoted in a conflict-affected context. With this aim the chapter conducts an evaluative analysis of a project of international cooperation developed by Oxfam Italy and the Palestinian NGO Dci/PS which is aimed to promote social participation and to raise children's rights awareness among Palestinian children and adolescents.

The analysis is conducted by drawing on theoretical and methodological concepts from recent literature on social participation, sociology of childhood and Sen's capability approach, and looking at 1. the structures that promote agency in communication processes, 2. the ways in which agency modifies the structures of communication processes. The analysis of videorecorded data permitted some conclusions about social conversion processes and factors of agency, which allow social change. Our data show that social change can be enhanced through children and adults' turns, but it is determined only in the self-organisation of a communication system.

*Acquiring a 'Right' Combination of Capital: Japanese Nouveau Elites' Capital Accumulation Trajectories for Children through International Schooling in Tokyo*

As economic globalization has been proliferated by nation-states' espousal of neo-liberal agendas, various domains of educational institutions have been internationalized and valorized globally valid forms of cultural competencies, termed 'global cultural capital' (GCC). With the rapid changes occurring in the global fields of education and business, many East Asian families and students have pursued GCC through international schooling, overseas education, and/or extra-curricular activities in order to improve and/or secure their status position in the global stratification hierarchy. However, existing research pays little attention to these families' strategies and trajectories of accumulation of not only GCC but also national cultural capital (NCC) through schooling and extra-curricular activities. By examining school choice patterns of nouveau elite families having enrolled their children in the preschool section of international schools in Tokyo, this paper examines a neglected domain of parental strategies to acquire the 'right' combination of GCC and NCC for their children through a series of school choices (e.g. preschool, primary school and secondary school sectors of international or Japanese schools). My findings reveal that Japanese nouveau elites see an embodied form of NCC (e.g. Japanese language and mannerism) as a primary resource to constitute their child's identity as cosmopolitan Japanese. Therefore, the mothers monitor their child's language acquisition and strategize to have their children acquire both GCC and NCC, which lead the families to be flexible and spontaneous in their decision-making to enroll their child in overseas schools, local Japanese school or other international schools in Tokyo. I conclude that NCC is still recognized as an important set of competencies for globally-minded elites in the context of Japan and that makes the families' capital accumulation strategies complex, flexible and stressful.

*Is It Possible to Overcome Social Gap through Coproduction?: Kashiwa's Practical Experience As a Radioactive 'Hotspot' after 3.11*

Kashiwa, a typical commuter town in the Greater Tokyo Area, is a significant urban farming area where the principle of 'local production for local consumption' is here to stay. However, Kashiwa lapsed into being the most serious 'hotspot'

within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the 'Round-table Meeting for "Kashiwan Products for the Kashiwan People" towards Security and Safety', and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childrearing years—to be engaged in that meeting. We deliberately and scientifically discussed a unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved certain results for the recovery of the reliability of local farm products.

Our primal motivation to convene the meeting was to overcome the 'gap within the local community', namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of 'choice' and 'mobility' between them. Redefining local consumers and farmers as Kashiwan citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-communication strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiwa, this presentation will discuss social 'coordination' and trust-building between people with opposite interests under the risk of uncertainty.

#### *Decision Makers and Those Affected in the Japanese Expert Community--the Fukushima Nuclear Disaster*

An aim of this presentation is to describe the great distance in risk evaluation regarding Fukushima nuclear disaster between two types of the scientific experts in Japan and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann (1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimating a seriousness of the disaster and a possibility of spreading of radio activities. In contrast some experts such as Hiroaki Koide and Tetsuji Imanaka from Kyoto University pointed a high possibility of core meltdown in the nuclear plants and warned citizens of the great dangers of the serious nuclear disaster through local or community media from the early period on. A distinction between experts and lay people which is very common in the previous risk analysis might be useless to explain this distance, because it appears within the expert communities. Therefore the author focuses on the other distinction and takes into account the diagnosis of Luhmann that the serious conflicts over the perception and evaluation of future loss between decision makers and those affected who are excluded from decision making process cross into the every functional area in the society. It implies the splitting of the scientific experts into such two unintegratable positions. To analyze this tendency in the case of Fukushima the author will focus on the different types of positionality for warning risks and dangers and will analyze the different degrees of their trust on one's own or other's controllability of the risky situations. These elements might influence their discourses at the more basic level than their differences in scientific-theoretical assumptions on a safety of nuclear plants and a nature of radio activities.

#### *How New Is the Image of Those with Dementia in 21st Century in Japan? an Analysis of TV Documentary Programs in the Nhk Data Archives*

**Introduction:** From the late 1990s to the early years of this century, a new image of people with dementia (PWD) has been promoted in Japan. The willingness of PWD to speak publicly about their thinking and desires around 2004 is considered a significant event. Afterward, their statements became a central issue in dementia care. The mass media and especially the NHK (Japan Broadcasting Cooperation), which produced television documentary programs on this subject, have promoted this trend.

The event of 2004 has been definitely important in changing the image of PWD. However, the views and wishes of PWD have been uncovered and constructed in diverse way in each field of dementia care, and the NHK has reported some outstanding care practices. The empirical exploration of this image change is an issue in sociology. How has PWD been represented before 2000s? How are previous images related to the new image? This presentation explores the presentation patterns of those with PWD in NHK TV documentary programs produced between 1980 and 2003 with using following data. **Method:** The NHK is now constructing and modifying its broadcast data archives and asking for participants to challenge some themes. As a participant, I obtained access to the video data systems for a year and created the following three types of data:

- ① a title and contents list of TV programs about dementia;
- ② documentation of the story, the contexts and scenes of each program; and
- ③ pictures of symbolic scenes in these programs.

**Results:** Two controversial descriptive patterns of the thoughts and wishes of those with PWD emerged. The first is that descriptions of these characteristics relate to problematic behaviors for caregivers. The second is that what PWD suffers think and feel are important in and of themselves and, therefore, sometimes conflict with the needs of caregivers.

#### *A Pragma-Semiotic Analysis of "Occupy Nigeria Group" Online Posts on the 2012 Fuel Subsidy Removal in Nigeria*

In response to the fuel subsidy removal by the Nigerian government on 1<sup>st</sup> January 2012, Occupy Nigeria Group, a protest movement, embarked on different mass strike actions and demonstrations including online activism. The civil resistant actions geared towards reversal of petrol pump price increase deployed certain verbal and visual means in portraying the government and its actions. Previous studies on online protest discourse in Nigeria have adopted sociolinguistic and discourse analysis approaches in examining issues of identity and self-determination with little attention paid to visual-pragmatic strategies in representing people and their actions. This paper, therefore, undertakes a pragma-semiotic investigation of "Occupy Nigeria Group" online posts on the 2012 fuel subsidy removal in Nigeria with a view to examining verbal and visual modes of representing people and their actions in the event. Seventy-five online protest posts purposively sampled from the groups' page are used to identify and categorize various pragma-semiotic elements and functions in the representations using insights from Mey's pragmatic act, Halliday's systemic functional linguistics and the semiotic theory. It is observed that the verbal mode complements the visual in projecting the demands and resistance of the group. The findings also reveal the use of various visual-pragmatic strategies such as prayer, negative labelling, humour, mockery, abuse, passionate and fierce appeal, including photo trick. This study has established some pragma-semiotic patterns in verbal-visual posts in the Nigerian online protest context. An awareness of the peculiar patterns and use is crucial to the understanding and interpretation of socio-political realities of such news events by online consumers.

#### *Comparative, Realistic, Communitarian and Public Qualities: Looking Back Michitaka Kaino's Sociology of Law*

Among Japanese socio-legal scholars, Michitaka Kaino (1908-1975) remains hidden abroad, though he is unique with comparative, realistic, communitarian and public qualities. Kaino covers the Emperor system/fascism, human rights, the courts, ownership, commons, family, sociology of law and pollution, which are titles of his eight collective works. He wrote many papers and articles in various journals and newspapers, which included opening essays to the monthly legal magazine called Horitsu Jiho. Furthermore, he invoked Western legal doctrine to solve domestic problems, presided over a public book-reading circle, represented as an attorney regional peasants who insisted upon their rights of iriai, and developed the sphere of environmental law.

Above-mentioned Kaino's qualities seemed to have characterized Japanese sociology of law to some extent. A comparative law perspective has been requisite for most Japanese socio-legal scholars. Realistic view of law in confrontation with Japanese social situation has become a matter of course. Kaino's stance to the right of iriai has been reevaluated in light of the study on the commons. In reference to the notion of "public sociology", Kaino's stance and works seem to fit "public sociology of law".

The methodology is a life history analysis, which tries to reconstruct Kaino's personal experience and life from his written records such as interviews and his biography. It is expected that a relationship between one socio-legal scholar and society would be brought into relief through this approach. Thereafter, qualities, merits and limits of Kaino's sociology of law will be considered from the point of view of global legalization.

#### *Mediating the Professional and the Amateur: Social Activism in a Post-Union Democracy*

Since the fallout of the triple disaster in March 2011, coupled with the government's pursuit of the reactivation of nuclear plants, Japan has once again become a seedbed for grassroots political activity. Various anti-nuclear rallies and demonstrations are held across Japan, and the largest of them all, the Friday Protest rally in front of the Prime Minister's Official Residence has been staged more than fifty times. Such contentious activism, especially among Japanese youth, has been quite inconceivable in the country for many years. How should we understand this development in relation to the three decades of relative silence after the end of student movements in the 1970s, which is said to have left a negative legacy by its violent disintegration? Building on the sociological studies of the protest cycles, this paper explores the concept of "abeyance" and demonstrates the working of "mediators" as key actors for social movement continuity in a post-union democracy.

*Climate Change Policy-Making Process and Reasons of Its Stagnation: Activities and Preferences of Stakeholders in Japan*

Institutional processes of making political decisions determine the range of their outcomes. The international comparative research project, the COMPON project (Comparing Climate Change Policy Networks), explores characteristics of the decision making processes in each society, based on common methods. The purpose of this presentation is to show results of the Japanese face-to-face questionnaire survey to national stakeholders and to discuss its interesting findings, especially on activities and preferences of major stakeholders.

The COMPON-Japan conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change really occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases. On preferences of domestic climate change policies, there is a cleavage over policy orientations, especially between industries and NGOs. Industries prefer a bottom-up voluntary goal setting, while NGOs prefer more institutionalized and legally goal-binding measures.

Our respondents replied the progress of climate change policies are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government's coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies. Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

*Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster*

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami.

Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan.

Community organizations for disaster management (*jishubousaikai*) are conventionally established under each residents' association (*jichikai*) or neighbourhood association (*chounaikai*). Men in their 60's and 70's, retired but active, are the main members of *jishubousaikai*. Women of the same generation also participate in activities of *jishubousaikai*, but they are seldom engaged in decision-making because of strict gender divisions of labour that characterize this generation. Younger generations with more egalitarian gender attitudes are generally not very interested in disaster management activities.

After the disaster, *jishubousaikai* managed shelters and distributed relief goods in many affected areas. The national government for the first time issued requests to each affected local governments to consider diverse needs of affected women and care-giving families in shelters; however, the requests were not recognized as important in many affected areas.

This paper investigates how age and gender interacted and shaped response processes in 2011 Tohoku Disaster though the analysis of data collected in two

studies: 1) interviews with people engaged in disaster response and recovery during the 2011 Tohoku Disaster, most of who were also affected by the disaster themselves and 2) an action research project with three *jishubousaikai*, aimed at incorporating gender and diversity sensitivity in their activities in Shizuoka Prefecture, where another gigantic Tokai Earthquake is predicted to occur.

*Gender-Based Violence Following the Great East Japan Disasters*

Research on gender-based violence following disasters remains limited in Japan. A team of researchers and advocates, who are members of the Women's Network for East Japan Disaster, conducted a case-finding study and compiled 82 unduplicated incidents of gender-based violence perpetrated in the aftermath of the Great East Japan Disasters. This presentation discusses the study's results and analyzes various manifestations of gender-based violence following the disaster.

While the majority of the reported cases ( $n=45$ ) pertained to intimate partner violence/domestic violence, the remaining 37 cases involved violence and harassment by individuals other than intimate partners. These incidents were diverse in their manifestations and situational contexts and included sexual assault, unwanted sexual contact, voyeurism, sexual harassment, ad stalking. The majority of the perpetrators were individuals whom the victims knew, as opposed to total strangers. Some of the reported cases involved sexual assault and exploitation committed by individuals who were in the position to provide assistance and protection, such as leaders of evacuation centers. Exploitation of a sense of fear and helplessness was a tactic frequently employed by perpetrators. For example, ex-partners perpetrated violence after approaching women and offering help, and disaster response personnel/volunteers exploited disaster-affected individuals. Women of all ages and in all situations are at risk of this type of exploitative violence; however, women who are single, divorced, separated, or widowed and those who have lost a place to live, job or other sources of livelihood appear particularly vulnerable to this type of violence.

This study elucidated multiple layers of vulnerabilities of women in the wake of the disaster, which stem from the pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

*Does East Asian Social Capital Bring about Beneficial Effects over Its Indigenous Cultural Constraints?*

East Asian social networks, as compared with North Americans', are often colored with their emphasis on hierarchy. In tandem with network structures, East Asian cultural context also stresses that hierarchy is essential in society, which is often modeled after traditional kinship networks. As was revealed in a book by Ikeda & Richey (2011) in Japanese cultural contexts, this hierarchical nature does affect Japanese political trust, knowledge, and participation. However, we are not certain that the case is true for other East Asian cultural contexts, i.e. the generalizability of the findings. This paper will focus on this point. Using EASS 2012 dataset (East Asia Social Survey among Japan, Korea, Taiwan, and Mainland China), we will show comparative analyses of social network and its effects on social trust, social support, and political/ social participation, especially focusing on the hierarchical nature of "Asian" social networks.

*The Factors of Japanese Female Workers' Job Quitting for Childbirth/Childrearing*

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Hakim stresses on "preferences" between work and home to explain behaviors of female workers with family responsibilities; "work-centered", "home-centered", and "adaptive". She presents the data that many of women are "adaptive" in Europe. She also points out the influences of relaxing labor market regulations

on increasing part-time work and on intermittent careers which are typical of adaptive women.

I suppose it is also important in Japan to focus on the structure of labor market as influential factors to explain the mass of women's behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as part-time and temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers' job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations.

The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their organizations and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose non-regular jobs in order to balance work with family lives.

#### *The Influence of Gabriel Tarde on the Development of Japanese Sociology in the Early Twentieth Century*

The purpose of this paper is to examine Gabriel Tarde's influence on the development of Japanese sociology in the early twentieth century. During this period, Tarde was an opinion leader of French sociology with his famous opponent, Émile Durkheim. After his death in 1904, Tarde's presence in the French academic community declined gradually, while Durkheim earned a reputation with his collaborators known as "Durkheimian school." Unlike Durkheim, a professor at the Sorbonne, Tarde did not have his own students at the Collège de France, where lectures were open for everyone. It may be one of the main reasons for Tarde's decline, as some historians of sociology think.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the Collège de France. One of Japanese sociologists who attended Tarde's course, Shotaro Yoneda (1873-1945), became the first professor of sociology at the Kyoto Imperial University. Yoneda established his sociological theory based on Tarde's "inter-psychology." In 1913, Yoneda co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Tongo Takebe (1871-1945), who also attended Tarde's course. Yoneda's earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde's idea for his "Power theory of economics," but discussed Tarde's imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde's sociology was more important in Japan than in his home country.

#### *What Is Happening in the Northern Mozambique Under the ProSavana Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia*

This paper intends to reveal what is happening in the Northern Mozambique under the ProSAVANA Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called "land grabbing", is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers?

In Mozambique, some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, ProSAVANA programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of ProSAVANA covers the Nampula, Zambezia and Niassa provinces.

The UNAC (Uniao Nacional de Camponeses) and international NGOs are claiming to stop ProSAVANA because of many problems causing from ProSAVANA and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on peasants' communities and examines how large scale land acquisition by foreign investment infringes food sovereignty of the society.

#### *Rural Cooperation in the Republic of Tatarstan(Russia):Ethnographic Case-Study*

The results of social survey (2013) in Pestrechinsky and Kukmorsky municipal areas of the Republic of Tatarstan (Russia) of such components as self-estimate of material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., draw a stable psychosocial climate of a rural area.

Mutual support is a phenomenon in modern society where personal values and disunity dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tatarstan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestrechinsky area are concentrated basically on mezolevel and in Kukmorsky area on microlevel. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business.

1. Specifics of a demographic portrait of population in Pestrechinsky area reflected on making facilities inside the house. At the same time home improvement in Kukmorsky area is connected with household needs outside the house. 2. Rural residents working on a family farm show high level of satisfaction of fulfillment of his/her reproductive capabilities. 3. Such form of rural residents' cooperation as condemnation of co-residents for not taking part in life of a rural community. 4. Life of rural people living in Pestrechinsky area is concentrated on the development of a social wellbeing while in Kukmorsky area - on personal wellbeing. None of these strategies cannot be viewed acknowledged as the best for the development of a rural society because personal welfare also constitutes social capital of the whole area.

#### *Social Networks of Rural Communities in Tatarstan: A Local Dimension*

Contemporary Russian rural society deteriorates rapidly such a feature of interpersonal relations as the ability of population to form a unique community and work together on the territory of its residing in order to reach one goal – public welfare. The level of losing of this significant social resource differs locally. Phenomenon of its losing is acknowledged by rural population itself as well as it is proved by data of social surveys. In a rural area, social networks based on the principle of simple geographic neighborhood and not tied to geographic closeness factors coincide partially so much that it is impossible to separate them from each other. In late Soviet period scientists started to connect the growing extent of network relations with institutional corruption as an inevitable effect of functioning of the economics of shortfall. Researchers of rural social networks point out that the most significant in them is 'human' dimension of interaction, not pragmatic moments, that is not from the side of benefit, equivalence of exchange. Development of a social net of familial personal ties is a feature typical for a rural resident. That is due to restricted possibilities in a rural area to have a social circle of communication. One of the types of such an interaction is residence of relatives of different generations in one rural house. Rural society has special and temporal structures. Special structure has a social dimension – the area of manipulations of one rural resident crosses the area of manipulations of other people forming social networks. Social networks represent an institute of horizontal interaction of actors that substitutes official powerful relations in many cases. In Russia network relations have been viewed as delinquent because of attempts to go beyond the given frames in solving some personal tasks.

#### *A Visual Retrospect of Istanbul's Galata Neighborhood: Pursuing the Path of Socio-Spatial Segregation*

This paper will examine the visual effects of gentrification in the historic neighborhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and conducting a new fieldwork in the neighborhood, I intend to examine the evolution of visual contrasts between physical proximity and social distance, revealing the differences and similarities concerning residential segregation and neighborhood change. Galata is a historical district which was inhabited by non-Muslim minorities until the first half of the twentieth century when these had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the "wealth tax" in 1964 and the cancellation of the residence permit for more than eight thousand Greeks. These years also represent a significant wave of migration from underdeveloped regions of southeastern Turkey towards Istanbul. These migrants have settled in the neglected and abandoned apartments mainly in Galata. In the '70s, small factories moved into the area, usually in the ground pavements, destroying the walls in order to install machines and thus worsening the condition of the buildings. Since the 2000's the dilapidated buildings are restored and the migrant population is gradually displaced and replaced firstly by the middle and then upper classes. Using the concept of territoriality, enrolling in both frames of time and space, this study aims to elaborate the interpenetration of these two structures and to identify the vernacular ways, developed by different social groups living in the district, of appropriating the same urban space.

#### *Is a Non-Violent Way of Resistance Against Violence Possible? Istanbul's Gezi Park As a Battlefield*

This paper will examine the interactions between the actors of the Gezi Park urban uprising and the Turkish state in the framework of shifting violent and non-violent strategies. The movement of peaceful, unarmed, non-violent people against the demolition of the Park was faced with violent tactics from the police force, varying from excessive use of tear gas and water cannons to plastic bullets, while streets turned into battlefields. This led to an emotional urban communing process of different political groups with different perspectives or agendas, and even "ordinary" people without any activist experience or intent, which represents a unique characteristic. The approach of the government, fostered by accusing the protesters of being "looters", has resulted in defensive, as well as new, creative, non-violent (but not always) ways of resistances such as standing still and silent in front of the police or painting stairs in rainbow colors. This study aims to elaborate the two months of resistance spreading over Turkey, from the main reasons behind it, as excessive police intervention, not merely during uprisings, but even before as discursive and political violence; which makes it one of the reasons behind the resistance. Apart from being a participatory action research, this paper will also cover discussions on violence, which was one of the main issues within the movement too.

#### *The Focus on Everyday Life As a Turn to the Human Dimension of Social Structures*

The focus on everyday life as a turn to the human dimension of social structures

If to use the metaphor of construction, we can say that the classical sociology mainly interested in architecture, leaving on the periphery of his attention the problem of the nature of the materials. This was reflected in the priority of macro sociology. Theories focusing attention to the logic of behavior not the masses and groups, but individual, emerged but they always, first of all, were in the background, secondly, do not exert any noticeable influence on the theory of macro-level.

At the end of the twentieth century, the visible turn of social science to everyday life had acquired a paradigmatic character (P.Sztompka). If to you use the construction metaphor, we can say that the sociology came to understanding that the "architectural forms" are unthinkable without careful study of the molecular structure of materials from which they are implemented. This means that the traditional division of macro and micro sociology has lost the meaning. Social system predetermines the quality of used elements, and the characteristics of the latter depends the fate of the system. In other words, the social structure is no longer regarded as something external to the people. Firstly, the social structure is understood as sustainable forms of social behavior (the theory of structuration by E. Giddens). Secondly, the social structure is regarded as socially programmed behavior of individuals (the concept of habitus by P. Bourdieu). Third, the interaction of individuals generates external emergent quality in form of social and cultural fields (situational approach by K. Lewin). Fourthly, situations of daily interaction acquire stable and predictable forms in the context of the action of macro-level institutions (Performance Theory).

#### *British Muslim Response to the Post-9/11 Uncertainties*

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on Terror and its effects have had a tremendous sociopolitical impact on the British Muslim polity. On the one hand the effects have fostered Islamophobia and the securitization of Muslims. But on the other hand, which is the focus of this paper, the aforementioned events have fostered an atmosphere where sociopolitical and religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and they identified three main ways in which the Muslim community is changing. Firstly, some Muslims are adopting a literalist reading of Islam, which is performance orientated and piety conscious. Secondly, a small number of Muslims are reading Islam in a liberal reformist way within a modern sociopolitical milieu. The group is composed of born and convert Muslims and ethnically diverse. The reformists tend to focus on human rights, women rights and the rights of the Muslim LGBT community. Finally, an increasingly large number of young Muslims are becoming politically assertive, confident, and organized. These Muslims in the main are concerned with human rights, especially of fellow Muslims. Like the literalist group, this group is composed born and convert Muslims and is also ethnically diverse. This group adheres to a mixture of reformist and literalist reading of Islam and often receives criticism from the literalists.

#### *New Technologies, Therapeutic Zones and Islamist Groups*

##### **New Technologies, Therapeutic Zones and Islamist groups**

Communication and entertainment technologies over the last decade have transformed sociopolitical activism. Ayman Al Zawahiri, in his book 'Knights Under the Prophet's Banner' states: 'We must ... get our message across to the masses and break the media siege imposed on the jihad movement ... This can be achieved through the use of the Internet'. In most cases the new technologies were first developed for military purposes and later modified for civilian use - Internet, mobile phones, and military games. However over the last two decades Islamist groups have started to use the technologies in ways that they were first intended for - build secret communication networks, attract and train new recruits. For the most part the use of these technologies, especially Internet has been well documented in academic literature, and think tank and government reports. However, there is little written about how the aforementioned technologies are used to create psychosocial environments that act as precursors to one joining and acting on behalf of Islamist groups.

In this paper I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call 'therapeutic zones', which make acquiring and acting upon extreme ideas more amenable. I consider these zones as an essential part in cultivating the desire among some individuals to acquire extreme ideas and in some cases act upon them, either with or without the involvement of Islamists. These zones are important because they are spaces where what I call militarized emotions can be cultivated and secondary trauma imparted. The emotions act as disclaimers to circumvent ethical and legal references and make Islamist explanations and solutions expectable.

#### *Significance of Agent-Based Simulation in Social System Theory*

Since the last decade of the 20th century, agent-based simulation method has been developed and becoming a powerful tool for social science. This approach has attracted attention as a new trend, which clarifies the social dynamics and complex human relations. Especially, the following is an important advantage of this approach. This simulation is performed in bottom-up and process-traceable ways, therefore we can clarify how the macroscopic form and social order are generated from the interactions of individual agents. The agents only receive a small number of constraints, each interacting autonomously in the computer space. Then we can reproduce by simulation the manner of forming the ordered whole (social system) from individual behaviors.

The advantage of agent-based simulation lies in that we can explore the micro-macro link between individual and society by a bottom-up procedure. There has been a deep division between the methodological individualism and collectivism. To bridge this division has been the most difficult work so far. Because of the emergent property of a macro level, it has been regarded as almost impossible to derive the characteristics of macro (society) from the micro (individual). In fact, while efforts to the problem of micro-macro link have been made in sociology, meaningful results have not been achieved.

In the presentation, I argue the micro-macro problem from three aspects based on the viewpoint of agent-based simulation. First is to examine the mechanism of *emergence* with reference to Schelling's "A Self-Forming Neighborhood Model." Second is *unintended consequence of action* by referring to Yamamoto's model regarding a trap of egalitarianism in the logic of social contract. Third is *mathematically unsolvable solution* with reference to Axelrod's "Tit for Tat" strategy in the iterated Prisoner's Dilemma game.

**IMAI, HEIDE\*** (Hosei University Tokyo, [heide.imai@gmx.net](mailto:heide.imai@gmx.net))

#### *Making Places for Identity: Urban Alleyways As Places of Belonging and Displacement*

This paper presents a comparative study of the *roji*, urban alleyways in Tokyo, and urban alleyways in Berlin-Mitte, which once have been part of people's personal spatial sphere and everyday life, but which have increasingly been transformed by diverse and competing interests. Marginalized through the emergence of new forms of housing and public spaces and re-appropriated by different fields, the social meaning attached to the alleyway is being re-interpreted by individuals, subcultures and new social movements to fit hybrid and multiple concepts of living and lifestyles. Focusing on the comparative cases of central Tokyo, Japan and Berlin-Mitte, Germany, drawing on ethnographic data supported by a conceptual framework derived from theories of place making and identity formation processes, this paper investigates the kind of functions the alleyways fulfilled in these cities in the past, and the qualities of urban life that have been lost or changed. Providing multiple narratives of change, the paper's main purpose is to critically reflect on the recent 'revival' of the urban alleyway, arguing that the interstitial nature of these places can be characterized as a boundary between belonging and displacement being on the hand places which are desired and needed to express local voices, thoughts and personal opinions but also places which face different forms of occupation, transformation or destruction.

In summary, conceptualising the alleyway as a contested place and sample for assessing physical, corporeal, and social relations in these processes of micro-scale place making, allows us to view the alleyway as the material expression for broader social struggles, and locus for generating, proclaiming and negotiating different cultural subjects, which are aspects of contemporary urban life. The outcomes of this study should offer more insights and alternative views to understand the potential and future of the urban alleyway in a global perspective.

#### *The Link Between Employment and Welfare and the Consequences for Social Inclusion of Non-Standard Workers*

Almost fifteen years have passed since the rising levels of inequality and insecurity became the social issues in Japan. One of the major reasons of this is clearly rooted in the limited social inclusion of non-regular workers within the institutionalized pattern of social security of livelihood and future prospects. Although the last several years witnessed some attempts of re-regulation of labor markets under the governance of the Democratic Party of Japan such as the revisions of Temporary Dispatching Work Law and Part-time Work Law, the processes and the outcomes of re-regulation appear to legitimize or even formalize the existing structure of inequalities and exclusion. The paper argues that the situation cannot be turned around unless the specific link between employment and welfare and the norms that support it is properly recognized. The link is shaped as a specific type of industrial citizenship, a set of rights and duties for employers and workers that is negotiated historically between state, firm and labor. In Japan, it was negotiated by enterprise-based labor unions prioritizing the employment security of workers with standard employment contract who are typically employed by large manufacturers. Social security system was designed to support these male bread-winners. Ironically, this citizenship – negotiated standard of social justice in a society – justifies triple inequalities that characterize the current labor markets in Japan: large firms over smaller firms, men over women, regular employment over non-regular employment with regard to the access to livelihood security and future prospects. The paper points out the necessity to overcome the standard employment centrism that produces the ironical consequences.

#### *Political Participation Patterns in Lithuania: Alienated or Active Citizens?*

Citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Political participation usually is expressed through a number of mechanisms inherent in the process of democratic government that help citizens to voice their interests, preferences and needs, and to pressure state officials to take into account their opinions. Active participation in the process of democratic governance provides ordinary citizens with a possibility to have influence on the appointment and monitoring of politicians and civil servants.

The focus of this paper is to investigate the impact of structural and individual factors on political participation patterns in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of interest in politics, political efficacy and participation in political acts? What are the factors that determine the differences between types of citizens? What are the causes and explanations of different patterns of political participation between types of citizens?

Based on the survey conducted in Lithuania in 2010 and 60 semi-structured interviews, the paper draws conclusions that three types of citizenship (active, voters, passive) may be identified according to interest in politics, political efficacy and participation in political acts. From theoretical perspectives of active traditional and monitorial citizenship, the characteristics of identified groups are mixed, because of socioeconomic and cultural conditions in Lithuania.

### RC48-788.2

#### *Support for Democracy and Citizens Participation in Lithuania: From Alienation Toward Active Citizenship*

Democracy is rather fragile, when it is based on formal democratic institutions. Support for governmental institutions and citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Citizens are free to choose a number of ways to influence the political process. However, not all modes of political participation are equal with respect to the consolidation of newly established democratic system. High levels of support for democracy and participation in conventional political acts constitute a precondition for a stable democratic system. On the other hand, other authors argue that low levels of institutional trust and participation in legal protest actions may be considered as acts of self-expression and it is not dangerous for stability of democracy.

The focus of this paper is to identify and to investigate types of citizenship in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of evaluations of democracy, trust to political institutions and participation in political acts? What are the factors that determine the differences between types of citizens? What are the causes and explanations of different patterns of satisfaction of democracy, political trust and participation between types of citizens?

Based on the survey conducted in Lithuania in 2010 and 60 semi-structured interviews, the paper draws conclusions that four types of citizens (trustful reserved, non-trustful reserved, non-trustful active, non-trustful passive) may be identified according to evaluations of democracy, institutional trust and par-

participation in political acts. From theoretical perspectives of active traditional and postmodern citizenship, the characteristics of identified groups are mixed, because of socioeconomic and cultural conditions in Lithuania

DORAY, PIERRE (Université du Québec à Montréal)

### *Vocational and Academic Effects on Gender Segregation in VET - a Three Country Comparison, Germany, Norway and Canada*

Gender segregated vocational education and training (VET) is usually attributed to gender stereotyped career choices of students at the end of junior high school. However, institutional logics may also promote gender segregation in VET. Empirical findings in German-speaking countries show that mixed-gender educational programs require higher school achievement compared to both male- and female-typed programs.

The paper investigates how institutional logics of the education system impact on the allocation of school leavers to gender-typed upper secondary (general and vocational) programs in Germany (DE), Norway (NO) and Canada (CA). We test the assumptions that (a) the more vocationalised an educational program, the more gender-typed the program (vocational effect), and that (b) mixed-gender educational programs require higher academic school achievement than gendered-typed programs (academic effect).

The three countries were selected because of their different educational policies (vocational and academic principles in DE; academic and universalistic principles in CA; NO sharing the vocational principle with DE, and the universalistic principle with CA). We use youth panel data in all three countries (DE: BIBB Transition Survey 2006; NO: Young in Norway YIN; CA: Youth in Transition Survey YITS) to analyse both the vocational and the academic effect on educational gender segregation. We apply multinomial logistic regressions for men and women separately, with gender-type of the educational program (male-typed, mixed-gender, female-typed) being the dependent variable to test our hypotheses.

Preliminary results show clear evidence for the vocational effect on educational gender segregation in all three countries, including Canada. In contrast, the academic effect on educational gender segregation is strong in Germany but relatively weak in Canada and Norway. We interpret our findings with the unique constellation of different educational principles (vocational, academic, universalistic) in each country.

### *Shrinking the Ballooning Young Precariat Class in Nigeria : The Need for Youth Empowerment*

All over the world, the debouchment of a new class has been observed with new demands for the progressive trioka of equality, liberty and fraternity. Far from being the forlorn cry for the establishment of a Marxian utopia or pantocracy, the genuine demands for egalitarianism necessitating the restructuring of economic, social and cultural capitals has become a desideratum for society's preservation. Social upheavals, civil protests and collective movements led by a determined precariat class to address social ills and worsening inequalities will continue unabated until the political and economic managers of the state capitulate to these demands. In Nigeria, the elite is already aware of the potential vituperation and precariousness of this class. Existing diurnal narrative in Nigeria is awash with the virulence and dudgeon expressed by this class. Violent crimes such as terrorism, armed banditry, carjacking, cybercrimes, human trafficking of persons, militancy and kidnapping are major highlights of the viciousness and masochism manifested by this class. Evil contrivances have become weapons for economic compensation and retribution on an insensitive elite and society. The imagery of Nigeria's future is akin to sitting on a time-bomb or walking a jagged precipice. In this paper, authors contend that the growing precariat class in Nigeria must not be ignored. Leaning on the political-economy paradigmatic thesis, they argue that the political class must reverse its natural shenanigans and rhetoric for change programmes that will impact on Nigerian youths who are simmering with rage and disenchantment. Lurking around for the right moment, this dangerous class could spell the doomsday for an already divided polity if genuine efforts are waved aside. Youth empowerment programmes must be practically rolled out soon and fast with a genuine politics of paradise built on the principles of economic security and social wellbeing to integrate this class into mainstream society.

### *Bodies-in-Design: Impairment and Embodiment in Universal Design*

#### **Bodies-in-design: impairment and embodiment in Universal Design**

Designed objects and environments are often inattentive to impairment or bodies that do not conform to particular, yet normalised, conceptions of bodily form and performance. This has resulted in a heightened awareness for a socially just design that is sensitive to the complexities of bodily actions and encounters, leading to the emergence of movements such as Universal Design. Drawing on a study on the relationships between impairment, embodiment, and design, this paper considers the diverse ways in which major exponents of universally designed products and services construct the impaired body, or the bodies for which they purport to design. Discussing data from interviews with designers in companies at the forefront of making universally designed products, we consider how the impaired body is designed into the production of various objects and environments, and how far designing for impaired corporeality is possible, and desirable, within the confines of commercially orientated organisations. As our research suggests, while Universal Design purports to design for all, the practices of designers sometimes risk falling back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

**YOSHIDA, TAKASHI** (Shizuoka University)

### *Social Stratification and the Formation of Single Parent Household in Japan*

It has been confirmed that the children who grew up in a single parenthood had many disadvantages both on educational attainment and the life course afterwards. This finding is robust in US, but recently Japanese studies have also found it repeatedly in Japan. This is to say that parental divorce limit their children's life chance, and hence reduce their children's intergenerational social mobility.

If we have concern with the intergenerational reproduction of poverty (or social stratification), we have to clarify the relationship between social attributes and the occurrence of the single parent households. We use the data of *Longitudinal Survey of Newborns in the 21st Century (2001 Cohort)* by Ministry of Health, Labour and Welfare of Japan. Respondent were randomly selected from men and women who nurture kids born either between at January 10th and 17th in 2001 or at between 10th and 17th in July 2001. Initial survey was done in 2002 and the sample size was 47,015. Afterwards, panel survey has been done for every year, except for 2007.

We set household composition at 9th survey (conducted in 2010) as basic dependent variable. As sample attrition was serious, we dealt with this sample selection bias by propensity score analysis and Heckman's two stage estimation probit model (Heckit). We found that those who did not have college or university degree, those who had married at early ages, and those who had low household income in 2002 tended to drop out from subsequent survey, but they also tended to divorce and form a single parent household in 2010. Marital relationships of those at low socioeconomic status were generally insecure and were likely to disrupt.

These findings suggest the mediating effect of divorce between parents' low educational attainment and those of their children's.

#### *Does Trust Promote Generosity?*

Both of trust and generosity have been considered as important factors to promote cooperation (Yamagishi 1998, Nesse 2001). Some researchers argue that trust plays a significant role in assessing quality and trustworthiness of unknown others. On the other hand, generosity is defined as a tendency to forgive defects or failures of partners (Exline & Baumeister 2000, McCullough 2008). However, these two cooperation promoting-traits appear to be incompatible. Trust helps us to assess partner's trustworthiness, which may lead to a withdrawal from inappropriate relationships. On the other hand, generosity helps us to forgive partner's mistakes, implying that we make a commitment in spite of partner's failures. Therefore, the question is: Are these two traits really compatible? And if so, how do we have developed these two seemingly contradicting traits?

Here, we aim to clarify the puzzling relationship between trust and generosity by using an agent-based modeling. We adopt trust game as a basic building block and then incorporate two further elements into our model. One is related to heterogeneous agents in terms of abilities to fulfill donor's expectation. The other element is related to partner choice, commitment (repeated trust games with the same partner) and an exit. Trust is thus formulated as selective strategies in the context of partner choice, whereas generosity is defined as forgiveness of partner's failures in the context of commitment relationship. We carry out the set of computer simulation experiments to assess the viability of several strategies.

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that as group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. Put it differently, there exists a coevolution mechanism of trust and generosity in our social world.

#### *Facing the Selves in the Field Research of Immigrants : From the Research Question Based on Visibility to Led through Daily Relationships*

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalized environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers' perceptions that categorized immigrants as the "aliens" visibly in the social structure, while the researchers' positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to inspect their presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships with immigrants focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghassan Hage proposed (Hage 2005). Based on my research, I experienced these approaches as transition from the former to the latter, that criticized the direct linkage between the notion of "aliens" and their visibilities by walking away from the ethnic festival to the daily relationships among return migrants from Peru, and by getting involved in a trouble of a family that shaken researcher's existence to remind me my family backgrounds as also return migrants from Korean peninsula after the colonial period. This is just one of examples to research another belonging and identity between researchers and informants. However, in the field of Japanese sociologists, there is almost separated between international sociology that focuses on structural social change and life story studies that approaches to individual meaning of life and encounters with informants so long time. This paper shows the possibility and the subject to link these studies on immigrants as one of fieldwork methodology for bridging between social theories and realities of daily life under globalization.

**INOKUCHI, HIROMITSU\*** (Daito Bunka University,  
[hiro.inokuchi@gmail.com](mailto:hiro.inokuchi@gmail.com))

#### *"Battle Hymn of Tiger Mom" As Social Capital Building*

##### **"Battle Hymn of the Tiger Mom" as Social Capital Building**

In this presentation, I explore Amy Chua's "Battle Hymn of the Tiger Mom" as an account of social capital building by a second generation Chinese American. I examine Chua's account in relation to Asian immigrant experiences, social and cultural ties, and communities in U.S. race and ethnic relations. The questions asked include: How did Chua raise her children to obtain social capital and educational opportunities in U.S. society? What were the limitations and (unintended) consequences of her strategy? How can/should we situate Chua's account in the history of Asian American social, cultural, political, and educational experiences? Does her account overcome stereotypes against Asian Americans, or those against other racial minorities?

First, I situate Chua's account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua's account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectually elite. She has very distinct idea on "success," and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua's account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents' experiences and they are very conscious not to allow their children to lose them while becoming "American."

#### JS-78.3

**INOKUCHI, HIROMITSU\*** (Daito Bunka University,

#### *Reading "Battle Hymn of Tiger Mom" As an Educational Biography*

##### **Reading "Battle Hymn of the Tiger Mom" as an Educational (and Socio-Political) Biography**

In this presentation, I explore Amy Chua's "Battle Hymn of the Tiger Mom" as a biographical account of child rearing by a second generation Chinese American. I examine Chua's account in relation to Asian immigrant experiences in the United States. The questions asked include: How does Chua tell about the ways in which she raised her children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can/should we situate Chua's biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua's account of child rearing in the context of existing quantitative and qualitative educational research on the educational achievement of Asian Americans. I review the literature on educational attainment of Asian Americans to point out the missing area is Asian Americans' self account of education at home, i.e., how they raise their children.

Second, I analyze Chua's account. Chua comes from an intellectually elite family, and she herself is also an intellectually elite. She has very distinct idea on "success," and her children are successful so far, but Chua's account also implies that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua's account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the biographical account of second-generation mothers is advantageous, as they know the ways their foreign-born parents raised their children and they are very conscious of how they raise their children.

[hiroko.inoue@email.ucr.edu](mailto:hiroko.inoue@email.ucr.edu))

#### *A Direction of Scientific Systems Approach: World-Systems Analysis and Dynamic Simulation Modeling*

The comparative world-systems approach analyzes systems of societies rather than a single society. Interaction networks in world-systems comprise systems of human societies which are bounded in space and engage in regularized interactions and exchanges. The evolutionary growth of the connections and intensified linkages through cycles and oscillations has formed increasingly larger and integrated world-systems over time. Structural globalization is thus conceptualized as an elementary trend that prevailed in the last two centuries. While the world-systems approach explains evolutionary growth of interaction networks over time, it is conscious of historical contingencies as well as spatially and temporarily specific conditions for local polities. This aspect is compatible with recently developing agent-based social science. Applying spatial agent-based simulation, the current study engages in examination of historical cases. In particular, this study focused

on the formation of large-scale polities and social complexity in East, Central, and West Asia in the middle ages. By so doing, this study examines the dynamics between local emergent processes, macro-interaction networks, and their impacts on the formation of large-scale polities and social complexity.

### *How Human Insecurity Arose Under International Peacebuilding: The Case of Timor-Leste*

This presentation explicates how new form of human security arose in Timor-Leste during the time of international statebuilding and peacebuilding.

Firstly, I draw attention to the influence of neo-liberal economic policy on people's lives. The introduction of neo-liberal economy had a detrimental impact on domestic agriculture in Timor-Leste, triggering a large-scale urbanisation as many moved to cities in search for jobs. Despite the recent economic growth, however, most of migrants from rural areas remained jobless and the poverty among the new migrants aggravated.

Secondly, I point out the impact of the failure of state-institution building on the human security condition in the country. As many have pointed out the modern state institutions had struggled to build its foundations in of the country. State was therefore yet to be fully forged to redress the poverty created by the economic policy. At the same time, it is important to note that the decline of customary form of governance had a critical impact on the quality of people's lives. While the clan-based community and its customary form of governance have provided social safety net in rural areas, the population in the urban areas lacked such supports from families and extended families. It was under such a context where a new form of human insecurity emerged.

I will close this presentation by discussing the implication of the case of Timor-Leste to the theory of international statebuilding and peacebuilding. The conventional theories have assumed that political democratisation would automatically bring about peace and security in the post-conflict society. The case of Timor-Leste, however, suggests the need to reframe the theory so that it would be able to include the complexity of political and economic modernisation and to appropriately explain the complex trajectories that the post-conflict societies might experience.

### *Towards Adequate and Accessible Psychosocial Care: A Research Working Alliance with Professionals in Treatment and Counseling*

Institutions of psychosocial care do not offer equal access to all members of society, not even to those who are entitled to such services by general health insurance. Immigrant status is associated with lower rates of use of mental health services; this likely reflects cultural and linguistic barriers to care. In the case of Germany, migrants are disproportionately highly represented among in-patients in psychiatric clinics and in compulsory treatment in forensic psychiatry; in many cases, psychosocial care therefore does not function preventively. Institutions of psychosocial care do not adequately respond to the needs of migrants and the relation between migration and mental health needs further investigation, as well as the development of cultural sensitive health care.

Psychotherapists and psychiatrists in Frankfurt am Main founded the "Intercultural Forum Migration and Psychosocial Care" in April 2010 to address these problems and work towards more adequate and accessible treatment and counseling. In some institutions there are changes in organization and leadership, more professionals with migration experience are employed and treatment is offered in different languages. In other institutions, such changes are absent or very slow. But professionals from most clinics and counseling centers take part in the "Forum" and agree that change is needed.

At the University of Applied Sciences, we are founding members of the "Forum" and take part in the ongoing plenaries and working group meetings. We are also conducting a research project on "Diversity and Inclusion in Institutions of Psychosocial Care". Students in the Master Research in Social Work attend the working groups and plenary meetings as focus groups and write ethnographic protocols on their observations. They also ask psychotherapists and psychiatrists for narrative interviews on their professional experience. In my paper, I would like to discuss the methodology, working alliances and findings of this research.

### *Vocational Education and Gendered School-to-Work Transitions in Switzerland and Japan*

The labour markets of Japan and Switzerland are significantly gender segregated. In Switzerland the seed for labour market gender segregation begins with the gendered career orientations of young school leavers. Via the Vocational education and training (VET) system and the occupational linkage of education and employment, early career aspirations are transformed into gendered employment opportunities. VET is indeed very prominent in Switzerland, where seven out of ten upper secondary graduates come from vocational programs.

But the case of Japan challenges the assumption that gender segregation is mainly due to gender segregated VET. Japan's upper secondary graduation rates figures are more than reversed from those of Switzerland with three out of four graduates having enrolled in general programmes and only one out of four in VET. Within VET, however, Japan (JP) and Switzerland (CH) show a similar distribution of upper secondary vocational graduates by field of education and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. Therefore the paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

We use comparable youth panel data for both countries to analyse our research question (JP: Youth cohort study of Japan; CH: Transitions from Education to Employment TREE). Our dependant variable is job gender concentration as measured on industry level. We apply stepwise linear regressions to analyse country specific effects of (1) junior high school variables (CH: track, marks, literacy skills; JP: position of class), (2) senior high school variables (field of VET, academic level), (3) higher education variables (field of study, short vs. long studies), (4) family background variables, and finally (5) gender on job gender concentration.

The findings allow for a critical assessment of VET's contribution to job gender segregation in different educational systems.

### *Female Employment and the Socioeconomic and Family Factors in Japan*

This study uses nationwide panel data to identify determinants of female employment in Japan. Almost 70% of women exit the labor market during marriage or childbirth and this figure remains high, especially among higher educated women (Cabinet Office 2006).

Reports indicate that whether married women work or not is explained by "Douglas-Arisawa's law," which suggests that there is a higher non-core family members' labor force participation rate in lower core income than in higher core income households. This law's validity has been proven using panel survey data in 1997 (Kawaguchi 2002), yet some reports currently indicate that Douglas-Arisawa's law is collapsing, especially among married women with less than a high school education (Manabe 2004). Furthermore, Takeuchi's (2003) study used panel data from Japanese married women aged 30 years and below and found that life events such as childbirth and child-rearing serve as restraints to employment, and that wives have not reacted to changes in their husbands' income.

This study verifies the current validity of Douglas-Arisawa's law and the determinants of women's employment in Japan.

Data obtained from the National Family Research of Japan, 2008–2011 Panel Study (NFRJ-08 Panel) were used with a dependent variable having a job dummy, where having a job = 1 and not having a job = 0. The results of logistic regression analysis shows that vocational school or university graduates would probably work than high school graduates with a lower probability of wives working if their husbands' income are higher. A short-term reduction in the husband's income did not affect the wife's probable employment; however, the youngest child's age did have an effect. Results indicate little change from Takeuchi's (2003) results and appear to maintain Douglas-Arisawa's law.

### *The Street As Urban Borderland: Micro-Geographies of Inequality and Co-Existence in Manchester and Shanghai*

The paper examines the micro-geographies of spatially divided but adjacently located and coexisting social groups (defined by place of origin, ethnicity, socioeconomic status or various other criteria) in two very different cities. It is rooted in six years of fieldwork in Shanghai, China, and several months of research-based teaching (Architecture) in Manchester, UK. The study builds on ethnographic work (namely long-term observation, visual methods and in-depth interviews) in two divided neighbourhoods, where the street acts both as a border, separating difference, and as a space of conviviality, bringing together and merging. In this way, the case study streets are established as spaces where the various barriers between the different are often patiently and persistently undone by those who live them in their everyday, just as symbolically as they are sometimes erected

by the powerful. Furthermore, the paper looks at how the formal and informal production, appropriation, transformation, use and management of street space in the case study areas of Manchester and Shanghai are linked and contribute to the formation and maintenance of multiple and hybrid social identities among members of distinct groups. The focus lies on the exploration of the street as a space which makes various types of inequality explicit, a space which is temporally, culturally, economically or, simply, physically in-between, and can thus be regarded as a type of urban borderland.

#### *Widowhood Practices Among the Edo People in Nigeria: Continuity and Change*

This is an empirical study involving both quantitative and qualitative approaches. It explores the widowhood practices among the Edo people in Nigeria which is a patriarchal society where majority of women especially those in the rural areas suffer from severe cultural constraints and inhibitions, creating an unequal relationship between men and women. The widowhood rites are often very dehumanizing to the extent that it erodes the self esteem, potentials and capabilities of women. They are made to suffer emotionally, physically and economically as they are often denied the essentials of life. In terms of their means of livelihood, a woman enjoys access to land for farm purposes when her husband is alive; but at death, she becomes vulnerable to the dictates of her late husband's relations as she is seen as part of the property to be inherited by the family. The case is made worse by the fact that in some cases no form of adjudication on her behalf ever carries any significant effect especially in the rural milieu where customary law seems to be stronger than statutory law. This is the debilitating situation facing most widows in Edo State, Nigeria, hence the need to examine the prevailing situation and proffer appropriate solutions that would help address the challenges of widowhood practices in the 21<sup>st</sup> century and beyond.

#### *The Sex Lives Of Sex Researchers*

The Sex Lives of Sex Researchers

As sexuality studies develops as a field, recent biographies feature some prominent figures. In addition to several texts on Alfred Kinsey, these biographies include those of Michel Foucault, Richard von Krafft-Ebing, Jeannette Foster Howard, the first librarian at the Kinsey Institute, and William Masters and Virginia Johnson. Some of this work is superb scholarship. Some might be considered "pathography," Joyce Carol Oates term for "the technique of emphasizing the sensational underside of its subject's life."

Pathographies of sexuality researchers spin for perversion. For example, James Miller's biography of Michel Foucault links Foucault's work to a range of unconventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portrays her as a sexually conniving secretary and delights in exposing surprising aspects of the researchers' sex life together. Historian James Jones biography of Kinsey perhaps most typifies the genre. Jones claimed that Kinsey's research was driven by his own "inner demons" which allegedly included homosexuality, masochism, and a range of sexual compulsions such as masturbating with objects inserted into his urethra.

This paper examines a number of biographies of sexuality scholars, and explores the dilemma biographers face in writing about the sex lives of these researchers. I suggest that, despite increased acceptance and even excitement about the academic study of sexuality, sexual stigma is a persistent theme in the stories about researchers themselves. Biographers use sex to frame the story, locating sex research in a brew of perverse desires and practices, and contending that the researcher's deviance colors or discredits the scholarship.

#### *Does Inequality Matter? Intergenerational Relations in European Welfare States*

Intergenerational transfers of money, time and space are important features of parent-child relationships. Previous research reveals substantial differences in intergenerational solidarity, raising the question of causes and reasons for European divergences. Apart from inequality on the micro level, meso level structures (family) as well as macro level factors are important in order to understand different support levels of giving and taking money, time and space within and also between countries. While single types of solidarity have been predominantly analysed separately, a joint analysis is still missing.

Based on the *Survey of Health, Ageing and Retirement in Europe* (SHARE), 14 European countries are analysed to measure the impact of inequality structures on functional solidarity between parents and their adult children. Multilevel analyses including micro, meso and macro levels indicate that need and opportunity structures as well as variations in family composition and cultural-contextual differences between welfare state regimes matter for intergenerational relations. Children in need get more support than better situated offspring. Simultaneously, parents with better opportunity structures help more. Furthermore, we can observe that parents in low-level service states and high poverty and income inequality countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other: children who receive time support from their parents often receive monetary help as well.

**SZYDLIK, MARC\*** (University of Zurich, [szydluk@soziologie.uzh.ch](mailto:szydluk@soziologie.uzh.ch))

#### *Money Vs. Space? Intergenerational Transfers in a Comparative Perspective*

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational coresidence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of money and space. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Using the *Survey of Health, Ageing and Retirement in Europe* (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark and Sweden parents rather offer monetary support. Furthermore, the provision of living space seems to substitute direct financial transfers.

#### *Ukrainian New Left and Grassroots Social Protests: A Thorny Way to Hegemony*

When and how the emerging radical new left in the post-Soviet societies is able to win hegemony within the rising social-economic protests mobilization? In the context of the post-Soviet 'weak civil society' the new left has a unique opportunity to use 'the primacy effect' in order to win strong position within the grassroots social protests. The prior strong position within the movement around some problem gives the privileged position compared to other political groups when the mass mobilization around it erupts. I will analyze the case of Ukrainian radical leftist student union 'Direct Action' organized in 2008 by ideological anarchists and libertarian Marxists which appeared to lead 20,000 student mobilization in over 15 Ukrainian cities against introduction of paid services in the universities in 2010 when established student NGOs were siding with the government or discovering they have no mobilization potential. However, the 'primacy effect' has its limits as not so many issues are remaining 'vacant' (because of the far right active intervention particularly) and not each issues has the same potential to destabilize the political regime. It means an increasing necessity for the post-Soviet new left to win and retain hegemony in the broad coalitions competing with other politicized and often hostile actors over non-politicized masses. Analyzing the case of highly successful 'Save Old Kiev' initiative against the privatization of public space, established in 2007 with the dominance of the new left groups coalition but where the

far right has ultimately won hegemony, I will show the process of 'double instrumentalization': participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

#### *An Analysis of Imagined Boundary of the "Japanese": Results from an Internet Survey in Japan*

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the "Japanese" among Japanese people.

There is a legal definition of the Japanese, that is, the Japanese is the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or "real Japanese") and non-Japanese may vary from person to person according to their experiences and social status. Especially, judgment in terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people's imagined boundary and definition of the "Japanese" in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical combination of conditions relevant to national identity, i.e., nationality, resident, blood, and language, and asked respondents to judge whether a person who has a certain combination of conditions is regarded as the "Japanese" or not.

By using this data, we can capture a person's imagined boundary of "Japanese" as a set theoretic diagram, and a person's imagined definition as a Boolean algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

#### *Income Inequality and Relative Deprivation: A Formal Theoretic View*

In a time of increase of inequality, does people's frustration or feelings of deprivation rise? If it is yes, how do theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals?

This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhaki's previous works. Yitzhaki (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gini's inequality coefficient.

In this paper, especially, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people's relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

**ISHIDA, KENJI\*** (The University of Tokyo, [kishidar@gmail.com](mailto:kishidar@gmail.com))

#### *Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure*

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990's. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market today. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Heckman's two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Secondly, however, male job changers with 'weak ties' get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where workers may lose their human capital and be put under uncertainty about their career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network's aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

#### *Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball*

As the result of globalization of a sport, the border crossings of athlete are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has evolved as a professional sport connected with capital.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league.

This network had subsumed Central America-Caribbean region by 1950s and East Asia after 1990's, and has been expanding to the 'Baseball Barren', Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the 'Baseball Barren', and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it have been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as the conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of 'labor', but parts of 'consume'.

From this analysis, the word of 'Sport Labor Migration' is becoming no longer appropriate to represent the border crossings of athletes.

#### *Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children*

Raising and nurturing children is one of the most important functions of a modern family, and the emotional parent-child bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship. This study discusses the process of creating new relationships and parents' viewpoints by analyzing the narratives of parents of Japanese transgender children. Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children's problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an "as suspected" response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child's unique or queer gender identity. And in their life stories, parents tried to reconfirm or reconstruct images of their children and reconfirm their emotional ties with them.

#### *How Do Support Providers Deploy Care Workers Effectively in Japan?*

This presentation aims to develop a more effective method of deploying care workers for in-home care of aged persons. Although in Japan the government provides long-term care for aged persons who require it in accordance with the Long-Term Care Insurance Law (Kaigo Hoken Ho), aged persons do not always find compatible care workers. This is not only because of the shortage of care

workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing compatible care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers.

To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford.

These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

**ISHIKAWA, EUNICE\*** (Shizuoka University of Art and Culture, [suaceunice@gmail.com](mailto:suaceunice@gmail.com))

### *The Education of Young Brazilians in Japan*

Currently (2011), the Brazilian population in Japan totals 210,032. Of that total 46,855 (22%) are under 20 years old, and 24,061 (11%) under 10 years old. From these data, we can conclude that many of these children attend, or have attended, school in Japan. Compared to the Japanese-Brazilian adults living in Japan, their children learn the Japanese language much more easily and quickly. Many of these children start their education in Japanese kindergartens, and then most of them continue studying in Japanese schools. Some advance to the university level. However, even if they speak the Japanese language, most of them have problems keeping up with the regular disciplines. The main reason is that they don't have the background the other Japanese children have. Additionally, they don't have their parents' help with their studies at home since most of the Brazilian parents are not fluent in the Japanese language. Another issue to be considered is that in Japan, education is mandatory for children under 15 years old who are citizens, but optional for foreigners. One problem here is how Japanese society views foreigners. For the Japanese, the Japanese-Brazilians are temporary foreign workers who will leave Japan after a finite period of time. The result is that the Japanese-Brazilians are dealt with as visitors, and this feeling extends to the children. This treatment negatively affects any policy regarding the education of foreign children in Japan. The prospect for Japanese-Brazilian children in the future depends on where they settle. Lacking a higher education a large number of Brazilian children experience difficulties with stability and ascension in both Japanese and Brazilian societies. In this paper I will focus on cases of young Brazilians raised in Japan who were successful in obtaining a higher education in Japanese universities, although they are currently the minority.

### *Volunteerism among Mexican Youth in the US: The Role of Family Capital*

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation theory, first generation Mexican immigrant youth are found to be more likely to engage in volunteerism compared to their third+ generation counterparts. This difference is most pronounced at the lower end of the family income spectrum. The study also analyzes the effects of components of family capital, family income and parental education, on youth volunteerism. Family income and parental education both have a positive effect on volunteerism, but the former is associated with volunteerism of any frequency and the latter with regular volunteerism.

### *Violence and Education in Judo Practices : A Comparison of France and Japan*

In this presentation, I examine the relationship between education and violence through judo practices of children in Japan and France. Judo originated in Japan but it is not anymore popular there. While the population of judo players is less than 200 thousands in Japan, it is almost 600 thousands in France where the national population is two times less than that of Japan. In order to compare the judo practices in these two countries, first of all, I examine the recent debates in Japan on the violence related to judo and on the ideas of judo as education (Matsubara 2013; Uchida 2013; Yamaguchi 2013). Then I take French examples with the data collected from my interviews to French judo coaches especially at a Brittany region and my fieldworks at a judo club in a Paris suburb, infamous for a poor and dangerous area. From my ethnographic research at this area, I found the social boundary in the area and that it was closely related to the order of violence there (Iso 2013). The children of the club learn the values and the morals that are not common in the area but are more extensively in France in practicing judo. The judo practice in the club is common to others in France. Contrary to France where the judo practices are oriented to avoid any violence and they are often considered as education, judo and judo players are often considered as violent in Japan but the Japanese educational policy has believed the educational

values of judo. Such policy has caused mortal accidents at public schools every year in Japan. I examine why the judo practices are so different in these two countries in regard to education and violence.

### *Habermas' Discourse Theory and the Concept of Public Sphere*

The aim of this paper is to clarify the concept of Jürgen Habermas' public sphere in his book, *Between Facts and Norms*, especially focusing on his perspective and method.

In this book, discourse theory is formulated with "D: Just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses." However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere "is a warning system with sensors that, though unspecialized, are sensitive throughout society" and "can best be described as a network for communicating information and points of view."

Some existing discussion found that Habermas succeeds to use a theoretical technique, called *conversion of perspective and shift the level of a reference in The Theory of Communicative Action*. However this paper points out that Habermas already uses similar techniques in *Between Facts and Norms*. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, such as politics and law, one of focusing point is a public sphere. Finally, we think on the feasibility of the concept of Habermas' public sphere as an analytical tool of actual problems.

### *Towards a New Understanding of Movement Outcomes and Industry Creation: The U. S. Environmental Movement and the Development of the U. S. Wind Energy Industry*

Using an illustration of the relationship between the U.S. environmental movement and the U.S. wind energy industry, I develop a theory for understanding the relationship between social movements and their economic outcomes. Synthesizing the social movement theory of political process with the economic theory of social structure of accumulation, I argue that social movements become more and less important to industry creation based on the intersection of their place in the cycle of contention with the industry's position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four distinct propositions to further clarify this theory. First, during times when economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become less important and the macro political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

### *Re-Thinking of Community Based Pre-Disaster Activities; The Problem of Social Divisions in the Case of Japan*

As the lessons learned about local initiative of disaster preparedness, this paper will be re-thinking the role of local community mainly focusing on the case of Japan recent two decades and especially based on the original research findings about neighborhood association "chonai-kai" and "making secure-and-safe community activity" after the Great Kobe Earthquake of 1995. The questions are 1) why and how previous disasters and terrorism have changed local communities' disaster preparedness and risk perception nationwide, 2) how the local office promoted risk mitigation at the level of local community and 3) whether they worked out or not during the tsunami disaster efficiently.

The findings are below. The lessons from Kobe are that 1) the local communities are one of the best social capitals which are worked as emergent aiding and caring system each other and so 2) the construction of "chonai-kai" based disaster preparedness have become main important program of the disaster planning nationwide. For the "chonai-kai", the problem of risk became more and more main

subject of their activities. 3) This trend was connected to nationwide anxiety and "making secure-and-safe community activity" after terrorism using chemical substance by cult in 1995 Japan. But 4) the initiative of the activities is not belong to "chonai-kai" or local community itself and 5) the social division within local community itself is the problem such as the isolation of disabled people or other minorities, which the Tsunami disaster revealed in 2011. This problem is evident in the case of unequal gender/ethnic relationships in communities and reflected in the local pre-disaster preparedness.

The discussion is 1) how the disaster studies take up the problem of social division in the theme of local community at global level and 2) how the relationships of the nations and local citizens in the disaster planning should be.

### *The Role of Japanese Public Health Nurses' Activities As Post-Disaster Assistance*

This paper will examine about the construction of disaster resilient local community based on multiple social networks through the cases of public health nurse activity in the tsunami devastated area.

The questions of this paper are 1) why and how the professional ability of public health nurse are efficient at the post-disaster time and 2) how it is different from volunteer activities such as non-specialized NPOs or neighborhood disaster prevent associations at the community base.

This paper is based mainly on the findings of my own interview with public health nurses of Ohtsuchi-town which located in south of Iwate prefecture and detailed survey on the public health reports about the disaster assistance. The findings are that 1) their activities are focusing on informal care and long-term support for community re-construction as well as official nursing services in the shelter right after the disaster, 2) their professional skills were especially effective in case they conducted their research about the health status for all surviving citizens in the area by using nationwide public health nurse human-resource network. And 3) they can support efficiently the destroyed local public office because they have been long working there and knowing in detail about clients and their community. It is important significantly different from other non-professionalized volunteers that 4) they have professional skills and a long year experiences of local community based caring and they have a variety of wide networks all over Japan.

I will discuss about collaboration of public health services with other local institutions, NPOs, volunteers and organizations for disaster vulnerable people such as elderly women. Japanese public health nurse activities is one of the best examples of post-disaster assistance system which has been uniquely rooted in local communities culturally and historically.

### *What the Ubiquitous Network Society Brings in Japan: Influences of the Mobile Internet Devices on Teenagers*

Advanced technologies sometimes corrode social institutions. "Act on Development of an Environment that Provides Safe and Secure Internet Use for Young People" is a Japanese law which binds every parent to set up mobile web filtering on the mobile phone of her/his child to block "harmful" information in cyberspace. However, recent prevalence of smart phones and hotspots in Japan is spoiling this protection.

In this paper we want to describe current trends of the Internet use among Japanese schoolchildren based on several surveys we exercised in 2010 - 2013 in Gunma prefecture. The results show that many teenagers use their mobile Internet devices in a quite unguarded manner. For example, 20% of high school girls answered our questionnaire that they had met someone they had come to know through the Internet.

We are convinced that, basically, teenagers are exposed to three types of different risks. The first risk is caused by the fact that they are connected directly with the outer world, where evil adults (or non-adults) are waiting for their victims. This risk contains cyber-crimes such as enticement, deception or false billing. Another risk comes from the situation in which the teenagers are connected online with themselves. Cyber-bullying, or cyber-troubles are getting serious because they happen where neither teachers nor their parents can observe. The last risk comes from the recent convenient condition of the ubiquitous network. Schoolchildren are exposed to the risk of addiction to the Internet activities, such as online games, blogs, SNSs, live-chatting or online-shopping.

We want to illustrate what Japanese teachers or parents suffer from and what we should do in order to protect schoolchildren. We don't think we can prevent teenagers from connecting with the web, therefore, at last we have to teach them how to adapt themselves to the coming digital age.

*Transformation of Relationship in the Second Modernity in Japan  
 in Comparison with the Theory of Reflexive Modernization*

The aim of this report is to examine how far the theory reflexive modernization can be applied to the Japanese society today.

Examining titles of books and headlines in Asahi-newspaper, we see abrupt increase of the word of 'relationships (Tsunagari)' and 'ties (Kizuna)' in and after 2011, when the big earthquake occurred. Precise examination leads us to other finding that since 2007 the number of these words began to increase and that the word of relationships mostly relates to family or community. Moreover, in 2007 a new word 'activity to get married (Konkatsu)' was coined and since then the word has got popularity. These suggest surge of interest in how to create or keep relationship in family or neighborhood. These phenomena to seek relationship actively seem to correspond with the theory of 'pure relationship' by A.Giddens or of individualization by U.Beck at a glance.

However, there are data which are contrary to their theories. If we focus on family relationship, since about 2000 we see tendencies that people regard family relationship as more important than before. First, people try to stop postponing formation of the family, which is not successful though. Second, they try to keep the family relationship; they support the idea that one should keep the family relationship, even if one becomes to dislike his or her partner, which are contrary to Giddens's theory. Third, more people tend to support the normal family; registered marriage and the family consisting of a husband, a wife and their children. While Western societies are experiencing the diversifying of lifestyles in intimate sphere, Japanese society is experiencing the re-institutionalization of family on people's consciousness.

In conclusion, although the theory of reflexive modernization is a useful tool to research Japanese society, we should re-theorize it from our differences.

*Expansion of Secondary Education in a Transition Economy: The  
 Case of Vietnam*

This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialistic economy to a market-based one. Influenced by this drastic transition of economy, people's aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school now is stagnating, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization policy of secondary education introduced a number of private high schools with weak management bases. They provided temporary bases for people's aspiration to go to high schools, but could not be continued due to lack of strong management strategies. Secondly, the development of the labor market could not keep up with the rapid increase of the newly produced labor force, high school graduates. People began to realize that only having a higher secondary education diploma was not enough to have a stable job in the metropolises, but was also too much education to work as part of the manual labor force in factories. In conclusion, this paper forecasts the future of post rapid expansion of secondary education in the first two decade of the transition economy.

*The Development of "Personal Services" Policy and Its Impacts on  
 Migrant Labor in France: A Study of Regularization Campaign for  
 Undocumented Migrant Domestic Workers*

This paper will focus on the development of "personal services (services à la personne)" policy led by the French State and its impacts on the working conditions of migrant domestic/care workers. Launched by the "Borloo Plan" in 2005, the "personal services" policy aims at creating new jobs in the household economy sector, largely dominated by informal employment practices. Given that many of the undocumented migrant domestic and care workers provide undeclared work and thereby constitute a large part of this underground economy, it would be of interest to see the consequences of this policy on their status. Discussions will be based on a study of regularization campaign for undocumented migrant

domestic workers conducted in the Parisian region, with a special focus on Filipino workers.

*Experiences of Difficulties Faced By Hikikomori People within  
 Everyday-Life: From the Perspective of View of Intimacy*

This paper aims to describe the experiences of difficulties faced by the withdrawal of youth from society known as hikikomori people in Japan. This paper is based on fieldwork data and narratives of hikikomori people in self-support group in Kobe. This self-support group organizes peer supporters with their edge of experiences, and provides support to hikikomori people as the person concerned (Tojisha). This paper analyzes their narratives from the approach of life-history analysis. In Japan, hikikomori phenomenon has been problematized since the 1990s. According to research conducted by the Cabinet Office in 2010, the population of hikikomori (age range 15-39), is estimated 696 thousand (comprising 1.79% of the total population of Japan). In this survey, hikikomori is defined as "people who predominantly stay at home for more than six months, other than for household work, child-care, schizophrenia or physical illness." Therefore, hikikomori has been referred to as problems of psychology and requires psychiatric treatment. Moreover, hikikomori has been also identified as problems related to Japanese education and employment systems. However, experiences of difficulties faced by hikikomori people are more complex. In fact, on their narratives, they address the various issues which they face in their daily lives. When talking experiences by hikikomori, they talk about various categories of human relations. In particular, their narratives on difficulties are often associated with intimate relationships, gender, sexuality and the other. For example, a hikikomori parson said "I am troubled about how to interact with other people familiarly." Thus, this paper focuses on the intimacy of human relationships within their everyday-life experiences. Through this analysis, I argue that the experiences of difficulties faced by hikikomori people not only reflect instability of employment of youth but also related to the anxiety and uncertainty concerning their intimate relationships.

*Embodiment Experiences of Women with Disabilities in  
 Yogyakarta, Indonesia*

**Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia**

**Abstract**

This paper explores the changing embodiment experiences of new disabled women after the 2006 earthquake disaster in Bantul district, Yogyakarta province, Indonesia. As a consequence of the disaster, thousands of people lose their parts of their bodies and become disabled. Not only they faced psychological suffering and trauma caused by the earthquake but also they should deal with many challenges in order to survive in their subsequent lives. Their properties were vanished and the situation was exacerbated by their work inability as a result of their impairment. They have been adapting to improper environment situation such as inappropriate facilities that hinder their mobilities. This situation even worse for new women with disabilities because they have not only to struggle for daily needs, they also have to challenge multiple oppression because they are disabled, because they are women and because they are poor and do not have ability to work. They also have been experiencing changing embodiment. After the disaster they lose their dignity and have to adapt to their new embodiment experiences. They have to follow procedures of medicalization to their physical disabilities in order to close with normality and should involve in some programs such as work skills from government and NGOs. This paper deal with ethnographic approach of the personal experiences of 5 new disabled women in comparing embodiment experiences before and after become disabled. This paper also discloses the embodiment process after 5 years of disaster and how those women with disabilities exercise their bodies to mainstream disabilities in their families and neighbourhoods.

*The Impact of Inequality on Subjective Well-Being*

One of the most debated questions in happiness studies is whether or not there is a relationship between income and life satisfaction. The evidence is rather mixed (Easterlin, 1974; Hagerty and Venhooven, 2003). This study attempts to give an answer as well, using preliminary data from the European Survey on In-

come and Living Conditions (EU-SILC), which contains a very good measure of income and several indicators on subjective well-being (overall life satisfaction, meaning of life, positive and negative affects). Multilevel regression is employed as a method, in order to study the impact of country level variables, especially related to income distribution, and the differences between European societies. The hypothesis is that inequality may be the missing link between GDP and subjective well-being.

#### *'Tolerance' Frame As a Hindrance to Effective Public/Authorities Feedback in Belarus*

The report is going to consider 'tolerance' as a misconception and an ideological frame. A critical assessment will be done of tolerance on the part of Belarusian people.

It is going to be shown that a) tolerance as an invariably beneficent trait of the Belarusian people is quite mistaken, b) that the 'tolerance' frame interferes with democratic governance principles as accepted and practiced worldwide, c) that responses to public dissatisfaction (part and parcel of normal governance systems) in Belarus are complicated due to persistence of the 'tolerance' frame; and d) that for the more fortunate and sustainable democratic outcomes in Belarus a regular public/authority feedback should be restored by getting rid of 'tolerance' as part of the ideological apparatus.

The idea of this paper concerns 'tolerance' as it enters democratic governance schemes and might be leading to their malfunction. The word tolerance is widely used in liberal democracies and is ascribed a positive meaning. However, it appears that tolerance is not necessarily a virtue. The word tolerance has negative connotations as it acknowledges a problem. The danger with the ideological frame 'tolerance' is that it might enter democratic governance models where it can effectively block public responses to dissatisfaction. This way, the system is incapable of conveying public dissatisfaction, and the stimulus is removed for the authorities to improve their work. This might be evident in Belarus, where people have little opportunity to convey their dissatisfaction, given that they are considered as well as consider themselves 'tolerant'. In this case, their tolerance, being mere holding on, is a potential volcano.

#### *Spatial and Temporal Structures of Inequality in the Super-Urbanized World. Flow-Structures of Glam-Capitalism and New Configurations of Inequality*

The economy and society in networked enclaves of globality – super-urbanized areas like Los Angeles, New York, Tokyo, Hong Kong, Moscow, London, Buenos Aires etc., are considered as glam-capitalism. Preconditions for new form of capitalism have been generated by virtualization of social structures. By the 2000s intensive commoditization of images had led to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being since the 1930s specific life style or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods / services must be aggressively beautiful to be intensively attractive for targeted groups. Value creation process now is related more to trends, than to brands, not only in traditional fashion industry and show business but also in high-tech and financial industries. At the century edge the 'lemon-like' stratification with dominant middle strata is replaced by the 'pear-like' bimodal stratification. Another impact of the glam-capitalism on social inequality is its temporality: with importance of access to consumer trends traditional quantitative gap between 'having more' and 'having less' is replaced by the temporal lag between 'having now' and 'having later'. Structures of glam-capitalism are characterized as flow-structures which generate coordination of participants through intensity of moves and penetrate boundaries created by traditional institutional structures and by network structures of recent decades. Emerging flow-structures reshape configuration of social inequality traditionally based on institutional regulation of access to material / symbolic resources according to social status. Three types of inequality are represented in current practices of discrimination, social conflicts, and social policies: 1) institutional inequality based on social status, 2) networked inequality based on personal identity, 3) flow-inequality based on personal mobility / creativity.

### RC09-173.7

**IVANOV, DMITRY\*** (St Petersburg State University, [dvi1967@gmail.com](mailto:dvi1967@gmail.com))

#### *The Next Transformation: From Glam-Capitalism to Alter-Capitalism*

Globalization has resulted not in the 'world society' but rather in networked enclaves of globality: New York, Tokyo, Hong Kong, Moscow, London etc. People in such enclaves experience globality through intensive flows of consumer goods, technologies, migrations, money, media-generated images (Appadurai). There capitalism has been transformed into glam-capitalism. Preconditions for glam-capitalism were created by virtualization of social structures. Hyper-reality of simulations producing copies without original (Baudrillard) is adequate model for economy of brands and networks as well as for politics of images and media.

By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that provokes shift of competitive advantages to hyper-virtuality of glamour. Being specific life style or aesthetic form, glamour becomes now newest rationality of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like 'copy left', 'open source', 'creative commons', and 'pirates' violating 'intellectual' property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

Alter-social movements reinforce functionality and competition against imagery and monopolization, and reaction of glam-capitalism to alter-social movements is initially oppression. But now glam-capitalism is absorbing cultural and social protest as corporate management adopts protesters' tactics. New management approach can be seen in practices of 'stretching' brands down, making 'open source' and 'free access' corporate business models, commercializing torrents, developing 'guerrilla marketing' etc. Creators of trends converging patterns of glam-capitalists and alter-social movements give birth to alter-capitalism as a 'post-Baudrillard' regime: capitalization on flow of originals without copies.

#### *Reforms in Higher Education in Russia: The Transition to a Market Model*

The pressure on universities to increase external sources of funding research became the global trend. This trend is consistent with the basic principle of a modern market economy - the demand of increasing the efficiency of all actors and to reduce government deficits.

In the last 20 years Russian higher education took several reforms. After 1992 many technical institutes have expanded the number of faculties and have become state universities. They were allowed to introduce tuition fees. In 2003 the special foundations, financing the first stage of innovations, were founded, including national and regional venture capital funds. The innovation activity of the universities was stimulated. In 2009 the government introduced status "research university" and began to support research universities with special mega-grants. To receive this status universities prepare projects for their research development. The amount of funds received by the university from external sources is among the indicators that are taken into account during the competition.

A detailed analysis of the problems that arise after the reforms, shows the positive and negative effects of each reform on the research activities of universities. The positive results of the reform are: the expansion of research in the universities, the emergence of new laboratories and scientific equipment update, inviting well-known scientists to carry out joint research projects. But still the main source of funding for research in universities is the state budget. There are significant restrictions on the receipt of funds for research from other sources. Limited income of the population in Russia does not allow to raise tuition fees. The economic crisis and the reluctance of the innovative entrepreneurs restrict the flow of funds from the business sector. There is also a contradiction between the development of innovation activity and basic research.

### RC49-802.7

**IVANOVA, TETYANA\*** (Sumy State University, [sociol\\_tanya@mail.ru](mailto:sociol_tanya@mail.ru))

#### *Anxiety and Social Change*

The purpose of the study: a comparative study of the correlation between the level of social anxiety, and some of the economic characteristics of the countries.

Indicators: the level of anxiety (Q83-Q84 – EVS), the level of happiness (Q3 – EVS), the level of social activity (Q5aA-N – EVS), human development index and human development rates.

High growth rates of human development level positively correlate with increased level of anxiety (0, 76) and negatively correlate with the level of happiness (-0, 51) and the level of social activity (-0, 57).

Low growth human development index are accompanied by reduced anxiety (-0, 88), high level of social activity (0, 81) and feeling of happiness (0, 71).

Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease in activity occurs in depression. Anxiety is accompanied by disappearing of emotions, interest loss, and energy reduction.

Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

**IVORY, TRISTAN\*** (Stanford University, [tivory@stanford.edu](mailto:tivory@stanford.edu))

#### *Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan*

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased immigration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of immigration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a "visible minority") and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participant observations from a 12-month period in the greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in perceived emasculating settings, priorities in partner selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant's legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

### RC06-120.2

**IVORY, TRISTAN\*** (Stanford University, [tivory@stanford.edu](mailto:tivory@stanford.edu))

#### *Marriage As a Social Resource: Distinctions Among Immigrants In Japan*

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalmijn 1993; Rosenfeld, 2001), the basic premise has remained intact (Qian and Lichter 2001; Cherlin 2004; Waters and Jimenez 2005). Research on new receiving destinations, however, has been much less conclusive about the nature and sequence of native-born/immigrant intermarriage within the process of group assimilation (Kalmijn 1998). Using interview and observational data gathered from the Sub-Saharan African population residing in the Greater Tokyo Metropolitan Region between July 2011 and August 2012, I show that marriage is substantially different across two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less instrumental mate-selection process and increases the likelihood of marriage to non native-born individuals. The segmented nature of immigrant/native-born intermarriage in Japan highlights the importance context- and country-specific factors play in understanding intermarriage and the process of group assimilation.

#### *Balinese Reactions to UNWTO's Global Code of Ethics for Tourism: A Case Study of Balinese NGO's Initiative*

This paper examines an emerging tourism-related movement in Bali, initiated by the local NGO to reform long established mass-tourism. While Bali is well-known as Indonesia's most prestigious tourism destination today, Bali's economic prosperity has been seen as resulting from the development of the tourism industry since the 1970s. However, especially after the 2002 terrorist attack, various socio-cultural, economic and environmental changes caused by modernization have come to be recognized as serious threats not only for the social stability but also for the tourism development among the Balinese. This is partly but significantly because Bali has been relying on international tourism. In other words, tourists'

fluid attitudes on culture and the environment seriously concern tourism practitioners. Consequently, although there is no unified idea and approach, introducing sustainable tourism has come to attract considerable attention especially among Balinese intellectuals, policy makers and NGOs.

A local NGO, Wisnu foundation, has launched a village tourism project called 'Bali DWE' in 2010. The project has two purposes: to promote alternative forms of tourism and to preserve the Balinese cultural heritage. In order to publicly demonstrate the necessity of reforming Balinese tourism, Wisnu foundation came up with ethical standards based on the UNWTO's Global Code of Ethics for Tourism (GCET) supported by urban intellectuals.

This paper firstly illustrates how Wisnu foundation and its collaborators identified the issues of tourism in Bali and promoted its ethical dimension by 'rearranging' the concept of tourism. The outcome of the field research reveals that although there is an apparent divergence between active villagers and urbane including NGO staffs in terms of their perspectives on tourism, preserving culture and means of livelihood, the usage of GCET is playing a certain role in uniting the participants of the project.

#### *The Impacts of Wartime Mobilization on Postwar Social Stratification in Japan: A New Direction of Quantitative Historical Research*

During the World War II, a large number of Japanese men were drafted in military service or forced to work for military factories. After WWII, they returned home from military or moved from military factories to other workplaces. This massive wartime mobilization could influence the formation of postwar social stratification system. Japanese Social Stratification and Mobility surveys, which have conducted at an interval of 10 years since 1955, have collected work history data of respondents born from 1886 to 1985. This work history data included the information on wartime experiences such as military service. So far, this information has not been utilized in Social Stratification and Mobility research. Using the data, we could reconstruct the information on at what age the respondents started military service, at what age they returned from military or in what kind of job they engaged after WWII. Life histories of respondents born from 1901 to 1925 are thought to be strongly influenced by WWII since they experienced the wartime at their active adult ages. Using 1955 and 1965 Social Stratification and Mobility surveys, this paper, first, attempts to reconstruct life history data of respondents that enable us to analyze the relations between wartime experiences and careers. The analyses of this life history data, then, reveal that there are clear age differences in wartime experiences among birth cohorts. Third, multivariate analyses of postwar occupational attainment indicate that although educational levels strongly influence patterns of occupational transitions from wartime to postwar period among people who experienced wartime mobilization in their twenties or thirties of age, father's occupations become more important in the transition period than before. Based on these results, this paper discusses the future possibilities of quantitative historical research.

#### *Who Tolerates the Use of Physical Punishment?*

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by violent ways of controlling have been reported in Japan. Before that incident, although the Fundamental Law of School Education prohibits physical punishment, public opinion generally tended to tolerate the use of physical punishment by parents in Japan. Many people think that hitting a child as a way of parenting is unavoidable in some cases. According to JGSS-2008 data, more than 60% of respondents approve the use of physical punishment by parents. Physical punishment by teachers was also more or less permitted in JGSS-2000/2001. It is now necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. This paper explores the factors of approving the use of physical punishment among Japanese adults. The results of analysis show that gender and the experience of being a subject of violence in childhood are strongly related to the attitude toward approving physical punishment. Young people who suffered violence in childhood are likely to support the use of physical punishment by parents. In addition, women whose father was perceived to ignore her in childhood are likely to support the physical punishment. The results imply that physical punishment possesses ritualistic elements among Japanese people by symbolizing intimate relationships. It is also suggested that new types of ritualistic behavior in intimate relations should be created in order to prevent serious problems by physical punishment.

*The Impact of Fukushima Daiichi Nuclear Accident on People's Attitudes Toward Nuclear Energy Policy: Silent Movement*

Multiple nationwide opinion surveys, carried out by the government (cabinet office), major media (national newspapers and NHK), the National Institute for Environmental Studies, and the Atomic Energy Society of Japan, have revealed that the Fukushima nuclear accident have heightened people's perception of disaster risks, fear of nuclear accident, and recognition of pollution, and have changed public opinion on nuclear energy policy. The gap of opinion on nuclear energy policy between specialists and lay people has widened after the disaster.

The results of Japanese General Social Survey data show that the objection to the promotion of nuclear energy is strong among females, and weaker among young males and the supporters of the LDP. This is similar to the data collected after the Chernobyl accident. Among people who live in a 70km radius of nuclear plants, those who live nearer to plants tend to evaluate nuclear disaster risks higher. Distance from nuclear plants and the perception of earthquake risk interactively correlate with the opinion on nuclear issues: among people whose evaluation of earthquake risk is low, those who live nearer to the plants are more likely to object to the abolishment of nuclear plants. It is also found that the nuclear disaster has changed not only people's attitudes but also people's behavior. People have come to try to save electricity in addition to turning off electrical equipments frequently. It has led to the 5.1% reduction of electrical demands over the previous year in 2011, and 1.0% more in 2012. The level of commitment to energy saving is found to be correlated with opinion on nuclear issues: 80% of the proponents of nuclear reactor decommissioning have tried to reduce electrical consumption. The reduction of electrical demands has been people's silent movement, that is, their manifestation towards the nuclear energy policy.

*The Apple Does NOT Fall FAR from the Tree: Offspring of Interracial Marriages in Brazil*

Starting from colonial times, Brazil has a long history of racial miscegenation. How do families structure themselves with respect to a concept of racial hierarchy? Several censuses and survey from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: "White", "Black", "Asian", "Mixed race" and "Native Brazilian". Though it is possible that some subjectivity is inherent to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards "whitening" of the population until 1991, with a slight reversal in 2000, resuming the "whitening" trend up to 2010 (the latest census). But how do offspring of interracial marriages self-report themselves? Among possible alternatives, is the race/skin color of the father or the mother the determinant factor? Is this choice affected by geographical region or social status? Is there a noticeable time trend in choices made? The study analysis data from five Brazilian censuses, between 1960 and 2010, in order to identify patterns and trends among offspring of interracial marriages.

Among exogamic couples where one of the partners is "White", this is the dominant race/skin color alternative for the offspring. When the mother is "White" the difference with respect to other alternatives is even wider, less so, when the father is "Asian". The reported proportion of "White" children increases with socio-economic status. Among "Black"/"Mixed-race" couples, the preference is for reporting "Mixed-race" offspring, with a higher proportion of "Black" if the father is also "Black".

DELLASOPPA, EMILIO (UERJ)

*Zero SUM GAME – Evolution of Violent Deaths in Brazil*

Though one can perceive an important drop in mortality rates by external causes in the last years of the 20th century and other for homicide rates in recent years for several states in Brazil, this decrease is counterbalanced by sharp increases in others. In spite (or because) of these contradictory trends, resulting global rates for the country as a whole remained basically stable since 1995 (external causes) or 2004 (homicides). The analysis covers mortality data from slightly over three decades, from 1979 to 2011, further disaggregating the information by sex and regions. Brazil's 27 states are analytically divided in five homogeneous Great Regions by the Central Statistical Office, IBGE. For the sake of comparison,

besides the crude death rate for the population as a whole, similar statistic is computed for the young adult population – those between 15 and 24 years of age, the group more affected by external causes in general and homicides in particular. In order to understand the dynamics of the process, crude rates are broken down by broad groups of death causes (natural, homicide and other external causes). Since the Southeast was the region which presented the sharpest drop, the analysis is replicated for all four states in the region to further enhance the comprehension of the process at a lower level. A seesaw effect is also perceived here with São Paulo and Rio de Janeiro presenting a strong downward trend from 2003 onwards, counterbalanced by Minas Gerais' and Espírito Santo's upward trend. Results confirm this exceptionality of the Southeast for external causes: it is the only Region that exhibit same level death rates at the extremes of the interval under study, while for Brazilian males rates increase 41% and the Northeast's almost threefold. Discrepancies are even larger for young adult males.

*A Comparative Analysis of Minority Concepts in Europe, the United States, and East Asia*

What is a minority? Who is a minority? Different understandings of minority concepts across disciplines and in different countries often cause confusion, hindering accurate recognition of minority issues and development of minority research overall. Recent increases in immigration, however, require a reexamination of the similarities and differences between minorities and immigrant in terms of their needs and rights, and policies for integrating them.

This study has two main purposes: (1) to examine the definition of a "minority" in various countries and (2) to understand minority concept differences in light of the social context and history of the minorities in each country.

Our comparative research revealed three types of minority concepts: 1) The "traditional/narrow" minority concept, in which only national, ethnic, religious, and linguistic minorities are regarded as a "minority" and wherein such people need particular protection and consideration to maintain their uniqueness as a group. This minority concept stems from Europe in the 19th century, and it has been used in Germany, Russia, and China. 2) An "extended/broad" minority concept, which extends concept 1 to include LGBT, persons with disabilities, the homeless, and others—in other words, vulnerable people with little power who have faced discrimination. This type of minority concept is used in the U.S., Japan, and South Korea, with certain differences. 3) An "unacknowledged" minority concept whereby the word "minority" is avoided on principle, an approach found in France.

The various minority concepts are analyzed particularly in the context of the collapse of the Cold War, and the possibility of reconstructing minority concepts is discussed for future research along with an analytic framework for minority issues.

*Reconsidering the Traditional Postpartum Practices of Laos from Women's Experience*

The traditional postpartum practice that keeps mothers body warm for a certain period after childbirth is still practiced throughout the Southeast Asia and has been performed in Laos usually as well. As the biomedicine penetrated into Laos, such traditional practice has been often considered as a "bad custom" which injures women's health. However, it must be said that this is partial and insufficient recognition which comes from overlooking the experiences of women who have actually practiced it. This presentation attempts to describe the postpartum practice called "yu fai" in Laos through the viewpoints of Lao women. These perspectives were suggested from interview survey which was conducted to 25 Lao women who have given birth, and it shows the following points. Yu fai is a process of caring a postpartum vulnerable body to make it recover to be able to do daily activities through performing a set of practices such as; lying by the fire, following food restriction, taking hot baths and drinking hot drinks. Interestingly enough, while their practices are generally oriented by a customary framework as a whole, the remarkable differences appeared in each individual way and the time period of yu fai. Through the experiences of monitoring and caring their bodies cautiously during a period of yu fai, women acquire individual knowledge about their own body's characteristics, and they can reconstitute their body perceptions and ways and period of yu fai based on their realization. Such differences are reproduced through the women's knowledge based on experiences of practicing yu fai by themselves. From examining above findings, this presentation tries to approach the aspect of yu fai as dynamic practice to care postpartum body based on women's individual experiences and knowledge.

*Japanese Single Fathers' Role Performance and Resources in Family and Work*

In this study, interviews with single fathers were conducted in a semi-structured way, and the balancing of their roles as fathers and workers was investigated. The sampling number was ten and all the samples were single fathers living in urban areas with a child or children aged under 18. The sampling was carried out by network-sampling through two NPO supporting single fathers. All the collected data were divided into two groups depending on whether or not the samples lived with parents able to share the burden of child-raising, and the data were analyzed with the constant comparative method. The results showed that housework and child-rearing skills are required as necessary resources at home, and all the fathers who lived independently of their parents have acquired these skills. The need for these two skills decreases slightly in the case of those living together with their parents, although these fathers have concerns about declining support from their father and/or mother. In terms of career roles, fathers living apart from their parents focus on advanced scheduling in order to receive maximum support from their parents as well as from the public, and therefore a work environment that facilitates making advanced schedules is an important resource for them. On the other hand, fathers who share the burden of child-raising with their parents pay attention to the politics of the work environment so as to gain an understanding of their coworkers in order to fulfill their parental roles. Finally, for both groups, the sense of a single father and management skills to create suitable conditions for child-rearing are essential in order to accomplish their roles as both a worker and a parent. In addition, it was found that a single father has a unique identity structured by family role, work role, and masculinities.

**IWATA, MIHO\*** (University of Connecticut, [miho.iwata@uconn.edu](mailto:miho.iwata@uconn.edu))

*Social Structure, Race, and Racial Relations in Japan*

Literature on racialization processes has predominantly examined the Western societal contexts and societies where high levels of racial/ethnic diversity and conflicts existed, such as the U.S., Europe, Brazil and South Africa. These studies have identified that social institutions, ideologies, and social interactions together shape, legitimize and thus perpetuate systemic racial inequality by classifying individuals as 'whites' and 'non-whites.' Yet, theoretically grounded studies on racialization in other societies have been limited; we know little about if and how structural forces affect racial hierarchy and meanings in other social contexts. This study highlights the intricate relationship between social structure and historical development of the concept of race and subsequent racialization processes in Japan, using semi-structured interviews of foreign residents in Japan and Japanese individuals. It shows how the state, its structural positioning, cultural representations, and dominant discourses of different foreigner groups together condition Japanese individuals' understanding of race, racial hierarchy, and their position within the hierarchy. The concept of race in Japan denotes a combination of phenotype, nationality, and cultural desirability internalized among Japanese individuals. Following this conceptualization, Japanese is understood to be a distinct racial group while foreign migrants become marginalized differently based on their perceived racial statuses. This study also highlights the salience of structural forces in creating and maintaining the significance of race, racial meanings and hierarchy, similar to the racialization processes documented in previous studies; since the ideology of homogeneous Japan and importance of maintaining social boundaries have been heavily embedded in the structure, there is a limited opportunity for social integration, which perpetuates the rigid racial boundaries. Thus, it provides deeper understanding of the effects of racially biased structure in perpetuating and even fostering racist acts and attitudes, which is imperative in bringing about positive changes to alleviate the increasing racial tension and conflicts in Japan.

**IYALL SMITH, KERI\*** (Suffolk University, [kiyallsmith@suffolk.edu](mailto:kiyallsmith@suffolk.edu))

*Indigenous Populations Achieving Human Rights in the Global South?*

The adoption of the UN Declaration on the Rights of Indigenous Peoples has resulted in enthusiasm for the potential it provides and skepticism surrounding the limitations of the Declaration (Anaya 2009, Schulte-Tenckhoff 2012, Watson and Venne 2012, Xanthaki 2010). While there remains much to be skeptical about, including continued human rights violations, little or no legal standing to demand human rights, and a state-centric model of protection and provision of human rights, unexpected victories are emerging.

In previous work I have looked at the claims of indigenous groups and responses at the local, global, and international levels (Iyall Smith 2011). These cases focused on cases in the global north, including Greenland and the Makah tribe in the US. In this paper I will look particularly at cases in the global south, which may present greater opportunities for success for indigenous peoples than discovered in the global north. Again I will examine indigenous rights within global organizations (focusing on issues emerging from the global south), regional organizations (focusing on regional organizations within the global south including the Inter-American System and the African Commission), and local contexts (cases to be identified, including the Miskito one million acres land claim in Honduras). While the global south is very much a part of the neoliberal political and economic system, some areas have managed to create progressive policies that elevate human rights. The extent to which these policies are enforced is also important to consider. Previous examinations of the UNDRIP and the implications for the global south identify strong potentials for the enforcement of rights (Hall and Fenelon 2009 and Rodríguez-Pinero 2011) and also points of conflict (Murray 2011). With this paper I hope to analyze additional cases to shine more light on indigenous peoples' potential for living human rights within the global south.

*Catholic Faith-Based Filipino Organizations in Japan*

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipino to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong. Discussion of this paper is partly based on an author's three year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagapay Oita Filipino Associations or KOFA. A reflexive account, this paper narrates the experiences of the organization as it tries to cultivate a "space" in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

[pjabko@amu.edu.pl](mailto:pjabko@amu.edu.pl))

*Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias By Using the Propensity Score Adjustment?*

The main goal of this presentation is to find out whether the refuses to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation.

Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood to refuse is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsuo et al. 2010, Lee 2006). This procedure is normally based on the logistic regression, but I will demonstrate the usefulness of a credit-scoring model for such purposes. In fact it is also based on logistic regression, but it helps to choose the relevant set of predictors as well as to illustrate and understand the nature of income refuses.

Secondly, based on the data from the "Polish General Social Survey", an assessment will be provided of whether PSW or PSA leads to lower total survey error (TSE). By removing the known values of income I will consider three patterns of missingness: (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values.

Findings are four-fold: (1) PSA is much more effective when missingness mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSA increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

*Classical Sociologists on Music and Society*

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc.

Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphonse Silberman (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistent conceptual grid. There is also poor debate on the role and significance of classical sociology reflection on music and society in the contemporary sociology.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The

*leitmotiv* of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociology of music.

*New Donors of Development Assistance: Theorizing the Future of the OECD Aid Apparatus*

This paper explores the new role that non-OECD nations such as Brazil, India, Russia, South Africa, South Korea and, especially, China are playing in providing international development aid. While global aid flows from traditional OECD nations remain significant to the development of global politics and what William Robinson calls the "Transnational State" (TNS) apparatus, these new aid donors are challenging the Western nations' vision of what development means and what kind of global economy is being built. The consequences of these increasing aid flows for the global economy and for the development of aid recipient nations at this point are unclear. But it is crucial for scholars to pay close attention to the rise in official development assistance (ODA) from non-OECD nations as a key indicator of global political and economic integration. Often considered to be of secondary importance to many globalization scholars (who prefer indicators such as foreign direct investment (FDI) and international trade), ODA is perhaps the most important measure of "economic politics" (to use Bourdieu's definition of globalization) for sociologists of development to observe. Bringing together insights from world systems theory, world polity theory, Robinson's Transnational State perspective, and Saskia Sassen's work on deterritoriality and denationalization, this paper will offer some theoretical analysis of the role that new donors are likely to play within the global political economy in the coming decades. Particular attention is paid to whether the so-called "South-South" aid from these new donors is really "South-South," whether we can expect to see a counterhegemonic shift in aid practice, what kind of future conflicts between donors are on the horizon, what this might mean for world state formation, and finally, whether any of this amounts to the beginning of the end for the nearly 60-year old Western aid apparatus.

*Multiculturalism and Minority Well-Being in Fourteen European States*

Despite pronouncements of its death by leaders of key European states in 2010, multiculturalism "carries on" (to use the *Guardian's* term 9/19/12) in public policies at the national and local level in these same states. Kymlicka (2012: 6) argues that "[m]ulticulturalism is part of a larger human-rights revolution involving ethnic and racial diversity." Using the European Social Survey (2002, 2008, 2010) for fourteen European states with scores on the Banting/Kymlicka Multiculturalism Policy Index (MPI), we operationalize well-being in terms of the Council of Europe's (2003) specification of the eight key areas of life (cf. Jackson and Doerschler, 2012). These are employment, housing, health care, nutrition, education, information, culture, and basic public functions (which include equality, anti-discrimination and self-organization) (Jackson and Doerschler, 2012: 1). Greater well-being of minority populations is seen to result from reductions in disparities and polarizations between them and the majority population (European Parliament, 2007). Scores for the eight dimensions of multicultural policy development (Banting/Kymlicka, 2012) allow us to consider the effects that specific state policies have on targeted areas of minority well-being. We furthermore examine the possibility that the situation of *majorities* also improves when states turn toward multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Do minorities report greater trust in the political system where multiculturalism has taken hold? What happens to majority group members' levels of education, employment and political trust as states implement multicultural policies? These are the questions on which this paper centers. With such information, political leaders can defend multicultural policies from criticism or amend them in directions that will better reduce disparities and divisiveness.

### Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. "Multiple discrimination" is a special focus of the European Union Agency for Fundamental Rights. Discussion of the need for a "Horizontal Directive" (EU-MIDIS, 2010 (5): 5) and the "Genderace" project of the 7<sup>th</sup> Framework Programme both highlight multiple discrimination and the "intersectionality" (Genderace, 2010: 272) of axes of discrimination. The Genderace report (2010: 32) uses the term intersectionality "to define a situation . . . in which several grounds of discrimination interact concurrently." This report follows the European Commission's 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to consideration of the discrimination-reducing impact of state policy in eight areas: (1) affirmation of multiculturalism by the constitution, legislature or parliament; (2) school curriculum; (3) media—sensitivity and representation; (4) dress-code exemptions; (5) dual citizenship allowed; (6) funding of cultural activities of ethnic group organizations; (7) bilingual education; (8) affirmative action (Banting and Kymlicka, 2012: 11). On the basis of the results, we assess the policy changes warranted by the data to enable European Muslims to fully utilize their talents and abilities to the benefit of Europe and its member-states.

### *Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks*

In their bid to globalise, transnational corporations (TNC's) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC's invest in a range of powerful and innovative advertising, marketing and promotional campaigns. However, the pressure to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant mine (Goldman and Papson, 1996) resulting in a range of political, economic and ethical questions. This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey's concept of monopoly rent which emerges "because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects unique and non-replicable." (2002: 90). The paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate the cultural, political, legal and ethical/moral issues associated with the logic of monopoly rents.

### *Towards a Practice Theoretic Approach to Understanding Sexuality*

In our book 'Theorising Sexuality' (2010) we re-worked the Interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1973) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Lindemann and de Nora in order to enable an understanding of the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of writers such as Schatski; Reckwitz; Warde and Shove in order to set out the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

### *Environmental Governance and Risks in Brazil*

Environmental governance has advanced in Brazil since the Rio Conference. Different stakeholders have had a relevant role in the process that has permeated in a growing scale the process of decision making and formulation of new public policies. The process of environmental governance has brought into scene stakeholders representing the public and private sector and the social movements, mainly the environmental movement.

The incorporation of new social actors with differentiated demands on the management of natural resources has become more frequent as to issues on water, solid waste, biodiversity and climate. The engagement of these different actors has brought to the environmental arena, a logic of dispute and negotiation on aspects linked to natural resources, sustainability in cities, impact of degradation of water sources, loss of biodiversity, conflicts with indigenous population on land, impact of hydroelectricity projects and more recently on the impacts of climate variability and its multidimensional aspects.

The paper will approach how national policies are taking place adequately or insufficiently taking into consideration the complexity of the process of environmental governance, and what this implies in terms of enlargement of the role and engagement of stakeholders in the process of decision making. The analysis will focus on the strengthening of deliberative spaces, multiplication of networks that promote awareness and mobilization to face uncertainties and potential risks in cities and biodiverse spaces and the pressure to reduce socio-environmental and knowledge based asymmetries.

Several civil society organizations have had in the last years important role facing environmental governance and risks in Brazil, and these initiatives promoted advancements towards democratizing access to information, besides pressuring for more transparent and participative decision making processes on environmental policies and the need to take into consideration diversities, complexities of transformations taking place in a context of global climatic uncertainties.

### *Developing Care-Technologies While Balancing Utopian/Dystopian Worldviews: Dimensions of Attention*

Collaborating since 2005 in different interdisciplinary pre-competitive care technology research projects in Flanders (Belgium), we learned about crucial dimensions to balance the tendency of supporting utopian/dystopian views on the impact on wellbeing and quality of care due to new care technologies. The goal of these subsidized projects is to innovate in a way added value is created for its future users and valorization potential for the collaborative companies. In general the team is rather utopian on the capabilities of the information and communication technology.

Involving potential users from ideation phase towards valuation of prototypes is a primary way to bring balance in looking at both positive and negative consequences of the future care technology. Due to the involvement of social scientists, over the years we moved from a pathology-centered problem definition, over an age-focused approach towards a care dependent approach. Concurrently, we emphasized the need of a multi-stakeholder approach, grounded in the insights of the Social Construction of Technology perspective (cfr Bijker, Rip). These premises of human centered design are not enough to balance the tensions and paradoxes encountered when studying the potential consequences of envisioned care solutions and their impact on care-giving.

Recurrent dimensions of empowerment and disempowerment, that are potential pitfalls, are described in this paper. Some essential themes will be: self-determination of care dependent and his/her caregivers, impact of technology on the caring relationship and quality of service by care organizations, role of present and future infrastructure and learning curve of present and future users, ... We also discuss the ways in which we try to balance tensions and paradoxes in this field, by making use in all phases of innovation binder approach (scenario's and persona's, tech cards, ...), and supporting the development of CareLivingLabs. We illustrate these with examples from past and current projects.

### Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary – or, the critical comparative reflection about media formats – constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how mediatization has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

#### *Orphans Other Deadends in the History of Sociology: Symbolic Interactionism and the Mid-20th Century American Compromise*

To conceptualize deadends in the history of sociology, we examine how intellectual lineages, networks and institutional histories have been narrated in U.S. sociology. Introductory sociology textbooks are strategic research sites because they are a space where sub-disciplines, academic institutions, curriculum, individual intellectuals, and market dynamics intersect. Examining textbook narratives of the discipline, we ask: What has been narrated as central? What has been omitted and why? On this basis, we identify symbolic interactionism as an orphan – a casualty of the mid-20th century standoffs in the United States between what came to be known as the consensus, conflict, and symbolic interactionism perspectives. The three-fold model of US theory remains a central feature of Introductory sociology textbooks today, a fact which explains the isolation of symbolic interactionism from the power centers of disciplinary sociology.

#### *Conflict over Confirmation Teaching in Public School – the Impact of Neoliberal Policies on Local Political Level in Denmark*

The neoliberal discourse is part of a larger shift from democratic to neoliberal policies that has been occurring over the past decades; a shift accompanied by both discursive and structural changes in society. If the neoliberal discourse is transforming the core functions of government globally, then this must also be true in the case of the close co-operation between the Danish state and the national church in Denmark. In this paper the cases of conflict over and transformation of the position of confirmation teaching in Denmark is analyzed in order to find out if the changes is a result of neoliberal policies in Denmark or simply a matter of structural changes caused by another rational basis. In Denmark confirmation teaching is part of the public schools timetable according to the Primary Education Act. Municipalities in Denmark have according to the Primary Education Act the right to place the confirmation teaching after school but until recently it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument used by local politicians is that the changes are necessary due to efficiency improvement of the public schools (after the merging of public schools) and more efficient utilization of the public schools timetable. Confirmation teaching is by the reform politicians seen as part of the private sphere and the National Church's claim for confirmation teaching in school is seen as an ineffective tradition, which is not corresponding to the state policies efficiency requirements for teaching and efficient operation of public schools. The friction over confirmation teaching is not only about the position of confirmation teaching in or out of school but a case showing consequences of how the neoliberal discourse is transforming religious authority in Danish society.

#### *Transdisciplinary Research on Work and Innovation: Co-Production of Knowledge on Contested Terrain*

There is a long tradition of funding research to improve the organization of work according to the requirements of changing production processes and in accordance with the demands of the employees for not only damage-free but also personally and socially rewarding working situations in Germany. Background for this tradition is not at least the high relevance of qualified labour for the German diversified quality production. This research is crossed by two potential lines of conflict: First, scientists are asked to postpone or defer their academic logics in favour of contributing to immediately relevant knowledge production on-site. This

line of conflict is widely acknowledged by concepts of inter- and trans disciplinary research (mode 2, triple helix, entrepreneurial university, techno science). A second line of conflict results from the social organisation of employment in capitalism. Constant re-arrangements by new ways of deploying labour and of relating work and organisations shape the forms of contradictions between interests or logics of action on both sides of the employment relationship. For this line of conflict the concepts of action research and, more recently, approaches to social innovation in the work place give useful instruments for analysis and methodologies. This paper examines how these two lines of conflict in trans disciplinary research are taken up in the research program on innovative work organisation of the German Federal Ministry of Education and Research. It further investigates which solutions are chosen in the funded joint projects to turn potential conflicts productively. Data are derived from a content analysis of programs and project reports. It is shown, that leaving these conflict-lines implicit rather than differentiating between diverse approaches to research in its context of application explicitly, weakens the potential of the projects' work for stabilising the German production model and shifts balances from sociological towards micro-economic perspectives.

#### *Multi-Sensory Tourist Experiences*

Since the end of the twentieth century, there has been an ocular-centric affinity in tourism research, often related to studies of place images and tourists' visual sensations. But there is more to travel than sightseeing: travel experiences are not just in the eye of the beholder but also in the ears, palate, nose, hands and feet. Tourist experiences are both corporeal and multisensory. Although vision is a dominant mode of consciousness in the modern world and some 90% of our perceptual intake is visual, this may not indicate an overall significance of eyesight. What one might call polysensualism is a manifestation of the increased emphasis on senses other than vision in travel experiences. Based on personal interviews, the paper will exemplify some under-researched non-visual tourist experiences related to novel themes on the research agenda.

#### *Decent Work and Corporate Social Responsibility: Contemporary Debates about Human Rights and Paternalism in Organizations in Brazil and Portugal*

The concept of decent work (ILO) has recently appeared in corporate social reports. The social relations in the enterprise, the types of contracts, the regarding of diversity and gender equity are themes emerging in business landscape.

Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (UN), national discussions and effective practices are not homogeneous.

The CSR academic debate revolves around the perspectives on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose motor function is masking the "real intentions" of corporations in their quest for higher profits (Thornton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes

to build the legitimacy of organizations in contemporary capitalism (Fremman, 1984).

The aim of this work is to investigate the influence of the guidelines of decent work in CSR in the national contexts between Brazil and Portugal, on a comparative basis. We investigated the existing regulatory guidelines for CSR through documentary research in corporate social reports and comparative studies of the relevant legislation. The results demonstrate that while human rights and decent work appear as topics of CSR agendas in both countries, in Brazil, the corporate actions are voluntary, whereas in Portugal, there are laws that reinforce the communication of business practices within the CSR and decent work.

### *L'évolution De La COMPétence En Organisation Des Collections De Documents Numériques: Le Cas De L'entrée Dans L'enseignement Supérieur*

La fracture numérique de second degré (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d'informations sont disponibles (Gantz & Reinsel, 2011), où l'accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Teevan, 2007), et où la dimension sociale des objets médiatiques se complexifie, la compétence à organiser ces informations devient fondamentale.

Cette compétence d'organisation correspond à la capacité à imaginer des structures pertinentes et à les implémenter à l'aide d'outils matériels ou logiciels. Dans les usages, cette compétence à organiser s'actualise aussi bien dans des activités de recherche, que de gestion des flux d'informations, ou de stockage (Jones, 2008).

Une série d'interviews d'étudiants réalisées avant et après leur entrée à l'université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d'adopter et de modifier les affordances (Norman, 1990) offertes par leur environnement. Trois catégories d'affordances peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d'organisation consiste donc pour l'utilisateur à prendre parti des affordances et contraintes des outils adoptés afin d'aménager l'environnement technologique pour le faire correspondre à la structure de l'activité de l'utilisateur, de sorte qu'il soutienne au mieux celle-ci (Kirsh 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence : l'intensité des usages des médias (Schradie, 2011), la variété des contextes sociaux dans lequel les usages se développent (Ito et al., 2009), et finalement, le rôle de stimulateur des relations sociales de l'utilisateur. Nos premières observations semblent indiquer que, plus encore que l'intensité ou la variété des usages, l'entourage des usagers joue un rôle primordial dans le développement de la compétence d'organisation, en ce qu'il crée des opportunités d'échange et de confrontation de pratiques médiatiques.

### *Marginalization As the Social Context of Risk Perception in Everyday Life*

In this paper, by adopting a constructivist perspective, it is tried to address the question how experience of marginalization and a sense of exclusion could affect the ways individuals perceive risks in everyday life. In general, social constructivist approaches to epistemological status of risk emphasize that the perceptions of risk are socially constructed and cultural and political contexts impact on how risk are made sense by people. The methodology in this research is based on qualitative methods and the data has been obtained through in-depth interview with 28 students from the University of Tehran in Iran. In the interviews we asked the students to describe how they make sense risks in their everyday life. Furthermore, they were asked to describe their experience with a sense of exclusion as a consequence of being marginalized in society. According to the findings, the ways the university students perceive risks have been closely intermingled with their experience of marginalization in their everyday life. Although studying in university may potentially result in social inclusion, most of the students have had the experience of marginalization accompanied with types of perceiving social and economic inequality and also ethnic, gender and generational discriminations. This has led to exclusion and so provides a context for perception of risk and uncertainty.

Particularly, when they try to build a desirable personal lifestyle, they face various social restrictions, which cause risks and uncertainty in their everyday life. In the other words, the social conditions of being marginalized lead to perceptions of some types of risk specially, those which are related to their lifestyle.

### *Creativity and Embeddedness*

Creativity, understood as an innovative and novel way to solve problems and change is combined with a variety of factors influence both the sociological perspective, as well as psychological. One is the factors influencing the level of creativity might be also the quality of social interactions and the conforming influence the possibility of being misunderstood or socially rejected.

The aim of the study would be to create analyze the relationship between the characteristics of the social structure and individual degree of creativity. The study group was analyzed from the perspective of the declared behavior in different social situations, declared level optimal distinctiveness and tendency to take the social risk. The level of creativity was measured by tests of divergent thinking based on the number of different responses to a given problem. Demographic factors were controlled. A study was conducted using a commercial online tool tracking IP numbers of participants based on the answers given by 306 people.

Analysis shown that people who tended to be more socially independent and less embedded in the social networks gave more divergent responses to the creativity test during the research. The level of individual creativity, commonly regarded as psychological factor, might be influenced by the social milieu of the person.

### *Are European Fundamental Rights to Information and Consultation Getting Diluted By National Implementations? Study on Implementation of European Works Councils Directive 2009/38/EC in the Field of Access to Justice*

The paper aims at drawing attention to proper transposition of EU directives as a challenge for ensuring effective workers' rights to information and consultation (I&C). To this end it looks at the example of implementation of the European Works Council (EWC) directives 94/45/EC and 2009/38/EC with a special focus on enforcement provisions. The choice of implementation of EWCs legislation as a 'lab case' is relevant in several ways: a) being an EU originating institution requiring implementation into national industrial relations (IR) and legal systems they represent a perfect example of tension between coherence of centrally introduced rights and their national 'conjugation'; b) the original directive 94/45/EC, substantially modified by recast directive 2009/38/EC and recently transposed provides for an apt up-to-date test-case; c) it addresses loopholes in existing research and has both a political and practical relevance for over 1000 active EWCs and over 17 mil. workers they represent.

The paper will provide comparative overview of national transpositions of specific key provisions of directive 2009/38/EC and an analysis of their coherence with the source regulation. Focusing on transposition of enforcement provisions on access to justice and sanctions it will argue that a formalistic 'copy-paste implementation' without consideration of the ultimate principle of effectiveness acts as impediment to coherent application of the fundamental right to I&C. To this end it will present jurisprudence of the European Court of Justice and research on the meaning of 'effective, proportionate and dissuasive sanctions'.

The paper will also argue against the lenient approach supporting the view that differences between national IR justify cases of substantial/excessive divergences in implementation. By means of reference to EU institutional developments and interventionism in the field of financial market and environmental regulation it will also challenge the view that the European Commission has no competence with regard to setting sanctions.

### *Do Equality Values Differ in Asian and Western Cultures? Results from the Social Inequality Module of the ISSP 2009*

Whether certain values are unique or specific to a group, a nation, or a culture, has been a topic of lengthy debates. During the last decades the interest has shifted from smaller to larger collectives and from smaller to larger regions. The European Values Surveys was an early attempt to identify cultural values, first in West European societies, and later in Europe as a whole. Whether the goal of the enterprise has been reached remains an open question. What most European

societies really distinguish from other societies is the millennia-long Christian tradition. But has this tradition also brought forth unique values? And if so, are they still influential in modern societies?

In the nineties a similar debate started in Asia. Asian values were initially seen as a stronghold against Western value imperialism and against Western democratization. The results of the empirical research in many respects resembled the European findings on value pluralism. Dalton and Nhu-Ngoc (2005) could not identify specific and homogeneous value patterns in the Confucian societies. Rather, family orientations and respect of authorities largely varied in Asian countries.

This will not be the end of the debate on Asian values. There are so many visible differences between Asian and Western cultures that the search for specific underlying Asian or Confucian values will continue. Education and work values, as well as economic and social inequalities might be domains in which specific Asian values have emerged. The paper focuses on values which are related to social and economic inequalities and tries to find out by means of multi-level analyses of the ISSP Social Inequality Module 2009 whether and to what extent these values are affected by different cultural backgrounds and whether Asian societies in particular differ from societies with a Christian tradition.

#### *Formal and Informal Female Migration: Challenges of Governance in Bangladesh*

In the last three decades, Bangladesh has grown to be an important source of labor migration. Female labor migration, however, has lagged far behind the male migration. Starting with a small number, in recent years the number of Bangladeshi women has grown. Official figures put the proportion of Bangladeshi female labor migrants as 1% of the total number of migrant workers in 2003. In recent years proportion of women as total migrants is estimated at around 14%. Bangladeshi female migrant workers go to the Gulf countries, Lebanon, and Singapore to work as domestic workers. Many Bangladeshi women also went to work in the textile industries in Malaysia, Mauritius and Korea. In addition to formal labor migration, an undetermined number of female workers go to neighboring India to work as domestic workers as well as in entertainment industries. The issue of Bangladeshi female migrants in India has created controversies in Bangladesh especially, in view of the harsh treatment they face as undocumented workers. They also take great risk, including the risk of life in crossing the Bangladesh-India borders. The present paper examines how the government of Bangladesh has dealt with the issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

**JAIME-CASTILLO, ANTONIO M.\*** (Universidad de Málaga, [amjaime@uma.es](mailto:amjaime@uma.es))

#### *Inequality of Opportunities and Preferences for Social Policies*

The positive relationship between democracy and equalization of income predicted by the well-known Meltzer-Richard has been highly criticized on both theoretical and empirical grounds. In this paper, I analyze whether inequality of opportunities (rather than outcomes) is connected with preferences for social policies at the individual level. I focus specifically on the sources of current inequalities by decomposing individual outcomes into a *fair* share, which can be attributed to personal merit and effort, and *surplus* outcomes, which are the results of structural barriers in the labor markets or depend on inherited factors such as social background. To do that I rely on the methodological approach used by the growing economic literature on reference groups, in which individual income is the product of two components: the average income of the group and an idiosyncratic factor, which is the result of individual attributes. I use data from five waves of the European Social Survey in order to test these hypotheses. Empirical findings prove that occupational status and individual differences with respect to reference groups (especially those caused by inherited disadvantages) have a strong and significant impact on preferences for redistribution. In addition, educational inequality has a negative significant effect over preferences for redistribution at the aggregate level.

**MOORE, REBECCA** (San Diego State University)

#### *New Religious Capital, Conversion, and Drug Rehabilitation: Evangelical Social Projects in Baja California, Mexico*

The aim of this paper is to analyze certain changes in evangelical identities and their religious capital in the religious field at Baja California, following the impact of charismatic movements and the crisis of denominational models during the 1980s, and their relation to the expansion of the so-called "Christ-therapy" in Rehabilitation Centers for drug addicts. From a general perspective, religious capital suffered a series of rearrangements within their referents mainly anchored in doctrines, practices and preconceptions relatively unchanged until last decades of the twentieth century.

Therefore, this work raises the question of whether the expansion of a new ecclesiastical model of openness to society in Pentecostals and Charismatic churches, especially in Northern Mexico, may explain the growth of Evangelical Christians, with new forms to mobilize symbolic capital and social participation.

In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector, has opened a space to apply their social change projects based on individual conversion. To study the above, this paper analyzes some cases of Rehabilitation Centers in Tijuana, and Ensenada, Baja California.

**JAIN, RASHMI\*** (University of Rajasthan, [rashmi.jn1@gmail.com](mailto:rashmi.jn1@gmail.com))

#### *Making People Illegal: What Globalization Means for Law and Migration*

In any given week in 2007, newspapers around the world carried reports of "illegal" migration. This did not start in 2007. It is not poised to end any time soon. While many of the accounts are about the United States or the European Union, unauthorized migration is newsworthy in all corners of the globe. Russia has a large and growing extralegal population. China stopped more than 2,500 illegal border crossers in 2009. Thailand and Malaysia have launched a cooperative approach to their shared illegal populations. The Gulf of Aden is a key human smuggling route. South Africa is attempting to grapple with its unauthorized occupants. Illegal migrants come to droves in India, and in lesser tempering this view of citizenship. Considering the limits of law in this regard, it is crucial to unearthing the place of law in accounts of globalization, and to understand both how and why globalizing forces are making people illegal.

It is worth examining as to why people and tribes of people are being termed illegal, what is it that does not give them support in the country they seek shelter and why do they leave their native land to find shelter in a foreign land. Here under the paper proposes to study and understand the concept of illegal people, how illegal migration is being aided by the process of globalization and how does it harm the native society and also the ill effects of migration on the migrants.

### JS-14.3

**JAIN, RASHMI\*** (University of Rajasthan, [rashmi.jn1@gmail.com](mailto:rashmi.jn1@gmail.com))

#### *Technology and Family Leisure: Is It the Way Forward?*

Families are one of the fundamental units of society and are the building blocks of social structures and organizations in every culture. A theoretical framework that has been used to describe and understand how families function and interact is the Family Systems Theory (Steinglass 1987; Whitchurch & Constantine 1993). According to the Family Systems Theory, the family is a complex system of individuals interacting with one another. The concepts of family cohesion, family adaptability and family communication are the key to continuation of family systems. Over the last seventy years, researchers have consistently reported positive relationships between family leisure and positive family outcomes when examining recreation and leisure patterns among families (Hawks 1991; Holman & Epperson 1984; Orthner & Mancini 1991).

Enjoying family leisure time can be a way through which cohesion, adaptability and communication is increased within families. The perils of the modern world with its fast paced life, both parents working, emergence of nuclear families, pressures of weekend socializing, demands of curriculum on the children have all made a serious dent in family leisure time.

The present paper proposes to examine the role of technology especially communication technology in promoting family leisure time amongst urban educated families.

**FEITOSA, FLÁVIA DA FONSECA** (National Institute of Spatial Researches (INPE))

#### *Multi-Scale Analysis of the Effects of Socio-Spatial Segregation*

The variable "space" is increasingly being used by scholars in the social sciences. In this sense, the methods that use spatial analysis are becoming more known

by social scientists. One of the most important applications of the use of spatial analysis in sociology, demography and population studies is the socio-spatial segregation. Some countries are studying the spatial concentration of the population with respect to race/color, but in others, such as Brazil, the miscegenation of the population is high, and so it makes no sense to study segregation by this variable. In this case, the income of the person can be the key variable in this process. Spatial analysis techniques, such as isolation indexes, are then used to analyze the spatial segregation according to income, translated by poverty or wealth. However, in each geographical unit (scale) used, the result of the analysis may be different. Then, the main goal of this paper is to create a multi-scale analysis of the effects of segregation in terms of isolation of poverty and wealth indicators. Our assumption is that when we increase the scale of the segregation analysis, the inequalities also increase. And this is what we attempt to show with this paper, using data from census tracts of 2010 for the city of São Paulo, the most populated in Brazil.

DE OLIVEIRA LIRA, JONATHA RODRIGO (University of Campinas)

#### *The Changes in the Form of Japanese Integration in Brazil*

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arriving of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country heading to Japan in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

#### *Autochthony, Whiteness and Loss in Outer East London: Tracing the Collective Memories of Diaspora Space*

This paper explores autochthony through the memory practices of in Newham, East London. It addresses how remembering East London as the home of whiteness and traditional forms of community entails powerful forms of forgetting that feed into contemporary ideas of racialised territorial belonging. Newham's formation through migration its 'great time' has ensured that myths of indigeneity and whiteness have never stood still. Through engaging with young people's and youth workers' memory practices, the paper explores how phantasms of whiteness and class loss are traced at the same time as the migrant, a figure of racial decline, is constructed. It addresses how this tracing reveals ambivalence, porosity, and the continued allure of race. Overall, it explores how whiteness and loss develop into autochthonous forms appropriated across ethnic boundaries, and how they are mobilized to produce new forms of racial hierarchy in a 'super-diverse' place.

#### *Bugs and Future Usage – Design As Twofold Problem*

My ethnographic field is a design laboratory in which young German designers develop wearable textile-electronic interfaces. It can be observed here that the characteristics of the design-work are quite different compared to the work of scientists, as for example Karin Knorr Cetina or Harry Collins have put it. In short, two types of practices can be found in the field of design: Designers talk about the use and the benefits of their conceptualized design objects systematically in meetings and informally on various other occasions. They ask themselves, what their design object is it good for and who will use it and when. In a less abstract level of their work, the designers are very concerned to create a functioning pro-

tototype. They have to arrange every material detail and technical problem of the prototype, as with the interfaces stitching, wiring, programming, de-bugging etc.

According to Bruno Latour, objects are an indivisible compound of contextual meanings and materiality. My data shows that the designers work on both sides of this notion of object: They have to design both, an object's meaning and material function. These two different kinds of goals require two different types of work practices. It shows that these practices interfere heavily with one another, although they are very different in character. Whereas the work on meaning and utility is anticipatory and therefore never concluded, functional and material problems pop up in the present progression of a designer's work and have to be solved or circumvented to keep the work process going.

For analyzing the creation of new technology, it is crucial to observe the designer's anticipation of utility over the whole process. They may vary in substance and become less obvious for the ethnographer, but basically the interplay of anticipation and construction constitutes the outcome of a design process.

BYUN, MIREE (Seoul Institute)

#### *Urban Scenes and Place Identity: The Case of Seoul*

The scene perspective can help us understand cities in terms of cultural amenities. Its abstract characteristics can join Asia with the US and Europe so that social scientists, policymakers, and average citizens can coherently interpret common features of world city systems. Scenes can be defined as the specific lifestyle of a place. Thus, a scene is more than a neighborhood or its physical structures. It includes collections of people labeled by race, class, gender, etc. It also includes specific combinations of these groups and activities that join them together. With these characteristics, scenes show the specific cultural tastes of the residents, shop owners, and visitors. They show their own internal logic and dramas that, for instance, shine glamorously rather than fade into anonymity, project warmth and intimacy rather than distance and aloofness, maintain an authentic and real life rather than a phony existence.

Place identity can be formed through interactions between the physical characteristics of specific places and the people using the physical facilities. In this sense, urban scenes are closely related with place identity. Both urban scenes and place identity are considered as contributing to the creative regeneration of a city. In this paper, we present how urban scenes can contribute to developing place identity in Seoul. To do so, we will compare a Seoul scene map with a map of the floating population of Seoul. This will lead us to incorporate characteristics of people into the facility data of the scene map in the specific place of Seoul. With this analysis, we expect to capture the dynamics of place identity and the influence of scenes on party identity.

**JANKOWSKI, BARBARA\*** (IRSEM France, [barbarajanko@yahoo.fr](mailto:barbarajanko@yahoo.fr))

#### *Sharing Information at the Operative Level*

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we finally know more about how we protect vital information, or how they are obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas "friction" and "fog" act as much between the belligerents as within the armed forces.

My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where they learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not. The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training forces.

**JANSSON, ANDRÉ\*** (Karlstad University, [andre.jansson@kau.se](mailto:andre.jansson@kau.se))

*Hospitality and Recognition in the Transmedia Age: Mediatization As Social Critique*

Recent (trans)media innovations, such as the smartphone and social networking sites, have drastically altered the conditions of everyday life in affluent societies. Such developments have on the one hand contributed to potentially expanding lifeworlds and extended social affordances in terms of mobility and social connectivity. On the other hand, research from various disciplines has pointed to social disorders, or "pathologies", related to the everyday dependency on such technologies, as well as to the socially segregating nature of these developments. Against this backdrop, the suggested paper engages with the ongoing academic debate around *mediatization*, generally understood as a meta-process of complex socio-cultural change, and focuses particularly on the critical potential of this concept. The argument is developed in three steps. Firstly, a general approach to social critique is presented, based primarily on the works of social philosopher Axel Honneth and media theorist Roger Silverstone. Here, the concepts of *hospitality* (Silverstone) and *recognition* (Honneth) are singled out as key (mutually dependent) facets of a socially sustainable and egalitarian (global) society. Secondly, the paper introduces a model of mediatization as a *socio-spatial meta-process*, based on Lefebvre's triadic notion of social space. The combined social forces of mediatization are mediated through three regimes of dependency: "material indispensability and adaptation", "premediation of experience" and "normalization of social practice". These regimes are to be understood as analytical tools for advancing a critical approach to the mediatization meta-process. Finally, the paper provides an empirically grounded analysis of the current status of hospitality and recognition in mediatized lifeworlds. The empirical analysis integrates qualitative interview data from two different field-work sites; (a) a small-town middle class neighborhood in Sweden and (b) an expatriate community of UN employed Scandinavians in Geneva, Switzerland. Altogether, the paper contributes to a situated and contextually sensitive critique of mediatization.

#### RC33-580.4

**JAROSZ, EWA\*** (Polish Academy of Sciences, [ewajarosz@yahoo.com](mailto:ewajarosz@yahoo.com))

*Social Structure and Daily Behaviours: A Cross-Sectional Analysis of Time-Use Patterns in Poland and Armenia*

Sociological and economic literature points to numerous differences across societies and social categories in their patterns of time allocation. For instance, studies of the labour force show that daily behaviours differ significantly between people of higher and lower occupational status (e.g. Kohn and Schooler, 1983). In the same time, behaviours of one social category, e.g. the unemployed, can be substantially different across different societies (e.g. Krueger, 2008). There are thus at least two dimensions that affect people's daily time-use patterns: social norms and arrangements in a particular country, and individual place within the social structure. This study addresses both of them, analysing the influence of the macro-level setting (country) and basic social characteristics (gender, age,

and employment status) on individual time-use patterns. This approach focuses on differences in the sequence structure and time allocation (e.g. unpaid work, socializing) analysed in a cross-sectional perspective. Since most of the existing reports on structural differences in behaviours come from developed Western countries, this study uses time-use data from the countries rarely included in comparative research carried out in the field: Poland and Armenia. Daily time-use patterns of Poles and Armenians are compared in terms of how much they differ across social categories, as well as what are other lines of such differentiation in these societies. The additional benefit of the study is that it compares daily practices in the countries of Central Eastern Europe and the South Caucasus region.

#### RC28-481.4

**JAROSZ, EWA\*** (Polish Academy of Sciences, [ewajarosz@yahoo.com](mailto:ewajarosz@yahoo.com))

*Stuck in the Moment? Time Perspective and Time Allocation Across Social Classes in Poland*

Individual's time perspective and everyday time-use patterns have major impact on all realms of human life. They influence the chances for upwards mobility and affect individual life trajectories. As put by Jeremy Rifkin, "those who are most present oriented are swept into the future that others have laid out for them" (Rifkin, 1987). However, time perspective is a multidimensional phenomenon and needs to be studied in relation to the actual time use patterns – in which is it supposed to be reflected. Only combining attitudinal and behavioural data can give deeper insights into socially differentiating role of temporal arrangements. This study analyses daily time allocation patterns in conjunction with temporal preferences and the possible drivers behind them – such as individual time perspective and time constraints. It focuses on the relationship between the perception of time or daily allocation of time and individual position in the social structure. Using quantitative data for Polish population aged 24-65 (n=780), it shows how temporal orientations and perception of time are related to individual social position and how they differ depending on the respondent's genders, age, educational attainment or occupational category (ISCO-based). The study casts light on the much overlooked dimension of social inequality, including the effect of temporal perspective on status attainment, social determinants of the ability to plan long-term and delay gratification, as well as the life course-related choices and their consequences.

**JASSO, GUILLERMINA\*** (New York University, [gj1@nyu.edu](mailto:gj1@nyu.edu))

*Happiness in the New Unified Theory of Sociobehavioral Processes*

This paper explores more deeply the part played by happiness in the recent attempt to unify justice, status, and power theories. Specifically, the paper does three things: First, it strengthens the foundation from Plato and Aristotle for the theory's premise that different people seek happiness in different ways and by different means. Second, it connects those different ways and different means to the attributes and possessions that people care about, as well as to the basic outcome – justice, status, or power – that is activated. Third, the paper analyzes a new set of situations in justice theory, in which individuals may compare themselves to everyone who outranks them (on the salient attribute or possession), everyone whom they outrank, or everyone in general. These situations lead to different outcomes both for individuals and for societies. Further, the paper shows vividly the implied effects of inequality in the distributions of attributes and possessions on average happiness and inequality in happiness.

**JAUREGUIBERRY, FRANCIS\*** (Université de Pau, [francis.jaureguiberry@univ-pau.fr](mailto:francis.jaureguiberry@univ-pau.fr))

*Technologies De Communication Et inégalités D'usage*

Il est devenu quasiment impossible de se déconnecter des technologies de l'information et de la communication. Parce qu'elles sont des outils facilitateurs du quotidien, synonymes d'immédiateté, de sécurité, d'ouverture et d'évasion. Se tenir informé, gérer son emploi du temps, faire ses réservations et achats, se sentir en sécurité et près des êtres chers malgré l'éloignement physique, autant de raisons nous portant vers une connexion permanente. Mais cette connexion est aussi synonyme d'informations non désirées, d'appels intempestifs, de surcharge de travail, de confusion entre urgence et importance, de nouvelles dépendances et de contrôles non autorisés.

Face à cela, des tactiques de réajustement visant à reprendre la main dans la gestion de son temps et de ses occupations apparaissent. Il s'agit de conduites de refus, non pas des technologies de l'information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle. Or, il s'avère que cette capacité de maîtrise des flux informationnels est très inégalitaire. Dans les organisations, il y a ceux qui ont le pouvoir de se déconnecter et ceux qui ont le devoir de rester connecté, dans la vie privée ceux qui

voudraient se déconnecter de temps en temps mais n'y arrivent pas et ceux qui y parviennent, et, de façon plus générale, ceux qui possèdent les capacités cognitives et le capital culturel leur permettant d'utiliser au mieux ces technologies en particulier dans les traces qu'ils laissent et ceux qui n'ont pas les moyens d'y parvenir et en subissent les conséquences, en particulier en matière de surcharge informationnelle et de contrôle.

#### *Growing Trends in Non-Standard Employment in Nigeria: Insight from the Food and Beverage Industry*

In spite of the effort of the International Labour Organization (ILO), to promote social justice and recognition of human and labour rights, decent working conditions have continued to elude workers in developing countries, job creation has gone hand in hand with the proliferation of non-standard work contracts in Nigeria such as temporary work and part-time employment. The *World of Work Report 2008* showed that the incidence of part-time and temporary employment has increased over the past two decades globally. Workers joining the labour market find it easier to secure casual employment without proper contract or access to social security and remain more vulnerable to sudden changes in market conditions, have to accept severe cuts in their wages when fortunes change and are less likely to take part in training. It is estimated that approximately 4.2 million job losses had been recorded in the entire sector between 1983 and January 2006. Apart from job losses, most workers are not adequately protected as most organizations have continued to defy labour laws that abolish workers exploitations in any form as well as high workers' violations concerning fundamental human rights at work as entrenched in the Labour Act of 2004. This study explores both primary and secondary data in bringing out clearly this phenomenon in the food and beverage industry in Nigeria. A total of 500 questionnaires was administered to workers in three selected organizations that have high incidence of non-standard employment as well as 20 interview session with some selected workers and union executives. The study found that this kind of employment have tremendous impact on the workers, who have continued to be voiceless at work, lay-off at will, engaged in poor quality of work, casualised, informalised, and are forced to work among others things

[jaworsky@fss.muni.cz](mailto:jaworsky@fss.muni.cz))

#### *Mobilizing for Immigrants' Rights Online: Creating Symbols of Belonging to the "American" Nation*

It's not secret that being an immigrant, especially an unauthorized immigrant, is a challenge these days in the United States. Discrimination, marginalization and deportation loom large, and comprehensive and fair immigration policy seems an elusive goal. In response, the immigrants' rights movement increasingly mobilizes online. Among these cyberactivists' primary tools are symbolic representations of immigrants belonging to the "American" nation, more specifically its civil sphere, the moral universe where battles for inclusion take place. Concrete symbols of family, hard work and community coexist with more abstract representations of "American" national ideals such as equality, fairness and opportunity. Utilizing a cultural sociological perspective, I examine the ways in which the immigrants' rights movement uses such symbols to perform national identity online. In particular, I employ the tools of the Strong Program, as articulated by Jeffrey Alexander and Philip Smith, among others. The goal is to put meaning and the process of meaning making squarely at the center of analytical attention.

What are the ways in which the immigrants' rights movement creates and engages symbols to signal immigrants' belonging to the nation? How do such structures of meaning work to portray immigrants as part of the sacred social fabric of the civil sphere and to counter images of pollution? How does the deployment of symbols help translate claims of belonging for a particular group into a universal right of inclusion? To explore these questions, I apply a dual methodology. First, I perform a hermeneutical analysis of the website content of 15 national-level organizations – focusing on the visual but paying attention to important textual cues and discourse. I also interview their leaders and webmasters to explore their motivations, goals and strategies. The ultimate goal is to contribute to the understanding of the relationship between symbols, social movements and national identity.

#### *Intergenerational Communication in Transnational Families: A Gendered Perspective*

Examining multiculturalism, and combining a postcolonial feminist perspective with intergenerational communication, transnational migrant families are examined with a view to understanding the realities and negotiations between generations as well as how cultural values are transmitted across generations. In particular the communication: varied aspects such as verbal and nonverbal, that grandmothers use in relation to their grandchildren will be examined. A nuanced analysis of gender intersecting with race, class, ethnicity and cultural diversity will be used in this study. The goal is to empirically uncover and shed light on the following questions: How do grandmothers transmit cultural values to their grandchildren in the Canadian context?

More specifically, what negotiations do grandmothers make to effectively communicate with their grandchildren about the cultures of their countries of origin?

Interviews, at least ten to twelve, using a semi structured interview protocol as well as focus groups if needed will be conducted in Ottawa among grandmothers and as diverse a group of respondents from varied cultures as possible representing varied nationalities and cultures will be selected to participate in the study.

**AHMED, RUKHSANA** (University of Ottawa)

#### *The Construction of Gender in the Canadian Construction Industry*

We examine the Canadian construction industry by looking at how gender interacts with various markers of identity within the construction industry: such as age, ethnicity, class, race, education etc. in Canada and how these interactions affect women's participation in this sector. We base our categorization of gender in its broadest sense to include its intersection with other aspects such as ethnicity, race etc. (Denis, 2006; Mohanty, 2003; Spivak, 1999; Tastsoglou, 2006). In the Canadian context, the espoused policies of multiculturalism and immigration provide a context for immigration related research (see [http://canada.metropolis.net/index\\_e.html](http://canada.metropolis.net/index_e.html)). However, there are challenges of labour force participation of immigrants and of women in almost every sector (Cohen, 1994; Watts & MacPhail, 2004).

In addition, research on the construction industry in Canada has shown that it is highly gendered in terms of the experiences of women (Watts, 2007) manifested in such behaviours as sexual harassment of women as well as a hierarchical and male dominated culture (Watts, 2007). At the same time, immigrants into Canada who are very diverse in terms of the various facets of identity outlined above have also tried in some instances to make inroads into the construction industry (Walton-Roberts & Hiebert, 1997).

By performing secondary data analysis (Rubin, Rubin, & Peele, 2005) through a survey of the literature as well as through an examination of construction industry periodicals, we want to examine how gender in its broadest conception as intersecting with race, ethnicity, and age, and other dimensions plays a role in the construction industry in Canada and, if there are differences in various segments of Canadian society.

We will do this by a comparison between mainstream women's participation and the barriers faced by them, in the construction industry, and ethnic immigrant women.

#### *Emotion at Work: Between Alienation and Resistance*

This presentation endeavors to utilize the concept of emotion in an heuristic and sociological manner in order to investigate the subjective link we have with work. More specifically, we will use it as a means to grasp not only the suffering and alienation that are associated with work, but also the pleasure that can intervene to ameliorate work-related pathologies. Furthermore, if we view emotions as a link to the self as well as to others and to the world, it becomes possible for an investigation of emotions associated with work to reveal how relationships to work can point to forms of resistance. It is also necessary in this regard to take into account the fact that the concept of emotion enables us to rethink the classical oppositions between rationality and affect, nature and culture, and masculinity and femininity. In addition, what Rimé (2006) has written about the social elements of emotion from a psychological point of view can be developed from a sociological and critical perspective. Finally, the concept of emotion is subversive in a manner that is analogous to the way in which care theory is subversive, which Carol Gilligan (2013) has demonstrated. This is particularly the case at the work place, which is characterized by control and self-control. The discussion will thus seek to reveal how the concept of emotion not only is heuristic in character, but also possesses a subversive and critical force.

**JÉBRAK, YONA\*** (University of Québec in Montréal, [jebrak.yona@gmail.com](mailto:jebrak.yona@gmail.com))

*Rebuilding Memories, Projecting Utopia in Lac-Mégantic Reconstruction*

On July 6<sup>th</sup> 2013, a train carrying crude oil derailed in downtown Lac-Mégantic, a town of about 6,000 located in the Estrie region. The industrial accident caused a series of explosions, killing 47 people. The fire destroyed almost half of the main street and affected the surrounding residential areas. The disaster created an acute awareness of Quebec cities vulnerability to industrial risks. On one hand, it launched a debate among planners, business groups and other decision-makers on how to deal with still-in-use train tracks crossing densely populated areas. On the other hand, many questions remained on how to maintain sustainable local economies that rely very much on the presence of the railroad system. Reconstruction plans were laid out within weeks of the disaster, proposing to redevelop a new commercial area, and creating a memorial ground where once stood the destroyed buildings. The community seemed absent of the debate, seen rightfully as a victim of events, and yet not perceived as an actor of the reconstruction process. The destruction of the urban fabric of Lac-Mégantic raises issues of collaborative resilience and participatory planning: cities are spaces of the every day, of belonging. Studies have shown that connecting social and cultural resiliency to planning and policy can generate a stronger collective capacity in decision-making. The loss of space called for an affective response that traditional Canadian planning is sometimes overlooking. This communication proposes to discuss the use of cognitive maps as a methodological tool that can be used in understanding how people perceive their environment, the lost one, the one that is being lived in and the one that will be built. It will analyse how they can highlight the construction of overlapping narratives that can contribute to the resilience process, and how it can potentially be used in the reconstruction process.

*When Religion Influences Political Choices in the Context of Nation. the Case of Political Theology of Dietrich Bonhoeffer*

In the times of Nazi regime every choice made was political, obviously. It made nearly every sphere of life political (as Hobbes and Schmitt would put it). Research on the history of churches – both catholic and evangelic – clearly shows how the national identity and ideology influenced their institutional form.

Nowadays, religious identity, which influences the political choices, is connected with the religious extremism, unwholesome lack of separation between church and state, establishing political rules due to religious norms, which leads to human rights violation. My aim is to describe opposite side of the idea of linking religion to politics and nationality. Moreover, the concept which I'll present is intersubjectively considered to be morally right, possibly because of history.

I'll present the theological and religious concept by Dietrich Bonhoeffer, "Protestant saint", member of the anti-Nazi resistance. I will put the national context - strongly rooted in the German concept of the state and law, as well as Luther's theology and German patriotism of Bonhoeffer on one hand, and the idea of the complete irrelevance of the national question on the other. According to the Author - the answer for the Christian man is obvious and the only one he could provide. Unconditional accompaniment the 'weakest brothers' (as Bonhoeffer called Jews) is both political (being in the opposition) and religious (directly resulting from the teaching of Christ) choice.

Bonhoeffer's political theology is a concept created within the concrete political and historical reality and is a part of German philosophy heritage. However, answers given by Bonhoeffer, not disregarding the idea of nationality, make it completely irrelevant. I'll present the relationship between religion, the concept of nation and political choices. Thus, I will show different from most of contemporary ideas interpretation of relationships among those categories.

**PRES-3.2**

**JELIN, ELIZABETH\*** (CIS- CONICET IDES, [elijelin@gmail.com](mailto:elijelin@gmail.com))

*Putting Care at the Center of the Global Agenda*

The pervasive inequalities in the world limit the prospects of masses of people – persons as well as communities – of living full and satisfying lives. The deficit in wellbeing reflects a critical deficit in care, since the core of wellbeing is to be found in caring and receiving care.

All human beings have to be cared for; most human beings (notably women) are responsible for caring of others during long periods of their lives. Survival depends on being cared for. Social bonds depend on and express themselves through caring.

Since care has been usually provided in the domestic economy, in the "privacy" of families and households, the deficit was and still is to a large extent invisible. Contrary to current trends in the political economy of the world implying

privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between age groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.

**JEMIELNIAK, DARIUSZ\*** (Kozminski University, [darekj@kozminski.edu.pl](mailto:darekj@kozminski.edu.pl))

*Celebrity Leadership in Open Collaboration Movement*

As Coleman observes (2011), open collaboration communities can rely on two diametrically different leadership philosophies: with a charismatic, celebrity leader (WikiLeaks, Wikipedia, to some extent Linux) or with no clear leader at all, or leadership passed from person to person (the Anonymous, Debian).

I would like to present the results of a long-term, participative, ethnographic study of Wikipedia community, and the role of Jimbo Wales in organizational culture development. I want to show how "benevolent dictatorship" (Raymond, 1998, 1999/2004) model on one hand contradicts the a-, or anti-hierarchical ethos of Wikipedia. Through a case study of development of Jimmy Wales role in Wikipedia community, I am going to show that in principle, "FLOS communities only tolerate an individual's exercise of authority over her areas of expertise" (Mateos-Garcia & Steinmueller, 2008, p. 342), with a possible exception to recognizing also organizing skills (Yoo & Alavi, 2004; Carte, Chidambaram, & Becker, 2006). I am also going to show that leaders in open collaboration movements have to carefully and sparingly accumulate merit and charisma (Reagle, 2010), and that they can lose it overnight, after one careless blunder. I am going to seek conclusions for the pros and cons of celebrity leadership, and describe the current role of Jimmy Wales, who gained real momentum and increased his influence only after he resigned from performing most of active duties on Wikipedia.

*Incorporating the Social Investment Element into East-Asian Productivist Welfare System: Path Dependence or Path Breaking?*

The critical difference between East Asian productivist welfare state and European social investment welfare state is the logic of social policy formation. East Asian productivist welfare state was designed according to the principle of 'economic developmentalism' to achieve economic catch-up. However, European social investment welfare state is emerging as a new policy paradigm to adapt new knowledge-based economy and deal with new social risks.

Recommodification and decommodification are both prominent in the social investment welfare state. However, the logic of economic developmentalism in East Asia (and probably, in Southeast Asia) led East Asian governments to push labours into labour market (the process of commodification) by devoting most of resources to human capital formation policies, such as universal education system. Family policy is very prominent in European social investment welfare state, but not in East Asian productivist welfare state. Third, one of the critical features of the social investment welfare state is the focus being placed more on the life course and on the future than on equality of outcomes in the present. Last but not least, the concept of citizenship in East Asian productivist welfare state and European social investment welfare state is different.

Given the differences of the East Asian productivist welfare regime with the social investment strategy in Europe, some 'active' components and mode of welfare delivery have changed recently in East-Asian countries, particularly Japan, Korea and Taiwan. This article aims to highlight the content of discourse and rationale for this change. The political position of different actors (political parties, unions and employer organizations) toward this change will be examined. Moreover, a new social/political cleavage and possible building of effective coalition for pushing this social investment in East Asian context will be examined.

*Diagnosing (Inter)Sex: A Case of Social Diagnosis*

For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of 'indeterminate sex' (ICD-9-CM code 752.7). But this diagnosis is only a first step; as with other diagnoses (such as cancer), further classification of the medical problem is necessary for deciding on management and prognosis. In the case of intersex, medical professionals assess additional data to determine the intersex individuals' 'true sex,' in effect explicitly diagnosing intersex while implicitly diagnosing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyson, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this vein, we (1) show how multiple social actors (e.g. parents, doctors, technology, legal and cultural institutions) contribute to diagnosing the individual's 'true sex,' which, once determined, can be 'restored' medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals 'sick' – not their chromosomes or organs.

JENKINS, TANIA\* (Brown University, [tania\\_jenkins@brown.edu](mailto:tania_jenkins@brown.edu))*The Myth of Meritocracy in the American Medical Profession*

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical graduates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. Last year, for example, over 90% of spots in plastic and orthopedic surgery were filled by USMGs. In contrast, non-USMGs fill lower-prestige residency positions in less desirable geographical locations and specialties (like internal medicine). In some cases, this has resulted in very polarized training environments, with so-called 'friendly' programs staffing only non-USMGs, and highly prestigious 'traditional' programs training only USMGs. Because of major differences in resources and medical service offerings, these programs have vastly different approaches to teaching which can affect residents' opportunity structure post-residency, especially in subspecialty training.

This study examines why this arrangement persists, in spite of its implications for inequality. What are the social forces and beliefs that sustain this system of stratification among internal medicine residents? Drawing on two years of ethnographic observation and interviewing at one such 'friendly' hospital, this paper presents evidence for a 'myth of meritocracy' among residents. Doctors feel they are *individually* responsible for their own success, and conversely, that they are to be individually blamed for not reaching certain goals, such as getting into competitive residency and fellowship programs. They also deploy examples of non-USMGs successfully achieving these goals as evidence for this belief, rather than as evidence of considerable structural barriers (e.g. visa restrictions) which constrain opportunities for non-USMGs. By elaborating local understandings of social mobility and advantage among medical residents, the paper reveals the power of this myth of meritocracy in obscuring, sustaining, and perpetuating the role of significant social and institutional constraint.

The aim of this paper is to discuss relevant approaches for studying how students in profession-oriented higher education programs become initiated in their expert culture in a period in which such cultures undergo changes in several ways. Much is written about how modes of knowledge production and distribution are in transformation in today's society (e.g. blurred relationships between knowledge production and application; new relationships between knowledge, education and innovation; and the spatial expansion of such processes). Less is known, however, about how such developments influence educational programs and student learning.

We present a conceptual framework for investigating these relations, highlighting the concepts of epistemic machineries, epistemic practices and 'epistemental-

ities' as constitutive for expert cultures across education-work boundaries. Next, we present our empirical strategy for examining dynamics of knowledge and student learning in three educational programs. We use examples and tentative findings from our first phase of data collection in law education to discuss how students get introduced to their expert culture during an intensive, inquiry-oriented introductory course.

Albeit of preliminary character, our analysis indicates that the introduction to - and training in - methodological principles for defining, exploring and solving professional problems in a structured way constitute a key mechanism of induction. By examining and integrating different sources of knowledge while working systematically on a complex problem, the students get introduced to the wider machinery of knowledge construction that constitutes the field of law.

Together with other findings, the study contributes to the field of higher education by developing new insights in the way expert knowledge evolves across the research-education-work divide. By revealing the role epistemic practices and their methodological principles play in connecting different sites in the expert culture, this study may also inform current efforts to bridge education and knowledge policies.

RC32-553.5

JENSEN, PER H.\* (Aalborg University, [perh@dps.aau.dk](mailto:perh@dps.aau.dk))*Factors Conditioning Female Labor Force Participation*

Studies of female labor force participation have so far primarily focused on supply side factors, i.e. factors that may support or impede women's "free choice" to participate – or not. Factors supporting female labor force participation have been identified as e.g. women's wages (relative to men), as it is expected that the higher the wages the higher the utility of paid employment. Factors impeding female labor force participation have been identified as lack of child/elder care institutions, the qualifications of women (calling for re-education and lifelong learning) etc.

What has been under researched is the impact of (1) demand side and (2) cultural factors on decision making of women. Demand side factors refer to the local production system; e.g. traditional male dominated manufacturing in a given locality may leave very little room for female employment opportunities. As to culture, it should be rather obvious that women are most probably not dispositioned to make use of public care institutions in as much as the cultural system inclines agents to support the idea that good mothers should take care of their children themselves.

The aim of this paper is to contribute to a better, more comprehensive understanding of the factors which explain variations in female labor force participation in different European localities. The major research question thus becomes: how has the interplay between supply side, demand side and cultural factors structured the level and character of female employment in different European localities?

The paper draws on comprehensive register data as well as survey data collected for the purpose of this study. Data are analyzed by means of quantitative methods.

KORDES, HAGEN (Münster Universität)

*Juvenilising Cultures: Illegal and Legal Road Racing in Londrina, Brazil*

This paper deals with masculinity and risk in the urban space of Brazil. The analysis seeks to comprehend sense and structure in the life-threatening manoeuvres of racing, beginning with the significations that the young racing enthusiasts attribute to their experiences of speed and thrill. Due to the illegal nature of road racing – *racha* – the research process for this study began in the virtual field of the internet community where young racers present and discuss their attraction (or even addiction) to acceleration and risk. Data was later collected in the 'real' field of roads (illegal) and autodromes (legal). The urban space of *racha* as a social practice is constituted by several groups whose members differentiate themselves through contrasting preferences in music and clothing. In this process of distinction they deploy and modify their bodies, at the same time seeking prestige and social reputation. Racing exhibits the joint power of the male driver and the modulated machine. We see here a kind of *humachine* constituted in the risk and danger of the race. The young men are thrilled by the heavy sound and vibration. In the moment of the race, they modify their registers of perception, time is accelerated, and they are released from the normal constraints of gravity in urban space. By high-tuning the engines the *rachadors* make themselves ready to transgress limits and norms of security and speed. The machine becomes an extension of the male body, a muscle car, a new sensory interpenetration of the corporeal and the engine.

**JEON, HYEJIN\*** (Yonsei University, [jhj776@gmail.com](mailto:jhj776@gmail.com))*Fairness-Awareness Difference Depending on Form of Employment: The Case of South Korea*

The main purpose of this study is to examine the relationship between the levels of Fairness-awareness and Forms of employment using data from 2009 Korea General Social Survey(KSGG) survey. In the field of Sociology, only few works has been dealing with fairness-awareness itself as a unit of analysis, despite numerous attempts to consider inequality in connection with social status, class, resource allocation and distribution process etc. even that earlier researches have limitations that these studies cannot explain which variable affect fairness-awareness of organization or they only concentrate positive influence of fairness-awareness affect to organization. Grounded on this, I analyze the data concentrating upon the Main Hypothesis which is "there are existing Fairness-awareness difference depending on Form of Employment (Permanent/Temporary)" and demographic variables as a Moderator. And the results are as in the following: (a) Temporary position have an positive effect on Fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between Fairness-awareness level of procedural and Form of Employment.

## JS-56.3

**JEONG, YOUNG SIN\*** (SSK Research Team, [freecity7@hanmail.net](mailto:freecity7@hanmail.net))*The Organizational Evolution and Innovation of Korean Anti-Base Movement*

The organizational evolution and innovation of Korean Anti-Base Movement - focused on the dynamics of multi-layered solidarity network  
It is a main feature of Korean Anti-Base Movement(KABM) that it has been affected by the historical tradition and culture of democracy movement. First, KABM started in 1988, directly after the June democracy movement in 1987. Second, democracy movement organizations paid attention to local issues in the 1990s and built many local organizations of KABM as solidarity ones. Third, the activist networks of democracy movement was a main factor of the building of national solidarity network and massive nationwide mobilization. Some factors of successful Maehyang-ri struggle can be explained by these.

But in the early 2000s, there came into existence new innovations of KABM organization. Pacifist activists belonged to small organizations and Jikimi-activists made up by voluntary citizens played a critical role in the development of Pyeong-Taek struggle. Two organizational forms, centralized democracy movement and emerging pacifist peace movement sometimes have cooperated and sometimes competed with each other. And both were was combined through the medium of residents' organization.

KABM has developed multi-layered ABM organizations composed in scale of village, city, and nation. The anti-base committees of city and nation scale have been composed of local and national organizations which experienced democracy movement. On the other hand, residents and Jikimi-activists lead village scale movement. The supplementation of three scale movements is important factor of the dynamics and extensive influence of KABM. But in case of Kangjung village of Jeju Island, the influence of city and nation scale organizations is weak. It is mainly caused by the geographical isolation and cultural factors, that is developmentalism and local conservatism. This implies that the objects of ABM has to be more than the mere change of aimed policy or institution.

**JEPSON, NICHOLAS\*** (University of Bristol, [nicholas.jepson@bristol.ac.uk](mailto:nicholas.jepson@bristol.ac.uk))*The Rise of China and Post-Neoliberalism Among Southern Resource Exporters*

Studies of the rise of China and its interaction with the rest of the global South have quickly grown into an established research programme in recent years. Efforts have generally concentrated on investments in natural resources and agriculture, new aid relationships and questions of political non-interference and human rights. I begin from a broader world-historical perspective which analyses contemporary China-driven structural transformation in the global capitalist economy and its implications for states in the South. The scale and speed of Chinese growth in recent decades has led to a level of import demand for natural resources of sufficient global weight to have prompted the 2002-2008 commodity boom. Even today, with a stagnating global North, fuel and mineral prices remain well above pre-2000s levels. As China, and increasingly other large Southern economies, continue to develop and urbanise, high natural resource prices seem likely to be sustained for another decade or more. This provides the revenue which is freeing hard commodity exporting states from the neoliberalising discipline imposed by the IFIs and global capital markets, easing a key constraint on their policy trajectories and thus allowing for alternatives in political-economic direction

of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commodities demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) donor dependence are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political-economic formation. In world-historical terms, these may tentatively point towards emerging regimes of accumulation centred around a new phase of materially-based growth in the global capitalist economy.

**JERONIMO, HELENA MATEUS\*** (University of Lisbon, [jeronimo@iseg.utl.pt](mailto:jeronimo@iseg.utl.pt))*Normal Waste: Confronting This Unavoidable Matter in the Technoscientific and Consumer Society*

If we think about the topic of waste today we have to be aware of its plastic and ambiguous nature, rejecting both the economic view, which sees it as lost and as a negative value, and the socio-cultural view, which associates it merely with fear and repugnance. "Normal waste" summarizes in a two-word formula the idea that waste is a normal condition of a society of widespread production and consumption, something central and unavoidable that spawned social, cultural, economic and technical responses, which in turn shape our history. But because this is a problem which is widespread, permanent and global, with environmental and public health effects on current and future generations, intervention in this field has to be guided by a combination of responsible use of resources, sustainable patterns of production, consumption and development, and the involvement of citizen-consumers. From these foundations I seek to show, first, that waste as a "problem" is the product of an order of production and consumption increasingly shaped by industrialization and urbanization. This was accompanied by a cultural process of sensitivities, mentalities and philosophical and medical convictions, which encouraged the sanitizing of public spaces, greater individuality, the refinement of manners and of the sense of smell. Secondly, I see waste as an environmental issue and as a factor which encourages the search for ingenious technological developments, stimulates international political measures, and involves multiple networks and institutions. The belief that the "problem" of waste can be only fixed technically is pure fantasy. Facing up to the problem effectively will also depend on co-ordinated political approaches and patterns of development which achieve harmonious combinations of the social, the economic and the political. Finally, I analyse waste in the context of its commodification as waste management activities are also significant business opportunities.

## RC31-521.1

**JESSE, MORITZ\*** (Leiden University, [m.jesse@law.leidenuniv.nl](mailto:m.jesse@law.leidenuniv.nl))*How Integration Took over the Immigration Agenda - from 'bad Idea' to 'best Practice'*

Over the last 20 years, European States have seen a drastic change in their approach to immigrant integration. From a rights based vision founded on the (legal) empowerment of the individual immigrant, with close-to equal rights as the best practice regarding integration; Europe has moved to a situation where integration is seen as a string of formal acts immigrants have to perform in order to obtain rights. Equal rights or naturalization is regarded as the final step of integration rather than its beginning. From an essential tool for integration, rights have developed to a reward for achieving formal integration requirements. This is problematic because legalistic, and formal integration requirements, such as passing a language or knowledge of host society exam, say nothing about real, i.e. social, integration of newcomers. Also, such formalistic approach to integration disregards that the host society also has a role in the integration of migrants. Nevertheless, the formalized approach to integration is regarded as best practice in most eu member states, including new destinations of or immigrants, such as Spain, Greece, or Italy

This paper will (1) map the paradigm change from a rights based approach to integration to a reward driven formalistic approach to integration in Europe over the last 20 years; (2) display the detrimental effects of these changes on the potential for inclusion of migrants into host societies; and (3) assess whether it is time to move back to a more rights based approach to integration for the sake of more chances to inclusion for immigrants.

## RC05-106.21

**JESSE, MORITZ\*** (Leiden University, [m.jesse@law.leidenuniv.nl](mailto:m.jesse@law.leidenuniv.nl))*The Incredible Message of Integration Requirements for Migrants - an Articulation of Ethnicity, Race and Nationhood?*

Over the last 20 years, immigration policies in Europe increasingly contained integration criteria immigrants have to fulfil in order to obtain a residence permit, citizenship, or an entry visa for the purposes of family reunification. Mostly, inte-

gration requirements are formal requirements, immigrants have to do in order to prove that they are capable of living in the host societies in an integrated way. One could think of language courses or language tests as typical integration requirements. However, more and more, one also finds requirements which allegedly help immigrants finding their way in the society of the host States. A typical requirement would be the immigration tests in the Netherlands or Germany as well as the 'knowledge of life in the UK' test required by British immigration regulation. The discussion whether such integration requirements are good tools to foster the inclusion of migrants aside - seen from a different angle, integration tests and the values, history, traditions, and customs they force immigrants to master are a formidable way to destill how societies putting such measures in place see themselves. What is the self image that these tests seek to transfer? What are the core issues policy makers think of when designing integration tests, which reflect the State of destination the best? Are these tests reflecting reality or only a ideal scenario?

These are the questions the paper will seek to answer. Relying on national immigration regulation in the EU and its Member States, such as the UK, Germany, Belgium, or the Netherlands, but also looking at Canada or Australia, the paper will try to (1) describe the ideal image of societies reflected in societies, (2) assess the excluding features of these tests and whether they build / create cultural boundaries, and (3) investigate in how far these tests reflect reality.

#### *Dualistic Production Regime and Dualistic Peripheral Workers - The Changing Labor Process and Power Relations In a Chinese State-Owned-Enterprise In The New Era Of Globalization*

This article explores the changing labor process and power relations in Chinese State-Owned-Enterprise under the influence of the global economy recession and Chinese newly issued "Labor Contract Law". It depicts the everyday working life of two groups of workers and the dynamics of workplace conflict based on author's intensive fieldwork during 2010 - 2011 at an old machinery factory, which located in Guangzhou city.

The research finds that, after the contractor teams were invited into the workshop, a new model of labor control - the dualistic production regime - has emerged in a Chinese SOE. The structural positions of different workers were utilized by the managers under this regime. With relative high age and outdated skill, the formal contract workers were disadvantageous in the labor market, so the strategy of indulgent labor control were established for them based on secure employment, basic benefit, but insecure low wage. Without city Hukou and legal contract, the temporary workers from contractor teams were threaten by the second-class position in city, and the foreman control were imposed on them based on secure wage but insecure employment. The disparity between core workers and peripheral workers were blurred, both groups of workers were in the similar disadvantage position, and the dualistic peripheral workers were generated in the workplace. Finally, different workers' expression and reflection were the important elements which reshaped the dualistic production regime. Resistance of the formal contract workers intensified managers' reliance on the contractor teams, while the toleration of the temporary workers placed themselves in the more marginal position.

From this study, people can better understand the potential and limit of Chinese SOE workers and the likely role they may play in the evolution of labor relations under China's changing environment.

#### *Widowhood, Intergenerational Family Support and Living Arrangement Among Older Adults in China: Based on Gender LENS*

Widowhood becomes an extended experience for old adults in China because of increased life expectancy, particularly for older women. While intergenerational family support and living arrangement of older adults has changed greatly during the past decades in China because of huge population migration and life style transformed. Drawing on the Senior Citizens Survey date of the Third Wave Survey on the Social Status of Women in China, jointly launched and organized by the All-China Women's Federation (ACWF) and National Bureau of Statistics (NBS), which carried out on December 1, 2010, this paper explores the patterns, status and associates of widowed older adults' living arrangement and intergenerational support in China, using logistic model. Conclusion: Preliminary findings suggest that the widow older women have closer intergenerational support and higher probability of live together with children than widower. Controlled the age, health status, educational attainment, housing and income resource, whether older adults give a hand to their children on housework make sense on their living arrangement, give money to their children can great increase the probability of older widower live together with their children, while take care of grandchildren decrease the probability of living together with children for widow older women. The paper try to explain the gender difference based on gender lens.

#### *The Emergence of Precautionary Chemical Management As a Salient Environmental Policy Issue in China*

The precautionary principle promotes preventive measures in face of scientific uncertainty. It has been integrated into a number of chemical regulations and agreements, including Principle 15 of the Rio Declaration, and the European Union's regulation on Registration, Evaluation, Authorization, and Restriction of Chemicals (REACH). China is the second largest producer of chemicals in the world. In recent years, health and environmental issues resulting from chemical pollution in China have frequently taken place, involving industries such as electronics and textiles. Environmentally sound management of chemicals is getting increased attention from the Chinese government. The development of China's chemical management policy may be observed from its policy amendments in recent years. In this context, what (combination of) principles guide China's chemical management policy becomes an interesting question. Drawing on interviews with key stakeholders, this paper analyzes the precautionary principle's application in China's chemical management policy, including consideration of risk assessment. It also reviews major Chinese chemical management laws, finding that government agencies are increasingly emphasizing chemicals' environmental hazards. The study finds elements of both the precautionary principle and risk assessment in China's chemical management policy today.

**JIANG, JIN\*** (The Chinese University of Hong Kong, [jiangjin.gm@gmail.com](mailto:jiangjin.gm@gmail.com))

#### *Social Formation of Geographic Proximity Effects: Understanding Unequal Access to Higher Education in China*

Recent literature has demonstrated that college proximity (such as the number of colleges within commuting distance) enhances college attendance in the United States. But not all differences in proximity affect college attendance. We argue that the causal role of proximity is crucially shaped by the educational institution and family logic of schooling the child generation. We thus focus on the questions of what proximity matters and why. The question of what requires a distinction of different types of schools and measures of proximity. The question of why looks at signs of the underlying mechanism of a true proximity effect.

We have created a new database by combining (1) school address data from official censuses of organizations in China, (2) provincial educational and labor market statistics from official published sources, and (3) individual-level data from the 2012 Chinese Labor Dynamic Survey (CLDS), which is the first wave of a nationally representative panel survey with over 16,000 respondents. CLDS provides detailed address on the place of residence for respondents when they were in secondary school. The combined database allows us to directly address the research questions. Organizational censuses provide school addresses and founding dates that allow us to estimate the national spatial distribution of secondary schools and colleges over time. Provincial data facilitate the control for confounding variables.

Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz. the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

##### *Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010*

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory—industrialization and economic development are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment rate increased dramatically, while the spatial disparities are substantial. Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within provincial divisions, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors.

This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic development, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

##### *Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector*

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic transformation – will result from such investments. Yet, studies have shown that in many developing countries, years of active multinational involvement by multinational corporations in the local economy have not had the desired effects: anticipated spill-over effects in the form of socio-economic transformation in the developing countries have not occurred. It is against this backdrop that this paper examines the skills development programmes and strategies in Nigeria's multinational corporate sector vis-à-vis the dominant national discourses on skills development in Nigeria. The key focus is on the extent to which multinational corporations operating in Nigeria have facilitated the acquisition, by Nigerians, of vital skills. From interviews conducted in key Nigerian national manpower policy agencies and two multinational companies, each with over half a century of active industrial operations in Nigeria, the paper argues that despite the long period of involvement, multinational companies operating in Nigeria still source vital skills from their home countries. Besides, the levels of investment in skills development in the local economy suggest a possibility of skills protectionism – an active or unwitting process of 'hoarding' vital skills rather than transfer them to local employees. The paper thus highlights the challenges and contradictions of aligning the economic calculations and objectives of corporations to national human capital development imperatives, and one of the subtle ways in which global skills inequality is sustained.

##### *Are Science, Technology and Innovation Fulfilling the Needs of Society?*

For decades science was considered the major force for the advancement of humankind. Ironically, S&T has notoriously progressed either for the preparation or the realization of war. Likewise, the gigantic technological steps made by humanity during the race to the moon are also of paramount importance. Science was regarded as the answer to the problems of humanity. However, many times science, rather than the use that man makes of science is counterproductive to the human ideals. Based on scientific discoveries man has made, and used, weaponry for massive destruction. The potential for annihilation of the human race of chemical, biological and nuclear weapons currently stored –and recently used– by a number of countries is beyond limits. However, scientists as a whole don't pay enough attention to the development of science for the benefit of humanity. Based on this inattention to social problems, UNESCO in an effort to catch the interest of scientists organized the conference "Science for the 21<sup>st</sup> Century", in 1999. The objective was the formulation of a new relationship between science and society, that is, a *new social contract with science* based on the assumption that science is to be subjected to public scrutiny. The debate on the need for a democratic discussion of scientific priorities, the size of its budget, its institutional structure, and the use that is given to the results of scientific labor, was recuperated. It was asserted that such decisions cannot be left simply in the hands of scientists and government officials. However, fifteen years later, the results of this global effort seems to be null. This paper gives some insights and examples of the way society is responding to this challenge, and how it could be more involved on the decision making of the scientific labor.

##### *Renting and Sharing: Housing Options for the Poor*

The government of Mexico encouraged the construction industry and the financial sector through massive new housing projects, particularly from 2000 to 2012. Developers built houses and acquired land reserves where the price of the land was cheap: on the far away outskirts of the cities. An important impact of this policy on the poor is that cheap land where irregular settlements would in the past have developed, has now become scarcer and more expensive. Over half of the population do not qualify for the new houses, anyway. Thus the financialization of housing on the periphery of Mexican cities is likely to have pushed the poor back into existing low-income settlements, or forced them to remain there, thus encouraging the already ongoing process of consolidation of irregular settlements. Old low-income settlements, founded more than 20 or even 50 years ago, have earned themselves a privileged location in the cities by now, as they can offer their inhabitants proximity to employment and infrastructure. In these areas, renting or sharing accommodation has become an important option for those with low incomes, either because, as is often the case, it is the only choice they have, or else because it suits their family or economic situation to rent instead of buying. Also, shared arrangements play a fundamental role in the lives of the most vulnerable groups: single mothers, the sick, the handicapped, and people of an advanced age. However, we know very little about current conditions in these settlements, and the problems faced by owners, tenants and sharers. To shed light on these parts of the city, I use information obtained from questionnaires and in-depth interviews conducted in Mexico, as part of a major research project into 11 cities in 9 countries of Latin America (the Latin American Housing Network).

##### *Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa*

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and authority by civil society organisations and government departments to effectively address these problems. Drawing on this context, I make two interconnected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of 'invisibleness' to operate within this system. By this I refer to the range of sustained strategies that workers- and foreign workers in particular- engage in to earn livelihoods. Drawing on a global literature of mobilisation, and community relations, I argue that in the face of the poor and inhumane conditions that workers face, silence and invisibility are tactics that they use to fight back and survive.

[zenovelist@naver.com](mailto:zenovelist@naver.com))

*Affiliation Divestiture As a Detour for Succession - in Case of Korean Business Groups, 1989-2010*

This paper examines affiliation divestiture process of Korean business groups, *chaebol*, in 1989-2010. One of the characteristics of *chaebol* is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network's holding company. Thereupon, the corporate network, composed of individual legal corporations, is the group owner family's privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm's typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure's network across time. The result is as follows. First, group network's cohesiveness is an important factor of making affiliate divestiture. Next, separation experience works as a path-dependency by becoming 'a logic of succession.' Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient. Last, group network forms plural cores before commencing gradual affiliate divestiture. By those processes, Korean *chaebols* get on different ways in succession due to how inner network of each structure is organized. In other words, cohesiveness of structure and composition of network show how a network of business group is divided, is transferred from previous owner to his descendants, and maintains its survival. This result provides a key to understand formulation and survival of derivative *chaebol*, which will continuously come into the world.

*The Employment Relations in the Changing Circumstances of Korean Labor Market*

This study aims to explain the employment relations in the changing circumstances of Korean labor market, focusing on the automobile industry. As globalization has developed, the segmentation between the regular workers and the non-regular workers in the labor market has deepened. The wage level of the non-regular workers is about 60-70% of the regular workers, while they engage in the same kind of job within a work organization. The labor movement of the non-regular workers to improve their working conditions has intensified, reflecting the serious situation in the labor market. This study analyzes the dynamics of labor movement of the non-regular workers, based on the segmented labor market in the Korea automobile industry. After then, we will try to present an alternative option to the present situation of the segmented labor market.

*Transforming Violence on School through Family Minority Males*

European schools are witnessing a growing range of violent behaviors, including bullying or gender violence. And especially strong violence is addressed towards ethnic and cultural groups. Research noted various factors that push to particular types of violence. In this paper we will focus on hegemonic masculinity that plays an important role on it. Thus, schools need preventive strategies like community involvement. Nevertheless very little research has pointed out on men participation in their local schools. In this sense, the start point of the paper is to show how participation of minority males in schools contributes to promote diverse models of masculinity and in consequence reduce violence behaviors. The results presented on the paper, draw on data obtained on project INCLUD-ED (6<sup>th</sup> FP European Commission, 2006- 2011). Researchers identify three specific types of masculinities (Flecha, Puigvert & Rios, 2013): Dominant Traditional Masculinity, Oppressed Traditional Masculinity and New Alternative Masculinity. As they point out, children and adolescents who do not follow the model of hegemonic masculinity are more often the victims. The *New Alternative Masculinity*, could become a referent for the adolescents to fight violence behaviors. It is through the involvement of role models in classrooms and in other learning spaces such as the playground, and also participating in decision-making that they help to create a safer atmosphere where violent behaviors are neither accepted nor tolerated.

*Radiation Risks and the Hermeneutics of Low-Doses: A Chronic Disaster?*

The Fukushima nuclear disaster (hereafter "3.11") has reactivated the controversy over the hazardous consequences for human health of low-dose radiation, an issue dating back to the mid-1950s.

Following on Miwao Matsumoto's notion of "structural disaster" and the sociology of nuclear labor as pioneered by Gabrielle Hecht, I will first address the chronic dimension of 3.11, or the disaster before the disaster. By the multiplied levels of subcontractors and the frequent camouflage of radiation doses, the labor organization of the nuclear industry in Japan and other countries (Taiwan, France...) have made invisible the major part of occupational hazards. This invisibility of local and chronic hazards has also alimented and biased a global production of scientific knowledge and ignorance, which is only one but fascinating part of the long controversy on "low-doses". I will examine to what extent has 3.11 created a new context that could lead to the further modification of current standards of radiation protection. Here I will present how Japanese labor and environmental activists build their criticism of existing safety standards by borrowing from classical epidemiology. I will further address the criticism on minor mode that has rose within the nuclear establishment (the "nuclear village") in Japan and among the international "community" of epidemiologists and radiation specialists. The conflicts of interpretation (i.e. hermeneutics) between Japanese government experts and activists thus reflect a larger debate, at a global level, within the community of epidemiologists and radiation specialists. This description will lead me to discuss the limits of the classical opposition between the positivist paradigm and the social constructivist paradigm.

This research follows up on a study I started in 2002 on Japanese nuclear contract workers. Further observation and interviews have been conducted since 3.11 in Japan and in Europe, among cleanup workers, government experts, activists and epidemiologists.

*"We Are All Sri Lankans": Sri Lankan Muslim Organization's Reaction Towards Islamofobia*

The civil war in Sri Lanka between the Tamil Tigers and the Sri Lankan government ended in 2009. In this ethnic conflict there was a third group whose 'own' identity was strengthened by the war, this was the minority Muslim population. Muslim politicians were using religion as an ethnic marker to strengthen their identity in the civil war and not getting involved in it. The war ended but Sri Lanka once again might face a conflict in the country. Clashes between Sinhala and Muslim groups are already a fact. Behind this is a Buddhist organization called Bodu Bala Sena (Buddhist power force), and the target this time is the Muslim community with Islamofobic rhetoric's.

This paper focuses on how Muslim organizations in Sri Lanka try to face organizations like Bodu Bala Sena in their counter rhetoric's. 'We are all Sri Lankans' is one of the most common slogans that is used by Muslim politicians and other actors in the way of facing Bodu Bala Sena, at the same time they want to safeguard the Muslim interest and the Muslim identity. This "dual-nationalism" is not uncommon in post-colonial societies and in the case of Muslim organizations in Sri Lanka Islamofobia trigs this.

This paper is based on interviews with 45 members of Muslim political organizations in Sri Lanka and material from these organizations websites and social media.

**JOHANSSON, ROINE\*** (Mid Sweden University,  
[roine.johansson@miun.se](mailto:roine.johansson@miun.se))

*Disaster, Organization and Temporariness*

One intersection between studies of organization and of disaster, that is seldom theoretically explored, is temporal delimitation. The well-known before-during-after trichotomisation of disaster studies is an indication of the inherent temporariness of disasters. Organization, on the other hand, is usually associated with stability and continuity. However, temporary aspects of organization have during recent decades attracted increased attention from researchers. In this paper, disaster management is regarded as a form of temporary organization. The aim of the paper is to provide a categorisation of different forms of temporary organization in which different aspects of disaster management can be placed. In connection with a recent discussion in organizational sociology, "organization" is here regarded as a *form of social order* (comparable with other social orders, like institution and network) rather than as a formal social structure; a phenomenon

can be organized to different degrees, and some phenomena are only partially organized. The least common denominator of organization is that it is a *decided* order. Without a decision, no organization, not even a partial one. Here, a distinction is made between full organization and different forms of partial organization, the latter consisting of mixes of organization and other social orders; a phenomenon may be a mix of organization and institution (if it, e.g., rests heavily on rules, norms and beliefs) or a mix of organization and network (if it lacks a clear formal hierarchy). Organization is a widespread form of social order. Many such phenomena are temporally delimited. Here a distinction is made, regarding the nature of temporariness, between known and unknown time-frames. The latter (when it is not known when a phenomenon will take place) is characterised by a higher degree of uncertainty. Disaster management belong to this category. Different aspects of disaster management are analysed with this theoretical framework.

#### *Change in Daily Eating Habits – Organization and Arrangement of Nutrition Patterns in the Context of Family and Public Compared Between Germany and Japan*

Instead of looking at unknown social arrangements far away, comparative sociological research should investigate the alien within the known following suit the ethnographic research of modern industrial society. While comparing the development of western industrial states, sociology can get insights in the meaning of social problems, its circumstances and consequences.

This perspective will be presented by an on-going project comparing eating habits of everyday life between Japan and Germany. The stark contrast between European and Asian nutrition habits illustrated by the German-Japanese comparison is examined to discuss the correlation of malnutrition, change of family structures, gendered responsibilities, and daily eating habits in regard to cultural differences as well as to numerous similar characteristics of the current social change. Thereby, the focus is to be laid on specific and comparative analyses as to how the diagnose of "malnutrition" is made, which shape it assumes and which causes are being named. Ultimately, it has to be questioned what kind of regional country-specific solutions of the stated problem take root and which family-supplementing and also compensating functions can be taken by extra-familial agents of socialization in order to teach nutrition skills. Afterwards, different national approaches to a solution of the respective problems of how to arrange daily nutrition in the area of tension between private and public nutrition supply as well as their transnational learning potentials can be discussed.

To compare developed countries with each other in regard to particular problems will not only result in new knowledge about the research objectives but will also help to evaluate and develop the theory of World Society, whether the world is differentiating into a multiplicity of societies or unifies in a way which takes a segmental, regional differentiation into account.

**JOHN, RENÉ\*** (Institut für Sozialinnovation,  
[rene.john@isinova.org](mailto:rene.john@isinova.org))

#### *Times of Innovation – Innovation of Times*

Social relevant times are caused only by social events. However the variety of events rapidly increases by the density of possibilities rising the problem of synchronization of social time. Pre-modernity could refer to natural events for this purpose. More important was the reference to the idea of fixed temporal horizons – the past and the future though. These temporal fixations were broken by modernization, presenting the problem of synchronization anew and even exacerbate it by developments like sciences or the European expansion. Thus synchronization means the possibility of a joined temporal orientation by a fixed horizon rather than the alignment of times. At first modern synchronization could be ensured by the concept of progress. But once its singularity had dissipated into a manifold moving concept (Koselleck's "Bewegungsbegriff") the problem occurred again. It could also not be solved by introducing mechanical time measurements or longitudes. Nowadays innovations have been established as synchronizing mechanisms. The factual specific, recombination re-arranges particular social relationships in regard to their temporal conditions. Organizations shape innovations into plans, they appear as cycles for society. Innovations as plans and as cycles fix the temporal horizons. However innovations do not any more synchronize universal throughout all social different areas. Rather innovations synchronize in a particular way specific factual arrangements for specific social circumstances. In an evolutionary perspective these social structures are addressed by selections and re-stabilizations. The success incident to innovation in a sense of social far reaching and enduring affiliations provokes ever anew de-synchronizing variations of social structure trying to surpass earlier attempts in regard to range and endurance. Therefore innovations as alternative synchronization attempts increase in frequency. Under the current conditions of functional differentiation

this can never result in a universal synchronization of world society but results in a highly dynamic multiplicity of temporal regimes.

#### *Intersections Between Western and Indian Childhood Discourses*

This paper presents one of the chapters in my Phil.lic dissertation on Conceptualising Childhood, Indian children as a social category are neither homogeneous nor monolithic. "Childhood" in Indian discourses represent "shifting set of ideas" developed over a period of time, and across different sub-cultures. In this paper I develop the intersections between childhood discourses in India and the West in order to show that childhood discourses (located in the West) documented in this study are getting percolated into Indian discourses due to globalization of childhood discourses, even as there are protests about childhood discourses being Eurocentric. In both the West and in India plurality of childhoods have been acknowledged in discourses on Childhood. Indian sociological studies document multiplicity of childhoods which in turn depends on varying factors such as region, religion, caste, social class, gender, family structure, etc. What emerges from the study of texts on the subject, is that both India and the West children have been marginalization in sociological discourses on children until now. There is a perceived emergent decrease in patriarchal control of children by adults, with adult-child relations becoming more democratic and participatory, manifested in greater negotiation of control by children. The "Century of the Child" notable for the United Nations Convention on the Rights of the Child (1989) and the new Sociology of Childhood has brought children into the arena of international politics and academic debates in both the North and the South.

#### *Pedagogies and Practices in the Modern and Postmodern*

There is a paradigmatic shift in how pedagogy is conceived and practiced in contemporary discourses. In this paper, I focus on the discourses that arise out of the fragmentation of the project of modernity. I attempt to make a distinction between modernist and postmodernist educational theory, their languages and vocabulary and their tools of measurement. Furthermore I show that issues related to change, crisis, difference, diversity and fragmentation of identity, and of knowledge and power are important aspects of the emerging conceptualization within pedagogy. I try to describe some pedagogies such as the notion of "border pedagogy" etc. have emerged from critical pedagogues who locate themselves within the postmodern. Pedagogies that give students an opportunity to engage in multiple reference points that constitute different cultural codes. Finally I raise the problems that the radical critique of postmodernism pose for education that is central to post-Enlightenment, emancipatory, liberal humanist project of modernism.

#### *Sociology and The Critique Of Neo-Liberalism*

Sociology and the Critique of Neo-liberalism

On all sides we're hearing that social critique is in trouble. Nancy Fraser's remarks about a 'crisis of critique' confirm Axel Honneth's account of critique's 'perplexing predicament'. Peter Wagner too observes that contemporary capitalism is 'sometimes seen to be beyond the reach of critique'. What is alarming everybody is the supposition that the project of immanent critique has been undermined by what Honneth calls the 'neo-liberal revolution'. Immanent critique, Michael Walzer tells us, judges the present with reference to ideals that are purely internal to a particular socio-cultural context. Immanent critique is having a hard time because the normative principles and ideals internal to our social and institutional practices appear to have been resigned in capitalist friendly terms by a triumphant neo-liberalism. So neo-liberalism issues a peculiar challenge to social critique. The distortions and cultural costs of its strategy of appropriations and resignifications need to be exposed and weighed up. Burdened with disciplinary commitments to a scientific integrity, the critical sociologist struggles to meet these demands. So what, then, of Wagner's claims about sociology's vital contribution to a critical consciousness of modernity? My paper will briefly reconstruct his programme for a critical sociology of modernity and will argue that it falls short of the distinctive requirements that neo-liberalism places on critique. I propose to excavate normative investments that are implicit in this programme that might be marshaled to a guide a critique that weighs up the cultural costs and damages in neo-liberalism's re-working of our normative principles and ideals.

**JOHNSON, VIVIEN\*** (University of New South Wales, [johnsonvivien@hotmail.com](mailto:johnsonvivien@hotmail.com))

*The Streets of Papunya: Walter Benjamin and Art History*

For Indigenous artists from Australia's Central and Western Deserts, ancestral power inheres in the landscape from past events and is transmissible to the protagonists' descendants as political (and also social and cultural) power. They have made this power, known as 'Dreamings', the subject of their art. In doing so, they have turned their faces to the past seeking, like Benjamin's angel of history, to "awaken the dead, and make whole what has been smashed" by the "single catastrophe"[1] of colonisation.

The artists of the Papunya community have another legacy from their forefathers' actions at this site: the artistic lineage founded here by their fathers and grandfathers. These men made Papunya famous as the birthplace of an Indigenous art movement that has revolutionised Australian culture, overturning the modernist dichotomy of indigeneity and contemporaneity that once consigned Aboriginal artists to the eternal past of the ethnographic present. This paper will examine the political struggle in which the current painters of Papunya are engaged to recover that legacy after a period of decline set off by complex factors, including a thoroughly postmodern 'identity theft'. Denied their birthright and history as a site of artistic production, the Papunya painters are combining both ancestral and artistic legacies to wrest back the power to shape their own destiny, thereby effecting a Benjamin-style 'opening-up' of history. They are using the street signs, provided by colonisers hoping to turn their community into a 'normal Australian suburb', to proclaim their cultural and artistic heroes. Overturning cultural protocols against speaking the names of the dead, they announce that this future will be built on their own achievements and the ancient ongoing power of place. *Disaster Warnings on Remote Islands: From the Traditional to the Contemporary*

Natural disasters such as tropical cyclones are commonplace in South Pacific island nations, including on remote islands within these remote countries. During a project on disaster response in a changing climate, warning signs and responses to them in remote island communities in Fiji and Tonga were investigated. On remote islands, people are well connected with their land and environment, and local ecological warning signs have existed and been relied upon traditionally. Knowledge about such traditional warning signs is still alive today, but diminishing as technology takes hold. Traditional warning signs are being overtaken by a reliance on warnings from the meteorological service on the radio. Many of the older people who hold most of the traditional knowledge perceive a lack of interest from young people in learning about those signs, because of the radio. However the ways in which young people are using the radio in are changing, which may make this form of warning message distribution less effective in the future. There are moves toward the use of mobile phone technology, especially in Tonga, for distribution of disaster warnings. In remote areas where mobile phone reception is less about being in the right general area than standing under the right tree, methods of locally spreading the news of any warning will remain vital. This presentation outlines knowledge of different types of warnings, their perceived reliability, how these are changing, and the responses to the warnings, on two remote island communities where sufficient warning is considered more important than the severity of an extreme weather event.

*Organising the 'Invisible' Sector: A Case Study on Household Workers in Lima*

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all household workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector 'invisible' and thus the workers' rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers' movement. In recent years, household workers have increasingly mobilised on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for domestic workers, setting labour standards for persons working in household services. Peru has not yet ratified the convention, but especially the local household workers' organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers' organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

*Women Human Rights Defenders: Promoting Women's (human) Rights in Honduras*

This paper explores the recent developments in women's human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d'état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women's groups. While promoting gender equality and organizing against militarism, neo-liberal practises and human rights violations, Honduran women activists have increasingly embedded the notion of human rights in their claims. Moreover, a wide variety of women's groups including feminists, teachers, community leaders, labour union members and LGBT activists, among others, have met challenges collectively as 'women human rights defenders'. I suggest that as a consequence, the discourse on women's human rights has moved from academic spaces and a 'feminist project' to the everyday understandings of a large number of women's groups and most importantly, a new framing of women's agency. In doing so, activists have, moreover, enhanced their alliances with supportive women's groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women's rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activists' work and the women's movement in Honduras generally.

*Sustainable Consumption and the Enactment of the Fairtrade-Market in Vienna*

Since the current discussion about the extent and manifestation of an environmental crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are currently undergoing a fundamental transformation where moral values and commitments are considered as constitutive of economic operations. But whether this *culturalisation of the economy* must be understood as based on a *moralisation of markets* (Stehr) or rather is the result of an *economic colonisation of morals* (Habermas) is neither theoretically nor empirically verified. My contribution is based on these considerations: on the basis of a praxeologic research approach I ask *how* and *in relation to which practices* is the so-called „fairtrade“ market enacted and, in doing so, moves in a tension between a moralisation of markets and the economic colonisation of morals. I consider these questions with reference to empirical research; starting in a fairtrade district in Vienna, the capital of Austria, I focus primarily on the constitutive practices and settings in which the fairtrade market is enacted. In doing so I address especially the questions how citizen consumers are able to learn about social and environmental risks and to what extent consumption of fair and sustainable products are driven by practices as well as respective sociomaterial orders.

*Sustainable Practices and Behaviour*

Practice theories are at the cutting edge of research on sustainable consumption and related managerial policies. They claim an alternative route to conceptualize the dynamics of social change by addressing both, the persistence and the innovativeness of human behaviour. The focus of this research are daily unsustainable routines, i.e. the everyday doings of people, carried out by bodies with the assistance of things, be it instruments or the surrounding infrastructure. Practice theories draw attention to core issues which remain quite often unaddressed by behavioural approaches such as large scale infrastructures or material agents as participants of everyday life. If it comes to behavioural changes towards a more sustainable way of living practice theories pose the critical question whether at all and how it is possible to steer or to govern social practices. Our contribution gives an overview of the "practical turn" in social science and its reception within the discourse and research on sustainable development. Social practices are especially linked to studies of consumption routines as well as lifestyles and the conditions for changing them towards sustainability.

*What Kind of Power Is 'Love Power'? II - Continuing the Elaboration of a Theoretical Concept*

Love, more specifically "love power," is central in my mode of theorizing contemporary western societies. In the article, "What Kind of Power is 'Love Power'?" (2011), I outline briefly, three ways in which I have approached this key question. I have done this, firstly, by comparing "love power" with "labor power," concluding that the two human powers are both similar and basically different, and that both can be seen as specifically human "world creative capacities" (in the sense explicated by Marx); secondly, by distinguishing *care* and *erotic/ecstasy*, as the defining elements of the internal dialectic in sexual love; and, thirdly, by asking, what kind of *power* love power is, looking (in vain) for answers among the so-called "power terms" as presented in dictionaries and applied in most prevailing social and political theories. I conclude that love power would add a new dimension and enrich the whole complexity of power terms. In this paper I will continue to elaborate the concept of "love power" roughly along these three lines. The aim is to explore, develop further, and reflect over the strength and delimitation of my love theory. I will expand the comparative view (labor vs love in Marx) by bringing in and assessing some other, apparently similar or overlapping theories and key concepts where creative and transformative powers are also at the center: some feminist historical-materialist work/labor-related concepts, and also concepts, generated within other research traditions, in particular "desire" and "erotic power" as variously framed by, or through critical debate with, psychoanalytic theory. Then, drawing on the explorations in the first part of the paper, I seek to explicate further my understanding of love as polyvalent practice and power, and what point I am trying to make by theorizing sexual love and love power in a specific historically located context.

*How Brown-Coal Mining Affects the Lives of Older Long-Time Inhabitants of the German Lusatia Region*

Not only the profound shock of events such as war that can shake societal structures and with that throw people of every age off their accustomed paths. Also events like natural catastrophes (floods, fires, storms) can threaten people's physical and spiritual health.

Another different form of serious influence on human lives is represented by events that emerge neither as a result of war nor through the forces of nature, but solely through the decision-making power of hierarchies. As when the Olympic Games required new sports venues to be built, and whole city quarters had to be flattened, or superhighway construction causes many houses or even whole localities to disappear, a severe, all-encompassing form of violent intervention acts on and against the existence of the people living in these areas. It is the same for people who live in mineral-rich regions.

In my contribution I examine the influence of renewed coal strip-mining and the resettlements necessitated by it on the lives of older people in the Lusatia region. Many of them will soon have to experience being uprooted from their homes for the third time in their lives – after the first time in the Second World War, then in consequence of strip-mining in GDR times, and now through re-

newed plans to mine extensively on what they thought was an area secure from future extraction.

How do older people react to the loss of their familiar environment? How does the necessity of resettlement affect their health, spiritual well-being as well as their sense of security in old age? What strategies do they develop to face the impending physical and mental effects of the threatened uprooting? The variety of responses to these questions – based on my research interviews carried out from 2010 in the region – is formulated in my presentation.

*2011 and 1968: Transnational Crisis - Transnational Social Movements?*

**2011 and 1968: Transnational Crisis - Transnational Social Movements?**

The Arab Spring revolts, the Indignados and international Occupy! protests were depicted as harbingers of an international, even transnational, movement capable of displacing political elites' neo-liberal agendas and politically and economically repressive regimes which. Clues for the feasibility of this transformative potential can be derived from comparisons with the protest movements closest in scale and character: those of the late 1960s. The two upsurges are similar in their lateral, non-hierarchical mobilisation and organisation, rejection of conventional 'system' politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties' protests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties' campaigners' radical alternatives to liberal or managed democracy were isolated or subverted. The reversal of their tantalising vision of substantive equality, into nineteenth-century levels of economic inequality, suggests that contemporary movements need *transnational*, radical alternatives to today's transnational economic crisis. What lessons do the failure of sixties radicalism in these respects offer for today's campaigners?

Examining international diffusion of radical ideas and campaigns via their *organisational*, *discursive* vehicles and communication *media*, suggests three possible commonalities for achieving 'transnationalised' social movements:

- similar causative grievances;
- adoption of another society's social movement model;
- and/or convergence of regional/national movements into transnational programmes and goals.

Analysis of these potential commonalities indicates that sixties movements achieved limited convergence into shared or similar perspectives and programmes only through a transnational, but ultimately unworkable ideological paradigms. Yet comparison, with the newer vehicles of global and social media and practices such as Occupy! suggests these need, but lack, the meaningful and coherent discourse(s) to achieve the transnational force for political change.

*Measuring Corporate Social Responsibility for Consumers: Lessons Learned from Seven Years in the Field*

Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data clearly indicate that we must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of "greenwashing" – or deceptive marketing that makes corporations *appear* socially responsible – conceals legacies of unethical conduct. How can citizen consumers effectively navigate the muddy waters of corporate social responsibility?

Drawing from a seven-year public sociology research project that uses independent, third party data to evaluate corporate practices, this presentation examines the art and science of measuring corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement.

1. *The Data Integrity Problem:* Including all reliable data, on the one hand, while excluding overly-biased data (or data that is the product of greenwashing), on the other.
2. *The Data Quantity Problem:* Uncovering too little data on some companies and too much (potentially overlapping) data on others.
3. *The Past/Present Problem:* Weighing companies' legacy of positive or negative conduct against more recent indications of change.
4. *The Multidimensional Problem:* Determining the comparative value of different dimensions of social responsibility (e.g. human rights, the environment, political lobbying).
5. *The Simplicity/Complexity Problem:* Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.

The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscores how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

### *Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems*

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3<sup>rd</sup> party tracking of corporate behavior. The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity in: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with some surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significantly different methodologies. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute ("State of Power 2013") and Asia Monitor Resource Center (*The Reality of Corporate Social Responsibility*) to determine where blind spots may be in each of the systems. Final recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than ceding the economic realm to neoliberal ideologues while focusing on social change efforts in other arenas.

### *Youth Work in England: An Uncertain Future?*

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are 'NEET', the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011.

Perhaps it is not surprising that UNICEF (2007) found the UK's children and young people to be the unhappiest out of those living in 21 developed countries. Aspects contributing to the result included attitudes to education, personal well-being, home and family life and general satisfaction with their lives. The OECD (2013) has found that young people are most likely to suffer from governmental austerity packages; they suffer most from cuts.

Youth workers have always tended to look back to a golden age. Currently, the period when government funding was channeled into work with young people via local authorities and third sector / voluntary organizations provides the touchstone. In April 2013, the UK's magazine Children and Young People Now published an article entitled, 'Youth sector on a "knife-edge" as third of organizations at risk'. It presented a depressing overview of reductions in expenditure and a pessimistic prediction of the future. Youth services have been subject to swinging cuts accompanied by amalgamation with targeted and acute services.

This paper identifies the aspects of young people's lives which have been affected by different cuts and other policy changes. Where possible, examples of innovative practice will be discussed. These present exciting ideas which have potential to be replicated if funds are found: although the future is uncertain, we owe the country's young people a more optimistic future.

### *Class and Health Inequalities in Later Life*

For over sixty years significant research activity has addressed the extent to which the effects of social class over the life-course have determined or contributed to an individual's economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement is-

suues among a growing body of epidemiological and social researchers. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. This paper will interrogate these issues as they relate to the role of class in later life using the prism of health inequalities. The paper argues that the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be conceptualised in relation to a population that may have been out of the workforce for many decades?

### *Communities, Connectivities and Later Life*

The rapid diffusion of forms of Information and Communication Technologies (ICT), mobile technologies and social media have transformed many aspects of social relationships and enabled new forms of social connectivity. However, the impact of virtual connectivity on community and communication for those in later life is not well understood. Research suggests that for older people internet use and its impacts are multifactorial and differ according to the nature of social relations. Research in this area has produced ambiguous results. Researchers have found that, where older people were previously socially isolated, by becoming internet users they were able to keep in touch with friends and family often across large physical distances. Others have found cyber communities to have a negative impact in terms of withdrawal from the outside world leading to a contraction in the use of social and physical space. It is certainly the case that the expansion of social networks beyond the local neighbourhood that domestic ICT allows can lead to profound changes in the nature of community in later life. Research on the internet has tended to focus on a digital divide, on the impact on community and social capital and on political and cultural participation. While the most common uses of computers by older people appear to be related to communication and social support, leisure and entertainment, health information, educational information, and productivity; this is not that different to younger groups. The presentation will address; theoretical approaches to new technologies and social relations in later life, trends in internet use among older people, research addressing the digital divide, patterns of motivation and use, the impact on social relations and social networks and the consequences of technological change for older people in temporal and spatial terms.

### *Socio-Spatial Justice and Housing*

While the relationship between justice and geography and spatiality is acknowledged and put central in research by several scholars, there is no consensus on the type of relationship. Space is often used as a contextual way and social justice writings are in many cases focused on power and struggles within society. Edward Soja has argued for putting spatiality more central in social justice research. Space may have a great explaining potential, but may also contain a causal power. This paper will further explore the spatiality of justice through an analysis of the Amsterdam housing market. Institutional changes related to housing that especially change the role, position and field of work of the social housing corporations in the Netherlands change the provision of housing. Space, landscape or territory shape the effects of institutional changes and are therefore both a means and an end of production and moreover distribution of housing. Amsterdam, by some regarded an example of a just city, is characterized by a high degree of social housing that at the same time is inaccessible for many. The private rental sector is small and expensive and owner-occupied housing prices have been growing quickly. To what extent can the Amsterdam housing market be regarded as just? And how does space relate to the concept of justness? The analysis will be conducted by a data-intensive study in which data on the dwellings in Amsterdam are connected to data on households.

### *The Vulnerable Man-Machine: Human Actors As Productive Parts in Work-Networks*

As parts of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. They may also have to learn how to manipulate the network so that they can retain a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to perform certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at "Techno", human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies and helmets, but in this network they necessarily remain some of the softest parts with different (dis)abilities and utilities. The analysis of ethnographic data from "Techno" suggests that technology and vulnerability is closely linked. The white collar-domain of the network results in one set of human vulnerabilities and the blue collar in, to some extent, another, but the real difference lies in the actor's possibility to manipulate the network. Depending on your formal position, who you know, how you are categorized (in terms of age, education etc.), and how well you fit into the network, you will be able to tinker with work schedules and the ordering of new machinery or software to different degrees. Being able to manipulate the network is particularly important to some, highly vulnerable actors and their manipulation-strategies differ depending on what resources they possess and how closely they are monitored by management and co-workers.

### *Recruitment of Women and Persons Born Abroad to the Swedish All-Volunteer Force*

This presentation examines the recruitment base to the Swedish all-volunteer force; the applicants for basic military training. So far the recruitment to the all-volunteer force has been satisfactory in respect of qualitative terms; both regarding psychological and physiological capabilities. The capabilities of those selected for basic military training have been as good as or better in comparison to previous years with conscription. Despite good quality among the recruitment base there have been vacancies, and the future need of personnel will increase. To increase the recruitment base and the diversity among the personnel, the Swedish Armed Forces are working to promote and increase the proportion of women and employees with different ethnic background. Although the all-volunteer force provides a more heterogenic recruitment base in some aspects than the conscript based force, the all-volunteer force in Sweden mainly attracts young men that are born in Sweden. The proportion of women has significantly increased from conscription. However there are no well-known changes in the amount of persons born abroad. Studies have revealed that the proportion of applicants for the basic military training born in another country than Sweden decline in each step of the selection process. This presentation will focus on the recruitment of women and persons born abroad in the selection process to the Swedish Armed Forces.

### *The Locally Oriented Global City: From Iconic to Anti-Iconic Architecture*

What does a global city look like? The desire to become a global city prompted many cities to undertake mega-projects that would increase their symbolic capital, such as the tallest or the largest buildings and cultural institutions bearing the prestigious names of world-renowned architects. However, although the allure of iconic buildings has not completely diminished, recently a new paradigm for the material reality of the global city emerged: the anti-iconic. The anti-iconic development, even when expensive and large-scale, advocates human scale projects that retain heritage and encourage embodied social interaction while shying away from flamboyant "global" architectural style with little connection to local communities. It appears paradoxical, then, that construction projects to help build a global city highlight preservation and augmentation of local particularities. I argue that the interpretation of the global city has taken a turn to local so that the picture of the contemporary global city consists of vibrant local communities and a robust and unique urban identity. To illustrate this empirically, I analyze the discourses underpinning Seoul's Cheonggyecheon and Toronto's Distillery District projects, based on policy reports, official statements and interviews. In the former, the Seoul Metropolitan Government removed an inner-city overpass to uncover and restore the historic Cheonggyecheon Stream; in the latter, Cityscape Holdings, a private real estate development company repurposed abandoned distillery buildings into an arts and entertainment area. Both projects were completed in the early 2000s, when Seoul and Toronto engaged in active campaigns to establish

their reputation in the global stage, and were believed to contribute to consolidating the global city status. Yet neither involves a new conspicuous building. I conclude the paper with a discussion on theorizing the global city as a cultural concept with fluid meanings, which contextualizes and underpins discourses of urban development and globalization.

### *Finding New Opportunities in Shrinking Cities: Local Citizens, Artists, and the State in Urban Revitalization Projects*

South Korea is one of many countries now facing the problem of inter-urban inequality. While Seoul and the capital region have nearly 50% of the national population, many other cities, which developed as the country rapidly industrialized during the latter half of the 20<sup>th</sup> century, are quickly losing their industries to newly emerging economies, such as China and Southeast Asian countries. In short, a number of Korean cities, once noted for their speedy urban transformation and growth, now face reversed difficult challenges of shrinkage. A good example is Busan, which had been the center of the southeastern industrial core, but is now struggling, with a shrinking economy and population. This paper examines two urban revitalization projects that took place in Busan's dilapidated old downtown and its biggest slum neighborhood. Unlike typical urban development projects of a developmentalist city, dependent on state-driven top-down approaches with a goal of supporting private capital accumulation, these two projects set themselves apart by relying on the active participation of local residents and artists to bring bottom-up changes that are strongly connected to the local history and social life. Through the two cases, I explore how the changed circumstances necessitated scaling back the roles of the state and capital, and permitted newly emergent civic actors to take much greater roles in the development projects, leading to unexpectedly successful outcomes. Additionally, the paper points out how the visible decline provided an opportunity to change the mindset of the society, which had been rather firmly embedded in development-oriented ideologies, and to seek alternative possibilities amid the shrinkage. Perhaps, with the arrival of more socially aware and inclusive development approaches and goals, shrinking cities may find new opportunities to build more resilient and livable cities.

### *Beyond Agamben's Noncitizen: Protesting Refugees on Their March through Europe*

Migrant protest on the move has emerged recently in different national and local geographies. Following the *Refugee Protest March* 2012 to Berlin, similar forms of political protest have been realized in different European spaces. Organized mainly by refugees themselves and supported by non-refugee solidarity activists, the recent phenomenon of 'mobile refugee activism' has created public discussion and thus influenced mainstream debate on the precarious situation for refugees in Europe. Analytically, while the politics, laws and regulations concerning the life of the refugee within the EU are layered according to three main spaces of institutionalized power: regional, national, international; also grassroots activism as organized resistance is developing accordingly. Based on my ethnographic study of *Asylstafetten*, the *Asylum Relay Walk* in Sweden during the summer of 2013, plus research on the *Refugee Protest March* through Germany and the marches organized by *Refugee Struggle for Freedom* in Bavaria, also the responsive practices of policing are elaborated in this paper. While repression via police harassment was a central experience of the protest marches through Bavaria, the *Asylum Relay Walk* through Sweden barely met 'the state'. Further including the *Congress of Protesting Refugees in Europe*, held in Munich in early March 2013, the historical and geographical context becomes palpable: 'European' refugee protest must be analyzed not only as local and national, but also as increasingly transnational. The self-proclaimed 'Non-Citizens' of Europe, in reference to Agamben expressing their overall aim to "overcome the duality of Citizen and Non-Citizen", have met the responses of power in different ways in different places. The 'Human Right' to non-violently articulate democratic dissent has in these cases been infringed by different strategies of state repression. Meanwhile, grassroots refugee activism has to a certain extent already managed to adjust domestically and organize internationally according to these structures of inequality, discrimination and exclusion.

### *Identities, Culture and Transnational Learning: Being Malaysian Women Medical Researchers*

In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women's potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shapes this group of highly skilled Malaysian women's identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework of transcultural identities and transnational learning in knowledge-intensive industries. The discussion also considers an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women's successful participation in the global economy.

#### *Theoretical Consistence Between Goffman and Luhmann*

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by cross-referencing to each other.

In a short journal article "Die Form Person" (The form person), Luhmann defined person as a form with two sides which through regulating the actions offers a solution to the problem of double contingency (Luhmann 1995: 152). After some explanation, Luhmann wrote: if you want to learn more, you have to read Goffman (Luhmann ebd.: 151). For a closer investigation of the theoretical consistence between these two sociologists, this article will develop its arguments according to the following guidelines:

1. Foreword
2. George Herbert Mead as a point of reflection: Both Goffman and Luhmann are unsatisfied with Meads' explanation as to the process of self-formation.
3. Double contingency as a chance: Unlike Parsons, both Goffman and Luhmann do not treat double contingency as an communicative obstacle needed to be overcome through common culture normality, but as a chance or a pressure to set dynamic practices in motion.
4. Person/non-Person: Both of them pay attention to the possible qualities and attributes of self-identity which are temporarily excluded from the side of non-person, but could potentially be ascribed as the self-identity. This may explain why one would behave so cautiously in the social interactions to maintain the civilian self.
5. Conclusion: Inspired by the above discussion about the theoretical consistency between Goffman and Luhmann, I would like to suggest, as the conclusion of this article, a practical perspective of a "self" that refuses the ontological existence of a pre-social self.

### RC36-623.2

**JUKKALA, TANYA\*** (University of Skövde, [tanya.jukkala@sh.se](mailto:tanya.jukkala@sh.se))

#### *Overcoming Alienation: A Luhmannian Perspective*

The concept of alienation can be found in micro- as well as macro-level sociological perspectives. The present discussion seeks an understanding of alienation, and possible ways to overcome it, in relation to Niklas Luhmann's theoretical perspective, which, given its non-hierarchical structure, may provide a possibility of conceptualizing alienation from "both sides". In Luhmann's theory of Social systems, individuals (i.e. psychic systems) are seen as residing in the environment of society (i.e. social systems) and thus not constituting a part of it. It is argued, on the one hand, that this results in an essential, and alienating, differentiation of psychic systems from social systems. On the other hand, the differentiation of systems from their environment (and other systems in it) provides systems with a particular "freedom" in terms of acting according to their own, non-alienating, system logic (i.e. functionally). Nevertheless, psychic systems want to participate in the communication of social systems and this is possible only through access to system-specific media of communication, which are defined by social systems. In relation to this, psychic systems appear to be condemned to act according to the logic of social systems, which consequently would emphasize the alienating process of social participation and reduce the "freedom" of psychic systems. However, media of communication may be defined in one way in social systems while, from the perspective of psychic systems, alternative ways to access system media through various creative and unexpected processes may be possible. The equal "freedom" of psychic systems in relation to social systems would seem to emphasize such a possibility. It is thus argued that Luhmann's theoretical perspective provides a possibility for psychic systems of social participation according to their own logic, and that this possibility may provide a key for understanding how the alienation of social participation can be overcome.

#### *Addictive Gaming: Self-Analyses of Addiction and the Biographical Context. Life Story Interviews with Video Game Addicts*

Since the 1990ties computer and video games are discussed as being addictive. In media and research the phenomenon has gained great attention and with the appearance of *internet gaming disorder* as research diagnosis in the appendix of the recently published fifth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM V) addictive gaming made a further step towards official recognition. Looked at addictive gaming from a social science perspective one could say that it is considered a social problem. But how do affected gamers perceive and interpret their gaming behaviour themselves?

This presentation tries to give an answer presenting biographical narrative interviews with german male and female gamers who are or were at some point classed as video game addicts according to a psychological screening instrument (CSAS II) (Rehbein et al. 2010) and/or self-analysis. The main objective is to take the subjective perspectives of the video gamers seriously and to reconstruct their self-analyses within their complex interrelationship between everyday life and the biography and the virtual world. By presenting exemplary cases it will be shown, without idealising or pathologising from the outset, which everyday and lifestyle problems can be solved using the virtual practices and which dysfunctions and follow-on problems this is potentially linked to.

The project follows Grounded Theory and in the analysis also uses the method of Objective Hermeneutics.

**JUNG, CHUNGSE\*** (Binghamton University, SUNY,  
[chungse.jung@binghamton.edu](mailto:chungse.jung@binghamton.edu))

#### *From Protest Event to Protest Wave: A Theoretical Appraisal on the World-Historical Perspective*

For a long time social movement studies are strongly influenced by the geographical and historical points of reference. Empirically, most social movement theories have been generated from case studies of short-term mobilization activity in the global North. Methodologically, the study of social movements is overwhelmingly characterized by case-oriented studies. However, one of the most fundamental characteristics about social movement is the 'connectedness,' both temporally and spatially, of collective actions with each other. This leads us to draw on a theoretical approach that attempts to identify similar processes and dynamics that operate in diverse cases of contention. "Protest waves" as understood in this manner offer us the possibility of constructing a systemic analysis that could identify and then particularly explain contention processes in the

global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country's specific characteristics and its location in the world-economy structure. These kinds of linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are decomposing and transforming. This heuristic characteristic of collective action has an elective affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

##### *Information Management, Collective Intelligence Within The Context Of Crisis Resolution - Going Global*

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global.

Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war.

Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict and these "theater of wars" are concurrently going global. Therefore it is more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of "Pooling and Sharing" as a new paradigm to overcome looming calamities. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values:

- sharing
- responsibility
- respect

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field

##### *Saving the Environment? Environmental Policies of Japanese Firms and Their Effectiveness*

In the past decade, a new framework has gained popularity that firms, which aim to make profits, should also address broader social issues, such as environmental protection, human rights, and labor standards. It is no coincidence that this framework of corporate social responsibility (CSR) has become popular under the anti-regulation logic of neoliberalism. Instead of bringing the state back in, the CSR framework grants corporations a way to pre-empt state regulations, by claiming that market mechanisms through corporate voluntarism is more effective in resolving social issues than state mechanisms through bureaucratic supervision. Thanks in part to the promotion by international organizations (e.g., the United Nations), various CSR policies have been widely adopted across advanced industrial societies. Their effectiveness, however, has been largely unknown, raising serious concerns that adoption of such policies amounts to mere symbolism. In this paper, we examine environmental policies of major Japanese firms and their impact on corporate environmental performance, using panel data on Japanese firms between 2006 and 2013. During the period, under the increased global institutional pressures for CSR, Japanese firms have adopted a broad range of environmental initiatives, such as environmental auditing and labeling. But there is little research on whether and under what conditions such initiatives lead to substantive changes. Our findings suggest that without other complementary mechanisms such as government regulations or other third party monitoring, corporate voluntarism alone is unlikely to achieve corporate environmental responsibility and may instead result in corporate carte blanche.

##### *Transnationalism and Religion; A Study on Biographies of Immigrant Women in Germany*

This study research into the biographies of South Korean nurses who left Korea in early adulthood and have remained in Germany until now. Between 1963 and 1978, around 11,000 Korean nurses left for Germany as working migrants. Korean nurses were hired under a restricted three-year time period for migration. After the expiration of the contract, many returned to South Korea or chose to immigrate to another country such as Canada and the U.S. But other nurses did not return to Korea but instead chose to remain in Germany. They have formed Korean Communities and organized various Korean immigrant associations in Germany. After deciding to remain in Germany, they established their life over more than 40 years in Germany society and culture. So the research is interested in the way of how they dealt with their life between a home they left behind and a new home. To this end, the data collection was conducted using Fritz Schütze's autobiographical narrative interview and collected data was analyzed according to his narrative analysis.

We are going to present a case study about immigrant women concerning transnationalism and religion. We will show in which complicated, intertwining and often conflicting ways transnationalism occurs if we consider not only the flows of people but also the flows of goods, especially when these goods are symbolic ones, as in the case of religion. One aspect we were especially interested in was to learn something about the 'flow of symbols'.

As a result of studying interviews with Korean nurses it is shown how these people find or come to 'religion'. We ask if religion is becoming an ersatz for moving back and forth between the home country and the current country of residence. This discussion leads to further considerations concerning the connection between religion, church religiosity, and transnationality.

##### *Civil Awareness: A Comparison of the 2011 Occupy Wall Street Movement in the United States and the 2008 Mad Cow Disease Protests in Korea*

The Occupy Wall Street protest that swept the United States in 2011 and the mad cow disease protests that embroiled Seoul in 2008 seemingly occurred in different political and cultural contexts concerning different issues. In fact, although the details of these two protests differ, the protests are similar in that the initial protest took on a larger symbolic significance that captured the imagination of other groups and encapsulated some essential truth about society. Both the Occupy Wall Street movement in the United States and mad cow disease protests in Korea demonstrated how spontaneous protests can strike a chord with the larger population and create a powerful dialog between the protesters and the public wherein the protesters articulate a theme resonant for the larger population and have immense impact on groups at a distance from the original protest. The very successful performance of protests as intense fusion between protesters and the public display similarities in a broader sense symbolically, and these similarities emerge in the motives of individual actors and shared inner meanings of the respective protests. It is worthwhile examining the motivations of these two different protests, the ways the discourses were made up among protesters, and interpreted in the mass media, and how the general public responded. The comparison of the two cases offers insights into the process by which a small group can create movement that transfers to other groups that do not share the same interests, discussing how the themes were articulated and how meanings are created beyond a national level.

##### *Airports As High Reliability Networks and the Inherent Emerging of Security and Safety Threats*

The theory of High Reliability Organizations tries to explain why organizations or its units can achieve error-free results in complex and error prone environments. After the application in the fields of nuclear power plants, air traffic control, etc. the theory was deployed to airport security screening procedures after 9/11 (Frederickson/LaPorte 2002). It is argued, that under the vital impression of 9/11 the security regime became enforced and prone to produce more false positives (error type I) rather than false negatives (error type II). Therefore, these false positives may become an argument to reduce security in favor of efficiency. To avoid cutbacks in security it is – according to the authors – essential, that airport screening organizations become high-reliability organizations.

We will argue that the focus on high reliable screening organizations is too narrow – instead the whole airport needs to function as a high reliability network of organizations. Since airports do not solely consist of security producing organizations but rather need to be understood as complex systems of heterogeneous actors such as airlines, airport management, retailers, etc., security regulations often can conflict with their standard procedures and organizational logics. To maintain the processes that are vital for these actors adaptive strategies evolve constantly and are passed on. These adjustments are often not formalized but remain informal since they transgress the rules of the security system. They are therefore frequently not reflected in the predominant security regime as they are not intended and the regime builds on idealized assumptions of compliance. Consequently, new safety threats for the airport system can arise due to the attempt to increase the security regulations in this critical infrastructure. The presentation builds on findings of a research project on the social production of (in)security on airports in Germany.

#### *Democracy, Anyone? Support for Democratic Governance in Newly Unequal Societies: Evidence from Post-Soviet Market Economies*

In this paper, we examine attitudes about the desirability of democracy versus dictatorship in Kazakhstan and Kyrgyzstan, two of the most pro-market economies in post-Soviet Eurasia. Drawing on original data collected in late 2012, we raise a series of fundamental questions about the link between market economics and democratic political culture. Are some societal groups more receptive to democratic ideals than others? Are the middle classes, following expansive market reforms and a shrinking of the welfare state, as hungry for political change and as hostile to dictatorship as democratic theorists posit? How do individual experiences with the transition to capitalism affect not only perceptions of current government performance, but preferences for the political future? To uncover answers, we systematically test the effects of a host of demographic and individual-level characteristics using a nationally representative dataset of 3000 respondents (1500 in each country). We look at minority versus titular status, household income, educational attainment, area of residence, and religiosity, as well as individual trajectories in the labor market, understandings of the roots of social inequality, and one's satisfaction with current political institutions and practices. We find that, more than two decades since the onset of independence, post-communist citizens remain divided over basic questions of governance, and this division is especially pronounced in Kyrgyzstan. In addition, surprising patterns of group and individual-level preferences emerge, challenging a number of conventional theoretical expectations.

#### *Family Resilience in Times of Mass Migration: The Case of Lithuania*

A decade ago state officials believed that short-term emigration is a rescue for Lithuania during the difficult economic period. They state that short-term emigration reduces unemployment rate, increases income of the population and people gain useful experience abroad. Following Lithuania's accession to the EU in 2004, the point on emigration radically changes - the de-bordering of Europe and the development of intra-European mobility is seen as one of the main factors of recent wave of the mass emigration from Lithuania giving rise of the family changes.

The paper aims to trace the development of the outline to migrant family research through the lens of changes, resources, definitions of the situations and impact management practices. While family resilience and coping with difficulties are seen as the main goals of the on-going research project, Reuben Hill's family change model is treated as conceptual axis of migrant family research. The authors theorize family resilience and coping with hardships by means of ideas of symbolic interactionism, theoretical constructs of intergenerational solidarity, kin networks, personal networks and conceptions of family practices: doing and displaying family.

Presentation of empirical data is based on two quantitative research studies, conducted in 2013, and includes comparative perspective. The focus is mainly on the analysis of family resources by means of the theoretical constructs of intergenerational solidarity (V. Bengtson), kin networks (B. Nauck) and personal networks (R. Milardo and B. Wellman). Different concepts are utilized purposefully in an attempt to analyse family resources on several levels – the concept of solidarity permits to examine specific features of interaction among individuals of three generations related by kinship ties, while personal networks of family members comprise exchange and interaction networks with significant individuals that transcend the boundaries of family and kinship ties.

#### *Why Do Women Generally Care More Than Men? Processes of Bargaining and Interaction in the Transition to the First Child -- CANCELLED*

This paper studies dual-earner couples in their transition to their first child. We perform a qualitative analysis on longitudinal and semi-structured interviews –both individual and couple- gathered in 2011 and 2013 in Spain. This case study is part of the international TransParent study. In this piece of research we compare how the couple intends to care for the baby, before birth, and how the couple's members describe having shared the care during the first and a half year of life of the baby. How do men and women think about their care involvement during pregnancy and how do they come up either with more symmetric or more traditional care arrangements afterwards? What distinguishes quasi-symmetric from asymmetric care-sharing couples: their relative resources and employment contexts or their gender and care attitudes? This paper analyses resources in a large sense: from relative income, job security, job sector, job organization principles and work careers to relations with peers and the family. Results show that resources in a large sense matter as a necessary condition for a symmetric share of care, but the key to understand real outcomes is the form of the bargaining process and the mix of gender and care attitudes within the couple.

#### *Transformation of Gender Roles in Lithuanian Society*

In 1990 after regaining Lithuanian independence, women organizations started their active performance. The majority of these organizations summoned reconstructive congresses, for example Lithuanian Women Catholic organization which was forbidden in the 1940s when the Soviet Union occupied Lithuania.

At the beginning of 1990 the first democratic election to the Supreme Council of Lithuanian Soviet Socialist Republic was held. In 1990 there were 14 women who made up 10% of the elected in the Seimas (Parliament).

Constitution of the Republic of Lithuania of 1992 consolidates the equality of men and women.

A legal measure to eliminate gender discrimination is the Law of Equal Opportunities which was passed in 1999. This law was the first of its kind in Central and Eastern Europe. On September 29, 2008 the Seimas signed National agreement on realizing women and men's equal rights and opportunities. The agreement was initiated by the National women's consulting forum striving to enforce equal opportunities of genders in reality.

After Lithuanian society entered the 21<sup>st</sup> century, with changes in economic and social intercourse, women have become more active while looking for well-paid jobs regarding their specialties. Though tenacious stereotypes about male and female jobs still remain.

Facts of public opinion poll and social inquiries prove that patriarchal attitude, which is based on a traditional understanding of manliness and womanhood, are still popular in Lithuania. It is often stressed that it is men who should take a more important place in labour market and social life. Women's opportunities to seek for professional career or stay in a leading position are perceived sceptically.

Though in Lithuania changes in labour market are present, a number of unresolved problems still remain. A problem of women – mothers' discrimination still exists.

However, an important question is open: why women electorate do not vote for women candidates?

#### *Perspectives on Climate Resilient Food Chains - a Case Study from Finland*

Climate change has several profound effects on the functionality of food supply chains. Floods, soil erosion and changes in plant species for example make agricultural activities and food production more vulnerable. It is, however, increasingly evident that local impacts of climate change on food chain may vary remarkably not only between countries but also within one country. In this regard, it is a major future task to re-organize the prevailing patterns of the food system in order to make it more resilient. It is important that all stakeholders of the supply

chain from food producers to retail and consumers have access to this transformative food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkanmaa and Southern Savo. The interviewed stakeholders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retail chains. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

#### *The Paradox of Managing Diversity. Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective*

On the background of "anti-racism" legislation, of ideas of cultural diversity and incentives of the marked economy, the management strategy of *diversity management* was developed in the early 1990s. It has since then made success globally as a "new paradigm for management". – The aim of this paper is to present some results from a research project on diversity management in mass media organizations in Sweden.

The project applies Luhmann's systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organizations and (3) as well the complexity of the issue must be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communication-based theory.

Social changes in direction of (more) equal opportunity and inclusion chances as to cultural diversity have occurred in the studied media organizations. In a previous study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also a high confidence as to legal regulations.

Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Competence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and *not focusing on person's cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.*

#### *Ingrid Jönsson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare*

Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.

Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analysing recent developments of eldercare with regard to marketisation and de-/refamiliarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between caregiver and receiver look like, under what economic, social and normative conditions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, changing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis's frame of analysis as well as in relation to the concept 'care packages' (used by Knijn, Jönsson, Klammer, 2005 compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for elder-

ly and its impact on the relationship between caregivers and receivers (dependence/interdependence) and women.

#### RC11-207.16

**JÖNSSON, INGRID\*** (Lund University, [Ingrid.Jonsson@soc.lu.se](mailto:Ingrid.Jonsson@soc.lu.se))

#### *Ingrid Jönsson: Childcare and Eldercare - Different Paths of Development*

Traditionally welfare in Sweden is publicly paid, publicly organised and access is based on needs rather than means. Economic retrenchment, changes of governance and legal frameworks in the 1990s have an impact on the organisation of social welfare with implication for universalism, marketisation and refamiliarisation. The paper will discuss the different paths of developments for eldercare and childcare and whether ideas of social investment currently being advocated by international organisations have contributed to the different paths of development. Although ideas of social investment in Sweden dates back to the late 1930s (Morel et al 2012) recent emphasis on early childhood and care in the context of limited economic resources and changes of governance and legal frameworks have implications for eldercare. Discussing eldercare as social investment in a European context means counteracting future costs related to ageing populations while it for children means capacitating them for changing labour market and family structures with the aim of improving employability and increased economic competition. Historical reviews of childcare and eldercare including changes of governance, legal frameworks, etc. constitute the background for the analysis of recent diverging paths within the two sectors in relation to universalism, marketisation and refamiliarisation. The recent development is socially as well as gender differentiated.

*Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India*

Despite remarkable progresses in many spheres, the Gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men's work and women's work. Women's work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 corers towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of, cutting, de-husking and drying of nuts is entirely depending on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women laborers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status

**DASOG, SHAMALABAI BHEEMARAYAPPPA\*** (Affiliation to research committees RC-41, [dr.sbdasog@yahoo.com](mailto:dr.sbdasog@yahoo.com))

*Gender Inequality in Family and Work-PLACE: An Empirical Study in Three Urban Centres in Karnataka, India*

Gender inequality refers to unequal treatment or perception of individuals based on their sex. It reflects and manifests in numerous dimensions of our life. Gender inequality and resultant discrimination in varying degrees on the grounds of sex are commonly witnessed, admitted and even justified in India. Despite the policy measures to overcome gender discrimination, gender inequalities within the family and at work place still exist. Most of the forms of discrimination against women have their roots in patriarchal system and its values. Women are dominated over by their male members in their own family. They have little power in making decisions.

The present paper proposes to examine the nature and extent of gender inequality within the family and work place. The main objectives of the study are to analyse the power dimensions of women in family and work place and to examine their participation in decision-making process. This empirical study is based on field data conducted in three urban centres of Karnataka State, India. The data are collected from 500 working women. The findings of the study proved that, the power dimension splits vertically; women are discriminated by the male members in their own family and work place, they are marginalised on the bases of gender. It is suggested that progress towards Gender equality requires empowerment of women which will lead to notable changes in gender relations.

## RC19-335.1

**KAASCH, ALEXANDRA\*** (University of Bremen, [mail@alexandra-kaasch.de](mailto:mail@alexandra-kaasch.de))

*Global Social Governance As Inter- and Inner-Organisational Relations Between Actors*

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors.

Global social governance is commonly characterised as a complex and multi-acted process, driven by more or less powerful and legitimate actors. There are

significant overlaps in their agencies, as well as they are bound in various (some-times) overlapping networks and alliances that cross-cut organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what 'others' do.

The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways of how the inter- and inner-organisational relationships can be conceptualised and how related interactions can be understood by drawing on a number of disciplines. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.

**KABISCH, NADJA\*** (Humboldt Universität zu Berlin, [nadja.kabisch@geo.hu-berlin.de](mailto:nadja.kabisch@geo.hu-berlin.de))

HAASE, DAGMAR (Humboldt Universität zu Berlin and Helmholtz Centre for Environmental Research - UFZ)

*Urban Green Space Provisioning in Berlin, Germany. Environmental Justice in Sustainable Urban Green Space Planning*

The city of Berlin, Germany, tries to integrate the ecological, social and economic dimensions of sustainability in all fields of policy action since some years. The main aim is to increase quality of life for all residents in an equal way. However, Berlin is facing further immigration which will lead to nearly 250,000 additional residents in the next 20 years. This population growth combined with urban planning policies of (re)densification will certainly drive the conversion of urban green spaces into residential land. This development might result in an unsustainable city environment which would raise concerns of environmental justice, too.

Set against this background, we present an analysis of urban green space provisioning in Berlin in order to identify distributional inequities between urban green spaces and population. The relation is discussed in light of variations in user preferences associated with age and immigrant status. Publicly available land use and socio-demographic data at sub-district level are applied in a GIS, dissimilarity index and cluster analysis approach. Our results show that although most areas are supplied with more UGS compared to the per capita target value of 6m<sup>2</sup>, there is considerable dissimilarity by immigrant status and age. Environmental justice is further discussed on a site-specific case in Berlin – the park and former city airport Berlin-Tempelhof. Visitor profiles and preferences are analysed. Results from questionnaire surveys indicate that the identified dissimilarities on sub-district level are not the same as environmental injustice in Tempelhof, but point to a mismatch of urban green space and user preferences.

We conclude that, if a city claims to follow the sustainability paradigm, successful urban green space planning should consider the match between quality of a park and specific cultural and age-dependent user needs while providing equal access to high quality green spaces for all residents.

**KACHTAN, DANA\*** (The Open University of Israel, [danakc@openu.ac.il](mailto:danakc@openu.ac.il))

*From Bottom-up – a Micro-Methodological Examination of the Military*

The aim of this paper is to deepen the discussion of micro-methodological examination of the military. Research on the military focuses largely on a macro perspective, examining mechanisms, structure and policies. In this paper I wish to emphasize the importance and contribution of micro research, which focuses on the individuals rather than the institution; examining their experiences, understanding and interpretations.

Based on a qualitative research study, utilizing a semiotic-interpretive approach which is well-suited to examining the subjective point of view, I argue that the interpretations and experiences of the soldiers are a central means for understanding the structure, the mechanisms and processes in the military.

By focusing on interviews with 60 combat soldiers who served in two infantry brigades in the IDF (Israel Defense Force), I wish to illustrate the role of individuals in creating and perpetuating the structure, culture and mechanisms of the military as well as in challenging them. Focus on the role of the individuals, rather than the institution, enables us to examine not only how structure and culture are maintained and reproduced through formal policy, but also how they are created and formed by the soldiers, through their practices, without the external supervision of the army.

The contribution of a micro perspective is, first, to stress that mechanisms operate not just top-down but also bottom-up. Furthermore, the study illustrates how social categories, such as ethnicity and gender, are preserved and perpetuated not only by institutional mechanisms, policy and structure, but also by individuals through the ways they perform. Finally, by emphasizing a micro perspective I do not ignore the important role of the organization, but rather emphasize an additional point of view in military methodology.

[s0947261@sms.ed.ac.uk](mailto:s0947261@sms.ed.ac.uk))

*Children's Leisure Pursuits: A Test of the "Homology" Versus  
 "Omnivore-Univore" Hypotheses Debate -- CANCELLED*

Recently in the UK academic milieu, there has been a debate as to whether the link between socio-economic status (SES) and adults' participation in cultural activities conform to a "structural homology" rule (Bourdieu, 1984), or present a pattern best characterised as an "omnivore-univore" distinction (Peterson, 1992). The dispute surrounded the issue of whether in contemporary British society, cultural participation (and consumption) still signifies social-class, and in what ways. However, researchers have yet to analyse class-based patterns of cultural participation and leisure pursuits in children.

The present paper addresses this gap in knowledge by exploring the associations between SES (measured by parental education and occupation levels and by familial incomes) and children's participation in three leisure domains: social-group activities, commercial-public activities, and home-centred activities. Within each of these domains, activities from across the "highbrow-lowbrow" cultural capital spectrum are examined.

The results are used to discuss the debate on the "homology" vs. "omnivore-univore" hypotheses in the context of cultural socialisation and cultural capital acquisition in the middle childhood years.

The paper relies on quantitative analyses of data drawn from the British "Millennium Cohort Study" (MCS), a survey of around 19,000 babies, all born between 2000-2002. The current analyses focus on data taken from the third and fourth sweeps of the MCS when the children were aged around 5 and 7 (respectively).

The findings indicate that children's leisure pursuits are stratified by SES: children in high-SES groups are more likely than peers in low-SES groups to participate in a range of leisure activities across the highbrow-lowbrow spectrum. This pattern of leisure participation is consistent with the "omnivore-univore" hypothesis. Yet, the results also show that the associations between SES and children's leisure pursuits are stronger for highbrow and midbrow activities than for lowbrow activities, a finding that lends support to the "homology" argument.

*The Provision and Expansion of High School Education in Post-War Japan*

This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now about 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These two features characterize high school education in Japan. At the same time, there have been regional variations in provision of high school education regarding above mentioned points. How and why was each prefecture different in providing high school education? To answer these questions, we first classify prefectures into groups using cluster analysis then clarify determinants of regional variations. In conclusion, we discuss how these variations may affect provision of high school education in the near future, in depopulating society.

*Lay Judge System and Social Bias*

Should Court respect the judgment of lay judges when the lay judges had not enough knowledge concerning to a specific psychological conditions or a disorder caused by mental disabilities?

This presentation aims to clarify the necessity to overcome prejudices of lay judges and to suggest the importance of supports of lay judges in order to avoid a social-based decision.

For long time, Japanese people have been used to the point of view that law system and judgment of Court are constraint to citizens. It seems difficult to imagine that a lay judge can join the procedure to drafting a law or to make a judgment of the Court. Creation of lay judge system changed the relation between Court and people.

After three years of the creation, however, some problems of this system have been progressively clarified. There are some criminal cases that lay judges demanded heavier punishment than the demand of public prosecutor. There are several reasons about it: the social demand to reflect on the sentiment and the damage of the victim and people concerned, the influence of the social norm and prejudice between lay judges, and so on.

We trace here the judgment of Osaka District Court concerning to a murder caused by a man with attention deficit hyperactivity disorder (ADHD). In this case, the Court made a judgment of 20 years of imprisonment beyond the demand of the public prosecutor. The judgment is derived from the misunderstanding that the society has not any institution or facility where accepts an ex-convict with mental disabilities. The judgment based on the misunderstanding concerning to ADHD makes us to notice the necessity of the support for the lay judges when the specific knowledge is needed to examine the case.

*Existential Reflections on Leisure-Tourism-Environment Interface: A Case Study of Uttarakhand State in India*

The existence of scenic and cultural attractions in any region provides golden opportunity for economic development. Attractions bearing mythological and religious significance promise all the more monetary gains especially in a country like India where religion has a stronghold. However, promoting tourism without thoroughly understanding the interconnections which make up the region's ecology can be disastrous. The recent tragedy that hit the holy shrine at Kedarnath in Uttarakhand has triggered a crisis of faith on one hand and rekindled the development debate on the other. The Himalayan state while zealously centrestaging tourism to catalyse economic development completely ignored the carrying capacity thresholds and sidelined the environmental and zoning regulations which ultimately jeopardized the exotic environment which sustains it. The June deluge left thousands of tourists stranded in the valley created panic and disenchantment amongst the tourists giving a great blow to tourism. Now grave concerns are being shown for its revival as the livelihood of a large number of regional population depends on the tourism sector. As part of reconstruction plan visitors are being exhorted to contribute their part by visiting safer places in Uttarakhand. Therefore, it becomes pertinent to review the current tourism with a sustainable perspective. The present paper examines the dynamics of the relationship between local people, sacred landscape and the tourism industry in the Himalayan state. It seeks to explore the shift in the profile of tourists and patterns of tourism in this region and offers reflections on how the edifice of tourism collapses under its own burden if it is devoid of tourist ethics and proper planning. Further, it emphasizes that in ecologically vulnerable systems, tourism cannot be encouraged only as an economic activity but as a cultural activity forging sustainable bonds with the sacred sites, sensitive landscapes and local folks.

*The Classed Parental Attitudes Towards the School Choice and Equality of Opportunity in Finnish Comprehensive School*

Recent international comparisons and rankings have highlighted the equality and quality of Finnish education system. Throughout the whole 2000s, PISA-test results have demonstrated that Finnish pupils score high; the percentage of pupils reaching only the lowest proficiency levels is small; the variation between schools is low; and, finally, the impact of pupils' socio-economic background to learning outcomes is small.

Traditionally, Finnish comprehensive school system has been built on principle of equality, and the provision of basic education has been governed through school districts. Since the 1990s, reforms, based on principles of decentralisation and deregulation, have reduced direct state control. As a result, local education authorities have developed distinctive policies concerning local models of selection and admission with diverse possibilities to exercise parental choice.

Our aim is to discuss the ways in which social class intertwines with parental values towards universal and selective features of comprehensive school within the political, social and educational context of Finland. Based on our previous studies we are especially focusing on 1) the changing emphasis on equality of opportunities, and 2) the new cleavages within social classes, in relation to school choice. We describe classed educational strategies by combining our empirical

findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617).

Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

#### *From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis*

In the present paper the effects of the Greek economic crisis to the Greek society are comparatively scrutinized with concentration on both male and female access to the labor market. In particular, the issues under investigation throughout 2008-2013 are: a) the unemployment percentage both of men and women, b) men and women part-time employment and c) the correlation between studies and labor. Besides, the variable of gender is studied in combination and in relation to age and years of studies.

Through quantitative researches an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time employment both of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects.

The economic crisis period is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the outcome of a policy about gender equality will be evaluated and the educational structures will be reorganized within a policy of reinforcing gender equality along with a broader policy about equality conducive to the unification of vindication schemata for both genders.

#### *Employee Driven Innovation - an Organisational Challenge*

Employee Driven Innovation - An organizational challenge

Anthony Kallevig, LO Norway

*The Nordic countries are about to open their eyes for that employees in all sort of workplaces is an important untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lack the understanding of what it is and how to do it.*

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seem to base the rather one-sided notion that essential ideas occur in laboratories and research departments. However a paradigm shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up. This happens at the same time as the general level of education is rising, and businesses are hiring more people with skills to see and understand the wider contexts and to participate in resolving complex issues.

As part of this, the Nordic countries adopted the concept of "employee-driven innovation" in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In Norway this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

#### *Churches and Religious-Secular Interaction in Welfare in Croatia and Finland*

The welfare state reforms have changed the position of actors and put co-operation between public and private stakeholders in Europe on the agenda. In this situation, the Churches are also taken more seriously as partners of welfare services and they have an opportunity to expand their activities on the secular sphere. At the same time, the question regarding the position of the religious in the interaction must be taken account. Growing religious-secular interaction sets Churches to a different position than the religious institutions had during the modernization process. Thus, the situation differs also theoretically from the classical views of secularization: both differentiation and dedifferentiation are equally relevant viewpoints for the analysis. In the context of predominantly Lutheran and Catholic countries, which are analyzed in this paper, the interaction may also support the impact of the religious on the secular domain.

The paper focuses on the role of Churches in the welfare sector in Croatia and Finland. It presents results regarding the local-level interaction between secular and religious organizations in the field of the welfare sector. The data includes the interviews of secular public sector and the social work of the Churches gathered in 2013 in three regions in Finland and Croatia. On the basis of the empirical work and background analysis the paper demonstrates the multifaceted reality of interactions between religious and secular institutions and discusses theoretical consequences of changing ways of interaction in different social and religious contexts.

#### *Disentangling Greek Xenophobia during Recession*

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone's economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the society's social fabric has grown more frayed generating a mixture of frustration, insecurity and anger among Greeks which has been directed against immigrants fuelling the upsurge of anti-immigration backlash. The acute augmentation of xenophobic stances has been expressed by the rise of the neo-fascist Golden Dawn which has grown from a fringe group into a nationwide political party propagating that immigrants are responsible for the socio-economic woes of the country. The study attempts to disentangle the complexities of Greek xenophobia during the recession using an amalgam of theoretical frameworks (i.e. realistic group conflict, social identity and scapegoating theory) as well as multiple secondary data sources, i.e. European Social Survey (ESS), European Value Survey (EVS) and Eurobarometer. The analyses unveil the etiologies of Greek xenophobic stances traced in the intense inter-group competition due to the scarcity in jobs and economic resources but most importantly in the formation of a far right-wing populist identity that tends to displace the blame for personal hardships and misfortunes onto the relatively powerless immigrant group members. The study unearths one of the social facets of the Greek economic crisis in breeding hostility against migrants and highlights that such hostility has recently taken more violent forms of racist attacks and racial clashes. It is underlined that the call to transform the xenophobic climate into a xenophilic one in Greece becomes more urgent than ever; hence immediate policy responses are needed to curtail xenophobia and safeguard the fragile social cohesion and order of the country.

**KALOGERAKI, STEFANIA\*** (UNIVERSITY OF CRETE,  
[s.kalogeraki@gmail.com](mailto:s.kalogeraki@gmail.com))

#### *Unveiling Correlates of "Don't Know" Responses in the Left-Right Scale*

Europe's current economic crisis has spread to the political sphere and escalated populist tendencies and nationalistic politics. Specifically in indebted member-states the political crisis is echoed in citizens' skepticism about an uncorrupted political system and widespread perceptions that political parties are not strongly ideological oriented, but rather populist, personalistic and clientelistic. In a period of socio-political bewilderment, the division of traditional patterns of individual's ideological orientation towards political parties has become more ambiguous. In empirical research a classical measure to operationalize political orientation and identity is the left-right scale. The "Don't Know" (DK) responses in the specific scale are usually treated similarly with "Refusal" or "No Answer" and interpreted as individuals' cognitive inability in the left-right self-placement; hence excluded from analysis. However, in the present study the DK responses in the

left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals' perceptions of weakening of democratic institutions, their distrust in political parties to revive the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic vows. Using data from the European Social Survey (ESS) in 18 European countries, the study charts changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multiple logistic regression analyses unveil the differentiated impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents' left-right orientation during a period of economic downturn and political turmoil.

#### *Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S*

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship while another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the hypothesis have been often unclear about what policies it entails. That is, it is argued that a policy aims to reduce the risk of exposure to marijuana in order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state level panel data from Centers for Disease Control and Prevention and other data sources (1999-2010), I estimate the effects of medical marijuana laws on alcohol-induced deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana laws lead to a reduction in cocaine-induced deaths. The results shed light on understanding the complicated relationship between marijuana and substances in the sense that availability of substances plays a critical role in the gateway drug hypothesis. Alcohol is provided in a formal/ legal market whereas cocaine can be only supplied in an informal/ illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

#### *Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 2)*

Following the presentation by Kazama, et al., we will present the results of a preliminary analysis of attitudes toward homosexuality, transgenderism and other non-normative sexualities among university students in Japan, focusing on the mechanisms through which gender, other attributes and personal experiences might shape their attitudes.

A definite and sizable body of literature on attitudes toward LGBT issues has been accumulated in the Euro-American context. Such studies are limited, however, in Asian countries. There are informative ethnographic studies on the theme in several Asian societies, and yet, without the data based on large-scale surveys, it is difficult to comprehend the environment in which people live or to reveal how non-normative sexualities are situated. As the first step toward filling such a gap, we conducted a survey at three private universities in 2012 and 2013. The questions include knowledge and awareness of, as well as attitudes toward sexual minorities (discomfort, judgment, perception of what is "normal") and also experiences of contact, including personal, media, educational, of such people/issues.

A preliminary analysis of the data of more than 700 cases shows that in many of the attitudinal items, women students show more liberal attitudes compared to their male counterparts. Personally knowing someone who is homosexual and/or transsexual also tends to make one more accepting of variant sexualities compared to students who do not have such connections. In the presentation, we will provide a comprehensive picture based on further analysis of the data, including how such attitudes relate to attitudes toward other issues, such as gender, family

and nationalism. We hope to draw implications on how heteronormativity, homophobia, sexism and binary thinking of men and women constitute the experiences of young generation in the Japanese context.

#### *Changes in Family Forms in Japan: Analyses of Subjective Definitions*

In order to understand the changes in family pattern, it is crucial to look at how individuals understand and define the family subjectively. In this paper, I will examine the changes in the subjective boundary of the family among Japanese, namely, who among kin are normatively considered as members of the "family".

The preliminary analyses of the 1st (1993) to the 4th (2008) National Family Survey of Japan conducted among married women by the National Institute of Population and Social Security Research show that there is an expanding trend of the normative boundaries. In other words, more and more types of kin are considered to be one's "family member". For example, the proportion responding that a "married daughter" is generally considered as one's family member regardless of whether or not they live together increased from 35% in 1993 to 66.2% in 2008. The analyses also show that the defined boundaries vary by age, education, employment status, household size and its composition, and geographic region.

In the paper, I will further examine how the subjective family boundaries relate to their attitudes toward various family forms and ways of living, such as attitudes toward taking care of aged parents, aged couples living with their children, married couples' not having children, and mothers of young children who stay home. Finally, I will compare these results based on individual level data with the macro-level data on family structure to explore possible mutual relationships behind the changes in family pattern.

#### *Effects of the Great East Japan Earthquake on Subjective Well-Being*

We study changes in Japanese people's subjective well-being (happiness) and feelings of altruism before and after the Great East Japan Earthquake of March 2011. We use a panel data set compiled by a group of researchers mainly from Keio University. Although the questionnaire is large, we focus on a question about people's altruism. We are interested in altruism because, according to a Japanese Statistics Bureau report on expenditure by Japanese households, charitable donations increased by over 850 percent in March 2011 compared to one year earlier.

Using this large panel survey consisting of responses from over 4000 households all over Japan, we found that many Japanese people reported more feelings of altruism following the earthquake, even in the most affected areas; this is consistent with the rise in charitable giving. We also found that a large number of people reported an *increase* in happiness after the earthquake, in fact, as the number who reported a drop in happiness. An interpretation of this finding is suggested by a recent experiment by Dunn et al., who find that spending money on others promotes happiness; according to this story, many Japanese people became more altruistic after the earthquake, inducing them to make charitable donations, which in turn made them happier.

We are interested in seeing how changes in altruism affect changes in happiness. However, both variables are subjective, so their measurement errors are likely to be correlated. Therefore, we use a two-step procedure, first identifying the effect of altruism on an objective variable, charitable giving, and then measuring the effect of charitable giving on happiness. In each step of the analysis, we run a two-stage logit regression, which controls for reverse causality. This analysis, which deals effectively with the aforementioned problem of correlated measurement errors, yields results that are consistent with our story.

#### *Social Contribution through Student's Participation in Village Festival*

Kanazawa University embarked on the new project on social contribution in 2010 through promoting students to participate in traditional festivals held in severely depopulated rural villages. This project aims to provide opportunities for

students to learn the everyday lives of rural Japan, and also to take a leadership role of university in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show to what extent this project goal has achieved its initial goal.

In 2004, central government enacted the law to reform the national universities to quasi-autonomous bodies. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. "Matsuri Project" started in 2010 as one of the University's social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called "Kiriko festival". Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the village Kiriko festivals. Young students are pleased to join the festival and walk around with shouldering heavy Kiriko with village people. Before the festival began, gorgeous dinner are sometimes served to students.

For the students, joining Kiriko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, oversee students can experience the actual lives of rural villagers. So far "Matsuri Project" has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

### RC54-868.3

**KAMIYA, YASUHIKO\*** (Nagasaki University,  
[ykami@tke.att.ne.jp](mailto:ykami@tke.att.ne.jp))

#### *Rethinking the Body through Its Disability*

A person with physical disability has uncontrollable body. The body's passiveness and vulnerability go beyond its activeness and capability. Disability studies associated with sociology of the body examine disability as a social, cultural, and political phenomenon in contrast to medical perspectives, focusing on how disability is defined and represented in society. Both of them have been positioned against medical science; they approach to the body from the society and context while medical science from biology and diseases. But they may be accomplice in the sense that they often ignore persons and their daily lives. Pluralism to which sociology of the body and disability studies owe much emphasizes diversity of human behavior and culture regarding health and illness based on binary comparison such as disease vs. illness, and the uniqueness of nature vs. the diversity of human cultures. Nevertheless, post-pluralism relativizes pluralism discourse by suggesting plurality of natures and sciences, and their mutual construction with society and culture. Persons with disability are now assumed to increase in number as overall disease incidences have not been as decreased as the mortality. The gap in the status of disabled persons between developed and developing countries is larger than the gap in non-disabled. Disabled persons from poor families living in rural areas have greatest needs but receive least medical and social care. In developing countries, persons with physical disability have greater handicap than those with intellectual disability, which is opposite from developed countries. Physical disability in a person sometimes leads to body impairment such as lumbago in other family members. Physical abuse to disabled persons is hidden problem. Some of physical disabilities can be relieved through simply changing the body posture. The body can manage its disability by itself through plasticity, and may not require society or sociology so much as we presume.

#### *Stabilization of the World Due to the Expansion of a Western State System: Explanation Using Game Theory*

Stabilization of the world due to the expansion of a Western state system: Explanation using game theory

Dr. David Strang explained the stabilization of modern global society from the perspective of the (sociological) new institutional theory while criticizing the explanations given by realists in highly original research ("Anomaly and Commonplace in European Political Expansion: Realist and Institutional Accounts." *International Organization*, vol.45, 1991). He states that global society has been stabilized as a result of the expansion and the "institutionalization" of a Western state system that respects the sovereignty of each country, rather than as a result of the balance of power of countries that reasonably maximize their utility.

However, his explanation seems still insufficient when we ask questions such as: why and how such an expansion took place; and why such an expansion stabilizes global society.

The answer can be derived from the fact of historical conflicts between dependencies and sovereignties. The form of the dynamic game between resisting/non-resisting dependencies and oppressing/non-oppressing sovereignties is analogous to that of the well-known chainstore game. This dynamic game has two Nash equilibriums. Based on the replicator dynamics of this game, we can interpret the historical changes in global society.

Initially, in a path-dependent manner, the world heads for an equilibrium that includes "dependencies that do not resist oppressive sovereignties." During this period, empires vie for supremacy. Subsequently, global political discourse requires sovereignties to comply with a "commitment" to non-oppressiveness. The world then heads for a subgame perfect equilibrium in which "sovereignties do not oppress resistance from dependencies." Thus, when the sovereign authority of many countries becomes established, "cooperation" will be selected in the repeated N-person dilemma game, resulting in a more stabilized global society. The term "institution" referred to by institutionalists can be understood as "commitment" or "equilibrium" in the game theory.

#### *Capacity for Urban Recovery in Southern Germany after the 2013 European Floods*

This proposed contribution deals with the impact of natural disaster on the recovery of urban settlements. In the 2013 European floods, settlement space in the South and East of Germany was severely impacted, including the Bavarian city of Deggendorf situated along the Danube river. Reports point out that early damage appraisals in combination with environmental degradation may significantly affect individual reconstruction efforts. This indicates an inter-related, socio-spatial, and cultural character of planning, settlement space, disaster, and recovery. Which aspects play a role in the recovery of urbanized regions after disaster, and how can their interrelation be conceptualized? An integrated approach based on socio-spatial perspectives in disaster research and urban studies serves to analyze these aspects in relation to vulnerabilities as well as institutional planning and programs for recovery. This permits a multidimensional discussion on ongoing processes of adaptation to disaster and its impact in urbanized regions, while enabling disciplines in spatial production access to this subject matter. A case study methodology serves to gather empirical data in the Fischerdorf area of Deggendorf in late 2013. Methods include qualitative interviews with key individuals in state and local institutions as well as impacted residents in addition to document research, participant observation, site visit. The goal of this contribution is to identify problems within the urban recovery after the 2013 European floods. This may serve to propose knowledge-based planning recommendations for the reconstruction of settlement space following natural disaster, and thus, reduce vulnerabilities of impacted populations against the background of recurring hydrometeorological hazards. In the case of natural disasters in urbanized regions, weak links between plans and programs for recovery and the needs of impacted populations may impair the capacity of cities to adapt. The approach is intended for application to other cases of urban recovery planning after disaster.

#### *Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey*

Using data from "The Study on the Quality of Life" collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 for the scale of 0-10) is higher than life satisfaction (5.98).

Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent's age shows a U-shaped effect on the life satisfaction (lowest at age 40 through 50). The happiness is positively affected by the respondent's education and being married, both of which seem to indicate more psychological, internal state of our life.

We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any others including own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accomplishment often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonia in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well as people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, which all indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.

*Domestic Division of Labour and Marital Satisfaction in China*

This paper analyses data of the Chinese Women's Status Survey 2000, a national survey in China, to examine the association between housework participation and marital satisfaction in urban and rural families. Married women's housework time is 2.8 times of that of married men. Yet their level of marital satisfaction is on a par with men's. We hypothesize that this is partly due to gender difference in the preference about domestic roles versus work roles. We first test if housework time forms a less negative association with marital satisfaction for women than for men (i.e. Do women dislike housework less than men?). We also test if work time has a stronger negative relationship with women's level of satisfaction than men's (i.e. Do women dislike paid work more than men?). Furthermore, we test whether elderly parents' help in housework mainly alleviate women's domestic burden rather than men's. We find supportive findings for these hypotheses in our preliminary analyses. We will employ Structural Equation Modelling to investigate the patterns of associations among different forms of marital satisfaction (including satisfaction with the domestic division of labour, satisfaction with marital life, and satisfaction with status in the family), the domestic division of labour and co-residence living arrangement with elderly parents.

*Transnationalism and Schooling: The Case Study of a Brazilian Ethnic School in Japan*

This paper aims at analyzing the relation between migration and education through the case study of a Brazilian ethnic school in Japan. The hypothesis which underlies this work is that the conception of Brazilian schools is related to the logic which drives the migratory flow to Japan: many Brazilian migrants living in Japan experience this migration as a transitory state, whose final objective is the return to their country. The experience as a temporary high school teacher in a Brazilian school has shown that the ethnic school tends to reproduce this reasoning: the curriculum is the same as that studied in Brazil; the textbooks are imported from education companies, whose educational view are strictly utilitarian; classes are taught in Portuguese and the pedagogical objective is to prepare the students to their return, allowing them to continue their studies in Brazil later on.

The fieldwork highlighted three points to be analyzed: first, given that the curriculum focus solely on the study of Brazil, the daily life and the migratory experience in Japan is set aside – the content of the imported textbooks does not fit to the social reality lived by those children. Second, Brazilian schools are target of severe criticism and receive a suspicious look by the Brazilian community itself. Common criticisms denounce poor infrastructure, lack of skilled professionals, corporate mindset that disrupts the schooling and high tuition fees. Third, most of those ethnic schools are supported neither by the Brazilian government nor by the Japanese government. Arguably, all these factors together contribute to a poor quality of education, hindering the chances for upward mobility either in Japan or in Brazil. Although the ethnic schools face many obstacles, there is still a demand for them.

*Urban Cultural Strategy and Japanese Animation in Nerima*

Culture is now implemented for urban economic development in many advanced countries. Urban cultural strategy, trying to attract investment and human capital, became popular in Western cities from 1980s. At that time, former industrial cities suffered from economic decline. In contrast, Japanese cities had enjoyed economic prosperity because of industrial growth, especially the R&D and Hi-tech industry. But from mid 1990s most Japanese cities including Tokyo began to gradually lose the industrial base because new international division of labor had deepened. So new plans for economic development were needed in Japanese cities around the end of the 1990s and culture became to be recognized as a resource for urban competitiveness. In this presentation, I will show detailed case of Nerima Ward, Tokyo. Because many animation companies concentrate in Nerima ward, the local government is encouraging animation industries and trying to reconstruct Nerima's image as Anime Town. It is based on a partnership with Nerima Animation Association, the trade association of anime companies in Nerima. I intend to explain how and why this partnership is formed and policy measures are implemented. Therefore, it is needed to focus on the flow of event that affects the recent situation. It is shown that a civil group that aims to construct a museum for Japanese animation and chamber of commerce played major role to prepare institutional base for recent policies from the mid-1990s. Although they cooperated to lobby for public supports for animation and achieve

significant results, they dissolved their partnership. I point there is a tension between culture and commerce. It affects policy formation and inter-organizational relationship in Nerima.

*What Kind of Trust Do We Measure Using the Generalized Trust Question? : An Approach Based on Latent Class Model*

Despite the importance in social capital research, empirical studies on generalized trust show inconsistent results. For example, trust studies have not shown clear results with respect to the relationship between group participation and respondents' level of generalized trust (Nannestad 2008). This study shows that a part of inconsistency is due to the measurement of generalized trust. Generalized trust is measured by such questions as "Generally speaking, would you say that most people can be trusted, or that you can't be too careful in dealing with people?" This kind of question is employed in major social surveys such as World Value Survey (WVS). This study hypothesizes that respondents think some different kinds of trust when they answer the generalize trust question. This study extracts heterogeneity of trust respondents think by latent class analysis (McCutcheon 1987), using Japanese dataset (Social Survey of Residents' Networks and Health). As a result, this study extracts four types of trustors; (a) active trustors (27.6%), who show higher levels of generalized trust and participate all kinds of social groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust but do not participate any kinds of social groups, (c) parochial trustors (19.6%), who show higher levels of generalized trust but participate local groups only, (d) distruster (21.4%), who show lower levels of generalize trust and do not participate any kind of social group. This result shows that respondents think four different kinds of trust when they answer the generalize trust question. Inconsistent results in previous studies may be caused by the difference of group participation between high trustors.

*Gender Difference in the Influence of Non-Regular Employment on Mental Health: The Case of Japan*

1. Aim

Studies on the relationship between non-regular employment (NRE; such as temporary or precarious employment) and health have been increasing since the 2000s. Most of the studies reported that NRE has a negative effect on various health outcomes (including mental health).

The purpose of this study is to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, when most of them were married women who worked to financially assist their household under the male-breadwinner model. However, male NRE workers has been rising since the latter half of the 1990s. In the case of men, socioeconomic disadvantages of NRE cause a strong conflict between the male-breadwinner model and their socioeconomic status. Therefore, we can expect that the impact of NRE on mental health is more serious for men than for women.

2. Data

The "Japanese Study of Stratification, Health, Income, and Neighborhood" (J-SHINE) survey data is used. This is a computer-assisted personal interview survey that was administered in Tokyo and four suburban cities in 2010 (N=4381, age range of 25 to 50 years).

3. Findings and Discussion

In this study, I use three mental health outcomes as dependent variables: depression (K6), mental component summary score (SF8) and suicidal ideation. The results of preliminary analyses are summarized as follows. First, NRE has significant negative effects on three outcomes in the case of men. In contrast, NRE has no effects in the case of women. Second, after controlling for covariates, the effects of NRE are disappeared: marital status (married) and subjective SES have consistent positive effects on outcomes. These results suggest that lower SES of male NRE workers decrease the possibility of getting marriage and it influences on mental health.

*Policies of Correcting the Physician's Geographical Uneven Distribution in Japan*

Japan has adopted the universal health care insurance system since 1961. It means that the government has to guarantee the access to health resources to

the insured living everywhere in Japan. The other hand, Japanese physicians can practice medicine at their favorite place within Japan. This system has continued traditionally from the 19th century. Therefore, the government has not been able to adopt any policy to directly regulate the practice place of physicians. This presentation examines how the geographical distribution of physicians has changed in Japan under these circumstances. Concretely, it analyzes how the policies after the 1960s, namely the increase of medical schools in the 1970s, the regulation of hospital beds since the 1990s, the new clinical training system in the 2000s, have influenced the geographical distribution of physicians, and shows that the physician's geographical uneven distribution has decreased.

### *The Transition to Parenthood As Experienced By New Fathers*

#### **The Transition to Parenthood as Experienced by New Fathers** **Abstract**

While many studies have explored the transition to motherhood, literature on the transition to fatherhood remains scarce. This qualitative study sought to broaden the knowledge on the transition to fatherhood by analyzing the experiences of fathers to first children aged one year and under, and looking at how they cope with the challenges presented by their transition to fatherhood.

Data was collected during an unstructured group interview held in a focus group of 9 married men in Israel. The study findings reveal that, contrary to common gender stereotypes, men were mostly concerned about emotional issues, and not instrumental ones, emphasizing their needs for emotional support.

Four main themes were raised during the men's discussion, with which they were required to cope in their transition to fatherhood: new insights about the meaning of love in their relationships with their spouses and the changes it undergoes, as a central experience in the way they feel as men; the need to adapt to new circumstances and changes in their relationship with their spouses; a sense of delay in their emotional bonding with the child in comparison to their wives, and with the new paternal identity they must adopt; and finally their emotional need to have access a "safe place", outside their relationship with their spouse and role of parent, where they can share their experiences with other men and emerge stronger.

The study findings shed light on three areas where new fathers grapple with mixed feelings of discomfort, difficulty and vulnerability: the personal, the spousal and the parental. These findings indicate the importance of developing a unique intervention program for new fathers in which all three areas will be addressed.

### *International Organizations in a Global Social Inequality*

Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space.

National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market's destabilization. International and regional organizations in this situation need to elaborate common rules, norms and values that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition.

Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founders of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich Gulf countries and the rest. It, in turn, influences and strenghtens the ethnical, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

### *From Theory of Social System to the Theory of Social Harbor*

In the new post-industrial era, especially in the sense of ecological civilization, the concept of "society" in the end should be re-understand and re-define. The work is an urgent job. People in the past regarded "society" as a "complex system" and the intercourses, the understanding and studying work is based on the systems methodology to reveal its dynamics mechanisms. In fact, there exist an entirely demands to find a new set of concepts, categories and to establish a new theoretical framework for the sociology. In this paper, the concept of "Social harbor" or "Harbor society" is proposed to reveal the society to help people build a new comprehension or sense to security mechanism.

"Harbor" is an abstract concept from physical world; it can be used to study the problem that how humans can better cope with unpredictable or unavailable changes and bring a new sense of co-existence of social cooperation. Correspondingly, the concept such as "matrix", "general climate" are important cornerstones. Thus, the theoretical framework of social Harbour can be developed based on the theory of social system and a new kind of insight or ideology which is beyond the concepts of systems and institutions can be established.

### *Understanding Science Revolution By a Trinity Model*

Paradigm change is an ex post summary of Scientific Revolution. How to make out a specific Scientific Revolution is still an unsolved mystery. Philosophy, mathematics and science are trinity, logic is the real core. Logic is mined from mathematics using the methodology of philosophy thinking. In other words, logic is refined from philosophy based on the mathematical framework. When philosophy and mathematics integrated, logic generated. While under the guidance of logic, new sciences are formulated. In order to achieve trinity, transforming from engineering, art and design language to the philosophical language system based on practice is completely significant. Why people all think that a solution is no doubt can be found for a problem? If the language system used when searching for the answer is the same with the language system used when formulating the problem, at no time the solution can be found. The only way to eliminate the problem is to completely and totally switch the way of practice's thinking, which means to change the language system. Here, we stress the in-turn transfer of engineering language, philosophy language and

mathematics language, from which a new mechanism of science development which the core element is logic can be developed.

### *Do Social Networks and Sns Function As Social Capital for Social Engagement?*

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagements whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/drinking and neighbors' social support as social networks, local participation, voluntary activities, and political interests as social engagement, and the presence of internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/drinking, but not neighbors' social support. Correcting for possible bias by counterfactual analysis, it is SNS activities, not internet activities per se, that facilitate social eating/ drinking. It is also observed that both social eating/ drinking and neighbors' support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust after counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious but more open people are more likely to use SNSs. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outreaching weak ties encourage social engagements for local and public interests; (2) SNS activities mainly helps social outreaches and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of internet activities.

### *Measuring Community Resilience to Natural Disasters: Implications for Disaster Management and Reduction in Korea*

Building a resilient community to disasters has become one of the main goals of disaster management to absorb and mitigate negative disaster impacts. More disaster resilient community often experiences less disaster impact and reduces long recovery periods after a disaster. In this paper, we present the methodology that we constructed a set of indicators to measure community's disaster resilience (CDRI) in terms of human, social, economic, environmental, and physical factors. Moreover, this study develops a methodology to aggregate constructed disaster resilience index of local communities in Korea. 229 local municipalities are examined to measure the degree of community's resilience to natural disasters. Geographic Information System (GIS) is used to analyze and visualize spatial distribution of disaster resilience. Moreover, this study examined a relationship between the aggregated community disaster resilience index (CDRI) and disaster losses using a geographically weighted regression (GWR) method. Identifying the extent of community resilience to natural disasters would provide disaster management officials or decision-makers with strategic directions how to improve local communities' resilience to natural disasters and to reduce the negative disaster impacts.

### *Revisiting the Digital Divide: Contributions from Older Internet Users*

One among the most prominent current debates regarding digitalization and social inequality is the one pertaining to the "digital divide". Research shows that this divide is a social rather than technologically driven phenomenon since socio-economic inequalities are the main determinants of it. Since the internet and new technologies are increasingly woven into the fabric of everyday lives the divide is a reality even in the most developed economies. The debate brings attention to particularly socially vulnerable groups such as older people. This paper draws from focus group data (n=30) and focuses on older people (60+) who are active internet users in Sweden, a country that tops the lists of the most de-

veloped countries when it comes to Network Readiness Index (NRI). The paper points to the various patterns of internet usage that structure older users' everyday life pertaining to the access and skills necessary to obtain different forms of information and to the maintenance of their social networks. We argue that these usage patterns can be perceived as contributors to the reproduction of already existing inequalities based on socio-economic factors. Argued hereby is also that as long as one is capable to conform to the imperatives that digitalization builds upon then old age need not be perceived as an obstacle to participation in the increasingly digitalized society.

### *Kalpana Kannabiran: Tools of Justice: Non-Discrimination and the Indian Constitution*

In the years since independence, the Indian subcontinent has witnessed an alarming rise in violence against marginalized communities, with an increasing number of groups pushed to [and outside] the margins of the democratic order. Against this background of violence, injustice and the abuse of rights, *Tools of Justice: Non Discrimination and the Indian Constitution* explores the critical, 'insurgent' possibilities of constitutionalism as a means of revitalising the concepts of non-discrimination and liberty, and of reimagining democratic citizenship.

What are the possibilities for a critical engagement with law in a context of perpetration of atrocities against communities and the flagrant denial of liberties to marginalized groups?

Stressing the links between non-discrimination and the right to liberty, the book attempts to return history and politics to constitutional hermeneutics, suggesting that interpretation is not the exclusive preserve of constitutional courts but, importantly, may be crafted by people's movements in their exercise of a dispersed sovereignty. It attempts an intersectional approach to jurisprudence as a means of enabling the law to address the problem of discrimination along multiple, intersecting axes. The argument is developed in the context of the various grounds of discrimination mentioned in the constitution — caste, tribe, religious minorities, women, sexual minorities, and disability. The book attempts to bring together an understanding of the social history of resistance to oppression in its specific forms, and the constitutional articulation of non-discrimination.

The book plots the possibilities of popular constitutionalism and constitutional morality, inside and outside courts in an attempt to project these as the other, the mirror, in which the existing constitution must validate itself. The constitution itself is not a fixed legal text, but a vision that shapes and is shaped by peoples through daily struggles and upheavals.

**KANNABIRAN, KALPANA\*** (Council for Social Development, [kalpana.kannabiran@gmail.com](mailto:kalpana.kannabiran@gmail.com))

### *Violence, Cumulative Discrimination and Gendered Struggles for Justice*

The unabated violence against women, sexual minorities, Dalits, minorities and indigenous communities in India, its resurgence even, resurrects older debates on subjugation, repression and resistance struggles. There are layers of new meanings and forms and articulations of suffering and harm that grow over these older debates on inequality and discrimination that signal shifts in economic realities and legal (im)possibilities -- spreading the sense of imminent crisis. The (mis)appropriations of ideas of justice, by the state, by non-state actors and "the people", drive new vectors of change at the intersection of law, governance and public debate. The emergence of a new common sense on the (co)habitations of gender based discrimination and the interrogation of the very construction of crisis itself -- "is this the worst that has happened?" -- are at the centre of the renewed imagination of justice.

This paper will use the events and debates around the Report of the Committee on Amendments in Criminal Law headed by Justice Verma that recommended wide ranging changes in the law on sexual assault to open out the possibilities that a Bill of Rights for Women holds for a different imagination of justice -- looking at the specific situation of women, but also at the ways in which larger questions of modernity, impunity, targeted assault, the existing recognition of "atrocities" in the law and state practice inform and are shaped by these debates.

What are the multiple locations and articulations of the law (or is it justice in the era of modernity?) -- within which the shifts in the debate need to be mapped? What are the aggravations in targeted assault that are consequent on rapid and escalating shifts in economic policy? And therefrom how does state formation take place around the edifice of patriarchy?

*This Is a Man's World? Changes in Disposable Income Predict Sex Ratio at Birth*

The human sex ratio at birth (SRB) is long known to be relatively constant at around 107 boys born for every 100 girls. In recent studies evidence has been found that SRB might vary according to exposure to chemicals and socioeconomic conditions. SRB has also been declining after World War II in several industrial countries – a phenomenon that remains unexplained. Here we show that changes in disposable income are associated with at birth sex ratios in OECD countries. Positive changes in disposable income are associated with higher proportion of male infants. We apply panel regressions to OECD data that spans the years 1971 to 2011 for 35 countries and UN fertility data in an unbalanced panel. Findings not only partly explain the rises and declines in the sex ratio in OECD countries, but also first time provides evidence of the influence of economic and social forces on SRB that can even be seen in macro level analysis. This opens up radically new research directions in social sciences, where the emphasis on the biological factors has traditionally been on how biological determinants shape social life and in the interaction of the two, not on how social and economic determinants might affect biological facts such as the sex of an infant. This furthermore contributes to debates of gender equality. Our findings suggest that the equality of opportunity differs for genders as the sex ratio depends on the underlying economic conditions: men seem to be born into better economic conditions.

*Experiences of Fatherhood in Lithuania: Persistence and Changes*

Men's studies is an emerging research area in many post-communist societies. There is a little evidence on the impact of the rapidly changing political and socio-economic context on the normative masculinity model and male identity.

The paper is directed towards a study of **how men become fathers** (their perception of a family and man's familial roles, motivations to have children, family planning practices) and what are the experiences of **"being a father"** (paternal involvement in childcare; communication and emotional ties with children; bread-winning and combining the professional and family roles). These issues are explored basing on the quantitative and qualitative Lithuanian data - the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample - 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985) and the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania. The investigations were accomplished in a frame of the four years research project „Trajectories of family models and social networks: intergenerational dimension“, financed by the European Social Fund (ESF).

One of research objectives is to follow the changes in men's family and paternal roles by comparing the experiences and attitudes of generations socialized in two different historic periods – the soviet time and in the years of societal transformations after the collapse of communist regime.

*Anti-Nuclear Movement in Taiwan: Fukushima Disaster Prompts the Case for Citizen Participation in Democratization of Energy Policy*

The anti-nuclear power movement in Taiwan has a history of more than two decades, where the conflict has never been just a question of science, but because of uncertainty and complicated interactions of socio-technical systems, has been about interconnected economic, environmental and social concerns. In the aftermath of the neighboring 2011 Fukushima nuclear disaster, intensive media coverage and synergy among Taiwanese civil society groups and Japanese environmental activists in several national and local rallies resulted in greater public awareness of possible catastrophe from nuclear power disasters among both Taiwanese and Japanese citizens. Despite the strong civic questioning of current energy policy, the Taiwanese government, however, does not only retain its strong support of nuclear energy in guaranteeing the safety of the three current nuclear power plants, but also maintained that diminishing the fourth nuclear power plant would result in costly economic decline for Taiwan. Against that background, this paper aims to investigate how has the anti-nuclear movements in Taiwan been transformed during the past three years and to inquire reasons why it could draw varied constituencies to participate in this collectivism with unprecedented scale.

In addition, this paper also analyzes how civil society through varied collective activism has challenged current energy policy and moved towards democratization of energy policy. Employing a qualitative approach along with discourse analysis and interviewing actors from the various social movement groups, the author attempts to answer questions above in five arguments – a feeling of close cultural and geographical proximity to the Japanese, increasing distrust in safety of the controversial fourth nuclear power plant, cyber communities as mobilization networks, advocacy of elite and celebrity, activism alliances across varied social movement organizations. Finally, deriving from these empirical findings, the author discusses how democratization of energy policy could take place in also recognizing key barriers

*Democratizing Expertise and Enhancing Public Participation in Deliberative Risk Governance: EMF Case in Taiwan*

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative / participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation. Employing concepts from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defence in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.

*Do Social Networks Help You to 'Get Help'? Usage of Mental Health Services Amongst Women of Different Ethnic Groups in England, UK*

The way in which people seek help and access mental health services is a complicated and varied process. Contact with, and usage of, services may occur through individual efforts, GP referrals, or informal contacts. Typically, in the UK, mental health service use has been researched within a largely individualistic paradigm, with Dixon-Woods' candidacy model gaining increasing popularity. There has been much less consideration of the social processes involved in help-seeking. More specifically, the way in which the resources available in social networks affect usage of services (as theorised by Pescosolido in the Network Episode Model) has not been explored in the UK context.

Pakistani women in England have lower rates of usage of outpatient mental health services compared with women from White ethnic groups. Although there has been an indication that social networks may have a role to play in the usage of services, there is little robust evidence. Previous qualitative studies show that Pakistani women's social networks can be lacking in social support, leaving women feeling socially isolated. Further, it is evident that Pakistani women's social networks may not contain network members that facilitate or encourage access to mental health services.

This paper addresses previously unanswered questions of how the *content and function* of networks are each associated with the *access and usage* of mental health services, and how these associations may vary amongst women of different ethnic groups. Using quantitative data from an English community survey (Ethnic Minority Psychiatric Illness Rates in the Community, 2000) this paper presents statistical models of the effects of social networks on access and usage of services, and discusses how these vary between Pakistani women and women from other ethnic groups. The findings are discussed in relation to the (lack of) current UK mental health policies to address ethnic inequalities in service use.

### *New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel*

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a *New Age* option in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan, post-materialist, secular new middle class.

Drawing on post-Bourdieuian cultural sociology, we start by describing the theological and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitanization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

### *Career VS Children: The Effects of Institutional Background on Females' Subjective Well-Being Across Europe*

The paper deals with life satisfaction and happiness among women in European countries. The research question is to disclose in which countries (with more liberal or strict labour market legislation) females are more happy to have job, kids or to combine children with employment. The author claims that women living in the countries with more liberal labour laws and open labour markets are happier to have children and combine their work with childbearing than those mothers who have to re-enter labour market in the countries with very rigid labour legislation. The hypothesis is tested with the help of the European Value Study dataset for 2008 year, including 28 countries. The results of multilevel regression analysis proved the tested assumption and showed that females are happier in those countries with family oriented labour legislations and at the same time where it is easy to find a new job, means liberal labour markets. In the countries with high rates of employment protection legislation females are more happy with jobs than with combining motherhood and employment. Conditional effects of multilevel regression explain the results in a more detailed way. The paper could have important implications for social policy in European countries.

**KARAISKOU, VICKY\*** (Cyprus Open University, [v.karaiskou@ouc.ac.cy](mailto:v.karaiskou@ouc.ac.cy))

### *From Real to Ideal: Visual Narrations of Collective Traumas and Identities*

The paper will focus on the commemorative sculpture in the Republic of Cyprus and comment the role attributed to individual actors in the process of narrating and preserving collective memory. The busts, statues and architectural complexes erected since 1960, when the country gained its independence, are consecrated to the dead and missing during the political inter-communal and inter-ethnic conflicts. In Cyprus the construction of national identity and the enhancement of memory mechanisms are achieved through the promotion of the individual exemplary distinction within the social body and the personification of heroic models.

Comparatively, the paper will examine an example which is placed at the opposite: the anonymity of membership in creating the nation and heroic concepts in China. Both countries are newborn states despite their long history and rich cultural background. However, their radically diverse cultural backgrounds determine in a dramatically different way the position and the role of the 'self' within the social group.

Greek-Orthodox tradition, under the hue of western Romanticism, mobilized personality cults in Cyprus. On the other hand, in China Socialist Realism summed up deeply rooted traditional behaviors and current political stands and revealed a different version of idealized interpretation of reality. Visual narration in China promotes the joy of the victorious results, the dynamics of the collective national struggles and the solid ground of today's society heading to the future. Furthermore, in Chinese memorials male and female bodies are mundane vibrant actors vindicating the achievement of a shared goal. In contrast, Cyprus promotes martyrdom and orchestrates powerful connotations with a view to keep alive the

collective traumas of the past. Commemoration focuses on the transcendental dimension of the individual heroes, on passivity and loss, and links them with familiar religious connotations.

### *Well-Being of Bosnian Refugees*

The estimated 70,000 Bosnian refugees in St. Louis suffered trauma, often including torture, during the 1992-1995 Bosnian war, with serious consequences for their well-being. The link between refugee status and poor mental health is well documented and many studies have addressed how post traumatic stress disorder (PTSD) is related to variables such as unemployment, welfare dependency, disability, social isolation and daily activity level. This paper extends the past research by exploring the relationship among mental health and several other variables that have been shown to be important in the literature looking at refugee resettlement and adaptation to a host country. Specifically, this paper examines the relationship among psychological symptom dimensions (somatization, phobic anxiety, depression, anxiety and paranoia), self-esteem, host language competency, and ethnic and host culture identity.

The study used data (n=395) from a mental health needs assessment conducted to identify and quantify the needs of the Bosnian refugee community in St. Louis, MO, USA. To examine the relationship among the above variables, Pearson correlation analyses were run. Results showed a significant negative relationship among all symptom dimensions and self-esteem and host language competency. No relationship was found, however, among the four symptom dimensions and ethnic and host culture identity. Results suggest that self-esteem and host language competency may play a particularly important role in refugees' mental well-being.

The results have implications for those interested in improving the well-being of refugees during their resettlement in a new homeland, mental health providers serving Bosnian and other refugee groups, and those who teach English as Second Language.

### *Normalcy after Stroke: Spousal Caregiving and Management of Uncertainties*

Stroke is usually characterised by sudden onset, and what follows may be a fluctuating and long-term recovery trajectory marked by uncertainties. In particular stroke, which is commonly considered a disease of old age, may pose various risks and uncertainties in the life course and biography of working age patients and their carers, who are often spouses. While chronic illnesses such as stroke have been widely conceptualised as 'biographical disruption' (Bury, 1982) for both patients and carers, this notion has also been contested on the basis that not all cases of chronic illness can be seen exclusively as 'disruption'. In this paper, I explore experiences of spousal carers of people who have had a stroke whilst in their working age (25-55). Drawing on qualitative data collected through 17 ethnographic in-depth interviews with spousal carers in Victoria, Australia, this paper demonstrates that their responses to stroke and the caregiving role vary across different social positions and contexts. Some participants were striving to regain a sense of normalcy, others somewhat reluctantly accepted the 'new normal', while yet others embraced the 'new normal'. Departing from conceptualising carers as agentively mobilising resources and navigating a biographically uncertain trajectory in an attempt to regain normalcy, I argue that their responses are better understood as a course of action enacted by a network of individual, medical and healthcare, social, and political actors. In this respect, I suggest that responsibility as necessarily distributed, and challenge the increasingly common construction in policy and healthcare settings of informal carers as choice-making service users. By doing so, this paper aims to generate a basis on which service providers, healthcare practitioners, policy makers and members of the wider society can engage in a constructive and critical discussion towards creating a 'caring society'.

### *Financialization, Crises and the Changes in the Global Income Inequality, 1820-2010*

This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic transitions, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analysis, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) this tri-modal distribution has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative "developmental" patterns during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

#### *Gezi Uprising in a Macro-Comparative Perspective*

This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were not the only ones. For instance, the cluster of movements known as the "Arab Spring", or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single analytical models mostly constructed upon the experiences of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports on social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. We conclude that although the primary source of conflict resided in the changing condition of declining middle classes - like the North American and European cases, Gezi uprising differed from these cases in the way (1) how these middle class grievances were formed and articulated, and (2) how a larger coalition of class interests were created.

#### *Conceptualising Re-Migration: The Case of Post-Soviet Nanoscience Émigrés*

This paper examines patterns of the outward migration of nanoscientists from the countries of the former Soviet Union during the period 1989-1994 yrs. This period of scientific migration is characterised by its mass character, very limited return rates, and peculiar patterns of diaspora distribution. The paper will focus on the latter.

It is argued that the numbers of emigrating scientists reached as much as 10 000 people leaving in 1993. (Gokhberg and Nekipelova, 2002) And whereas the primary destinations for emigration included Germany, Israel, the USA and Greece (top-4 in 1992-93), the final destinations featured the USA, Germany, France and the UK (Ibid.). I argue that the conventional approaches to studying scientific migration do not capture the pivotal features of the process that allow to explain the discrepancy between the first and the final destinations for the scientific migration. I tackle this problem by, first, identifying the (latent) diaspora by the method of surname disambiguation from a nanotechnology publication database, and mapping the general distribution. Second, I explore career trajectories of the migrant scientists and the reasons behind their decisions to stay or move

on, by conducting a series of semi-structured interviews during a multi-sited fieldwork in the US, UK and EU.

The main contribution of this paper is theorising migration in terms of a dynamic process, where destinations have organisational, regional and national capacity to attract, extrude, or retain the inherently mobile scientists: there are 'transit' destinations, the destinations that 'capture' migrant scientists once they come there. A bias towards one discipline can be avoided, as nanoscience stretches over most of the natural sciences disciplines, to which more than 80% of the post-Soviet émigrés belong (Graham and Dezhina, 2008). I also revisit the issue of the reasons for scientific migration, which appears to have mostly been studied using surveys.

[christian.karner@nottingham.ac.uk](mailto:christian.karner@nottingham.ac.uk))

#### *The Discursive Competition Between Very Different Counter-Hegemonies: Neo-Nationalism Vs. "Subaltern Counterpublics"*

This paper draws on a decade of research on the politics of national identity and ethnicity in contemporary Austria. Employing a critical discourse analytical approach, it argues that in our current phase of globalisation and in the context of the EU as the "quintessential network state" (Castells 2000), the dimensions and meanings of counter-hegemony vary according to the political context and geographical scale being considered. Based on an analysis of diverse media materials, public debates and civil society organizations in Austria today, two very different forms of counter-hegemony are discerned: First, neo-nationalism as self-defining resistance against "transnational flows" and external others; second, the "identities, interests and needs" articulated by groups of migrants and other subordinated groups in what Nancy Fraser (1993) terms "subaltern counterpublics".

The discourse analysis of relevant data offered here revolves around the key-concepts of the *topos* - or "structure of argument" (Reisigl and Wodak 2001) - and *deixis*, or "rhetorical pointing" (Billig 1995) effecting the (re)production of social boundaries. The central argument being developed is as follows: Key to conceptualizing the defining differences between neo-nationalism and subaltern counterpublics is Michel de Certeau's distinction (1984) between "strategies" and "tactics"; while the former define neo-nationalist discourses being articulated from an "institutional power base", "tactics" are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporarily and discursively slip through the "webs of power" that surround and constrain them.

**KARNER, TRACY XAVIA\*** (University of Houston,  
[txkarner@uh.edu](mailto:txkarner@uh.edu))

#### *Poetics, Politics, and Possibilities: Visualizing Our Humanity*

At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community—our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the role of emotions, especially empathy, in moral thought and action. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self-aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathic impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vantage point of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time.

### WG03-912.4

**KARNER, TRACY XAVIA\*** (University of Houston,  
[txkarner@uh.edu](mailto:txkarner@uh.edu))

#### *The Facebook Gaze: Disciplining Action in Online Interpersonal Space*

Facebook as the most widely used social media site in the world has led the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault's Panopticon, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template. Creating a uniform normativity through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. EdgeRank, Facebook's algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your EdgeRank score. Similar to the hermeneutic circle of the tourist gaze (Urry 1990) which disciplines performative travel photography, this same dynamic is at work on Facebook as users learn to construct images that echo those shared and positively received by others. Images that generate a large number of responses provide a model for expected and accepted contributions. Neuroscientists have also found that receiving 'likes' activates the reward center in the brain and these approval responses predict future Facebook use (Meshi et al. 2013). This informal, but immediate, feedback lets the individual know how well their performances are being received and assists them perfecting and refining their presentation to remain visible and included in this new form of sociality.

*Job Is Not Everything. the Case of Return Migration from the UK to Poland in the Wake of the 2008 Economic Crisis*

The human capital approach, which is dominant in the EU migration policy, suggests that migratory experience and resources are likely to improve returnees' competitiveness and foster their successful adaptation on the home country labour market. Based on the analysis of the return migration from the UK to Poland in the context of the economic crisis in 2008, this paper critically examines this assumption.

It is estimated that within 8 years after the EU enlargement in 2004 about 0,7 million Poles went to work in the United Kingdom. At the same time it is suggested that about 250 thousand Polish immigrants in Britain decided to come back to their home country. The financial crisis did not significantly influence the number of return migrants. It rather slowed down the new emigration and those who stayed in the UK employed wait-and-see strategy (Barcevičius et al.). The quantitative data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women). Simultaneously, they are much more likely to run their own business and work as a self-employed.

Addressing this apparent contradiction, this paper makes use of qualitative research to understand the conditions and process of successful and unsuccessful reintegration on the home country labour market. Based on the analysis of biographical narrative interviews with the Polish return migrants from the UK to the Lower Silesia region in Poland, we examine the process of labour market reintegration as a result of the interplay of subjective and structural factors mediated by earlier biographical experiences. In the paper, the tentative results of an ongoing empirical study will be presented along with a theoretical discussion on the limits of human capital approach in understanding return migration.

*Cooperation Between Strangers of Unequal Status*

Recent studies of trust and cooperation in social dilemma situations focus on explaining how social identity processes - triggered by differentiation based on a nominal characteristic - affect cooperative behaviors among strangers. Few studies, however, predict and explain whether and how much cooperation occurs among strangers who vary by characteristics that have status value attached - i.e., characteristics that cause actors possessing one state of a given characteristic to be perceived as more worthy than actors possessing another state of that same characteristic. Even studies that incorporate the status hierarchies' effects into social dilemma models focus on groups' effectiveness in producing collective goods, rather than on the simplest trust-game type interactions. This might be defensible insofar as game theory predicts that status differences will have no effect on cooperation among strangers. Our paper takes a different approach: Using status characteristics theory, we predict that in a prisoner's dilemma (PD) where actors are differentiated by salient status characteristics, the rate of cooperation will

vary by the partner's status relative to that of the focal actor, as well as by whether it is a simultaneous or sequential game. We report experimental results from a one-shot, two-person PD, before which subject pairs worked on tasks intended to manipulate the status of subject and partner. We test the following hypotheses: (1) in a sequential PD, if actors are differentiated by salient status, the rate of cooperation is higher when the low-status actor initiates the game than when the high-status actor does so; (2) regardless of the nature of the game, the cooperation rate among high-status actors is higher than that among low-status actors; and (3) in simultaneous PDs, the level of cooperation among status differentiated actors is at the same level as it would were they both high-status partners.

[ukarttun@student.uef.fi](mailto:ukarttun@student.uef.fi))

*Contemporary Capitalism As an Economics of Seduction: Ethics and Justice Defined By an Aesthetic Principle of Pleasure*

In neoliberal society, aesthetic seduction has become an important operator in economics. Commodities are successful only if they lure consumers. From an economics oriented towards practical and functional needs, there's a shift to multiplied fields of aesthetic productions. Aesthetic refinement has become the inner rationality and power element of neoliberal or post-neoliberal society.

When searching for the cultural logic of neoliberalism we must take seduction, the aesthetic powers of attraction, seriously. In this paper I will argue that the long-term commodification process has not only written the aesthetic principle of pleasure under producers' and consumers' skin but it might also be seen in ethical standards or even in legal proceedings. What it means to human culture and basic question of equality if ethics and justice are understood under market-based terms and values?

Gerhard Schulze has discussed of "the experience society", and Pine and Gilmore in their business theory of "the experience economy". Consumers are known to find experiences and emotions through services and commodities, but this theory could be developed forwards, by activating mental concepts, like experience or emotion, with more primal bodily connections and conceptualizations. Zygmunt Bauman has moved into this direction, by speaking of "the aesthetic of consumption", and of consumers as divided into the seduced and the repressed.

Are there any space for controversial or critical voices under the hegemony of seduction markets? The question is analyzed by taking a recent art censorship case, in which the court sentenced different terms for market and art referring it; business actions in porn industry were taken as legal, while art criticizing the same field was understood as a crime. Does the neoliberal ethics already demand that acts of anti-seduction - like market-critical art - can be interpreted as crimes?

*Development Interventions, Livelihoods Security and Sustainability of Resources Among Tribal Communities of the South: A Case of Sugali Tribe*

There is a direct link between livelihoods security and development interventions by different agencies and sustainability of the resources among the tribal communities of the global South in general and India in particular. The link between them is crucial to achieve the desired results of both sustainability of resources and livelihoods. It reduces the risks and paves the way for poverty reduction among the marginal communities of the South. To achieve the livelihood security, the donor agencies and also the State must take cognizance of and balance the existing local resources. This paper tries to address the interface between the poverty reduction strategies and to attain the goal of sustainable development by managing the natural resource base among the tribal communities of Andhra Pradesh, South India. Further, it also tries to address the role of international donor agencies in bridging the gap between the haves and have nots, which is drastically increasing year by year without any change.

**Objectives:**

1. To examine the livelihood security and natural resource base
2. To understand the link between livelihoods security and poverty reduction
3. To assess the impact of developmental interventions in the tribal communities
4. To address the donor agencies or NGO's role in sustainable development of tribal communities

**Sources of Data:**

Paper largely depends on the primary data collected from the field site among the Sugali tribe of Andhra Pradesh, south India. It also bases its inferences based on the data gathered from official reports and records, Census records, published as well as unpublished research reports, papers, etc., with reference to India. Besides, it also draws its inferences from the studies made by the authors and other scholars in Andhra Pradesh, India. It also takes into account the studies made in other parts of South Asia.

[kasieswar@gmail.com](mailto:kasieswar@gmail.com))

*People's Politics and Governance in the Countryside an  
Ethnographic Profile of Emerging Leaders from the Countryside of  
South India*

The government initiatives to enhance the situation of the rural mass, especially rural women, have paved the way to Integrated Rural Development Programmes (IRDP) in India. As part of the IRDP, the Government initiated the formation of groups in the villages of rural India with the name as DWCRAs or Self Help Groups (SHGs). With the help of the Government as well as donor agencies, the programme became successful in some parts of rural India and here are the cases where these groups became the symbol of success to neighbouring areas in the rural areas of Andhra Pradesh.

The present cases are situated in three backward areas of the Rayalaseema region of Andhra Pradesh, India. These three cases are different from each other but the ultimate goal of the three cases is the same as enhancement of lives and livelihoods of rural masses. The present paper tries to explain how the members of these groups have emerged as leaders in their respective areas and enhanced the lives and livelihoods of the people in general and women in particular in Andhra Pradesh. Three cases are Rythu Sangam (Farmers Club, Chittoor), Dalit Horticulture Club (Anantapur), and Village Organization (Anantapur) which have studied and regarded as the backbone of rural masses in the two districts of Andhra Pradesh.

The Three initiatives have shown that people, rural women, have improved their awareness and enhanced their lifestyle. Further, it also explains how they have strengthened their groups by acting as pressure groups in their locality which is benefited them to a large extent. To conclude, the paper has shown the importance of emerging leaders, rural women, in the rural areas of Andhra Pradesh.

PAPADOPOULOS, APOSTOLOS G. (Harokopio University)

*'so Close and Yet so Far Away': Migrants and Nationals in Greek  
Agriculture before and after the Economic Crisis*

In Greece the structure of rural society has changed profoundly since the 1960s. Rural exodus and consequent demographic ageing, restructuring towards more intensive seasonal farming and social rejection of wage labour in agriculture and living in rural areas created labour deficits.

The arrival of international migrants following the collapse of the neighbouring socialist regimes in Albania, Bulgaria and Romania meant new opportunities for the struggling Greek agriculture. The mass availability of flexible, cheap wage labour gave agriculture and rural areas an impetus of development and demographic regeneration.

The employment of these migrants was rather complementary than antagonistic to family labour often freeing family members to undertake other jobs outside agriculture and rural areas. The segmentation of labour markets between the informal and formal implied their smooth operation for the 'benefit' of both populations.

However, the economic crisis variously affected the situation and the convergence of the labour markets. The crisis was now expected to bring closer the informal and the formal labour markets leading to a stronger competition for the same jobs the two populations.

Drawing from research material collected in a rural area where the intensive cultivation of strawberries was concentrated, the paper analyses labour relations and living conditions developed between oldcomer and newcomer migrant workers in the region of Elia in western Peloponnese.

The cultivation of strawberries is a typical example of an export driven industrial product while the employment of international migrant labour reflects the externalisation of reproduction costs and the demand led character of the labour market. It becomes evident therefore that control over labour costs and labour relations is a critical issue for the competitiveness of the product. Thus, ethnicity, exploitation, racist production relations, irregularity of residence status and arduous working and living conditions are examined in the paper as part of this production model.

*The Polemic of Sea Level Rise: Unlocking the Potential of Social  
Learning for Improved Climate Risk Governance in Local  
Governments of Australia*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

Sea level rise is one of the most critical climate change impacts that could exacerbate shoreline erosion, storm surge and flooding. As it represents complex, uncertain and significant environmental, financial, social and legal risks to coastal populations, it demands a rethink of institutional arrangements for risk governance in the whole system of Australian coastline (Abel et al., 2011; Ryan et al., 2011; Leitch and Robinson, 2012). However there are challenges like conflicting expectations and normative judgements of values, contradictory perspectives of evidences and knowledge to deal with (Leitch and Robinson, 2012). Accordingly, the government will need to balance the aspiration, expectations and values of coastal communities by taking into account the social dimensions of uncertainty which hold a vital role in the ability of local authorities to shift to new governance and practices (Leitch and Robinson, 2012; Taylor et al., 2012; Susskind, 2013). Failure to realize this may jeopardize the objectives of building trust, legitimacy and cooperation in risk management and impair the ideas of deliberation and inclusion desired for improved risk governance. Thus translating this quest into practical strategies is of paramount. This study aims to explore sociologically-informed approaches to risk governance through deep investigation and understanding of how social learning underpins risk perception, communication and decision making through negotiation and compromises and that it holds potentials to improve risk governance. Theories orientations for the research derived from Luhman's System Theory and Social Amplification of Risk Framework (SARF). This study embarks on interpretive case study involving local governments in Australia with local government officers and local communities as unit of analysis. The findings that revealed the implications and explicit attention of social learning in risk decision making will be the basis of practical intervention for future risk policy making as well as extending the current sociological theories of risk.

[katagiri@leh.kagoshima-u.ac.jp](mailto:katagiri@leh.kagoshima-u.ac.jp))

*The Meaning and the Role of Clothing for Elderly Women*

The aim of this research is to explore the meaning and the role of clothing for old women by analyzing their life stories. This means to investigate not only psychological but also sociological effects.

In general almost all elderly women have plural diseases in various levels. For example some old women need to be cared in nursing home or hospital, and the others don't need but often go to hospitals from their own houses. We call the former type "dependent elders" such as dementia or bedridden people because of needing professional care and cure, conversely the latter one "independent elders" because of ability of social contribution as the volunteers in many kinds of fields.

But even if which type they are categorized, it would be desirable to wear their favorite clothing. The reason is that it would be helpful for them to maintain their Quality of Life (QOL) as a result of thinking positive and continuing to engage their enjoyable activities. To investigate this issue, this research would emphasize the subjective recognition and experiences of their own clothing, and not the objective beauty of appearance and fashion trends.

Intensive data were collected as life stories of 7 elderly women including both types, "dependent elderly women" in nursing home and "independent" who had engaged the volunteer at medical agency. The interviewer asked all the interviewees to arrange some favorite pictures during their lives. These pictures helped to remember their clothing including some episodes and memories in their youth.

As a result of content analysis, it is clear that "the meanings of clothing" and "the role of clothing," for dependent and independent elderly women, are "Self-expression" and "the switch of identity". It appears that the satisfied and favorite clothing as social body assist their lives when they confront some hardships.

*Adorno's Style of Clitacal Theory and Sociology as Chimera*

According to T.W. Adorno, this society is full of contradictions, so the concepts of sociology cannot but be flawed and fractured. But he evaluates such a cracked character in sociology affirmatively because it enables sociology to grasp the essence of "non-identifiable" thing. If the concepts of sociology become too static and too systematic, sociology views society as the "identical" object and can't face social contradictions. So Adorno intends to make a new style of sociology for the critical "non-identity" thinking. And his narrative style is formed after art works, especially after avant-garde arts. The purpose of this presentation is to consider Adorno's unique style of critical thinking. Adorno emphasizes the hybrid character in sociology. He says that sociology has both philosophical and scientific characteristics. From Adorno's view, sociology is a mixture of the European philosophical tradition and the American empirical science. This view is probably derived from his experience of exile. In other respects, Adorno's sociology has hybrid characteristics between opposing things. For example, the study of *The Authoritarian Personality* used both quantitative researches and qualitative researches. By having multiple elements in it, sociology can comprehend a complex structure of social phenomenon. For Adorno, sociology is a jumble of various academic disciplines or methods of study. In

the lecture, Adorno says that sociology needs Chimerism and Quixotic attempts. Culture critique is as important work as social critical theory in Adorno's thought, and these two aspects in his works are related. Adorno makes methods of modern art or modern music references for creating his style of thought, for instance, collage, dodecaphony, etc. And art works are regarded ideal model for social relationship because these have multiple elements with reconciliation. In this presentation, I consider relationship between modernity and critique by analyzing Adorno's singular style of critical social thought.

##### *Between "Munesuke Mita" and "Yusuke Maki" -on the Possibilities of Fictional Construction By Sociology-*

"Yusuke Maki" is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name "Maki" for creating a new style of sociology. Mita says that the name of "Mita" is used for works within the modern society and the name of "Maki" is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fictional sociologist "Maki" for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita's project "Maki." Maki often uses the word "clarity" affirmatively, and there are two aspects of this word in his works. The first connotation is the clearness and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber's "ideal types." But such a fictional character in sociological theory enables us to have a theoretical "clarity." The second connotation of "clarity" is unmediated interaction between people in society. Maki's definition of "Gemeinschaft" uses this aspect of "clarity." The fictional sociologist "Maki" creates the image of a not yet existent utopia by combining these two aspects of "clarity." Here is a fictional possibility of sociology. Maki's social theory intends to create a sociology beyond the modern rationality. But it doesn't ignore or deny the potential of modernity. He seeks to change the direction of the modern rationality. The early works of Mita and Maki largely depend on modern Western social theories, and in the later works Maki creates his original perspective of "comparative sociology" which relativizes the western modernity. A consideration of Maki's social theory probably links to a consideration of social theories in a non-western world.

##### *Strong Family Ties and Demographic Behavior in Japan*

This study investigates the effects of intergenerational family ties on demographic behavior such as marriage, divorce, marital fertility, and women's labor force participation during the child rearing period, using retrospective life history data from a nationally representative survey in Japan.

Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and proximate residence. The proportion of couples co-residing with the husband's parent(s) or with the wife's parent(s) at the time of marriage decreases from about 35% for those born in the 1930s to 20% for those born in the 1960s. However, the latter cohort starts living with their parent(s) soon after marriage, and then over 30% of them co-reside 10–15 years after marriage, showing a delayed co-residence tendency. In addition, for the 1960s cohort, the proportion of couples living nearby (within a walkable distance) the husband's parent(s) or the wife's parent(s) is over 20%, higher than other cohorts, from the time of marriage onward.

A series of event history analyses shows interesting results: Intergenerational co-residency and/or proximity have strong positive effects on marital stability, marital fertility, and the labor force participation of married women. It suggests that weakening intergenerational ties can be a key cause of current demographic problems such as later and less marriage, rising divorce rate, very low fertility, and women's labor force exit upon family formation.

In the past decade, much has been written and discussed about the relationship between strong family and low fertility. However, little literature has presented the whole picture of the relationships between strong family and demographic behavior. This paper will try to fill the gap.

**KATO, KUMI\*** (Wakayama University, [kumikato@center.wakayama-u.ac.jp](mailto:kumikato@center.wakayama-u.ac.jp))

##### *Wolf, Extinction and Fukushima*

Iitate, Fukushima is a village designated as 'whole village evacuation' since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the "The most

beautiful villages in Japan", and was renowned for its high quality beef and dairy products. The farming community's spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Sasu called Yamatsumi-jinja. The shrine's guardian or holy messenger is a 'wolf' considered to protect farming villages from pest animals such as deer, boar and monkeys. The wolf's mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Ansei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yamatsumi-jinja, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the 'spirit of the place' is critical in the 'reconstruction' process, even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt 'anti-nuclear' action.

##### *Intergenerational Relationships Between Adolescents and Their Grandparents in Japan*

Intergenerational bonds among family members may be more important today than in earlier decades, because the individuals today live longer and share more years and experiences with members of other generations (Bengtson, 2001). A decline in birth rates and population aging have been recognized since 1989 as a major social problem in Japan. The main objective of this study is to examine how adolescents' perception of the relationships with their grandparents is associated with the frequency of communication with their grandparents, parents and friends in Japan. Further, I describe differences between face-to-face and ICT communication.

In order to accomplish the above objectives, I collected survey data from Japanese college students in 2011–2013. These data were collected in the government-funded project entitled, "The Process model of building the intergenerational relationships in child care and examining the model." The data include 198 Japanese college students aged 20 to 21. The questionnaire included questions concerning their perceptions of the relationships with their grandparents and ICT communication with their parents, grandparents, friends along with demographic information. A multiple regression analysis was used.

The adolescents are likely to have greater satisfaction of the perception of relationships with their grandparents. In addition, having overly burden of the relationships with their grandparents are associated with little conversation between the adolescents and their fathers. Their higher commitment to their grandparents is related to their increasing the communication with older persons by e-mail and face-to-face communication.

Based on my findings, I suggest that Japanese society needs to consider the ways to facilitate communication between adolescents and their grandparents in order to build intergenerational relationships. It is also important to promote the positive effect of the perception of relationships between adolescents and their grandparents on influence processes within the grandparent-parent-grandchild triad in Japan.

**KATTAKAYAM, JACOB JOHN\*** (University of Kerala, [jjkattakayam@yahoo.com](mailto:jjkattakayam@yahoo.com))

##### *Abuse Among Older People: An Invisible Discrimination*

The forces of globalisation, modernisation and technological change, and the rapid transmission of knowledge have resulted in lifestyle changes and corresponding adjustments in cultural values. Improved healthcare, lifestyle changes and the subsequent increase in life expectancy have challenged traditional images of old age. Today, one-eighth of the world's elderly population live in India. The increased life expectancy in India is also leading to four-generation families. Kerala finds itself facing a huge human development challenge in the form of its elderly population that is burgeoning faster than other Indian states. Despite glowing accounts praising the Kerala economy's improved performances in recent years, marginalised groups like the elderly have remained discriminated and neglected.

In many countries, older people are being treated unfairly by stereotyping and discriminating against them. Deprived of work, dependent on charity or old-age assistance they suffer from all types of physical ailments and are regular victims of robbery, assault and other crimes. Elder abuse constitutes different forms of abuse like neglect, disrespect, verbal abuse, physical abuse, financial abuse, psychological and emotional abuse or even sexual abuse. The discrimination that

older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependency. This article focus on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders' perception of abuse. This paper focus on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

#### *Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India*

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Further, inadequate public healthcare facilities and expensive private healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. India recognised the need for social security during old age quite early. The Indian Constitution guarantees social security in old age under its Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government's social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based prejudices and discrimination are now firmly embedded. There are more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitise the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

#### *Informal Caregivers' Expectations and Experiences of Hospital Admission of a Relative with Dementia*

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWD) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (QoL-AD and EQ5-DQ), severity of dementia (MMSE), carer stress (GHQ), activities of daily living (I-ADL) physical illness and depressive symptoms (GDS), and economic data on care services and resources (Sheehan et al 2012). These measures were repeated at six months and at twelve months where feasible. In the second phase caregivers whose relative was planned to be discharged to a long term facility were interviewed several times, the final interview took place about four months after the admission of the PWD to the facility (Katz et al 2013). This paper focuses on a) caregivers' observations whilst the PWD was in hospital and b) the process of choosing a facility.

Concurrently and retrospectively family caregivers gave detailed accounts of their relative's care in hospital. They varied considerably in their assessment of the quality of care received, but many focused on the patient's physical and mental deterioration during the hospital admission. Caregivers noted how their roles vis a vis their relative changed, and described their emotional and practical reactions to what they observed. Most recounted a difficult process of being an 'outsider' to the care of their relative and feeling guilty and remorseful.

Caregivers described their experiences of having to choose a long term facility (often at short notice) with relatively little guidance from hospital or social services. This paper focuses on their perceptions of the conflicts caregivers face in endeavouring to provide protection for their relative whilst simultaneously carrying out their (filial) responsibilities.

#### *'If I Had Cancer I Would Get Loads of Sympathy, 'Cos It's HIV, I Can't Even Tell Anyone': Young People's Understanding of the Stigma of HIV*

There is little research which has documented how the stigma of HIV is understood by young people who have grown up with the virus. This paper presents the experiences of twenty-eight participants living with perinatally acquired HIV in the UK. At the same time as being formally told their diagnosis participants recalled being alerted to the stigma of HIV. They are advised to keep their status secret to avoid discrimination or rejection.

The fear and experience of stigma was reported as central to their experiences of growing up with HIV. Participants observed that HIV is viewed differently to other illnesses, and believed that, unlike other health conditions, HIV did not evoke a sympathetic or supportive response. The young people identified the negative and derogatory talk around HIV in wider society as affecting their self image. Through their observations of the negative media representation of HIV coupled with the lack of positive role models, they learn that it could be counterproductive to be open about their status.

This paper presents the strategies participants devised to avoid stigmatisation. They construct an alternative biography to explain hospitalisations and illnesses, conceal medication in the home, hide the taking of medication at school and with peers, deny knowledge and awareness of HIV and learn 'the code of silence' and to 'keep their heads down'. The external negative representation of HIV IVHIVre-inforces the stigmatised nature of their condition and young people in turn feel discredited. Young peoples' explanations of the stigma of HIV identify the link with sex, promiscuity, racial stigmatisation, fear of infection and association with homosexuality and intra-venous drug use. Participants themselves construct a hierarchy of blame: those perinatally infected are 'innocent' whilst those infected through sexual contact or intra-venous drug use are seen as responsible for their own infection.

[jurate.kavaliauskaite@tspmi.vu.lt](mailto:jurate.kavaliauskaite@tspmi.vu.lt))

#### *This Ain't Mere Eco-Nationalism: Undervalued Cultural Roots of the Lithuanian Green Movement*

A nation state embodies the political order of the modernity in contrast to contemporary Green movements foreshadowing its end (Hurrell, 1994; Lash et al, 1996). Consequently, nationalism and environmentalism are considered to be hardly compatible companions (Hamilton, 2002). Therefore a puzzle of the Greens, found at the vanguard of independence movements of Central and Eastern Europe in late 1980s, is often resolved with a simplistic disavowal of their "green" identity. In words of American scholar Jane I. Dawson, here Green movements were no more than a manifestation of *eco-nationalism*, a mere surrogate for a hidden nationalist strife (Dawson, 1996, 2000). The paper aims to challenge the *eco-nationalist* thesis, a reductive and homogenizing reading of *eco-mobilization* of 1980s in the region, bringing to the fore a deeper empirical look into complex and diverse cultural origins of pioneer organisations of the Green Movement (Lietuvos Zalieji) in Lithuania. Archival analysis and in-depth interviews with surviving fathers and active members of the Movement reveal tangible distinctions in the collective identities (Melucci, 1995) of three earliest voluntary environmental associations, Zemyna, Aukuras and Atgaja, in Lithuania. The identity work and differences among the early Greens are poorly explained by *eco-nationalist* argument, however, their mutual tensions are well represented by the classical distinction between *anthropocentric* and *ecocentric* worldviews (Naess, 1973; Eckersley, 1992), embedded in peculiar local cultural meanings of 'nature' and conflicting logics of *soviet* environmental modernization, (*neo*)*traditionalist* apotheosis of indigenous 'ethnoscape' (Smith, 1999) and lively *postmodernist* celebration of the ecology of countercultural lifeworlds. These findings urge for a more rigorous and subtle approach to the play of cultural fields and cultural notions of 'nature' in environmental/ ecology movements not only in Europe but also worldwide, including Asia (Thomas, 2002).

#### *How to Conceptualize Social Inequality after Risk Concept?*

How to conceptualize social inequality after risk concept?  
— Focusing on 1980's dispute in Germany.

Risk concept has become a major interest in sociology with the publication of Ulrich Beck's *Risk Society* (Beck 1986). One of the most important thesis of *Risk Society* is the "paradigm" shift of social inequality. Beck claimed the "change from the

logic of wealth distribution in a society of scarcity to the logic of risk distribution in late modernity". Thus he pointed out the appearance of risk society "in contrast to class society".

However, Beck's thesis has been criticized in several researches by showing the continuity of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer Geißler (Geißler 1996), J.H. Goldthorpe, (Goldthorpe 2002) etc. Then how can we understand social inequality covering the relevance of risk and class. The issue is to integrate the relevance of risk and class to understand contemporary social inequality. And we need a concept which integrates class elements and risk elements.

This presentation attempts to figure out the issue to integrate class and risk concept focusing on 1980's individualization dispute in Germany.

### *Acceptance of Foreign Nurses Based on the EPA in Japan and Future Challenges*

**Objectives:** The acceptance of foreign nurses started in Japan from 2008 under the Economic Partnership Agreements. Over 400 nurses have come to Japan from Indonesia and the Philippines thus far. If they do not pass the exam within 3 years, they basically have to return to their countries. They can work in Japan as nurses if they pass the Japanese national board exam for nurses within 3 years after coming to Japan and they will be paid the same or more as Japanese nurses. Passing the national board exam for nurses is the main issue for the foreign nurse candidates. So far, the rates of foreign nurse candidates passing the national board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and 9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing the exam is very challenging for them considering the fact that the overall pass rate for Japanese applicants is approximately 90%.

**Methods:** We conducted a study on the practice national board exam targeting Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia. We requested them to take the Japanese national board exam translated into English and Indonesian and analyzed the exam results.

**Results:** The percentage of correct answers was low even though the practice national board exam for nurses was written in English or Indonesian.

**Conclusions:** Because the percentage of correct answers was low in the study on the practice national board exam for nurses, we believe that there is a difference in the nursing training curriculums and nursing itself in each country. It is necessary to compare and study the differences in nursing training curriculums in each country as soon as possible.

### *Environmental and Ethical Implications of Food Consumption Affecting Distant Countries: How Aware Canberra and Tokyo Community Gardeners of These Issues*

Global food system has developed with the increased power of agri-food corporations. Under the current structure, wealthy people tend to over-consume food, while poorer people are experiencing social inequality and degradation of their environment. Recent studies around 'alternative' food systems have highlighted grass roots movements, especially in industrialized countries, for democratic and environmentally sustainable food systems, which often focus on local food production. However, it is still necessary to discuss environmental and ethical soundness of global food production and consumption, because it is unrealistic to expect that local food systems can immediately become the dominant structure of the society. To begin to transform the current dominant system, it is important to explore whether people who are engaged in 'alternative' food systems understand and care about the ethical and environmental issues around global food systems, from consumer point of view. Consumption attitude of imported food is a key, as citizens in wealthy countries are the major actors of global food consumption, who has some power to choose what to buy, and in that way create demand, even though this power is restricted. This study may then point to the possibility of these people engaging in 'alternative' food system becoming agents for global change.

This study examines whether community gardeners in industrialized countries have an understanding of, and interest in, the ethical and environmental implications of the current global food supply chain. This study compares Canberra (Australia) and Tokyo (Japan) as case studies. Initial analysis of interview data suggests that participants from Australia expressed a stronger understanding and awareness of ethical and environmental issues occurring outside the country than Japanese participants. The cultural, political and economic differences, including different position in the global food system (Australia as a net-exporter and Japan as a net-importer), underlying these results will be considered.

### *On Hannah Arendt's Understanding of Society or the Social: Resisting Unprecedented Crises*

Hannah Arendt stated in *The Human Condition* her intention to understand society or the social as well as provide criticism on society and salvage the political to promote appreciation of and resistance against unprecedented crises. In her pursuing an understanding of society, she has adapted a unique method tracing back to the distinction between the public and the private in ancient Greece as the origin of society, and then referring to the history of theories on society presented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above method and argue that society is fundamentally ruled by the biological life process. Therefore, human life and activities in society are regulated based on whether each person contributes to the sustenance of the life process and multiplication of lives. This interpretation can link Arendt's understanding of society in *The Human Condition* with her descriptions on unprecedented crises in her other writings, especially *The Origins of Totalitarianism*. Arendt has stated that when people are extremely forced to contribute to a function of the life process, an ideology forms out of ideas of race, body, and other biological things contributable to such a function. By rise of such an ideology, people not contributable to the function have been removed to a condition of complete rightlessness in imperialism and concentration camps in totalitarianism. Moreover, to accelerate the function of the life process, humans apply nuclear fission to harness nuclear power at the risk of irreversible danger, "to act into nature".

In addition, this paper outlines my attempt to search for a normative theory in her arguments on resisting unprecedented crises by focusing on her concepts of forgiveness and promise.

SON, JUYEON (University of Wisconsin-Oshkosh)

### *"I Don't Want to be a Burden": Japanese Immigrant Acculturation and Their Attitudes Toward Non-Family-Based Elder Care*

Elder care remains in the family sphere in Japan while elderly Japanese immigrants in the U.S. are actively planning to utilize formal care services. Although social structural conditions may explain these differences, they do not fully explain "how" Japanese immigrants have developed norms of independent living and utilization of formal care services. This paper will focus on how Japanese immigrant women's value acculturation leads to their cultural preference for non-family-based care. They seem to accept the U.S. norms of the independent parent-child relationship and see their children as "other" individuals rather than "inseparable" family members who are obligated to fulfill their filial duty. This value acculturation may manifest in their preference for independent living, friend-based support, and utilization of formal care services. This ensures their middle aged children's freedom from filial care duty by showing no expectation of it at all.

### *The Reception of "Art for Art's Sake" in Japan: Case Study of a Classical Music Festival Audience*

The purpose of this paper is to examine how the idea of "Art for art's sake" is received in contemporary Japan from the perspective of music and the human body. The concepts art and artist are typically described as relatively new conceptualizations that originated from modern European societies. In pre-modern societies, musicians were usually not regarded as artists, but rather as artisans who produced their work based on orders received from patrons. Therefore, their work was not regarded as art but as extensions of rituals or worship practices. However, during the modern period, a movement started that viewed these activities as art. It appears that the ideal of Art for art's sake provided impetus to this movement. In this study, we therefore attempted to determine the reception of Art for art's sake in contemporary Japan. Research data were collected using a survey of the Saito Kinen Festival Matsumoto, which is one of the most famous music festivals in Japan.

The analysis focused on factors that oriented people toward the ideal of Art for art's sake, and the results demonstrated the following major findings. First, people who attended the festival because of their relationships rather than music interest tended to demonstrate an orientation toward Art for art's sake. Second, participants who were closely involved with classical music indicated a strong orientation toward Art for art's sake. Third, people who were introduced to classical

music by listening to it with media, such as televisions or radios also indicated a strong orientation toward Art for art's sake. The results indicate that as people consume music through media rather than their bodies (e.g. playing musical instruments or attending music concerts), their musical consumption become individualized and their perspective on the ideals of art more purified.

#### *From Clinton's Anti-"New Terrorism" Policy to Bush's "War on Terror": Presidential Transition in the Anti-Terrorism Policy of the United States*

This paper aims to tackle the question of why the United States came to launch the war against Afghanistan and Iraq under the name of "Global War on Terror." To clarify this problem, I examine the historical usage of the concept of "terrorism" by the two U. S. administrations surrounding the 9/11 attacks in 2001. It is notable that some terrorism scholars were able to "predict" the emerging threat of the religiously motivated terrorism as "New Terrorism" shortly before the 9/11th attack on the World Trade Center. Scholars such as Daniel Benjamin and Steve Simon argued in the paper published in *Survival* that more lethal and dangerous threat of the religious terrorism was increasing. This poses a serious puzzle; because even those scholars themselves admitted that there were no dramatic statistics or powerful evidence before the 9/11 attacks. To answer this question, I focus on the concept of the "religious motivation" in those scholar's arguments, and perform a conceptual analysis. By doing so, I argue that the advocates of the "new terrorism" did not insist the newness of the "new terrorism" based on the empirical data of the lethality of terrorist attacks at the time, but in fact they re-define the conceptual dichotomy of "religious / secular" based on the standard of negotiability, by which the "new terrorists" were characterized as non-negotiable and irrational jihadists. This new concept of "religious motivated terrorists" made possible the policy prescription of "war on terror" of the Bush Doctrine, which justifies the preemptive attack to those new terrorists and the "rogue states" which were supposed to harbor those terrorists.

#### *Power Transition in the Legitimation Mechanism of Fashion Designers*

Prior to the advent of the Internet and social media, fashion designers' reputations were legitimated by industry professionals who attended biannual fashion show events that took place in the major fashion cities, such as Paris, New York and Milan. It was their prerogative and privilege to be part of the by-invitation-only insider circle. Consumers and the general public eagerly awaited for the press coverage in newspapers and magazines to see what is going to be in trend the next season. It was an exclusive status to be a member of the industry because they were the "gatekeepers" of fashion who consecrated the designers. This mechanism of hierarchy has been completely overthrown by the invention of twitter, Facebook and other social networking media. The younger designers are no longer interested in having a fashion show, and they communicate with their followers directly via social media. Their fans wear their favorite labels, take pictures with their smartphones and instantaneously post them on blogs, twitters, and instagrams. This communication occurs on a minute-by-minute basis. The fans are making an invaluable contribution to the publicity and the promotion. Amateur bloggers with insatiable appetite for fashion are just as powerful and influential as professional magazine editors. Luxury brands that were reluctant to rely on the social media since they reach too wide an audience are finally following suit as well. My paper attempts to explore how the mechanism of the mainstream fashion system has transformed in the past decade and investigates how the legitimation process of designers and the power structure of the industry have changed.

#### *Buddhism, Collective Memories, and Political Process in Myanmar (Burma)*

Buddhism as a majority religion in Myanmar (Burma) has been a powerful symbol for the Burmese population and long affected the socio-political dynamics in a traditional country. Despite the romantic reading of Buddhism prevalent in the West and among neo-liberal commentators, Buddhism has manifested the potential to become a contentious public symbol when appropriated to oppress the 'enemy', while simultaneously justifying its position and winning public support.

The sangha historically maintained a close relationship with the Buddhist kingdom and a symbiotic relationship between them underpinned the stability of the country until the last king was dethroned in 1885. The desecralization of Buddhism by Europeans and the violation of its symbols remain deep in the collective memories of the people. I discuss the political activism of Buddhist monks that started during the British colonial rule and highlight the patterns in which monks respond to different crisis points in modern history, deriving from a deep sense of anxiety that their Buddhist tradition is threatened.

Myanmar (Burma) witnessed intense communal violence during the democratization period after independence in 1948. Prime Minister U Nu was hampered by monks making incessant demands to give preferential treatment to Buddhism and eventually succumbed to make Buddhism the state religion. Buddhist monks today comprise almost half a million of the population and profess themselves to be the custodians of the *sāsana* (the Buddha's dispensation). They are increasingly asserting their authority to protect the *sāsana* in the age of moral decline, which they see as coming from Islam. This paper attempts to unravel the collective trauma that prompts monks to manifest a similar pattern of both self-defense and aggression, and understand the cultural and religious undercurrent that continues to influence people's aspirations and worldview.

#### *Family Support and Mental Health Care for the Japan Self-Defense Force Personnel*

Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 100,000 personnel at its peak. Given the increased operational tempo, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (JGSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and a "Mobile Counseling", or outreach program, to provide mental health care to JGSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families' perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of "community capacity" model will be discussed in terms of enhancement of social support networks for the JSDF families.

#### *New Middle Class in Singapore As a Global Creative City*

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed during these 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intensions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would trace the historical transformation and analyze the sociological meanings. Second I would compare with other typical Asian cases. Particularly I would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and people. Lastly the I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities.(227 words)

#### *Social Friction in the Community Hosting Evacuees of Nuclear-Disaster in Fukushima: A Case Study of Iwaki City*

The Fukushima Nuclear disaster has brought various and complex social divide, not only to those communities forced to evacuate but also to the communities housing evacuees. Iwaki-City, Fukushima Pref., is currently hosting about 24,000 evacuees from several municipalities, which is the largest evacuee-hosting

municipality in Japan. One of the issues in the aftermath of disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and supporters in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existed social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

#### *Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life*

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and societal changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women's perceptions, and their negotiations with rising phenomenon of femicide in Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out violence against women, and femicide as an extreme practice of violence through interrelationality with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class positioning, this study analyses women's emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women's practices in everyday life and re-constitute social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women's agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

**KAYA, TÜLAY\*** (Istanbul University, [tulay.kaya@istanbul.edu.tr](mailto:tulay.kaya@istanbul.edu.tr))

#### *Turkish Sociology's Footprint in the History of Sociology*

A simple glance at the classical or contemporary sociological theory books is enough to recognize the general tendency of limiting the history of sociology to the West in general without even mentioning the existence of other sociological traditions. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology.

The purpose of this paper is to show that history of sociology cannot be limited to Western traditions only. In that term emergence of sociology in Turkey and its establishment as an academic discipline at higher education institutions is a good example.

As the need for knowledge and practice of sociology in Turkey was different from the conditions the West was facing, development of sociology had its own unique way in Turkey. Sociology as an academic discipline was first taught in Darul-funun (House of Sciences) which was a higher education institution in the Ottoman Empire period. After the collapse of the Ottoman Empire and with the emergence of the new Turkish Republic, new reforms took place in higher education. In 1933 Darul-funun was reorganized and named Istanbul University. Since then up until now lots of sociology departments have been established at various Turkish universities.

One of the assertions of this paper is that while sociology is considered as a mere Western heritage, the history of sociology's emergence and involvement in higher education in Turkey also show that particular social and historical contexts of Turkey have created different needs for and relations with it as a science result-

ing in different approaches and traditions which are also scientific and historical contributions and which should not be overlooked.

#### *Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part1)*

Purpose: Although there is a sizeable body of social research on gender inequality in Japan, biases against sexual minority groups have remained largely uninvestigated. Through surveying university students, we examined the feelings of heterosexual people towards sexual minorities.

Method: We conducted questionnaire surveys at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambiguous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with lesbians, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren't accepted due to their failing to fit into the binary. Although the feeling of rejection towards male homosexuality is stronger than that towards female homosexuality, it also suggests that gay men tend to be associated more with sexual matters than lesbians.

#### *Social Security and Orphans in Foster Care: The Experiences of Social Workers and Home Based Care Workers in the South African State's Provision of the Foster Care Grant*

South Africa's HIV epidemic remains the largest in the world. It is estimated that there were 5.6 million people living with HIV in 2009 (WHO, 2011: 24). South Africa had an estimated 1.9 million children who had been orphaned by AIDS by 2009 (SAHRC, 2011: 57) and this figure is expected to increase to an estimated 4 million children (approximately 10% of the entire population) by 2015 (Whiteside and Sunter in Madhavan, 2004: 1443). The South African state has a well-developed system of social security. The state introduced a foster care grant, which is unique to it, in response to the HIV and AIDS pandemic (Hearle and Ruwanpura, 2009: 427). For the state to get the foster care grant to the orphans there are actors that play a mediating role between the state and the orphans in foster care. This paper pays particular attention at the experiences of social workers and home based care workers in the South African state's provision of the foster care grant in Ha-Makuya, a rural district in Northern VENDA (Limpopo Province). During the Apartheid era, Ha-Makuya suffered systematic underdevelopment and is now considered to be a national poverty node (Berman and Allen, 2012: 81). Data were collected from seven purposively sampled social workers and home based care workers who were interviewed in May 2013. It was found that the application of the foster care grant was dependent on the role played by the home based care workers as they were the "eyes in the community" and also they, according to the social workers, "liaised" with them. This paper also illuminates the functionality of other social institutions. These social institutions include the family, the legal system and the social services.

*Detecting 'Ripple Effects' Of The Canterbury Earthquakes In a National Longitudinal Study Of Aging*

The timing of the 2010 and 2012 surveys conducted by the New Zealand Longitudinal Study of Aging provides a clear "before and after" dimension to the exploration of the impacts of the Canterbury earthquakes, on the study population of older people. Our data shows some effects (after controlling for baseline differences) on measures of living standards, as well as on physical and mental health, according to location, and degrees of recorded direct and indirect exposure to the Canterbury earthquakes. In particular, the aspects of control and self-realisation within the quality of life measure show different trends based on location and exposure to earthquake effects. Other psychosocial measures of loneliness and depression also show regional differences. These differences are not unidirectional or consistently negative, to the extent that some exposure suggests positive outcomes on some measures. The relevance and value of these findings in terms of policy will be further enhanced by our future ability to continue to track such effects over the longer term, in light of the scale and duration of the Canterbury recovery process, and of other emerging phases of this country's exposure to a potentially hazardous seismic environment.

ALPASS, FIONA (Massey University)

*Health, Work, Caregiving and Retirement in the New Zealand Context*

Several features of the New Zealand policy context provide an interesting comparative perspective on the relationships between caregiving, paid work and health status in the fifth wave survey of a national sample of participants aged over 55 years, drawn initially in 2006 from both the general and the Maori electoral roll. Relatively high workforce participation rates for those aged over 65 years, followed the final removal of mandatory retirement in 1999, and a universal national superannuation system has been retained alongside the development of a voluntary contributory fund, known as KiwiSaver (introduced in 2007). Legislation which opened up the right for caregivers to request flexible working arrangements was reviewed five years later in 2013, with a recommendation that this right be available to any employee, irrespective of needs relating to family caregiving.

In this context of arguably mixed policy messages, survey data provided by the participants in the 2013 Independence, Contributions and Connections study will be presented. As well as considering trends over the five waves from 2006, the 2013 survey offered a supplementary opportunity for caregivers to describe their caregiving roles, their sources of additional support, their views on workplace and caregiving interactions, and plans for the future.

*The Question of Internet Filtering: Negotiating Discourses of 'moral Panic' and 'risk' in the Australian and British Policy Debates*

The implementation of internet filtering systems is becoming an increasingly established means of regulating the internet in many countries. The availability of pornography involving child sexual abuse is understandably an emotive concern, which makes public opinion in liberal democratic countries more accepting of internet filtering of such content. However, the exposure of children to inappropriate online content and their increasingly autonomous activities online produce further societal anxieties. In the cases of Australia and the United Kingdom, the objectives of child protection and crime prevention inspired proposals for online filtering, but these schemes proved controversial because of concerns about their potential to (intentionally or unintentionally) prohibit a wider range of materials if they were ever to be implemented. The Australian proposal, which was set aside in 2012 after a complex five year long debate, would have applied filtering to block a range of materials deemed 'harmful', 'offensive' or 'objectionable' (both illegal and legal). More recently, the UK government has made calls for Internet Service Providers (ISPs) to provide a 'default on' filter to address anxieties about internet pornography and this has provoked renewed debate. These debates have involved many experts from the internet industry, filtering vendors, academic researchers, child advocacy NGOs, civil liberties groups and adult industry representatives arguing for and against the idea that the state can (or should) engage in the regulation of internet content. Drawing on comparisons from both the Australian and British examples, this paper explores how the rhetoric of 'moral panic' and 'risk' are variously used as discursive strategies in recurring policy debates about filtering pornography on the internet.

*Centre-periphery relations and academic autonomy in Latin American social sciences: critical comments*

The volume edited by Fernanda Beigel is positioned at the intersection of various strands of literature such as sociology of science, sociology of intellectuals and internationalization or globalization of the social sciences. It integrates various debates and enriches them with in-depth, historical studies provided by experts in the domain. It provides a conceptual differentiation of the ubiquitous term "academic autonomy" by contrasting it with its various opposites (heteronomy, dependency), by differentiating between its intranational and its international as well as between its disciplinary dimensions. Apart from highlighting the intra-regional variety of cases and thus differentiating the concept of "the periphery", the book thus also manages to restore the agency of the peripheral actors that purely structural analyses tend to overlook. This could only be done convincingly through a set of empirical studies. They clearly show that academic exchange, however unequal, is not unilateral.

*Ibn Khaldun – Assessing His Influence in the Foundation of Modern European Sociologies*

In the course of recent debates around decentering, decolonializing and pluralizing the history of our discipline, Ibn Khaldun has been (re-)claimed not as a precursor, but as one of the "founding fathers" of sociology. Suspicion has been voiced that Ibn Khaldun's heritage, especially his *Muqaddima* as an important reference in the foundational phase of modern European sociology, has been sidelined with the construction of the sociological canon and thus remains today an unacknowledged source. This paper systematically assesses the presence of Ibn Khaldun as a reference in early sociology texts. Starting from a representative corpus of German-language sociological monographies published between 1900 and 1934 (bibliography provided in Käsler, 1984), this study reconstructs the circulation of Ibn Khaldun's works within the German-language and wider European community of scholars. While the overall presence of Ibn Khaldun is quantitatively rather low, it is indeed qualitatively interesting. A preliminary analysis hints to three potential "entry points" into modern sociology: Spanish history of ideas that refers to Ibn Khaldun's heritage; debates between organicists and historical sociologists at the *Institut International de Sociologie*; as well as Vienna as a place of debate around Ibn Khaldun, possibly through the influence of Ottoman social thinkers. The paper then provides more detailed textual analysis of the reception of the *Muqaddima* by two important early sociologists, L. Gumplowicz and F. Oppenheimer, with regard to their "sociological theory of the state". The way in which they mobilise Ibn Khaldun as a reference is particularly interesting with regard to the question in how far sociological theory is context-bound as opposed to generally true.

THOMPSON, MAXINE (North Carolina State University)

*Stressors and Resiliency Resources: Explaining the Significance of Subjective Social Status and Objective Social Status for Depressive Symptoms Among African American and Afro-Caribbean Women Residing in the U.S*

Studies in the U.S. often find that black women report more subclinical depression and psychological distress than whites or black males. Scholars argue that these disparities arise from the intersection of race, gender, and social class that converge in unique ways to place Black women at higher risk of poverty and its associated stressors that challenge their emotional well-being. Stress research indicates that the strong inverse relationship observed between objective measures of social standing (e.g., education and income) and mental health arises from greater exposure to stressors and/or the lack of coping resources among the economically disadvantaged. Recent research suggests that subjective rankings relative to others may be even more influential. This study used data from the National Survey of American Life to investigate the association between objective and subjective social status and depressive symptoms among black women residing in the U.S. Using regression analyses, we investigated the extent to which two chronic stressors—perceived discrimination and financial strain—and four resiliency resources—religious involvement, relationships with friends, emotional support from family, and racial/ethnic group evaluation—mediated or moderated the association between status and symptoms. Findings revealed a strong negative relationship between subjective status and symptoms for both groups of women and a less robust relationship between education and symptoms for

African American women. Family support and economic strain mediated this relationship for Afro-Caribbean women, while discrimination, economic strain, friends, family, and group evaluation did so for African American women. Our findings speak to the paradox of inclusion. Although the experience of subjective social status is similar for both African American and Afro-Caribbean women, the different effects education, perceived discrimination and group evaluation suggest the need to avoid homogenization of the life experiences of women of color when examining disparities in mental health.

##### *Father-Child Relationship Quality in Living Arrangements after Divorce*

Based on multi-actor data from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender of the child and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. Our results reveal that children who live in families with joint physical custody have indeed higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live mainly with their mother. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child's gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

##### *The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood*

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men's gender role attitudes explain men's paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father's role of providing is highly important, there is scant research that directly addresses providing as a form of paternal involvement. Second, I aim to unravel issues of causality, by focusing on men's gender role attitudes as predictor of paternal involvement before these men enter parenthood. In most studies, scholars use the simultaneous measurement of father's views on parental roles and paternal involvement. As such, father's experiences with paternal involvement may well have shaped their attitudes concerning parental roles rather than the other way around.

My results show that men with more modern gender role attitudes indeed spend more time on childcare tasks, also when controlled for relevant background characteristics such as educational attainment, work hours, religiosity, age, partner status, age and gender of the child. In contrast, gender role attitudes have no impact on changes in men's work hours across the transition to parenthood nor on their level of income. This latter finding shows that men's work schedule and their provision are unrelated to men's gender role attitudes, suggesting that being a good provider is of importance to all men who become fathers, irrespectively of gender role attitudes.

##### *Does Greater Equality in Governance Contribute to Greater Health Equity? Lessons from Closing the Gap for Aboriginal Australians*

There is growing evidence that providing increased voice to vulnerable or disenfranchised populations is important to improving health equity. In this paper we will examine the engagement of Aboriginal people and organisations in local governance reforms associated with the Indigenous Health National Partnership Agreements (IHNPAs) in Australia and its impact on the uptake of health assessments.

The sample included qualitative and quantitative responses from 188 people involved in regional governance in Aboriginal health. The study included data on the uptake of Aboriginal health assessments from July 2008-December 2012. The eligible population was 83190 in 2008/9, 856986 in 2009/10, 88256 in 2010/11 and 90903 in 2011/12. Logistic regression was used to examine the relationships between organisations within forums and the regional uptake of Aboriginal health assessments. The independent variables included before and after the IHNPA, state, remoteness, level of representation from Aboriginal organisations and links between Aboriginal and non-Aboriginal organisations.

The introduction of the IHNPA was associated with a shift in power from central government to regional forums. This shift has enabled Aboriginal people a much greater voice in governance. The results of the analyses show that improvements in the uptake of health assessments were associated with stronger links between Aboriginal organisations working with other Aboriginal organisations and between non-Aboriginal organisations working with Aboriginal organisations. Higher levels of community representation were also associated with improved uptake of health assessments in the IHNPA. The findings suggest that the incorporation of Aboriginal organisations and community members in regional planning may play an important role in improving health equity. This study makes an important contribution to understanding the processes through which the incorporation of disadvantaged groups into governance might contribute to health equity.

##### *Re-Invention of the Kurdishness through the Transnational Kurdish Media*

##### **Re-Invention of the Kurdishness through the transnational Kurdish media**

Dr Janroj Keles, Business School of Middlesex University

##### **Abstract**

The rapid development of transport and communications technologies have contributed to the exchange of information and resources along with multiple participation in socio-cultural and political activities across the borders of national states. Transnational ethnic media has played a key part in this by enabling a re-connection of diasporic/transnational populations with a mediated homeland. In this sense, this paper will explore the linkages between nationalism, media and Kurdish migrants and the role of the Kurdish transnational media in articulating and mobilizing different political and identity positions for Kurdish migrants. It will focus on the development of Kurdish media in Turkey/Kurdistan and in Europe and the way in which they have connected, constructed a deterritorialized imagined Kurdish political community. This paper will be based on 30 in-depth interviews with Kurdish journalists and migrants of diverse age, gender, political affiliation, occupation and length of migration in London, Berlin and Stockholm.

##### *Getting Better All the Time? Selective Mortality, Attrition, and Compositional Changes in Longitudinal Studies on Ageing*

By default, life-course studies on ageing include selection processes. Selective mortality changes the composition of samples as people age. In addition, in longitudinal studies, this selection process may be compounded by selective attrition. Consequently, the distribution of important social attributes, such as education and social class, is likely to change over time in any given study cohort.

The aim of this study is to explore changes in the distribution of baseline sample characteristics due to i) selective mortality and ii) attrition in an ageing panel sample (born 1914–1934) throughout different follow-up waves (1968, 1974, 1981, 1991/1992, 2000/2002, 2011). The study is based on nationally representative longitudinal survey data from Sweden (Swedish level of living survey – LNU and The Swedish panel study of living conditions of the oldest old – SWEOLD).

After 43 years of follow-up, 67% of the total sample (N=2335) had died, and an additional 16% had been excluded because of non-response in at least one follow-up wave. The proportion women in the sample increased from 50% to 60% because of selective mortality. The mean level of education increased among both men and women. Similarly, changes in class structure were observed for both sexes. In particular, the proportion of manual workers decreased and the proportion of non-manual workers in the sample increased over time. In both women and men, the changes in class structure were compounded by attrition. In men but not women, selective attrition also compounded changes in education.

Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up.

The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

#### *Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies*

The emergence of the welfare state provided a countervailing force against the social ills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations. Despite ideological and institutional theoretical perspectives, we find that individual attitudes are attracted to the material returns of the welfare state and envy of those who have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (45 countries; 112 country-time points; 120k individuals). We conclude that resource acquisition as opposed to equality or social cohesion drives the impact of welfare state institutions on individual attitudes.

#### *Between State Bio-Power and Social Bio-Politics Documented and Undocumented Migrant Care-Workers in Israel*

The paper deals with tensions emerging between high demand for migrant care-workers in affluent economies and their simultaneous construction as a demographic threat to the nation's political body. Drawing on the empirical analysis of the Israeli case, an ethnically defined nation state and a major 'insourcer' of labor migration, the article examines how these tensions are put in display in the topical realm of migrants' family formation and unity within host countries. It argues that while contradictions between the reproductive labor of migrant care-workers and their reproducing bodies are closely connected to gendered state policies managing labor migration, they manifest differently along the legal/illegal continuum of migration status. Thus whereas documented care-workers are subjected to the regulation of their employment conditions and protected by labor laws, they are also directly exposed to state and employers' control on family formation. Paradoxically, undocumented domestic migrants who are forsaken to unfettered dynamics of informality and risk of deportation, gain space for greater maneuver over the creation and maintenance of family life in host countries. Moreover, difference in the management of the reproductive-reproducing dyad around care workers according to their legal status, shape the repertoires of contention available to civil society organizations and networks as they try to assert migrants' rights to family life in the context of global feminization of migration and stringent control policies.

#### *Socioeconomic Influences on Inequalities of Wellbeing in Later Life: A Study of Australian Baby Boomers*

Promoting health and wellbeing in individuals across the life course has become a priority for many governments and policy makers around the world. There is increasing recognition of the value of subjective measures of wellbeing as a complement to the more traditional, objective measures of health and wealth. In Australia there is a widespread view that the early post WWII birth cohort has been advantaged relative to later cohorts but there has been little attention to the origins of inequalities arising from earlier life experiences within the cohort.

This paper begins to address this gap by examining the influence of earlier life course exposures on subjective wellbeing among a sample of Australian baby boomers aged 60 to 64 years from the 2011-12 Life Histories and Health (LHH)

survey (a sub-study of the NSW 45 and Up Study). Inequalities in childhood social position – notably parental social class and education – were found to have small but significant effects on later life wellbeing. The childhood influences operated mainly through their relationships to adult attainment of socioeconomic position such as highest education, occupational class and household income. Differences in childhood health also impacted on later life wellbeing through associations with adult health and physical capacities. Overall, there was evidence that advantages or disadvantages experienced in both childhood and adulthood had a cumulative effect on wellbeing on entry to later life. These findings underscore the value of examining not only proximal, but also earlier, distal life course determinants of wellbeing and the importance of reducing inequalities in health and wellbeing across all stages of life. Comparisons to English Longitudinal Survey on Ageing will indicate the influence of societal differences in socioeconomic development and public policies on wellbeing outcome.

#### *Insights from the Past: Disaster Research and the Second Environmental Crisis*

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet an earlier environmental crisis occurred in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as *Silent Spring* and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact wideranging laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the Environmental Protection Agency were created to tackle toxic challenges to health and wellbeing. This was a time of both rapid policy innovation and moral transformation regarding human interaction with the environment. In this paper, we consider how the experiences of that earlier era can inform needed change now.

#### *Consumption Behavior and Disaster Recovery: Insights From Eight Years In a Living Laboratory*

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams<sup>[1]</sup> and drawing from extant research in marketing, sociology and psychology, this body of work investigates the short- and long-term effects of these natural disasters on consumers' consumption behaviors and how these behaviors aid in the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveying (n=448) conducted in the weeks and months after impact shed light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evolving views of possession). Follow-up surveying (n=176) four years after a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.

#### *Contract and Cruelty: Wal-Mart and Labour Conditions in South Africa*

This paper presents findings from research in six branches of a Wal-Mart owned food chain in Johannesburg, South Africa. Wal-Mart entered South Africa in a newsmaking majority share owner buy-out of South African listed Massmart Holdings in 2012. This paper explores the results of research with shop floor workers. It details labour conditions and worker frustration with company and unions, alike. It examines worker politics in these stores as they struggle to combat the erosion of existing conditions, and as they struggle to be heard by their union. It discusses union efforts to support this workforce and to build an All-Africa Alliance of Wal-Mart workers. It grapples with the gap between worker experiences of precariousness in their jobs and union battles to confront this multinational on its home turf.

##### *Prearity and the Law: Regulating Casual and Contract Labour in the South Africa Retail Sector*

This paper explores the history of legislation around forms of casual, part-time and contract labour in South Africa since the 1930s. Building on my previous work on casual and part-time labour regulation in the retail sector (Kenny 2009), this paper expands the discussion to explore the legal lineages which helped to define the construction of these forms of labour within the retail and distributive sector. It seeks to examine the relationship between the law as disciplinary apparatus, transnational importation of law and norm, and socio-political contexts and worker and union politics in explaining changing legal provisions over time. In so doing, I hope also to examine the boundary between these forms of employment law and the influences of Masters and Servants legislation as limit for black workers in South Africa in relation to the sector.

##### *Shifting Power Relationships in the World Economy: A Long Term Perspectice*

It is argued by many that position in the world economy is, for the most part, highly stable and resistant to change, at least across the macro-level "zones" that form a key element of world-systems theory. I suggest that this apparent stasis actually masks a considerable amount of change and discontinuity within the global economy. This paper takes a different perspective, focusing on power rather than position, to explore the extent to which shifting relationships between military and economic power, both within and across countries, reflects a changing dynamic with significant implications for the global economy. Following Kentor (2013), the balance of economic and military power within countries is charted at 10 year intervals from 1850 to the present. I then explore the impact of this changing balance of power on movement in the world economy.

#### RC02-58.1

**KENTOR, JEFFREY\*** (Eastern Michigan University,  
[jkentor@emich.edu](mailto:jkentor@emich.edu))

##### *The Structure of the Global Economy 1850-2000*

This research develops a new typology of the structure of the world economy, based upon Charles Tilly's (1994) theorization of the emergence of the modern nation-state system.

Following Tilly, this research conceptualizes the world economy as a four dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology.

This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

##### *Insert Coin for the Next Level! Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster*

Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which

doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields.

Even if economic development processes are highly localised not all 'locations' are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODTÜ Teknokent which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M.S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that: Can digital games can be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

##### *Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems*

Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within many less developed countries and even among some of the rich countries, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly lead to increasing inequality and less long term economic development in most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization.

Recent evidence has suggested that the impact of economic globalization has contradictory effects in both developed and less developed nations. Other data show that less developed countries in Asia, in contrast to African and Latin America, are more likely to have more economic development, less poverty, and less growth in inequality from increasing ties to the global economy.

The paper summarizes some differences between the USA and EU nations that have led to the different outcomes of globalization. It focuses on data and several years of fieldwork in four Buddhist countries in Southeast Asia (Thailand, Vietnam, Laos, Cambodia) to identify some of the causes of the impact of ties to the global economy which vary even within Asian countries, showing some Southeast Asian countries (such as Cambodia) share more characteristics with African or Latin American countries that are related to very uneven economic development, rapidly increasing inequality, and no poverty reduction.

This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

##### *Literacy Leadership and Accountability Practices: Holding Onto Ethics in Ways That Count*

Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard 'benchmarks'. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday work of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership and how principals' work is increasingly coordinated by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of 'validation days', and 'liter-

acy chats' between a literacy leader and classroom teacher, are examples of such textually organised actions. We elaborate on these inescapable textual framings and tasks faced by the principal and literacy leader, and those that they create and modify in order to 'hold on to ethics'.

We argue that while leaders' and teachers' everyday work is regulated by 'ruling relations' (Smith, 1999), it is also organic and responsive to the local context. We conclude with a reflection on the important situated work that school leaders do in mediating trans-local policies that might otherwise close down possibilities for engaging ethically with students and their learning in a particular school.

#### *Ruling Relations at Work: The Active and Occurring Text in the Everyday Life of a Local School*

In Australia, as in many western education systems over the last two decades, discourses of accountability, transparency and performativity have reshaped education policy that in turn has reorganized the work of school leaders and teachers. Increasing attention to the production, analysis and display of student achievement data has been one of the effects of this reorganization.

This paper presents some of the work undertaken by school leaders and teachers in a small religious school whose NAPLAN results suggest that it is succeeding 'against the odds'. In the spirit of institutional ethnography we are interested in the ways in which the educators' everyday practices in this school are textually mediated and shaped by a number of different texts and discourses, including the discourses of accountability and transparency associated with the national school reform agenda, and the discourses of professional learning, *Veritas* and care that are promoted locally.

The paper examines how intersecting layers of national, state and sector policies connect with and coordinate school leaders' and teachers' everyday practices. We trace the ways in which translocal 'ruling relations' (Smith, 1999; 2006) of a globalized education system reach into and regulate the activities of people in local everyday settings. Our analysis uses the concept of the 'active text', the text as *activating* and *occurring* in a specific place and time and at the same time *coordinating* and *ruling* from a distance. We examine in detail a sequence of the production and reading of assessment data by educators in one school and consider how this codifies students and their learning experiences and articulates with and coordinates teachers' actual practices. In this process we begin to learn from those involved how their everyday work brings into being institutional processes that produce a particular institution's standard sequences, its decisions, policies and outcomes.

**KERN, THOMAS\*** (Chemnitz University,  
[thomas.kern@soziologie.tu-chemnitz.de](mailto:thomas.kern@soziologie.tu-chemnitz.de))

#### *Opening and Closure in the Reproduction of Social Movements and Organizations*

This study examines the social mechanisms behind the reproduction of social movements and organizations based on Max Weber's distinction of open and closed relationships.

Max Weber's concept of social closure played an important role in the academic discourse about Marxist class theory in the 1970s and 1980s (Parkin 1972, 1979). Accordingly, the formation of classes is closely related to processes of social closure where a group of privileged actors monopolizes their access to certain resources (Murphy 1986, 1988). In this sense, the concept refers to a central mechanism behind the formation of social collectivities. In the context of the discussion about the production of social capital, the distinction between opening and closure was further developed and refined in the field of social network analysis. Burt (2000, 2005) demonstrated in several studies how processes of opening (brokerage) and closure affect the innovative capacities of social networks.

This presentation aims at transferring the findings of past research on social classes and networks to formal organizations and social movements. In the first part, I will discuss the social mechanisms that produce closure: While the closure of formal organizations typically depends on a continual process of decision-making (Luhmann 1998), social movements reproduce the boundary between "us" and "them" through ongoing mobilization. In the second part, I will draw on network analytical concepts in order to operationalize the opening and closure of social structures. In the third part, I will show on the case of the energy market in Germany how the mobilization of the environmental movement affected the balance of opening and closure between electric power companies.

#### *Back Home: The Reintegration of Return Albanian Migrants in a 'Foreign' Environment*

In this paper we explore the Albanian return migration from Greece. Albanian return migration is a neglected field of study and there is little empirical evidence related to it.

In the beginning of the 90s, after the fall of communism in Albania and elsewhere, Albania was the biggest exporter of migrants in the Eastern Block, judging by its proportion to the general population. Over one fourth of the country has lived or is living in a foreign country. Their main destination was Italy and Greece, because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our research is focused on the reasons of their return, the Greek debt crisis being one of them. We mainly explore the difficulties of their re-integration in Albania, and how they perceive themselves in the Albanian society. We call it a 're-integration' because Albania is not the country that they left behind when they first migrated. It has changed, pretty much the same way as other closed societies have done after they opened their borders.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their reintegration. We include the role of the Albanian government because it has been advertising itself as a facilitator and accommodator for their smooth adaptation.

#### *All Change: The Social Life of Change Management in the UK National Health Service*

The UK NHS is going through what is typically referred to as an unprecedented period of change, marked by key priorities of patient choice, innovation, quality, innovation and the minimisation of bureaucracy. These processes are associated with a plethora of paradigms, initiatives and tools designed to support the management of change, including strategies for developing the learning organisation and the role of change agents, predictive change tools, models and processes of personal change, and the rejection of 'old-style paternalistic' theories of organisation and culture.

This paper will explore the rise of the change management agenda in the NHS, and the organisational and psychosocial theories and values which underpin it, before moving on to consider how and why we might trace its articulation in the practices of NHS managers, drawing on preliminary data from exploratory discussions and observations with NHS managers working in a large soon to be Foundation Trust Hospital in the North of England. We consider how and why we might go about understanding the social life of change management in organisations by focusing upon manager's practices and accounts of their experiences of and rationale for change, especially the productive character of change mantras and devices. We end with some critical reflections on the importance and the difficulties of tracking, understanding and articulating the activities and the actants of change in organisations-in-flux and in managing the ways in which we ourselves as researchers are enrolled in the processes of change we seek to study.

**KERSTEN, JOACHIM\*** (German Police University, [joachim.kersten@dhpol.de](mailto:joachim.kersten@dhpol.de))

*Policing of Minorities and Police Accountability*

In the European Union organizational structures, traditions and citizens' trust in police differ substantially among the member states. While numbers of police per 100 000 population fluctuate between less than 150 to nearly 500, trust in police indicates an opposed relationship: the lower the numbers and the less money spend on police/ security the higher is trust in police (Kääriäinen 2013).

Despite of all the variety there is a common challenge to police in Europe which is the relationship between police and minorities. Whether working migrants and their descendants (e.g. Turks in Germany), traditional resident minorities (e.g. Roma in Hungary) or asylum seekers/ refugees from civil war regions (e.g. Sub-Saharan Africans in Austria), survey results indicate that minority men and women are more frequently subjected to police controls than majority citizens. More often than majority citizens, persons from a minority background feel treated unfairly by officers during encounters with police. At the same time, the victimization rates of minorities are significantly higher while their levels of reporting to police is lower, and this includes instances when they become victims of hate crimes (Goodey 2013).

The European Union has commissioned research aimed at an assessment and an improvement of police-minority relations in the EU member states. The presentation will report findings of such a project ([www.corepol.eu](http://www.corepol.eu)). This research project investigates police minority problems and best practice conflict resolution in a wider perspective of restorative justice approaches in Germany, Austria and Hungary.

**KESKINEN, SUVI\*** (University of Turku, [suvkes@utu.fi](mailto:suvkes@utu.fi))

*'Crisis of Multiculturalism', Neoliberalism and Possibilities for Creating Alternative Narratives in Activism*

During the last decade the 'crisis of multiculturalism' discourse has characterized media and political discussions in many European countries. Especially Muslims and non-western minorities have been framed as problematic outsiders that enhance illiberal cultures, followed by demands on stronger integration and assimilative measures. Notions of gender equality and sexual freedom have played a significant role in such debates not the least in the Nordic countries that build their national identities on being world-champions in achievements in gender equality. Building on interview and media data gathered in Denmark, this presentation focuses on how activists who belong (or are categorized as belonging) to racialised groups (Muslims, non-western minorities) seek to provide alternative narratives and question these hegemonic discourses about migrant/minority families and communities.

Public debates on gendered violence in Muslim families, especially forced marriages and honour-related violence, have been on the agenda in Danish media and politics since the 1990s. The othering images of the subordinated, victimized Muslim woman and the threatening, patriarchal Muslim man have circulated in the media for more than a decade, with consequences also for the everyday lives of the racialized subjects. My paper will analyze how activists create spaces to challenge such images and discourses, as well as to produce alternative narratives and imaginaries. Moreover, it will be discussed how such spaces are shaped by neoliberal rationality that emphasizes individualization and entrepreneurialism. It will be analyzed how governmental 'role model' projects, mentor networks for ethnic minority women and media interest in 'the voice of ethnic minority women' shape the spaces from which the studied activists publicly speak from – spaces embedded in, but not totally restricted by multiple power relations.

*The Transform of Finnish Educational Policy - the Viewpoint of Special Education*

Educational policy in Finland is based on internationally ratified treaties, such as: UN declaration 1993; Salamanca 1994; Dacar 2000, and the Universal Declaration of Human Rights 2007. Since year 1998, educational legislation has been on change toward inclusive principals and values, such as emphasizing equality, participation and shared services. Education is guaranteed for all, regardless of ones background, wealth or origin. According to the official statistics the amount of students who get special education has increased significantly from the year 2005 to 2010. Our study examines educational policy in Finland and its implementation in our primary schools. The data of this study contains two educational policy documents: (Education and Research 1999- 2004. A development plan and Education and Research 2011-2016. A development plan) What are the essential similarities and differences of these documents concerning special education?

*Learning Communities – a New Paradigm for Education*

Education is by its nature a normative enterprise and therefore guided by certain aspirations, cultural and ethical beliefs. It is no wonder that the educational systems of different countries reflect the local ideas of nation, the established ways of perceiving knowledge, ways of production, as well as religious and other normative ideas. In western countries educational thinking has been generally linked to the scientific worldview that is based on Cartesian and Newtonian inquiries. In this approach understanding is sought by taking first things apart – after that is done, the whole is constructed again. This kind of thinking has its emphasis on things like analytical thinking, determinism, and reductionism, but it cannot cope with phenomena such as complexity, purpose, intention, uncertainty and ambiguity, to name a few. The arts are, however, often mentioned to possess capacities and methodologies to deal with these latter issues. Is this really true is a question well worth to be investigated. The theory of learning communities (Wenger, 2004) offers us plausible framework, from which the premises for the role of arts in education can be outlined. However, at the same time the theory reveals also the limitations of the current structures and predominant ideas within the field. Combining the theory of situated cognition with analyzes of the on-going change in modern society, the new paradigm can be both grounded and justified that means also changes in educational designs.

*From Topic to Problem. Organizational Mechanisms of Constructing Demographic Change*

By referring to organizational theorists like Karl E. Weick and Niklas Luhmann, the proposed contribution starts from the assumption that for organizations demographic change is not a clear and unambiguous given problem, but rather a topic which *might be* regarded (i.e. constructed) as a problem-or not. Consequently, demographic change is understood as a *non-instructive* problem, which can be framed in different ways (e.g. *risk*, *catastrophe*, or *standard problem*). Based on the analysis of qualitative expert interviews that has been conducted in organizations of various types (e.g. business firms, health insurer, local government, social welfare organizations), I want to present preliminary results on the question: *Which structural elements and which mechanisms are crucial for the organizational construction of demographic change as a problem?*

More specifically, the proposed contribution wants to shed light on two aspects: first, it is asked as what kind of problem the demographic change is constructed by organizations. This refers to the organizational *construct of demographic change* itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the *process of constructing* demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on.

Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the conditions which let organizations pay attention to such phenomena like an aging and/or declining population. To address this question promises a central contribution to understand why and how organizations *by themselves* do or do not refer to a shift in the social structure of populations *at all*.

*Leisure and Life Satisfaction and Adjustment in Elderly People***LEISURE AND LIFE SATISFACTION AND ADJUSTMENT IN ELDERLY PEOPLE**

Today, everyone is busy in his business. Every PEOPLE needs leisure to maintain his quality of life and satisfaction. Leisure helps the person to maintain his health. After retirement people have leisure. In old age the people feels rejected and inferior as his physical and mental abilities deteriorate. The purpose of this study is to find out the relationship among leisure and life satisfaction, leisure and adjustment of elderly people in the context with socioeconomic status and support system. In old age people have leisure but they may not have satisfaction because of poor economic conditions, lack of social support. In family people has social and emotional support but in old age home the get material support not emotional support. So it affects the person's life satisfaction. Life satisfaction is very important for adjustment.

120 elderly people selected from old age home and family who are busy and 120 elderly people selected from the same population but have leisure. They have been administered life satisfaction scale and adjustment inventory.

The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economical status. 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economical status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and in family

**Key words:** Leisure, life satisfaction, adjustment, support system

#### *Use of Facebook As a Source of Political Participation Among University Students of Pakistan*

Use of Facebook as a Source of Political Participation among University Students of Pakistan.

The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring. However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. The following study intends to see that how Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influenced its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to validate this relationship. The study will provide deep insights regarding the political use of Facebook and its influence on civic and political participation.

#### *Islam and the Arab Muslim Refugees in United States*

The studies of Arab Muslim refugees in the United States are just in the beginning; research is needed on wellbeing of families. Refugees have more challenges than many other immigrants because of what they have experienced before and after they arrive to United States. Politics, religion, and culture overlap to shape these refugees' lives. Islam is one of the main factors that influence refugees' resettlement and adaptation in their new home. New opportunities challenge traditional ways of living. The paper will draw on some of the findings of an on-going research study exploring refugees' religion continuity and change: fate, rituals, and practices, the role of religion in refugees' resettlement, adaptation, and emotional support, types of challenges faced for being Muslim, and the role of Muslim communities in refugees' resettlement. A qualitative approach was used to investigate the perceptions and experiences of female Arab refugees. Semi structured interviews were conducted with refugees in the middle Atlantic area. Grounded theory was used to build useful theory about Arab Muslim refugees' religion continuity. Findings emphasize the importance of taking a holistic approach in understanding Arab Muslim refugees' needs which can lead to successful integration into the American society. Islam is more than religion; it represents a strong emotional support that ties the family together and helps them to assimilate to the new culture, and passing their religious values to their children is one of their priorities. In addition, it appears important for the wellbeing of refugees that they maintain their religious rituals while encouraged to integrate to the new culture. Social ties play an important role on family's wellbeing and emotional support represented on other refugee friends, relatives, and American friends.

#### *South Africa's Development Public Policies, Emerging Contradictions and Prospects in the Brics Partnership*

After almost three and half centuries of economic exploitation through international capitalist pursuits through colonialism and apartheid, South Africa has emerged as a democratic country. The liberation mandate for South Africa's post-apartheid reconstruction and development was translated into a popular development policy called the Reconstruction and Development Programme (RDP) based on redistributive ideals framed in the historical document – the Freedom Charter. Such an ideal was compromised within two years of democracy as the reality of eradicating high levels of under-development amongst the vast majority of the previously disenfranchised Black populace became contingent on growth and development programmes that will create opportunities for their socio-economic advancement. Adoption of a neo-liberal economic development policy called Growth Employment and Redistribution (GEAR) was considered the most strategic approach for the state to deliver on its development mandate through participation in the international market driven economy. However, such an economic approach to development has been proven to come with a wide range of contradictions perceived to be the source of slow and unsustainable pace of delivery challenged by a restless civil society. In being afforded entry to BRICS in 2010 it has committed to new sets of multilateral agreements to solidify its south-south strengths so that it will enjoy mutual benefits from such an arrangement to meet its development challenges. It is against this context that this paper tests out South Africa's relative position and status within BRICS as a new entrant, highlighting some potential contradictions followed by prospects for engagement on a diverse set of development oriented programmes and projects within this multilateral arrangement.

#### *Youth in Conflict with the Law - a Study of South African Youth in Detention at the Westville Youth Centre Durban , South Arica*

"The government must stop focusing on building a future for the youth but start to build the youth for the future" The history of South African youth especially those from disenfranchised backgrounds has been characterised by a struggle to become meaningful social actors. Many sacrificed their lives as foot soldiers of the liberation struggle so that the generation to follow will be contributing members of society so they may reap the benefits of their ultimate sacrifice for freedom. In recognition of the youth contribution to liberation in the country, South Africa earmarked a public holiday called the National Youth Day. As part of its post-apartheid reconstruction policy, a National Youth Development plan is in place to further their aspirations and social mobility in a rapidly transforming country. Despite such socio-historical context and policy initiatives for youth development, a large section of the populace are marginalised and excluded by a myriad number of socio-political and economic factors placing them at risk. This paper attempts to investigate the underlying nature and causes of South African youth who have come into conflict with the law. It draws from a situational analysis of 77 youth who are incarcerated at a youth detention centre in the Metropolitan Area of Durban for various forms of crime. The paper seeks to provide possible proactive measures drawn from the social reality of incarcerated youth on how intervention at a micro, meso and macro level can serve as a safety net preventing youth coming into conflict with the law.

#### *Changing Patterns of Ethnic Conflicts in India's Northeast and the 'Flawed' Peace Process: The Unfinished Business*

##### **Changing patterns of Ethnic conflicts in India's Northeast and the 'flawed' peace process: The Unfinished Business**

With the beginning of the involvement of 'external powers' in the India's troubled Northeast (Assam, Manipur, Meghalaya, Arunachal Pradesh, Tripura, Nagaland, and Mizoram), ethnic consciousness gradually developed amongst the people where ethnicity (*ethnicism*) gradually gave way to conflict among the various communities, against a backdrop of significant poverty and inequalities, impacting dramatically on economy and society. To name a few, we have the ethnic conflicts between the Nagas, Kukis and Meiteis in Manipur, Bodos and Non-Bodos in Assam, the Garos and the non Garos in Meghalaya leading to 'strategic' and intensified militancy in the present scenario.

The Peace processes could do no better. There has been a continuous 'flawed' peace process in the region providing no solution but encouraging more cycles of violence. The focus of the paper is to explore the dynamics of ethnic conflicts in the region, to examine the engagement of peace process by the Indian state with different communities and to conceptualize 'Peace' as a trouble more than a solution.

**Key words:** External powers, India's Northeast, Ethnicity, Ethnicism, Peace

#### *Participatory Water Governance through Gender Sensitisation in the Indian Context*

Equity in water, through gender-sensitization of developmental projects in the sector, is now recognised as an international agenda, owing to the commitments made in the Johannesburg Plan of Implementation, and declaration of 'Water for Health' as a human right. However, governments in developing countries have been found to be limited by social fabric existing at the community level, strongly held together by long standing traditions and social structures. The study discusses issues and concerns with respect to effective participation of women in governance of water projects, and provides case studies/ examples to illustrate the practical implications of success(es) and failures(es) to engage women for decision-making.

The study concludes that efforts that penetrate into the existing social structure to built opportunities for a re-allocation of power amongst different groups of people are required. Participatory appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

#### *Inclusion in Continuing Education and Its Unequal Accessibility: An Empirical Analysis for Able to Work Young People in Siberian Region*

The data of two surveys conducted by us in Novosibirsk Oblast (in 2012 the economically active inhabitants of semi-urban settlements from 16 to 45 years old were interrogated, N=356; in 2008-2009 it concerned young workers of urban, semi-urban and rural settlements, N=778) demonstrate that in whole a mass demand for further education among the adults has been observed. There is a special need in higher and second higher education, as well as in the courses/programs of supplementary professional education (SPE). The largest need in additional education, professional training and retraining were revealed among those employees whose work is connected with information use or innovative activities (as well as interest in them).

Anyway among all young workers educational activity of different kinds (real or projected) is realized as the most productive means for achievement of fuller self-realization in work. So, for this purpose they prefer increasing of their educational and qualification level in the major profession (41% of answered), also increasing of the general educational level and mental outlook (28,7%), than change of a place of work (8,8%), change of profession or kind of activity (9,8%) or even widening of an area of independent decision-making (15,6%).

However the discovered educational needs essentially surpass real involvement of the adult population in the continuing education. It was revealed the unequal accessibility to SPE services. Thus there is a noticeable part of employees (42,2%) and the unemployed (69%) who never passed before through professional training or retraining. The employees who are available to use a branch system of SPE often have experience of numerous cases of professional development. While the employees of the enterprises without corporative SPE system, become only casual participants of such programs. So it leads to unequal "accumulation" of knowledge among different groups of able to work people.

#### *Dynamics of Social Indicators of Ukraine*

Nationally representative surveys started in Ukraine (along with other countries, that arose after the collapse of the Soviet Union) only in the early 90s. Several surveys in the framework of the ESS and ISSP have been conducted during the last 5-7 years, but these surveys are irregular. Therefore, long series of social indicators are a rarity for Ukraine. The report addresses social indicators available for the analysis, obtained mainly in the polls of the Kyiv international Institute of sociology from 1991-1994 until 2013. These include indicators of well-being, health, happiness, morality (in particular, the level of xenophobia and modernization (in particular, the use of the Internet). We discuss the possibility of combining the individual social indicators in integrated indicators describing the state of the country.

#### *The Increase in Support of Right-Wing Party in Ukraine: Assessing the Social and Economical Context*

The survey data show that right-wing ideology becomes more popular in Ukraine. Far-right party Svoboda, promoting racist, xenophobic views, on the parliamentary elections in Ukraine 2012 received 10.44% and was held in the Parliament for the first time (in the previous elections of 2007, it received only 0.76% of the votes). One of the most unexpected findings of the Ukrainian national exit-poll 2012 is that individuals with higher education have greater propensity to vote for this right party. Has far-right ideology such strong support in Ukraine or are there were other reasons for this success? The analysis is based on the electoral statistics and nationally representative data about the well-being, educational status, ethno-linguistic affiliation, electoral history, basic social and political attitudes, and protest intentions of supporters of the right party Svoboda in Ukraine.

**KHAZAIE, RAZIEH\*** (Shiraz University, [gkhazaie@gmail.com](mailto:gkhazaie@gmail.com))

#### *A Challenging View on Religion-State Relationship: Iranian Case*

It's obviously documented and historically recorded that religion has always been a strong factor in Iranian society, and is embedded in social/everyday life of Iranian Muslims. Most of researches also explore that Iranian Muslims strongly believe in spirituality as well as rituals although the states might have followed secular policies in public spheres in past decades.

Since the victory of Islamic Revolution in 1979, the state was formally charged to diffuse religious believes over the society and to control people to follow religious rituals and Islamic duties in public sphere as well as the private space. These new policies made the state to intervene in legislating process regarding the Islamic believes to make people to follow Islamic rules in public sphere and do rituals like prayers, fasting, Hijab etc.

But what's the true reality? A survey on the basis of data collected in 2010-2012 in a few of important vital cities in Iran tries to find answers to this question. Due to the findings of this research it's suggested that although the state is to make people do rituals in public sphere and all possible efforts are done by the state, media, police etc to convince people to follow the state Islamic rules (i.e. not eating/drinking in fasting days in public spheres) -otherwise they will be punished- but it has not lead to increase in doing religious rituals in their private everyday lives.

This research explores that state's pressures on people to do rituals have been less successful although it suggest that Iranians are strongly religious and strongly believe in spirituality yet but in a personalized way.

#### *Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art*

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance around them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as

in-depth interviews, participant observation and qualitative analysis of texts was applied.

The empirical data show that under the conditions of deficient sponsorship and information support, artistic success in Petersburg largely depends on the artists' constant self-promotion efforts (participation in competitions and collective projects, applications submission, dissemination in Internet). By accumulating material, informational and reputational resources of their members, art-communities make convenient platforms for artistic self-presentation and development both in and beyond the local market. Responding to the specific noneconomic logic of this market where symbolic recognitions places before commercial success, communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange imperceptible for the small and highly competitive market of contemporary art in St. Petersburg and balance between the margins of creative products unoriginality and unrecognizability. Thus, artistic communities can increase symbolic capitals of individual artists serving as a peculiar kind of social lift and constituting one of the major forces of the social construction of artistic reputations.

#### *Social Effects of Neoliberal Policy in a Post-Soviet City: Urban Space Contestation Revisited*

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and (re) development in Russia. Subject to this policy, contemporary St. Petersburg experiences impetuous commodification and aestheticization of urban space and, consequently, its rapid gentrification. Alternative views on how urban space should be organized make citizens consolidate and buck against the decisions of elites.

This paper considers the processes of urban space contestation by strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frames developed by Levebvre, Scott and de Certeau.

However, our empirical data show that the abovementioned theoretical backgrounds have to be adapted to the local context of St. Petersburg where struggles over urban space unfold under the conditions of total uncertainty: coexistence of multiple property regimes, constant adjustment of legislative frameworks, insufficient transparency of decisions and actions performed by city authorities and investors. For instance, pursuant to growth machines theory, coalitions of authorities and developer companies are fashioned in Petersburg, but it is only true for big businesses whereas smaller enterprises often suffer damage from inconsistent authoritative decisions. Meanwhile, local communities always suspect developers of collusions with urban administrations and thus struggle against "imagined growth machines". Moreover, contrary to the fixed notion of urban theory, in their resistance weaker advocacy groups sometimes resort to strategic collective actions rather than spatial tactics whereas strong advocacy groups do not disregard tactical actions.

#### *Protecting The Health Consumer – Health Capabilities and Collective Voice Versus Patient Choice*

'Patients' are increasingly seen through the lens of the 'health consumer'. Non-communicable diseases and injuries are increasingly predominant, while a rejuvenated interest in the 'social determinants of health' and health inequalities re-locates individual biology and agency within a larger context of physical exposure and social conditions, highlighting longer chains of biomedical and social causal factors (Venkatapuram, 2011, 33, CDSH 2008). This contrasts against discussions which view patients as individual health consumers, leveraging self-efficacy to achieve societal health outcomes. The health capability paradigm offers an alternative perspective balancing individual health agency, scientific and professional judgement, and collectivist health norms (eg Ruger 2010, 141-142). This paper advances a health capability perspective on systemic health protection and argues for capability-oriented health system reforms (eg Thai Health 2013) which support and vindicate the principle of health protection. The discussion

is illustrated with respect to well-known occupational and environmental health hazards such as asbestos that are beyond the health agency of individual 'patients' (Khoo and Kulsomboon, in progress). The goals are twofold – to prevent and decrease risk of exposure and to increase provision for those who have, or may in the future, become ill or disabled through exposure. The discussion points to the importance of protection as a systemic attribute in health governance. It focuses particularly on collectivist and solidaristic consumer action and its role in participatory deliberation through organized civil society channels.

The theoretical discussion integrates reflexive health governance and the capabilities approach, linking normative, substantive and procedural claims for health justice and rights with theories of health governance. A 'joint scientific and deliberative approach' can provide a means to guide decisions and bring together normative substance, scientific evidence and procedural decision-making to achieve broader health system development and reform towards more legitimate and just forms of shared health governance (Ruger 2010, 183).

#### *Challenges of Poverty and Inequality in the Arab World*

Challenges of Poverty and Inequality in the Arab World

Despite spectacular economic rise of some of the Arab Gulf countries, poverty remains a persistent challenge in the Arab World. Social inequalities persist as new inequalities overlay old structured ones in a number of Arab countries. Depending on the entitlements patterns and the provision of the social safety net, social inequality is often deepened by the rapid social transformations. Historically formed structured inequality often combines with new poverty to produce social turmoil. Social inequality and poverty played a critical role in the waves of social uprisings popularly known as the "Arab Springs". There are intra and inter-regional variations in poverty in the region which help shape not only internal political outcomes, it also impacts external relationships. Some of the poor countries in the region depend on their rich neighbors to meet ends meet, while others look beyond the region for facing the challenges of entitlements. Such external relations play an important role in shaping the geo-political alignments in the region. Intra-Arab regional migration too plays an important role. Remittance earnings play a critical role in meeting the challenges of poverty in some of the countries. However, social upheavals tend to disrupt patterned migration with far reaching consequences in the intra-Arab world relationships. The paper will provide a critical survey of the state of the play of poverty and inequality in the Arab world and try to chart various social and political implications of structured inequality and poverty in the region.

#### *Gender Research in Japanese Sociology: Complicit or Critical?*

The impact of feminism in sociology has been examined quite thoroughly in the US and Britain but comparable analysis has not been undertaken in Japanese sociology. The present paper endeavors to fill this gap, but less to assess the extent to which feminist research is represented Japanese sociology than to examine the type of gender research published in a mainstream sociology journal, to obtain a picture of the nature of gender knowledge that is produced in sociology, and specifically, whether gender research in sociology raises questions about the way sociology is practiced. I analyzed all four issues per year from Volume 40 (1989-1990) to Volume 61 (2010) of the official general sociological journal published by the Japan Sociological Society, *Japanese Sociological Review (Shakaigaku Hyoron)*, with a total of 558 theoretical and empirical articles. All articles were coded for topic/subarea, geographic focus, if relevant, methodology, and also gender, affiliation, and professional status of the author(s). In addition, the text of the gender-related articles were read and coded for major claims or findings and reference sources. Preliminarily, the analysis shows that most gender-related articles are on the topic of family and marriage, body and norms, intimacy and sexuality, and social stratification. The next popular topics are labor, employment and organization, and social network. Only two such topics are central to sociology represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in a highly diversified discipline, a closer look reveals a different picture, one that could suggest a marginal status. Results of further analysis will be presented at the ISA.

*Effects of Women Employment on Family Integrity (Case study: Comparative Teachers with Housewife in North of Iran)*

Identifying the effects of women's employment has contributed to the strength and health of the family, and the research in the effects of women's employment has high scientific and social importance and necessity. The purpose of this study is to identify the effect of women's employment in Integrity of the families. The research method in this study is survey. Population includes of 400 people of employees (teachers) from 25 to 49 years as a test group, as compared with the same number of housewives as control group. Sample size which were determined by using Cochran formula is 200 that includes 100 of the employed women and 100 of similar housewives women. Samples selection is down, using random sampling method in systematic way in employed group and stratified method appropriate to unemployed groups. The tools of data collection was questionnaire and its validity was using a content validity of face validity, using and reliability using Cronbach's alpha coefficient (0/84) has been approved. For data processing spss software and for data analyzing statistical analysis appropriate in level of variables measurement such as Pearson, Spearman, the mean comparison (t.test) and analysis of variance (ANOVA) was used. The results of the research showed that the Integrity of family among housewives women is higher than the employment groups. More results show that whereas the income has positive relationship with the Integrity of Family, the education have negative effect on Family Integrity. Discuss show that the result of this study have been protect with the result of Alaeddini (1993), and André Michael (2003).

*Sociocultural Interaction in the North Caucasus: Globalization and Identification*

The North Caucasus is experiencing globalization challenges. New information technologies generate frequently the cultural shock, threatening ethnic cultures in the region. Interaction of the global and local in modern conditions strengthens intensity in traditional cultures. Therefore glocality becomes time imperative.

Globalization influences greatly the identity, opening a way to set of identities in the global world. Of principal value is conscious familiarization with cultural wealth of other people. We should take such values which do not break internal development of our own culture and do not tear it off from the historical roots, the best achievements and traditions. The ethnic culture can develop and rise to the universal importance only in dialogue with cultures of other ethnoses.

One of the findings of modern public consciousness is that it is impossible to imagine any civilized country out of communication with other world, with other cultures. The need of the people for cultural mutual understanding and aspiration to learn an inner world of each other lead to expansion of spiritual bonds and contacts. Ideas of preservation and further development of a human civilization are connected with the need of cultural mutual communication.

Efficiency of cultural inheritance depends, first, on ability of a community to claim, master and use values of other people in own ethnic environment; secondly, on aspiration of a community to take unavailable valuable elements; and thirdly, on readiness of a community to see in loan an opportunity to open the best qualitative lines and properties.

It becomes obvious that the new acquired does not lose ethnic coloring and originality, but on the contrary, it becomes more profound ethnically and at the same time integrated. This statement is especially topical for a modern sociocultural situation in the North Caucasus and in Russia as a whole.

*Inequitable Access to Citizenship: Gendered Social Policies and Unattainable Democratic Ideals*

Although gender equality is central to the attainment of democracy, its realisation in conceptions of citizenship in democratic states has been marred with complications. Access to citizenship rights is most often unequally experienced due to unequal power dynamics emanating from racial, gendered and socio-economic factors. As a result of these factors women and men's experiences of democratic citizenship is a site of struggle and constant negotiation. This paper seeks to interrogate women and men's ability to access the fundamental rights guaranteed in democratic countries. This examination is undertaken through an analysis of social policies in Southern Africa. The paper argues that gendered, racial and class factors hinders equitable access to citizenship rights, so does the inequitable valuing of social, economic and political rights in defining citizenship. In conclusion the paper holds that these inequalities limit the attainment of full democratic citizenship for most of those who have been historically excluded in terms of gender, race and class.

*Micro-Credit (Self-Help group), Dalit Women Inclusive Growth and Development*

**Micro-credit (Self-Help group), Dalit women Inclusive growth and Development**

In last three decades, the gospel of micro credit through Gramin Bank model have become part of global legends of development in South Asian countries including India for poverty alleviation, especially for dalit. Historically, the main basis of dalits' backwardness is effect of capital deficiency. In India's eleventh five-year plan, an agenda of inclusive growth is prioritized through household saving and productive investment for capital formation and economic development. Homogenous women group formation following approach of equity, consensus, democratic culture and voluntary spirit in line of Bangladesh model of Self-Help Group (SHG) is encouraged as an ideal, to promote financial self sufficiency, poverty alleviation, social, economic and political empowerment. SHG is linked to Government, NGO, Commercial Bank and private Microfinance agency for financial support, entrepreneurs, subsidies, training for capacity building etc., for creating the culture of an alternative sustainable development of the poor. An in depth study is conducted on most vulnerable Dalit women' SHGs members in eight talukas of Nanded district located in backward Marathwada region of Maharashtra. The objectives proposed to understand the extent of financial inclusion in generation of employment, income, improvement quality of life, solution of own varied problems, etc. Karl Marx and Max Weber's methodological perspectives of capital accumulation and protestant-ethics of capitalism used in comprehending ethics of saving and credit of SHG phenomenon in context of development of Dalits. Ground reality of SHGs outcome reveals alarming; almost negating the goals it set, like over mental stress, raising under debt trap, pressure for over work, even less wages at cost of own freedom. The consolation is liberation from family restriction and opportunity of involvement in different social issues having no financial implications in improving living standard.

*Microfinance (Self Help Group) and Tribal Women Empowerment: A Study in Nanded District of Maharashtra*

**Microfinance (Self Help Group) and Tribal Women Empowerment: A Study in Nanded District of Maharashtra**

Since the early fifties, many developing countries are making concerted efforts to eliminate the colonial legacy of underdevelopment and social backwardness. Various measures have been undertaken to reshape the economy, social structure and cultural life of the masses. For this purpose, Since independence, India has implemented various developmental programs through five-year plans to bring socio-economic transformation of the society. The induction of commercial bank, co-operative bank, regional gramin bank and others since late sixties, is one among many developmental programs operating in augmenting the living standard of poor, eliminating poverty, inequality and unemployment of the rural segments including tribes. In fact, over the years, experience shows that due to rigid formal procedure, rural poor and tribal are not able to avail many benefits from these credit institutions. Large numbers of them are still under the trap of local money lenders and other formal and informal credit agencies. These are growing concern that the banking system is not catering enough to the needs of disadvantaged groups, especially tribal and more particularly women. This study was carried out on then SHGs comprising 20 members each belonging to Kolam, Dhangar, Wangani and Golla tribal communities in Kinwat block of Nanded. The following objectives are addressed in the study. (1) To examine the effectiveness of SHGs in promoting thrift and saving among tribal women (2) To understand the dynamics of SHGs in the process of improving quality of life of tribal women (3) To assess the implication of women participation in SHGs on their overall socio-economic status. So far, SHG programs are perceived as set oral in approach and not encompass the entire fabric of human development system within which they live and survive.

KHUTKYY, DMYTRO\* (Kiev International Inst Sociology, [khutkyy@gmail.com](mailto:khutkyy@gmail.com))

*Efficient Participatory Democracy: Real Utopia Model*

In many societies of semiperiphery and periphery ordinary citizens face unsatisfactory conditions of work, low salaries, generated by exploitation processes

in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopias approach of E.O. Wright the considered alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? Theorizing, case studies, and qualitative expert interviews provide grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting, referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermediate reforms. The findings are applicable to semiperipheral, peripheral, and even core societies.

#### *World-Systems Approach to Global Inequalities in Effects of Individual Activism on Subjective Well-Being*

The world is experiencing global crisis, yet proactive individuals can promote social change. Still, opportunities for activism and its impact are unequal in the modern stratified world-system. Therefore the following research question arises: what are the differences in degrees of causal influences among proactive orientation, individual activism, personal achievement, and subjective well-being between countries of core, semiperiphery, and periphery? The preceding theoretical implications and empirical findings by M. Kohn, S.K. Parker and C.G. Collins, M. Seligman, M. Argyle, C. Welzel and R. Inglehart, L. Beer and T. Boswell, I. Wallerstein were considered. The posed hypothesis is the following: degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being are higher in core societies than in semi-peripheral societies, and in semi-peripheral societies are higher than in peripheral societies. The data sets of World Values Survey 5th wave (2005-2008) with the sample of 49 countries with up to 69,381 respondents were used. Structural equation modeling and multiple group analysis in MPlus has been performed. In fact, the hypothesis was confirmed partially. It was proven that positive influence of person's individual activism on subjective well-being is the strongest in the core, is weaker in the semiperiphery, and is even negative in the periphery. However, it was found that there are relatively small differences between degrees of influence of individual activism on personal achievement. This finding signifies that overall human actions do lead to accomplishments, regardless of structural conditions. Moreover, it was revealed that the degrees of influence of all other constructs are surprisingly reverse: they are stronger either in the semiperiphery or the periphery and are the weakest in the core. The highest degree of influence of proactive orientation on individual activism and personal achievement in the semiperiphery testifies that people with proactive orientation do can bring change there.

#### *The Variant Actuality of Young People in Precarious Transitions in Late Modern Japan—Based on the Interviews with 51 Young People*

In recent Japan, young people have experienced prolonged and complex transitions from school to work, have been forced to work in precarious jobs, or faced the risk of unemployment, poverty, and social exclusion. The Youth Cohort Study Japan (YCSJ) conducted by The Japanese Educational Research Association is a five-year panel survey that contains 1687 samples aged 20 (first wave in 2007) and 891 aged 24 (fifth wave in 2011). Our analyses of YCSJ data have indicated the characteristics of the transition from school to work in recent years, especially its precarious processes and the factors (familial and educational background,

social capitals, gender bias, etc.) which have influence on the differentiation of transitional trajectories. Then we have tried to describe the actuality of youth in precarity based on qualitative analyses of interviews with those young people who have participated in our five all waves and assent to be our interviewees (we interviewed with fifty one cases). Through these analyses, we aim to show some variant types of precarious transitions. And we also suggest how young people overcome or negotiate their difficulties.

#### *Racial Identity and Psychological Well-Being Among African Americans and Whites*

Research over the past few decades finds that African Americans have persistently poorer psychological well-being than whites. African Americans score lower than whites on happiness, life satisfaction, and trust in people. In contrast, African Americans' mental health (e.g., as measured by depressive symptoms) is comparable to or better than whites', despite African Americans' lower socioeconomic status and greater exposure to stressors. Scholars have speculated that a strong, positive racial identity may help explain African Americans' good mental health, based on findings that the two are associated. If so, it means that racial identity may be stronger or more beneficial for African Americans. Together these findings raise two important questions. First, does racial identity contribute to African Americans' psychological well-being? Second, is the association between racial identity and psychological well-being stronger for African Americans than whites? We addressed these questions using data on African Americans and whites from the 1996-2012 General Social Surveys. We investigated how racial identity is related to psychological well-being (happiness, life satisfaction, and trust in people). Based on social identity theory, we examined two identity dimensions—identification with (closeness to) one's racial group and ingroup biases (relative evaluations of ingroup versus outgroup members). On average, African Americans identified with their group more than whites did, but whites evaluated their group as relatively more intelligent and hardworking than African Americans did. Stronger racial identification was associated with greater happiness, life satisfaction, and trust in people, equally for African Americans and whites. Contrary to prediction by social identity theory, favorable ingroup evaluations at an outgroup's expense were sometimes associated with poorer psychological well-being. These effects of ingroup bias did not differ by race. We discuss what the findings imply for social identity theory and for how racial inequality influences psychological well-being.

#### *The Role Of Risk In Child Mobility Decisions -- Empirical Evidence From Benin*

Child mobility is still common throughout the West African region. This has been academically approached under the headings of child fostering, child migration, child labor and trafficking. Poverty is considered a main driver, alongside social networking and skills matching. Recent empirical work looks at the role of shocks to child mobility. Yet, it has been hypothesized that vulnerable families do not necessarily wait for a shock to occur, but might relocate children as an ex-ante strategy.

The proposed paper looks at the role of risk in the child mobility decision with data from a fertility based survey of 3000 rural households in Benin, a country known for high child mobility rates. The survey allows for registering children living away from parents, their schooling status and purpose of leaving. The 2012-survey covers three important areas: poverty, exposure to the massive floods of 2010 (shock), and the household head's level of worry about not being able to provide for his family the next 12 months (risk).

The regressions show (controlling for social and demographic factors), that perceived risk correlates substantially and systematically with child mobility. Poverty and shock, on the other hand, do not correlate at a statistically significant level. This interestingly contrasts with the correlates of the schooling decision. While poverty, as previously established, correlates negatively with schooling, risk and shock do not. Focusing only on children who have left and are not in school, both risk and poverty correlate with the mobility outcome.

The results support the notion that child mobility forms part of an ex-ante risk management strategy for families at risk. At the policy level this supports cash-transfer type social policy interventions, supporting findings from South-Africa where even small - but predictable incomes - like pensions and child benefits - have produced positive effects on child outcomes.

### Normalizing Precarity? Youth Unemployment and Employment Instability in Poland

In the last decades, there has been a heated debate concerning the consequences of employment flexibility in many European countries. Concerns have been raised that flexibility may foster a two-tier labour market, where highly protected insider jobs coexist with unstable employment, offering inferior working conditions. Substandard employment is concentrated among young school leavers. In this context, Poland is an interesting case: although the Polish economy has done quite well throughout the current economic crisis, the rates of youth unemployment and temporary employment remain disturbingly high. Precarity for young workers appears to have become the norm, with more than 25% of economically active 15-24-year-olds in unemployment, and 66% of employees working fixed-term (EUROSTAT, 2012). This paper presents the results of an analysis of the distribution of various aspects of labour market precarity for the Polish youth: not only unemployment and temporary employment, but also unstable employment histories signifying a weak attachment to the job market. The quantitative analyses are conducted on subsamples of the youngest cohorts of respondents (aged 21-25) from two most recent waves of the Polish Panel Survey (POLPAN), 2008 and 2013. POLPAN data include detailed information on the respondents' employment history, enabling a dynamic analysis of young peoples' early labour market trajectories. The quantitative results are supplemented by a qualitative analysis of in-depth interviews, reconstructing the ways in which the young define their own experiences of unemployment and precarity. Paradoxically, it appears that even as young underemployed Poles tend to regard their current employment situation as unsatisfactory, psychological coping mechanisms lead them to legitimize existing labour-market inequalities.

### What Does the Word of "Joshi-Ryoku" Mean in Terms of Gender in Japan?

Recently the word "Joshi-ryoku" has become very popular on the mass media and daily life in Japan. It seems a counterpart of the word "girl's power" in the English speaking world, which means girls' empowerment, ambition, or strength. But *Joshi-ryoku* has a more restrictive sense. The meaning of this word "Joshi-ryoku" is so complicated, and therefore, examining the usage of the word helps us to find the complexity of the modern Japanese culture and society, especially from the viewpoint of gender.

In these 10 years, the Japanese society has experienced the changes in many points: The economy went into recession and improved: a regime change occurred: social unrest never ceased. The movements by the sexual minority people are rising, while women's movements are stagnant and cannot achieve a change of generations.

The word "Joshi-ryoku" came into use in this social situation. It means the ability that women must learn in any age. The specific meaning changes in context, it varies, for example, from the ability as a housewife to do the housework efficiently to the ability as a working woman to manage business tasks with alacrity. So it depends on the context where and by whom it is used, conservative or liberal.

This presentation examines the variable meaning of this word depending on different contexts and, by doing so, determines the gender regime that the word implies in the present Japanese society.

### Family Caregiving and Stress Processes: Son and Daughter Caregivers in Japan

In Japan, caregiving of elderly parents has been traditionally the responsibility of the family; the wives of eldest sons, or daughters-in-law of the elderly, typically provided care for elderly parents. However, the profile of family caregivers has been changing in the past few decades. One of the major changes is the increase of male caregivers. Presently, about 30% of primary caregivers are sons or husbands of the impaired elderly. A growing concern is that these male caregivers may have different types of difficulties or stress from caregiving, compared with their female counterparts. For instance, a recent national survey on elderly abuse reported that more than a half of the abusers are male caregivers. Evidence suggests the possibility of gender differences in stress processes. However, most previous studies are on female caregivers, and research on gender differences in stress processes is very limited in Japan. Are there gender differences in the stress processes of family caregiving? This study seeks to address this question by drawing on stress process theory (Pearlin et al. 1990). I analyzed data from a survey conducted in 2011 on son and daughter caregivers aged 40 to 64 years old, who take care of their elderly parents at home as primary caregivers. The analysis results show that the stress proliferation processes of son and daughter caregivers share many similarities in terms of pattern, whereas certain differences appear to reflect the gendered nature of Japanese society.

### Dimensions of Safety in the Process of Mental Health and Illness. Empirical Results and Theoretical Framework

Feeling safe in the world is regarded as a basic human need which Maslow placed at the second level of his human need hierarchy directly after bare physical survival. Consequently, lack or loss of safety in the most general sense is considered as a major risk factor for the impairment of human well being and the development of mental disorders. Dimensions of safety which have been identified as relevant for mental health are personal relationships, economic living conditions and environmental circumstances. Despite the fact that the relevance of these dimensions of safety for mental health has been confirmed in an increasing number of studies, there is still lacking a common theoretical framework that allows a comprehensive understanding of the interrelationships between individual and environmental aspects of safety in the etiology of mental disorders.

In this presentation the recent results of empirical studies on the impact of the lack or loss of safety on mental health will be discussed with regard to their contribution for the understanding of the interaction between personal characteristics and environmental hazards in the development of mental health and illness.

### The Sociology of Work and Factory Sociologists in Communist Poland

In Communist Poland the sociology of work was one of the most prosperous social science branches. It was perceived as particularly important due to the Marxist emphasis on the category of work, as well as its supposed significance for national economy. It might have been even perceived as a dream come true by those who imagined social science as a scientific guidance for the practice. Besides academic field, in which the branch was hindered by imprecise definition of the very subject of its study, normative bias, censorship and, mostly, self-censorship, the sociology of work spread to big socialist enterprises which employed professional sociologists in 1960s and 1970s. Their role was significant also due to the role of the workplace as the backbone of Socialist civil society. As a result, new occupation and potentially interesting field of intellectual activity opened for young sociologists.

The paper will base on period literature dealing with factory sociologists - limited yet existing - as well as on archive resources and interviews with ex-factory sociologists. Due to fragmentary data it will not probably be possible to describe typical social profile or career paths of factory sociologists, so the paper will concentrate on those cases in which some more detailed biographical data is available. The study will aim at describing their professional role which was by no means clearly defined, position in the factory structure/hierarchy - somewhere in between the management, Party secretary and labor unions - as well as their expectations and factual content of their work. It will also refer to their professional aspirations and career paths. A special concern of the paper will be intellectual ambitions of factory sociologists and their relations with the academic field from which they were rather isolated, what in turn caused their constant dissatisfaction.

### Medicalization in Turkey in the Context of the "Health Transformation Programme"

There has recently been a growing interest on the effects of health care systems on medicalization in particular national contexts. This paper contributes to this literature by focusing on the case of Turkey, where medicalization in the form of increasing consumption of medications, use of health care services and diagnosis of a number of diseases goes in parallel with the health reform process that started a decade ago aiming to radically transform the provision and financing of healthcare services. Special emphasis is given on how policy measures such as separating purchasers from providers, encouraging competition among public providers, implementing performance-based payments, and combining public and private health care services affect medicalization by creating financial and professional incentives for physicians to alter their diagnostic and treatment behaviors. Additionally, the arguably positive and negative impacts of medicalization are discussed with reference to recent statistical data including population health indicators, patient satisfaction, outpatient/inpatient ratio, consumption of pharmaceuticals, the number of screening tests performed and the number of doctor visits with a particular focus on indications of overdiagnosis/overtreatment.

*Alternative Food Consumption and Sustainability in South Korea*

Under the neo-liberal regime of South Korea, large supermarkets dominate Korean food market. Yet, there has been growing effort to find some alternatives such as local food. There has been relatively little researches done on East Asian alternative food consumption. Our paper attempts to fill this gap by investigating the attitudes and behaviors of Korean food consumers. We attempt to (1) conceptualize the 'alterity' in food consumption in the Korean context, (2) develop typology of alternative consumption patterns among Korean consumers, and (3) find the main factors affecting the alternative food consumption.

We have found the followings based on historical analysis and national survey of Korean consumers. First, Korean food system is characterized by low food self-sufficiency rate and alternative food discourse is strongly influenced by political ideology and nationalism. In order to reflect this historical particularity, we have conceptualized alternative food consumption by combining food consumption attitude/values and political orientations. Second, in our typology of food consumers, two types of consumers are most visible, i.e., "consumers without consciousness" and "conscious consumers without consumption." The former consumers actually purchase organic/local food while they do not have alternative values. In general, these are consumers with high income. The latter have greater consciousness and interest in alternative foods, yet they do/can not consume organic and local foods. Third, among the total consumers, the percentage of consumers with high consciousness without consumption is higher. This might be interpreted as potential for the future of food politics for alternative food system in Korea as these consumers are likely to change their food consumption behavior in accordance with how they think. It remains to be seen whether this potential can fully develop into a social program to build a more sustainable food system in the future.

*Different Manifestations of the Public Sphere in Japan and Korea*

This paper examines the heterogeneous trajectory of the public sphere in Japan and Korea, especially how it is differently represented by NGOs in the two countries. The state has long been argued to safeguard the public ever since Aristotle laid the foundation for the intellectual tradition in which the state was considered as an agent of the universal interest. In contemporary sociology, however, this myth was challenged by a new tradition that emphasized the distinctive characteristics of modern state that concentrated on the reproduction of political power by the power elite, without paying due attention to the interest of the public.

The emergence of the public sphere in East Asia, more specifically in Japan and Korea, was rather hampered by the overdevelopment of the strong state during the process of economic development. Once the people in the two countries realized the necessity to protect their own interest as well as the public interest, however, various types of NGOs were institutionalized and took a central position in civil society. These organizations tried hard to advocate the public interest in diverse aspects of everyday lives of ordinary citizens. Despite these similarities, however, the ways they represented the public interest were very heterogeneous. Their manifestations of the public interest are not only different in their organizational structures, but also the issues they are concerned with. Generally speaking, NGOs in Japan have small-scale organizations and more voluntary participations, being more concerned with the enhancement of everyday lives of citizens. In contrast, NGOs in Korea have large-scale organizations and are more concerned with the political issues, frequently initiating massive protests against the state.

*Gender, Law and Legal Professions in Korea*

Gender, Law and Legal Professions in Korea

Since 1945 Korea has gone from colony to dictatorship to democracy. Educational opportunities for women have exploded in quantity and quality. The legal professions, once reserved only for men, have opened up to more balanced gender representation especially in the past few years, and the legal system of education has undergone a paradigm shift that many have predicted will be a boon for women entering the professions of law. At the same time, new laws protecting the place of women in society have been passed and seem to be working for the benefit of gender equity and equal rights. Women judges, legislators and business executives have become common forces often fighting for a more gender-balanced system.

This paper explores the changes that have occurred for women in the legal professions in Korea since women first became lawyers to the present day. This paper seeks to delineate these changes and to offer a socio-historical analysis of how this took place as well as where it might lead.

*Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths*

Social Capital, Social Integration and Suicidal Thoughts among Korean Youths  
 Abstract

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular how and to what extent measures of social capital are associated with having suicidal thoughts, ceteris paribus. In a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendship network size, frequency of interaction with close friends, quality of network members (number of "delinquent" friends), degree of intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents (in terms of time spent together), frequency of interaction with close friends, and neighborhood fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

*Understanding Civic Engagement in Asia: The Role of Social Capital*

The question of "who participates" has received a great deal of scholarly attention among political sociologists. Increasingly, students of political participation, both formal and informal, have relied on the concept of social capital- defined in terms of trust, networks, norms of reciprocity, and organizational membership (Putnam 1993)- in analyzing the conditions under which people choose to engage in political activities instead of opting to ride free on the efforts of others. As Jacobs and Skocpol (2005) point out in *Inequality and American Democracy*, equal political voice and democratically responsive governments are under increasing threat due to the declining level of political interest and participation on the part of individual citizens. Understanding why some people decide to engage in politics formally and informally, therefore, is of paramount importance not only for the US but for any democratic nation. This study proposes to investigate this topic in the context of Asian countries. Based on the multilevel analysis of the Asian Barometer Survey of Democracy, Governance and Development (2006), which consists of data on 13 countries in Asia, it examines how and to what extent various social capital indicators (i.e., generalized and institutional trust, participation in voluntary associations, and network size) influence the likelihood of engaging in political activities, while controlling for key socio-demographic factors (i.e., income, gender, education, age, and religion). Four outcome variables are examined: two formal (voting and contacting an elected official) and two informal (attending a lawful demonstration and discussing politics in social settings). Findings from hierarchical linear modeling reveal that social capital is associated with different political outcomes in complex ways, at both individual and contextual (country) levels. Theoretical implications of the quantitative results are discussed in relation to earlier findings in the extant literature.

*Biopolitics of Depression in Korea*

<Abstract> Biopolitics of Depression in Korea

As Korea has experienced rapid modernization, patients of depression have dramatically increased for the last 50 years. This has led, tragically, to a rapid increase in the rate of suicides. This study attempts to understand the reasons

why Korea as one of the most successful countries in modernization has shown such high rates of depression and suicide. It also attempts to analyze the process of medicalization of depression in Korea and how the doctors and patients accept anti-depressants as a cure for depression.

### *Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s*

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarriedness among youth. The explanations on the issue has been given to the causes such as economic condition or individualism among them, which seem to be insufficient. This article aims to analyze the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patrilineality privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The result shows the great gender differences in the narratives of family value. Men interviewees tend to tell the sons' responsibility of the care for the parents and the role of the male provider, while the women counterparts focus on seeking the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents'. So we can call the recent changes among them as 'the family-oriented individualization'.

### *Korean Wave As a Hybrid Subculture*

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any 'Korean subculture' including cuisine, clothes, cosmetics and language, etc. 'Gangnam style' by Korean singer 'PSY' has recently acquired more than 1.7 billion views on Y-Tube in the world within a year.

This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative perspectives, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

### *Organizing Independent Contractors in South Korea: A Case of Insurance Agents Unionizing*

The purpose of this study is to understand limitations and possibilities of organizing independent contractors by focusing on insurance agents in South Korea. Among various types of precarious employment, insurance agents are an exemplar case of independent contractor jobs. Since the 1997 crisis, the private insurance industry has shifted market risk on to workers by employment externalization in the form of independent contracting as well as to consumers by introduction of variable insurance scheme. The labor standard law does not treat insurance agents as workers and most of insurance agents are not affiliated with labor unions. As a result, insurance agents are outside labor protections. Under this context, insurance agents attempted to organize their own union, Korean Insurance Agents' Union (KIAU), in early 2000s, and form a branch of Korean Finance and Service Workers' Union (KFSWU) in 2004. However, the KIAU lost rapidly its membership since the mid-2000s and have failed to revitalize itself until now. This failure might be attributed to some external and internal factors. External factors include the denial of worker status by the courts, the absence of labor market regulation by the government, and crack down on union activities by major insurance companies like Samsung. Internal factors include the absence of strategic approach on the side of the industrial union (KFSWU), individualized job characteristics of insurance agents, heterogeneity of the working conditions between regular workers of insurance companies and insurance agents. In recent attempts to re-organize insurance agents, the role of industrial union is crucial factor. Some

programs turning non-regular workers into regular jobs are implemented by the KFSWU through collective agreements; however, the union focused on directly employed non-regular workers, like fixed-term workers. Moreover, the KFSWU's strategic and long-term support was not given to insurance agents, because of its internal constraints and the lack of preparation.

### *Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan*

The *Zainichi* Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But succession of ethnic identity formation is not easy in a country that determines nationality by *jus sanguinis* and so many third- or fourth-generation of *Zainichi* Koreans have some trouble living as a 'Korean.' Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the 'Korean Wave' and 'abductions by North Korea', which have been spread contradicting images of 'mother country', in the Japanese media, this paper look into the interpretations and responses of *Zainichi* Koreans through their selection processes of group appellation in everyday life.

In this paper, looking into the survey and in-depth interview data, which I have conducted after 2008, I will also attempt to analyze the relation between the using and selecting group appellation of *Zainichi* Koreans and the changing of ethnic identity of them.

These approaches would bring light to new aspects not only on the current *Zainichi* Koreans' identity but also on how factors, like as Zainichization, affect changing ethnic identity in host society.

### *South Korea's Developmentalist Worldview and Debates about Its Modernity*

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seonjinguk (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seonjinguk or "on the threshold of seonjinguk" ("seonjinguk munteok"), which provides both senses of superiority over hujunguk (backward country) and of inferiority over seonjinguk. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seonjinguk as its historical national mission. This paper aims to provide a critical review of the debates about Korea's modernity in the light of its dominant developmentalist worldview, the discourse of seonjinguk.

### *International Policy-Translation Among Precarious Women Workers Organizations :Japan and Korea in Comparison*

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women's Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experiences of Women's Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women's Trade Union (KWTU) later. On the contrary, Women's Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2). Yet, the organizational performance and political impact of the KWTU and KWWA overwhelm those of the Japanese, WUT and ACW2, in a decade.

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will adopt for describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individuals and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women's organization, the labor movement discourse, and the drivers in the process of policy influence.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur

and matter within labor movement, and that its effectiveness can vary according to the strategy, environment and context.

#### *Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study*

Whereas the impact of the welfare state on the quantity and quality of women's employment is widely studied, little research has further investigated the ways other (non-welfare) types of policies affect women's occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 35 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by a policy that guarantees equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender inequality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

#### *New Media and The Social Reconstruction Of Reality*

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann's phenomenological proposition: 'Reality is socially constructed', this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of "social reconstruction of reality." Next, referring to the results from 2011's survey of 1027 netizens on happiness, the constituting mechanisms of online and offline life-worlds are compared. Finally, based on aforementioned theoretical and empirical discussions, qualitative differences in online and offline life-worlds are further explored.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to favor fantasy principle. If causal logic is inherently emphasized in explaining the behaviors of citizens, narrative logic seems more salient for understanding netizens' behaviors.

Compared to our conventional offline everyday-life which has been existing from the outset of agricultural age, online everyday-life, used to be generally looked down as 'mock reality' devoid of substance. However, empowered online virtual reality is now elevated to an alternative life-world capable of competing against offline actual reality. Moreover, owing to its hyper-real characteristics, online virtual reality appears to reinforce itself up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

#### *South Korean Values: Understanding Who Koreans Are*

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people in general, can serve as the starting point. Identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of "magic of numbers" and fully utilizing the power of empirical

generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used.

It could be argued that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in 'the sense of supreme bliss.' As aforementioned tendencies went through significant alterations, 'the sense of supreme bliss' sought after differs from that of traditional Korean society. The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by making meaningful and beneficial personal connections. What we are witnessing is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

#### *Inequalities in Life Expectancy and Healthy Life Expectancy in Korea: Gender and Educational Disparity*

Health inequality is considered as a sensitive barometer of social inequality. Over the last decade, social inequality in Korea have becomes intensified in multiple dimensions, which could impact on distribution of population health.

Based on life expectancy (LE) and healthy life expectancy (HLE), we examined the health inequality cross social groups by gender and education over time. LE is the expected number of years of life remaining at a given age, derived from the current age-specific mortality rates. HLE is a composite measure of *mortality* and *morbidity*, to imply remaining years that a person of a certain age is expected to live without disability or in good health status. Through data linkage (death registration, population census, and nationwide sample survey for morbidity status), we calculated LE and HLE by abridged life table method and Sullivan method, respectively.

From 2000 to 2010, LE at birth of men and women increased from 67.9 to 74.3 years and from 77.4 to 82.2 years, respectively. As of 2010, women live 7.9 years more than men. However, gender gap in HLE was negligible; HLE at birth was 62.8 years for women and 62.7 years for men, respectively. Also, education disparity was apparent in 2010; for men with less than high school education, LE at 30 years old was 37 years, while that was 49 years for college graduated men. Similar pattern was observed among women; 49 years vs. 55 years. Such gap did not become narrower over the last decade in both genders.

These results imply differential experiences of morbidity and mortality across gender and socioeconomic groups. Social determinants beyond individual biological traits, and biological process of social influence within individuals should be explored.

**KIM, NORA\*** (University of Mary Washington, [hkim4@umw.edu](mailto:hkim4@umw.edu))

#### *Developmental Multiculturalism In The East and Liberal Multiculturalism In The West?*

While multiculturalism is losing its popularity among Western European countries, multiculturalism has gained popularity and continued to play an important role in East Asian countries. This paper examines the extent to which multiculturalism in the East (mainly South Korea and Taiwan) conform to and deviate from Western liberal multiculturalism. In this paper, I define and limit the discussion of multiculturalism as immigrant multiculturalism or a mode of immigrant incorporation.

I argue that at the level of practices and policy instruments, Western multiculturalism and Eastern multiculturalism are similar; both segment and stratify immigrants on the basis of their willingness and ability to assimilate to a host country. But, at the level of discourse, Western and Eastern multiculturalism diverge. Western "liberal" multiculturalism treats tolerance a property of liberal West and construes the immigrant others "illiberal, object of tolerance". On the contrary, Eastern multiculturalism presents multicultural tolerance as a necessity for their countries to become advanced liberal democracy. For this reason, I call multiculturalism in the East "developmental multiculturalism". The key difference in the Western liberal multiculturalism and Eastern developmental multiculturalism centers on who has the responsibility to learn the value of tolerance. In the West, it is the immigrant minorities; while in the East, it is the non-immigrant majorities.

The difference in Western liberal multiculturalism and Eastern developmental multiculturalism may suggest one possible reason why the popularity of multiculturalism has declined in the West while it is still in vogue in the East. In the West, multiculturalism is constructed in a way that its failure is blamed on immigrant minorities. In Eastern developmental multiculturalism, multicultural tolerance is constructed as a virtue of advanced, more developed [Western] countries and achieving multicultural tolerance is the role of non-immigrant majorities for their country to become more like the developed countries.

*Making Race through Immigration Policy: The Science and Politics of the 1911 Dillingham Commission Report*

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of immigrants, often divided by esoteric categories (such as "black Russians") that are remote from our contemporary understanding of race and ethnicity. As report progresses to the synthesis and recommendation, however, the notions of "desirable" and "undesirable" immigrants emerge as an overarching principle of categorization, and the ensuing recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

*Attitudinal Correlates of Cohabitation in Japan*

What are the attitudinal correlates of cohabitation in Japan? Cohabitation has been growing more prevalent among young cohorts in Japan, and yet little is known about its relationship with liberal attitudes on family and gender. Exploring this issue is important for testing the Second Demographic Transition theory that predicts ideational secularization as driving force for non-traditional unions like cohabitation. In this article I examine attitudes on family and gender norms that are correlated with current or past cohabitation experience. For this analysis I use the 2009 National Survey on Family and Economic Conditions (NS-FEC), a national, two-stage stratified probability sample of 3,112 Japanese men and women ages 20-49. Individuals with more liberal attitudes toward pre-marital sex and out-of-wedlock birth were more likely to have cohabited relative to those with conservative attitudes. Also, those who disagreed with forgoing divorce for the sake of children were also more likely to have cohabited. On the other hand, differences in attitudes on other gender issues did not significantly change the likelihoods of cohabitation. The results show that liberalism in only narrow range of family issues are associated with cohabitation in Japan, showing only partial support for the Second Demographic Transition. Also, the results suggest that cohabiters in Japan would be expected to have higher rates of divorce once they enter marriage compared to non-cohabiters.

*Care, Welfare State and Multidimensional Social Citizenship: The Case of South Korea from a Comparative Perspective*

This study aims to investigate the peculiarities and changes of the childcare in South Korea by applying a theoretical framework of multidimensional social citizenship. To embrace the affluent theoretical arguments on gender, family and welfare states, this study suggests the concept of 'multidimensional social citizenship' consisting of de commodification (state intervention), defamilialization (family role), and degenderization (gender equality) in analyzing care. Using OECD data and Time-Use data, the childcare of South Korea in 2000s were analyzed according to the three-dimensional social citizenship. The main findings are as follows. First, the social citizenship has developed dramatically in the dimensions of de-

commodification and defamilialization, but not much in that of degenderization in childcare of South Korea. Second, in terms of outcome, the development of childcare policy has hardly contributed to improve women's labor market participation in South Korea. Finally, the classification of childcare across the welfare states according to three dimensions suggests the existence of East Asian care regime.

*Social Investment, Welfare State and Generation Politics: The Case of South Korea*

This study aims to introduce a new generational politics model, and to apply it in explaining the welfare politics in South Korea where social investment strategy has recently been pursued. So far, social investment perspective underscoring policies for the early stage of life rather than policies for older age has overlooked welfare politics, whereas existing theories on welfare politics have failed to organize generational interests theoretically. To fill this theoretical gap, this study suggests 'three generations model' which establishes older generation, working generation, and future generation as key stakeholders having welfare status in the welfare state. Applying this model, this study explains how public pension for older generation has reformed, and how social investment policies for future generation have expanded in South Korea since the late 2000s. The main results are as follows: First, the findings in analyzing pension reform show that generational cleavages were stronger than the class cleavages of labor-capital or insider-outsider. Furthermore, future generation has been considered as a main stakeholder even without visible representation in decision making. Second, development of childcare policy has been pursued in the context of social investment in South Korea. The complete expansion of childcare support has been made possible as the interests of current working generation and of future generation were considered almost conformable. In addition, investment on future generation has been considered as the compensation for generational equality in the era of ageing society. Theoretically, this study confirms that three generations model has an effective explanatory power in understanding welfare politics of social investment.

*Culture-Driven Gentrification from below: A Case Study of Tokyo, Japan*

This paper analyses the ongoing process of Tokyo's gentrification from the case study of former working class neighborhood in east Tokyo. Since gentrification has generalized as a global urban phenomenon, it has become an avowed policy goal of the cities competing for economic supremacy and globalized services. In Tokyo, recent redevelopment of the central Tokyo which actively promoted by state authorities had been considered.

The eastern part of Tokyo has been developed as an industrial district in the rapid economic growth period of modern Japan. Like many run-down areas in other cities, it has suffered from the decline of local manufacturing due to de-industrialization and had remained as a place that stimulates nostalgia for "the good old days" rather than attractive tourist destination until 1980s. However, when art exhibitions in derelict factories and community-engaged art projects as local experiment for community rebuilding had begun in late 1990s, changes occurred gradually. Galleries and studios started to set up in the area, while tenement houses replaced with small independent restaurants and cafes. Local art festivals and tourism campaigns coupled with commercial and residential redevelopment of surrounding area started to lure tourists and relocating businesses. The initial intentions of art as a cultural resistance slowly fade out, while the focus has been moved to economic revitalization and celebrating authenticity.

This may be a common scene in many 'creative cities' around the world, but what makes difference is that instead of "revanchist city", there is coexistence of expectations for gentrification from the local community itself and deep-rooted nostalgia to the past based on the myth of ethnic homogeneity. Both the main features of first-wave gentrification in 1970s and current state-led gentrification can be seen in this case, intertwining various elements of gentrification history that has been formed from multiple time and space.

#### *A New Style of Labor Movement Among Korean Youth*

South Korea has shown high levels of collective interest in various forms of social movements in the modern history. So far, Korean scholars adopted social movement theories emphasizing the roles of resource mobilization, rational choices, political opportunity structures, or social networks; however, they could rarely include the role of emotions in social movements.

This study focuses on emotional factors influencing the mobilization of social movements: Although the youth generation feels anger and dissatisfaction with the perceived social injustice under the economic crisis, why do they fail to take collective actions? With the ever increasing economic polarization in the present neo-liberal regime, the relationship between emotion and social activities among young people in Korean society has been drawing scholarly attentions. As high rates of unemployment and unstable employment conditions (non-salaried and part-time work) become normalized in the society, youth anxiety and depression are emerging as societal problems. The emotions of the young generation (particularly anxiety and depression) were not approved as cultural *nomos* in traditional Confucianism and modernism. However, not in the line of Gustav Le Bon, the authentic expression of collective anger (resentment) can incite proactive behavior in a late-modern or post-modern society.

In this research, the subjects are youth in their 20s, mainly college students, involved in "Alba Yeon-dae" which literally means a solidarity group for part-time workers aiming to raise the minimum wage. This study employs ethnography and in-depth interviews to examine how the emotions of youth (anxiety, fear, and anger) exert a socially bonding influence that moves them to collective action. "Alba Yeondae" has emphasized the collective expressions of frustrated emotions against the unjust regime and, in particular, developed a new style of labor movement while reforming the existing structures of societal and economic exploitation.

#### *Memory, Community, Identity: Narrating "Chosen" By Zainichi Korean Women in Japan*

Memory, Community, Identity: Narrating "Chosen" by Zainichi Korean Women in Japan

Zainichi Korean women invoke lives and experiences that reflect class, gender, hierarchy and patriarchy. The notion of "Zainichi" and "women" women has undergone a vivid transformation provoking the question, "What constitutes Zainichi womanhood in a transnational context?" Undoubtedly their identities are constantly evolving, an on-going process of construction and reconstruction in the milieu of multi-cultural, hybrid and hyphenated identities, and situational ethnicities. Many situate themselves in more than one nation-state, displaying intricacies of multiple selves. Thus we ask: What are the dynamics of multiplicity, diversity, malleability, and/ or resistance that Korean women employ in positioning and defining themselves within their own community and society? What are the commonalities and differences of Korean women's experiences in their cul-

tural settings? What are the discursive frameworks of adjustment and settlement, flux and change, unyielding and stable structures and strategies articulated in relation to work, family, children, and social ties? How do they juxtapose their homeland's "traditional" value system with new cultural and social encounters? In what way does acceptance, negation, negotiation, and agency affect their identity and legitimacy in society? How do they articulate the spatial imaginaries of "home" and the emotional embodiment of nostalgia, longing, belonging, displacement, and alienation? This paper attempts to present a transgenerational articulation of selves and emerging identities of women, their stories, and meaning within a transnational context. It elucidates narratives that pertain to Zainichi women's cultural expression of who they are and how they see themselves within the Japanese as well as their own ethnic community.

#### *Responding to Knowledge Gaps in Food Safety Issues: Citizen Science after 3.11 in Japan*

The 3.11 nuclear accident resulted in concerns about food contamination. The government released little data and citizen groups took the issue into their own hands to fulfill knowledge gaps on food safety issues, establishing organizations to test their own food. Based on qualitative interviews and a survey of these "citizen labs," the paper examines how the lay people's testing efforts were structured in response to food safety threats. Who led the initiatives, what were their motivations, and how did they test food in a different/same manner as the "official" experts in the government? Furthermore, to what extent, was their "science-doing" linked to a larger political mobilization, or did it simply remain as a personal strategy to ensure well-being of their own and their families? Drawing on theories of citizen science, the paper examines politics of knowledge gap in the aftermath of nuclear accident and citizen responses and their potential for politicization.

#### *Charm As the Capital in Japanese Youth Culture*

The purpose of this presentation is to examine the type of capital an individual possesses to attract others using quantitative data from the 2012 survey conducted by the Japan Youth Study Group. Z. Bauman (2000, *Liquid Modernity*) has pointed out that with professions and families becoming more and more fluid, one's own body has become one of the means of confirming one's identity (Details of the book is omitted in this abstract). Then, what does this 'body' refer to? Attractive looks can be one of them. But this is not enough. C. Hakim (2011, *Honey money: the Power of Erotic Capital*) has offered an interesting insight on this point. That is, in addition to economic capital, cultural capital and social capital identified by P. Bourdieu (1986, "Forms of Capital"), she has proposed the fourth capital, 'erotic capital'. She also suggests that the benefits yielded from erotic capital, which is made up of looks and interpersonal charm, are huge and increasingly important. Nonetheless, conventional sociological studies have not paid enough attention to people's attractiveness. In particular, in the study of feminism, femininity, which is one of the attractive characteristics of a female, has been denied. Therefore, we need to examine the difference between people with attractiveness and those without, and benefits that are gained in this regard. The presentation first examines constitutive elements of erotic capital in Japanese youth culture. Secondly, it examines the ways in which erotic capital differs from 'social capital', a concept which is increasingly receiving attention.

#### *Language Rights and Disability Studies*

Language rights discourses have rapidly evolved in Japan during the last decade. From an almost unknown term, it has advanced to a frequently used concept to address linguistic inequality. By foregrounding fairness in language matters, this discourse has expanded the scope of moral arguments on language diversity in Japan.

While initially being heavily influenced by international academic and political discourses, the Japanese discussion on language rights has gradually undergone some specific evolutions. For example, it is probably unique to Japan that the struggle for the recognition of the sign language has been one of the leading forces advancing language rights. Related to this is the most striking characteristic: the entwinement of language rights with the discourse of disability studies. The so-called social model in disability studies, which sees the cause of disability not in the body of the individual but in the society, has ostensible affinity to the idea of language rights which also focuses on injustices rooted in sociolinguistic conditions. The approach to add options rather than just change the dominant regime, or the emphasis on improving the legal framework are also features common to both discourses.

The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language.

After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

#### *Education, Employment, and Gender Role Attitudes Of Japanese Married Women In The 21st Century: Declining Significance Of Rational Choice and Cognitive Dissonance Reduction?*

Several students of attitude change have utilized models that combine rational choice with cognitive dissonance. Kimura (2007) proposed a hypothesis of "rational choice and cognitive dissonance under the constraint of the segmented labor market" in order to explain the apparently paradoxical associations among education, employment, and gender role attitudes found in the data of Japanese married women in 1980s and 1990s. There was a negative relationship between educational attainment and attitudes towards the gender division of labor, a negative association between these attitudes and employment, and also a negative association between educational attainment and employment. If we analyze the data in the early 21st century, however, we can find that all of these associations are weaker than before. Although this seems to reduce the explanatory power of the hypothesis that postulates rational choice and cognitive dissonance reduction, I will examine the factors that may have contributed to these changes from a rational choice perspective. On the one hand, surveys on gender role attitudes, as well as media reports on these surveys, have pervaded Japan so that respondents might have come to regard a negative attitude towards the gender division of labor as a socially desirable response. On the other hand, protracted recession have reduced the size of the fulltime labor market as well as the husband's income so that even highly educated wives might have become unable to resist working as part-time or dispatched workers. The former implies that another kind of rationality plays a part while the latter implies that structural constraints on rationality are significant.

#### *Who Support the Death Penalty in Japan?*

One of the most powerful reason for retaining the death penalty in Japan is the wide public supports for it (86% as of 2009). However, it is often criticised that the governmental survey contains a wording misleading the public into retentionists, and it remains uncertain who support the death penalty. Based on the online quota sampling survey conducted in 2013, the presentation clarifies what distinguishing attitudes are found in the retentionists. Although recent criminologist studies show that people's misperception of unsafer society despite the counter evidences, no significant difference in this point is found between retentionists and abolitionists. Rather the gaps are found in their knowledge and perceptions of social factors of crimes, deterrence of criminal punishments, rehabilitation of criminals, international trends, and the principle of the presumption of innocence.

#### *Branding of an Industrial Heritage and Practice of Local People: The Case Study of Gunkan-jima*

This study examines how the branding and the commodification of an ex-industrial area proceed and how they affect everyday practices and historical identities of local people.

Nagasaki is a global harbor city located in southwest Japan. Less than fifteen kilometers away from the port of Nagasaki, there is Gunkan-jima island. The island was used as a coal-mining station between 1887 and 1974, contributing to the industrial modernization of Japan. In 1890, the Mitsubishi Company bought the island and set about gaining coal from the bottom of the sea. Subsequently, the company built up the island's infrastructure as well as living quarters (such as large concrete buildings, apartments) to accommodate its workers. However, in 1974, the mines were forced to close due to an abrupt shift in energy use, which made the whole population move out of the island. Since then, Gunkan-jima has been totally uninhabited.

However recently, the island started to arouse attention as a symbolic site of industrial modernization of Japan. Nagasaki City is now attempting to re-evaluate this abandoned island as an "industrial heritage" and utilizing it as a tourism resource for regenerating the declining industrial areas. There has even been a movement to make the island a world heritage site, while tours around Gunkan-jima are also becoming more and more popular.

Using data based on fieldwork conducted in Nagasaki City and semi-structured interviews with several actors related to Gunkan-jima, I found that the branding and the commodification of the ex-industrial island have been drastically promoted by the municipal merger and the "locality" as the basis of the legitimacy to represent the island has been totally changed. These findings can be utilized in the future studies that examine the mechanism of urban regeneration projects.

#### *Situational Approach to "Individuality"—from the Perspective of Frame Analysis—*

The purpose of this study is to examine the concept of "individuality" from the perspective of the definition of the situation and Goffman's discussion in his *Frame Analysis*. Symbolic interactionists focus individual interpretation process about social reality. They postulate the great influences of the individuality upon constructing social reality. However, can we construct social reality freely? How can we explain the steady coincidence of our definition of the situation?

In *Frame Analysis*, he investigates the acquisition process of social reality based on his "interaction order theory." He indicates people's impressions for others depends on the definition of the situation. When he engages in this problem, he focuses on the correlation between impressions for the role behaviors and these for the individualities.

Imagine an interaction in an operation room. Some surgeons say jokes or give some nicknames to surgical instruments during an operation. If a patient watches their ridiculous attitude, s/he guesses they might be queer or incompetent. However, according to Goffman, they try to reduce stresses or tensions of other operation staffs and lead the operation to succeed by doing so. From the standpoint of the operation staffs, such behaviors by surgeons do not convey any odd impression about their personalities. In the American hospital culture, these behaviors are accepted as conventional role behaviors of surgeons.

As shown in the above example, how people interpret the behaviors of surgeons and their individualities is dependent on their definition of the situation. According to Goffman, it depends on what kind of *frame* they apply to social reality. The *frame* in this context is a cultural cognitive pattern of social reality. Whether a behavior is interpreted as a typical role behavior or a unique behavior indicating her/his character depends on the frame of the interpreter.

#### *It's a Girl Thing: Tween Queens and the Commodification of Girlhood*

This submission is a 58 minute documentary film to be shown either in a roundtable session followed by a Q&A or as part of a social event.

##### **Description:**

Since the birth of Mary-Kate and Ashley Olsen in 1986, the girls' tween market has evolved from almost non-existent into a multi-billion-dollar money-making machine.

Framed by the structure of a faux interactive website for tween girls, *It's a Girl Thing* speaks with consumer critics, tween brand marketers, girls, moms, and educators to explore the seemingly benign cultural universe of candy-coated, pastel-colored, hyper-commercialized girl culture (and the tween queen phenomenon) to reveal the complex and contradictory messages directed at today's young girls.

Historical research, playful reenactments and found footage allow the film to look closely and critically at the global tween market's evolution and the role of Disney and Nickelodeons' tween queens (Mary-Kate and Ashley Olsen, Britney Spears, Hilary Duff, Miley Cryus, Miranda Cosgrove, Kiki Palmer, Selena Gomez, and more) in the market's explosion.

## Genre As Social Force: Hollywood Cop Action from the Perspective of Filmmakers

Recent analysis of genre as social construction shows that critics and scholars tend to categorize works of art differently than producers do. The biggest marketers in Hollywood cannot copyright genres and so avoid treating their own product as generic. They sell their films instead as unique combinations of diverse elements, in order to appeal to many audiences and differentiate product. Interviews with contributors to the Hollywood cop action movies discuss the conditions under which they come to work on the projects, the extent to which they see themselves as *genre* filmmakers, and how they differentiate their own work. This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrates how a genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

### *Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews*

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard *et al.* 2000; McKie & Watson 2000; Wolkowitz 2006). The discussion has brought out the role of the bodily communication skills and the ability to brand oneself in the current labour market where the CV advantage has been displaced by the tyranny of the *right person*. Feminist scholars (e.g. Acker 1990; Bordo 1993; McDowell 2009) have already shown how different corporeal characteristics in terms of sex/gender become categorized as suitable or unsuitable to conduct different kinds of work tasks. However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes.

The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge in determining which candidates would "fit in" with different working teams and environments. In order to fill in their clients' expectations, the consultants not only attempt to read the bodily performances of the employee candidates. In addition, due to the employment discrimination law, the consultants must be capable of interpreting the non-verbal hints of their clients concerning the ideal bodily features of the wanted employee. Theoretically, the paper draws on Marx's notions of labour, Bourdieu's (1984) conception of embodied capital and the phenomenological discussion of the lived body (e.g. Merleau-Ponty 1945).

### *"Strong Ones Manage Alone, Weak Ones on Each Other's Laps". Love and the Finnish Touching Culture*

**"Strong ones manage alone, weak ones on each other's laps". Love and the Finnish touching culture**

The quoted phrase is an old Finnish saying which represents the traditional virtue of managing alone. The "lap" is not only a metaphorical expression; instead, it refers to the widely shared attitude to the sense of touch in human relationships. In Finland, the touch is saturated with prohibitions, fears and taboos, even in childcare. This was noticed in touch life narratives written by Finns of different generations that were gathered for the project under discussion. In particular, writers born just before or during the war years in 1939-1945, hardly remember to have experienced any caring touch by their parents. Many of them had suffered from the lack of caressing and loving touch throughout their lives.

The paper asks whether the touch as the most archaic human sense and vitally important for the child's development is inevitable for the human love bonds (cf. Ashley Montagu 1979). How could "love" be excluded from touch even be conceptualized (cf. Luce Irigaray 1996)? How is the inevitability of touch reconciled with the fact that touch is the most politicized sense in many (northern) western cultures today whose material and symbolic power has only preliminarily been discussed in academic research (cf. Constance Classen 2005; Erin Manning 2009; Anthony Synnott 1997)?

Even the feminist theorization of *affects* has neglected the sense of touch although it, to me, represents an embodied reaction and act where (social) emotions and (physical) affects merge into each others (cf. Sara Ahmed 2005). By utiliz-

ing the empirical material of the Finnish cultural context, my presentation gives an example how the socio-cultural research of senses and feminist affect theory can be utilized when studying the tactile conditions of love.

### *Re-Articulation on Japanese 'Comfort Women' Survivors' Experiences*

This presentation examines the process of how Japanese 'comfort women' has been excluded discursively from the whole 'victims.' The number of Japanese comfort women is estimated from thousands to tens of thousands. Even such a large number of women seem to have been forced to do so, and the fact that they had been located in the poverty group, there has been a tendency, in the discursive space of 'comfort women issue,' that those women are not recognized as 'victims.' Moreover, those women have often been represented that they devoted themselves to the nation by performing comfort women. As a matter of fact, Japanese comfort women survivors' voices have not been heard enough. Presenter introduces some cases that were known by members of civic movements on this issue as Japanese survivors' claims but were not treated as the matter for the movement groups to make their victimhood known widely in the early 1990s.

To restore Japanese comfort women survivors' history, it is indispensable to describe the aspects that on the one hand those women have been included in the members of a perpetrating country, and on the other hand excluded from the compassion among local community. Being related to that, this presentation explores otherness and postcolonial context over victims/survivors in the country of the perpetrators from feminist perspective and nationalism theory. In doing so, it aims to re-articulate their experiences.

### *The Conditions for Sustaining Efficient and Inefficient Norms*

Although most rational choice theorists have assumed that social norms are created to prevent negative externalities, some norms spoil the welfare of people. These inefficient norms have been discussed as "unpopular norms," which typically include "the emperor's new clothes," self-destructive adolescent behavior, infibulation, and honor killing. However, it is also true that efficient norms, which prevent uncooperative behavior, are observed in social dilemma situations. In this paper, we hypothesize that long-term relations stabilize both efficient and inefficient norms, but communications destabilize inefficient norms. We analyze a Sub-game Perfect Nash Equilibrium (SPNE) and a Strong Perfect Equilibrium (SPE) in an N-person repeated prisoners' dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all other members if s/he deviates from this expectation. Two equilibrium concepts reflect a player's ability to communicate. A strategy profile is an SPNE if no player can carry out solitary deviations (change his/her strategy). This equilibrium concept assumes a situation such that players cannot communicate with each other, e.g. tacit price collusions in oligopoly markets. As the Folk theorem indicates, there exist inefficient SPNEs, in which the Pareto-deficient payoff is sustained by costly punishment. In contrast, an SPE assumes a situation such that self-interested players can engage in cheap talk and collude. If feasible coalitional deviation exists, all members of the coalition can earn more by changing their strategies simultaneously. Every SPE is an SPNE, but the opposite is not true. The sufficient condition for existing SPEs is proved using the multi-objective dynamic programming method. In conclusion, we successfully formalize the hypothesized relationship between efficiency of norms, long-term relations, and communications among players. Additionally, we point out some notable implications.

### *Future Visions and Social Theory*

Social sciences in general and sociology in particular are facing a challenge of conceptualising the relation between environment and society in ways that assist the dialogue and multiple attempts for creating visions of a sustainable society. Thinking about the future always involves thinking about the future of society. However, in future studies little attention has been paid to how underlying social theories affect our future visions. Since backcasting is a special approach in future studies which starts with a normative vision of the future and elaborates a strategy to reach this normative vision, this issue is even more pressing. Our paper

aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices.

In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only present in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses.

The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilising such methodological approaches. We argue that by consciously reflecting upon both theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

#### *Emotions As Reason, Rationale and Result of Urban Artist Areas*

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the intersection of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian – and often emotional – purposes internal to the participating artists and their community. The latter purposes are objectives directly and emotionally pursued by the participating artists. These artist areas are "reserves" that serve as catalyst for the internal socio-spatial emotional enjoyment of artists, performing and propagating a "liberty of delectableness" not offered outside these specific areas. As a theoretical starting point I interpret texts such as Zukin's "Loft Living" (1982), Bourdieu's "Rules of Art" (1992) and Ehrenreich's "Dancing in the Streets" (2006), plus the literature on the notion of "cultural sustainability" that alludes to emotional values (e.g., Kirchberg & Kagan, Brocchi, Duxbury, Throsby). There is a variety of emotional benefits that can be paraphrased and typologized as "artistic community identity", "alternative patriotism", "lifestyle experimentation" and "bohemian sociality" – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the "affective turn" (Clough 2007, Gregg & Seigworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

**KIRCHNER, CORINNE\*** (Columbia University,  
[ck12@columbia.edu](mailto:ck12@columbia.edu))

#### *Agism and Language in Old-Age Inequality*

Nikolas Coupland (2007) has focused on "style" as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coupland shows that the common sociolinguistic reduction of style to *social structural* affiliations entails a cost to understanding how users *agentically* create meaning through choices of style.

Separately, Coupland bemoans that linguists have insufficiently studied discursive communication by and involving old people, disregarding a long tradition of largely psycho-cognitive studies of language practices by and toward old people (But see linguists Pennebaker et al, 1995, Sankoff & Blondeau, 2007). Excepting gerontologists, social scientists also tend to omit old people from research. General discourse rarely associates old age with matters of style, as if style-based variation is of no interest or awareness after a certain age.

Aging of the global population has been widely publicized, generally expressing fears about negative effects on society-at-large – i.e., on younger generations – underlying pervasive public attitudes of agism and disciplinary research inequality.

That agism is embedded in language, and detrimentally affects aging identity-formation often through linguistic practices, has been recognized (Minichiello et al, 2011) but only minimally examined, without serious attempt at proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding "ableist" language and the stigmatized identity of disability. The Disability Rights Movement offers a model, led by disabled activists, eventually involving rehabilitation and other "helping professionals" and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key disability activist *versus* aging service organizations showing agentic linguistic style changes that can undermine negative effects of agism.

[kirdina@bk.ru](mailto:kirdina@bk.ru))

#### *Methodological Institutionalism Vs. Methodological Individualism As a Core Principle in Alternative Social Theories of Second Modernity*

Modern dominant Western social theories are based largely upon methodological individualism principle. Attempts to overcome its confines are undertaken constantly in different analytical programs and approaches (A. Giddens, M. Archer, P. Szotompa, P. Bourdieu, J. Alexander, J. Ritzer, V. Yadov etc). But in fact all these approaches assume an explanation of the social and economic phenomena in terms of individual behavior and follow methodological individualism principle (S. Lukes, J. Hodgson). In the paper the capabilities and limitations of methodological individualism as a core principle of mainstream sociology and economics are explored. The recent debate dealing with methodological individualism in Russian and foreign sociology and economics is considered. Institutional individualism principle (A. Agassi, F. Toboso) is tested. As a challenging view, premises for methodological institutionalism (P. Keizer, S. Kirdina) are offered and considered as an alternative and complementary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological philosophical precondition such as holism ("the whole is more than sum of its parts") and a reductionism ("the whole is understood as a set of primary elements forming it") respectively. Institutional matrix theory (S. Kirdina) based on methodological institutionalism principle will be presented to explain the success and failures of historical trajectories of modernization for non-Western countries as well for Western ones.

**KIRILENKO, OLESYA\*** (Rivne Humanitarian University,  
[olesya.kirilenko@gmail.com](mailto:olesya.kirilenko@gmail.com))

#### *Fitness Culture As the Factor in Globalization of Recreational Sports*

In the context of globalization, integration in the sphere of competitive and professional sports that receives maximum support from political and economic institutions, International Olympic Committee, and international sports federations expands to a great extent. Increasing need of the modern society for health-recreational technologies unprecedentedly reinforces the role of health culture and health industry known as "wellness". Fitness is an element of wellness culture, and it presents a universal basis for popularization of health forms of physical and sport activity along with optimization of nutrition and body weight control. It makes health fitness as the direction of recreational sports an effective tool for strengthening population's health and preventing non-communicable diseases.

Globalization of health fitness culture is primarily determined by the development of global fitness industry. Another factor in fitness development is the activity of mass media and advertising, as well as marketing and educational campaigns in the form of fitness conventions. The third factor in globalization of fitness culture is the activities of international organization in the sphere of sports for all and fitness, which include Sport for All Commission of International Olympic Committee, the Association for International Sport for All, International Fitness Association, Federation of International Sports, Aerobics and Fitness, and others.

Issues in social factors of promoting health fitness on a global scale as well as its scientific, informational, educational, economic, legal and institutional support represent actual direction in integrative sociological research of sports, physical activity and health. Uneven development of fitness culture and inequality in access to fitness services caused by of various social factors are of particular interest to sociologists.

### JS-87.3

**KIRILENKO, OLESYA\*** (Rivne Humanitarian University,  
[olesya.kirilenko@gmail.com](mailto:olesya.kirilenko@gmail.com))

#### *Problems of Access to Modern Wellness Culture*

Society's growing interest to the quality of life has predetermined the development of modern culture and industry of health called "wellness." During last decades, wellness has acquired features of new institutional complex, which integrates functions of numerous spheres related to health preservation and improvement, e.g. medicine, pharmacology, sports, leisure, tourism, manufacturing of food, goods and cosmetics. The process of popularization of wellness culture is supported by scientific and educational institutions, mass media and advertising.

From a sociological point of view the inclusion of individual into wellness culture is determined not only by the conditions of upbringing and quality of education that form motivation and skills of healthy lifestyle and consumption. The key role in this process is determined by individual's socio-economic status, which includes income level, nature of person's professional activity, availability of mon-

ey, free time and vitality strength for active-health leisure. In this aspect, the maximum access to the values and practices of wellness culture have the elite groups, middle classes primarily in the developed countries ("the golden billion"). Not only modern medicine and wellness culture but also basic medical care stay inaccessible for the majority, namely the poor population of the world.

In the light of increasing societal need for health improvement, the effective strategies of increasing access to wellness culture is determined by the limits of economic growth, amplification of ecological barriers, the need to shift to wise consumption. Such strategies include raising people's personal responsibility for their health, lifestyle, active-recreational leisure; strengthening financial, institutional and informational support; development of preventive medicine; using potential of leisure and local green tourism for expanding the access to health-recreational practices for people. In general, the study of health-stratification and unequal access to the wellness culture is based on integrative sociological approaches.

#### *The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward*

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms, boarded the bandwagon of neoliberal urbanism, after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan's sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage neoliberal urbanism by its mayor, Tōru Hashimoto, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of mushrooming fancy mansions and many homeless in the city renders this policy turn questionable.

In this urban sociological research, I aim to comprehend the process of neoliberalization in Osaka City, observing this change process over the last 30 years in detail at the level of a downtown neighborhood called Horie, located in the Nishi Ward. With reference to the concepts of post-industrial city, gentrification and neoliberal urbanism, the study comprises of an analysis of visual materials and narratives of the long-time residents in the area. Despite being very close to the central business district of Osaka City, Horie has a more residential character and is interesting in terms of the regeneration of its old shopping street of furniture stores during the 1990s. Its current atmosphere is visually similar to the western examples of neoliberalized gentrified neighborhoods, with its up-market mansions, western style cafes, specialty stores claiming to do fair trade, trendy people strolling around, and some small crime like purse-snatching.

#### *How Can Trade Unions Improve Quality of Work in Low-Wage Services in Europe?*

In 2010 the European Union adopted the Europe 2020 strategy, emphasising the need for increasing labour market participation with more and better jobs as essential elements of Europe's socioeconomic model. But there is evidence that quality of work in many of the low-waged sectors in Europe is still problematic (Holman 2012) and problematic configurations produce various forms of precariousness, low-wage work, problems of social inclusion and violence at work (Kalleberg 2009). Increasingly, employment at the lower end of the spectrum of skills and wages in Europe is dominated by services that are spatially distributed and often employ vulnerable groups of employees (e.g. contract catering, office cleaning, waste collection, etc.). In these sectors, work is often outsourced from the public sector or other private sector companies and taken over by private sector service providers (large service multinationals or SMEs). The outcomes for employees often are insecure and problematic working conditions and little representation. This results from companies' cost-cutting strategies, enhanced by changing regulations, the practices of contract awarding and public procurement, the role of the client, conditions that are likely to be exacerbated by austerity measures in the framework of the current crisis, etc. The continuous debate about the specifics of service work has brought significant evidence about the importance of the triangular relations between management, employees and customers (Korczynski 2009). The paper investigates how trade unions address those challenges at EU level and in selected European countries. It is based on the recent research done in the framework of a European comparative project WALQING ([www.walqing.eu](http://www.walqing.eu)). The findings presented in the paper are mainly results of the analysis of interviews with social partner representatives in those sectors as well as from company case studies carried out in the examined countries.

#### *Discourses of Internal Migration and Belonging: The Case of Some Communities in Ghana*

Ghana, whose geographical position is along the west coast of Africa, has a population of approximately 20 million people. It is estimated that 45-60 local languages and dialects are spoken in Ghana (Dzameshie 1988). English is the official language in Ghana, and is used as a medium of instruction in educational institutions, commerce and government. A large population of Ghanaians are multilingual but use English as a common language for communication with speakers of other languages in society and for official purposes as a lingua franca. Each of the nine regions in Ghana has a dominant language that is also taught as a subject to school going children. Of all the languages spoken in Ghana, the Akan language is the most dominant of all. About 44% of Ghanaians understand and speak the Akan language (Osam 2003), though not all of them can speak it so fluently.

This paper examines how highly proficient adults from Southern Ghana construct and negotiate social belonging and exclusion in Northern Ghana. The data comes from interviews of individuals who migrated to Northern Ghana as adults and spent a significant portion of their lives in Northern Ghana. *How do such individuals negotiate for belonging within the Northern identity region and successfully learn the dominant language? How do participants position themselves as successful learners a Northern language? After successful negotiation, how do they see themselves in relation to the local people?*

We argue that the study of identity and language use must consider socio-historical contexts. Success in acquiring the Northern language is based on interaction. We examine the aspects of a good language learner namely: learning process, learner characteristics, and language features from the perspective of identity negotiation. We also examine the narratives that the individuals tell of the processes of identity negotiation.

#### *Personality and English Learning: The Case Of Some Students In Ghana*

This paper focuses on understanding the role personality plays in English learning among some students in the Eastern Region of Ghana. Personality as defined by Ortega (2009), are qualities in a person or predispositions that have been learned through social experience. The personality aspects examined are learner beliefs, motivation and self-esteem because they are linked to learner abilities, skills and goal achievement respectively. To what extent do these aspects of personality support English learning? Is a question we hope to answer. Cook (1991) argues that learners have fully formed personalities and mind when they start learning a second language, and these have profound effects on their ways of learning and on how successful they become. Their capacity to perform assigned tasks, which requires mental and physical effort, is influenced in one way or another by their fully formed personalities, which in turn is influenced by the environment in which they find themselves. This implies that students who come to class will bring along attitudes from the society they live in, which in turn affects their motivation and subsequently their performance. These attitudes developed over years, could be either positive or somewhat negative. Data was collected from a sample size of 1444 Senior High School students in the Eastern Region.

#### *Frequency of Incarceration, Criminal Thinking, and Sense of Coherence Among Male Japanese Criminals in Offender Rehabilitation Facilities*

For former convicts, reintegration into society is complicated by psychological factors, such as mental strains and personality traits, and socioeconomic factors, such as unstable employment. The aim of this study was to investigate the relationship between the frequency of incarceration (at children's self-reliance support facilities, juvenile reformatory, juvenile penitentiaries, and prisons) and the personality factors of criminal thinking and sense of coherence (SOC).

This study was conducted at two metropolitan area offender rehabilitation facilities and participants were 116 Japanese men who had been placed under parole/probationary supervision or had been recently released from prison. The participants completed a questionnaire survey that contained the Japanese

version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of the three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, "cut off" thinking, self-deception, and problem avoidance. Spearman's rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and each personality factor. In addition, the Man-Whitney U test and Kruskal-Wallis test were performed to analyze the relationship between frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of "cut off" thinking. The frequency of imprisonment (at prison only) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders' SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

#### *Young People's Practical Agency: Transitions From FE College To Work In London*

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people's experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. This group is an under-researched 'missing middle' (Roberts 2011) group, who are neither NEET nor following 'tidy' pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at 'the present', and thus they develop resilience. We suggest that agency is situated and discuss the interplay between young people's agency and the contexts in which they live, particularly in relation to youth labour market conditions.

#### *Deterritorialising Teaching and Research through Information Technology and Capitalism*

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deterritorialise teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deterritorialisation is used here in two senses: Firstly as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language.

This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level linking together epistemology, social sciences, psychology and cultural-historical activity theory. Furthermore information technology is deemed to have the general capacity of enhancing the joint knowledge creation of humans in conjunction with it. Is the future role of universities to provide such easily adaptable concepts which facilitate bringing in corporate partners by avoiding excessive clarity? Would this contribute to the techno-political utopia of virtual online communities developing the roles of the state and combating transnational corporations as Tael Harper suggests in "Smash the Strata"?

[mikael.kivela@helsinki.fi](mailto:mikael.kivela@helsinki.fi))

#### *No Wires Attached? Displacement of Power through Information Technology*

"What we have learned so far is that there is nothing without the Wireless Network." This paper explores the extent and consequences of the previous sentence in terms of translating two scientific models into material form. It was uttered as a summary of using Minerva Plaza, a set of facilities built within the University of Helsinki in order to utilise the supposed digital nativity of the students. The stated goal of Minerva Plaza is to weave together collective knowledge construction, emerging communication technologies and inclusion into the scientific community in order to prepare especially future teachers for the challenges they are predicted to meet during their careers. These goals have been somewhat incongruent with The University's ICT policies and the capacities of the selected soft- and hardware.

The collection of assembled and interconnected components of Minerva Plaza can be aptly described as volatile. They can facilitate very fast transitions from one state or point of interest to another but also being difficult to hold permanently. Some of this explicitly intended in the design. On the other hand the Wireless Local Area Network has managed to hold its position as an unintended obligatory passage point for the sets of translations of using the Plaza as planned. This paper presents an analysis on how dependency on ICT and project funding has displaced the power to decide who participates and how away from the users. This seems to resonate with David R. Johnson's depiction of technological change as a cause of diminishing professional control within the professoriate. Unlike Johnson I argue this is caused by the volatile nature of the whole assemblage also in cases where the technology use is initiated and endorsed by the teaching professionals.

#### *Old and New Inequalities of Educational Opportunity by Gender and Family Background in Finland*

What comes to equality of educational opportunity, in the sociology of education enduring themes have been, for instance, the Bourdieuan thesis of strong reproduction and the persistency of inequality à la Shavit and Blossfeld as comes to relations between parents' socioeconomic position and their offspring's educational achievements. Empirical studies from various countries have started to report decline in educational inequality. Our own previous studies based on Finnish longitudinal data have shown that the equality of educational opportunities, as measured by differences in participation in university studies by gender and family background (parents' education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20<sup>th</sup> century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

In this paper we explore equality of educational opportunity and labour market effects related to educational expansion in Finland. Our updated longitudinal register data covers five age groups of higher education students and graduates from baby boomers to recent small age groups, including for the first time also students of the universities of applied sciences. We ask to what extent expanding education improves the odds of participation in university studies when analyzed by gender and family background. We also study how the female/male relation, family background and labour market placements of university graduates in different fields change along with higher education expansion. Shortly, we examine the ways in which changing gender relations in university education manifest on the labour market in the earnings of male and female graduates of various fields and family backgrounds.

#### *Toward a Sociological Understanding of Evolutionary Time in Human Development*

There is no doubt that social sciences would benefit from opening up more toward Darwinian ideas; most crucially, it would enable a more accurate grasp of the vast time periods involved in the development of our humanity and social life. As known, sociologists have had a complicated relationship with Darwinism – perhaps haunted by the specters of "Social Darwinism", the threat of "sociobiological reductionism", or other traumatic past experiences. This presentation seeks steps toward evolutionary sociology by examining, (1) the lessons taught

by the currently popular "evolutionary psychology" (Tooby and Cosmides, Pinker) regarding the human nature; (2) the "*Homo economicus* criticisms" of evolutionary economists in the spirit of *A Cooperative Species: Human Reciprocity and Its Evolution* (Bowles and Gintis); (3) Geoffrey Hodgson's version of "Generalized Darwinism"; and (4) a "niche-construction" approach to human "gene-culture coevolution" (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution.

While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to "the problem of social order" – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson's model in turn utilizes pragmatist conceptual tools well, but its level-ontology and abstractions of generalized principles of evolution remain less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment transaction model opens the brain-consciousness-language-society continuum "outside-in" rather than "inside-out" and allows understanding time periods in terms of localized organism-environment transactions by means of which evolution can in fact only be understood.

#### *Did Japanese Women Writing on Cultural Issues in Post War Japan Create Solidarity Among Themselves? a Case Study of the "Kusanomi Kai" (Kusanomi association)*

In post-war Japan, many Japanese women have been writing about their everyday lives, their opinions on social problems, or politics in major newspapers. These readers' columns helped in founding the "Kusanomi Kai" (Kusanomi association), an association of writers and readers, in 1955.

In my presentation, I will examine how and why a community of writers was created between 1955 and 1958. First, I will explain why they founded the communication association and made it their primary media. Back in the 1950s, women often found it difficult to get their opinion published in major newspapers, since some men were of the view that women were inferior to men and consequently criticized women's opinions that appeared in the readers' columns. To avoid being criticized, some women made "Kusanomi Kai" their primary media to communicate amongst themselves.

Second, I will discuss the practice of writing followed by the "Kusanomi Kai" members and the use of media studies. Those days, most women had little experience of making a speech in front of an audience. However, as they were good at writing, they used the skill for expressing their opinions about gender or social problems and read them out as they appeared in print. To do this, they would go to a meeting of "Kusanomi Kai" and talk about their writing in the media.

Third, I will outline the profile of the women who participated in the "Kusanomi Kai" and the categories of members in the association. The association was made up of not just housewives but also a few working women. They wrote about their opinion on issues that mattered and discussed them with each other in the group meetings. This is how they developed a sense of intimacy and built their collective identity, not as "housewives" but as "women."

**KJELLMAN, ARNE\*** (Stockholm University, [kjellman@dsv.su.se](mailto:kjellman@dsv.su.se))

#### *The Foundation of a Theory of Everything*

This paper discusses the basis of a recently developed "Theory of Everything" that builds on a "Subject-Oriented Approach to Knowing." Its persistent claim is that physics and modern science by their reference to the "given", most often explicated by the concept of "matter", have led human thinking astray. This work shows that in the very moment a thinker/knower introduces "matter", or the like, as something subject alien, he already in the outset introduces a crippling matter/mind distinction from which knowing never will recover. This contamination spreads to other men and their languages and conceptual frameworks, hence many of the perplexities and paradoxes found in modern science. On this view truth and falsity, right or wrong disappear, as well as the traditional role of science as a pursuit of truth. Along also goes the cleft between the social and natural sciences. This means that all knowledge endeavours can, pace Ernst Mach, be grouped under the same umbrella. The idea of a common reality gives place to the idea of a private universe – a privise – belonging to each and every man, and laboriously constructed on the basis of purely private experience. By his own will man builds this fund of cumulative experience in isolation or in a mood of communication and social consensus. In the latter case, the tools of communication are also critically influenced by his choice of conceptual seed. On this view, the first hominid man was forced to construct a private language to connect to his children simply to break free from the isolation of his thoughts. Thus Adam was forced to build an emerging science strictly in a bootstrap manner. There is

no other way to explain science and human knowledge – a recognition that has hitherto been hidden by a misunderstanding of the sign function.

#### *We Are The People! Street Demonstrations As a Means Of Communication*

##### **We are the people! Street demonstrations as means of communication**

Over the last decades we have witnessed a dramatic rise in the occurrence of street demonstrations. Increasingly, citizens chose street demonstrations as a means of communication. "We are the people!" or more recently "We are the 99%!" are appeals to politicians to listen to the people and to take their claims serious. Movement politics have become the natural counterpart of party politics.

Employing a unique dataset of over 80 demonstrations that occurred between 2009 and 2013 in 9 different European countries, we give voice to the citizens who populated these protest events. Some of these demonstrations were people protesting the austerity measures they were suffering from. For instance, students protesting a raise of tuition fees or public health workers fighting budget cuts. Other were people demonstrating against the way democracy was practiced in their country. Democracy, as we know it for decades, no longer satisfies many a citizen. Not only in post-communist and authoritarian regimes but also in mature democracies people challenges democracy as it is done. Occupy-London or Amsterdam, or the 15<sup>th</sup> of May in Spain are examples. We will compare the participants in these two types of demonstrations. What were their grievances? How did they evaluate democracy in their country? Did they trust state institutions? What did they expect from their participation? Did they participate in party politics next to movement politics or had they given up party politics? How were they embedded in the multi-organizational field?

We maintain that movement politics is a necessary complement of party politics. The democraticness of a country is defined by the quality of both movement and party politics.

#### *Scenes of Street Art in Montevideo: City and Creative Processes*

La presente ponencia es punto de partida de la actual investigación que desarrollo en el marco del Doctorado en Gestión de la Cultura y el Patrimonio (Universitat de Barcelona).

El objetivo de esta presentación es visualizar algunas líneas claves sobre el papel que atesora el Street art en su diálogo con Montevideo, más precisamente, con respecto a la ciudad, su espacio público y los procesos creativos que nacen de las interacciones generadas entre los propios artistas urbanos (ya sea en su carácter individual o colectivo - crew).

Montevideo es una pequeña ciudad, capital del país más pequeño de América del Sur. Sus características propias de cercanías permite interacciones entre artistas urbanos, artistas, etc., generando un crisol heterogéneo de formas creativas en un territorio sumamente acotado.

Asimismo, estos agentes trazan lógicas horizontales en las tareas que realizan, eligen democráticamente y generan fuertes lazos de solidaridad en las tomas de posesiones al momento de "marcar" el territorio de la ciudad. La elección por el espacio público es tratar de impactar e involucrar al habitante de la ciudad con el graffiti u otras formas de arte urbano, "rompiendo" con su espacio cotidiano, con su familiaridad con la ciudad.

La ciudad se reinterpreta poniéndola en cuestión a través de sus formas, sus contenidos, su arquitectura, etc., demarcando los espacios sociales donde se presentan las producciones artísticas, ejerciendo su derecho a la ciudad, buscando reconocimiento en la distancia invisible.

Los procesos creativos son múltiples, y las formas de trabajo creativo también. Las estrategias de generación de arte en ese gran lienzo blanco llamado ciudad permiten construcciones compartidas entre los artistas como puntos de tensión y normas internas de respeto y convivencia.

En definitiva, Montevideo es un pequeño lienzo con multiplicidad de artistas e interacciones creativas que se visualizan y complejizan en territorios locales acotados.

**KLEIN, STEFAN\*** (Universidade de Brasilia (UnB),  
[sfkstefk@yahoo.com](mailto:sfkstefk@yahoo.com))

*Considering the Theoretical "Status" of Critique*

The hereby proposed presentation shall focus on a very specific aspect of the relation or discussion concerning modernity and critique. The aim is to, considering the multiplicities of viewpoints addressing the centrality or relevance of modernity as a centerpiece of sociological interpretation, understand to which extent a predominant and (partially) normative concept of modernity can be taken as a point of departure to define the origins of (dialectical) critique while, at the same time, distancing oneself from the hegemony of modernization theory.

Therefore sociological theory as critical theory should be able to establish a profound and rigorous dialogue with distinct theoretical cornerstones, and here is where the interest lies in bringing to the debate standpoints from peripheral origins, focusing specially on the contribution of the Brazilian (although from a European and migrant background) critical theorist Roberto Schwarz. One has to take into account that a significant amount of his interpretations was written from the 1960s until the 1970s, and therefore precedes the more or less recent wave of post- as well as decolonial critique.

It is certain that the predominance of European colonization in so called South America was tantamount to the pertinence of recovering modernity - carried foremost under the attributes of civilization and enlightenment - as a fundament for economic, political and social conceptions. Hence, as a centerpiece of the discussion should stand Schwarz's effort to work out the specific and distinct traits of the so called modernization or state-formation process in Brazil and how this enables us to consider the particularities and generalities of a critical perspective based upon various academic disciplines. This dialogue of critique(s) is appraised as a possibility for putting present sociological theory under 'cross-examination'.

*Segregation Patterns in Dual Vocational Training in Germany: Increasing Advantages for Young Women?*

In Germany, gender segregation in the system of vocational training and education (VET) is strong and persistent. This system consists of three sectors: dual vocational training, the largest sector, the much smaller part of school-based training, and vocational preparation measures, bridging schemes for school leavers who cannot find regular training positions. Existing research mainly concentrated on most visible segregation line in this system: Traditionally, dual training focused on male dominated training occupations in industry, craft and construction. In contrast, women were (and still are) heavily concentrated in school-based training, where many health and clerical assistant occupations are being taught. Less is known, however, about segregation patterns within these subsectors, particularly in the dual training system, their change over time, and their effects on employment prospects of female and male apprentices.

In recent decades, the labor market has undergone major structural changes. Skill-biased technological change and sectoral change have resulted in more challenging requirements for future workers and changing demands for occupations and qualifications, which have been reflected in shifts in the occupational composition of the dual system. Today, the majority of training contracts are found in service occupations. However, we do not know how these long-term structural changes affected segregation patterns in dual training and transitions from training to work in female and male training occupations.

Against this background, this paper aims to answer two questions: First, in what respect have segregation patterns within the dual system of vocational training changed over time? Second, could young women profit from structural labor market changes in terms of smoother transitions from training to work? These questions are answered by using large-scale registry data of the Federal Employment Agency on dual training and subsequent employment biographies in Germany in between 1977 and 2010.

[michael.kleinod@hu-berlin.de](mailto:michael.kleinod@hu-berlin.de))

*Exploiting Untouched Nature? the Social Production of Nature As a Resource at Nakai-Nam Theun Npa (NNT), Lao PDR*

The presentation argues that nature conservation is an *external* imposition on current socio-economic realities in Laos, and as such *internal* to the country's social structures and dynamics: the state and its subjects have to make do with biodiversity conservation as a fact established internationally. Therefore, resource protection feeds into extraction with some systemic necessity. Nature reserves are an effect of power differentials, so the extraction it invites or necessitates one way or the other is ridden by inequities, as well.

But inequality defined merely by access to and use of the resources within a certain protected area (PA) is a very limited, and in fact ideological, notion of social inequality. The yardstick should rather be the distribution of the general social resources of the country and beyond. Otherwise, there is the risk of naturalizing "stakeholders" as stewards and custodians of biological diversity. Such essentialism, present in the everyday practice of sustainable development, largely misses locally lived realities and aspirations, and with these the systemic and productive relation between nature conservation and exploitation, in Laos at least. Instead, a view where nature reserves are not passive reservoirs but rather "factories" that produce biological and cultural diversity as a resource, in a process of socially structured practice, is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

*Sociology of the Frontier, Frontiers of Sociology? Ecotourism in Laos and the Social Practice of Resource Production*

This presentation departs from the overall concern with the nature of power and the power of nature in current global capitalist society. It focuses on one central product of this society, ecotourism in countries like Laos: frontier economies that, by definition, challenge the well-arranged epistemologies of institutionalized disciplines. I argue that attempts at understanding frontier dynamics must be decidedly sociological, i.e. aware of the dimensions and peculiarities of *social practice* as the very place where transformations and continuities take form. On the other hand - since theory itself is bound by and thus must reflect the complexities and limitations of time and place - sociology of frontiers must also transcend itself: first, by transcending the inherent bias that "everything is social", albeit acknowledging that every "thing" is social. Second, just like socio-economic processes "run wild" at the frontier, frontier sociology has to transcend academic boundaries, within and outside the discipline.

Nature reserves are "thick" social facts constituted and maintained by socially organized and differentiated practices, and ecotourism is central in this regard. I analyze ecotourism in Lao nature reserves as a socially organized practice that crosses scales (local-global), dimensions (ecology-religion), and nature relations (subsistence-capitalist) as well as binaries such as "tradition vs. modernity" and "conservation vs. development", which continue to pre-occupy large parts of environmental thinking and practice. Seeing nature conservation as effective resource production, I suggest a theory of frontiers as social spaces of productive conversion. I will show how a careful, reflexive materialism and an elaborated notion of social practice as the place of symbolic-material crisis regulation provide fruitful methodological grounds for a critical social theory of eco-capitalism. The presentation highlights the challenges and chances for a theory of social nature relations in late capitalism fit to deal with the diverse pitfalls of its frontiers.

*Truth and (self) Censorship in Military Memoirs*

Sometimes it can be fairly difficult for outsiders to gain access to the military field. However, there is a rich source on the military that is readily available for every researcher: military memoirs. This source does provide some methodological challenges, nevertheless. One might wonder about the reliability ('truth') of these autobiographies and whether their content is affected by the fact that these books are prone to official censorship by the military in order to preserve operational security.

This study shows that truth and (self) censorship are not only a concern for researchers, but also for military writers themselves and it gives insight into the way soldier-authors deal with these issues. This study provides concrete quantitative data based on all military memoirs published between 2001-2010 dealing with Afghanistan experiences from five different countries (UK, US, Canada, Germany and the Netherlands).

The majority of soldier-authors make some kind of truth claim (either in the form of a subjective or objective truth) in their books that they also substantiate. Books published by traditional publishers do so significantly more often than self-published books. At the same time, military authors also frequently admit to some form of self-censoring, especially anonymising names is an often mentioned method. So truth claims and self censorship do go hand in hand.

From each of the countries studied, at least one author mentions being actively censored by the military, but most don't even mention it, making censorship a common military feature, that is almost normal for military writers.

Making truth claims, mentioning being censored, or self-censoring do not influence the kind of plots these authors write either in a negative, or positive way.

#### *Developing Home? Transnational and Translocal Return Migration To Ghana*

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of 'successful' transnational return migrants resemble that of the local elites who have made it in the capital or other big towns: migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana. The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depend to a large degree on what return migrants have managed to remit back either during their migration or when returning.

#### *Polyamory and Political Economy: A Note on Socio-Economic Inequalities*

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of class privilege within many polyamorous communities. This paper highlights the economic conditionality of polyamorous relationships and families. Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions which riddle poly communities in advanced industrialised societies and confine its reach of this particular identity to predominantly white middle class circles. The insertion of poly cultures into an economic and cultural nexus shaped by neoliberal capitalism helps to circumscribe the material and discursive spaces from within which poly relationships and kinship formations are enacted. In this paper, the author is particularly interested in how the construction of the discourse of polyamory as a style of enhanced reflexivity resonates with class-based cognitive and communicative normativities. The author argues that the common stylisation of polyamory as a reflexive ethics further goes hand in hand with the fading of an emphasis on passion and sensual pleasure and establishes a rationalistic bias within the discourse of poly love. The paper closes by proposing a research agenda into poly intimacies which is more attentive to class and socio-economic inequalities.

#### *Employment Preferences or Family Values - Where Are the Pitfalls for Women's Labour Participation?*

A better reconciliation of work and the family life is one important issue on the political agenda in many areas of the world. In West-Germany, the male-breadwinner family model is still well established. Only recently, the development of child-care for children less than three years of age offers mothers the possibility to re-enter the labour market early. Apart from such important structural restrictions, family values and gender attitudes play an important part for explaining labour force participation of mothers. With regard to family values, the family-home plays a decisive role. In West-Germany there is a widespread belief that children should grow up in sub-urban or rural neighbourhoods, so that moving to a child-friendly home can be seen as a proxy for a strong value orientation towards

family life. Such moves normally add space between the family home and the work place, which results in the necessity of long-distance commuting. Hence, an early re-entrance in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to estimate the influence of family-oriented relocations on the re-entry in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panel Study (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010 and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entry of mothers in the labour market, whereas employment preferences have positive influences. Other important influences like marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.

#### *The Challenge of Female Commuting for Partnership Stability*

In modern societies, demands for spatial flexibility are omnipresent. In Germany, as in other European countries, commuting between home and the workplace is widespread. Women often neglect mobility demands when they have a partner and/or children because commuting adds an extra burden to those who are mainly responsible for the household. But of course there are women who are long-distance commuters, and there are some hints that commuting is as harmful as often feared. Recent findings about the impact of job related mobility on partnership stability show that long distance commuting of women increases the risk of separation for couples in Germany. The goal of this contribution is to get a deeper empirical insight in this coincidence and to explain the mechanisms behind this harmful effect.

This is possible by using the German family panel study (pairfam) which provides rich information on couples' dynamics and spatial mobility. Our contribution makes use of the first three waves of the panel. The sample consists of 2,500 women with partner aged 25 to 28 years and 35 to 38 years in the first wave. Using event-history models harmful effects of female long-distance commuting on partnership stability are replicated. In the next step, the data of the pairfam study concerning gender attitudes, employment and family preferences, and other psychological and relationship aspects are used to explain this effect. It is shown that commuting, employed to reconcile the new roles of women and men in family and working life, destabilizes couples' relationships under certain circumstances. The societal consequences and possible policy recommendations are discussed.

#### *Political Arrangements of "Minha Casa Minha Vida" Program - the Role of State, Civil Construction Sector and Civil Society*

Historically there is a functional relationship between the development of the civil construction productive sector and the Brazilian State, with a deep impact in housing policies' decision-making processes. 'Minha Casa Minha Vida' program was an anticyclic measure to face the international economic crisis, supporting that sector and implementing Keynesian investments with macroeconomic effects, having few concerns with housing needs.

The Federal Government concentrates program' normative and financing functions, redistributed from the cities/housing ministry to the economic planning ministry and the government's strategic political decisions agency. Implementation decision power was granted to a public bank which acts guided by productivity goals, regardless housing needs. The constructive sector was already strongly present in the program formulation and influencing the rules to a better reproduction of the sector's capital, being also a fundamental actor in the implementation, given that it became its main promoter.

In the case of municipalities – who had almost no influence on MCMV conception – it was assigned a role of appointing the beneficiaries of the first range (low-income families), assuring them, without financial/institutional efforts, the maintenance of electoral mandates through clientelistic relations. Social movements' participation was limited to a category with only 3% of the budget (but that enables them to deliver actual results to their bases). They also informally participate in the appointing process, amplifying their political gains but with results that drift them away significantly of their struggle against spatial segregation.

These decision arrangements discourage particularized solutions dialoguing with local needs and represent the State/corporations' historic imbrication, ori-

ented by the development of construction sector and by its macroeconomic, political and electoral roles. This logic shapes the actual housing policy model and explains housing investments' decision-making process, apparently deepening territorial inequalities. Then, a pending question is: does this model contribute to or counter inequality in Brazilian cities?

**KLOCHKO, MARIANNA\*** (The Ohio State University - Marion, [klochko.1@osu.edu](mailto:klochko.1@osu.edu))

##### *Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?*

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world the notion of success, especially economic success, became very popular even for children. It is important to note that as economic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achieving this coveted success.

Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one's success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic institutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with its relatively high level of corruption (according to TI index) and unstable economy might be more likely to influence the population to acquire quite different values and attitudes, more suitable to 'cut-throat' conditions of the market. Is the Ukrainian population's willingness to ignore the law and basic notions of honesty an indicator of a rational adaptation?

**KLUG, PETRA\*** (University of Bremen, [petra.klug@uni-leipzig.de](mailto:petra.klug@uni-leipzig.de))

##### *Good without God: Atheists Facing Moral Questions and the Question of Morality*

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power altogether is perceived to be without an ethical basis, and thus immoral.

Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts behind this accusation, how atheists react to it, what kind of morality they bring into play, and what they in turn think about religious morality.

In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in fact a variety of approaches atheists take in facing the issue of inequality. What these approaches share is a common pattern for nonreligious ways of dealing with social change.

These different points will be laid out and illustrated with interview material in order to create a theoretical framework regarding atheist and nonreligious morality and ethics.

##### *Intelligentsia in Modern Russia: Social Status Change*

Humanitarian intelligentsia is a specific social group. Throughout its history it is not only developed non-material culture of society, but also played the leading role as civil asset of the nation, its "conscience". During two past decades transformation in social life put the group in necessity of social adaptation, and so far the social position of the group and its role in the new social relations became unclear.

The paper is aimed to determine the current status of humanitarian intelligentsia in socio-economic, socio-political and professional fields and seek ways to improve its civil and professional positions. The analysis is based on the theoretical and methodological approaches that take into consideration the stratification of Russian society, differences in territorial conditions and professional fields. The study was divided in two phases. Initially, a wave of semi-structured interviews

(n = 100) were conducted. After that, quantitative data were collected from questionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current socio-political position of the group and its social adaptation level. The factors of status change present different levels: macro - level (socio-economic, political, socio-cultural change in the country), meso - level (the development of the region and current professional sphere), micro - level (individual knowledge, attitude and behavioral strategies).

##### *The Reality of Nineteen Eighty-Four. How Fiction Becomes Social*

A literary text, according to the literary theorist Wolfgang Iser, operates by oscillating between the limits of the fictional and social worlds and thereby expresses the plasticity of the human being and its continued evolution of self. Notwithstanding, the question of how these fictional ideas spread into the social domain is rarely tackled. At the heart of this presentation is the task to forward develop an understanding of how the fiction found in literature participates in the shaping of social reality.

The reception of George Orwell's popular novel *Nineteen Eighty-Four* (1949) in the German public sphere in the years 1983/1984 will be taken to exemplify the irruption of the fictional into the social. Symbolizing the concept of totalitarianism in its purest and most extreme form, the element of imagery provided by the (fictional) literary text moves beyond signification and pretends an ontology. This socio-fictional aggregate referred to either by the novel's title or the term Big Brother has come to shape the idea of totalitarianism for a whole era. I will introduce the social philosophy of Cornelius Castoriadis to the debate, as I believe it can help us understand the functioning of the fictional within the social as displayed in this phenomenon. Castoriadis attributes primary importance to the imagination for the creation of social knowledge as well as the interaction between the social imaginary significations and the (individual) radical imagination. His framework of the interrelation between the individual and the social may well be perceived as a gateway for the irruption of the fictional as found in the arts into the social.

For a sociological understanding of literature, I therefore propose to take the element of ontological pretension provided by fiction into consideration. Fiction can thus lay the foundation for abstract social terms and hence becomes part of social reality.

##### *Dealing with Difference: Exclusion As a Problem of the Subject or the Discourse?*

This paper integrates the sociology of knowledge approach to discourse (Reiner Keller) into the debate on exclusion on grounds of sex, ethnicity or age. The main thesis is that exclusion is not a problem of closed or open structures, of powerless or powerful subjects or of intersectional categories. In contrast, the paper argues that exclusion is mainly a result of the interplay between discourses as structures of power and knowledge and subjects related to an institutional context. Considering empirical results, which stress the relevance and irrelevance of intersectional categories alike, the paper discusses how to deal with difference in institutions, that is how to explain mechanisms of exclusion. We propose a concept, which applies the intersectional perspective to the level of communicative interaction in institutions. Focusing on intersectional categories, the concept regards them as discursive constructions, which are more or less relevant in situations of interaction.

First, the paper discusses the main strands of related theories, which deal with the problem of structure and agency in the field of exclusion from three different perspectives: structures constitute subjects, subjects form structures, and subjects disappear behind the (intersectional) structures. Second, the paper concludes that all three mentioned perspectives miss the decisive point. Neither the focus on powerful subjects nor the dominance of structures of powers nor behind structures veiled subjects can cope with the problem of difference proceeding exclusion. To explain this phenomena a broader perspective is needed, which integrates the interplay of discourses and subjects in the context of institutions. The paper argues that intersectional categories are constructed by discourses. Discourses as structures of knowledge and power, are (re-)produced and transformed in communicative interactions. The main hypothesis is: How institutions deal with difference (and exclusion), based on certain intersectional structures, depends on the institutional context in which communicative interactions takes place.

*Consent to Data Linkage: A Focus on the Interviewer Respondent Interaction*

Linkage of survey and administrative records is increasingly popular. The survey respondent's informed consent is required to perform linkages and a number of studies have documented interviewer effects in the decision to consent. Whilst studies found that 28-34% of the variance in consent outcomes is attributable to interviewer characteristics, many of the characteristics were unobserved. We use experimental data on consent to data linkage collected in wave 4 of the Innovation Panel (IP4) to examine the role of the interviewer-respondent interaction in the decision to consent to data linkage. IP4 included a number of experiments around the way in which consent is asked and respondents were asked for consent to record their interview, see Sala, Knies and Burton (2013). We report results from multilevel models on selectivity in consent using information gathered from coding the interviewer-respondent interaction around the data linkage request. The code frame considered whether the interviewer read out the question as scripted, with minor or major deviations. Deviations from the script considered whether the change in wording may be viewed as biased toward a particular decision. We coded the interviewer-respondent behaviour for all available interviews which allows us not only to examine the prevalence and effect of non-standard interviewer behaviour and how it affects the consent outcome, but also whether these vary across experimental treatment groups in a nationally representative study. Results will contribute to elaborate on Groves and Couper (1998)'s model of survey response into building a theoretical model that explains better the complex processes that lead respondents to consent.

**KNOTH, ALEXANDER\*** (University of Potsdam,  
[alexander.knoth@uni-potsdam.de](mailto:alexander.knoth@uni-potsdam.de))

*Creating Citizens: How State Produces Persons (1945-2011)*

**Creating Citizens: How state produces persons (1945-2011)**

The birth of modern society follows structural pluralism and many forms of social differentiation. Processes of state formation are dealing with the population and their new personnel. But who or what is the population? How does the state address individuals? What are patterns of membership and belonging when individuals become persons i.e. citizens?

Using a historical perspective through the lens of classification and social knowledge the contribution will discuss the "making up people" (Hacking 2002) within the formation of nation state's political system. It will be shown that legal classification and categorization are state practices in order to address people and to distribute resources. These *persons* are reflecting structural changes and they can be used as a key to open modern society's self-descriptions.

In the first step (1) beginning at 1945 the historical sequences will be sketched to reconstruct the legal paths of the cases Hungary, The Czechoslovak Republic, Ireland and Netherlands. In the second step (2) some common and some historic-specific *persons* with their interfering social dimensions (i.e. nation, ethnicity, sex or economy etc.) will be presented and compared. Against this background (3) using the heuristic differentiation of citizen/non-citizen major shifts of the meaning of political membership and belonging will be shown. Finally (4), the approach focuses analytically the creation of persons in a macro sociological context and votes for a view on the transnational level of the EU.

WG02-906.3

**KNOTH, ALEXANDER\*** (University of Potsdam,  
[alexander.knoth@uni-potsdam.de](mailto:alexander.knoth@uni-potsdam.de))

*Person's Classification & Categorization: A Source to Explore Social Differentiation*

The classification of *persons* can be seen as a prototype of social classification (Durkheim/Mauss). Following the differentiation paradigm modern society's inclusion of individuals is based on the functional differentiation of the social systems, which is universal and not orientated on ascribed attributes. Theoretically the principle of functional differentiation would be posited as a result of the system demands, however there aren't empirically saturated studies explaining this principle.

The contribution aims to explore institutional manifestations of inclusion by focusing on person's classification, because classification processes are essential for the formation of functional subsystems.

Using a historical perspective through the lens of classification and social knowledge I will discuss the production of citizens within the formation of nation state's political system. It will be shown that legal categorizations are state practices in order to address people and to distribute resources. These *persons* are reflecting structural changes and they can be used as a methodological key to open modern society's self-descriptions and their way of modernization.

In the first step (1) historical sequences from 1945 to 2011 will be sketched to reconstruct the legal paths of Hungary, The Czechoslovak Republic, Ireland and

Netherlands. In the second step (2) some common and some historic-specific *persons* with their interfering social dimensions (i.e. nation, ethnicity, sex or economy etc.) will be presented and compared to illustrate the social differentiation of the nation-state. Against this background (3) using the heuristic code of citizen/non-citizen major shifts of the meaning of political membership and belonging will be shown. Finally (4), it will be argued that society's personnel stands for a specific institutionalization of inclusion and shouldn't be seen as a deviance from "Vollinklusion".

**KNOWLES, CAROLINE\*** (Goldsmiths, University of London,  
[c.knowles@gold.ac.uk](mailto:c.knowles@gold.ac.uk))

*Uncertain Landings and Slippery Cities*

This paper probes the connective tissue of globalisation through the lens of a simple object, in a pair of plastic sandals. As we follow the flip-flop trail from the oil wells in Kuwait from which plastics originate, to the garbage dumps on the edge of cities like Addis Ababa (a big emerging market for Chinese plastics) to which they are finally consigned, through the larger resonance of a small object it will become clear that globalisation is not what we understand it to be. And neither are the cities it presumes to connect. The cities on the trail – cross cut by multiple intersecting trails of people and objects – were both omnipresent and slippery. While it looked from a distance as if the trail passed through particular cities, closer examination often proved otherwise, as the trail strayed into particular neighbourhoods, urban zones, exurbs, suburbs, and borders between nation-states as zones of unregulated activity. In providing a trail through a city, flip-flops reveal it from an unusual angle: from the little considered vantage points of feet, streams of commerce passing through markets and garbage. It concludes that in the light of this kind of mobile, trans-local, object-led research we need to rethink cities in ways that admit both this slipperiness and streams of everyday life, as well as rethinking globalisation so as to acknowledge its ad hoc, shifting and unstable character.

*Techno-Materiality, Culture, and Climate Change: Japan and the Bilateral Carbon Offsetting Mechanism*

Across the Asia-Pacific countries including China, South Korea, Singapore, Australia and New Zealand are embracing emissions trading and establishing their own national systems. Japan is a notable exception. After several failed attempts to develop an emissions trading system, Japan is developing a unique program that emphasizes bilateral trade and technology transfer, the Bilateral Offsetting Mechanism (also known as the Joint Crediting Mechanism). Through this program Japanese companies directly trade technology for emissions offsets from developing country partners. Japan's refusal to engage in emissions trading is in part structured by its heavy reliance on fossil fuels, as well as its need to reconstitute its energy supply mix. In the aftermath of the Fukushima crisis securing energy supply is of critical importance. Broad public contestation of the continued use of nuclear energy to meet Japan's demand increases pressure to use more fossil fuels. To an extent that has placed security energy supply in direct conflict with reducing greenhouse gas emissions. However the bilateral offsetting mechanism also reflects interesting aspects of Japan's refusal to engage with more speculative forms of finance. The program emphasizes material outcomes and has the potential to make a bold policy statement in the Asia-Pacific especially as the Clean Development Mechanism fades in significance. This article explores the unique Japanese approach to climate policy, the role of both private and public sector in shaping the program, as well as the cultural elements that are reflected in its aims and instrumentalization. The program is particularly evaluated from the perspective of sustainability. Japan's approach to emissions reduction manifests underlying socio-political as well as cultural institutions. However, the emphasis on materiality and tangible outcomes, as well as longer rates of investment may demonstrate a more sustainable approach to emissions reduction than those advanced by Japan's neighbors in the Asia-Pacific.

[wknobl@gwdg.de](mailto:wknobl@gwdg.de))

*From Hegel to Weber: The Peculiar Relationship Between German Historiography and Sociology in the Long 19th Century*

**From Hegel to Weber: The peculiar relationship between German historiography and sociology in the long 19th century**

(Prof. Dr. Wolfgang Knöbl, Institut fuer Soziologie, University of Goettingen, Germany)

The first part of the paper focuses on the period when influential German historians tried to emancipate themselves from Hegel's philosophy of history in order to create a truly empirical science – and failed! The problem was that they couldn't solve the problem of relativism which comes up in any historical account that distances itself from Hegel's teleological perspective. Thus, historians such as Ranke and Droysen again and again came up with arguments that in the end were not too dissimilar to the Hegelian ones.

But getting rid of Hegel's teleological philosophy of history was not only a problem of historiography. It was at the centre of the emerging social sciences in general as can be seen in the writings of the most important Neo-Kantians who influenced Max Weber. Weber clearly saw the problem and deliberately tried to cut off all links leading to a philosophy of history. This was accompanied by some costs and Weber's particular conceptual move – the coining of highly robust processual terms which seemingly could not be doubted (and thus could not be relativized!) with respect to their analytical usefulness – was not a necessary one as contemporary developments in other philosophical traditions show. But it was Weber's theoretical apparatus which became most influential so that sociology followed his lines of arguments and continued to base its narratives of social change on the assumption that social reality is to be understood as a cosmos driven by robust processes (like "bureaucratization", "rationalization", "secularization", etc). This move, so it is argued, might have been convincing in Weber's days, but it is not any longer.

[jko@ntu.edu.tw](mailto:jko@ntu.edu.tw))

### *Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan*

One emerging issue of research on work and labor market is to study the segmentation trend in job and work mobility in labor markets, and mechanisms behind segmentation processes. Recently, some researchers argued further that the division between standard and nonstandard workers has acted as an additional segmentation of labor market. This approach also paves the way to understanding of the link between precarious work and social inequalities. Considering the significant impacts and labor market policy implication of this possible segmentation development, I research difference on patterns of job and work mobility between standard and nonstandard workers, and also study if these differences have caused segmentation in labor markets of Taiwan.

Existent literatures provide two strands of arguments regarding consequences of nonstandard work arrangement: the *stepping-stone* hypothesis and the *entrapment* hypothesis. The *stepping-stone* hypothesis claims that nonstandard work provides a stepping stone to a standard job and is regarded as a means to flexibilize the rigid labor market. On the other hand, the *entrapment* hypothesis, which is derived from labor market segmentation theory, assumes that nonstandard work has long-lasting negative consequences on job mobility because it makes nonstandard workers "trapped" in the secondary labor market segment, or leads to unemployment. To investigate which hypothesis is correct in Taiwanese labor markets, I use "Manpower Utilization Quasi-Longitudinal Survey" (2008-2011) to examine job and work mobility between standard and nonstandard workers. As a result, the findings from multi-nominal logistic regression models support the entrapment hypothesis. Segmentation of labor market is reflected in difference of mobility pattern between standard and nonstandard workers.

### *Determinants of Social Activities Among Older People in China: An Analysis of Family Factors and Community Factors*

**Objectives:** The study investigates the extent of family factors and community factors affecting engagement in social activities (non-market productive activities and leisure activities) by older people in China.

**Conceptual framework:** Given filial piety and Chinese "quanxi" value the importance of family in Chinese culture, family factors, including older people's household size, composition and number of financial supporters are tested. In line with opportunity structure arguments, the impacts of community factors (public facilities, community offices and urban/rural communities) on the likelihood of social activities are examined. Research hypotheses are summarized here:

H1: Older people living with more family members are less likely to engage in social activities than are older people living with few or no family members.

H2: Older people living alone are less likely to engage in social activities than are older people living with partners.

H3: Older people with more financial supporters from within their family are less likely to engage in social activities than are older people with few or no financial supporters from within their family.

H4: A community with more public facilities increases individuals' propensity to participate social activities.

H5: A community with a longer office increases individuals' propensity to participate social activities.

H6: Individuals living in an urban community have a higher propensity to participate in social activities than do individuals living in a rural community.

H6: Individuals living in an urban community have a higher propensity to participate in social activities than do individuals living in a rural community.

**Methods and data:** The first wave of the China Health and Retirement Longitudinal Study (CHARLS) is used. The analytic sample is composed of respondents above 50 years old (n=7,813). Multilevel models for dichotomous data are employed (first level: individual characteristics and family factors; second level: community factors).

### *Transnational Families and Newcomer Children in Japan*

In the 1980s, because of the economic boom in Japan, many workers came to Japan from other Asian countries. In the 1990s, the Japanese government revised the Immigration Law, resulting in workers coming from Latin America. Since then, the number of foreign laborers has continued to increase.

The number of foreign workers' children has also grown. They face difficulties keeping up with academics in school because of insufficient Japanese language and poor school support. Teachers also face challenges in instructing diverse students whose native languages are Chinese, Tagalog, Portuguese, Spanish, and others.

In Kanagawa prefecture neighboring Tokyo, the number of newcomer children is relatively large. Four public high schools began providing special services for foreign students in 2007, and the number of such schools increased to 16 in 2013. Those schools provide a variety of services including native language classes, Japanese-as-a-second-language classes, and special instruction classes for academic subjects.

The authors identified the challenges and needs of newcomer students. The data derived from interviews with 85 children at a high school in Kanagawa prefecture from 2007 to 2013. The findings and interpretations indicate that (1) some newcomer children have poor academic achievement and face difficulty going on to college because of scarce resources and support even though they desire more education; (2) many families experience separation due to migration for jobs or women marrying Japanese men and leaving their children in their own country. These are the "multinuclear households" often seen in countries with long accepted immigrants; (3) those families that live apart for many years have difficulty reestablishing their ties. We argue that special educational and social attention should be given to these families and their children.

### *Mobile Social Dilemmas in an Experiment: Mobility Accelerates the Cycle, but Does Not Change Cooperation*

#### 1. Problem

This paper sheds light on the role of mobility on cyclic processes in mobile social dilemmas. Olson argues that rational actors will free-ride in large groups. Erhart and Keser's experiment revealed that people formed clockwise cycles of group size and cooperation when they can change groups. But they did not compare various levels of mobility. Thus, our research question is how mobility affects the cycle and the cooperative behaviors.

#### 2. Methods

We conducted a laboratory experiment (with 168 participants in 40 groups in 10 sessions). Three conditions (treatments) were introduced (immobile, high mobility costs, and low mobility costs conditions).

#### 3. Results

We show the following findings. (i) Mobility did not change effects of size on cooperation ( $N=339$  group-rounds). (ii) Still, mobility accelerated effects of cooperation on size ( $N=360$  group-rounds). As people moved more easily, cooperative groups were more likely to expand. (iii) As a result, intergroup mobility accelerated the cycle ( $N=40$  groups). Groups rotated faster when people moved more easily. (iv) However, mobility did not raise nor decline cooperation levels ( $N=40$  groups).

#### 4. Conclusion

We observed negative effects of size on cooperation. This was consistent with the literature, both on mobile and immobile social dilemmas. We observed cyclic dynamics. This reconfirmed Erhart and Keser. We observed identical cooperation at various mobility levels. This was inconsistent with Tiebout's prospect. The literature overlooked that free-riders can invade cooperative groups. To foster cooperation among rational actors, first increase mobility to free cooperators. Then, restrict mobility to exclude free-riders.

**RC27-466.2****KOBAYASHI, KOJI\*** (Lincoln University, [kobko696@gmail.com](mailto:kobko696@gmail.com))*Media Representation and the Cultural Politics of Zainichi (Residing-in-Japan) Korean Athletes: A Preliminary Conceptual Analysis*

This paper examines how *zainichi* (residing-in-Japan) Korean athletes have been represented in the media and mobilised in relation to the cultural politics of Japan. *Zainichi* Koreans have been the largest ethnic minority in Japan largely due to forced migration during the era of Japanese colonialism. Second and later generations of *zainichi* Koreans have often strategically hid their Korean citizenship and identity by speaking Japanese and adopting Japanese names in order to avoid daily conflicts with, and discrimination from, Japanese society. Sport is one of the sites where the politico-historical issues of *zainichi* Koreans are brought to the fore in public consciousness and popular discourse. From the legendary professional wrestler—Rikidozan—to the naturalised Japanese football player—Tadanari Lee, *zainichi* Korean athletes have been represented in an ambivalent manner—both as 'Japanese' and 'the Other'. This ambivalence of representation is linked to how they self-identify, the role of the media and the context of cultural politics at the time. By examining how representation and perception of *zainichi* Korean athletes have been maintained or changed over time, the paper highlights the key events and sport stars that have contributed to the re-positioning of *zainichi* Koreans in Japanese society. Research on *zainichi* Koreans has been rarely conducted yet deserves attention because it challenges the homogeneous construction of ethnic essentialism and sport nationalism in Japan and reveals the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of *zainichi* Korean athletes with respect to how they might be studied both theoretically and methodologically.

**RC09-170.3****KOBAYASHI, KOJI\*** (Lincoln University, [kobko696@gmail.com](mailto:kobko696@gmail.com))*Taking Japan Seriously Again: The Cultural Economy of Globalisation and Self-Orientalisation*

Although Japan's economic presence has declined over the past two decades, the legacy of Japanese cultural-economic contributions to the global process has not been adequately addressed. This paper identifies the pioneering role of Japan in developing, and globally disseminating, two key commercial processes of 'globalisation' (Robertson, 1995) and 'self-Orientalisation' (Dirlik, 1996; Iwabuchi, 1994). By delineating the links between the two interrelated processes, it is argued that Japan's contributions to the making of the global cultural economy have dramatically altered the mode of domination by transnational corporations—from economic rationalisation to cultural differentiation. This was triggered, as I contend, by the formation of strategic alliance of Japanese corporations with Western marketers and advertising agencies when they globalised their products and business operations in the 1970's and 1980's. Drawing on case studies of global sport brands, this paper demonstrates the ways in which Japanese workers and corporations negotiate the structural forces of the global/West through their practices of globalisation and self-Orientalisation. Overall, this re-thinking of Japan's cultural-economic contributions counters the view of *seemingly* unilinear development of neoliberal capitalism that has been prevalent in theorising of global consciousness and connectivity.

*Self-Rated Ability of Reading the Atmosphere and Correlated Factors Among College Students*

Inarticulate understanding of someone's needs and feelings accurately, and communicating with people smoothly is represented as "reading the atmosphere", and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire survey to examine factors that affect the self-rated ability to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as "cannot read the atmosphere at all (Group 1)", 19.4% "cannot read the atmosphere very much (Group 2)", 46.8% "can read the atmosphere a little (Group 3)", 25.4% "can read the atmosphere very much (Group 4)", and 5.3% "read the atmosphere too much (Group 5)". Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However,

they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

**RC40-681.1****KOC, MUSTAFA\*** (Ryerson University, [m koc@ryerson.ca](mailto:m koc@ryerson.ca))*Dark Side Of The Miracle: Hunger and Food Insecurity In Turkey*

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantization, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income gap between the rich and the poor, worsening of working conditions, increase in the percentage of workers working for the minimum wage and high levels of youth unemployment. Despite these socially unfavourable social factors official figures celebrate success in terms of food security and fight against hunger.

This paper will provide insights as to the causes and consequences of such "success" in food security while critically assessing the analytical and methodological utility of the concept.

**RC21-359.7****KOCH, FLORIAN\*** (Universidad del Norte, [fkoch@uninorte.edu.co](mailto:fkoch@uninorte.edu.co))*Arranged Urbanism: Modes of Informality and Governance Structures in Barranquilla, Colombia*

During the last several years a dynamic transformation has been taking place at the northern city fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built – a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the 'formal' and the 'informal'. The main finding of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of informal arrangements between the land owner and the public authorities. This form of urban development is described as 'arranged urbanism' and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of 'arranged urbanism' can also be found outside of the Latin American context and thus present a new mode of planning governance in Cities in the Global South and the Global North.

**RC21-364.4****KOCH, FLORIAN\*** (Universidad del Norte, [fkoch@uninorte.edu.co](mailto:fkoch@uninorte.edu.co))*Governance of Climate Adaptation through Urban Regimes: The Cases Bogotá and Frankfurt*

Climate adaptation strategies have gained importance both in Cities in the Global South and the Global North (Birkmann et al 2010). A crucial aspect of these strategies are so-called climate adaptation plans. These plans show the actions which should be taken in order to reduce the negative effects of climate change on urban population. My presentation analyzes the climate adaptation strategies of Bogotá, Colombia and Frankfurt (Main) Germany and evaluates the political processes beyond these plans. Even though the context of both cities is very different, similar results can be traced: In both cities „climate adaption urban regimes“ exist which determine the content and the implementation of the plans. These „urban regimes“ - an „informal yet relatively stable group with access to institutional resources that enable it to have a sustained role in making governing decisions“ (Stone 1989) are not locally bounded but consist of multi-level actors constellation and consist of private and public actors. The existence of these regimes does not guarantee the implementation of the climate adaptation plans. On the contrary profound changes regarding the future urban development are precluded by these regimes. These results are compared with the older discussions on Urban Growth Machines (Logan & Molotch 1987), Urban Regimes (Stone 1989, Stoker 1995) and the questions „Who governs?“. From a theoretical point of

view my presentation tries to provide insights on the construction of capacity to act regarding climate change on an urban level: How are climate adaptation plans elaborated, who participates in their elaboration and who not?

### *Women's Health and Gender Discrimination In India*

#### Abstract

The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realise their potential, that it's not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy. **Women's health in India** can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women in India face a multitude of health problems and gender inequality is one of the reasons that play a major role in the health outcomes of women in India. Human development Report (United Nations report, 2011) indicates that India is one of the worst countries in the world and ranked 132 out of 187 in terms of gender inequality. In 2005 India enacted the National Rural Health Mission (NRHM) with a clear set of measurable objectives, like Maternal Mortality Ratio (MMR), Infant Mortality Rate (IMR), Total Fertility Rate (TFR), and targets for National Disease Control Programmes (NDCP) in addition to create universal access to public health services and also balance the gender ratio.

The present paper focuses on the achievements of Odisha through NRHM by presenting the primary data (Bolangir, Odisha, India). There is a significant improvement in rate of decline of IMR, MMR and TFR. In addition the present study also examines gender disparities in nutritional status and concludes that women are more malnourished than male.

### *Finding Shelter in Denver: Multiple Regimes of Spatial Order and Multiple Coping Strategies*

From a homeless person's perspective, the neoliberal city seems like a virtual minimum-security prison. In order to work, eat and rest, they must negotiate multiple and layered ordinances regulating their activity and movement. For the homeless, simply occupying public space is already problematic. Certain municipalities allow begging, others do not. Scrapping metal often violates land use codes. In seeking services, the homeless must conform to the requirements of state and charitable service providers. Obviously, neoliberal spatial control of homelessness does not germinate from a single control center. Peck (2010) argues that the *mongrel phenomenon* of the neoliberal state is relationally constituted. His notion aligns with Staeheli and Mitchel (2008) claim that public space regulation does not emanate from a single ideological or practical nexus, but comprises many separate interpenetrating *property regimes*.

In attempting to understand how homeless individuals negotiate a growing phalanx of codes and ordinances variously intended to move them toward service providers and into shelters we utilized ethnographic methods. Talking to homeless injection drug users in Denver, CO, a city wherein sleeping with any protection against the elements in public has recently been outlawed, we found that shelters, due to mandated durations of stay and strictly enforced conditions of confinement were often considered undesirable places to be. Understanding this, it is unsurprising that homeless people resist this degree of control by continuing to seek alternative and often illegal places for shelter and attending to personal hygiene. Other findings prove both ironic and tragic. We learned that as part of an overall strategy for negotiating Denver's regimes of spatial confinement often leads to increased drug use. A heavy nod numbs heroin users from the cold and rain. And methamphetamine addicts frequently increase dosages and usage in order to avoid the need for sleep altogether.

### *Does Inclusion Mean Everyone Every Time?! – Critical Reflection on a Popular Concept*

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtle (and not so subtle) forms of exclusion that have developed over the years in our society? Is it really

intended that each person in its unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and consequential topics.

[martin.kohli@eui.eu](mailto:martin.kohli@eui.eu))

### *Cleavages and Conflicts in Aging Societies: Generation, Age, Class?*

Fifty years ago, inequality in developed societies disadvantaged the elderly. Becoming old could mean falling into poverty, and some sociologists interpreted retirement as a form of social exclusion and alienation. Today, the tide has turned: the elderly have benefitted from the expansion of the welfare state, and some sociologists paint the bleak picture of a coming gerontocracy. The discourse of "intergenerational equity" faults the elderly for monopolizing resources and endangering our future.

However, it remains essential to assess the extent of the generational cleavage per se and the extent to which it masks the continued existence of the "old" class cleavage between wealthy and poor (or owners and workers). There are moreover "new" cleavages such as those of gender and ethnicity (or "race"). Emphasizing the generational conflict tends to downplay other inequalities, and by this, risks being ideological.

I will briefly retrace the stages of this discourse, and then examine the current extent of cleavages among generations or age groups in terms of economic well-being and social inclusion. How these cleavages turn into conflicts depends on their potential for mobilization, which I will assess by examining political attitudes, participation and voting. The result is that the salience of generational conflicts is (so far) low, which I attribute to the mediating function of political institutions and of generational relations and transfers in families.

Class inequalities cumulate in old age, and class cleavages may thus deepen in future aging societies, but the potential for class mobilization seems to fade away. Generational cleavages may also deepen, not least through the current trends towards welfare state retrenchment. Whether they will lead to generational mobilization depends on the continued viability of the mediating institutions in politics and the family.

**ALBERTINI, MARCO\*** (University of Bologna,  
[marco.albertini2@unibo.it](mailto:marco.albertini2@unibo.it))

### *Parents' Home Ownership and Support for Adult Children Across Europe*

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by an high level of defamilialization, Continental Europe follows a model of supported familism. The Mediterranean countries are best described as adopting a model of familism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children's own family projects.

The present paper, based on data from SHARE and SHARELIFE, examines how parents' housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts. First, we will analyse the extent to which parent's home ownership status affects the likelihood that children co-reside with their family of origin. Our preliminary results suggest that, ceteris paribus, parents who rent their home are less likely to support their adult children through co-residence. Secondly, we want to analyse how parents' own housing experience affects the strategy that they adopt to support their adult children. For instance, does the fact that parents received support in buying their present home lead them to help their children in turn? Also, a number of other experiences – such as ownership status of one's first home after the exit from the parental home, age when establishing one's own household, or special events in one's housing history – are likely to affect the strategy that parents adopt in supporting their adult children. Most importantly, the role played by parents' housing experience is likely to vary across different welfare contexts.

**KOHN, AYELET\*** (Hadassah Academic College,  
[ayeletkohn@gmail.com](mailto:ayeletkohn@gmail.com))

### *Friends, Comrades and The Aesthetic Melting Pot: Instagram As a Tool Of Propaganda*

This paper examines the ways through which the aesthetic mechanism of Instagram, a social network application designed for media sharing, is used as an

emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defense Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew).

I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, aesthetic and emotional norms shared by the users (Chandler&Livingston, 2012). This frame of values is understood as a common ground for the Israeli users, who were raised on myths about the army and the value of deep friendship among warriors. The same frame of values serves them simultaneously as members of a social network which is based on fixed aesthetic norms such as chosen filters and the "artistic" square shape, which its similarity to Kodak Instamatic and Polaroid images makes the photographs "sentimentally beautiful" (Enquist, Magnus and Arak, 1994).

Also common are values of sharing, the meaningful dual concept of "friends", and the vital act of positive motivating, may it be the army's hierarchic system or the social network's "likes".

I will look into the ways through which the use of Instagram helps the sites' administrators and private users to activate a unified code of symbols, which blends individuality and nationality, the beauty of nature, the aesthetic standards of the application and the admiration of armed forces (Friedländer, 1984).

And last, seeing Instagram as a platform for individuals to perform and share their artistic creativity (Gye, 2007), goes along with another Israeli myth, which praises soldiers as sensitive individuals who fulfil their national duty, while being young "fighters and dreamers", who express their feelings in various forms of art.

#### *Free Movement and Serial Migration: Exploring the Lives and Motivations of Highly Skilled Finns Living Abroad*

The European Union (EU) is a globally unique area, where it is possible for the majority of Europeans to study, work or retire in any of the 28 EU member states, as well Switzerland, Iceland, Norway, and Liechtenstein (Koikkalainen 2011). European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up on job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, or Eurostars (Favell 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the experience, qualities, and motivations of the serial migrants, those who had lived abroad in at least two different countries. Why did they move abroad in the first place, and why did they move again? Do they display a particularly European identity, continue to identify with their original home country, or see themselves as global citizens (Koikkalainen 2013)? And does the ease of mobility increase the likelihood of remigration?

### JS-40.2

**KOIKKALAINEN, SAARA\*** (University of Lapland, [skoikkal@ulapland.fi](mailto:skoikkal@ulapland.fi))

#### *Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland*

This conference paper focuses on two European tourism destinations that thrive on seasonal labour often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the aurora borealis and reindeer safaris attracts just below one million tourists each year. While the profiles of these two places are very different, they yet do share important similarities in terms of labour demand. In London the pubs, hotels, shops, and amusement parks rely on seasonal labour, often performed by young people originating from other European countries. In Lapland the hotels, skiing resorts, wilderness safari companies and other tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our under-

standing of the migration – tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience. Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. Is working at a tourism destination in fact a form of lifestyle migration? And how do seasonal migrants form workplace communities, develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?

### JS-41.8

**KOJIMA, HIROSHI\*** (Waseda University, [kojima@waseda.jp](mailto:kojima@waseda.jp))

#### *Correlates of Work Behaviors Among Muslim Migrants in Japan, South Korea and Taiwan*

This study analyzes correlates of work behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013).

The results of logit analysis for the correlates of employment status show that ages 35+, entry before 1990, South Asian origin, intermarriage with a local woman and high school education have positive effects on self-employment in Japan. In South Korea ages 35+, intermarriage with a local woman and high school education have positive effects on self-employment but South Asian origin has a negative effect. In Taiwan ages 15-24 and 30-34, entry before 2007, marriage with a local woman or a compatriot, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects. Therefore, the positive effects of high school education is shared by the three societies, while the effects age, year of entry, national origin and the nationality of spouse do not have consistent effects.

As for being an employee, ages 35+ and entry before 1990 have positive effects, in Japan while ages 35+ entry in 2007-2008, Indonesian origin and high school education have positive effects in South Korea and ages 35+, entry before 2007, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects in Taiwan. Therefore, the positive effects of high school education are shared by the three societies. The results for employment type and job hunting method will be also presented.

In sum, there are some variables which have opposing effects in different societies. They seem to reflect the differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

### RC31-538.7

**KOJIMA, HIROSHI\*** (Waseda University, [kojima@waseda.jp](mailto:kojima@waseda.jp))

#### *Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates*

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in East Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants.

The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects on the visit to halal shops once or more per week and that junior college education and living in owned or company housing have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Taipei shows that living in owned housing and very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins, white-collar employment, non-strict observance of Islamic rules and adaptation have negative effects. The results show more differences than commonalities among the three societies, possibly because of the differences in the composition of Muslim immigrants and in the availability of these facilities.

### "Alternative Unions" and Their Involvement in the Post-3.11 Disaster Politics

Labor unions I call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual membership-based unions, such as general unions and community unions. I call them *alternative* because from the standpoint of nonstandard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded. This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment issues, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live enmeshed in a complex web of individual and organizational ties, and they thrive by building new ties as they respond to newly emerging crises. From the standpoint of individuals who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emergent crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crises by utilizing their networks with other unions and civil societies. Secondly, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

#### *Depression, Work and Identity in a Neoliberal World: Perspectives from Australia and the UK*

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at play, workers in these countries have been affected by some common trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007; Ehrenberg 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g. antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We locate our empirical findings in the context of theoretical debates about the impacts of neoliberalism on contemporary individuals, and draw explicit comparisons between people's experiences in Australia and the UK to illustrate our points.

#### *Preschool Teachers in a Changing Institutional Context: Reforms and Prospect of Professional Group*

Results of this research are the initial stage of the "Processes of the Actual Russian Market of Preschool Education" project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining status positions of group, on the other hand.

The cultural resource of occupation is very poorly popularized that making uncertain the symbolical capital of group in the opinion of clients (parents and

educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions admits. The professional organizations in estimate of experts received different treatment. Informants of the "pro-state" sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of "pro-market" organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classical "not bureaucratic" ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The current changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

#### *The Causal Effect of Another Sibling on Own Fertility – an Estimation of Intergenerational Fertility Correlations By Looking at Siblings of Twins*

Researches have documented persistent differences in fertility between different socioeconomic groups. These differences could over several generations have important population level implications on the social transmission of socioeconomic status as the size of socioeconomic groups naturally are dependent on differential fertility. The reasons for intergenerational fertility correlations are however poorly understood. The current study attempts to differentiate between the causal role of another unexpected child in the parent generation, from the effect of other characteristics that are shared between parent and children, for explaining intergenerational fertility correlations. Thus it is possible to examine if intergenerational transmission of fertility is due to transmission of socioeconomic status, which on average is shared between individual. This is examined through an instrumental variable approach, using a twin birth as a source of exogenous variation in family size in the parent generation. Data is drawn from the complete Swedish population using administrative register data on more than 2,000,000 parent-child links. Findings show that little or none of observed fertility correlations can be attributed to the causal affect of growing up with another sibling as such, instead shared characteristics between parents and children such as fertility preferences, ethnicity, religion or socioeconomic background appears to explain observed fertility correlations.

*Key words: Leather industry, household footwear sector, women workers, institutional support, division of labour*

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows the division of labour system of footwear production activity at the household level. Men and women have specialization in each operation in the footwear production activity. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production system. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training. Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has made significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.

*Perceptions and Causal Attributions of Atopic Dermatitis in Japanese Adult Patients*

Lay theories of aetiology serve to reconstruct some sense of order from the fragmentation produced by illness. They are also related with illness behaviors and responsibility for health of the patients. In the last decade, many articles have been devoted to the study of the causal attributions of patients of chronic illness such as cancer, diabetes, heart disease, and depression. Little attention has been given to the causal beliefs of atopic dermatitis patients.

Atopic dermatitis, a chronic itchy inflammatory skin condition, has many kinds of treatments. This situation has brought confusion into both the clinical settings and the patients' lives in Japan. Adult patients with atopic dermatitis, whose number has been increasing, have to choose appropriate treatment for themselves on the basis of their own perceptions and causal attributions of their disease.

We examined the illness beliefs of patients with atopic dermatitis about their causal attributions. Semi-structured interviews were conducted with twelve Japanese adult patients who had suffered from atopic dermatitis for years. The participants were recruited in Kanto area, using snowball sampling. The participants reported various beliefs about causal attributions such as dietary habit, lifestyle, bacteria, their innate constitutions, nuclear accidents. We analyzed the factors in the viewpoint of the distinction between internal/external attributions. The result shows the influence of patients' causal beliefs on self-care activities.

*What Makes Junior High School Students and Their Parents to Do More Pro-Environmental Behaviors? - Results from Intergenerational Study in Minamata, Japan*

Experiences in nature, sharing knowledge about environmental issues and environmental awareness are examined as the factors to prompt junior high school students' and their parents' pro-environmental behaviors. Based on the survey we conducted in Japan, we found that sharing knowledge is the common factor to promote students' and their parents' own pro-environmental behaviors. Other factors had different effects on their own behaviors.

In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those three factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 3<sup>rd</sup> grade junior high school students and their parents in that city.

Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors, 2) Experiences in nature are in correlation with only students' pro-environmental behaviors, not with parents' behaviors, 3) as for students and fathers, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors and 4) as for mothers, awareness of personal responsibilities for doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

*The "Classical" Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man*

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the "developed countries" due to formation of mass consumer society, 2) dynamics of alienation in "developing countries" that takes place in classic terms of alienated labor and a strong social stratification. But really in globalizing world we can see sharply distinguished types of alienation? Probably today we should talk about rhizome (Deleuze, 1980) of different dimensions of alienation. Using the concepts of diverse trans-phenomenon (trans-politics, trans-economics etc.) of French post-structuralist Jean Baudrillard (2006) I'm representing the concept of «trans-alienation» which is a hybrid of "new" Western and "old" Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The "democratic" Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomie and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a "dead subject": a vicious circle: alienated labor ↔ alienated consumption. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show revision of the terms "subject" and "subjectivity" and indicate the possibility of resuscitation active social agent as a full-fledged subject of power, of his will, intentions and desires. This "resurrection" is possible by the development of new ideas about the properties of the social environment (conditions): a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

**KOMLIK, OLEG\*** (Ben-Gurion University, [komlik@gmail.com](mailto:komlik@gmail.com))

*The Socio-Political Foundations of the Zionist Banking System in British Mandatory Palestine and Its Institutional Change in the Political Economy of Israel*

Tracing the actors and focusing on the institutional dynamics, the purpose of this paper is twofold: to explain the evolution of the Jewish Zionist banking in British Mandatory Palestine and to analyze the extensive transformation of the financial system during the first decades after the Israeli independence.

In 1948, when Israel was established, there were more than twenty banks and a hundred of credit cooperatives. This was the legacy of the pre-state period in which this fragmented Jewish banking system was formed by the British liberal legal framework, social and business networks among German origin Jewish bankers, power struggles between the local political actors—while the Zionist ideology unites them all.

Thirty years later, in the end of the 1970s, the landscape of the Israeli banking was completely different: it was dominated by only three powerful banking groups which have become almost exclusive actors in the financial and 'real' markets. The government has decided to create a 'state-led' financial system (similar to France) and brought about an extreme consolidation in the banking sector, in order to control the monetary system and optimize the channeling of capital for achieving industrialization. Through ordinances and informal means, embedded in institutional arrangements, politicians and state bureaucrats adopted and simultaneously applied a triangular policy: giving institutional preference to three specific banks; imposing discrimination against the rest; and prompting mergers in the field. The regulatory authorities also allowed the three largest banks to become 'universal' (similar to Germany), what made the implementation of the

government's developmental strategy easier and concurrently strengthened the banks' dominance in the political economy of Israel.

Therefore, due to the national historical context, political connections and social networks, the "big three" have become the state's loyal policy partners. And in return, they claimed and received a preferential status that served their business interests.

#### *Emergent Platform Stage of Japanese Civil Society after the Fukushima Accident: The End of "Winter of Social Movements" in Japan?*

After the severe accident in Fukushima Daiichi nuclear power plant, major campaign issues in anti-nuclear power have become variable. Before the accident, these issues were related to the anti-nuclear power plant construction in particular regions and anti-atomic weapon for the risk of causing radioactive contamination. However, this crisis broadened the range of these issues and changed the risk. Not only living environments in Fukushima were destroyed by the tsunami, but also the environments in other regions were influenced by the risk of the unseen health problem which may be caused by radioactive contamination. How did Japanese civil society organizations respond to the arising issues? What are the differences and commonalities of the organizations working through each issue?

To investigate the questions mentioned above, we conducted interviews with leaders of civil organizations on related issues in Tokyo, Osaka, and Fukushima, and a questionnaire survey on hundreds of the organizations which appeared in newspaper after the March 11.

From these researches we find out that the wide range of issues in nuclear power which was caused by the crisis gave way to the emergence of, not only the anti-nuclear power organizations which passed through the "winter of the social movements" before the Fukushima accident, but also new comer organizations which keep sometimes ambiguous or neutral stance on nuclear power. But, for example, a new comer movement proposed a law request for the victims, which was finally got through, to the local government. In other words, a newcomer organizations can have the means of accessing Japanese society. So, these organizations can provide the alternative means to fight against the government for Japanese civil society organizations of the issues in nuclear power. These research findings must make important resources to predict the future of the civil society after the great earthquake.

#### *The Influence of World War II-Experiences on Today's Older Workers*

Older workers are at the center of many current policies. These workers' activity is essential for maintaining a sufficiently large and well-qualified workforce, and for ensuring a sound financial basis of pension schemes. Therefore, policy-makers encourage older people to work. However, policies to this aim meet some challenges because older people are not only influenced by current development. Instead, they are also subject to life-course influences, meaning the on-going effects of past experiences. This presentation explores the life-course effects of World War II (WWII)-experiences on older workers. These experiences are, e.g., a soldier or a prisoner of war during WWII. The life-course effects of WWII-experiences can function through three main mechanisms. First, the career interruption created by WWII may have a scarring effect similar to the one of unemployment spells, and thus influence the further career progression. Second, generational membership influenced how individuals experienced WWII, and it also influenced which historical developments of the labor market people participated in. Third, WWII-experiences can influence health status, personality and world view, which in turn, influence the decision on when to retire. This presentation answers two questions: Do WWII-experiences affect workforce participation in old age? Does the effect depend on the timing of these experiences within the life-course? I conduct a sequence analysis with data from the "Survey of Health, Ageing, and Retirement in Europe" and the "English Longitudinal Study of Ageing". The analysis determines life-course differences according to, e.g., gender, and generational membership. Moreover, the analysis explores how labour market structures and retirement policies modify life-course effects by comparing countries: Germany, Finland, Poland, Sweden, and the United Kingdom. Findings help to refine theories on old age, life-courses, and the labour market. Moreover, they help policy-makers in countries that recently participated in a war to design more effective policies for older workers.

#### *Local Food Movement and Sustainable Community Building in Seattle*

A growing number of consumers are demanding alternatives to the globalized, industrialized agro-food system that foster and rely upon social relations embedded in a particular place. The food localization movement is an unmistakable feature of the urban corridors of the U.S., where direct farmer-to-consumer relationships are becoming increasingly common. For instance, there has been a 4.6-fold increase in the number of farmers markets across the U.S. between 1994 and 2013. In 2007, more than 12,500 U.S. farms reported marketing products using the Community Support Agriculture (CSA) model.

This article examines the development and current state of the local food movement in the Seattle metropolitan area of Washington State. We are particularly interested in the roles that different actors play, and how these actors formed connections with one another as the local food system developed across this region. We also examine the positive effects that emerged from food system efforts, the challenges that were overcome and those which were not, and the emerging challenges and needs. We pay close attention to how low-income residents and ethnic minorities participated in and benefited from local food system development efforts. Data are derived from interviews with local farmers, retailers, non-governmental organizations (NGOs), and government officials conducted between 2011 and 2012. Government statistics and documents, and other archival materials were also collected and analyzed.

Overall, our preliminary findings suggest that a local food policy initiative in Seattle helped not only promote local food consumption and support local farmers, but also provided opportunities to connect various actors in the food system. What is particularly noteworthy is that local food networks connected actors belonging to traditionally different sectors, and with a regulatory schema for the sale of local foods, the localization movement became in many ways institutionalized allowing for accelerated movement toward urban sustainability.

#### *Movements and Counter-Movements in Korean Environmental Politics of Post-Fukushima*

This paper intends to explain how the Korean social movements engage in the environmental politics after Fukushima disaster by focusing on the competition between two master frames, eco-justice versus green growth. We believe that Korean social movements have more actively developed zeal of nuke-free society through engaging in various nuclear issues after the disaster. Simultaneously, counter-movements based on green growth frame have more actively supported nuclear plants as an alternative to peak oil or climate change. Each movement tries to seize the so-called master frame, 'eco-justice' or 'green growth' respectively. As the former is strengthening its relationship with global and local NGOs, so the latter is focusing on the national and local governments, business and media groups. Divergent movements in Korea are converging again after the Fukushima incident with the flag of global justice frame with expanding their activism into transnational arena. Simultaneously counter-movements are also developing a strong solidarity with the master frame of growth. The Korean environmental movements engaging in such contentious politics pay more attention to regional collaboration in East Asia to cope with unexpected high risks at various levels.

#### *Titanic and Mcsex: Accomplishing Masculinities Among Chinese Men Who Buy Sex*

It is argued that a profound transformation of personal lives has taken place in late modern Western societies. In particular traditional 'procreative' and modern 'companionate' models of sexuality have been increasingly supplemented by 'recreational' sexual ethics. Hong Kong follows a similar but somewhat different path due to its Confucian Chinese culture, British colonial history (1842-1997) and the rapid advance of globalization. Departing from traditional masculine roles, Hong Kong men are struggling among different discourses of heterosexual male sexuality and are increasingly preoccupied with the construction of a new self.

It is under this background that I would like to explore the newly emerged scripts for Chinese masculinities. Based on 24 in-depth interviews and 2 focus group discussions conducted since 2012 of Hong Kong heterosexual men who buy sex, this paper examines these men's involvement with commercial sex in relation to their male identity. Following Rofel (2007), I will argue that these men

are a desiring subject with 'sexual, material, and affective self-interest'. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or McSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a 'sunken boat' or Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men's commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism.

### *The Day Wikipedia Stood Still: Wikipedia's Editors Participation in the 2012 Anti-SOPA Protests As a Case Study of Online Organization Empowering an International and National Political Opportunity Structures*

This paper contributes to the discussion on Internet mobilization and on international social movements' ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The event studied is the "first Internet strike" of 18th January 2012 against the SOPA legislation proposed in the USA. Wikipedians from all around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedia editors are shown to share values of the international free culture movement, through experienced Wikipedians were also likely to be conflicted about whether taking part in a protest action is not violating the site's principle of encyclopedic neutrality. Wikipedia's participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation (24 hour site's blackout) was a major factor that led to a creation of an international political opportunity structure (worldwide awareness of and protests against a proposed American legislation) enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

### *Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries*

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements have pluralized and become more heterogeneous since the 1970s, while life courses destandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of destandardization by investigating which social strata are driving the process. We examine differences in destandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Survey (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents' 15<sup>th</sup> and 35<sup>th</sup> birthday using sequence analysis, which allows examining complex life course patterns.

The empirical results show for all countries that a) 'traditional' sequences of family formation are diminishing and b) life courses of the lower educated have become more destandardized than those of the higher educated strata. This is due to the fact that a new standard of family formation emerges among the higher educated, while the lower educated follow a variety of different paths. Specific life course pattern contribute to the social stratification of changing family life courses. Overall, our results suggest that destandardization is to a lesser extent fostered by value changes, but much more by social deprivation and failure to establish stable and socially accepted family trajectories among lower social strata.

**KONNO, MINAKO\*** (Tokyo Woman's Christian University, [konno@lab.twcu.ac.jp](mailto:konno@lab.twcu.ac.jp))

## *The Collective As an Ideational Entity*

As actors in a social world, we are well aware of the existence of collectives. Families, communities, organizations, social and political movements, businesses, states and so on can be considered collectives. We know that various social entities in our social world are not mere aggregates of individuals; they are more than the sum of their parts and transcend the individuals who form them. These entities act like other individual actors, welcome or reject us, ask us to act for them, and give meaning and a sense of direction to our lives.

However, the existence of collectives is no longer self-evident when we take a step outside the everyday world. Viewed from the outside, collectives seem to be mere aggregations, or relationships among individuals, the simple sum of their parts. Unlike its individual members, a collective itself cannot have a material body, a thinking brain, or a warm or cold heart. If collectives exist, they cannot exist in the same sense that an individual body does so.

How can we reconcile these two perspectives? This paper argues that such a reconciliation is possible by revisiting the nature of our social world, which is essentially a field of meanings. In this field, collectives exist as "ideational entities" in the words of Japanese sociologist Seiyama Kazuo. They do not exist in the same way as a material entity exists; instead, they exist as elements in a particular field of meanings. To the extent that this field is intersubjective, the collective acquires a unique ontological status for those sharing it. Thus, collectives are ideational but, nonetheless, real.

### *Toward a Sociology of "Sexuate" Beings*

Although biological factors underlie human sexual behavior and interaction, sexuality is a distinctly sociological phenomenon, as it is part of the social world that is endowed with and constituted through meaning. In this regard, sexuality does not differ from other aspects of social experience. However, its close connection to the biological body presents an especially interesting challenge for sociological theorizing.

The meaning of sexuality has been explored widely in the social sciences and humanities. One notable theoretical strand in these inquiries is gender theory. Gender theorists share a sociological perspective in that they view sexuality as part of the meaning structure that we constantly create. Another important approach is the theory of sexuality in organizations. Whereas modern organizations are supposed to be rationalized, these theorists have identified multiple ways in which everyday interactions occurring within them are sexualized.

Yet, the body itself is curiously absent from these and other theoretical approaches. Although the only way to know our bodies is through some meaning structure, this does not mean that the body cannot exist unless meanings are attached to it. The body exerts a powerful influence on social interaction, and sociological theory must account for it.

As social theorist Drucilla Cornell has argued, we are "sexuate" beings with multifaceted and multilayered sexual potentials. Our sexuate status creates the materials with which we construct our social world, which, is shaped through this process. A more adequate theory of sexuality must be based on an understanding of how the real and fictitious possibilities of attraction and repulsion among human organisms are acknowledged, used, and acted upon, on the one hand, or ignored, minimized, and rejected, on the other, in various social contexts. Building on Cornell's concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

**KONO, SHINTARO\*** (University of Alberta, [skono@ualberta.ca](mailto:skono@ualberta.ca))

### *Diversity in Leisure and Leisure Research for Social Justice in Japan: Seeking International Conversations*

Although Japanese leisure research literature has grown over the past four decades, it has not been well recognized at the global level largely because of the language barrier. Given the observations that local languages and leisure-like phenomena are closely intertwined with each other particularly in non-Western contexts (Fox & Klaiber, 2006; Iwasaki, Nishino, Onda, & Bowling, 2007), the acknowledgement of the existing Japanese leisure literature appears necessary to initiate constructive conversations on leisure and leisure research in Japan among international researchers. Therefore, a critical review of literature on leisure in Japan written by Japanese researchers in Japanese language was conducted. Four major challenges were subsequently identified: leisure research as historical description, the weak linkage between empirical and theoretical research, the persistent influence of a work-leisure binary perspective, and the ambiguity of the relevance of leisure research to contemporary social issues. To tackle these challenges, I propose that diversity and social justice perspectives (Parry, Johnson, & Stewart, 2013) can facilitate researchers' conceptualizing leisure as active and multi-faced phenomena reflecting social diversity, enhancing the linkage between empirical and theoretical aspects of research, increasing self-reflexivity, and proactively addressing social inequalities and social discourses. Rather than simply

importing Western perspectives, this paper argues for scholarly analysis cognizant of Japanese history, culture, and contemporary social issues, particularly family issues. I argue that a culturally-adapted communitarian model of diversity perspective on contemporary Japanese family settings will open space for a just research of diverse family issues, including the rapid rise of one-/two-person households and the so-called "invisible family" that do not necessarily fit the conventional idea of Japanese nuclear family. This study examines specifically gender and age issues in the contexts of such postmodern family configurations. Given the effects of globalizations on all nations, further international conversations are necessary to advance our knowledge on the subject.

#### *Expansion Of Higher Education: Demand, Supply and Differentiation Of Universities*

Russian experience of expansion of higher education offers to understand the specific lessons. Demand and supply were drivers of changes.

Part of the national economy has formed a demand for knowledge, qualifications. On the other hand, the mass demand has been formed by employers on a more or less socialized young people whose core competency is the relative ability to learn new subjects and skills of communication. This demand has brought primarily by the service sector and trade, which began to develop explosively now. Mentioned qualities became seen as a result of staying in higher educational institution. Specialty, for which there was teaching is not important for the employer, a possession of a higher education diploma is essential as a certificate of appropriate training. Seller of clothes, for example, should not have a diploma of trade manager, he may have engineer or teacher degree, but availability of a diploma is mandatory.

Demand (both kinds) of the labor market was transmitted into families. The educational system has responded by supply adequate to the families' demand. Now the increment of human capital is developed in some universities; implementation of the signal function, the production of certificates about staying in educational institution take place in other universities.

A second kind demand has led to growth of correspondence departments. There are lower requirements to students at those departments; learning there requires less time and efforts. Thus, it is easier to get a diploma. So enrolment in those departments became set equal to enrolment in full-time departments and surpassed it. Expansion of higher education turned out mainly expansion of the correspondence education.

#### *World Civil Society and Activist Identity in Japanese Environmental Smos*

Globalization can standardize the way people interpret their social worlds and act in them. Norms such as environmental protection, human rights and democracy have become more widely accepted. The concept of World Civil Society describes how increased civic communication across boundaries generates political opportunities for citizen groups by creating pressure towards national governments to abide by international norms in a variety of fields.

In this paper, the formation of activist identities within the Japanese Environmental SMOs is studied against the backdrop of global diffusion of norms, ideas and forms of action as well as Japan's role in the international community. Globalization supports activist identity in Japan: Japan's wish to become a recognized and actively contributing member of the international community creates ties with a normative community that many activists can readily relate to.

As Japanese social movement organizations have traditionally derived their strength from their unique ties with the local communities, it is important to ask how the local and the global interact in the processes of civic mobilization and formation of activist identities. Are we observing increased glocalization, or the development of genuinely cosmopolitan ethos and global mentalities?

Awareness of global environmental problems transformed significantly during the so-called environmental boom of late '80s and early '90s. The 1990s have at the same time been called the era of the emergence of Japanese civil society. My paper discusses how the Western-style environmentalism influenced the Japanese environmental movement at two points of time: the environmental boom of the '90s, and post-3/11 era—and how it interacted with the indigenous elements therein. The approach is micro-sociological: I study how environmental activists represent themselves and their role in society in life-story interviews. What role does the juxtaposition of Japaneseness and foreignness have in these discourses? Is there room for cosmopolitan identities?

#### *Expansion of Vocational Education and the Social Reproduction of Working Class in China*

In post-reform China, the value of education is heightened in the country's development of a market economy. Driven by a neoliberal ideology of human capital development, the Chinese state envisioned education as a motor of economic growth and has implemented a series of education reforms. In parallel to the adoption of an export-oriented growth model, the role of vocational education is emphasized in the past two decades – to train secondary school graduates with skills to match the needs of the developing industrial sectors. This paper describes how the expansion of vocational education in China responds to the neoliberal idea of human capital development. It also investigates its impact on the life chances of students with rural background, who previously had limited chance for post-compulsory education. Based on the fieldwork data collected in three vocational schools in Chongqing, we find the students have an urge to craft marketable selves through the acquisition of educational credentials. Earning degrees in vocational schools is motivated by their aspiration for upward mobility. However, many students show their pessimism after working side-by-side with other factory workers on the production lines during their internship. This paper argues that under the developmental mode in a globalized market, China relies heavily on labour intensive manufacturing-based economy. The state-capital alliance has already shaped and structured the types of jobs that available in the labour market. The expansion of vocational schooling operates in the guise of training and skill development; but, in reality, these educated youth only becomes members of the new generation of migrant workers for the use of the export-led industrialization. The human capital argument for national development has failed to deliver on its promise.

#### *Governance Matters?: Social Concertation and Macro-Economic Outcomes*

The contemporary labor market and welfare state has undergone dramatic changes since the 1980s. In most countries, governments have been facing the declining economic growth, higher level of unemployment, rising inequality, and tighter fiscal constraints. Just as the context of labor market and welfare state has been changed, the patterns of governance coping with the problems have also changed significantly.

Previous literature shows that the macro-economic outcomes such as unemployment and inequality have something to do with the different patterns of governance. This study seeks to examine the relationship between governance patterns and macro-economic outcomes by analyzing the 30 year trajectories of labor market and welfare reforms and policy-making systems in 20 advanced countries. We do so by proceeding as follows.

First, using the optimal matching technique, we identify different trajectories of labor market and welfare reforms and policy-making systems in the three decades from 1980 to 2009. Second, we group the countries based on the similarities in reform trajectories and policy-making system changes. Third, we compare the levels of unemployment rate and inequality across the groups.

The results show that countries characterized as coordinate market economy have developed new social welfare and active labor market programs relatively early and have relied on more consensus-based policy-making systems, which require the cooperation between government and organized interests for coordinating macro-economic objectives. The results also reveal that those countries following higher expenditure on new social risks and concertative policy-making trajectory perform better in terms of reducing unemployment and inequality. We discuss the implications of these findings for the development of new governance model in Korea.

#### *Conservative Movements and Political Threat Structure: Focusing on History Issues Related Groups in Post-Cold War Japan*

Since the 1990s, a growing set of conservative movements has become conspicuous in Japan. Major movements that have brought media's attention and political and diplomatic struggles have emerged starting from history-revising movements led by the *Atarashii Rekishi Kyokasho* or *Tsukurukai* up to Xenophobia movements led by the *Zaitokukai* in recent years. Taking these movements into account, this paper asks: what triggers conservative(or right wing) movements in post-Cold War Japan?

Social movement scholars have argued that mobilization is incurred from political opportunity structure(POS), which simply put, when political opportunities open, people gather together for contention. However, although POS theory has provided a great deal of explanatory power, it also exposes its explanatory weak-

ness: where a movement occurs when POS closes. This leads to shed a new light on political threat structure (PTS). While POS refers to favorable political environments, PTS presumes the opposite like repression. In this regard, this paper focuses on PTS and argues that PTS influences mobilization in the case of Japanese conservative movements. When observing conservative movements after the 1990s, movements were triggered though POS closes.

In order to support the argument, this paper first addresses the relations between POS and PTS and what constitutes PTS: threatening Cabinet's ideology and formal speeches like the Murayama Speech, unfavorable remarks and behaviors by politicians, etc. Next, by selecting three 'major' conservative civic groups and through discourse analysis of these groups, it explores how they were mobilized under PTS. Lastly, this paper attempts to find whether certain combination of PTS factors exist to stimulate movements.

This paper intends to contribute to understating the mobilization of conservative movements - Japanese one in particular - and to the academic discourse of the relation between POS/PTS and movements.

#### *Immigrant Occupational Attainment in Japan and Its Determinants; Is It a "Structured Settlement"?*

Japan as a "post-translational society" has recently shifted into a "new" country of immigration as southern European countries. However there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to reveal immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed; to the first question, we answered that socioeconomic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees and Korean Residents. In addition, there is a gender gap in a return of educational attainment, which tends to be smaller for females than for males. To the third question, we can argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in western developed countries. However, it is also revealed that Japan has experienced multiple mode of incorporations of immigrants simultaneously, or a "structured settlement" as a feature of "new" country of immigration.

#### *Refugee Returns - Experiences of Inclusion Here and There*

My doctoral dissertation focuses on the personal experiences of research participants, legally defined as refugees, in relation to their reentries to the region of their origin, from Finland. Reentry, a fluid concept, adopted from intercultural communication research, illuminates several types of return that appear along a spectrum from normative notions of 'permanence' to relatively transnational outcomes. Specific examples in my interview data include forced return, voluntary return and onward migration, patterned visits, following return in Chile, Iraq, or Vietnam. Applying Rosenthal's biographic-narrative interview as the interview method of study, the participants narrate their life story, which is then analyzed, in terms of phenomena linked to return, especially concerning the biographers' social networks. My aim in this presentation is to illuminate how the participants narrate experiences of inclusion and exclusion in different settings in Finland and as a returnee, in the region of their origin. In addition, the interviews illuminate other key settings, events, relationships and issues that play a critical role in their lives. Experiences of being different are frequent in the participants' narratives - both here and there - and they frequently reflect on this, often showing remarkable social acuity and awareness of social and cultural dynamics, in terms of aspiration, achievement, abandonment - or being contextually-abandoned, with the result of either achieving the aspired position or experiences of abandonment. In addition, normative framing and unquestioned assumptions are frequently encountered, presenting an ongoing and central challenge, for both myself and those I have invited to participate in this research.

#### *Returning Refugees' Life Stories*

My doctoral study looks at refugee returns applying Rosenthal's biographic-narrative interview as the method of inquiry. Focusing on reentry, a concept coined from the field of intercultural communication denoting the immediate experiences of people returning, the applicability of the method is being elaborated on in reference to different types of interview participants, returning from Finland to the region of origin, e.g. the case of three voluntary returns to Iraqi Kurdistan from Finland. All three interview participants held a legal status of a refugee in Finland, stayed there for at least 2 years, and returned under the auspices of an IOM programme of assisted voluntary returns in the beginning of 2013. In order to examine the return processes as a whole, with special emphasis on social relations and networks, and the impact of the time spent in Finland in the participants' lives, the biographic-narrative interview was chosen as the most applicable method to elucidate the genesis of return, key turning points characterizing the participants' lives, the various salient social and cultural dynamics concerning the return decision, and what the future looks like from the participants' present perspective. It is a matter of looking at "the experiences preceding and following the phenomenon in question" (Rosenthal, 2004: 53). For the analysis, the procedure of biographical case reconstructions is followed step-by-step: biographical data, text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of types and comparison of cases. Challenges are apparent regarding other types of biographical data. That said, both the levels of narrated and experienced life history fall within the scope of my study.

#### *Pragmatic Restrictions: Politics and Policy Limitations In Turkish Refugee Regime*

This paper scrutinizes how the Syrian refugee crisis affect Turkey's decades long geographical restriction policy on admitting asylum seekers. It presents how foreign policy goals provide a context for pragmatism in making immigration policies. It also debates how the reaction of societal actors to immigration affects the making of Turkish foreign policy vis-à-vis the Middle East. Thereby, looking at the Syrian refugees crisis, it presents a case of public philosophy clashing with policy.

Turkey is one of the last four countries in the world that remain to impose geographical restrictions on admitting asylum seekers. For decades, policy makers appealed to Turkey's geographical region as a discourse for rejecting asylum applications of those that came outside Europe. While under the Cold War conditions this may have made some sense, in its aftermath this policy remains unintelligible. Given the recent hike in illegal entries to or residence of foreigners in Turkey, this policy serves to keep refugees in limbo and forces them to seek informal employment in Turkey. Yet, since the 1980s geographical restriction is pragmatically used when it comes to settling people of "Turkic" descent - serving the interests of Turkish foreign policy inasmuch as its goals did not clash with the public opinion. The most recent Syrian refugee crisis, however, is the first instance whereby there is a clash between the two. AKP government seeks policy pragmatism with geographical restriction once again and provide refuge for Syrians whilst the public philosophy remains opposed to receiving any foreigners, including the Syrian refugees to Turkey.

Overall, this paper debates the Syrian refugee crisis as a case study to assess to how far Turkey's immigration policy can appeal to pragmatic policy solutions rather than drastic changes in policy and public philosophy dealing with foreigners.

#### *The Turkish Dilemma: How Should Islam Relate To Republican Era Collective Memory?*

This paper scrutinizes the ways in which the secular Republican collective memory clashes with Islamist collective memory in Turkey drawing upon insights from political sociology and political history. Among others, the ascendance of political Islam in Turkey for the past decade also illustrated cleavages in society regarding the basic tenets of collective memory. Relentlessly, the supporters of secular Republicanism retained the ethos that made "Turkish people a singular nation with ancient roots in Central Asia as well as Mesopotamia and racially not different than the Westerners" (Inan 1968). In a denigratory mode, this ethos rejected any connection between Turks and Arabs and recently went as far as appropriating to the Prophet Mohammed Turkic origins thanks to his families "mythical" connection to the "ancient Turkic" population of Sumerians. While not fully ridiculing

this ethos, the supporters of political Islam in response vied to emphasize Islam and its Turkish martyrs as a predominant character of collective memory. In other words, Turk's gallantry, statecraft superior to its neighbors, and finally tolerance to the weak became the underlying theme of such collective memory. It is puzzling to see that while both ideologies underline superiority, history, and continuation in Turkish historiography, but they diverge on how to fit in Islam in this composition. In the end, we face a very pious and conservative nation who call themselves defensively as the "real" Muslims vis-à-vis each other, but not certain about how to fit in the heritage of Islam in the making of their collective memory as a nation. This paper investigates the roots and effects of this dilemma on the relation between politics and religion in Turkey.

#### *Patterns of Substance Use in Entertainment Venues in Latvia:*

A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to EMCDDA). Monitoring surveys carried-out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the models of alcohol and illicit drug use were identified: young people try these substances at very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug choices are made to suit particular entertainment purposes and driven by desires of achieving known effect. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marihuana); at the same time drugs in pills or plasters are in favour. We can speak as well about the prevalence of substances with stimulant effect that offer effect appreciated by some users: catching unexperienced energy, feelings of parallel realities etc. Another alarming trend is poly-use that increases the risk of overdose and intoxication. Poly-use combinations can include alcohol, legal medications, and various illegal drugs.

#### *Patterns of Transition from Youth to Adulthood in Latvia: Comparison of Four Generations*

Authors analyse the transition of young people to adulthood between the second half of 20<sup>th</sup> century and the first decade of 21<sup>st</sup> in Latvia putting in focus the transition from education to work. Employing the generations approach as theoretical frame allows identifying the ties between historical events and living conditions, and individual biographical solutions. We distinguish four generations of youth: 1960–70s, 80s, 90s (the time of national awakening) and the millennium generation. Previous research demonstrates that rapid changes in political system in Latvia echoed in the transition to adulthood. We approach these changes by cross-generational comparison of young people's transition from education to employment, their occupational choices and effects of education on further life-paths. The analysis is based on data from national youth surveys carried out between 1967 and 2012.

Up until late 1980s the transition to adulthood was a rather standardised process, the system offered stability and security at the beginning of independent life, e.g., guaranteed jobs, but some were not satisfied with that. The status of an individual was mainly defined by their position in economic, regional and political structure and was less dependent on personal qualities. The transition to market economy marked the turn towards new models; individual qualities and ability to take risks became more important than qualification and professional training. Finally, global processes marked the transition of millennium generation, when individualisation trends and increasingly complex social life encouraged looking for individual solutions by mixing various strategies and activities. For a long time the society believed that each next generation would achieve a better life. However,

looking at the generation that enters the adulthood in present days brings up not so optimistic forecasts. Meanwhile youth research in Latvia suggests that modern youngsters accept the situation and recognise the increase in opportunities.

#### *Lobbyist Activities of Religious Interest Groups – Germany and the USA Compared*

The question of political lobbying by religious (collective) actors is not an issue for interest group research only. Their public and political presence also raises questions concerning the relationship between religion and the state within modern, secularized societies. All modern democratic states know (traditional) regimes of religious governance that influence the scope of action of religious organizations and may open up or limit their opportunities to increase their political participation. In recent years the (scientific) concern regarding national regimes of religious governance has even increased since there have been processes of secularization, privatization of religious practices and religious diversification that have challenged historically rooted arrangements regarding the relations between religion and state.

This research project focuses on the political presence and participation of religious organizations in two countries with different traditions regarding both the role of organized interests in general and of religious interest groups in particular: Germany and the USA. The question is how religious organizations try to influence political processes in the two countries, thus to frame the political agenda, to be present in public and to establish relations to and networks with relevant (political) actors.

The strategies and means religious communities apply are analyzed via a qualitative analysis of documents published by religious organizations like press releases, position papers and their websites. Via a media analysis not only positions of religious organizations concerning certain political issues are investigated but also the results of their efforts to be present in the media and place their concerns publicly. The political participation of religious organizations is investigated via parliamentary lobby lists, the numbers of their members being elected to parliaments and their presence in parliamentary committees and governmental advisory boards which they are invited to as experts on specific issues and as relevant societal groups, respectively.

#### *A Challenge for an Expert: The Management of Acute Psychosocial Support*

According to Finland's Health Care Act, municipalities are responsible for organizing the acute psychosocial support in crisis and special situations. Typical of these situations is the need for immediate and simultaneous help, where obtaining the necessary resources is challenging. Acute psychosocial support includes psychological, social and mental help to the victims, their families and communities. All these parties should be considered in managing the acute psychosocial support. Strategic management is required when psychosocial support is organized for different groups, so that the general view is not forgotten and no one is left without the offered help.

The purpose of this study was to find out what helps the expert to quickly become a crisis and special situation manager and what helps the employee to change back to the expert role. In addition, the study sought answers to crisis and special situation manager's decision making and what kind of abilities crisis management requires? Both quantitative and qualitative methods were used including for data analysis. The data consisted of initial mapping and a theme interview made at Vantaa City social and crisis emergency department.

This study showed that the feel of being in control of a situation as well as being in control of oneself are factors supporting the management of acute psychosocial support. Both the employee and the team should have special skills to control the situation, as well as the feel of being in control personally. Crisis and special situation management consists of management support, structures, capacities and the support of various parties. These factors can be influenced by education and training. Education and training should be planned carefully, for example, by skill mapping to find weaknesses in skills so that training would be targeted correctly.

### *A World-Systems Methodology for the Study of Inequality*

Drawing on historical data on inequality within and between regions of the world-economy, we indicate that inequality within regions in both the core and the semiperiphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributional arrays—a global income distribution that is both systemic and historical—that has shaped the geography of winners and losers both over the long term and in more recent decades. This depiction suggests that (i) Schumpeterian cycles of innovation and creative destruction in the global production of goods and services have been key to shifting patterns of within- and between-country inequality, as these innovations have included (ii) the deployment of shifting and unevenly successful institutional strategies aiming to facilitate mobility and change for specific regions and/or nations within the world-economy. This exercise allows us to raise new questions for further research, but also to propose some empirical and methodological innovations to better advance future social science inquiry on inequality.

**KORZENIEWICZ, PATRICIO\*** (University of Maryland, College Park, [korzen@umd.edu](mailto:korzen@umd.edu))

### *Global Migration and the Contentious Politics of Citizenship*

Our understanding of migration changes fundamentally once the relevant unit of analysis is shifted from the nation-state to the world as a whole. Elsewhere, we have argued that ascriptive criteria centered on national identity and citizenship, and the relevant state policies emerging thereof, have served as a fundamental basis of stratification and inequality in the world since the nineteenth century. Moreover, we have indicated that the growth of between-country inequality through most of the last two centuries became a driving force for the migration of labor and capital: growing income disparities between nations over time generated strong incentives (e.g., drastically lower wages in poor countries) for both the migration of workers to higher-wage markets and the "outsourcing" of skilled and unskilled jobs to peripheral countries. Both trends exercised a "market bypass" that over the last two decades have been overcoming the twentieth century institutional constraints on labor flows that characterized the development of the world-economy. In the proposed paper, we further specify and expand our arguments by developing a new model that identifies the main forces driving migration across the world-economy. We test this model by drawing on an original cross-national dataset on population flows: this exercise allows us to more precisely identify country- and region-specific patterns of outgoing and incoming migration, and to assess the relative weight of specific variables (e.g., wage differentials, income inequality, civil war, famine, geopolitical location and migration policy regimes) in explaining these patterns. Finally, we consider the social and political tensions that have accompanied recent changes in these migration patterns, discuss how these tensions are shaping the politics of citizenship across the world, and draw some theoretical implications for rethinking how Karl Polanyi's concept of the "double movement" might be used to understand contemporary patterns of migration and its regulation.

### *The Genesis of Educational Inequality in Post-Soviet Russia: The State, School, Interest Groups*

In this paper we focus on growing social inequality in contemporary Russia which is being fostered and reproduced by the current setting of its educational system. Particularly, we look at the impact and effects of the education policy both on the federal and the local level.

The results of the study are based on the expert survey conducted in 2013 in three regions (Moscow, the Moscow Region, the Republic of Karelia.) The sample

includes officials of the federal and regional level directly engaged in the education system reforms of 1990- early 2000s, as well as school principals. We also conducted a content analysis of federal and region programs and legislation in the field of education in the period under review.

We discuss the restructuring of the education system on the basis of neo-liberal approach, which has become a common trend in globalization era, but we argue that its impact in Russia has had its own particularities with respect to stratification of schools (i.e. quality, resources and context) due to its institutional preconditions. To do this we reconstruct the meanings inserted by various interest groups in the process of restructuring of the education system (i.e. households, school principals, education policy makers, etc.) and set it against the formal institutional design of the reform. We show that these reforms (extension types of schools, the provision of school choice, the legalization of paid services, and rejection of affirmative action) have provided exclusive opportunities for elite groups and extremely limited opportunities for the more deprived strata of population.

Parallel to that we also discuss how the results of pioneering sociological studies in Russia and particularly their dissemination among the expert public have pushed the issue of inequality in access to quality education to become a major point in the national policy agenda in Russia.

### *Multifaceted Party Membership*

Party membership is in general in decline; however, both the trends and the membership figures vary among parties, and the meaning of party membership varies among members. Both the degree, type and quality of party member participation vary among party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members on the basis of their participation. Second, the characteristics of these party member types are shown. Third, the distribution of party member types across parties is explained on the basis of party level variables, such as level of intra-party democracy, party culture and campaigning strategy. Finally, the party member types are discussed and compared to other, newer forms of party 'supportership', and the democratic implications of party membership figures are put into perspective.

### *Experiences from within the 'Migrant Hierarchy': Imposed Categorizations As Definers of Social Identity for Highly-Skilled Migrants in Finland*

Studies of ethnic hierarchies in Finland show varying levels of prejudice towards immigrants based on their nationality and ethnicity. Levels of acceptance are also tied to the role of the immigrants in the economy and labour market (i.e. class standards). In the intersection of these value judgements an overall 'migrant hierarchy' is formed. At the bottom of this hierarchy are 'unwanted' humanitarian migrants from less familiar cultures, while at the top end are the 'migrant elite': 'wanted', highly-skilled, and preferably Western, migrants.

I study this hierarchy as a form of categorization that creates a social structure. This structure has an effect on the construction of migrants' self-defined social group identities; although these categorisations stem from the Finnish society and its views on immigrants, I believe that they are recognised and to certain extent internalised also by the migrants. Drawing from ethnographic and interview data emphasising lived experience and everyday life of skilled migrants in Finland, I will discuss how the imposed categories become strategies that can be used also by the migrants themselves in identity negotiations and to represent value judgements. As such they also point to possible problems with integration: in (re) drawing their group boundaries within this new social structure, skilled migrants in Finland are defining their identities not only as who they are, but also as who they are not: not 'unwanted' humanitarian migrants, but also not Finns.

### *Can Actor Relational Approach be Combined with Institutional Ethnography – What Could be the Benefits When Studying Information and Communication Technology Use in Child Welfare?*

The need to make use of an interdisciplinary approach is vital when studying the development and use of new technologies in welfare services. There is research that indicates that information and communication technology (ICT) affect

work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT.

This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems.

The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

#### *Mayume's Life History: Between Japan and Brazil*

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese-Brazilian, her appearance is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn't understand what they were talking. However, she adjusted very well to the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That's when Mayume faced a difficult adjustment: "I wanted to come here to see the town. I didn't want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself". She compares the Japanese town where she lived to Bastos: "Japan is a developed society, it looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that's too much land!" Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor building, lack of respect toward the teacher, lack of discipline. Mayume's dream is to return to Japan and attend college there.

Mayume and other children face ruptures in their socialization process due to their parents' labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

#### *Pension System Based on Sharecropping and Economic Security of Families*

Decisions about giving birth and upbringing of children imply consent to finance the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on the sharecropping – one of schemes of incentive system under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state.

The practical implementation of such a system would be based on division of pension insurance contributions, paid by a working individual, between the two pillars of the new system, in proportion to the expenditure incurred on his (her) upbringing by the state and the parents in the past. The first part would be spent on financing universal benefits, granted to all present pensioners on the basis of their contributions made in the past, during the professional activity. The second part of the contribution, the so-called second pillar, would be transferred directly to the parents of this person – increasing their pension capital (if they are still working) or in the form of direct payments (if they are already retired). Additional, capital pillar could be established to improve long-term economic security for those without children or provide an extra protection for individuals involved in the first and second pillar.

The empirical part of the analysis will be done for the pension system in Poland, in the context of its planned restructuring.

#### *Towards Usages of Europe By Patient Representatives at National Level?*

Following a series of landmark rulings of the European Court of Justice (ECJ) on cross-border healthcare, the access to healthcare in other EU Member States has been facilitated for European patients. After ten years of negotiations these rulings have been codified in the EU's Directive on the application of patients' rights. Europe thus now offers national actors various resources to pursue their interests beyond the opportunities of their national healthcare system including challenges and resources for patient representatives at member state level. But do these actors use those European resources inside their national healthcare system? Based on semi-directive interviews, this paper thus investigates if and how patient ombudsmen in the Austrian healthcare system include usages of Europe into their institutionalised routines and which are the national institutional limits to those usages. The paper argues that while Europe has rendered the national institutional boundaries of healthcare systems porous, control over patient flows is kept intact and that there is only limited room for manoeuvre for patient ombudsmen to use Europe at national level.

#### *Transition from School to Work, and Labour Market of Younger Generations in Japan*

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the "organization-oriented," and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practice is confronted with the pressure from globalization, and it is becoming difficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on prevailing insecure job market especially in younger generations in Japan.

#### *Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan*

In the late 1960s, from North America to Europe and from Latin America to Asia, many countries witnessed a wave of student protests. Since those movements showed distinct features from place to place and shared similar backgrounds such as the Cold War politics and common issues such as antiwar and academic freedom, they provide a good field to examine the critical question haunting recent social movement studies: whether and how culture matters in the emergence and process of social movements (See Johnston et al., 2009; Polletta, 2008).

Against this background, this presentation examines a campus protest at the University of Tokyo, Japan, from 1968 to 1969, using data from in-depth interviews with the participants to show how the students' ideas shaped their perception and interpretation of the situations in the course of the struggle and influenced their choice of strategy and tactics.

This presentation focuses on a group of students called "NON SEKUTO RAJIKARU" (non-sect radicals). The protestors were not monolithic but divided into three groups in conflict: Democratic Youth League of Japan (DYLJ) under the guidance of the Japanese Communist Party (JCP), the New Left sects which were seeking a new form of Marxism politics as an alternative to JCP, and the non-sect radicals without any affiliation to DYLJ or the New Left. On one hand, the non-sect radicals and the DYLJ and New Left students were equally marked by Japan's campus culture dating back to the 1910s: the strong tradition of Marxism as a guiding ideology of social movements and self-cultivation. On the other hand, the non-sect radicals developed principles against the basic lines of DYLJ and the New Left factions, including centralized and hierarchical organizations and strict Marxism orthodoxy. Thus, they created decentralized and horizontal organizations and based their choice on their firsthand observations instead of ideology.

*Risking It? Upper Social Class and School Choice in Finland*

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the 'collective assurance against risk', and as it increases individual risk, it might lead to social closure and enabling the strengthening of the 'lines of social division in the community'. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children entering lower-secondary school, and investigate how their hopes and fears regarding their children's education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and abroad, and as contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some 'international fears'. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

**KOWALCZYK, BEATA\*** (Warsaw University,  
[beakowalczyk@yahoo.fr](mailto:beakowalczyk@yahoo.fr))

*Expressing the Inexpressible. Japanese Artists about the March 2011 Tragedy*

The number of "Shinchō" a monthly Japanese literary magazine, issued in March 2012, published short diaries written by 52 Japanese artists to commemorate the tragedy caused by the Great Kantō Earthquake and the Tsunami, which happened the year before. Artists representing various genres of art such as literature, music, photography or visual arts were requested to describe these 52 weeks of their life and the process of artistic creativity after the disaster. In the society, where speaking about one's inner thoughts and emotions is not culturally approved, artistic work seems to be one of the most important, if not the sole, vehicles bringing up the *vox populi* to a broader attention. It can be said that it is thorough art that the social phenomena are reflected in the public discourse. It is art that collects individual experiences of the disaster in a diary of collective memory. In this sense art becomes also a *political tool*, as Jacques Rancière would say, which has the power to express the inexpressible, to render visible what from various reasons could not be revealed.

In my presentation I will analyze the content of the diaries to see what aspects of the events, which took place in the aftermath of the Earthquake and Tsunami disaster, were described by the artists and what was the purpose of casting light on these particular problems. Another issue I would like to raise is the question about whether the image of the tragedy as recreated from the artistic diaries is compatible with the one presented in the official discourse.

[beakowalczyk@yahoo.fr](mailto:beakowalczyk@yahoo.fr))

*Living Between Tongues. Elements of Evocative Autoethnography in Tawada Yōko's Writings*

Autoethnography can be described as *an approach to research and writing that seeks to describe and systematically analyze (graphy) personal experience (auto) in order to understand cultural experience (ethno)* (Ellis, Adams, Bochner 2011). The value of autoethnographic method lies in the possibility, it offers, of having an access to an inner (emotional reactions, feelings and thoughts of a respondent not revealed otherwise) insight into an analyzed problem. Consequently, this methodological paradigm recognizes forms of writing research – amongst which also literary works such as biographies etc. – which are consciously value-centered, where the searching subject is visibly present and her/his voice is of equal importance in forming statements about the social reality. If a literature is to be considered an

object of sociological interest, an autoethnography, especially its evocative genre, entrusts it with playing a significant part in describing the social world.

Given the above, in my presentation I would like to discuss elements of evocative autoethnography in literary works of the Japanese writer Tawada Yōko to see how the knowledge, which is acquired from literature, can be applied to an analysis of a social phenomenon, here: a professional career of a migrant writer, who works and lives between two languages: Japanese and German. Tawada Yōko left Japan at the age of 22 and at that time her knowledge of German was limited to grammatical rules. Ever since, she successfully writes and publishes in both languages, experimenting with the borders of language and public discourse. She is associated with the term "exophony", which may be defined as a voice from the outside resounding in the world of literary culture in a given country. In my presentation I will focus on the social condition of the writer in exile, while questioning the universality of the notion of artistic genius (Elias 1994).

*Why Is It That I Think I Am Better Than You? Antecedents and  
 Consequences of Hospital Employees' Assessment of Their Own  
 Skills Relative to Those of Their Colleagues*

Work in health care organizations requires employees to permanently improve their skills, and taking part in continuing education is a prerequisite for keeping a position or for being promoted. Comparing the resulting skills and abilities with those of colleagues and co-workers is a mechanism of status evaluation and, in turn, may produce perceptions of superiority. In a survey of 1050 employees (physicians, nurses, social workers, etc.) from 49 hospitals we asked respondents whether they were worse, equally, or better skilled than the colleagues with whom they work together on a day-to-day-basis. 46 % reported to be better skilled (equally: 50 %, worse: 4 %). This finding is not due to a higher representation of better skilled respondents in the sample and is found in both formally high (e.g. physicians) and low (e.g. nursing assistants) skilled employees, so apparently many respondents overestimate their skills or relate their skills to those of a selective and less skilled subset of the actual comparison group. We try to explain this finding using theories from sociology, social-psychology, and psychology. Estimating multilevel models with individual (level 1) and hospital (level 2) characteristics, we identify antecedents and clustering of employees perceiving to be better skilled than their colleagues. Linking the proportion of these employees in a hospital to its quality of care we attempt to gain insight into the consequences of this phenomenon: Do hospitals do better or worse with higher proportions of employees that rate their skills better than those of their colleagues? We finally discuss whether the high opinion employees have of their own skills may be a result of the permanent self- and third-party evaluation at the workplace and in contemporary societies as a whole.

*Functional Differentiation and the Public Sphere: An Attempt  
 in Theoretical Formalization for Historical and Comparative  
 Research*

This study elaborates on the concept of functional differentiation as a structural feature of modern society. Methodological criteria to judge whether society is differentiated functionally remain elusive, although these must be presupposed when the concept of functional differentiation is applied to the comparison of societies. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logic. Conversely, however, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the case where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, courthouse, market, and educational system, does not guarantee a functionally differentiated structure. To exploit

this concept for a comparative survey, the inquiry must focus not only on differentiation itself but also on preconditions leading to such a structural change and the formalization of this relationship in general terms. This study underlines one of the formal features of functional differentiation, namely, the idea of horizontal heterogeneity, the emergence of which assumes the societal spread of the tolerance for diversity and rejection of the omnipotent instance that orders the world hierarchically. In addition, the public sphere in Western modernization is highlighted as one of the significant places where these collective mentalities and expectations were cultivated. On the basis of this theoretical consideration, previous historical and sociological studies on East Asian civilization processes, especially the Japanese case, are revisited.

[koyanagi@tokiwa.ac.jp](mailto:koyanagi@tokiwa.ac.jp))

### *Research on Aged Prisoners in Japan*

#### 1 Situation of the research

In accordance with aged society in Japan, the population of people whose age is more than 65 years has been increasing twofold during in the last two decades. In this context, the number of arrested people aged over 65 years has been increasing by 3.8 times and the population of aged prisoners is also increasing rapidly.

#### 2 Purpose and sample size of the research

The purpose of this research is to clarify the actual situation of aged prisoners. Almost 450 male and 150 female aged prisoners are investigated focusing on their life style in society, motivation and situation of the current crime, specific feature of criminal life curve, philosophy of life, future plan after release, etc.

#### 3 Outline of the research

The details will be presented at the session.

Most dominant type of crime is larceny, and then stimulant drug control law violation, and fraud. Half of them were unemployed. 65 % married but 40 % divorced then 60 % did not have any persons who support prisoners when they committed a crime. 53 % have disease. 45 % do not have any place where they can live after they release from prison. Most of them do not have any job after release. Total of 53 % have disease and receive many kinds of medicine.

ANDO, YUICHI (National Institute of Public Health)

OSADA, HITOSHI (Suginami City)

### *Newly Started Activities of 80-Year-Old Japanese Seniors*

Eighty-year-old Japanese seniors were asked if they had started new activities after their age of 70. All seniors aged 80 years living in Suginami City, Metropolitan Tokyo, were invited to participate to a research program organized by the city as her 80-year anniversary. Among the seniors listed, 2,476 persons responded to a mailed questionnaire (response rate was 66.0%). Over 70% of the respondents (72.1% of men and 72.5% of women) reported their health condition was excellent or fair.

Thirty-nine percent of the respondents (38.7% of men and 39.3% of women) answered that they had started some new activities after age 70. Various activities were reported. The most frequently mentioned new activity was hobby (46.8% of seniors who had started new activities; 37.4% in men and 53.3% in women), followed by athletic activities (35.0%; 33.3% in men and 36.1% in women) and personal computer and/or mobile phone (21.0%; 25.6% in men and 17.7% in women). Not only sedentary activities such as reading and playing games, but also kinetic activities, including walking, swimming, and gymnastics, were indicated. Seniors who were healthy at age 80 were more likely to have such activities than those who were not healthy.

In Japan, where population aging has been rapidly progressing and life expectancy at birth has been rapidly increasing, seniors have become younger and younger than their age-peers in older cohorts, physically as well as socio-psychologically. The results of this first-wave survey of 80-year-old seniors living in a relatively affluent urban area seem to show spryness and "youthfulness" of today's Japanese seniors.

### *Experiences of Modernity and the Modernity of Experience*

It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true what Michael Oakshott has to say about this topic: "Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains" (*quoted in*: Jay 2005: 9). Although this paper sees itself in the tradition of this 'recklessness', it does not aim to escape the ambiguities of 'experiences'. On the contrary, ambiguous is not only the word, but also what it stands for. But it is precisely this ambiguity of *experience*, and the acknowledgement of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman). In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the already mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. And I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolívar Echeverría. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity.

### *Civilizational Distinction: Figurative Changes of Contemporary Societies*

A common civilizational core binds all contemporary societies. It provides interaction, trust and solidarity. It is a civilizational unity is a basis for the emergence and existence of multiple modernities with their endless social and cultural diversity (S. Eisenstadt, J. Arnason, P. Wagner). The development of the western and eastern societies in the civilization relation should be comparative study based on the figurative Sociology of Norbert Elias. Figuration is an entwinement of relationships people, intended and unintended social and cultural processes. In the center of the figurative process is fluctuating voltage equilibrium, a balance of power, which belong to the structural characteristics of configurational currents. Civilizational distinction show a full range of colorful entwinement intentional and unintentional links, networks, activities, structures, states. Sociogenesis symbols of culture and civilization shows how they precede unplanned actions and relationships between individual and group. However, they require an understanding and designing models or strategies of economy, government and culture, both at the individual and collective levels. In every contemporary society develops a flexible balance of power between individuals and groups, a specific configuration of social inequality, resources, and efforts. Civilizational order as well as at global and local levels is a set of flexible forms of social mobilization, effective institutions, technology management, cultural controls and patterns. Figurative modifications, meaning moving modernities of contemporary societies, speak about degree of their civilizational variability while maintaining a fundamental properties in common. Figuration as interdependence of people is primarily mediated by factors like social communication. The main mechanism of interaction within and between national societies (states, communities) are historically formed socio-cultural practices and a variety of social communication (transit, exchange, and use of experience, knowledge and information). Civilizational configuration is a variety of modernities, coexisting and interacting actively in the changing political and socio-cultural space.

[vvk\\_soc@mail.ru](mailto:vvk_soc@mail.ru))

### *Socio-Cultural Resources Development of Russian Province ("backs") in Context of Globalization*

The situation of contemporary rural province ("backs") in most Russian regions shows a doldrum of social, economic, economic and cultural life. The demographic situation has stabilized, yet the population in general and of an economically

active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural "backs" in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

**KOZYREV, GENNADY\*** (D. Mendeleyev Univ. of Chemical Technology, [genkozyr@mail.ru](mailto:genkozyr@mail.ru))

#### *Creating an Image of «Victim» As a Way of Creating Controlled Conflict Situation*

For creating controlled conflict situation and for finding (appointing) an "enemy" often an image of "victim" is being created, meeting goals and tasks of its creators.

An image of "victim" may be classified on the follow types: "victim-hero", "victim-loss", "victim as belonging", "victim-tragedy", "victim-country", "victim-nation", "multifunctioning victim" and other.

Constructed "victim" has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of "victim". Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of "victim" includes the following steps: *actualization*, "privatization", *heroisation*, *humanization*, *institutionalization*, *historicization* (mythologisation), *objectivisation*, *legitimization*, *sacralization*, *realization* of "victim's" image in the social and political practices.

Generated image of "victim" presuppose execution following functions in the real and potential conflicts:

- identification of people on the base of their attitude to the "victim";
- creation of enemy image who is guilty attacking "victim";
- consolidation of people to fight identified "enemy";
- upbringing of "new heroes";
- determination of people behavior in critical situation;
- image of "victim" is becoming the elements of culture.

Deliberately thrusting of "victim" problem generates disadvantageous situation for alleged "enemy". Direct of potential oppressor's image constructed, with necessity to oppose or annihilate it. The most important "enemy" characteristic is its mortal threat for person, group and society. Next distinguisher of «enemy» is dehumanization.

Special role in the process of both "victim" and "enemy" image construction belongs to mass media and first of all a television.

Generated image of "victim" may be used as motive for intervention of "third party", for deliver a "retribution blow" on a real or an appointed enemy.

**KRABBE, ROBIN\*** (University of Tasmania, [rkrabbe@westnet.com.au](mailto:rkrabbe@westnet.com.au))

#### *Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia*

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called "emancipatory ecological cosmopolitan commonism (EECC)", aimed at ending repressive domination. The equitable meeting

of needs is given priority, based on "synergistic satisfiers", with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEI's) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEI's currently underway in Tasmania, Australia to progress towards positive ecology and EECC will comprise the final part of this paper.

#### *Women's Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics*

Women's labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified than men.

If a person is overqualified, in the sense that an employee's level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one determinant - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

#### *Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia*

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities (e.g. gas, risks, techno-measuring devices and regulatory apparatus) interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technically-informed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as reasonably practicable - ALARP); and how regulators interpret their responsibility in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g. a concept of responsive regulation) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed: e.g. how do regulators perceive the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regulatory practices and effectiveness.

#### *Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States*

Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated as well as politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico's Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

#### *Challenges for Teachers and Pupils on a Vocational Program*

##### **Challenges for teachers and pupils on a vocational program**

This paper aims to analyze teachers' views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice.

In another social landscape - before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today, teachers in the vehicle and transport program partly facing a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I'll still do not want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the educational processes to become a car mechanic seem to have changed.

My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

#### *Social Transformation and the Memory in a Postwar Society- the Case of Kosovo*

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is "Memory vs. Forgetting" (2009), and the second one is "Socio-cultural Changes in Postwar Kosovo" (2010). Both projects are conducted by the Department of Sociology in the University of Prishtina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of creation of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and mentality, and the behavior patterns and practices.

Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in depth-interviews, and visual elements collected in the field, such as pictures

and video materials. The data show that people's relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

#### *Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. the Role of Socioeconomic Status and Ethnicity*

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents' socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents' labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries' actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Multilevel models are computed in order to account for variations within schools and between schools and to disentangle the complex causal process that determines adolescents' aspirations and expectations. First descriptive results indicate that adolescents' expectations reflect actual cross-country differences in age at first marriage and first birth.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

#### *Producing the Collective Subject: Anarchist Practices at the People's High School in Buenos Aires*

This paper analyzes the experience of a "people's high school" in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including "movements of unemployed workers" (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the "independent left"). One such organization, the people's high school (*bachillerato popular*) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds new light on how and why some uses of consensus seem to fall flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in an Argentine shantytown, the people's high school is using anarchist practices to create alternatives to neoliberal capitalism.

### *Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena*

In talk of the "international community", many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights work and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate fields of practice have emerged – one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

**KRAVCHENKO, SERGEY\*** (Moscow State University of International Relations, [sociol7@yandex.ru](mailto:sociol7@yandex.ru))

#### *Rethinking the Theory of Social Becoming: For a Humanistic Turn*

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural traumas lead to different ambivalences, clashes within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared "normal accidents" (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Urry, U. Beck). Taking into consideration these realities of new catastrophism I argue for a 'humanistic turn' in sociology, whereby societies should be examined through the patterns and character of their complexity-dependence and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robertson), synergetically takes into consideration paradoxes, risks, and dispersions of socium, searching for new forms of humanism, based on men's existential needs. The notion 'praxis' should be rediscovered: it should mean humane praxis - humanistic creative agency, the main aim of which is to preserve the human capital of all the generations and to maintain the balance between scientific, technological innovations and key environmental processes.

**WG01-895.1**

**KRAVCHENKO, SERGEY\*** (Moscow State University of International Relations, [sociol7@yandex.ru](mailto:sociol7@yandex.ru))

#### *Vulnerabilities to the Network Human Capital*

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its "normal accidents" (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recently in the history of mankind in the implementation of modernization the question about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should take the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintended consequences of human agency; it is necessary to consider the delayed hazard as derived from the scientific research and innovation: the effect of "normal accidents" should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

#### *Participation, New Forms of Corporate Governance and Social Responsibility – History, Discussions and Realities – Industrialised Countries, Central and Eastern Europe and Developing Countries*

Discussions to "participation" started in Germany within labour movement & works councils in 19<sup>th</sup>/20<sup>th</sup> century. Main questions were how workers & representations can participate in the production process, in works force organisation, decision making etc. The promoters were socialist parties & left wing circles, trade unions & works councils.

In France in the 80-s the "participation" was that base-democratic right which should stamp the "socialism in the colours of France". Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90-s went around Japanese participation offers in production processes. Predominantly was - 'Japanisation'. The following "Flexurity debate", had the idea to exchange "flexibility of working regime" into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ties in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bearers of debate were less in trade unions or „left political circles“. Targets were common responsibilities of stake- and shareholders for environment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Trade unionists in supervisory boards and works committee member's support this course; however, they were not any more the sole or key players of debate.

The discourse wins in social and changes away only from conditions of employment to the responsibilities and the consequences of the application of products. ISO 26000 is asked from the supervisory boards, the shareholders' meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European countries.

**KRELL, KRISTINA\*** (Leibniz Institute for Social Sciences, [kristina.krell@gesis.org](mailto:kristina.krell@gesis.org))

#### *Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?*

When exploring individual well-being, not only satisfaction with life as a whole is a suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day's expenses but also people's perception of how their effort and performance is valued by others (e.g. the employer), which can be a considerable aspect of mental well-being. In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

**KRELL, KRISTINA\*** (Leibniz Institute for Social Sciences, [kristina.krell@gesis.org](mailto:kristina.krell@gesis.org))

#### *Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe*

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people's lives are from diverse perspectives, which together form their "objective living conditions". As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one's own life, such as life satisfaction or happiness. The life domains that are included in the index are

- income / standard of living

- housing area
- health
- social relations
- work

Each domain incorporates a number of single indicators that describe this aspect as thoroughly as possible.

Constructing an index based on micro data has the advantage that the computation of the index for subgroups (e.g. by gender, age groups, etc.) is possible. In the lack of a micro data base for Europe that covers information on all the domains mentioned, the index combines three data sources: the EU-SILC, the ESS and the EU-LFS. At present it can be computed for a limited number of European countries for the years 2006, 2008 and 2010 (severely limited also for 2004).

First results of the index indicate that there is a high correlation between macro indicators of the economic strength of a country (e.g. GDP/capita) and the index as a whole, whereas certain domains of the index seem to be unrelated to those macro indicators. Particularly, this concerns the domains housing area and health. Hence, the indicator can give differentiated insight into the "performance" of countries concerning their population's objective living conditions.

#### *Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers' Interests in Japan*

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges popular generalizations about civil society and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local "social capital" but weak in generating "advocacy" on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan's many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center *Sōhyō*, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NPO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

#### *Not No Place: Fragments of Johannesburg*

*Not No Place* is a collage of visual and written fragments on Johannesburg– historical, archival, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of *Utopia*). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. *Not No Place* presents a collection of moments in the city's complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg. *Not no Place: Johannesburg: Fragments of Spaces and Times*. This intriguing and beautiful book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors' personal narratives and ruminations on topics; the subheading *Fragments of Spaces and Times* captures it well. It is a peripatetic amble through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

#### *Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics*

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al, 1969). Due to the heavy impact of colonization and political power imperialism of the colonial powers – the role of languages in these nations starting from the 15 -16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction.

Though there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as developing nations on the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education.

In many of these nations local / nature languages were not given any importance at the national international. They were treated under the banner 'vernacular languages', and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colonial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.

[eugene.kritski@globescan.com](mailto:eugene.kritski@globescan.com))

#### *Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development*

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxymoron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumers in the two-dimensional space defined by "Environmentalism" and "Materialist" attitudes. A large proportion of customers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirational. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirational may gain gratification from sustainable purchasing and sustainable consumption. Aspirational represent hundreds of millions of consumers globally. They are most prominent in countries with a tradition of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchasing might be introduced to Aspirational as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members' demo- and psychographics. The segments' attitudes will be causally linked to a broad range of socially and environmentally responsible behaviours, and communication patterns.

**ERKKILÄ, TERO** (University of Helsinki)

#### *Multilingualism and Community-Building Among Brussels Based Civil Servants and Lobbyists: Perceptions, Practices and Power Positions*

This presentation explores the multilingual and multicultural aspects of community-building, networking and communication in the EU's political and administrative system with special attention to the effects of a multilingual and multicultural working environment on the actors' identities. In order to track these aspects we investigated the networking and communicative preferences of EU civil servants and lobbyists based on broad-scale survey data (277 surveys com-

pleted) and thematic interviews (17 hours of recorded materials). We argue that the power dimension of the linguistic choices among EU bureaucrats is especially important, since as Mamadouh (2002) observes: *Language(s) regulate(s) access to political, economic, and cultural resources. Language matters to access the supranational political arena (for example, to acquire a position in an EU institution or a policy network), as well as to control political representatives and civil servants at the EU level.*

The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by (Euro-) English. It also appears that in their professional routines our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more to do with political status/historical reasons than with practical considerations. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents' social identities are rather influenced by new signifiers related to economic globalization and competition and their institutional positions than their linguistic backgrounds or the multilingual practices they take part in.

KANJUO - MRČELA, ALEKSANDRA (University of Ljubljana)

### *"I Hope to Muddle through until the Retirement" – the Aging Workforce in Demanding and Dangerous Jobs*

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation (pilots) and transport in general (bus drivers, machine-minders, traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seem strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and structured questionnaires with relevant workforce representatives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (mainly market driven) period respectively, to identify similarities and differences in challenges. Thirdly, the problem is approached from social policy point of view to demonstrate the inefficiency of the latest changes in the Slovenian pension system regarding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatisation, Europeanization and globalization, as well as the influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security from society, state and companies to individuals. The individualisation of risks has serious consequences for quality of work and working conditions of workers whose possibilities for decent retirement and satisfactory pensions are severely reduced.

\*Testimonies and evidence were collected as a part of a research project, commissioned by consortium of Slovenian Unions Associations (Alternativa and Free Trade Unions), Ministry of Labour, Family, Social Affairs and Equal Opportunities, Chamber of Commerce and Norway Grants fund.

### *Europeanizing Social Science - the Case of the European Social Survey*

This paper sketch out and analyze the historical development of the European Social Survey (ESS). In the 1996 a group of European social scientist under the auspice of the European Science Foundation initiated what became one of them largest social scientific projects, a project that now is seen as the golden standard in transnational survey research. The first wave was launched in 2001 and has since been conducted biannual in an increasing number of European countries. From the first wave and onwards the ESS has been heavily funded through the European Union Framework Programs and National Research Councils. Simultaneously the ESS has been leading in developing and disseminating transnational surveys research techniques from items design through field works to data management and dissemination. Using documents and interviews, the paper analyses the case of the ESS shedding light two interrelate processes both very central to the analysis of social sciences in society. First, it can tell us about the current changes and developments of surveys research. Surveys research has been one of the most influential social scientific techniques, but the classical techniques of surveys re-

search has in different ways been attached to the nation state. Thus, the paper asks which kinds of changes does transnationalization of surveys research bring? Secondly, the paper analyses the relations between the social sciences and the EU. The social sciences has since their first institutionalization been closely entangled to the nation state, but how is this entanglement changes in the Europeanization process and with what consequences for the social scientific knowledge?

### *Resistance to Mining in the Current and Past World-Historical Conjunctures: A Comparison of Mobilization Against Globalizing Capitalism Across Place and Time*

This is an incorporated comparison of resistance to destructive resource extraction by mining in the current and past world-historical conjunctures. The analysis is based on long-term participant observation and field research in the most important mining investment areas in Brazil, India and Finland. The empirical quality of the analysis of the current conjuncture allows to test world-system theories often based not so much upon large-N comparative ethnography. The findings are related to historical ruptures and continuities in resistance, seeking causal explanations and reasons to why mobilization against globalizing capitalism has occurred in some places and times and not others. The mining industry's global and regional trajectories will be historicized and tied into the current events by historical institutional analysis.

### *Korean Environmental Sociology: History and Characteristics*

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology which was founded in 2000 has organized theoretical and empirical research and has published Academic Journal *ECO* since 2001. Seejae Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development model. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

### *An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?*

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of

wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

#### *The Joint Impact of Paternal and Maternal Parenting Styles on Children's High-School Academic Achievement in Taiwan*

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers' and mothers' parenting styles jointly influenced their children's academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father's and mother's parenting styles jointly influenced their children's development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children's academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being "yan" (strict) and being "tsi" (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children's academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children's development in Taiwan.

#### *Renaissance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France*

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectivities, eg. collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with numerous contradictions, attachment both to the country they live in and its culture (France) and to the country and culture of their origin (Algeria), also from their ambivalent attitude towards the suburbs of the French cities which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of "humanistic coefficient" was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state's integrating policy.

#### *Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis*

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated a general theory.

When Tanase studied abroad in 1970's, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parson's theory. But after that he rarely mentioned

Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodern theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons' functional analysis uniquely to study law and society in Japan. He decomposed research objects (tort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons' general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons' general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase's application becomes a nice model of using Parsons' general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.

#### *Local Responses to Increasing Vacant Houses in Tokyo*

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social problems have begun to threaten residential environment there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs, and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

#### *Questioning the Promise of English: Language Choice of Japanese Transnational Workers in Asia*

English has increasingly been positioned as a global lingua franca in public and academic discourses especially in non-English-dominant countries like Japan. Together with neoliberal ideology of human capital that associates language skills with individual and national economic advancement, ideas about English in globalized world have formed a particular language ideology, influencing education policies and raising demands for English teaching and testing. While the prevalence of English is indeed observed in globalized marketplaces and transnational communication, language choice and use should be conceptualized as a local practice (Pennycook, 2010) that reflects, reinforces, or disrupts social, historical, material, and ideological conditions at a certain locality.

This paper reports a qualitative study that investigated the language choice as well as views and experiences of transcultural communication among 20 current and former Japanese transnational workers of five Japanese manufacturing companies who were assigned to work in China, Korea, or Thailand. Semi-structured interviews revealed that for workplace communication, Japanese was predominantly used in China and exclusively in Korea, whereas English was exclusively used in Thailand. Almost all interviewees developed truncated repertoire of the local language in order to fulfill daily survival needs (Blommaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.

These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

#### *Conflict Management in Prostitution* (“性活”=“Seikatsu”) — the Structure and Meaning of Pluralistic Justice

“Conflict management in prostitution” have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kenya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as “性活者”=“Seikatsu-sya”, sex-practical use person) is protection or any system which will help them.

This presentation will try to make clear the “real” situation of conflict management in prostitution (I call it normally as “性活”=“Seikatsu”, sex-practical use). For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire.

The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with “law” even “living law” in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against “law” finally.

Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is legal or illegal. Because the “law” must be different for each in multilateral prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

#### *Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States*

Since the 1990's, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers' experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, access to local queer and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

#### *Gendered Innovations In Hospital Workforce Management: A Scoping Study*

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of 'gendered innovations' that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare systems into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are still not used effectively in hospital management, despite an increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

#### *Mapping The Governance Of Care and Professional Development: A European Comparative Study*

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-centred approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) 'constrained professional development' was observed in the German corporatist and federalist/fragmented system

with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) 'elitist professional development' was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) 'integrated professional development' emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This suggests that interventions on the (meso/micro) level of professions, in order to achieve transformative potential, must be connected and backed-up by (macro-level) health and social policy interventions.

**KUHONTA, ERIK\*** (McGill University, [erik.kuhonta@mcgill.ca](mailto:erik.kuhonta@mcgill.ca))

##### *Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia*

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state's role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patrimonial or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

##### *Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology*

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, "physical capital" is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate "taste groups" are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu among others, that social norms relating to specific gender roles, self-control, race and other status and identity markers play a marked role in the repertoires Europeans use for assessing the bodies of both men and women.

##### *Processes of Economic Consolidation in Central and Eastern Europe*

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the processes of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from various democratic consolidation measurements that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

**KULCZYCKI, ANDRZEJ\*** (University of Alabama, [andrzej@uab.edu](mailto:andrzej@uab.edu))

##### *Abortion Policies and Health Outcomes in Latin America: What Are the Relevant Lessons for Africa?*

Both Latin America and sub-Saharan Africa have high abortion rates (generally above 30/1,000 women aged 15-44) despite overwhelmingly restrictive moral, legal, and social sanctions. Although data are limited, enough is known to examine how Latin American countries are making progress in negotiating the challenges posed by abortion and compare it with the situation in sub-Saharan Africa. This allows identification of relevant lessons for improving health and social outcomes in much of Africa.

Several decades ago, many Latin American countries had economic levels seen in many African nations today. They have since achieved better contraceptive practice and social outcomes, and are now witnessing declining rates of abortion, unsafe procedures, and related deaths. In contrast, Africa accounts for over half the world's unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for ameliorating present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple innovations (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change, bolder policy reform, and better outcomes in this deeply controversial policy arena.

**KULCZYCKI, ANDRZEJ\*** (University of Alabama, [andrzej@uab.edu](mailto:andrzej@uab.edu))

##### *State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?*

Indonesia is the world's most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversible method that accounts for over 50% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injectables are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world's highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second

most common method. We use survey data, documentary evidence, and key informant interviews to examine these developments further. With certain caveats, the Indonesian experience offers lessons for instituting more solidly founded contraceptive and population policies and for accelerating the path toward replacement-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing injectable use can help meet demands on the fragile state health system, make use of Egypt's underdeveloped community-based channels, and may serve as a catalyst for other Arab states to help them reach more sustainable population and development trajectories.

#### *Depression, Suicidal Ideation and High-Risk Behaviors Among Underserved Youths in Central Mexico*

**Background:** The staggering cost of depressive disorders and suicide on the quality of life of patients and families, the increased mortality risk, and the high economic burden demand our attention. There is evidence suggesting that engagement in risky behaviors, development of negative habits such as using alcohol, tobacco, and drugs, and depressive disorders all begin during adolescence. Further, substance use, in particular smoking and drinking, has been linked to depression and suicide risk. The study aim was to evaluate the prevalence of depression and suicidal ideation and identify predictors that could inform a prevention program.

**Method:** Using a cross-sectional study design with a probability sample, 702 adolescents (ages 14-24) from low-income, rural high school students in the central Mexican state of Guanajuato were surveyed.

**Results:** Almost half (49.2%) of participants showed some level of depression (CES-D >16), with 23.6% identified as suffering severe depression (CES-D >25). Logistic regression analyses indicated that controlling for financial status, symptoms of depression were predicted by female sex, low self-esteem, risky behaviors, conflictive parent-teen relationships, and binge alcohol drinking. The same variables with the exception of binge drinking predicted severe depression. In turn, suicidal ideation was associated with depression, low self-esteem, high-risk behaviors, and conflictive relationships with parents. A similar pattern of clustered behaviors among teenagers has been reported.

**Conclusions:** Predicting and ultimately preventing depression is of enormous public health significance. The findings can inform the design of interventions to prevent this early pattern of depressive disorders and associated risk factors among low-income, rural youth in Mexico and possibly in other contexts.

#### *Urban American Indian Youth Religion, Native Spirituality, and Well-Being: A Latent Class Analysis*

Most American Indians (AI) in the United States now live in urban rather than tribal areas yet little is known about their interconnected spiritual, religious and cultural worlds. This presentation documents ways that urban AI middle school students were involved with religious institutions and Native spiritual and cultural practices, and assessed how these differences related to cultural identities and risk and pro-social behaviors. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern USA metropolis. Latent class analysis identified distinctive groups of youth according to religious affiliations, attendance at religious services, adherence to Christian and traditional spiritual beliefs, sense of Native spirituality, and involvement with spiritually significant Native cultural practices. Five classes emerged. There were two Christian groups, one attending Christian churches and following Christian beliefs, but uninvolved with Native beliefs, spirituality, or cultural practices, and a nominal Christian group affiliated with but not attending church, and relatively unattached to belief systems. Two groups followed Native beliefs and spiritual practices, one affiliated with the Native American Church (NAC) and another unaffiliated with any church. The fifth, non-religious group, was unaffiliated, followed neither Christian nor traditional beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA indicated that the two Christian groups were higher in SES, had lived longer in the urban area, and reported more pro-social behaviors and better decision-making but also the most substance using friends. The two groups embracing AI spirituality (NAC, and non-NAC) had better school grades, more enculturation in tribal language and strong AI ethnic ID, and the strongest bicultural orientations. The non-religious group had the lowest scores on parental monitoring, closeness, and supportiveness. Findings increase understanding of different ways that urban AI youth blend Native and Christian religious beliefs and spiritual practices, and their consequences for well-being.

#### *Gender and Medical Specialization: Segregation By Culture or Choice?*

Women taking to gainful employment and professional practice are on the rise in India and medicine is one such profession which by its nature, prestige and rewards comes to be sought after most by women. It is precisely owing to these traits, the medical profession has been strongly aspired by their male counterparts as well, which might bring into play the forces of gender bias and gender discrimination as has been the case with the phenomenon of gainful employment in general. The paper seeks to ascertain empirically the considerations, motivations and compulsions influencing the choice of branch of medicine by women in medical profession. The findings are based on in-depth interviews with 237 women physicians in the City of Bangalore in India. The findings reveal that women doctors are inclined and constrained to avoid such branches that tend to be male dominated. It is further noticed that women doctors tend to opt for the soft specializations that are less sought after by their male counterparts and hence are less expensive in terms of course fees and capitation, and also are relatively less paid on the one hand and provide less intrinsic satisfaction and recognition in medical circles and society on the other. The experiences and dispositions of women doctors appear to indicate that their decisions on specialization tend to be culturally conditioned and are outcome of their tendency to avoid areas of medicine over which their male counterparts are assumed exercise a cultural and professional prerogative and unjustified monopoly.

#### *Technology Induced Inequalities at Workplace – an Indian Experience*

Inter-industry variations in compensation packages has since long been a normal phenomenon in industrial circles as it comes to be determined by the functional importance of respective industry and the levels of skills and expertise required. The paper deals with recent trends toward increasing inequalities in earnings in Indian work organizations. It is assumed that growing complexity of knowledge and skills required, length and cost of training requisite for operations, increase in capital expenditure requirements and growing sophistication and competition in industrial spheres are the functions of technological innovations and their dispersion through forces of globalisation and these developments have implications for compensation packages across the industries resulting in increasing inequalities in wages within and across industries. The analysis of data pertaining to variations in pay and allowances in 16 labour intensive and 14 technology intensive manufacturing establishments in India over a period of 20 years indicate that differential emphasis on technology and innovations in different industries has brought about unprecedented inequities in the levels of income between the industries and even within the industries across the cadres. Such inequalities are further accentuated by elimination of moderately skilled workers on grounds of obsolescence and redundancy. The findings further indicate that the technology induced variations in income in Indian Industries vary significantly with sector of industrial operations and its functional importance for economy on the one hand and its potential for creation of wealth on the other.

#### *Marginalized or Empowered? Conflict Induced Internally Displaced Kurdish Women's Experiences in Turkey*

This study is focusing on the conflict-induced internally displaced Kurdish women's experiences. There has been an ongoing internal armed conflict in Turkey since 1984 and one of the consequences of this conflict is the internal displacement that occurred in 1990s. In the displacement process, women and other family members were victimized. They did not only lose their homelands, but they also had to struggle in the city centers with poverty and discrimination.

After they started to live in the city centers, women may become both marginalized and empowered. The aim of the study is to understand the situations that lead Kurdish women to be marginalized and/or empowered in the cities to which they have been forced to migrate. After the displacement process, which is one of the major victimization processes for these women, some of them may be trapped in ethnic and gender-based discrimination and may become more marginalized in the city centers. But marginalization and empowerment are not fixed categories and there is always a possibility for these women to transform their marginalized position into empowerment. By political engagement, working outside house and/or being head of the household these women may break the cycle of their marginalization and becomes empowered in the city centers.

*Notions and Expectations of Democracy Among the Participants of the Occupygezi Movement in Turkey*

The aim of this paper is to explore the notions of democracy and the expectations around democratization of Turkey expressed by the protestors of Occupygezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul's rare central parks, developed to nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protestors and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8<sup>th</sup>, 9<sup>th</sup>, 10<sup>th</sup> June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in Istanbul were also used as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protestors, along with their demographic characteristics.

This paper is based on the analysis of the participants' notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government's policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

 (Srinakharinwirot University, [saywithsk@yahoo.com](mailto:saywithsk@yahoo.com))

*Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN*

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and health care among aging using qualitative methods from secondary level of population data. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency while the death rate is very low and birth rate is declining. The total fertility rate of the ASEAN population is 2.4. The demographic dividend could be categorized into three groups including 1) countries that already have passed opportunity, i.e., Singapore, Thailand and Vietnam, 2) countries that have had the chance to handle this prime event, i.e., Indonesia, Malaysia, Brunei Darussalam and Myanmar, and 3) countries that will meet this situation in the future, i.e., the Philippines, Cambodia and Lao PDR.

The ASEAN community consists of ten countries as its members which all have different population structures, hence dividend occurs more than once and each country could give a hand to others to help solve problems and clear effects. It may be necessary for countries which have not faced the prime period to learn experiences from those who have passed the period. For labor issues, population segments could be reallocated to countries that lack human development resources resulting in the new trends in health care systems for aging people in the future.

*Changing Trends In Demography and Family Structure In Asia: Japan, Hong Kong, Korea, Singapore With Reference To The U.S.A*

Fertility decline and population aging are two of the most critical factors accounting for burgeoning family alternatives around the globe today. Asian families are no exceptions, but they present themselves as if their patterns are quite different from their western counterparts. Even among Asian families, they differ from one another, resulting in the different pattern of their family structures unique to their own. Therefore, now is the time for us to examine changing

trends of population and fertility indicators which seem to result in Asian family alternatives such as lifetime singlehood, elderly couple households, and elderly alone households.

Historical, archival, current, and prospectus statistical data for four Asian societies- Japan, Hong Kong, Korea, and Singapore-and the United States are examined. Following the footsteps of western nations Japan, among Asian nations, took the initiative to launch into the area of population aging and fertility decline. The rate for progress in Japan, however, has been much faster and unprecedented than other western nations. Nevertheless, today and the prospects on these dimensions in other Asian nations are more striking than their Japanese counterparts. Fertility decline and population aging started relatively late in these three Asian societies. The prospects reveal, however, that they will be in the critical situation, i.e., the zero/minus population growth in the foreseeable future, in which Japan has currently been undergoing.

Asian elderlies must learn to lead independent living lifestyles quite different from those of the traditional ones. Making the best use of the modern ICT devices, various programs developed for the care of senior citizens would have significant implications for Asian societies that will soon follow the Japanese footsteps. Japan, especially for the care and health management of the elderly, may hopefully give a good guideline for other Asian families in the years to come.

[fkumagai@jcom.home.ne.jp](mailto:fkumagai@jcom.home.ne.jp))

*History of Courtship and Dating in Japan*

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the *tsumadoi-kon* (the groom commuted to the bride residence), to the *muko-in* (the groom lived with the bride family) during the aristocracy, and to the *yome-in* (women marrying into men's families) under the *Bushi* ruling. It was only after the Meiji era that Japanese marriage changed to the *Yorai* pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (*miai*), and the romantic marriage (*ren-ai*). In the arranged marriage the go-between (*nakoudo*) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization *miai* was the predominant pattern, however the complete reversal has emerged today, and *ren-ai* has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singlehood of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various "Kon-Katsu" services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and *Machi-Kon* (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singlehood, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

*Car Festivals (Religious Yatras) in India : A Dimension of Leisure Tourism (A Case Of 'Nanda Devi Raj- Jat Yatra' In Uttarakhand, India)*

This paper is about the car festivals (Religious Yatras) organized in different part of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being. *Jagannath Puri Rath Yatra* (Orissa, India), *Maysor Rath Mahotsav Yatra*, *Maysor* (Karnataka, India), and *Nanda Devi Raj-Jat Yatra* (Uttarakhand, India) etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. *Nanda Devi Raj- Jat Yatra* is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August- September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttarakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.

Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

#### *Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping-Some Illustrations from Western Himalayas*

Around 10,000 years ago human being had started domestication of plants and animals, even before this period, people had been altering plants and animal for their own benefit by using other means such as fire-stick farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and atleast selecting three respondents from each village, 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, sericulture and horticulture and earning very good income and experienced change in the amenities available in the household as well as they are capable to provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

#### *The Diffusion of American Football in Japan from 1930's to 1950's*

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspaper publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies from the beginning of 1930's, American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.

#### *The Geographies Of Discontent*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The protests against the *politics of crisis* in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-criticism in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined *Habitus*, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the *Habitus* as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

#### *Conflict In Ethiopia*

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word *colonus*, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where the arrivals lived as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teaches us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing its neighbouring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13<sup>th</sup> century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

#### *The Roots of Horn of African Conflicts*

The Roots of Horn of African Conflicts  
Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of Africa is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waaqefana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper

### *Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan*

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new situations make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan's limited living space.

Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

### *The Movement of People's Politics in Democratisation Process in Thailand*

This paper aims to explore the concept of people's politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People's participation has also been launched throughout the country. Both the best practices and the drawbacks of people's politics in the political movement towards democracy will be examined in the paper. The grassroots' movement for human security, equity and opportunity will be studied as an example of the strengthening of people's politics in terms of deliberative democracy, civic education and community democracy. The roles of the people's movement through the works of Center for People's Political Development Center supported by King Prajadhipok's Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people's politics development in the future.

### *Constructing the Assessment Framework for Local Disaster Management Capability*

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society's acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system's ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

The ultimate goal of this study is to develop an assessment framework that is both comprehensive and feasible in the area of disaster management. The paper first reviews and analyzes the capability assessment systems carried out in the United States, New Zealand, and Japan. We then modify the US national preparedness system (e.g., core preparedness capability) and develop a framework based on Taiwan's experiences in disaster management. The resultant assessment framework is constructed with a matrix of 19 disaster tasks (e.g., risk assessment, evacuation, and housing) and 11 capability elements (e.g., planning, science and technology, and social capital). It assesses whether a local society has the required institutional mechanisms and resources to execute these tasks in three disaster management missions (i.e., prevention and mitigation, response, and recovery). The result of this capability assessment framework is expected to be applied further in disaster risk assessment and capacity building program.

### *Public Environmental Concern in Taiwan*

One of the top 21 emerging global environmental issues for the 21st century identified by the UNEP foresight report is "Social Tipping Points? Catalyzing Rapid and Transformative Change in Human Behavior for the Environment (rank #5)." It can be thus inferred that humans need to change original destructive actions and need to learn to adapt to changing climate and environment (with combined influences of both natural and human forces). Moreover, these actions need to be taken with a more rapidly speed. However, the factors that trigger people's behavioral changes are often differentiated due to countries' different socio-economic contexts. Therefore, it is important to understand how individuals in different cultures think of, know of, and plan to respond to these environmental challenges and to investigate the interrelationship between people's environmental attitude and environmental behaviors. This paper aims to answer these two research questions.

The study reports the data (n=2209) derived from 2010 Taiwan Social Change Survey (TSCS)—a longitudinal face-to-face national survey project conducted each year since 1985. The results find that the Taiwanese public is concerned about environmental issues and they demonstrate a positive environmental value system in terms of protecting the environment, coexisting with the nature and other species, and respecting the earth. However, they show a level of inconsistency in the frequency of taking pro-environmental behaviors. While they often recycle for renewable resources, they rarely consume organic foods and drive less personal vehicles. The preliminary analysis suggests that there are deficits between pro-environmental attitude and actual environmental actions. To overcome this behavior deficit, it is perhaps necessary to provide net-benefit incentives to Taiwanese people.

### *The Intellectual Advantages and Dangers of Borrowing: the Complex Relation Between Literature and Sociology*

Literature and sociology are two types of intellectual games. Literature is driven by the rules of art. The latter foreground such aesthetic techniques as estrangement (anti-essentialism), meaning gaps (let the reader guess) and the captive mind (manipulated emotions). Sociology is a scientific discipline and is hence bound by the rules of typological construction (essentialism), methodological reflection (transparent language) and distanced role-taking (critical empathy). This does not exclude intellectual borrowing of the insights, imagination and language produced by writers. A good starting-point to reflect on these issues is the methodology of Ervin Goffman. He uses literary sources mainly for their accurate ethnographic observations in particular from the French existentialist writers Jean-Paul Sartre and Simone de Beauvoir in order to investigate issues of identity and identity work and more generally the micro norms of interaction between ego- and alter.

What Goffman tends to ignore though is that in particular Sartre in all his novels and dramas describes alter as "stranger". There are never any close emotional bonds between ego and alter. In order to fully explore the imaginative possibilities of literature, other French writers such as Proust and Celine should be looked into as the latter suggest that social relations between strangers can change into intimacy but also return to the civility between strangers in public.

Nor should sociologists ignore how literary theorists analyze the works of fiction writers. Reading such work helps us better to understand both what is specific for the literary text but also how the techniques, imagination and language of fiction writers illuminate important aspects of issues that sociologists have tended to leave out in their interpretative work such as the importance of events, time, place, artifacts, representations, bodies, problemsolving etc.

*Structure and Specificity TRUST of E-Zines*

Nowadays the Internet has globally changed mass communication. As a result 'civil journalism' has emanated. The urgent problem of trust in networking has become more actual. Media-trust defines relations in mass media communication with the using of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience or to a concrete reader (a viewer, a listener, a user). The user's status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context ("the ideology of the time"), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the information, of connection information to one or another area of subject's life and etc. Users' trust in e-zines is one of particular cases of media-trust, which is a result of three basic components integration: trust to information, trust to journal and trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

*Trust, Loyalty, and Culture in Organizations*

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and the correlation analysis of trust, loyalty and types of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees' loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees' loyalty, i.e. each component of organizational trust will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. Senior leaders should re-double their efforts to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

*The Sportification of Tai Chi and the Hegemony of Vision*

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as *hegemony of vision* (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived

by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal "chi" cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has invited the relative neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of "chi" and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxiang City, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.

*The Relations Between National and Global in Ukrainian University Rankings*

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. . Being initially national educational institutions (with a certain specific interpretation of "national" during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of "double pressure" from the ideology of nationalism and influences of globalization. How intersection between "national" and "international" is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

*Emotional Infrastructure of Reconciliation*

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian - is made aiming at excavating the basic emotional components underlying the successful reconciliation. This involves the discussion of emotions like guilt, hatred, forgiveness, penitence and love. The tolerance is usually assumed as minimal precondition for reconciliation but the ideal reconciliation is linked with the proactive approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the role and dynamics of the tolerance/love/hatred complex. This is then linked with the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized

*Contextualizing "Individuality": Searching for More Flexible Definition*

This presentation focuses on a concept of Kanjin (the contextual) coined by a Japanese sociologist Eshun Hamaguchi. Hamaguchi introduced this concept of Kanjin to overcome a commonly accepted view that Japanese are collectivists lack in individuality. In such view, Japanese are described as self-sacrificing and group-oriented agents unable to act autonomously. According to Hamaguchi, however, such view of Japanese is helplessly biased because it sees Japanese society within the framework based on a narrowly defined concept of the individual. Hamaguchi insisted that the concept of the individual is so westernized that it cannot be applied to the different cultural contexts like in Japan. Therefore, he argued, Kanjin as a more flexible model of agent is needed. Now, what is Kanjin? Hamaguchi translates it into "the contextual" and defines it as a "relatum". However, today, the contextualism and relationalism can be seen in various forms in the sociological discipline. Then, is the concept of Kanjin different from them? If so, how is it different? Through elaborating these points, this presentation would contribute to the attempt to challenge the classical perspectives on "individuality".

*Ready or Not? California's Early Assessment Program and the Transition to College*

Nearly one in three first-time freshmen in the U.S. are enrolled in some remedial/developmental course in English or math at their college or university (U.S. Department of Education, 2003). Rates of remedial course enrollment vary substantially across U.S. colleges and universities, with some institutions not offering any and others enrolling upwards of 80 percent of their incoming students in remedial classes. Part of the explanation for the large share of remedial students in American colleges and universities may be limited information. Students are often ill informed about what they need to do to succeed in college and subject to the (arguably) mistaken perception that everyone must at least attend, if not complete, college in order to succeed in the labor market. A majority of high school students, regardless of their academic performance, report that they will attend college (Rosenbaum, 2001). In fact, academic performance accounts for little of the variance in students' expected levels of educational attainment. Despite the pressing need to ensure that more students obtain a postsecondary degree, we know surprisingly little about what leads to college readiness and degree completion.

This study focuses on California's efforts to improve college readiness through the Early Assessment Program (EAP). The EAP is an intervention designed to increase the quality of information about academic preparedness available to high school students. We aim to understand how an increase in information about college readiness affects students' need for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.

*'white Trash', Working Class or Just Your Average Guy? the Changing Face of a British Far Right Supporter*

In the wake of a lively academic debate of the past decade and against the background of yet another decline in fortunes of the British Far Right, the paper investigates the sources of its political power. It was long considered to lie in the working class neighborhoods, to the point of current BNP leader comparing his party to the early 20th century Labour. However to what extent is the support base of the Far Right proletarian, or rather post-proletarian, given the overall postindustrial trend, remains debatable. And there's more to that – how does the experience of living in area with actual minority population influence the support for the Far Right and what are their preferences in cross-party perspective. Based on aggregate electoral and socio-economic data, I would argue that there is need to differentiate between the ideological hardcore, persistent and transient supporters of the Far Right, which are defined by distinct set of characteristics. Furthermore, as the face of the Far Right shifts to grassroots movements (such as the English Defence League), the transiency trend is set to increase.

*The Disparity in Rate of Deductible of Social Health Insurance with Respect to Age and Gender and Its Resolution in Post-War Japan: Whether It Has Influenced Healthcare Utilization and Longevity?*

In post-war Japan, healthcare system has been constructed so that every Japanese could utilize health service of modern medicine free of charge or at low cost. When this system started in 1961, the employed and their dependents were obligated to enroll in so-called "social health insurance" plans. The medical expenses charged on the employed were all covered by these plans, whereas those charged on their dependents were covered only by 50%. The other people such as the self-employed including farmers, retirees, and their dependents were compelled to enroll in so-called "national health insurance" plans, which covered 70% of their medical expenses. The disparity in rate of deductible was based on occupational status, which was closely related to age and gender. This disparity has been reduced bit by bit until the year of 2003 when irrespective of occupational status, the deductible rate for those 70 years and over of age was 10%, whereas that for those under 70 years of age was 30 %; in either case, monthly total out-of-pocket expense was capped. In this paper, change in (a)disparity in out-of-pocket expense of healthcare service utilization, (b)health care utilization

rate and rate of deaths in medical institutions broken down by gender and age, and (c)life expectancy at birth, 20 years of age, and 65 years of age broken down by gender, in post-war Japan will be examined, and by comparing between the patterns of chronological change of (a) and (b), and between those of (b) and (c), it will be analyzed how the change in (a) has influenced (b), and how the change in (b) has influenced (c).

*Globalization in East Asia and Contemporary Situation in Northeast Asian Societies*

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 -- higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tensions both between Japan and China, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China's relationship is often described as comprising "Cold politics and hot economics". It can be said the same for Japan and Korea's relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of "Cold politics and hot economics", as is recently observed in hate speech against foreigners from Korean.

*Financial Support for Families with Children and Its Trade-Offs: Balancing Redistribution and Parental Work Incentives to Increase Well-Being of Families*

Financial support for families with children implies inherent trade-offs some of which are less obvious than others. In the end these trade-offs determine the effectiveness of policy with respect to the material situation of families and employment of parents - two crucial elements for the well-being of families. We analyse several kinds of trade-offs involved using a careful selection of potential changes to the system of financial support for families with children. We focus on: 1) the trade-off between redistribution of income to poorer households and improving work incentives, 2) the trade-off between improving work incentives for better off and poorer households, 3) the trade-off between improving work incentives for first and for second earners in couples. The exercise is conducted on data from Poland, a country characterized by high levels of child poverty, low female employment and one of the lowest fertility rates in Europe. We demonstrate the complexity of potential consequences of family support policy and stress the need for well-defined policy goals and careful analysis ahead of any reform.

*Supporting or Hindering Maternal Employment? Comparing Financial Incentives within Family Policies in CEE Countries*

The Central and Eastern European (CEE) countries have often been treated as a monolith in comparative social policy analyses. While there are moderate differences in gender employment gaps of childless men and women in these countries, the picture of employment among parents of young children is completely different. The employment rates of fathers of preschool children are very high in all countries ranging between 84% and 94%, but the employment of mothers diverges from 36% in Czech Republic to 81% in Slovenia. Previous research has showed that there are different cultural, structural and economic factors influenc-

ing the gender employment gap in the group of parents of young children. Also the institutional context (work-family policy) plays an important role. However, there are also financial incentives that lie in the rules of family benefits and child tax credits systems, often neglected in comparative research, but influencing maternal decisions whether to work. In my research I compare these rules in the CEE countries looking for incentives that support or hinder maternal employment. I focus particularly on such pairs of countries that share similar socio-economic and cultural contexts for maternal employment, but differ in financial incentives that lie in the tax-benefit systems and in employment outcomes for mothers of young children. One of such examples is a pair of two, small Baltic States: Estonia and Lithuania. I show that while socio-cultural and structural contexts are more favorable for maternal employment in Estonia than in Lithuania, more generous maternity/parental leave-benefit provisions in Estonia form a strong negative economic disincentive for mothers to work when their youngest child is still in its nursery age. In consequence, the employment of mothers of very young children (nursery age) is much lower in Estonia than in Lithuania, whereas employment of mothers of older children follows the opposite pattern.

### *Does School Context Reinforce the Educational Inequality of Children of Immigrants in Europe? A Multilevel Analysis of Individual and School Effects*

Various national and international studies on school achievements confirmed that immigrant descendants suffer educational disadvantage over native students (cf. OECD 2006). Social background of students has proved to be crucial factor explaining unequal opportunities in education. However, in some national contexts disadvantaged students seem to overcome the socioeconomic barriers and perform better at school, a fact that raised the question about the role of context in school achievements. This article focuses on the institutional factors of school in explaining the discrepancies in educational outcomes between native-born and second generation in six European countries. The aim is to examine the effect of school policy, climate, and sociocultural composition of students on reading and mathematics performance of 15 years old students. I use hierarchical linear modelling as a multilevel analysis technique with the international data of PISA 2009 from Austria, Belgium, Denmark, Germany, the Netherlands, and Switzerland in order to estimate both, school-level and cross-level effects on the individual students' test performance. The expected finding is that in all six countries compared the school context does affect the performance of students. The more selective the education system either regarding age, performance and/or sociocultural background of students, the more disadvantaged is the second generation compared to their native-born peers. On the other hand, the schools that responded to the increasing multiculturalism of society and adapted their programme to students' specific needs are expected to have a positive impact on students' performance.

### *Mobility As Strategy to Cope with Resettlement: History of Mobility and Social Reproduction of Ethnic Groups in Northern Laos*

Moving villages has been part of their life for many of the indigenous groups in Northern Laos. However, in the last few decades, such mobility patterns have changed since villages in the Northern Laos were targeted for resettlement to places near the road. Increasing economic concessions from cross-border investment has led to rapid expansion of rubber plantation, restricting land and forest access of the ethnic people. With resettlement and changing livelihoods, which also lead to scattered social networks, indigenous women and men have to devise new ways of organizing their social reproduction. Women in these communities are burdened with the responsibilities to weather the changes associated with resettlement and keep the family going for day-to-day survival, but their support networks for childcare and other reproductive work might not be available as before with more women becoming busier and more mobile in order to gain cash income. Unlike childcare among urban workers and in industrialized countries, analysis on childcare in rural remote areas has been neglected. However, we noted that the changes in mobility patterns pose new challenges for childcare arrangement in these remote villages. Based on Cresswell's (2010) notion of political dimension of mobility and following Kronlid (2008) in taking mobility as capability, this paper analyzes the link between gendered livelihoods and mobility patterns and how these affect social reproduction especially childcare.

### *Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan*

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country on their own. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

### *Vulnerabilities to Cyclonic Disasters in Bangladesh*

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the local peoples' evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2007 and 2009 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation, resulting enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

### *"Individuality" As a Moral Expression in Japan*

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how "individualization" and "individualism" has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of "individualization" and "individualism" and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words "individualization" and "individualism" in Japan are vocabularies often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive "individualism." Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000's as "ko-shoku (individual or solitary meal or eating)" and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are "vernacular constituents of moral discourse" (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about "individualization" or "individualism" is a speech act that participates in constructing social realities.

### Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is "a more sober political identity" that separates itself from the background of the past centred around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on conscious and free choice of civil identity. Dominant role of paternalistic, tribal and religious identities is a feature of traditional societies in which ideology, ethnicity, and religious traditions are main social values. In post-traditional world the values of civil nations are asserted that integrate multi-ethnic communities and ascertain cultural pluralism as a main vector of collective identifications. 'A civil nation' is not developed by chance, but emerges as a result of the efforts to strengthen civil society and its institutes and their interaction with the state. The overall problem of the Kyrgyzstan's identity is a mismatch between its basic elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements' composition. While the Soviet identity was dominated by the concepts as 'merging', 'destruction', 'formation of unified Soviet people' and others; currently national-patriotic, primarily national-cultural, notions of Kyrgyzstan's identity are growing stronger compared to civil understanding of the phenomenon of Kyrgyz nation.

#### *Between Lifestyle and Necessity: Senior Mobile Home Living in Florida*

This paper focuses on a community-type that has long been attractive to older people in the Sunbelt states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the "mobile home lifestyle" in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of mobile home communities on the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less stable, affordable, and personally fulfilling for older people than originally anticipated.

#### *"Look at My House!" - Home-Making and Identity in an Urban Mobile Home Park*

This paper focuses on meanings and practices of home among residents of a predominantly Latino mobile home park in Florida. It is based on an analysis of 30 qualitative interviews conducted with sixteen Latino/a, twelve White, and two African American community residents, follow up walks with fifteen interview participants, and ethnographic fieldnotes written by a Latino student researcher and community resident during 2008-2009. This research was part of a larger study investigating the communities and disaster vulnerabilities of working class families who lived in mobile home communities in Florida, during the unfolding of the last U.S. economic crisis.

The paper specifically discusses the meanings and emotions of home for the Latino/as, who were predominantly immigrants, and emphasizes differences with how white residents thought and felt about their places. Latino/as generally displayed great pride in their neatly decorated and customized mobile homes. They emphasized the (precarious) achievement of homeownership, the neighborly community, and the park's safety and tranquility (especially when compared with surrounding areas) in their descriptions, which functioned as markers of decency,

upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of "trailer" residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.

#### *The Business Case For Labour Broking In South Africa*

Globalisation has brought about changes in the world of work, in particular the restructuring of the workplace in order to promote labour market flexibility. Labour market flexibility comes about as companies compete and cut costs through the growth of waged occupations created in temporary jobs and casual positions. South Africa is currently dealing with the rising use by companies of temporary employment agencies, also known as labour brokers, who apparently facilitate this labour market flexibility. Labour broking has stirred up a lot of controversy in South Africa through the media, unions and many movements to the point where labour broking has been labelled as a new form of slavery that further fuels worker exploitation. Certain abuses have been associated with the practice of labour broking in relation to ensuring decent jobs in South Africa's globalizing capitalism. This research has been conducted regarding the business case for labour broking and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhumane, insensitive, detached system and strategy.

#### *From 'L'intervention Sociologique' To 'Pendampingan Sosiologis': A Reconstruction Of Social Movements Theory & Methodology Based On Indonesian Experience*

The idea of '*L'intervention sociologique*' (sociological intervention), introduced by respected French sociologist, Alain Touraine, has been considered as one of the most innovative approaches to social movements. However, in the different social context out of European society, sociological intervention faced various challenges. My experience in doing sociological intervention to a group of young actors of 'multicultural movement' in Indonesia has allowed me to identify the limitation of sociological intervention and furthermore, to build alternative adaptation and innovation that is more suitable with Indonesian society. As a consequence of theoretical and methodological reconstruction that I have made, I therefore introduce a concept of '*Pendampingan Sosiologis*' or could be translated in France as '*L'accompagnement sociologique*' and in English as '*Sociological Accompaniment*'. Although *pendampingan sosiologis* found its origin and inspired principally from Touraine's sociological intervention, which is essentially a simultaneous process of research, experimentation and action, there are several fundamental differences between these two approaches that certainly will open a further global dialogue for the development of social movements theory and methodology in many different contexts.

#### *Multicultural Movements In Indonesia: A New Youth Initiative For Social Transformation*

The massive process of reislamization of society that started to develop after the time of 'Reformasi' in 1998 has brought many social changes in everyday practice of social life in Indonesia. Today, Indonesia has to face almost everyday the problems related with the disruption of harmony of living-together. Besides religious-fundamentalism and terrorism, the intolerance among religious groups, violence against minorities and the demise of cultural diversity respect value have become a serious problem in society. Concerned with that situation, many young people in Yogyakarta in Central Java have built movements for bringing back social tolerance in Indonesian public sphere. As counter-actions and counter-discourses, the movement has successfully gained the public support and built larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global

multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

#### *Russian Youth: Mobilities, Inequalities and Life Chances*

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing uncertainties. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

#### *Life Expectancy and Retirement Age: Policy Options and Practise*

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforces. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforces and reduced inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

[daniel.kuenzler@unifr.ch](mailto:daniel.kuenzler@unifr.ch))

#### *The Politics of Social Policy in Kenya*

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rather based on neopatrimonialism and regional affiliation than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1'000 people were killed and over 300'000 displaced.

It was thus remarkable when the newly aligned major political camps released programmatic manifestos for the 2013 elections. They included some claims in the field of health, without converging into a coherent vision of social welfare. The financial feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalitions' interest and capacity in implementing them.

However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial

resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power resources theories have limited explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDG5). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

#### *Faces of Uncertain Transitions to Adulthood – in Different Fields of Education*

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its manifold fields of education are ideal cases for studying the phenomena in question.

Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will

- (a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances);
- (b) differentiate between forms of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone);
- (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In context of our research project, we link theories of interactionism (e.g., Meads processual concept of "self"; Strauss' concept of "status passage") with Bourdieu's theory of social inequality (and his concept of "field") to understand the strategies and orientations of adolescents at the threshold to adulthood.

### RC04-80.9

**KÖNIG, ALEXANDRA\*** (University of Wuppertal,  
[akoenig@uni-wuppertal.de](mailto:akoenig@uni-wuppertal.de))

#### *Orientations and Strategies of Less Privileged Students*

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term "self-project" (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing "self-project", that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions), and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific "artistic", incorporated capital. Mass participation to education at an academy does not exist. c) The relevance of significant others: The quantitative interviews show that students from lower classes more often feel parental misgivings concerning their personal ability. The qualitative interviews allow to deepen the analysis about the role of significant others.

## Educational Inequality and Welfare State Patterns

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

### *The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)*

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is passed down generations. In recent years this idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagors who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

### *Victims and Villains: Exploring the Media's Representations of Gender in the British Press and the Impact of These Depictions on British Muslim Experiences of Belonging*

A recent spate of "multicultophobia" in Europe has seen German Chancellor Angela Merkel recently pronounce the failure of multiculturalism, a sentiment further echoed by British Prime Minister, David Cameron and the then President of France, Nicolas Sarkozy. It has been suggested the continued existence of radically different practices by Muslims highlights an "illiberality" about multiculturalism, since the latter is alleged to license these practices. This paper presents findings of content and critical discourse analyses based on the researcher's doctoral thesis examining the media's representations of Muslims around the period of the London bombings. It presents a comparison of how gender is represented in the British press, exploring in particular how these debates play out with respect to structure and agency. 503 articles were analysed in the six-month period preceding and following the attacks on London from five major national newspapers. It will be shown how belonging for Muslims can become a problematic negotiation as a result of these representations. While Muslim "differences" are recognised, their negative representation signifies that there exist limits to what can be tolerated in multicultural states. It is argued that alleged failure of multiculturalism is a reflection of multiculturalism's inherent liberality rather than illiberality. The fact that radical alterity beyond the spaces allotted by liberalism cannot be tolerated represents the failure of multiculturalism.

**SANDOVAL, GERARDO** (Social Weather Stations)

### *Gender, Work and Family: The Situation in the Philippines*

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines.

At the macro-level, Filipino women have gained greater equality with Filipino men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses.

But what happens when men and women go home from work? Despite the increasing role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family.

The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as "homemakers". Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life.

Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

### *Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations*

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometowners to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and

agency approach to transnational phenomena is likely to shed a new light on actors' transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers migrants' identity. Their identification with the place of settlement and their new associated obligations undermine their "raison d'être" as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging. In this context, the latter needs to be constantly re-asserted, re-invented. The surge of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert "villageness".

### RC31-537.1

**LACROIX, THOMAS\*** (CNRS, Migrinter, University of Poitiers, [thomas.lacroix@univ-poitiers.fr](mailto:thomas.lacroix@univ-poitiers.fr))

#### *Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France*

This paper analyses the recent evolution of Moroccan organizations in France. The analysis of the Journal officiel, a registry of all associations created in France, shows a steady decline of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO's engaged into development and humanitarian activities.

What are the relationships between this reorientation of Moroccan volunteering and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey "Trajectoires et Origines" including a sample of 10 000 people and focusing on both immigrant integration and transnational practices shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding "here and there" of immigrant transnational organizations.

**LACZKO, LESLIE\*** (University of Ottawa, [laczko@uottawa.ca](mailto:laczko@uottawa.ca))

#### *Nationalism and Attitudes Towards Immigrants: Canada and Taiwan Compared*

Leslie Laczko, University of Ottawa, Ottawa, Canada K1N 6N5  
Ming-Chang Tsai, National Taipei University, Taipei, Taiwan

Nationalism and Attitudes Towards Immigrants: Canada and Taiwan Compared  
Canada and Taiwan are both developed societies with a full range of class cleavages. Both are "new societies" that grew out of waves of settlement from elsewhere. Both have a complex internal ethnic structure, with two large majorities, aboriginal minorities, and waves of more recent immigrants. In recent decades, both societies have experienced important re-definitions of the relationship between the aboriginal segments and the larger society. In Taiwan, the cleavage between the long-established Taiwanese and Mainlanders is an overarching one that has ramifications in many areas of political life. This parallels Canada's linguistic dualism. In Canada the history of dual European settlement has led to a bilingual society with a full range of separate French-language institutions centered in Quebec, and the language cleavage is an overarching one. Both societies are also immigrant societies with ongoing debates on various aspects of immigrant integration. National identities are complex and evolving in both societies, and relations with a larger neighbor (USA, PRC) play an important role in each setting. This paper will summarize and juxtapose some findings from Canada and Taiwan from the 2003 International Social Survey Programme (ISSP) data set on national identities in 34 countries. In both societies, civic and ethnic definitions of nationhood co-exist in tension, and attitudes towards immigration are mixed and contradictory.

#### *Changing Care and Migrations Regimes : New Contrasting Regulations and Their Impacts on Employment and Working Conditions of Care Workers. an Intersectional Perspective*

Since the beginning of the 2000, the French care/domestic service sector, like other countries in Europe, has been undergoing considerable reorganisation. These changes in terms of commodification have had consequences on the modalities for providing care but also on formal/informal care, paid/unpaid, public/private care. These transformations have had a strong influence on the employment/working conditions and training of women care/domestic workers. Thus, despite professionalization policies and the implementation of new rights, precariousness is still a typical feature of this sector.

However "local indicators" as well as considerations on "who cares ?" have to be taken into account. Indeed, this sector constitutes a working universe that is extremely complex to grasp, due to the multiple actors involved, the levels of intervention (local and national)... For example, when the sector comes to professionalization, the progress still remains fragile and has not taken place evenly or at the same time across all segments of the sector.

At the same time, these new regulations have taken place against a background of changes in migration policies and the dynamics of migration.

In this context, this paper aims at analysing the effects of these trends and contrasts on employments and working conditions of care/domestic workers (elderly and child care), in an intersectional perspective. We will discuss in which ways these consequences are similar or not for migrant and not migrant domestic/care workers and if not, why and how.

A European research project coordinated by the ILO has been instrumental in foregrounding issues relating to the role and working conditions of migrants as caregivers. This paper will present results from the French case as an example of mixed care regimes. Data sources include LFS data, policy reports, interviews with union representatives, government departments, NGOs (16) and migrants working in the sector (50).

#### *L'action Et Les Politiques Syndicales à L'épreuve De L'aide Et Des Services à Domicile En Europe. Le Cas De La France*

En France, comme pour d'autres pays européens, l'aide et les services à domicile sont le lieu, depuis plusieurs décennies d'expérimentations discrètes en matière d'émergence de nouvelles formes d'emploi et de précarisation du travail. Dans le même temps, des avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d'emploi ainsi que les politiques et pratiques des employeurs en matière de management et d'encadrement du personnel, que l'on raisonne sur le secteur marchand ou non marchand. Du côté des organisations syndicales, le secteur apparaît comme un nouvel enjeu. De nouvelles pratiques et politiques émergent, tandis que les militantes du terrain continuent d'être engagées dans un travail militant au quotidien, dans un univers où les taux de syndicalisation sont faibles..

Cette communication propose de s'intéresser aux formes des politiques et de l'action syndicales dans l'aide et les services à domicile en France, en articulant les différentes échelles de l'action syndicale et en revenant sur les contradictions à l'oeuvre. L'analyse documentaire, d'entretiens réalisés auprès d'acteurs syndicaux et institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l'oeuvre et de la façon dont elles peuvent peser pour changer le travail, qu'il s'agisse d'actions au quotidien ou de formes d'intervention dans des instances internationales. Les données sont extraites d'une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par le BIT (financement européen) menée au moment de l'application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

#### *The Egypt Sufism Movements in the Aftermath of 2011 Revolution. Critical Study*

##### **Abstract:**

Experts on Sufi movements often assume a potentially significant position for Sufism in forming the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in

Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

#### *How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness*

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufte 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed over time and to what extent the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

#### *Exploring the Role of Listening in Participation. -- CANCELLED*

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Crary who observes there is in our times 'an ongoing crisis of attentiveness.' Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be "an ethical listening subject." He argues this subject will make "the choice to listen selectively." This does not mean Beard explains to only those points at which we feel "safe" but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Holfield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Holfield argue this listening then in turn creates the 'self'. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

#### *Social Disorganization and Terrorist Attacks in the United States before and after 9/11*

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. countries from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover,

while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

#### *Back to the Future? How 3D Printing Technology Reassembles Museums' Materiality with Scenarios Analysis*

3D printing or 'personal fabrication', as a newly emergent technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the widespread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum's aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field.

Based on 3D printing's current engagements and appropriation in the museums field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of 'forms of museum capital': Firstly, it analyzes current museums' acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection's restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing engaged in museums' interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-making in the age of (im)mobility. Some scenarios analysis of the 3D printing's general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

#### *Educational Inequality in China -- Preliminary Findings from Recent High School Graduates in Urban Nanjing*

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus of educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious high schools, and students with better self-reported academic performance are more likely than their counterparts to enter key universities. Father's education and occupations, high-school prestige, and key university are significant correlates of social participation and occupancy of leadership position. Implications of the findings will be discussed.

*Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing*

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are often presented in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese universities are stratified into key universities and non-key ones, which differ significantly in resource input and prestige. Differences in network changes between these two types of universities are compared. Second, how may participation in extracurricular activities and part-time employment, two major aspects of university life, affect the social network structure? Changes in network size and diversity are measured. Preliminary findings show that transition to key university, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

**LAINE, SOFIA\*** (Finnish Youth Research Network,  
[sofia.laine@youthresearch.fi](mailto:sofia.laine@youthresearch.fi))

*Creating Agora Chronotopes on Young People's Political Participation in Transnational Meetings*

This paper deals with young people's political participation in transnational meetings. Methodologically the study aims to shed light on multi-sited global ethnography. Young people are viewed here as a social age group sensitive to critical, alternative and even radical political participation. The diversity of the young actors and their actions is captured by using several different methods. The research sites are the EU Presidency Youth Event (2006 Hyvinkää, Finland), the Global Young Greens Founding Conference (2007 Nairobi, Kenya), the European Social Forum (2008 Malmö, Sweden) and three World Social Forums (2006 Bamako, Mali; 2007 Nairobi Kenya and 2009 Belém, Brazil). The data consists of participant observation, documents and media articles of the meetings, interviews, photos, video, and internet data. In this paper the diverse field of youth political participation in transnational agoras is studied by using a cross-table of cosmopolitan resources (or the lack of them) and everyday-makers – expert citizen dichotomy. First, the young participants of the EU Presidency youth event are studied as an example of expert citizens with cosmopolitan resources (these resources include, for example, language skills, higher education and international social network). Second, the paper analyses those everyday-makers who use performative politics to demonstrate their political missions here and now. But in order to make the social movement global they need cosmopolitan resources to be able to use the social media tools and work globally. Third, the paper reflects upon the difficulties of reaching those actors who lack cosmopolitan resources, either everyday-makers or expert citizens. The go-along method and the use of the interpreters are shown as ways to reach these young people's political missions. Fourth, the paper underlines the importance of 'contact zones' for deeper democracy and for boosted dialogue between different kinds of participants.

*Spaces of Dialogue? the Case of the Wsf Tunis 2013 from the Perspective of Local Youth and Volunteers*

The paper focuses on the World Social Forum (the WSF) held in Tunis 26-30 March 2013 from the local youth perspective. The WSF Tunis brought together 60,000 participants from formal and informal social movements and networks all over the world for five days. The authors distinguish the young WSF volunteers from other Tunisian youth who participated in the forum. The data drives from participatory ethnography and action research. Around 15 WSF volunteers and

20 young Tunisian civil society actors involved in the WSF Tunis were interviewed during and right after the forum.

The research questions focus empirically on the dialogue/non-dialogue from the young Tunisian participants points-of-view: 1) what kind of local (Tunisian) dialogue took place; and 2) what kind of global dialogue (esp. together with non-Tunisian participants) took place – inside and outside workshops and sessions. These questions intertwine with the questions of why the WSF came to Tunisia and what affect it had to the local civil-society from the young informant's perspective. The paper also studies the roles and effects of the local youth in the WSF as well as the success and shortcomings of the WSF Tunis from the perspectives of the young volunteers and young Tunisian civil society actors.

The Tunisian author of the paper (Jabberi) was the volunteer coordinator in the WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in the forum (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the global South and North takes also place in the setting of co-authors, carefully reflected in the paper.

*Producing Knowledge about Post-Separation Stalking from Children's Point of View - Children As Social Actors?*

In this presentation, the post-separation stalking is understood as gendered violence from the children's point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children's and their mothers' wellbeing. Stalking is defined as severe, continuing, multidimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production.

The presentation is based on the ongoing research project "The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking" funded by Alli Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The principle has been to enable safety spaces for children's voices. The children's knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children's narration. The data is collected by children's groups based on action and interviews conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

*The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University "Hookup Cultures"*

There is significant media attention, especially in North America and the UK, to a so-called "hookup culture" among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced threads within such discourse obscure a regime of institutional reification requiring interrogation.

The current technological phenomena of social media, texting, and camera phones bring with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonic relationships is also undergoing accelerated changes. Research is challenged to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorized in the literature, interfering with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical and moral sensibilities mitigate efforts to nuance, trouble, and frame discourse on this subject, rigidifying a project of patriarchal social reproduction.

This paper offers a theoretical framework for engaging issues of sexual coercion and consent, reconciling laws, policies and practices with RealPolitics of

socio-sexual landscapes, belief systems, behaviors and interactions, employing the case of universities and their students as sites of institutional sociological convergences. We will report on a grounded theoretical qualitative study incorporating Feminist ethnographic, narrative, phenomenological and phenomenographical methods with a diverse cohort of university students interviewed throughout their first year navigating transitions and complexities in their developmental lives and social environments. The participants provided courageously candid, detailed and complicated accounts of their experiences. Findings elucidate and detangle previously conflated and/or obscured details of the phenomena, pointing to hopeful opportunities for fostering social and sexual agential capacities.

#### *Identification of Training Needs in Informal Sector for Street Vendors and Their Facilitators in Mumbai*

Informal sectors are thought as a source of development. But these sources of development can be mislead by poor working conditions and poor management in these sectors. Where poor working conditions can include different problems in their day to day functioning which is also affected by poor management of the human capital engaged in the process. Therefore with increasing importance of development through these informal sectors needs to be more focused and organised, for which identification of training needs of its human capital is one major approach that needs to be addressed by different Corporate Social Responsibility (CSR) activities of organised sectors and other government and non-government organisations. Exploring the importance of Training Needs Assessment (TNA) this paper is an attempt to highlight the difficulties they face in their work life and the way they deal with. This paper also tries to identify their skill development techniques and strategies that links to their growth and descent survival of their family in the society. This paper is based on primary data sources where, structured questionnaires were administered among the Mumbai street vendors, Government and Non-Governmental Organisations and CSR activities of organised sectors including a few case studies. The data was analysed through chi-square test and cross case analysis. The findings supported that the group undergone any kind of training were able to speak about their future learning skills they require for better development of their families than those who were deprived of any kind of training for their business growth were keen to learn the skills required.

#### *Issues of Atrocity and Discrimination Against the Dalits: A Study of Students Protest at the Premier Indian Educational Institutions*

Even today Dalits are the victims of violation, isolation, atrocities, discrimination, untouchability, discrimination, ill-treatment, deprivation, social stigmas, and the trap of the poverty in the society. Recent years that makes the state answerable before each and every Indian. Violence against Dalits in general and Dalit women in particular. Needless to mention the two unfortunate incidents: Recently 30 Dalit houses were torched by the upper caste people in Lathore, Odisha. Earlier the most unfortunate incidence of Pipil gang rape to a Dalit girl in Odisha, Khairlanji massacre in Maharashtra and many more. Conceptualise the problems this paper tries to explore the combined protest efforts of students' organizations and civil society in India. The second objective of this paper is to find out, how the students' organisations take up the issues and strategise in the process of revolution or protest against the state for the justice. It also aims at to explore the deftness of the students' revolution and its impact on social disaster prone area. It this paper is also theorising the atrocities, discrimination and it's consequences towards the Dalits in India. This study is based on both exploratory and content analysis research; data triangulation is the method for the data collection. Thematic analysis and descriptive statistics are the data analysis procedures for this study. The students sensitisation, organisation and the way of the protest are the footprints of students' movement in the sand of justice and struggle. The politicisation of the issues in the campus and the outside the campus pulling the leg of success of this movement. Personal vested interest played prominent role to de-speed and de-lined the student protest from their founding motto. This study reflects how it impact the civil society, upper caste lobby and to the state silence in the atrocity and discrimination issues.

#### *Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School*

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys' school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the "form" and "severity" of CP administered on students. Many were of the opinion that CP was "a fine means of disciplining students" as long as it is administered with the 'correct' intent of guiding students. They also thought that CP becomes an "issue" only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of "brutal/ inhuman beating" in schools. These views expressed by teachers raise important policy implications.

#### *The Conflict over Mining in the Heart of the Universe*

Mining is progressing over indigenous people's land in Mexico.

One of the holiest sites of Wixárika people, Wirikuta, has been concessioned to mining companies seeking to revive mining in the region. This has caused a conflict between different groups of actants by construction, ownership and control of that territory.

This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective, I also seek to highlight the importance of nonhuman actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

### RC19-330.3

**LAMPIS, ANDREA\*** (National University of Colombia, [alampis@unal.edu.co](mailto:alampis@unal.edu.co))

#### *Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link*

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly competitive milieu articulating local and global dynamics. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people's capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national CCTs programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people's livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality; CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household's surveys, and on programmes assessments and internally available data. Through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.

**LAMPRIANOU, IASONAS\*** (University of Cyprus, [iasonas@ucy.ac.cy](mailto:iasonas@ucy.ac.cy))

*Response Latencies and IRT Person Estimates Using CASI*

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

The possible practical consequences of the use of this algorithm for survey research are discussed.

Wise, S. L., & Kong, X. (2005). Response time effort: A new measure of examinee motivation in computer-based tests. *Applied Measurement in Education*, 18, 163-183.

**LAN, PEI-CHIA\*** (National Taiwan University, [pclan@ntu.edu.tw](mailto:pclan@ntu.edu.tw))

*Deferential Surrogates and Professional Others: Recruitment and Training Of Migrant Care Workers In Taiwan and Japan*

When outsourcing care to foreign workers, a society must engage in discursive reconstruction and institutional reorganization of intimate labor: Should care be seen as a family duty or professional work? Should care be characterized as a culturally embedded practice or a market form of labor that can be easily outsourced to foreigners? This paper examines the operation of transnational care regimes in Asia by comparing the recruitment and training of migrant care workers in Taiwan and Japan. Although both countries seek migrant workers as a solution to the similar problems in aging population and care deficit, Japan and Taiwan have adopted distinct models which demonstrate varied ways of intersecting migration regime and care regime: Migrant care workers in Taiwan are positioned as "deferential surrogates" while their counterparts in Japan are seen as "professional others." It is often assumed that East Asian societies share substantial cultural affinity due to their intersecting histories and common tradition of Confucianism. This comparative study not only shows varied institutional parameters of care that organize the family, market and state in distinct patterns, but it also demonstrates that cultural values and social practices such as familism and gendered division of care are subject to transformation under the influence of state intervention and global market.

## SOCI-980.6

**LANDER, EDGARDO\*** (Universidad Central de Venezuela, [elanderl@yahoo.com](mailto:elanderl@yahoo.com))

*Decolonizing Struggles in Latin America Today*

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constitute distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical experience and a particular mode of production, and specific ways or relating to so-called "nature".

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and modern technology. For the majority of the planet's population living in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern, as essential a component of the modern experience as the experience of the North. Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the global modern experience. Eurocentric social sciences have overall erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the "normal", "modern" universal template that the rest of the world has to replicate.

## PLEN-11.1

**LANDER, EDGARDO\*** (Universidad Central de Venezuela, [elanderl@yahoo.com](mailto:elanderl@yahoo.com))

*The Tensions between the Struggles against Inequality and the Defense of the Rights of Mother Earth in South America*

In the last decade and a half the struggles of South American popular movements and organizations against the military governments, free trade agreements and neoliberal economic adjustment policies crystallized in the election of many left or "progressive" governments. In these struggles and the constitutional processes that occurred in some countries, there are two central threads of struggles will be explored: first, the popular demand for the "return of the state" and social policies aimed toward social inclusion, access to education, health, food, social security ... and a reduction of the profound inequalities that have historically characterized the continent. The other axis refers to the relationship of humans with their natural surroundings, the struggles of indigenous peoples and peasants for their territories and rights of Mother Earth. This implies a profound critique of the very idea of development and the search for options to a civilization in crisis that has to confront the fact it we have reached the physical limits of the planet. This also relates to a critique of the monocultural character of liberal-colonial South American states in profoundly pluricultural societies. The attempt to achieve these two sets of goals simultaneously has generated deep contradictions. In response to widespread social demands of the most excluded sectors of society and looking to reassert their political and electoral legitimacy, all these governments have prioritized economic growth based on *extractive neo-developmentalism* (economic model based on an increased dependency on the export of non-processed primary goods) in a context of a significant hike in the demand and price of commodities in the world market. The purpose of this presentation is the analysis of some of the socio-environmental impacts of these governmental options and the main social and political conflicts that these have generated.

## RC06-128.4

**LANE, LINDA\*** (University of Gothenburg, [Linda.Lane@socwork.gu.se](mailto:Linda.Lane@socwork.gu.se))

*Work-Life Conflict In The Economic Recession*

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to change jobs, accept reduced working hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although

the global economic downturn has affected well-being of all employees, the ramifications for individual employees' remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright's class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifeldrud, Bison and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

#### *What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures*

In this paper we compare different methods of measuring social capital in conjunction with alters' resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego's social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego's network resources differs if the accessibility of resources is not taken into account; how well we approximate ego's resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego's network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting larger-scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

#### *The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries*

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the 'the new middle classes'. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumption.

#### *Negotiating a Space to Rest: Denver's Camping Ban and Camping in Denver*

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into

"loft-living" condos, rundown streetscapes were intensely policed then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver's revitalization while exacerbating the city's problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public's field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of "protection against the elements".

Aware that the camping ban did not eliminate homelessness and interested in how Denver's homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

#### *"Because You're a Migrant, They Treat You Really Tough." Findings of a Qualitative Study on Young Migrant's Perception of the Armed Forces in Germany*

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants' perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of "others". In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migration backgrounds in three different German cities. The composition of the group of interviewers allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in producing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewers was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemen as positive role models for their respective communities.

#### *Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research*

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as a constitutive part of one's biography. In general, peer research that is aimed at exploring life worlds as an "insider" is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58

narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of a sexualisation of the researcher occurred that focussed on the researcher's sexuality and his sexual biography.

The paper addresses methodical ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytic concepts of inter-subjectivity and counter-transference it argues for reflexively bringing in into the research process one's own sexuality as a researcher as a means for a deeper understanding of the production of sexual life stories in the interview situation. The double-bind of being researcher and perceived peer that may lead to exploitations of the interviewee's fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

### *Mobilizing for Dignity: Recognition and Social Movements*

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy. How have such movements fared? We will argue that the roots of these movement can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in Marxist critique of alienation, Lukacs critique of reification, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilizations.

### *Tokyo: Rebuilding the Global City in a Context of Urban Maturity*

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban financment, and urban rebuilding projects.

Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the « Japanese miracle » which occurred from the 1960s to the 1980s during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.

Two new phenomenons are necessary to understand this urban *miracle* in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the edition of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of European and American cities facing the same issues than Tokyo.

This paper will present the urban transformations induced by urban maturity, and will allow to discuss the notion of urban maturity, taken as a notion in opposition with the model of shrinking city.

### *Résister à La Précarisation Du Travail Dans Une Sidérurgie Brésilienne : Malgré Le Syndicat ?*

En fonction du principe de l'unicité syndicale, le Syndicat des métallurgistes de Ouro Branco et base (SINDOB) est le seul syndicat à représenter les travailleurs de la métallurgie et de la sidérurgie dans la région de la Vallée du Paraopeba située dans l'État de Minas Gerais au Brésil. Le SINDOB est notamment le syndicat qui représente la moitié des 6.000 travailleurs directs (et un dixième des

4.000 travailleurs sous-traitants) de l'ancienne sidérurgie Açominas, une entreprise étatique privatisée en 1990 et aujourd'hui détenue par le groupe brésilien Gerdau, 14e producteur d'acier dans le monde. Une enquête par entretiens a été menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette sidérurgie dans le cadre d'une thèse de doctorat sur les formes de résistance non institutionnalisées des travailleurs. Les dirigeants syndicaux interviewés – trois directeurs et le président – affichent leur politique auprès de la Gerdau : « négociateur ». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd'hui « tranquille » grâce à ce « partenariat » établi depuis de longues années avec le groupe sidérurgique. Les bouleversements de l'organisation du travail dans cette entreprise – commencés par « l'assainissement » financier et administratif d'avant la privatisation et suivis par la politique managériale du groupe Gerdau – ont changé le scénario du travail et de l'emploi dans toute la région. Dans un contexte de précarisation sociale du travail, nous souhaitons discuter les relations entre la politique syndicale de la « négociation » et la fragmentation des résistances des travailleurs face aux restructurations du travail.

### *Neoliberal Policies and Neoliberal Politics in Latin America's "Pink Tide": Moral Riots, Symbolic Boundaries, and Collective Performances in Bolivia's "Black February."*

Analyses of Latin America's "pink tide" (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank's recommendations as a result of the deleterious consequences of *neoliberal policies*. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal *politics* (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments. Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests targeted the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

### *Teamwork Diversity*

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and lean production, which first appeared in Japan's industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy improvement. On the other hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today's workplaces?

Does teamwork represent a breakthrough from Taylorism or a strengthening of Taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec manufacturing sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption rests upon a logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both Taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.

*Romanian Youth in Catalonia (Spain). Selfidentification, Languages and Symbolic Capital*

The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the different languages in contact. In this line, and especially in the case of migrants, it has to be noted that they are facing a necessity to coordinate, build and rebuild their self-identification with the host societies considering the capital linked to languages. In addition, especially in the case of young people, in the process of building their self-identifications and feelings of belonging, family influence and their own life experiences outside of this area may influence the construction of self-identifications in which the symbolic capital of the languages spoken in the residence territories are unequal and highly relevant (Bourdieu, 1985, 1991; Heller, 2000, 2008).

Centred in Catalonia, a bilingual territory of Spain where Catalan and Spanish are co-official languages and where significant Spanish and Catalan nationalist synergies linked to languages have developed, and in the case of young Romanians, the aim of this paper is to analyze the predictive power of parental and non-parental variables related to languages in contact on self-identification with Catalonia.

From a quantitative approach, the main results show the importance of variables that refer to the symbolic realm of language – young people's language attitudes toward Catalan and Spanish and their self-identification with Spain, as well as the language attitudes and self-identification of their parents – carrying greater weight than other variables of socio-structural character, as the socio-professional or socio-cultural levels, and even the level of Catalan competence.

This work is a part of a research project funded by the Spanish Ministry of Science and Innovation (EDU2009-08669EDUC). Ianos, Poalelungi and Popa have a Pre-PhD Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379 / 2013 FIB 00347 respectively).

*Undeserved Unhappiness: A Comparison of Philippines and Japan*

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS' participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

*Legitimation Work: A Social Theory*

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimizing their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provides funding, and the general public provides legitimacy. In satisfying the three publics the actors engaged in preserving the relevance and importance of the publicly funded organizations are conducting legitimation work. Legitimation work is a social pro-

cess being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization's communication with the various publics and what role they play in the legitimation work.

**LAUBE, WOLFRAM\*** (University of Bonn, [wlaube@uni-bonn.de](mailto:wlaube@uni-bonn.de))

*Dissolving Inequality? Changing Cultural Models, Education and Social Mobility in Ghana*

In northern Ghana, cultural models of how to get on have changed drastically within the last generation. Coming from a part of the country that has been economically and politically marginalized throughout the colonial and post-colonial periods, people believe that formal education and modern professional careers – instead of traditional livelihoods centered around subsistence agriculture, labor migration and reciprocity within extended families – provide the only way to be successful and to achieve life chances comparable to those people in the southern part of the country have. Changing cultural models are the result of a decline of rural livelihoods that is caused by environmental changes but equally rooted in internationally promoted structural adjustment policies that have disadvantaged local smallholders and led to the influx of highly subsidized cheap agricultural imports. But despite serious investment in education by both parents and students, poor educational quality of public schools and the lack of a conducive extra-scholar environment lead to prolonged educational careers and educational malperformance. High cost of secondary and tertiary education further reduces the number of students actually able to achieve meaningful educational outcomes and social mobility. Long-term qualitative and quantitative research shows that education, despite of its potential to promote equity, in the absence of specific public programs addressing the education of deprived members of the Ghanaian society, rather leads to personal frustration, as shifting cultural models of success cannot be met, and societal marginalization, as social mobility is not achieved. This situation has the potential to create social unrest and destabilize the Ghanaian society as adequate employment for the poorly educated youth is increasingly difficult to get by. On the general level research shows that education on the societal level can only contribute to equality, if it is paralleled by policies that specifically target the needs of those marginalized.

*(Dis)Placing Trust: The Effects of Job Displacement on Generalized Trust over the Lifecourse*

The adoption of 'flexible modes of production' across much of the developed world has been theoretically posited to be a substantial driver of declining macro-levels of social capital and generalized trust. A key facet of 'flexible modes of production' believed to be particularly harmful for social capital are increasing rates of job displacement (e.g. involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the posited association, very little has research has investigated if, how and why job displacement affects social capital. This paper explores how experiences of job displacement can affect individuals' tendencies to (dis)trust over the adult lifecourse, using two-waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job displacement, between the ages of 33 and 50, appears to significantly scar generalized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains higher amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work: the more central employment is to individuals' lives the stronger the negative effect of displacement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spillover into the wider social sphere, both at micro- and macro-levels.

**LAURENT, ARTHUR\*** (Oxford - ECI, [arthur.laurent@yahoo.fr](mailto:arthur.laurent@yahoo.fr))

*A Peruvian Reducing Emissions on My Behalf: Representation of the Stove User for a*

Regulatory carbon markets are one manifestation of international climate change negotiations. Their implementation requires the state intervention at different levels. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. The standards have ambiguous relations with the state and put at stake the notion of government. As such, they question the ability to govern sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at how the carbon offsets resulting from this value chain are sold to the final consumer. In particular, I will be interested in how Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in mobilizing offsetters. Building on the analysis of various offsetters, I will show that the understanding of the Peruvian context is very different for them as is their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.

**LAURENT, ARTHUR\*** (Sciences-Po Paris,  
[arthur.laurent@yahoo.fr](mailto:arthur.laurent@yahoo.fr))

### *Multilevel Analysis of Standard Governance: Voluntary Carbon Certification and the Peruvian Cookstove Sector*

Carbon markets are often seen as one of the best success in environmental markets yet they are also subject to many criticism. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. The standards have ambiguous relations with the state and put at stake the notion of non-state governance. As such, they question the ability to govern sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at the capacity for a private led initiative to engage with the state and whether any complementarity, crossover or parallelism can be drawn. The way the initiative led is implemented by a private company, claiming a social business orientation, interrogates the capacity to reach further collective outcomes than the mere interest of the private sector. This consideration will be informed with results of three consecutive verifications for three project packages meaning more than a dozen projects from either public or private institutions. Such an interesting amount of data will enable comparison. Rather than considering the standard as a mere global initiative with local manifestations, this research looks at the national context for informing how standards influence at meso level.

[lenalavinas@gmail.com](mailto:lenalavinas@gmail.com))

### *Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia*

This paper aims at comparing female trajectories in three BRICS -- Brazil, China and Russia -- since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population<sup>[1]</sup>, as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: *Capital for the Future*).

Moreover, these three countries differ profoundly in the way they have developed different patterns in terms of institutions and norms with regard to social protection schemes, labor regulations, and gender policies.

This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be undertaken in order to determine the factors that most contribute to explain gender asymmetries in each country.

[1] Age bracket 25-54 years old.

### *Inancial Inclusion As a Basic Human Right? Reframing Inequalities in > the > South*

A new wave of commodification "all the way down" (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizens to equal consumers and from risk-sharing to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of de-commodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) even state that "we need to reframe the wording of 'universal human rights' (...) in more basic terms" (2012:150) to connect all people to finance.

This presentation will compare the extent to which incomplete social protection schemes are being replaced by the provision of minimum income transfers and some basic services for the needy through the social protection floor (ILO 2012) and the basic universalism framework (Huber and Stephens 2012) along with a process of "bankcarization" of the poor and the vulnerable. We argue that preventing market failures instead of promoting equality of opportunities and further public redistributive mechanisms to make market societies more homogeneous reflects strategies to enhance privatization and capital markets whose deployment has been long constraint by domestic market restrictions in the developing world. This trend is likely to reinforce duality and polarity and undermine strategies to achieve broader equality between developed and developing nations, between the wealthy and the excluded. The North-South divide will deepen. We will examine how these conceptual frameworks have emerged in the aftermath of the 2008 crisis; we will scrutinize the profile of the public provision of welfare in some developing countries, through an overview of social spending (public and private).

### *Conseillers à L'emploi Et Politiques D'activation : Une Gestion Paternaliste De L'accompagnement à L'emploi ?*

Le mode de gestion paternaliste s'est historiquement développé dans un contexte d'émergence du salariat au sein des pays industrialisés. Avec l'extension d'une législation dédiée aux rapports salariaux et la montée d'un Etat social (Castel, 1995) oeuvrant non seulement dans le cadre d'une gestion de type assistantiel, en direction des populations les plus démunies, mais aussi de type assurantiel, à destination des travailleurs réguliers privés involontairement d'emplois, cette gestion spécifique des rapports de travail, caractérisée par un contrôle social discrétionnaire et personnalisé combinant sécurité et coercition, semble avoir perdu de son acuité, par l'établissement des droits universels.

Nous appuyant sur une enquête ethnographique menée en France auprès des conseillers à l'emploi, nous souhaitons montrer que ce mode de gestion discrétionnaire et personnalisé des rapports de travail et d'emploi peut également s'observer au guichet du service public de l'emploi, avec la montée des politiques dites

d'activation, caractérisées par un projet institutionnel d'incitation à l'adaptabilité aux normes d'emploi (Cassiers et al, 2005). Ce mode de gestion spécifique de relation avec les chômeurs comporte en effet des caractéristiques communes avec le paternalisme : personnalisé, il combine coercition, autonomie et vision du bien commun marquée par une logique de contrepartie (Boismenu et al, 2003). En revanche, une différence importante subsiste à travers le poids de la rationalisation gestionnaire, qui s'incarne notamment dans le profilage des chômeurs.

Ces nouvelles formes de paternalisme, qui prennent également pour appui la légitimation de l'asymétrie des rapports entre employeurs et chômeurs au nom d'une rationalité supposée des entreprises, se situent donc à la croisée de deux visées, la subjectivation et la rationalisation. A partir de 200 observations de rendez-vous entre conseillers et chômeurs, notre communication entend analyser les effets de ces deux visées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

### *New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap*

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession is an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized assistance in job search by the Monitoring Monthly Custom, introduced in 2006) on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

By changing the standards, organization, this industrial rationalization of a new type reconstructs the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment coaching), and strategies of avoidance or neutralization of the most coercive professional acts.

The paper examines also the notion of subjectivity in social policies and the prescriptive strength of standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed recruitability, by the establishment of trusted devices or else by the taking account of a "situated rationality" of the unemployed.

### *Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination*

The category of 'Leisure' as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and making a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and makes a call and argument about extension of epistemological breadth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation's commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrellas.

**LAW, ALAN\*** (Trent University, [alaw@trentu.ca](mailto:alaw@trentu.ca))

### *Leisure, Justice and Economic Collapse*

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the

state is critical in setting the terms of social legitimacy, but 'the' state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19<sup>th</sup> century.

### *Insights for Healthcare Professionals on Patient Experience of Research Participation*

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEx International collaboration – using common methods to collect and share individual narratives on an evidence-based web site. In Germany, 43 people, who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were strikingly similar results. Participants in both countries spoke about their motivation to help others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in reliving some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

### *The Financialisation of Food and Farming in Australia*

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia's past development was assured through foreign capital, so the nation's future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent – and nature – of the purchases is not in the nation's best interests. Critics argue that some of Australia's most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is 'repatriated', taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control.

Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of 'financialisation'. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculation in land along with opportunities for more secure food production for oil-rich but land-and-water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorizing the sociological 'meaning' of financialisation as it affects the Australian agri-food sector.

**RC09-171.1****LAWSON, GEORGE\*** (LSE, [g.lawson@lse.ac.uk](mailto:g.lawson@lse.ac.uk))*Negotiated Revolutions 2.0? The Arab Uprisings In Comparative Perspective*

The 2011-12 uprisings in North Africa and the Middle East have helped to re-invigorate scholarly interest in revolutions. But what kind of revolutions do these uprisings represent? This article situates the Arab uprisings within the context of post-Cold War revolutions, locating them within a cluster of 'negotiated revolutions' that have emerged over the past twenty years. 'Negotiated revolutions' differ from 'modern revolutions' in five main ways: they result from a relative rather than systemic state crisis; their trajectories are characterized by negotiations rather than armed confrontation; their participants reject the utopian commitments of past revolutions; they are welcomed rather than disavowed by leading international actors; and they lead to the development of weak rather than strong states. The article assesses the Arab uprisings within this schema, arguing that, contra those who see the Arab uprisings as offering a new model of revolutionary change, their causes, trajectories, and outcomes are broadly familiar. Extending this point, not only do the 2011-12 uprisings sit within a family of revolutions that can be traced back to 1989, their focus on political justice rather than the 'social question' means that the uprisings share a family resemblance to previous instances of 'self-limiting' revolutions. This comparison illuminates both the strengths and shortcomings of the 2011-12 uprisings.

**JS-83.8****LAZMEY, T. AUGUSTUS JULIAN\*** (The American College, Madurai, [lazmey@yahoo.com](mailto:lazmey@yahoo.com))**SELLAMUTHU, S. GURUSAMY** (Gandhigram Rural Institute - Deemed University)*Socio - Economic and Health Status Of Elder Population: Some Empirical Reflections From Tamilnadu, India*

The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental disorders and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their own family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come from the family members are denied resulting in their deprivation and deserts. Consequently, the welfare intervention from GO's and NGO's are looked forward to fulfil their basic needs. The health care and support systems promoted through GO's and NGO's provide some solace to their requirements. The condition of the elderly population in rural India is not properly addressed. There is also gender disparity in provision of care and support and status in rural community. This paper is and outcome of the field investigations conducted on socio-economic and health status of elder population in selected block in state of TamilNadu, India. This paper analyses the status of the elderly population in terms of socio economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

**RC15-269.1****LE CLAINCHE - PIEL, MARIE\*** (EHESS, [leclainchepiel@gmail.com](mailto:leclainchepiel@gmail.com))*Is There a Medicalization of the Facial Appearance?*

A partir d'une recherche au sein d'espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu'où observe-t-on une médicalisation de l'apparence, et par quels dispositifs se traduit-elle ?

On peut avancer qu'il existe des normes d'apparence que les institutions médicales et judiciaires encadrent. La problématique du normal et du pathologique imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne chercheraient pas à rendre la beauté mais à rapprocher d'une norme d'humanité. Une posture pouvant aller à l'encontre des associations d'aide aux personnes défigurées, qui militent pour un élargissement des normes d'apparence.

Aussi, sans proposer de typification du rapport entre réponse sociale et réponse chirurgicale, en suivant des personnes touchées par une forme de défiguration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d'expérience de l'anormalité faciale fonction des appuis institutionnels disponibles dans chaque pays.

Pour aborder ces questions on pourra tirer des éléments de la mise en place des techniques de transplantations du visage au cours des années 2000 et de leurs modes de légitimation.

**RC08-165.16****LE MAITRE, FRANCIS\*** (University of Konstanz, [francis.le-maitre@uni-konstanz.de](mailto:francis.le-maitre@uni-konstanz.de))**ZINK, VERONIKA** (FU Berlin)*Sociology and the Myth of the Crisis*

Ever since Comte, sociological scholarship is predicated on the legitimizing image of being the science of crises and conflict. The dealing with crises has attended to the question of how they arise, how they may be prevented through sociological insight, and what role they play for the functioning of our socio-cultural reality. According to A. Weber sociology itself is a „daughter of crisis“ entering the academic world in the so called saint-simonian time of modernity; a period of change, tremors, uncertainty and unsettledness be it with regard to the political, the economic or the societal order. Even nowadays, we can witness the topos of crisis and conflict as being the ever renewed funding myth of our discipline by e.g. having a brief look at the major themes discussed at various national and international congresses of sociology.

Within our contribution we will show that whilst early sociologists have both attempted to understand the outbreaks of crises in order to cope with these anomalous jolts and believed in the eschatology of a cathartic *grande crise finale*, recent sociological theory mainly regards crises as a part of a social drama and all the uncertainties accompanied as constitutive for the structuring and the stabilization of the routine of social reality. Herein crises are no more labeled as punctual outbursts but seem to offer an omnipresent model of contemporary social reality. Positing that the routinization of crises is at the stake of present sociological narrations, we will finally question how this ever-present dystopian corrective of tremors can function as a 'challenge of reality' (Baudrillard).

**RC23-419.12****LE ROUX, RONAN\*** (CNRS UMR 8085 PRINTEMPS, [ronan.le.roux@gmail.com](mailto:ronan.le.roux@gmail.com))**SAINT-MARTIN, ARNAUD** (CNRS UMR 8085 PRINTEMPS)*Instrumental and Political Asymmetries in Coastal Risks Perception Between the French State, Local Actors and the European Union*

Presentation of a new project (2014-2016) funded by the French Ministry of Ecology, involving F. Chateauraynaud, J. Debaz, A. Saint-Martin, M. Jouvenet, R. Le Roux.

**Background**

- Recent concerns have stressed a probable increase of the frequency of extreme events and new risks linked to climate change.

- Between generic models and emerging big data strategies, best predictive configurations are not firmly established.

- Political tension with legal framework under progress. Tensions occur between the State and local actors concerning the responsibility of risk prediction and preparedness, as illustrated by the case of storm Xynthia (Feb. 2010, 59 casualties, mainly in France): while the State has not properly applied its own directives, it is suing local mayors for not respecting them; in turn, following the trend of participative science, local towns are recruiting technicians to have their own measures. Local territories also show growing demand of satellite observation solutions offered by the European Union.

**Hypotheses and questions**

How cognitive facilities and political margins of maneuver influence each other: whether, to what extent and in what cases an instrumental asymmetry occurs between the State and local actors (i.e., the State using rather generic prediction instruments, vs. local actors using rather territory-specific information). If so, are such asymmetries a condition or an effect of political tensions? Do scientists play a neutral role in the way they produce and disseminate data, models and scenarios?

**Terrains and approach**

Comparative approach with case studies: geographical comparisons (France-USA-Japan); risk comparisons (oil spills, algal blooms); scientific and socio-technical configurations (instrumental strategies and division of labor).

**RC10-185.4****LEADER, ANDREW\*** (Flinders University, [andrewleader1980@gmail.com](mailto:andrewleader1980@gmail.com))*Perceptions Of Executive Government Leadership In The Age Of Engagement and Community Based Decision Making*

Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder's perceptions of the outcomes of community engagement match with the perceptions of engagement's success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments' leadership and accountability reaches a critically low point.

### *Virtual Networks As Tools of Social Justice*

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a globalized world focused by the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tools of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO's. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

The idea of justice is connected with the distribution of natural and social resources among people and the criteria and mechanisms of correction of injustices. Putting together the theories of justice by John Rawls(2003), Amartya Sen(2011), Nancy Fraser(2009) and Martha Nussbaum(2011) that represent the political, economic and cultural aspects of justice, that are related to the justice found in the ways of life and not only in the legal recognition, we can extract elements characterizing the social justice in the plan sense. Then we can also allow investigating its presence in the free participation of individuals in the social networks.

FRASER, Nancy. Reframing Justice in a Globalized World. In *Lua Nova*, São Paulo, 77: 11-39, 2009.

### *Consequences of Alternative Feminist Approaches to Land and Housing Security*

In September 2013, the Huairou Commission, an international non-governmental organization that works with grassroots women, and Espacio Feminista, who work with landless women in Recife, Brazil, held an expert group meeting. Patricia Chavez, founder of Espacio Feminista, said:

We need to go deep into what development is; we are just accepting a process of urbanization; people are not obliged to live in riverbanks, hills. We are being

forced out of fields, to open up space. [There is a] model of development that is being imposed . . . let us not be transformed into something that is not compatible with our needs.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market that pays low wages and offers no protections. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the "diverse" economy as developed by J.K. Gibson-Graham, authors of *The End of Capitalism (As We Knew It): A Feminist Critique of Political Economy* (1996, 2006). The diverse economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist). On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

### *Global Cyberspace: The Involvement Problem*

In the present-day information world the involvement of an individual in Cyberspace is an important social marker determining belonging to one or another social group. Your circle of contacts, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren't an Internet user. On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the Internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development that prevents the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

## RC15-262.2

### *Les Droits Du Patient Et La Dépénalisation De L'euthanasie Comme Lieux De Questionnement De La Médecine Contemporaine : Le Cas De La Belgique*

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépénalisant l'euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des praticiens en matière d'information et devait, notamment, assurer au patient un accès direct à son dossier médical. L'application de cette loi fait encore problème aujourd'hui, et pas seulement en raison de la volonté du corps médical de maintenir son autonomie de pouvoir mais aussi du fait des carences de la loi elle-même et de la représentation qu'elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l'unanimité. La Loi de dépénalisation de l'euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d'abréger ses souffrances. L'application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l'entremise de la notion de « clause de conscience ». La question est cependant plus complexe car si l'autonomie du médecin peut apparaître comme un frein à l'exercice de ce type de droit, elle peut aussi constituer le moyen de s'opposer à bien d'autres obstacles d'ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés d'application de ces deux lois fondamentales, des controverses éthiques qu'elles suscitent – et notamment autour de la redéfinition de la figure du médecin – et des tentatives entreprises dans les divers lieux de la décision politique en vue de les surmonter.

**LECCARDI, CARMEN\*** (University of Milano-Bicocca,  
[carmen.leccardi@unimib.it](mailto:carmen.leccardi@unimib.it))

*The Spaces and Times of Youth Culture in the New Century*

It is starkly evident that in the new century young people's biographical constructions must come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingent form of identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of the 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

**BOYER, ROBERT\*** (Institut des Amériques, [robert.boyer@ens.fr](mailto:robert.boyer@ens.fr))

*Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation*

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified of "welfare orientalism" (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affected such institutions as family and firms, as well as ageing, and rising inequalities.

The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new "regulation mode" able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitalisms, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

*Precarious Working Life and Militant Activism of Non-Regular Workers in South Korea*

From the early 2000s, non-regular employment has become a core labor policy issue in South Korea. Non-regular labor, comprised of a variety of precarious employment patterns, such as fixed-term workers, part-time workers, dispatched and subcontracted workers, home workers, and dependent self-employed workers, has proliferated in Korea, particularly along with changing corporate employment strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety-net.

Given their precarious working life, non-regular workers came to the fore as a symbol of militant labor activism over the past ten years. They organized their unions even under their employers' harsh suppression and the lack of regular workers union's support. Those precarious workers engaged in the prolonged strike action to defend their unions from the employers' suppression and protest against inhuman discrimination imposed on them. Faced with limited movement resources, they often resorted to extreme struggling actions, such as hunger strike, sit-down demonstration at the air, and even committing suicide, in order to gain public attention and create societal pressure to resolve their issues.

In this context, our paper is to discern why union behavior of non-standard workers are so militant, and to examine causal relationship between those workers' precarious working life and their militancy.

*The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India*

Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian Society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affiliation have been carved in Deccan basalt.

From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollutions. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government.

First part of this paper presents understanding of Ajanta caves as general description and significance of Ajanta caves. Second part of this paper analyses impacts of cultural heritage tourism on Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. Third is part of summary, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to preserve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.

### *Understanding Stratification in a Global Perspective: The Case of South Koreans*

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses nation-states as the unit of analysis with an assumption that stratification takes place exclusively *within* nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has usually been taken by development scholars. It focuses on stratification *among* countries. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a *global* stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as individual-level processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, I situates income earnings of South Koreans within a broader pattern of global income hierarchy, and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) with achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

#### *Relational Skill Assets and Anti-Immigrant Sentiments*

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received much attention. In this paper, we highlight the role of relational dimensions of skill assets in explaining native workers' attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrance skill barrier against immigrants and the latter as a pulling factor that attracts skilled or unskilled immigrant work forces. Then, we create a new independent variable, "relational skill specificity," which is a relative measure of interpersonal skills over instrumental skills in one's occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over the entire skill assets are less likely to develop strong anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political variables. The findings suggest that different levels of anti-immigrant sentiments between skilled manual workers (e.g. craftsmen), and skilled non-manual workers (e.g. professionals), originate not only from different levels of cognitive skills but also from varying levels (or compositions) of relational skills. Overall, the findings of this study provide a novel pathway of causal explanation of how native individual workers develop their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

#### *Moving Between Violence and Nonviolence in the Black Panther Party, 1966-1971*

This paper will explore how the Black Panther Party (BPP) transformed its chief strategies for the Civil Rights Movement from violent to nonviolent throughout the late 1960s and early 1970s in the United States. The BPP has been infamous for Black Nationalism and armed struggles against racist violence, as opposed to the nonviolent methods for the Movement popularized by Martin Luther King Jr.

In contrast to the well-known armed demonstrations of the BPP, there were in fact serious debates within the group on the effectiveness of violent tactics, and the leaders of the group promoted more nonviolent actions. After the FBI's count-

er-intelligence activities particularly targeted the BPP, incarcerations and murders of most of its leaders forced the group to nearly collapse and split off into the International Section. As a result, the BPP leaders became more divided on the issue of violence. Huey P. Newton strengthened the group's relatively nonviolent strategies, such as their free breakfast programs. Eldridge Cleaver, however, reinforced revolutionary ideas influenced by Third World guerrillas, and maintained the BPP's violent rhetoric and tactics during his exile in Algeria. The conflict between Newton and Cleaver was a result of the state's effort to destroy the BPP, as well as the two men's personal power struggle.

I intend to argue that the BPP did not have a fixed identity as an exclusively violent organization, but instead created multifarious concepts of black liberation inside and outside U.S. The state agencies, especially the FBI, deeply affected the process of its transformation by repressing the group. The dynamics and dialogues between Newton and Cleaver, which centered around the debate for and against violent strategies for the BPP, will be the key to understanding the inter-relationship between the social movement's militancy and the state's oppression.

#### *Childhood Poverty Across Generations: A Trajectory Approach*

Research on social stratification and mobility has established a strong inter-generational link in economic disadvantage, documenting the ways in which socioeconomic status is transmitted from one generation to the next. Childhood economic deprivation plays a critical role in the stratification process, as it has been identified as a key obstacle to upward mobility. Ample evidence from the life course literature suggests that early and persistent childhood poverty has adverse impacts on educational attainment, labor market performance, health, and family formation. Incorporating these two streams of research, this paper provides a multigenerational analysis that turns around the question of socioeconomic mobility: How is childhood poverty experienced by parents passed on to their offspring's poverty experiences during childhood? Using data from the Panel Study of Income Dynamics (PSID), we extend previous research in several important ways. First, drawing upon recent research suggesting the role of family influence across multiple generations, this paper examines how grandparents' socioeconomic standing affects parents' childhood poverty, which in turn affects children's childhood poverty. Second, we employ finite mixture modeling to construct trajectories of childhood poverty across generations. Specifically, we investigate how different temporal patterns—timing, duration, stability, and sequencing—of economic deprivation throughout childhood in one generation are associated with those in the next generation. This approach thus allows us to address potential limitations of using cross-sectional measures to estimate intergenerational links in childhood poverty. Finally, our analysis examines the mechanisms by which poverty trajectories during childhood are transmitted from parents to children, using family background characteristics at the time of child-bearing as intervening factors. We expect this study to generate new insights into the intergenerational transmission of childhood economic disadvantage.

#### *The Alienated Image of University Professors Under the Corporatizing Culture of Neo-Liberalism: Social Conscience or Academic Labor?*

Taiwan universities have been undergoing drastic changes in many respects, since last 25 years, particularly initiated by the neo-liberalism to meet the demands of a globally advanced industrial labor market, which legitimately accelerate universities as corporations. The neo-liberalist conception, to be called 'the corporatizing culture', by an appeal to market-logic freedom, has signaled a radical shift in the notion of higher education/learning. The aims/academic values of public universities in Taiwan are under siege caused by entrepreneurial thinking from corporate capitalism. The meaning of university autonomy is replaced gradually by market vocabularies and ideologies. The effect is that professors will be called to public accountability and make their performance accessible to the multiple stakeholders in society. Their freedom for doing research projects is controlled more and more by evaluation schemes whose criteria are narrowly concentrated on utilitarian application and their capacities to do research is increasingly dependent on identifying and getting command of external sources of money. That is, they will work as academic labors. The implementation of curriculum and teaching will be directed toward workplace employment and therefore commercialized. The subjectivity and academic freedom of professors seem to be weakened by the management of teaching quality assessments. The author hence pertains to argue in this paper that the alienated images of professors such as de-subjective, non-ethical, and disposable, distorted by neo-liberal discourses, need to be addressed seriously, if the last Professors as social conscience and the voice of justice could last and fight back in the neo-liberal corporatizing world.

## RC31-526.17

LEE, HYUNOK\* (Yonsei University, [hlee1@yonsei.ac.kr](mailto:hlee1@yonsei.ac.kr))*Gendering the Migration System in East Asia*

This paper attempts to do gendering the migration system in East Asia by focusing on social reproduction. Inter-Asian migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998)'s work, I attempt to gendering the regional migration system by examining two feminized migration streams: labor migration for care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

## JS-26.7

LEE, JIN KYUNG\* (Sangji University, [jinklee@sj.ac.kr](mailto:jinklee@sj.ac.kr))*How To Examine Spatial Housing Inequality and Housing Polarization?*

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of PIR and the Gini coefficient, affordable housing and affordability of householder are more important subjects in Korea than the level of housing wealth, in view of inequality. The third thing is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, in descending order, and unlike HWI, HAI is affected relatively by unsold housing of region, the number of houses, per capita GRDP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and it in HAP is TM (top-middle) section.

LEE, JIYEON\* (Yonsei University, [jylee80@yonsei.ac.kr](mailto:jylee80@yonsei.ac.kr))*The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism*

Since the Korean family law including the family head system was enacted in 1958, the status 'a head of family' had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women's organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on "why the abolition of the family head system was possible in 2005" and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has oriented toward the actor centered approach and overlooked the wider social context and to make a supplementary view on the transformation of family structure and discourses in South Korea. Therefore my research question is "what social conditions created a new family discourse and brought about the abolition of family head system?" The IMF economic crisis in the late 1990 triggered the increase of discourses on the Korean family crisis and the demographic change. In this transformation of family structure, the frame of family discourse for abolition of family head system in South Korea had also been changed. Before the 2000s, the cons and pros of the family head system was the confrontation between 'gender equality vs. tradition.' However, after the 2000s, the change of the family structure coincided with the economic crisis has involved the risk on the middle class patriarchal family model and actual decline in marriage ratio, increase in divorce and remarriage rates and low fertility rate. Therefore, the new discursive frame of focusing on particular family problems has appeared for the recognition of the variety of family in society and social right to make one's family.

LEE, JONG YOUL\* (Incheon National University, [jylee@incheon.ac.kr](mailto:jylee@incheon.ac.kr))  
ANDERSON, CHAD (Incheon National University)  
ROH, JIYOUNG (Incheon National University)*Cultural Policy and Urban Development: Cases in Korea*

The urban agenda is shifting in South Korea from a politics of place to one of people. The Korean political paradigm has shifted in the direction of welfare provision, but local government has limited flexibility in implementing a welfare agenda outside of the megacity of Seoul. Even so, innovative local efforts continue in the area of cultural policy, where local government has more flexibility to pursue a coherent agenda with broad benefits, including both ones that embrace development of place and ones that transcend the prior association of cultural policy with place to deliver welfare benefits to people through cultural spending. This study uses pooled data from more than 200 local governments in South Korea across five years to investigate the factors involved in urban development. On the basis of the results in the area of municipal and district-level cultural spending, a number of cities and districts are identified where cultural spending has a clear relationship with local development according to different measures. This study will explain the dynamics of a number of these creative local efforts.

LEE, JONG YOUL\* (Incheon National University, [jylee@incheon.ac.kr](mailto:jylee@incheon.ac.kr))*The Cultural Industry and the Scenes of Dalian: Culture As a Driver of Development*

The Cultural Industry and the Scenes of Dalian: Culture as a Driver of Development

Jong Youl Lee, Incheon National University  
Chad Anderson, Incheon National University  
Bo Wang, Incheon National University

China has continued to undergo rapid development in the past decade even as individual cities and provinces have pursued different paths to development. Data from the top 99 cities in China for the decade from 2000 to 2010 show that culture has become one path to urban development, particularly through the development of tourism and fixed cultural investments.

Dalian is a good example of a city that has combined both of these trends. The city considers culture to be one of the five leading industries and considers integration of cultural resources and capital, science and technology, and even urban layout and planning. Spending on culture has been increasing from year to year, increasing five times over from 2002 to 2011. The cultural industry is centered on contents like animated games, film and drama, media contents, new cultural creativity, as well as on tourism and has become a new pole of rapid growth. Much of the city's growth has been driven by the cultural contents industry as well as by tourism driven by a unique mix of amenities, the non-market features that affect the city.

This study details the Dalian model of development by connecting the developmental trends to the city's cultural industry and tourism features. This is done by detailing Dalian's overall urban experience through defining the city's scenes. The mix of amenities in Dalian provides the lived experience of the city residents who provide the workforce in the cultural contents industry driving development in the city. At the same time, the overall urban scene provides an experience luring tourists both domestically and from abroad to the city.

## RC09-170.2

LEE, JOONKOO\* (Hanyang University, [joonklee@hanyang.ac.kr](mailto:joonklee@hanyang.ac.kr))*Globalization, Localization, and International Coproduction As an Emerging Form of Governance in the Global Animation Industry*

This paper examines the interaction of globalization and localization and the rise of international coproduction as a noble governance form in global cultural industries. The expansion of Western media and cultural industries to emerging markets has been intensified since the 1990s thanks to worldwide deregulation and liberalization and the introduction of new media, such as satellite TVs and the Internet, which facilitate the integration of national, regional and global markets. At the same time, the growth of cultural and media markets in emerging countries has presented new opportunities and challenges for both global and local firms. Global media giants have found their strategies should be adjusted to better serve local audience who is not solely satisfied with their global content, and local firms have become more ambitious in bringing their content to overseas. Examining the case of the global animation industry, this paper argues that as global firms seek to tap into local markets ('localization') and local producers try to enter foreign markets with their own products ('globalization'), international coproduction, a form of cross-national, inter-firm partnership for animation production and distribution, provides both actors with new opportunities to collaborate for

a project amenable in markets across different cultures, languages and regulations. It facilitates global leading firms to better address local markets and access talents in emerging economies, while local firms can benefit from newly acquired skills in creative development, marketing and distribution as well as expanding outlets for their content overseas. The paper concludes with discussion of the challenge for firms in managing cross-national cultural production networks and the implication of this new form of inter-firm governance to the future of a global cultural economy.

#### *Idea and Public Discourse in Policy Change: The Case of Migrant Labor Policy in Korea, 1990-2003*

This study examines public discourse about migrant workers and migration labor policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorials and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Industrial Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme were so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans' historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

**LEE, MINJIN\*** (Rikkyo University, [leemj@rikkyo.ac.jp](mailto:leemj@rikkyo.ac.jp))

#### *The 'people House' and a New Move to Organize 'resident Workers' in Korea*

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as 'resident workers' has appeared. The 'People House' ('minjunguijip' in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, in Incheon and Kwangju after 2008. The 'People House' considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of 'resident workers'. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing 'resident workers'.

This paper has aims to examine practices of the 'People House' to organize 'resident workers' and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the 'People House' in Korea and 'worker center' in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

#### *Counter Hegemonic Discourse on New Poor in Japan in 2000s – a Case Study of Two Indie-Magazines*

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into "new poverty." The emergence of "new poor" who were unidentifiable but already everywhere

alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss "new poverty." This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on "new poverty/poor." In order to do so, two Japanese indie magazines – Freeter's Free(2007-2008) and Lost Gene(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-) publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers but also contributors and editors – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

**LEE, NA-YOUNG\*** (Chung-Ang University, [nylee@cau.ac.kr](mailto:nylee@cau.ac.kr))

**LEE, JAE KYUNG** (Ewha Womans University)

#### *Can We Hear Subaltern Woman's Experiences?: Im/Possibility of Representation in Postcolonial Context of South Korea*

The purpose of this paper is to illuminate the implication of feminist oral history as critically reexamining the relationship between hearer and speaker, representer and narrator, the said and the unsaid, and secrecy and silence. Based upon oral (life) history of military prostitutes in U.S. camp towns in South Korea (yanggongju), we tried to reveal the experiences of historically excluded and marginalized 'Other,' and then critically reevaluate the meaning of encountering 'Other' not just through the research process but also in the postcolonial society in Korea. Narratives of old women in kijichon ( formal prostitutes in U.S. military base) shows how women have navigated the boundaries between inevitability/coincidence, the enforced/the voluntary, prostitution/intimate relationship, and military prostitute/military bride while continually negotiating as well as conflicting with various myths and ideologies of 'normative woman,' 'official nation,' and 'normal family.' In addition, women's narratives to cause the rupture of our own stereotypical images of military prostitute not only prove the possibility to reconstruct self-identity of subaltern woman, but also redirect the research focus from the object to the subject (hidden) desire to represent others. Therefore, we argue that feminist researchers to represent other's experiences should inquiry 'what/how we can hear,' 'why we want to know others,' and 'who we are,' instead of asking whether 'subaltern can speak or not, which shed light on what feminist oral history would be like.

### RC20-346.7

**LEE, NAEYUN\*** (University of Chicago, [naeyun@uchicago.edu](mailto:naeyun@uchicago.edu))

#### *Relative Social Standing and Support for Nativism*

This paper explores the relationship between relative social standing and one's attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one's nativist attitudes by exploring the individual-level effects of education and

income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable "ancestry" which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country's characteristics (economic conditions, income inequality, size of foreign-born and college-educated populations), individual characteristics (socioeconomic status, occupational position, religiosity, and political party affiliation), and one's support for ancestry-based national membership. My findings suggest that, at the individual level, non-college graduates and low-wage earners are more likely to support ancestry-based national membership. However, at the country-level, high school graduates living in highly educated societies and countries with larger foreign-born populations are more likely to support descent-based national membership. In other words, non-college graduates in societies with high percentages of foreign-borns and college graduates may feel more vulnerable and show greater support for social closure against migrants through restrictive descent-based citizenship. As for income, low-income earners living in countries with greater income inequality are less likely to endorse ancestry as an important criterion of national membership. In line with the relative deprivation theory, this finding indicates that marginalized groups in countries with greater inequality (e.g. income inequality) are less likely to feel discontent and entitled compared to their counterparts in more egalitarian societies.

**LEE, ROSA\*** (The University of Tokyo, [rosa.sb.lee@gmail.com](mailto:rosa.sb.lee@gmail.com))

#### *Becoming-Minor through Shinsengumi: A Sociology of Popular Culture As a Culture of the People*

This study scrutinises the rise of a people's culture into a popularly mediated culture to reconsider the state of popular cultures in contemporary societies. For this purpose, it focuses on Shinsengumi, a group of young men in history who are feverishly romanticised in contemporary Japan. Initially, Shinsengumi were marginalised from mainstream history as violent insurgents, but they were quickly reincarnated in popular culture to be gradually transformed into a popular cultural symbol through the masses' relentless fantasising. As a culture borne by the masses, Shinsengumi provides a window onto popular culture in its broader sense as 'the cultural habits of a particular group of people' and thereby, a key to explicating the transitions and dynamics surrounding contemporary cultures and society. With this proposition, this study begins with an overview of previous scholarship on popular culture to demonstrate the need to explore popularly produced cultures. This is followed by an analysis of Shinsengumi narratives, the various intervals of communications undertaken to describe and/or explain the symbol since its debut in culture in early Meiji. The analysis exposes ontological shifts surrounding the concept of orthodoxy and technological advancements in a mature consumer society have diversified popular culture into different streams. Alongside this transition, Shinsengumi evolved into a Deleuze-Guattarian becoming-minor symbol which can be accessed and appropriated by anyone who seeks to transmit their personal romanticisations about the group. In practice, social interactions at the 2012 Hino Shinsengumi Festival reveal Shinsengumi's symbolic capacity enables the symbol's narrators to carve their own terrains by transcending conventional social and physical boundaries as they come together and across their differences through the symbol. This finding demonstrates popularly created cultures in post-capitalist societies such as Shinsengumi could operate as a disenfranchising medium for nondenumerable individuals to claim their territories, albeit temporary, through creative actions.

#### *Coming Together and Across through Celebration: How Individuals Change Their 'societies'*

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-capitalist societies. Using these instruments, more anonymous individuals are becoming 'playing selves' who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re) consider how people foster and utilise their ties as social capital to state and advance their objectives. Following this trend, this study scrutinises the emergence of 'loose' collective actions based on weak ties and their roles in advanced capitalist societies. For this purpose, it introduces two Japanese grassroots organisations, the Old Tokaido Road Shinagawa House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mu-

tually confirm each other's differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to review and renew their perceptions of social realities.

#### *Religion, Civil Society and Multiculturalism in Korea*

In this study, I examine the role of religion as a socially integrating force in the transition of Korean society toward multiculturalism. In this era of globalization, when most nations are becoming multiethnic or multicultural, arguments and conflicts over multiculturalism are topics of heated debate worldwide. Theoretically, I take into consideration Bellah's "civil religion" and Casanova's "public religion" and examine whether these social theories may have validity for explaining the roles of religion in multicultural social context of Korea.

My research tries to compare the roles and functions of three major religions (e.g., Catholicism, Protestantism, and Buddhism) in their social works for immigrant workers in Korea. For this task, I analyzed statistical data spanning 2001 to 2010 regarding social welfare centers providing services for foreign migrants in Korea, managed by religious organizations. I also conducted in-depth interviews with religious leaders who are in charge of these centers.

As a result, Catholic churches include most various activities to solve multicultural problems of migrants in close relationships with Korean civil society. Catholic leaders work with civil NGOs for the social integration. Protestant churches have most number of social welfare centers for the migrant workers in Korea. There is a problem of proselytizing. Lastly, Buddhist temples, lacking the prophetic traditions unlike Christianity, put little effort into these issues. However, every religion, to different degrees, appears to secure its interest in the expansion of religious influence on a society. What is significant in the public roles of religion should be engaged in the civil ethos of a "good society" (Bellah).

#### *Contemporary Religious Landscapes in South Korea : From Diversity to Commonality in a Habermasian Post-Secular Society*

The contemporary religious landscape of South Korea is summarized with three major religions – Buddhism, Protestantism, and Catholicism – that monopolize 95% of religious 'market' consistently. This paper explains these socio-religious phenomena with historical approach and tries to diagnose its implications through Habermas's *post secular* theory. First, Korean religious field had been subordinated and passively molded by exogenous socio-political factors such as Japanese colony, the Korean war, and military-dictatorial regimes, and democratization process. The current monopoly of religious market is the result of inter-play between internal dynamics of religion and external social forces. Although a highly competitive ecology of religions often causes social conflicts, it also makes positive conditions to reflect on Habermasian post-secular perspectives in the public sphere. Also, peculiar tensions between traditional Asian religions (Buddhism and Confucianism) and Western religions (Protestantism and Catholicism) contribute to its realization of the public common good. In particular, Habermas emphasizes the sophistication of epistemic stance of religions in order to actualize conversation between the religious and the secular. The highly competitive religious situation of South Korea eventually facilitates religious-secular conversation by revising and reinterpreting their own *doctrines* or social principles. This research includes many case studies focusing on social debates between religions, as well as between religious institutions and secular ones.

#### *Privately Public Places: Uprootedness, Care Norms and Home-Making of Migrant Women in Korea*

This paper conceptualizes the private/public boundary situated in 'home' as contested place and the role of care work in demarcating this boundary. I delineate the process in which 'unnatural' or temporary homes of migrant women in a host country become a place where women run away from *as well as* a place women run to, and the implications of this process on their legal precariousness. For the purpose of this paper, I focus on two groups of migrant women in South Korea and the contrasting ways in which homes mark the legal boundaries; the paper draws on from field data consisting of participant observation and in-depth interviews with runaway marriage migrants and (formerly) undocumented domestic workers. For marriage migrants who have run away from homes (or *gachul yijuyōsōng*), their absence from homes (or their husbands' homes) becomes grounds for their legal precariousness. On the other hand, for undocumented

migrant domestic workers, homes are *private* places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalist reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

#### *Precarious Work and New Class in Post-Industrial South Korea*

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, working condition and work arrangements, however, we suggest that not only employment insecurity but also insecurity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition we include how individual workers perceive 'precariousness' and how this contributes to the definition of precarious work. Then this paper investigates the relation between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will be also considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave - 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

#### *The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents*

Due to South Korea's (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationship is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

#### *Mobility of Chinese and Korean Marriage Migrants in Japan Rural Areas*

In this research report, we are going to look at mobility of South Korean and Chinese female marriage migrants in Japan from the following perspectives:

- 1) suspicion raised among people in the community by marriage migrants' temporarily returning to their hometown,
- 2) proportional growth of monolingual in their offspring generation.

In rural areas, marriage migrants are still seen as "escaping brides", and are under significant influence of this old paternalistic belief that "Once married into a family, she belongs to it". This idea has taken marriage migrants' mobility negatively, and has worked as a mechanism which restricts it. This report will present our perceptions toward female marriage migrants' mobility through cases in Tohoku and Tokai districts.

#### *Canadian Women's Perspectives On Disability, Underemployment and Health*

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach—the social model of disability and feminist disability research—and present a critical interpretive textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

#### *The State's Role in Gentrification: Beyond the Co-Optation and Repression Dichotomy*

This paper examines the local state's role in the gentrification process. I compare two cases where gentrification pressure is high and the state has a significant stake in gentrification—Downtown Los Angeles and the old neighborhoods within the city of Seoul. On a superficial level, the state seems inclusive in Los Angeles and willing to incorporate voices that rally against gentrification, and the state in Seoul seems to be exclusive, and at times violently repressive. These two cases seem to align well with the existing social movement theory that projects a trend towards a "Social Movement Society", exclusively, in the Western world, where social movements are much more prevalent, yet are contained and co-opted (Meyer and Tarrow, eds., 1998).

However, this literature can inhibit scholars from taking seriously the double role of the state that simultaneously co-opts and represses. In so doing, it can create a false dichotomy between the role of the Western and the non-Western state in governing gentrification. Contrary to this view, through participant observation in both cities, I come to unveil the underlying similarities of the two states' roles in controlling dissent. I analyze how both states 1) mask their involvement in repression, and 2) delegitimize dissenting voices to avoid a legitimacy crisis.

Focusing on similarities on the abstract level will help scholars of urban sociology to better articulate the theories of the role of the local state in facilitating gentrification, which has been under-theorized despite the early attempt by Logan and Molotch (1987) to bring the state back in with their 'growth machine' thesis. With comparative case study, the point is not to discern the *degree* of state's involvement in various cases but to identify *types* of involvement of the state that will further serve as a stepping-stone for elaborating the theory of gentrification.

#### *Erasing the Line Between Work and Leisure in Korea*

This paper examines the blurring of the line between work and leisure in Korea, which is now in a highly industrialized, hard-working society prompted by rapid globalization. It also has a well-developed ICT infrastructure with a highly educated and skilled labour force, now evolving into an increasingly older society within a creative, service economy. In these contexts, individuals in Korea, both at work and at leisure, are facing diverse inequalities depending on their social structural conditions. This paper mainly regards leisure as un-coerced activity, while

looking at work and leisure from the angles of time, place, ageing, gender and activity. First, it examines why and how the once clear dividing line separating time or place between work and leisure has been erased. Then, it looks at whether the age-segregated life-cycle has been transformed into one that is age-integrated. Next, it considers women's entry into the work force and whether the conventional values of work and leisure have been changed. Finally, the traditional notions of labour and leisure activities are challenged by both positive and negative views on leisure. As conceptual background the concepts of devotee work, which is part of the Serious Leisure Perspective (SLP), and the labour of leisure are introduced and compared. After investigating the complex relationships between work and leisure, related implications are then taken up.

#### *Resistance Up In The Sky: New Forms Of Labor Protest In Neoliberal Korea*

The continued rise of Korean economy in the world stage is widely recognized by the presence of global brand-name products such as Samsung Galaxy phones, Hyundai Sonata, and even by the phenomenal world-hit of Psy's "Gangnam style." However, on the other side of this triumphant story of Asian capitalism, there is Jin-sook Kim, a female labor unionist, who protested on top of an industrial crane at the height of a 15-story building for 309 days. In a vibrant economy where automobile exports contribute a lion's share, the massive layoff at Ssangyong Motors pushed 24 auto workers to death either by suicide or by post-traumatic illness. These are unparalleled cases of labor resistance, which merit a serious scholarly examination.

This study focuses on the sky struggle (*haneul toojeong* in Korean), like the one staged by Jin-sook Kim, which represents a new form of labor resistance in contemporary Korea. In this paper, I first present data on traditional labor disputes and the new sky protest and introduce three major labor struggles - Kim's sky resistance at Hanjin Heavy Industry, the suicidal protest of laid-off workers at Ssangyong Motors, and non-regular workers' struggle at Hyundai Motors. Through these instances of labor contention, I discuss how the mode of labor protest has changed in Korea in recent decades. In the second section, I explicate the structural and political conditions that gave rise to this changed form of labor unrest by focusing on Korean economy's neoliberal transformation, the deepening fracture in the labor market, and democratic institutions devoid of labor representation. The paper closes by discussing the theoretical implications of these labor struggles in Korea, especially in enlightening our understanding of contemporary class conflict and collective action in a democratic society.

**LEE, YOUNG HEE\*** (The Catholic University of Korea, [leeyoung@catholic.ac.kr](mailto:leeyoung@catholic.ac.kr))

#### *Technology and Citizens: Case of Citizens' Jury on National Pandemic Response System in South Korea*

Due to their technical complexity, most public policies in today's technological society are dominated by expert-centrism and technocracy (an institutional form of expert-centrism), based on the belief that they should be the exclusive realm of technical experts. But globally, expert-led and technocratic policy-making culture is faced with challenges in many countries. The same is happening in Korea in many different forms.

Based on such awareness, this paper aims to analyze the democratic implications of the Korean experience of the citizens' jury, a form of citizens' participatory technology assessment activity organized by an NGO called the Center for Democracy in Science and Technology in 2008. In particular, the topic of this paper, the citizens' jury on the National Pandemic Response System in 2008, is a noteworthy case for it represents the first time in Korea that citizens were randomly selected to make up a jury, a method considerably different from existing forms of citizens' participation.

In identifying its democratic implications, the citizens' jury will be compared with another form of deliberative participation, the consensus conference. Compared to consensus conference, citizens' jury is different in the following ways: first, the participants are randomly selected; second, the modalities of opinion collection and presentation well illustrate the differences and non-alignment between the participating citizens. The paper concludes that such characteristics of citizens' jury present highly positive implications in realizing genuine democracy in our society.

#### *Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools*

Debates over the place and role of religion in the public sphere have gained significant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrivals of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities' religious requests and the post 9/11 context contributed to this. As a result, the *Consultation Commission on Accommodation Practices Related to Cultural Differences* was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific "reasonable accommodations" implemented to respond to religious requests of pupils and teachers - in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice - with the aim of disclosing the effects that the so-called *Bouchard-Taylor report* has had in such institutional contexts.

#### *Statistical Analysis of the Sport Participation in a Population : Some Sociological and Software Considerations*

Estimating the sport participation rate in a given population raises the question of defining what it means "to be sporty". From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociohistorical duet "training and competing" but to go further so as to include softer and more ephemeral physical activity forms. *In fine*, a scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etic dual approach.

Sociologists aim to discover the sociological, cultural, demographical characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The distribution-free *pointG* software proposes some modern approaches for dealing with two-way tables (Yule's Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher's goals (Wheaton, 2003) enable to detect and visualize (Ely, 1999) the sociological, cultural, demographical effects in the 2010 general survey of the sport practices in the French population.

#### *Does Early Schooling Equalize Educational Outcomes Across Social Origins : Evidence from Pre-School Extension in France*

Universal preschool is often seen as the mean par excellence of correcting social inequality in educational achievement. However, evidence on the short and long-term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic backgrounds.

### *Educational Expansion, Earnings Compression and Changes in Intergenerational Economic Mobility: Evidence from French Cohorts, 1931-1976*

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly influenced by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what features of the educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1930s and those born in the mid 1950s, but subsequently rises. For cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than cohorts born in the 1930s but the difference is not significant. Changes in mobility mostly reflects the evolution of cross-section earnings inequality, rather than variations in positional mobility.

### *Pleurer Ensemble Restaure-t-Il Le Lien Social ? Les Commissions De Vérité, « Tribunaux Des Larmes » De L'après-Conflit*

Les commissions de vérité et de réconciliation, dispositif emblématique d'une « justice transitionnelle », font figure d'institution exemplaire. Quelque trente instances ont ainsi été chargées, depuis les années 1980, d'établir, après un conflit politique violent, la « vérité » sur les actes de violence, et de proposer une politique de réparations au bénéfice des victimes. L'expérience de la Truth and Reconciliation Commission sud-africaine (1995-1998), a contribué à leur succès. La force des émotions qui s'y sont manifestées, a crédité les commissions de vérité d'une capacité de modifier le rapport des sociétés à leur passé violent, à un double niveau : celui des individus blessés et celui du collectif. En permettant aux victimes de raconter leur expérience de la violence, ces institutions leur permettraient de se libérer du traumatisme. Ces scènes émouvantes dans le même temps refonderaient la nation.

Ce pari se fonde sur des descriptions erronées de ce qui se passe sur la scène des commissions de vérité, et sur des erreurs intellectuelles. Une de ces erreurs consiste à croire, en premier lieu, que les acteurs arrivent à l'audition avec des émotions nées de l'expérience de la violence politique, et stockées depuis lors —des « traumatismes ». On suppose, en deuxième lieu, que ces émotions, traumatiques, sont suscitées par la souffrance : peine infligée par la violence, ou souffrance de la perte d'un proche. On imagine, en troisième lieu, que l'expression émue de cette souffrance permet le remplacement d'émotions de déliaison, par des émotions d'adhésion : la victime s'identifierait à un collectif qui la reconnaît enfin ; réciproquement, la nation se refonde dans la communion émotionnelle, dans l'effusion cathartique. On verra comment ce « tribunal des larmes » que fut la TRC met à l'épreuve ces convictions.

### *Leadership Research in Healthcare: A Realist Review*

According to Gilmartin and D'Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren't stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collaborative, multidisciplinary studies.

The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which

factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role?; 2) How can leadership impact the healthcare sector and what challenges are addressed?; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those?; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as "what works, for whom, and in which circumstances" highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professionalism, expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals' and women's differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

### *Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities*

Submission to RC23 Research Group: Research Committee on Sociology of Science and Technology

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.).<sup>[1]</sup> Scientists determine who will practice science in the future: academic scientists act as gatekeepers in terms of the production and training of scientists (admissions, funding, training and apprenticeships); and the design, implementation, certification and evaluation of curricular content. Moreover, access to and understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technical workforce; this reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

### *Embodying the Other As a Self*

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team.

What strikes about life in the field is the level of danger commonly accepted by members of the organization (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian career. Incidentally, the fantasy of danger flows into our perception of aid workers as modern heroes living a life of adventures and self-sacrifice (Dauvin, Siméant, 2002). In concrete terms, kidnapping, rape, beating and robbery are often their reality. While being in the field with the teams, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone's safety. This dynamic is reinforced by the lack of intimacy and the control over individual bodies. Everyday routine is submitted to rules and constraints, particularly for international staff sharing house, office and meal. To a certain extent, these mechanisms of embodying the other operate as well with the local communities.

The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn't the choice of risking one's life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

### *Are Civil Society Organisations Doing Research ?*

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues.

Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of *how* CSOs are currently participating in EU-funded research – to what extent, in which roles, for what purposes and to what effect.

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists

### *Beyond Rational Dialogue : Alternative Modes of Participation*

The stumbling blocks of the "dialogical" procedures spread in the political public place and put in the service of the democratic participation of the citizens can be limited, by-passed even by the development of modalities and "post-dialogical" devices of sustainable cooperation in the public and "private" places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The "post-dialogical" way suggests that the "dialogical" devices in the service of the democratic participation are neither a necessary condition, nor a sufficient condition of the mobilization of the actors or the exercise of the citizenship. The passage of the models and the devices of participation of "dialogical" type in the models and devices of cooperation of "post-dialogical" type allows to envisage sustainable democratic methods of social exchange and governance beyond the public place and beyond the political space, by considering their development and their functioning in the "private" spaces, in particular those of the world of work and of everyday life. The way of the cooperation groups a big variety of approaches and experiences and suggest, beyond the devices of interaction, to question the transformations of the company and the State, as well as their possible evolution towards the forms of "the cooperative company" and of "cooperative State", major partners, with civil society, of the democratic governance of our societies.

Our paper will include a theoretical approach and the synthesis of the results of our field work in the domain of industrial democracy and of citizen contribution to sustainable development in France and in Europe.

### *Marketization and Agency: Freedom and Self-Control in Low-Status Online Contract Work*

How does the marketization of knowledge work and the associated creation of entrepreneurial subjectivities influence workers' agency, or their control over their own lives? Proponents of marketization suggest that it provides workers

freedom in choosing where, when and how to work. Critics fear that it leaves workers isolated, adrift and vulnerable to exploitation. In this paper, we approach the question through an extreme case: self-employed knowledge workers who contract with clients around the world through online labor markets.

The data is based on interviews of 25 online workers in United States, Nepal and Philippines, and on participant observation in online labor markets and in worker online communities. In contrast to earlier studies of independent online work, which focus mostly on relatively elite workers, we focus on workers who specialize in low-status digital tasks, such as photo labeling, sentiment analysis, and data entry.

The findings show that online workers celebrated their freedoms and cast the uncertainty inherent in contract work in positive terms, as variety and excitement. At the same time, the lack of structure provided by an organizational context left many of the workers struggling with self-control, resulting in underwork, overwork and ineffective time use. To cope with self-control issues, many workers participated in online peer groups and used sophisticated software tools to track progress and create goals and alerts. Since well-paying tasks were available on the markets only occasionally, some workers felt compelled to attend whenever these tasks alerted, even at night, and structured their daily activities so as to be constantly available. This suggests that at least for some workers, the freedom of marketized knowledge work may be somewhat illusory: the iron cage of corporate bureaucracy is replaced with a self-imposed digital cage.

### *Do-It-Yourself Finance! a Participatory Action Research on Community-Based Finance Systems in the Netherlands*

The contemporary global financial and economic crisis has led to a shrinking Dutch welfare state, which encourages citizens to help and support each other on the grassroots level. This paper provides insights in a community-based savings and credit mechanism, called CAF-group. The rationale of CAF-groups derives from informal savings and credit associations in developing countries and migrants in the west. Since the early 1990s, international and local development organisations have learned from this phenomenon and have developed a methodology for self-funded financial groups to improve the well-being of vulnerable people.

Lately, CAF-groups have been successfully implemented in Spain, Italy, Portugal, Hungary, Belgium and the Netherlands. Based on practical evidence in Europe, one can assume that participation has a positive impact on human needs such as the generation of significant economic benefits and the improvement of financial management skills. Participation creates self-confidence among CAF-members which in turn leads to feelings of ownership and responsibility for the management and maintenance of their group.

The implementation of self-funded financial groups in the Netherlands is supported by a participatory action research program. This paper discusses the results of this program by exploring whether and how participation of members can improve their well-being based on the capability approach of Sen (1993). Therefore, the capability approach is operationalized and applied to three CAF-groups in The Hague, the Netherlands: (1) men, 40 plus, ethnically-mixed; (2) women, 40 plus, ethnically-mixed; (3) mixed sex, below 30, Aruban ethnicity. Data is collected through qualitative interviews with members, participatory observations of group meetings and evaluation workshops.

This research provides insights into the operational features of community-based financing mechanisms, here three CAF-group in comparative perspective, and demonstrates how grassroots solidarity economy processes can contribute to the general well-being of vulnerable people in a time of global crisis.

### *Certifying Practitioners and Accrediting Programs: The United States Experience*

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice (applied, clinical and public sociology).

In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master's or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their action oriented work. Certification is not licensure as granted by a state or commonwealth.

In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master's, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of certification for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

#### *Urban Land Encouragement and the Greenbelt in the Greater Toronto Area*

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under its first review. The main rationale for the legislation was threefold: (1) to protect green space from further land encroachment by Toronto's massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. In tandem with this legislation, a second provincial legislation came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the two municipalities - Markham on the "inside" of the green belt, and Barrie on the "outside" of the belt - and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of reports, and newspapers. It is hoped to draw general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

#### *Inclusion and Structural Processes of Young Recipients of "Unemployment II Benefits"*

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to "include" - due to their precarious status as recipients of "unemployment II benefits". I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative "metamorphosis" (Schütze 2001). In terms of biographical analysis a special focus is put on "structural processes" (Schütze 1981) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to the concept of "theoretical sampling" (Glaser/Strauss 1967). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

#### *Why Economic Inequality Matters for Criminology and Criminal Justice*

The presenter, a co-author of *The Rich Get Richer and the Poor Get Prison*, will focus on economic inequality, which receives less attention than race or gender. This paper will start by providing an overview of economic inequality in several developed nations before discussing several ways to conceptualize the inequality between natural and corporate persons. Next, the presentation will summarize the links between inequality and crimes of the poor as well as crimes of the rich, following Braithwaite's formulation that inequality worsens crimes of need and crimes of greed. The impact of inequality on each stage of the criminal justice system will then be reviewed. Law making is influenced by lobbying. Policing means war on crimes done by the poor and zero tolerance, but deregulation for corporations. Judicial processing and outcomes are heavily influenced by quality of legal assistance and resources. By sentencing, the wealthy and corporations who have harmed workers, consumers and communities have been largely weeded out; it is the poor who get sentenced to prison, reinforcing the belief that they are the most dangerous. The conclusion highlights the importance of ideology in minimizing concern about inequality and its effect on justice.

#### *Governing the Commons in Transforming Economies: The Case of Ukraine*

The situation generally defined as the "tragedy of the commons" acquires its specific features depending on the political and economic settings. Due to the domination of the public domain and the state ownership in the basis of the socialist economic systems, the definition of the "commons" in the so-called post-communist countries (the former Soviet Union and its satellites) can be employed to a much more extensive body of the resources. This creates additional challenges to the process of governing the commons in those countries, and it becomes increasingly complicated in their ongoing socio-economic transformation toward capitalism.

On the case of Ukraine, which is surviving through one of the worst scenarios of the failing transformation to capitalism, the disastrous deterioration of the economic infrastructure, and deregulation of the property rights, I investigate the epistemological value of the scholarly work on the governing the commons and the disaster capitalism, particularly writings by Naomi Klein and Eleanor Ostrom, as applied to the countries in transition.

I locate the situation in the post-socialist countries against the background of the global economic and legal (related to the property rights) affairs. I investigate the possibilities and the character of the reciprocal influences of the resources mismanagement in those countries and the vulnerabilities peculiar to the Western economies.

#### *Inclusion and Exclusion Intertwined*

Inclusion and exclusion intertwined - a sociological self-examination of a German-Dutch-Jewish family biography in the context of racism and war

For over 30 years I have worked as a scholar in the areas of racism-research and education. While, during this time I have studied processes, consequences and causes of negative stereotyping, othering and exclusion I now dare, for the first time to do a "sociological self-examination", excited and encouraged by the reading of a text by Pierre Bourdieu (published in 2001 under that title). The focus is my German-Dutch biography, which is also about my Jewish grandfather from Rotterdam (Netherlands), whose daughter (my mother) during the occupation by troops from Nazi-dominated Germany fell in love with a German soldier (my father). My analysis shows a form of inclusion in a bi-national family, asserting after war and holocaust a 'normality', that almost compulsively is 'forward looking', but excludes all the issues that have to do with racism and injuries from the past. That 'leaden silence' makes family possible, suggests harmony, and closeness and affection can occur, while key life events of family members remain untouchable.

'Covering narratives' are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

BACHER, JOHANN (University of Linz)

#### *Individual and Structural Causes of Neet - a Case Study of Austria*

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less well-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of the NEET-population be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

EIFLER, STEFANIE (Catholic University of Eichstätt-Ingolstadt)

#### *Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory*

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect (labeled as structural or model-inherent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. The presence of the model-inherent interaction is owed to the restricted range of the outcome variable.

However, several scholars have engaged in a discussion whether the model-inherent interaction has a meaningful interpretation. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g. Bowen 2012), others adhere to the interpretation of the total effect (e.g. Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn't result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

ROBETTE, NICOLAS (Université Versailles Saint Quentin)

#### *"How People Recount Their Life": Recording and Analysis of Individual Well-Being over the Life Course*

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals' life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being; the respondents' subjective experience proves to be varied, non-stereotyped and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

LEMAIRE, XAVIER\* (University College London, [x.lemaire@ucl.ac.uk](mailto:x.lemaire@ucl.ac.uk))

#### *Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries*

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative technologies for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the time limited impact, while other technologies like the mobile phone have spread in Africa quickly.

This paper will determine how a more dynamic approach could help to analyse the way actors interact and build relations around new technological products, so to understand how their dissemination could be accelerated. Technologies have their own life and need to produce a specific context to thrive (Latour, 1996). Markets are created by policies and institutions; a series of stable rules embedded in organizations or networks have to emerge to make them sustainable. Clean decentralised energy technologies are "new" in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

LEMAIRE, XAVIER\* (University College London, [x.lemaire@ucl.ac.uk](mailto:x.lemaire@ucl.ac.uk))

#### *Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries*

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming- leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

#### *National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland*

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1989. On the basis of an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders' identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

KATZ-GERRO, TALLY (University of Haifa)

#### *Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration*

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in culture and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm.

Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think of our contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

#### *Contested Multiculturalism in Germany? - the Debate on Circumcision*

In the words of Angela Merkel multiculturalism has "utterly failed" in Germany (16/10/2010). Although the former German President Christian Wulff had stated "Islam also belongs in Germany" only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multiculturalist elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious

sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children's rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced into the German Civil Code that made circumcision of boys for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the 'boundaries of the social world' (Luckmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This included a reinterpretation of circumcision as a practice potentially 'cutting back' children's rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

#### *Maladies Chroniques, Transitions Professionnelles Et Changement Social*

A l'occasion d'une recherche d'une durée de trois ans ayant pour thématique centrale les rapports entre maladie chronique et travail, cette communication s'efforcera de montrer que, à l'occasion d'un dispositif spécifique de recherche action clinique que nous présenterons, la rupture biographique (Bidart 2006, Grossetti 2006) se transmue en une dynamique de transformation sociale. La transformation personnelle débouche, « naturellement », sur une (dynamique de) transformation collective via la présence d'un groupe, qui sur un temps long, conduit chacun à quitter le récit de sa vie pour soi, pour mettre en commun ce qui dans son parcours individuel fait écho aux autres participants. Le récit de sa vie, de la simple vie, de ce que certains appellent la vie nue (Arendt, 2002 ; Agamben, 1998) ou la vie vivable (Butler, 2010) se transforme peu à peu en une réflexion sur ce qu'il faudrait transformer chez soi, chez les autres **et** dans la société afin de parvenir à une vie en santé. Ce sont alors les normes sociales du travail entendues comme « la représentation sociale du travail-emploi qui détermine l'accès aux ressources de base requises pour répondre au commandement contemporain de l'individu maître d'œuvre de sa propre existence » (Castel 2011) qui sont questionnées. Quel que soit l'âge, le sexe ou le niveau social c'est bien la question de la centralité du travail dans une vie qui est mise en débat. Cette recherche montre bien à quel point les transitions sont des occasions de co-construction du changement individuel et social. Si les façons de penser changent, elles conduisent alors à une volonté de changement social qui se manifeste via différentes stratégies que ce soit dans le milieu familial comme dans celui des organisations et des institutions.

*From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency*

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices of differentiating. The focus of the talk is on the involvement of things into these practices and of a special configuration these practices carried out: masculine software developer.

The argumentation will begin with introducing theories of practices as an instructive theoretical "tool" to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interlinked with practices of doing masculinity. The so produced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, "guarantees" the social order in the observed field.

*Involved Fatherhood: Source of New Gender Conflicts?*

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although being a minority, looking at these fathers helps to understand the complex dynamics of changing gender relations in the private sphere.

Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity is still job centered. Our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father's uncommon attitude to occupational career must be shared and supported by the mother. Otherwise the man's abstinence from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father's engagement, but, on the other side, tend to defend the household as their domain. Often the father gets into a position of his wife's "junior partner". If men refuse to be the junior partner a new kind of gender conflict arises. Closing the gap between "culture and conduct of fatherhood" (LaRossa) proves to be complicated in different respects. It even can evoke new conflicts.

*Homeownership, Social Policy, and the Crisis: How Austerity Policies Fortify Property-Based Private Welfare Systems*

It has been argued that the nexus of increasing homeownership rates, accumulation of housing wealth, as well as financialization of housing markets have facilitated the emergence a social policy model in which households and families draw on their home as a source of private and collective security, especially at a later stage of the life course. If ever there was opportunity to reinforce such a property-based welfare system, it is the 'black swan' financial crisis and its consequent backlash on public budgets, the rationale being that the threat of state bankruptcies and economic breakdowns has substantially constrained the various institutional and political forces working against reforms. To investigate whether and under which premises policy-makers have acted on these opportunities, be it due to ideological beliefs or actual external pressures, this paper applies a qualitative content analysis of the structure of austerity measures in five distinct European countries (Netherlands, England, Germany, Sweden, Italy) in the period 2009-2013. The main contention here is that if recent reforms or policy proposals have neglected the housing domain altogether, or even more revealing, if housing policy reform has targeted the social/public rental sector (including all kinds of rent allowances) but not the owner-occupied sector (e.g. through keep-

ing tax advantages and allowances in place or even implementing new ones), we might see a more permanent policy transformation towards a property-based welfare model that postulates the availability and utilization of private housing wealth. On the other hand, social policy research has continuously shown that, depending on welfare regime and timing, endogenous pressures are translated differently into reform processes across countries. Hence, with its comparative approach this study also seeks to contribute to the discussion on whether emergencies and crisis situations lead to the convergence of capitalist and social policy models or whether long-standing regime differences persist nonetheless.

*La Fabrique De L'autonomie*

Dans le contexte de la mise en œuvre volontariste d'un projet utopique, construction d'« un nouveau quartier de ville constitué de mixité, (...) de solidarité et d'innovation sociale », à l'initiative d'une université et de collectivités locales, un « groupe-ressource » pilote les « commissions de mutualisation », lieu incontournable des prises de décisions, de positions ou encore de pouvoir des acteurs. On proposera l'analyse de l'agenda de ce groupe-ressource, les thématiques abordées, les situations et positions, les argumentations, les processus de décision. Les sujets abordés lors de ces commissions vont de la signalisation à l'animation commerciale du site mais sont surtout pour nous l'occasion de questionner les tensions entre les notions de dépendance et d'autonomie. Dernièrement le débat autour de la vente de frites par un « food truck » sur le quartier ne fait pas l'unanimité. Doit-on offrir à la personne en situation de handicap, l'être « dépendant », celui qui va à l'encontre de la norme, de l'idéal de nos sociétés (GAUCHET, 2004) qu'il soit en fauteuil, fou ou vieillissant, l'occasion de consommer des aliments riches en graisse ? Celui-là même que l'on pousse à l'indépendance, à participer à un projet de vie, à se prendre en main, à être autonome mais que l'on ne reconnaît pas capable de faire ses propres choix diététiques.

Entre une « politique de la pitié » (ARENDT, 1967) et le paternalisme des décideurs, les commissions de mutualisation peinent à s'inscrire dans une conception capacitaire des individus et creusent un fossé avec les intentions originelles du projet : penser le quartier par et pour les usagers.

*Changing Gender Orders and the Variety of Gender Welfare Regimes*

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The difference based gender order developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women's votes, legal reforms for women's own rights of property and decision in the family. The worldwide spread of Fordist/Toyotist mass production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-/housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women's educational advancements, by women's movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Presently a flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

*Soft Power, Reciprocity and Guanxi: Temporary Business Migration, New Media and Belonging*

**Soft Power, Reciprocity and Guanxi: Temporary Business Migration, New Media and Belonging**

This paper connects two contemporary bodies of literature surrounding the nation that appear to be unrelated. The first is what might broadly be termed, diasporic connections. Although the notion of long-distance nationalism relegates the participation of diaspora in home nations to interference, work on trans-

nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and economic-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be loosely grouped under the banner of soft power research. Perhaps spurred on by China's adoption of Nye's notion of soft power in recent times, these focus on the management of how one's own nation is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy.

Both bodies of work, diaspora connections and soft power, understand relationships between nations and diaspora-to-home-nation as dyadic and reciprocal. Hence, though the two bodies of work develop in parallel they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and *guanxi* can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant's experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

#### *Young Italians Surviving Strategies In The Social and Economic Crisis*

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research's main goal is to highlight, thanks to the methodological tools of sociology, not only the crisis' possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life's routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of newforms of identification and belonging. The main goal is to highlight paths, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on every day practices, on the methods of planning for the future, on the interpersonal relationships. The main research's hypotheses concern the influence of cultural capital on the different personal and family strategies. Cultural capital, gender and ethnicity seems to be the most relevant variables to understand differences and abilities to cope with this very difficult social and economic context. In-depth qualitative analysis has been carried out to enrich available quantitative statistical data, in order to identify possible ways to promote and support best practices able to reduce the negative effects of economic crisis, and to overcome it without weakening the social bonds and, at the same time, promote inclusive, innovative and secure societies. The research aims to provide an accurate description of the everyday practices used to adjust to the current economic crisis, thereby enriching the available quantitative data with in-depth qualitative data.

#### *Young Women Facing The Economic Crisis*

The paper presents the intermediate outcomes of a research on the impact of the socio-economic crisis in Italy on young people. More specifically this paper deals with gender differences and inequalities which characterize the condition of young people in Italy. Which are the expectations, the abilities and the competences to cope with difficult economic conditions that characterize young female and male? The relevance of cultural capital will be discussed in order to understand the opportunities or the difficulties faced by young women or men. Besides some data will be presented on young male and female living in Italy but with foreign origins. We argue that gender, ethnic origin and cultural capital are the three most important variables to explain inequalities of opportunities among young people facing the economic crisis.

#### *Communities of Sense and the Borders of Art and Politics: Graphic Art, Moving Images and Dancing Bodies in Urban Periphery of Rio De Janeiro*

**Abstract Text:**

Duque de Caxias is a city located in Baixada Fluminense, a peripheral area of the Rio de Janeiro state occupied by many poor northeastern migrants attracted by work opportunities in the emerging 1940s and 1970s Brazilian southeast.

Transformed into national security area in 1971 by military *coup d'état* and administered by mayors chosen by the national government until 1985, the Caxias of today is visually experienced through massive images of floods, garbage and violence. Overshadowed by the beauties of the *cidade maravilhosa* (marvelous city), the neighbor city of Rio de Janeiro, Caxias is, in the words of its youth, "a steamroller crushing all their dreams for generations"[1].

Against the trend we have outlined, a new scene erupts in 2000s Caxias: a youth who perceives the city as absolutely cinematic and responds visually to this finding.

This study aims to approach the intertwining of visual art, politics and everyday life by presenting and discussing the production of cultural activist group called *Mate com Angu*, engaged in a movement of filmmaking named "Novo Cinema da Baixada" that promotes audiovisual productions and free film screenings that end up in large dance parties, widely advertised by posters displayed throughout the city and also shared on the Internet. Our focus is the visible surface of exchange created between the posters, the movies screened, their film productions and the dancing bodies performing on the floor.

Based on Jacques Rancière's concept of *partage du sensible*, we address these graphic art, moving images and performances as a *montage*, a framing of a controversial world within the given world by the clash of heterogeneous elements that can establish new communities of sense grounded either on the feeble political mode of consensus, or otherwise, on dissensual supplements that displace the territories and borders of art and politics.

#### *The Dimensionality Of Immigrant Adaptation In Britain: An Analysis Across Generational, Ethnic, and Gender Lines*

Many theories have been put forward to explain the long-term experiences of migrants and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the 'neo-assimilation' theories of the 'new' straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the immigrant experiences, as well as the paths of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation [socio-economic (including education, labour market outcomes), socio-cultural/linguistic (identity, religious affiliation and family formation practices), spatial (segregation), or political (electoral and non-electoral participation)] rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate to this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of current immigrants to Britain and their descendants. The determination of the dimensionality will follow the work by Bean et al (2012) and use factor analysis to determine the underlying number of factors behind variables deemed to be representative of the immigrant adaptation experience and assess the structural equivalencies in the factor analyses across gender, ethnic, and generational lines. The analyses will provide an empirical evidence base to: (1) assess the extent of inequalities in adaptation across gender, ethnic, and generational lines, and (2) examine the extent to which the uncovered dimensions of adaptation in the British context match existing theoretical views.

[terryleung@cuhk.edu.hk](mailto:terryleung@cuhk.edu.hk))

#### *User Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals*

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory for welfare service organizations that receive public funding. Also encouraged by consumerist impetus, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-

sionals in these organizational platforms. Habermas' model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas' theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world interact to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

#### *Determinants of Effective Cross-Border Cooperation*

The world over local communities broach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities' capacity to reduce the transaction costs that differing policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community's interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Ivangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study's outcomes, the paper uses collective-efficacy theory to measure each community's response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

#### *Implications of Generational Change for the Armed Forces*

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

#### *Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town*

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs) on the urban fringe. How can a benevolent delivery regime coexist with forced relocations, shack eradication, and the introduction of veritable refugee camps administered by the same municipal state overseeing delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography

is generally accepted in the urban studies literature. In this paper, I examine relocation from informal settlements in Cape Town in the context of emergent forms of socio-spatial confinement. I relate the proliferation of post-apartheid forms – state-provisioned formal housing, rental stock for the working poor, TRAs, and others – to a broader process of dispossession and confinement. Drawing on a year of ethnographic fieldwork in relocation sites across the Cape Flats, I argue that post-apartheid urban relocations can be characterized as *dispossession through delivery*. Rather than understanding delivery/upgrading and dispossession as antitheses, it is precisely *through* formal housing allocation that segments of the population are relegated to TRAs. If under apartheid, Cape Town's informal settlements were targeted and removed en bloc – what I call *indiscriminate dispossession* – post-apartheid removals entail a process of *selective dispossession*. Under the rubric of “meaningful engagement” and “participatory upgrading,” the City capitalizes upon factionalism within settlements to create a distinction between “deserving” and “undeserving” residents: neighborhood groups that successfully portray themselves as legitimate representatives are defined as “deserving” and gain formal housing, while contending groups are defined as “undeserving” and relegated to “alternative accommodation” in TRAs and other novel forms of socio-spatial confinement.

#### *Natural Disaster Mitigation, Public Opinion and a Propensity To Discount The Future*

Despite the growing urgency of scientists' warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthy polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries or millennia, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible.

A recent increase in manifest and unpredicted climate disasters, which have already struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.

A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute 'substantial but affordable sums on a regular basis' for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks 'in the next two years', 'during your lifetime' and 'in centuries to come', suggesting no progressive discounting of the future.

### RC10-185.3

**LEVER-TRACY, CONSTANCE\*** (University of South Australia, [constance.lever-tracy@flinders.edu.au](mailto:constance.lever-tracy@flinders.edu.au))

#### *The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World*

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the introduction of disease into Haiti by UN forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee's study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

#### *The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World*

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the introduction of disease into Haiti by UN forces or by the lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee's study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

#### *Dispossession and Social Theory: Comparing the Politics of Land and Labor*

This paper draws on over two years of ethnographic research on anti-dispossession struggles in India to analyze how the politics of land dispossession differs

from the politics of labor exploitation. Based on this comparison, it tries to show how core features of Marxian social theory—including theories of the state, ideology, and historical agency—must be reconstructed in light of the recognition that dispossession is an ongoing feature, and not simply a historical precondition, of capitalist development. The paper concludes with reflections on the possibilities for creating alliances between land and labor struggles.

**LEVIN, JACK\*** (Northeastern University, [j.levin@neu.edu](mailto:j.levin@neu.edu))

#### *Blurring the Boundaries: The Declining Significance of Age*

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book addresses issues of the cult of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of 'emerging adulthood'.

Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to 'boomer changes'. The book thus takes a comprehensive life course approach to aging.

#### *Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.a Da Fontinha (PORTUGAL – PORTO)*

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequally urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporaneous *religion*, also arouse renewal urban struggle dynamics, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributes to the resistance processes analysis in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, what movements these processes engage and what are fragilities and lines of flight can they offer?

On approaching these questions, we take as case studies the *Comunidade Coliseu*, a São Paulo's *favela* – a Brazilian urban slum habitation type – placed on Vila Olímpia Neighbourhood, and *Es.Col.a da Fontinha*, a squat-eviction process of an abandoned Porto's municipal school transformed in an auto-managed collective space. Immersed on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractivity of city, to the urban marketing, those places and those people try to oppose that path, almost heroically.

Attempting those cases, the ambition is to underlying local/unprivileged urban population ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

#### *Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators*

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.

Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from 'bottom up' has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the difficulties inflicted by neoliberalism. In education this implied breaking with the "old" divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

##### *Conceptualizing The Bereavement Hierarchy*

Yagil Levy  
The Open University in Israel  
Conceptualizing the Bereavement Hierarchy  
Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determines the ability of collective actors to leverage political factors (such as the extent to which the war is portrayed as successfully attaining its original goals) to challenge the dominant discourse and influence the war's policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children's lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subversive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group's social status and its reliance on the military as a mobility track; (2) the group's ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies- market-regulated vs. state-sanctioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subversive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

##### *Institutional Feedback and Collective Learning in Industrial Waste Management*

Heavy industries offer an interesting research subject of complex operational environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achievement of challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collective learning in complex operational environments? Numerous analyses concerning the performance of different policy designs have ended up emphasizing the importance of such flexibility that allows steering the regulation based on regulated actors' experiences. Such an opportunity may be called as a feedback between institutional and operational environments and it seems to be very important element also according to collective learning. Few studies, however, have analyzed the capability of policy designs to strengthen such institutional feedback in practice. Based on a case study of industrial region located in the northern Finland, I argue that institutional feedback is very important in industrial waste management. My preliminary findings point out that optimally institutional feedback allows the continuous learning and the development of industrial systems towards better material efficiency.

##### *Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor*

In this presentation, we will expose a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristical dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of "moral-concerns" of massmurderers.

Firstly, we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead these "veterans" beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the thematics of indignation in both contexts and more specifically on the relationships to money and the management of resources that emerge for the perpetrators in the course of their duties.

**LEWANDOWSKI, ROMAN\*** (Voivodeship Rehabilitation Hospital for Children, [rlawando@wp.pl](mailto:rlawando@wp.pl))

##### *Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment*

Poland, like other European post-communistic countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organizations access to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communistic system, costs control were made through a lack of access to expensive medical technologies, which absolved both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist times and now not only they have to adapt themselves to new reality, but also help to socialize younger colleagues entering the medical profession.

##### *Changing Circumstances in Late Life and the Relationship to Household Debt*

The study is motivated by the rise of household debt in recent decades in most economically developed societies. Students of consumer society have noted the increasing importance of material comfort and the growing use of credit among people in late life. Yet, for those living on fixed income any change in the economic environment or in one's health can dramatically disrupt their economic wellbeing. The theoretical framework on household debt in late life builds on two concepts central to social stratification: consumption and risk. With regard the former we focus on risks associated with changing circumstances such as retirement and illness. As to the latter, we argue that consumer culture and its institutional structures are an important driving force behind growing household debt.

Based on the above theoretical framework, the paper addresses three issues: the relationship between debt and changes in life circumstances (especially as re-

lated to health status and labor market activity); the association between household debt and the subjective experience of economic hardship; and cross-county variations in the relationship between household dynamics and indebtedness. The analysis is carried out using the first and the fourth waves of the Survey of Health Aging and Retirement in Europe (SHARE). The panel structure makes it possible to study changes in late life (marital status, labor market, and health) and their relationship to household debt in 13 European countries and in Israel. Preliminary findings reveal that household debt is widespread even in advanced ages; it is not limited to households that are asset poor; but it is systematically related to need as determined by changes in health and marital status. Large country differences exist in the magnitude of household debt. We also find complex effects of country context on household level relationships.

#### *Trade Unions and Whistleblowing: Can They Do More Than Protect Their Members?*

The role of trade unions in relation to whistleblowing is frequently seen as reactive and defensive. They often have limited resources and regard their prime function as being to advise potential whistleblowers and to represent both those who feel they have been victimised for reporting concerns and members who are alleged to have engaged in wrongdoing. Research conducted by Public Concern at Work and the University of Greenwich in the UK suggests that trade unions are good at performing these tasks but are not particularly effective in ensuring that allegations are investigated and wrongdoing rectified.

A more proactive and collective role for trade unions would be to negotiate whistleblowing policies and procedures at the workplace where employers were willing to do so. Research conducted in several countries consistently shows that whistleblowers normally report their concerns internally first and that line managers are often the first port of call. However, if this manager is not appropriate for any reason (for example, is the subject of an allegation or is regarded by the whistleblower as unsympathetic/antagonistic), the question arises as to whether, for trade union members, a lay or full-time official should be regarded as a suitable alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in relation to the whistleblowing process and will consider the ways in which they could use their collective strength to play a more positive role in dealing with alleged workplace wrongdoing.

#### *Natural Surveillance: Google Trekker and the End of Wilderness*

##### **Natural Surveillance: Google Trekker and the End of Wilderness**

For individuals seeking refuge from the increasingly monitored spaces of urbanized "control societies," the idea of untamed wilderness has long held a special appeal. Figuring prominently in various strains of ecological writing and literary romanticism, wilderness has also been central to various indigenous belief systems in the Americas, Australia, and New Zealand. In these contexts, wilderness has often been valorized as an aesthetic, moral, and national resource of the highest order, a sacred place for the regenerative experience of living "off the grid" of contemporary techno-culture.

However, new surveillance technologies are rapidly taming the wild, bringing it under the watchful eye of the governments, corporations, and private individuals who want to minimize risk and uncertainty in any environment—even where an element of risk has long been considered a virtue. Indeed, the rapid proliferation of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms of remote sensing is challenging long-held conceptions of nature as refuge. As the surveillance assemblage expands into the wild, finding an unobserved, or unobservable, spot will become increasingly difficult.

While Facebook's Mark Zuckerberg dreams of an "Open Planet" of total transparency, Google is bringing its "Streetview" concept to nature with "Google Trekker," a backpack mounted data collection apparatus that is designed to illuminate the hidden recesses of the natural landscape. With satellite cameras, drones, and now Google Trekker looking over our shoulder even on the highest mountain peak, will we continue to imagine the regenerative power of wilderness in opposition to the enervating qualities of post-industrial life? Is desert solitude a bygone fantasy? By putting Google's Trekker into dialogue with concepts of rugged individualism, wilderness, and frontier autonomy, this paper will explore the implications of "rural surveillance" phenomenon for national imaginaries and eco-consciousness generally.

#### *The Unequal Structuring of Healthcare Choice: Perceptions of Australian Healthcare Consumers*

The notion of choice in healthcare is a cornerstone of many western developed health policy settings. In the Australian context, choice has been integral to policy initiatives encouraging Australians to take out private health insurance (PHI). Promoted by policy makers and marketed by the health insurance industry, choice of specialist medical provider, hospital, and even complementary and alternative services has become highly valued. This private system coexists with a universal health insurance scheme for medical care and public hospital provision. However, despite the emphasis on healthcare choice, there has been little exploration about the factors shaping, and unequal structuring of, healthcare choice.

Drawing on Bourdieu's theoretical framework of intersecting forms of capital (cultural, social, symbolic, economic, and spatial) we explored the structuring of choice by Australian consumers using indepth interviews. Purposive sampling ensured a diversity of perceptions and experiences of healthcare choice, as well as in capacity to draw on healthcare capital when exercising choice. Interviews explored use of healthcare; purchase and use (or not) of PHI; social networks and information sources drawn upon when making healthcare choices. Interviews were thematically analysed.

We found that people have an unequal capacity to make choices in healthcare. Complex, interlinked forms of capital contribute to the unequal structuring of choice. While people's choices are most clearly enabled or constrained by economic resources and position, economic capital is strongly shaped by social relationships and networks, geographic location and interactions with healthcare providers. Choice represents an individualised rather than communitarian approach to healthcare service provision. Therefore the prioritising of individual choice in healthcare policy and markets contributes to the maintenance of unequal health outcomes across the population.

#### *China in the British Imaginary: Coverage of Beijing Olympics in the UK National Press*

Categorised as 'mega-events', the Olympics have long been an incredibly elaborate media spectacle in the guise of a purportedly idyllic and ostensibly shared global story, which uniquely reveals about host cultures, carrying real implications for international relations and domestic interests. Such a rich cultural repertoire shared in the media discourse becomes part of the popular imagination that constitutes the collective memory. It is in this sense that British media coverage of Beijing Olympics has shaped how a distant culture is discursively constructed and geopolitically defined. This article will answer the following questions:

- Which themes are focused on in the British press coverage of Beijing Olympics?
- How does the character of reportage vary between different titles?
- What is the general image of China that emerges from the coverage to be analysed?
- How does media narratives of Beijing Olympics relate to the wider context of an evolving repertoire of Orientalism in a discursive power struggle in the globalised context?

**LI, DAI\*** (Peking University, [lazywindream@gmail.com](mailto:lazywindream@gmail.com))

##### *A New Cycle: Understanding the Current Life Course of Rural Families in Western China*

Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economical meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a pattern emerges in which a peasant plays different roles at different ages: he is raised by grandparents in the country home where education is inexpensive, works in the city if possible supporting his children and parents, and returns home where livelihood is inexpensive, raising his grandchildren, hopefully with the support of his children who work in the city. We call this pattern the 'new cycle' as opposed to the peasants' traditional life course which dissolved in the tension between rural-urban duality and globalization.

##### *Gender and Power in the Primary Teaching Workplace: Women's Fight Against Male Power in Taiwan*

This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analysing the responses of the teachers in the campaign against male power.

In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six different class teachers, four females and two males. Semi-structured interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses in the Taiwanese context and in the case-study school. The research evidence suggests the image of female teachers as a silent majority in their workplace. However, while confronting difficult challenges rooted in the teacher surplus issue, women's image may be changing as empirical illustrations of women displayed their capabilities and dedication to fight against the male principal for their ideals. When compared to their female colleagues, the involvement of male teachers in the campaign seemed passive and obscure. More importantly, this campaign process calls attention to gendered power within this highly feminised teaching workplace and reflects the complexities of gender and power; that is, the relations between gender and power exist not only between men and women but also between men. As argued, female teachers seemed to suffer more negative experiences from the principal's leadership or from the power relations, while male teachers were supportive and reliable allies of their principal to share power and to trust because of their gender.

##### *Is the Preference for Men an Advantage or Gender Inequality? : A Case Study of the School Management in Taiwan*

The aims of this paper are to explore whether and how men are preferred and advantaged in attaining managerial positions within the school context by drawing on the experiences and views of the teachers in a primary school. The study was carried out between 2008 and 2009 in a primary school in southwest Taiwan. Non-participant observation and individual semi-structured interviews are the main sources of data collection.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men's abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men's advantaged position, women's domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men's dissociation may imply that men can also enjoy working with children and the solid teaching profession.

##### *Income Inequality, the Welfare State, and Economic Growth Across Time and Space*

Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primarily studied the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state. Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-recursive structural equation modeling by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

##### *Parents' Commute to Work and Children's Social and Emotional Wellbeing in Germany*

Based on a nationally representative sample from the German Socioeconomic Panel Data (SOEP), we examined the relationship between parents' commute to work and five domains of child emotional and behavioral problems, using SDQ and controlling for family socioeconomic and demographic characteristics and child gender. The findings show that commute to work by both fathers and mothers when their children aged 3 to 4 years was associated with a higher level of emotional and behavioral problems in their children two years later. In both-parent families, father's daily commute to work two years prior was associated with higher scores for peer problems and, to a lesser extent, higher scores for emotional symptoms and hyperactivity when the children aged 5 to 6 years. Daily long distance commutes (40 or more km each way) in fathers was associated with the highest level of emotional and behavioral problems in children. Mother's commute to work either daily or weekly was associated with a lower level of prosocial (positive) behavior in children. Analysis including single mothers showed that mother's commuting 20 km or longer each way was associated with a higher level of conduct problems but a lower level of prosocial behavior in children. This is one of two studies on this topic in the literature and much further research is needed to address causality in a more rigorous way, with more waves of longitudinal data and to examine mechanisms linking parents' commute to work and child outcomes.

*Parents' Nonstandard Work Schedules and Child Wellbeing: A Critical Review of the Literature*

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information bias, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and an adverse child developmental outcome. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuance, strengths, and limitations of the existing studies, and propose recommendations for future research.

*Exploring the Sense of Justice about Grades in Group Projects*

The problem of free rider is ubiquitous in governing the commons. It often leads to injustice in allocating the rewards in any group projects. This paper investigates formal methods in which the instructor may adjust individual students' grades relative to grades earned on a group project that reflect group members' sense of justice. Data are collected from 77 college students enrolled in a sociology course. We estimate the just grade function for each and every rewarder student in each group, and show how to use these estimates to in their grade adjustments. We also engage a recent debate (Markovsky and Eriksson 2012; Jasso 2012) about how to measure the just reward.

This paper is motivated by two bodies of literature. The first one concerns the free rider problem ubiquitous in the social world when public goods are involved (Hardin 1968; Marwell and Ames 1979). Specifically, every instructor must have encountered the difficulty of how to determine individual students' grades when they assign assignments to be completed and evaluated in groups. While many instructors may have treated it as a nuisance in their grading duties and proceed in various eclectic ways as long as the students do not complain, it is indeed an important issue to address if one takes seriously the idea of justice and the authoritative duty an instructor/grader performs. The second one concerns the social psychology of distributive justice (Berger et al. 1972; Deutsch 1975; Jasso 1980; Konow 2003). Specifically, we argue that theoretical and methodological developments in this literature (Jasso 2007) may be applied to the free rider problem of allocating rewards to individuals participating in group projects. In this paper, we demonstrate such a particular application in the classroom context.

*The Bureaucracy and the Construction of Risk in China*

There were three large-loss fires ignited by exterior-wall insulating materials which made the fire risk of insulating materials a hot topic in the past three years in China. And meanwhile public policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council of China that calmed the things down.

This paper is based on a qualitative research mentioned above, which attempts to elaborate the logics of the bureaucracies of China in the process of construction and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict first and then risk consensus among the three stakeholders mentioned above. From this research, we can get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segmentations of bureaucracy which all try their best to shift their responsibility, and this leads to the "organized irresponsibility" which seems to be a classic paradox in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public's benefit and safety, it's still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.

*Impact of Conjugal Living Arrangement on Marital Satisfaction in China's Rural Labor Flows*

In the context of rural people floating out for jobs, one of challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey "Population Mobility and Reproductive Health / Family planning Service", which was carried out in Juchao of Anhui province of China in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction.

The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men interviewed are working at hometown, only a few of their wives float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

*Law and Rebuilding Community In Post-Disaster Recovery In China*

Law and Community in the Post-Disaster Recovery in China Abstract: The existing the emergency response act of PRC(2007) prescribes many issues with regards to the post-disaster recovery, especially the rights and obligations of governments of different levels, civilians, and NGOs, etc. The efficiency and effectiveness of these articles related to the recovery was not reviewed until the 5.12 Wen Chuan Great Earthquake took place in 2008. Especially in the period of recovery of the catastrophe, the rebuilding of local community is one of most important problems confronted by the disaster zone, but which cannot be resolved practically according to the above mentioned law and demonstrated there existed at least four shortcomings in the law. So the central and Sichuan provincial government took several active measures to make up the shortcomings of the law for rebuilding the community. Firstly, the State of Council made specially and comprehensively the post-disaster recovery regulation. Secondly, different governments were facilitated to build up mutual help relationship so as to restore and revitalize the economy and social development as soon as possible. Thirdly, government adopted many mitigation disaster policies synchronizing with the planning and rebuilding disaster zone. Finally, in the process of rebuilding, the ability of self aid and help of individual and family was emphasized by the government and community which began to promote drastically to train and educate the civil society's disaster response ever than before. In sum, the benefits generated from recovery practices of the Sichuan must be very helpful to amend and perfect the existing recovery articles of the act.

*Diffuse or Enclosed? the Ethnic Communities of Taiwanese Migrant Workers in China*

This paper focuses on how the spatial characteristics of cities influence ethnic communities of Taiwanese migrant workers in China. Although Taiwanese migrants and Chinese both fall under a 'pan-Chinese' context, most Taiwanese migrant workers still see themselves as a different ethnic group and thus inhabit ethnic communities that are distinct from those of the locals.

Within this context, this paper tries to answer two questions which are directly related to urban sociology and community studies. First, whether the spatial characteristic of cities affects the openness or insularity of an ethnic community and—if it does—why is this so? Second, in what degree does such pan-ethnicity affect the lives of those living in different cities.

By comparing data collected from 35 interviews, as well as by examining other factors such as the cultural practices of Taiwanese migrant workers in Beijing and Shanghai, this paper highlights either the openness or insularity of such ethnic communities, derived from factors not only based on ecological characteristics (such as physical arrangements for work and leisure), or industrial differences, but also on how Taiwanese immigrants perceive and interact with the local Chinese in different cities.

In this paper, I will first define what I mean by the openness or insularity of an ethnic community and how the insularity/openness relates to life styles, social

bonds, and ethnic relations. I will show that openness/insularity is an idea that I have arrived at by combining Claude Fischer's (1984, 1995) concept of the institutional completeness of a subculture, Louis Wirth's (1938, 1956) theory on the cultural heterogeneity of cities, Robert Sampson's (2012) discussion of neighborhood effects, and the subjective experience of the city in which they live. Continuing, I will list empirical indicators of openness and insularity, such as residential pattern, social/ethnic relation, friendship network, and the perception of local societies.

##### *Down to Earth: Environmental Governance and Flexible Bureaucracy in China*

The notion of "flexible bureaucracy" is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucracies to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges.

This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Baoding, Dujiangyan, Hangzhou, and Tianjin. It also draws from archival research in Beijing.

This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities. In places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

##### *The State on the Street: Visible Hands in Creative City-Making in Shanghai*

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, however, the literature has focused more on bottom-up, spontaneous, and community-driven forms of urban initiatives. Especially when it comes to urban culture, there is much discussion about the explosion of creativity and entrepreneurialism from below; the state seems to have disappeared from the sociological field of vision.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the "norms" of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

##### *Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China*

China's class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendship ties across class boundaries. In particular, analysis of strength and diversity of cross-class social ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

##### *Living in the Gray Zone: State's in/Exclusion of Live-in Migrant Care Workers in Taiwan*

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the "graying" of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to *Labor Standard Law* that defines the rights of workers.

Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

##### *Exploring the Meaning of Social Justice in Chinese Context*

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work undergraduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province.

Result indicates that this group of interviewed students perceives social justice as a distant ideal which is too difficult to achieve. From the students' narratives, a strong sense of powerlessness was detected and they feel constrained a lot by current social and political reality in Chinese society. They mostly construct the idea of justice within a nation-state framework by using a resource-distribution scheme.

Their conception of social justice is largely a mixed product of Western-oriented social work education and their growing-up experience in transitional Chinese society. In addition, it is worth exploring the distinctive and long-lasting effect of their received political education (mainly derived from Marxists' theories) in high school, which offers them vocabulary, standpoint, and theoretical assumptions to develop their interpretations of justice. Based on above empirical findings, this research suggests some future directions for promoting a more inclusive and globalized understanding of social justice among the Chinese youth.

*A Text-Mediated Buddhist Conglomerate and Its Practitioners:  
 Using Institutional Ethnography to Explore Lay Followers' Religious  
 Experience in Tzu-Chi*

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious "conglomerate" within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20<sup>th</sup> century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organisation's modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun's book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers' participations in the organisation's volunteering activities help to consolidate and coordinate lay followers' religious identities.

*Religious Sisterhood Among Female Audience of Da-Ai Dramas*

The purpose of this paper is to examine the way in which the audience respond to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious "conglomerate" which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai's prime-time drama (also known as Da-Ai Drama) series on both networks from Jan, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher have conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edu-entertainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

*Social Desirability Bias and Mode Effect in the Case of Voting  
 Behavior*

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous studies on social desirability of mode effect did not obtain consistent findings. The problem of social desirability bias is found to be more severe in telephone interview than in face-to-face interview when dealing with voting turnout

(Díaz de Rada, 2011; Voogt and Saris, 2005). The issue of such responding bias with the consideration of mode effect is worth further examination.

This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 president election in Taiwan. Data are drawn from two national representative sample conducted in the same year after the election to eliminate recall error, with face-to-face survey data from Taiwan Social Change Survey and CATI data from Taiwan Social Image Survey. After weighting by population characteristics, socio-demographic variables will be compared first to examine the dis/similarity of the two samples. Voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.

*10th Anniversary of Hakka Television: A Study to Examine the  
 Ethnic Broadcasting Policy in Taiwan*

It is 2013 that the 10<sup>th</sup> anniversary of Hakka Television, the first ethnic broadcasting system in Taiwan. Reviewing the past 10-year development, there have been 3 ethnic television stations founded and operated in Public Television System to protect the minority language such as Hakka, Holo, and Indigenous. In this important moment, it is necessary to examine how the ethnic broadcasting worked in the past decade in Taiwan.

This research summarized the development of ethnic broadcasting during this decade from 2003 to 2013 in Taiwan by reviewing the literature, especially in Hakka communication. Furthermore, it also interviewed those who participated in either practical or academic field to discuss and give a suggestion for the next era.

The result shows that the population using Hakka is consistently growing owing to the broadcasting; however, it is still stated in an unequal position of language using as a vulnerable one. In addition, this kind of situation is also shown inside Hakka community among different 5 accents; moreover, the gap is even widened in this group. It is obvious that the policy protecting the right of using and reducing the development gap among dialects still needs a great improvement in next decade.

*A Mapping of the Current Reality of Regional Inequity*

This document will focus on the continuity of a power that emanate toward the provinces of the interior of Argentina and the power relations between the national state and different sub-national states.

It will be shown that there are colonial models from Mexico to Argentina that have their origins in scholastic currents found in the peninsular cloisters of medieval Europe. Under this influence, and a century after the conquests carried out in the region of the Río de la Plata, the first institution of higher education was conceived. The most important philosophical currents in the region could be seen to parallel the political regime introduced there.

Furthermore, the economics and the general development of the Argentine territory were considered from their inception focusing on external trade of primary resources whose main activity consisted in the creation of a handful of precarious port-cities and surrounding areas of the interior with the products being exported to Europe exclusively without balance and with diametrically opposed strategies.

These two main aspects –economic and philosophical-political– imbued Argentina with a distinctive profile in the development of its institutions and in the power dynamics that have persisted for almost five centuries.

This specific distribution led to a particularly non-disruptive path; a path that is highly inequitable with regard to the development of ideas, of power and its institutions and with delayed economic development.

This exploration will give rise to a mapping of the current reality of regional inequity under protection of a biased and caudillista political and economic power.

*Democracy and Education: A Strategic Alliance For The Exercise Of  
 Future Freedom. The Case Of Argentina*

Argentina today finds itself in the midst of a crisis, with a weakening democracy and an education system in decline. Any solution to the country's current problems must focus on not one or the other of these issues, but on the two together, as inseparable.

The discussion presented here will first focus on the school as a highly planned and compulsory training institution for minors.

Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and "control".

From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented.

Next, an analysis of this situation will be given.

Finally, conclusions and some ideas for future changes will be proposed.

#### *Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision*

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care ("test and treat"), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 66.5% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to "test and treat" among convicted offenders.

#### *Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South*

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine's (2007) call for a feminist geography on interactions between social categories and spatial ordering, this article investigates housing loss among women foreclosees in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosees in terms of marital status, race/ethnicity, and location. While married women foreclosees typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women's foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of 'women alone' in the property market.

#### *Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance*

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens' and stakeholders' claim for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of symbolic action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

#### *On The Development Of Talcott Parsons' Conception Of Societal Community*

On the Development of Talcott Parsons' Conception of Societal Community  
During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with the four function paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, well over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons' first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his *Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies*. Our presentation will discuss the differences between the two conceptions of the integration of American society and will also compare Parsons' conception of societal community to current analyses of civil society and to Jeffrey Alexander's *The Civil Sphere*. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

**LIE, JOHN\*** (University of California, Berkeley, [johnlie@berkeley.edu](mailto:johnlie@berkeley.edu))

#### *Misrecognizing the Modern: Japan and the Failure of Social Theory*

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet "modernizing" Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and its legacy. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today.

### *Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences*

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the 'true value' of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term "Jews" is replaced by the term "Israelis", and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for a so called 'Peace product' (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes (anti-Semitic and anti-Arabic attitudes) into account, a strong correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

### *Conflict and Economic Consequences: Comparative Notes on "Going to WAR"*

Wars are beneficial some argue. Wars are costly others argue. Some experiences prove that technological development in warring situations (may) have positive spin offs later on. Wars can be simultaneously costly and beneficial others argue. Some suggest that being a victor in one war can create a psychosis or collective social memory that propels the victorious state/nation into long term militarist adventures that eventually leads to its downfall. Against this background we are discussing four case studies.

These paper explores in some detail four economies in terms of preparations and consequences during the Second World War, namely that of Nazi Germany, the UK, the USA and South Africa. A look is taken at the economic state of these countries before the war, preparing for war, economic developments during the waging of the war and the socio-economic and political outcomes. It concludes with some lessons learnt and pointers for the future. In our conclusion the reader may find in his / her own deduction that going to war – even if coming out victorious – may be far costlier on the long term than we tend to think.

### *Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers*

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release.

To assess the dynamics of age during incarceration and upon release, life-history interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a 'deep-freeze', prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view toward greater understanding of subsequent desistance post-release.

### *Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers' Ability to Leave the Benefit System Via Employment*

In the first decade of the 21st century there have been reforms in German family and social policy towards an "adult worker model", aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on activation and labour market participation. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers' child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probabilities to take up employment are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers' labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don't have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection process at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

### *The Impact of Unemployment on Male Gender Role Attitudes in Germany*

Germany has a long-standing tradition as a welfare state with a pronounced male breadwinner orientation in social and family policy. In the last decade there have been some reforms in the direction of a more gender egalitarian "adult worker model", particularly for the unemployed.

In this paper we want to explore the impact of unemployment on men's gender role attitudes within this new policy framework, assuming that unemployment might lead to a more egalitarian view on gendered work-family attitudes. The new labour market policy in Germany has a general notion that assigns obligations to work to both male and female recipients of unemployment benefits which might lead to less pronounced male breadwinner attitudes among unemployed men living in a couple.

For women it has been shown that employment status has an influence on gender role attitudes. In explaining this phenomenon, it has been argued that there are two mechanisms at work: first, there is a selection effect implying that women with more employment oriented attitudes have a higher probability to be employed. Second, there is an adjustment of attitudes, that is, changing one's own attitudes in response to employment status in order to reduce "cognitive dissonance".

We conduct an empirical analysis of the relationship between gender role attitudes and unemployment for men and women who live in couple households. For our analysis we use the German panel study "Labour Market and Social Security" which is covering the general population. In a first step we analyse the impact of unemployment on gender role attitudes controlling for other covariates influencing gender role attitudes and unemployment status. We are particularly interested in the effect parenthood has on this relationship. Fatherhood, in particular, might lead to a persistence of male breadwinner attitudes among men as it fosters male responsibility for family income.

### *Theorizing Queer Temporalities*

Traditionally, feminist research has focused more on the content and the supposed effects of gender norms and their relations to power, than how the gendered power relations may change. However, there has been a tenet within feminism and—more recently—masculinity studies, which more specifically discusses *how to change these power relations*. A further research specifically looking at *how such gender norms change* is warranted. How might the gender stereotypes that surely inform the enactment of violence, transform into something new? In queer pedagogy advocates try to find solutions for resisting gendered norms, for example, through queering time. The question is what is meant by 'temporality' and 'queer'? What norms of temporality are queer supposedly challenging? Taking temporality in queer studies as starting point new strategies of resistance,

against different gendered power relations, prevail. This paper, discusses various resistance strategies in relation to different attempts to reach gender equality.

### *Change of Basic Human Values in Europe 2002-2012*

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theoretical circular structure of basic values has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses uses data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PVQ-21).

ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefore this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

### *The New Normal As a System Challenge*

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that "the low hanging fruit" of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Alpert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism. Tyler Cowen argues that due to Internet, globalization and smart machines "average is over" and the middle classes are shrinking. Ian Morris builds a historical argument about "growth ceilings" that can't be penetrated without major systemic changes.

In the international debate Japan is seen as an example of things to come. In spite of economic and demographic decline, social order and reasonable labor force participation have been maintained. Therefore the question is, can Japan again be seen as "number one" in adjustment to the New Normal?

### *Internet Christianity and the Boundary of Civil Society in China*

This paper examines whether religion, through a case study of online Christianity, contribute to the development of civil society in China. We discuss how the global interconnectedness of the Internet influences the Christians in China and the diaspora, in terms of communicating their faith, building their communities and furthering their cause. Herbert (2011: 633) has noted that electronic media has enabled 'wider circulation of religious symbols and discourses across a range of social fields, which tends (even in secularized societies) to move religion out of the differentiated religious sphere to which it is notionally confined in liberal versions of modernity and into various contested public spheres'. If this was the case, the Internet and social networking sites may very well challenge many governments' concern to keep the secular and religious spheres separate in their attempt to maintain social harmony in multi-ethnic and multi-religious societies. Our paper investigates if users of the Internet and social media for religious pur-

poses in China see their activity as contributing to the development of civil society. We proposed two hypotheses: one, while physical spaces can be defined by worshippers and the modern secular state as either sacred or profane spaces, such boundaries are not distinct in online spaces, such as blogs, Internet forums, and social networking sites; and two, to the extent that Internet users engage in social (e.g. religious) and political discourses, boundaries between the social and political domains established by the modern secular state are constantly being blurred and transcended. The answers accrued from this line of enquiry is highly significant in that they can reveal the diverse motivations behind the users' participation in online religious activities, and hence allow us to analyse the different ways online religious groups relate to the party-state authority as the latter engages in the regulation of religion.

### *Rediscovery of Asia - from the Value-Based Orientalism to Strategic Universal Asianism*

#### **Rediscovery of Asia - from the value-based Orientalism to strategic universal Asianism**

The so-called Asian Values debate has long history. In the late 19<sup>th</sup> and the early 20<sup>th</sup> century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectivism such a like an orientalism defined by the western, simultaneously, they want to modernize themselves without loss of their own identity, because the process of Asian modernization at that time had lain between Scylla of nationalism and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues had contended with traditional Confucianism and orientalism of linear development expressed by European, and have attempted to de-objectivation of Japan and the whole Asia in the name of 'Great Asia'. On the contrary, Sun, yat-sen, the father-figure of modern China, has attempted with his famous three principles of the people (so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and welfarism. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of 'Great Asia', which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of an East Asian Community and to frame alternative conceptions of Asian commonality, this article will examine the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.

### *The Profession of Minority Journalists: The Voices of Zainichi (ethnic Korean) Journalists in Mainstream Newsrooms*

This study aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around journalism and multiculturalism have criticized their mainstream media for preserving a news frame confined to the national boundaries, which assumes the readership is ethnically homogeneous. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as a research interest in Japan. With increasing diversity of residents, however, a demand for minority participation in the media industry slowly emerges; considering effects of minority journalists as members of mainstream media may redeem an absence of approaching minorities as subjects.

Previous studies in America clarify that minority journalists have two natures - called 'duality'; one engages in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study redefines this 'duality' as a structure of conflict between 'professional identity' and 'ethnic identity', and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of 'professional identity' over 'ethnic identity' is observed in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue 'ethnic identity' as their foremost mission, however utilizing this 'ethnic

identity' facilitates accesses to various news sources. This is an advantage frequently expected of the Zainichi journalists by their superiors.

#### *Reframing Citizenship in Contemporary Brazil: The Effectiveness of Democratic Institutions*

After the highly enthusiastic expectatives raised by the re-democratization of Brazil in the 1980's, contemporary sociologists and political scientists are more likely to analyze the effectiveness of political institutions that were created by the democratic constitution in 1988. This work compares the democratic effectiveness of two of these institutions: the *conselhos* (councils) and the *ouvidorias* (ombudsmen). Each of them sets a particular way of dealing with patrimonialism, a traditional obstacle to democracy in Brazil. The research results indicate that both institutions present considerable limitations to democratic governance inasmuch as they reproduce traditional practices they were supposed to confront. In spite of that, the institutional frame of *conselhos* is better adapted to absorb social control practices. The work proposes a systematic reflection on the relations between the constitutional foundations of these institutions, the role played by them in politics and the individual perceptions of their agents. The experience of *conselhos* and *ouvidorias* are also analyzed in the light of the broader debate on the reformulation of conventional patterns of political representation in contemporary Brazil. The main challenge to improve their democratic effectiveness is to encompass political autonomy and accountability mechanisms in their formal dispositions and daily activities.

#### *Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian's NGOs*

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations' experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connexions between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGOs' experience: social justice, philanthropy and ecology. The first two have a common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In turn, the consecration of the value of ecology concerns a different context, dating mainly from the decades of 1990 and 2000. I also build on a micro sociological approach in order to interpret these values in the light of the individual trajectory of Herbert de Souza, known as Betinho, the major actor in the formation of these

institutions. Betinho's biography presents individual frames to the macro-historical process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

#### *Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan*

For many children, high quality early learning environment can provide lots of the experiences and skills that help build a foundation for later school success. Among the numerous measures of early childhood education and care quality, some closely linked to later success in school are those which assess school readiness. Many researchers have been claiming that education subsidy is a significant factor related to children's learning and development. In 2010, the Taiwan authority announced "The Free Education Program for Five-Year-Old Children". This program which was expected to benefit a larger ratio of population revealed the importance that Taiwan government has attached to early childhood education. However, little information is available about "the effects of this program's subsidy on preschool children's school readiness" and "can this program's subsidy really minimize the gap between disadvantaged and advantageous children". This study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of children's readiness. The results showed that subsidy of the free education program has significant influences on children's school readiness development. Preschool children who are from lower family socioeconomic status are more likely to accept extra subsidy of free education program, and further will reduce the school readiness gap with their counterparts of non-lower family socioeconomic status. That is to say, the subsidy of free education program for five-year-old children in Taiwan really diminishes the school readiness developmental gap between disadvantaged and advantageous children. The implications of the findings for theory, practice, and preschool education policy are also discussed.

#### *Workload and Wage Gain As Determinant Indicators of Constructing a Composite Index Reflecting Worker Well-Being: Evidence from Taiwan Record-Linkage Data of Manpower Surveys*

In light of tremendous institutional changes in the labor markets and working conditions, the research devotes to establish some labor indicators in the hope of reflecting labor transitions and enhancing international comparisons. Although existing official statistics help shed lights on recent development trend, they are not capable of providing us with dynamics and evolution of a complex labor market system temporally and spatially at individual level. Based on 900 thousand individual laborers collected from the 1980-2010 micro data sets of Taiwan Manpower Utilization Surveys (MUSs), the research uses record linkage technique to link individual records of MUSs, creating the so-called quasi-longitudinal MUS (QLMUS). QLMUS is not only large in data size, but also rich in labor information, including demographic characteristics, human capital, work status, employment dynamics, and individual wage income. On the basis of the constructed QLMUS, the research aims to study the evolution of labor well-being in the past three decades. With other factors being fixed, the study constructs an indicator of labor well-being (ILWB) on the basis of joint distribution of individual wage income and workload. ILWB is measured by the joint integral with respect to individual wage income and individual workload, which can not only reflect the collective well-being of labor by social class, region, labor market institution, but also enable us to explore the joint effect of labor market flexibility and security, or flexisecurity, and to reflect various conditions of labor market, worker's life, labor's value and labor market inequality. Research findings serve as the base for the design and provision of evidence-based labor market policy.

[liangwen0626@gmail.com](mailto:liangwen0626@gmail.com))

#### *Education Faculty Members' Perceptions of and Responses to the Ssci-Oriented Academic Evaluation Systems in Taiwan*

The main purpose of this research is first to investigate Education Faculty members' perceptions of and responses to the SSCI-oriented academic evaluation systems in Taiwan, and then to analyze the relevant factors of how the faculty members perceive and respond to these systems. Semi-structured interviews

were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu's field theories, M. Burawoy's theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks.

The conclusions are as follows.

1. In terms of Education Faculty members' perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy's voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

#### *Identity Formation and Social Relations on Facebook for Taiwanese College Students*

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sited approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students' college life due to cultural globalization facilitated by information and communication technology and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan's historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conceptions of performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It's all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

#### *The Global Crisis, International Migration and Social Change : Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities*

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to produce a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mo-

bilities paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: the first one focus on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of mobility and migration that structure labor markets; the third one deals with the temporal dimensions of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants' adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

#### *Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work*

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in global social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key topical foci, namely: (a) to seek to determine what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and (un)intended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to deal with youth in austerity and young people's responses to inequalities, (d) to understand economic insecurity, youth poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes aptly or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibilization, and how the process of globalization has influenced life-course patterns and inequality structures in the local communities. The author would like to debate the results of qualitative and quantitative empirical research, but also focus on the theoretical concepts used in the analysis.

#### *The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions*

Rapid economic and social changes coupled with constantly changing policies have had impacts on the way in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China's General Social Survey. This study enhances the literature by examining the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajectory-

ries types between four subgroups defined by gender and household registration status, as well as between father's social status. We also examine the evolution of transition using the typology built to reflect changes in both demographic and occupational spheres.

##### *Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability*

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2009 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

##### *Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn*

In this article we describe some special characteristics of the world's greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group's authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business groups (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as a "global fragmented despotism." The organizational structure of world factory may be helpful for explaining Foxconn's poor labor conditions and workers' suicides happened in 2010.

##### *Mapping the Climate Discourse Networks: Media Coverage of Climate Change in Taiwan*

There is an increasing media coverage and visibility on climate change in Taiwan. Few studies, however, have been done with regard to how issues of climate change have been reported in the newspapers. This paper intends to examine Taiwan's newspapers from 2007 to 2008 as well as semi-structured interviews with climate experts. Through discourse and relational networks methods, the paper examine how and why the climate change media discourses have been framed and represented, and how they interact or reflect national climate change politics and policies. It concludes with a discussion of how these findings help us understand multiple actor and discourse networks that effect national climate policies.

##### *Visualizing Voices of Women*

There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound to abandon their families in search of economic opportunity. Migration patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experi-

ence using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment and to their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

##### *The Effects of Family Support and Friend Support on Adolescent Functioning: A Taiwanese Case*

A number of factors affect adolescent functioning. This study investigates the respective contributions of perceived support from family and friends to various adolescent functioning, including deviance, depression, and self-esteem. Although previous studies have examined the relationships between family support, peer support, and adolescent functioning, these studies have some limitations, such as relying on western sample (e.g., U.S.) and cross-sectional data. Using Taiwan Youth Project (TYP), we employed latent growth curve model to explore how these two supports influence adolescent functioning. We expect to see that adolescents who experience high level of family support may have better functioning (e.g., high self-esteem and low depression) than adolescents who have low level of family support. We also expect to see similar results when support from friends is in the model. In addition to the individual effect from the two sources of support, we also investigate the moderating effects of these two supports on adolescent functioning. We expect to see significant interaction between these two supports such that high level of family support may have stronger effect on adolescent outcomes when friends' support is at high level. In contrast, low level of family support may have negative impacts on adolescent functioning even when the level of friends' support is at high level.

##### *A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan*

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age is an M-shape in these two countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe that the curve is only due to cohort differences in women's behavior.

The OLS regression model cannot entangle the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women's participation in the labor force correlates with their family obligations or cohort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriages or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women's re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.

##### *Rigidity, Culture-Related Conflict and Depression*

Since martial law was abolished in 1987 in Taiwan, the rate of depression has dramatically increased. The reason for this remains uncertain. Some researchers think that this phenomenon might be related to the psychological conflict be-

tween 'social orientation' and 'personal orientation' which is generated through the process of acculturation. Although the development of democratization increases personal freedom, it also increases anomie. Hence, being influenced by Chinese culture in which the values of social groups are highly valued, people in Taiwan might feel anxious and uncertain when personal orientation is strengthened. Accordingly, the researchers suggest that the tension between social and personal orientations might trigger the formation of psychological conflict. Depression could also occur when people feel that the psychological conflict is too high to cope with. In this paper, the author attempts to propose that psychological conflict is not related to depression but the 'rigidity' of the personal psychological construct system. In the dynamic process of social change, depression might occur when the individual's construct system is rigid and not flexible enough to adapt to the tension between personal and social orientations, aroused by the changing society. This hypothesis is examined by conducting a survey and an interview in Taiwan. The survey has already been conducted and there was not enough statistical evidence to identify the relationship between depression and conflict. The interview is going to be conducted next month, and Repertory Grid Technique (RGT) will be adopted to qualitatively and quantitatively examine the relationship between the levels of the rigidity in terms of the construct system related to personal and social orientations and depression.

#### *Influencia De Las Nuevas Tecnologías En La Prensa y Los Procesos De Opinión Pública: Una Nueva Cultura Periodística*

El surgimiento de las nuevas tecnologías ha traído consigo un gran impacto en todos los ámbitos de la sociedad pero el más significativo, indudablemente, ha sido el cambio comunicativo, ya que ha supuesto la conexión entre personas, desde cualquier lugar del mundo, con algún tema en común. Así lo ha demostrado, por ejemplo, la teoría de seis grados de separación, recogida en el libro *Six Degrees: The Science of a Connected Age* del sociólogo Duncan Watts, que intenta comprobar que el "mundo es un pañuelo".

La prensa no es un eslabón perdido en esta cadena tecnológica, pues ha sabido aprovechar todos los recursos que genera la red para propagar sus informaciones. Hoy en día no se concibe un medio de comunicación que no tenga su espacio en alguna red social como Facebook o Twitter, esta última siendo la horma de sus zapatos, ya que 140 caracteres son más que suficientes para un titular informativo o de opinión, y que miles de seguidores se informen in situ.

#### *'Modern Times': The Conceptualization of Contemporary Societies*

This paper attempts to do three things in following the development of the concept of modernity. First, its history of the last three decades is outlined: from its initial appearance and its early critique in the eighties of the then emerging postmodernity, to the now frequently used and almost indispensable appearing term when it comes to diagnosing contemporary societies. There has thus been a journey from conceptual polemics to its having become a part of the 'dominant intellectual discourse'. Lyotard's *La Condition postmoderne* (1979) was probably the starting point. The dichotomy of *Modernity versus Postmodernity* (Habermas 1980) was established soon thereafter. Later the term gradually became an integrated part of sociological theory and it was declared that "*Modernity is itself deeply and intrinsically sociological*" (Giddens 1990). 'Modernity' then came to refer to a "global condition" and possibly also the beginning of a future "world sociology of modernity" (Wagner 2012). A second question the paper is concerned with is the explanatory value that the concept of modernity has for empirical research on contemporary societies. The third question the paper considers is the impact which the success of the concept has had on sociological thinking. It appears to be common knowledge that we are living in a period of 'late modernity', even if there is now a panoply of different 'modernities'. The more general question here is what the consequences have been for further theorizing and analysis after the important breakthrough of "modernity" in the media and the academic discourse. One can note that the first reference to it made by Habermas in *Modernity versus Postmodernity* is to an art critic who in *Frankfurter Allgemeine Zeitung* advanced the thesis that "*Postmodernity (-) presents itself as Antimodernity*", thus expressing what was to become the new 'Modernity'.

#### *Continuity, Change or Coevalness: Charismatic Christianity and Tradition in Contemporary Tanzania*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

This paper explores parallels and dynamic interplays between charismatic Christianity (Pentecostalism and Lutheran charismatic revivalism) and «traditional» understandings of mysterious power as related to an occult sphere in Iringa, a regional capital of South Central Tanzania. I discuss how notions of mystic power as constructive, defensive and necessary yet also dangerous and potentially destructive are adopted into and partly transformed by charismatic discourses on the realm of darkness and related ritual practices of empowerment, rupture and spiritual struggle. Attempting to move beyond a rigid continuity-discontinuity dichotomy I suggest that the relationship between Pentecostal-charismatic Christianity and traditional religion/ culture may better be grasped in terms of coevalness, intersections and ongoing mutual influence than temporalising difference.

#### *Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management*

During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function organized in R&D units towards an integration of technological, market, organizational and institutional dimensions (Tidd, Bessant&Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et.al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need to involve not only all members of organizations but also external partners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burnes, 2009, Weick&Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hazy&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include nonlinear interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl&Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hazy & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

#### *The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case*

The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries' capacity in maintaining sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors---where the movement is generally from the periphery/semi-periphery to the core---either trans-continently or within regions, has persisted. The combined stock of migration of nurses and doctors from the periphery of the global care economy comprises the larger portion of the international migration flow of nurses and doctors.

This paper focuses on the Philippines as the top-ranking source country for nurses and fourth for doctors in the global care economy. It provides a brief profile of Filipino international nurse and doctor migration, offers an explanation of this phenomenon and what the consequences are of this pattern. It incorporates insights from interviews the author conducted on the experiences of Filipino nurses and doctors who migrated to the US, Germany, and Denmark as part of a multi-phased research project on the international migration of nurses and doctors into healthcare systems. A look into the Philippine case can provide insights into the uneven outcomes of labor migration in the global care economy in the context of neoliberalism and their policy implications.

**JS-34.6****LINDSAY, JO\*** (Monash University, [Jo.Lindsay@monash.edu](mailto:Jo.Lindsay@monash.edu))*Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households*

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change 1. more flexibility in systems and infrastructure so the public could escape 'path dependency' including flexibilisation of large scale water supply, drainage and sewage systems and water governance systems including water policies and pricing 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account and be designed for local contexts. 3. Enabling and encouraging flexibility in domestic spaces and with domestic technologies so people are not 'locked in' to water wastage in laundries, bathrooms, kitchens and gardens. Enabling people to access alternative water sources and recycle water themselves 4. Attending to everyday practices and values around water including risk and trust. Enabling the everyday activities of achieving 'cleanliness, comfort and convenience' (Shove 2003) while using less water. I argue that we need to know more about the 'meso' level of the water sensitive practices of diverse communities and households to effectively promote and achieve change.

**RC22-397.3****LINJAKUMPU, AINI\*** (University of Lapland,[aini.linjakumpu@ulapland.fi](mailto:aini.linjakumpu@ulapland.fi))*Religious Socialization and Dimensions of Spiritual Violence*

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one's life. The situation is definitely different when one is born into a religious community: i.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one's belief or existence in the religious community. It is an exercise of power against members of the community, which reduces the ability to determine one's own future. Birth into a religious movement is not in itself a spiritual violence, but in the socialization process, there are many factors that are relevant to the emergence of such violence. Empirically, the presentation focuses on two religious groups: the Jehovah's Witnesses and also Conservative Laestadianism, the largest revival group in Scandinavia. As dimensions of spiritual violence, the presentation examines themes of human rights, "non-alternativity" and the asymmetric use of power.

**TG04-955.2****LINKE, VERA\*** (Bielefeld University, [vera.linke@uni-bielefeld.de](mailto:vera.linke@uni-bielefeld.de))*When Risk-Analysis Needs Hazard-Assessments - Is Risk-Based Regulation Actually Part of the General Risk Discourse?*

Beck describes modern societies as preoccupied with the management of novel risks. Recently, this notion of risk was widened by the idea of risk-based regulation as a rational strategy of governance: risk assessments justify the selective spending of scarce resources on extremely harmful events, as well as withholding investments for less significant events. The focus on risk in decision-making represents a paradigm shift away from the idea that government ought to ensure 'security'. Ewald (and others) have argued that the once central notion of safety (as a dispositive of risk) is no longer relevant and is substituted by precaution. A second observation concerns the non-essentialist character of risk: Michael Power has spoken of the "risk management of everything", meaning that any event can be transformed into a risk, attributing probability and damage values.

The concurrence of both observations requires a new interpretation of risk-based regulation. The focus on efficiency on the one hand and the comprehensive use of risk assessment on the other, raises the issue to what effect probabilities can still be used as a governance tool. Methodologically, there is a tension between the all-inclusiveness of possible harms and the necessity for offsetting all single risks. As a universal tool of description, risk-analysis would need to be able

to prioritize between different types of risk. The use of traditional hazard-based assessment strategies in risk-based regulation could be an indication to this unresolved tension.

In explaining and developing this position, the paper draws on empirical evidence from UK regulatory agencies. We review the basic statements of regulatory policy-making (e.g. Hampton report) and key political documents (funding documents of regulatory agencies like the Food Safety Agency) to investigate whether the spreading of risk analysis actually hampers the use of risk-based management or if it contributes to the expansion of risk management.

**TG04-946.3****LINNELL, MIKAEL\*** (Mid Sweden University, [mikael.linnell@miun.se](mailto:mikael.linnell@miun.se))*Managing Social Unrest through Risk: Reintroducing the Debate*

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmö during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing "calculations about probable futures in the present followed by interventions into the present in order to control that potential future" (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both *at risk* and being *a risk* to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer's writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

**RC14-243.2****LISSITSA, SABINA\*** (Ariel University, [sabinal@bezeqint.net](mailto:sabinal@bezeqint.net))*Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective*

The digital divide is a social side effect of the information age. The technological means that enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the "second level" digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The goals of this paper were: to present the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital and to characterize the link between the digital divide and social stratification.

The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,872 interviewees aged 20-65 years old.

Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from significant to insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.

**JS-26.1****LISTERBORN, CARINA\*** (Malmö university, [carina.listerborn@mah.se](mailto:carina.listerborn@mah.se))**MOLINA, IRENE\*** (Uppsala University, [irene.molina@ibf.uu.se](mailto:irene.molina@ibf.uu.se))*Resisting the Neoliberal Turn in Swedish Housing Provision*

Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of 'good housing' has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing from the late 1960s is also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. Several researchers point at how the Swedish housing system has been thoroughly deregulated from the 1990s onwards, to 'gradually become one of the most liberal market-governed housing markets in the Western world' (Hedin et al. 2012, p.444). The lack of national government interventions and the absence of a national urban policy have led to an increased debate within private sector, tenants' organizations, as well as the growth of new social movements based on housing issues. The social movements articulated around housing provision are fighting against the fear of 'renoviction', territorial stigmatization and the difficulties for young people to enter the housing market due to the increased housing shortage.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this 'dysfunctional' housing market is deeply imbedded in the increasing socio-spatial, gendered and racial segregation within the Swedish urban landscape.

[gregoire.lits@uclouvain.be](mailto:gregoire.lits@uclouvain.be))

#### *Confidence Building and Stakeholder Involvement in Nuclear Waste Management. the "Glocalization" of Social Acceptability*

In most of the nuclearized countries, the public agencies in charge of the development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralyzed all the decisional processes, leading the different agencies to transform their approaches and integrate what they call the "social aspects" (or the "problem of social acceptability") of the waste into their research agenda.

In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the "Forum for stakeholder confidence (FSC)". The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear organizations and aims at facilitate the sharing of experience in order to "ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes".

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experimentations made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse "good practices" of public participation can be seen as a "strategy of glocalization" as defined by Ulrich Beck (2003). This new kind of multi-level strategy, that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

#### *The Role of Social Scientists in Dealing with the "Social Aspects" of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?*

In most of the European countries that are confronted with the problem of nuclear waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the "participative or deliberative turn" (Lehtonen, 2010 ; Chilvers, 2008 ; Barthe, 2006). Whilst technocratic rationales (based mainly on performance assessment and quantitative risk analysis) prevailed until the early nineties, they have proved to be unsuccessful and reached stalemate, leading to a paralysis of decisions-making procedures. Experts identified the "societal aspects" of nuclear waste management (mainly the emergence of organized local contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this "participatory turn" in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the "societal aspects" of high level waste management: it is claimed that the prob-

lem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutionalist stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of bringing social scientists in the process back to controversies in the late 1940s in the US. This genealogical account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.

#### *Social Resilience: Learning From Hanshin and Tohoku*

Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context.

In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations.

However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to 'go to the hills'.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to remedial intervention, a continuing institutional hiatus becomes evident.

This paper draws on recent literature on 'place branding' and 'place leadership' to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

#### *Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists*

This paper examines attitudes towards education and explores informal educational structures inside the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one of the parts of lifelong learning that implicate the process of gaining knowledge and skills while individuals intercourse with their social environment. Many anarchists tend to criticize prevailing educational practices and maintain the concepts of libertarian pedagogy and postmodernist critique of formal education. They suggest that governmental institutions reproduce social inequality and constrain people from getting knowledge in order to create governable and disciplined subjects. My findings show that anarchists realize their own learning needs and carry out appropriate learning activities that are concerned with their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them into their daily routine. Their rhetoric, deeds, consumption practices and forms of communications are tightly connected (in dialectical way) with those attainments that are distributed by channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international *MYPLACE (Memory, Youth, Political Legacy and Civic Engagement)* project.

### *The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Inter-marriage Between Aborigines and Han Chinese People*

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a series of social and economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese increased, and meanwhile, the likelihood of marrying for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio is highly skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

#### *Conjectures on Labor-Environment Alliances*

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as India and Brazil. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left – cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in no small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are likely to take the helm of social movement sector (cases such as the US, Japan, and Taiwan), and more likely to emphasize the purely ecological dimension of environmentalism and to jettison the class politics embedded in many environmental controversies. We close the paper with a description of possible future paths of convergence and divergence of labor and environmental movements across the world sectors we have described.

#### *Chinese Elite Higher Education and Reproduction of Educational Inequality*

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through *Gaokao* examination only. This new strategy is called *Independent Freshman Admission* (IFA, or *Zi Zhu Zhao Sheng* in Chinese). Whereas ample evidence exists for the social disadvantages of people with low SES in the ability to access and complete elite higher education in Westernized countries, research on educational inequality at elite universities in non-Western countries has remained scarce. This research, using administrative data from one Chinese elite university in the years 2007 and 2008, presents behind-the-scenes details of admission processes at Chinese elite universities for the first time and demonstrates the impact of these processes on educational stratification in a radically changing society. Significant associations were found in the IFA selection process between students' socioeconomic origin and whether they passed the multi-stage selection process to access tertiary education. The new IFA system favors students from higher socio-economic origins at the expense of students from lower socio-economic backgrounds in admission to elite universities. Furthermore, this institutional reform of elite higher education will likely have a long-term impact on the social origins of the intellectual elite and changes in social structure in Chinese society.

#### *Inequality, Government Trust and Election Participation*

It is a hot topic that how to promote Social transformation of the trust in government and election participation in China. This article examines the relationship of inequality, government trust and election participation and why people take part in convention political participations. The author argues that government trust plays an important role in convention political participation, but contrary to more traditional models, there is regional disparity of the convention political participation in China. In addition, the authors posit that government trust is strongly affected by perceptions of income inequality and social preferences for income inequality not real economic inequality. Using the data of Chinese General Social Survey 2006 (CGSS2006), the author presents Hierarchical Linear Modeling (HLM) on the effects of inequality and government trust on the convention political participation, controlling for other related factors. Finding indicates that inequality is the strongest determinant of government trust and that government trust has a great effect on convention political participations.

#### *Locality and the Moral Inequality of MDMA Users in Taiwan: A Case of a Newly Democratized Country*

The 'normalization thesis' has been developed to explain the massive increase of drug consumption in recent years, because of the growing popularity of dance/club drug within the young people. Different from most of the criticism, this paper thinks it short of ethical prudence and sociological insight: it incites moral panic for its effect to legitimizing the drug use without identifying the social attributes of drug user. Seeing these weaknesses, this paper presents a figurational approach to explore moral narrative of different social space, and their response to drug regulation. Data were collected by reinterpreting the existing researches in Taiwan, as well as by the fieldworks implemented in Taipei City and Pingtung County by way of semi-structured interview. It is confirmed that individual pleasure is the reason to take MDMA in both regions and 'peer pressure' plays no role in their use of MDMA. Taking relational ontology, this paper finds that there are two kinds of moral narrative in term of their attitude toward the moral centre. Those who live in Taipei City are more interested with, and capable of challenging the moral discourse that MDMA is illegal and dangerous, while those living in Pingtung County take a relatively detached view from the moral centre. In other words, the closer are the MDMA users to the moral centre, the more likely they take an active way to defy the centre; the farther are they from the centre, the more possibly they take a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratization, and their capacity to challenge the moral centre is unequal.

#### *Relationship Among Fathers' Occupation, Fathers' Parenting Behaviors and Children's Academic Performance during Early Adolescence in Modern China*

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children's education. By incorporating cultural capital in Bourdieu's theory of reproduction, therefore, an empirical study was conducted by putting together a study concept of "economic strata of fathers (occupations) → fathers' parenting behaviors → accomplishment of children's education" by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shanxi Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the "father's occupation" on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu's theory of reproduction can be applicable to society in China, with a significant influence from fathers' parenting behaviors on self-esteem and academic performance of children. First of all, parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher reliance on school education than home education. On the other hand, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar

strata and own abundant network resources; however emphasize education for males over females.

#### *Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia*

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also the result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

#### *Gender, Law and Legal Professions in China*

Based on surveys, interviews, and archival research, this paper attempts to analyze Chinese women's current status and impact in the legal professions.

This paper introduces and compares the Chinese pioneer women lawyers and some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict. In the past, being affected by biological determinism, gender essentialism and dualism hierarchy; the ability of women to study law and work in the legal professions was not fully implemented. Since Chinese judicial reform started to pursue harmonious justice and multiple dispute settlement mechanisms, Chinese women judges, due to their abilities of mediation, have played more of an important role in the Chinese judicial system. Sex discrimination and gender bias however still exists in the legal professions in China.

#### *Local Institutions and Historical Contingency: Divergent Paths in Local Economic*

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. Specifically, the passive nature of the local state complemented with the bridging character of the local business associations and the more independent entrepreneurship of local firms in Wenzhou have contributed to a local transition from a semiliberal capitalism throughout 1980s to a market economy coordinated by locally weak but semiautonomous business associations since the second half of 1990s. By contrast, a strong and omnipresent local state together with impotent business associations and dependent entrepreneurship of the local firms in Wuxi have shaped a path of transition from local state corporatism to a mixed-market economy coordinated by the local state at the turn of the century. On the other hand, with a dominant local state intervention and the weakened business associations and entrepreneurship, Chongqing transformed from a typical path of planned economy toward a road of strong state capitalism. This article further traces the historical origins of different local institutions in Wenzhou and Wuxi, arguing that a historical contingency of self-liberation in Wenzhou at a critical juncture of the 1949 socialist revolution explains an inactive local state with a more lenient attitude toward the local private peasant sidelines, in contrast to

the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.

#### *Cultural Stigma and Social Exclusion for Adolescent with Mental Illness: A Case Study in Guangzhou, China*

Due to the prevailing stigma towards people with mental illness, adolescents with mental health problems are facing overwhelming social exclusion in mainland China. In order to respond to the lack of studies on the social exclusion for young adolescent with mental illness in Chinese context, this study tried to explore the process of seeking medical service and daily struggles for teenagers with mental health problems in China. A case study has been conducted to understand the social exclusion for a middle school student in her school life. The data was collected from researcher's one-year placement as a social worker in a junior middle school in Guangzhou, China. The girl, her classmates, her parents, and her teachers were targeted interviewees. According to the research findings, the cultural construction of mentally disabled people as violent and demoniacal from social media and Chinese traditional belief has profoundly affected the adolescent's mental well-being. The research also identified a dilemma faced by young people with mental health problems. On one hand, they are entitled to the social welfare, on the other hand, the labeling effect in social welfare provision and legal responsibility for school to take care of students' safety in Chinese social context result in an unfriendly environment for the young people in school, as being rejected by school and teachers once diagnosed. Chinese cultural value that emphasized family to take care of it member also leaves the family with great anxiety. A new service model as 'medical care- social workers - teachers - families - peers' for social work intervention, which seeks to promote community understanding on adolescents with mental illness, reduce the labeling consequences of 'stigma', and initiate a more positive social support environment for young patients' rehabilitation was advocated.

#### *Gentrification during the Redevelopment of Urban Villages in Shenzhen, China*

Developing countries have witnessed unprecedentedly rapid urbanization process, whereas we are worried to see that most of the urbanization happened in the form of urban sprawl. It is the situation in most fast growing cities that on the one hand, urban land is expanding into rural areas without control; on the other hand, many distressed inner urban sites are left unused. During the new stage of urbanization, massive urban expansion is no longer encouraged, replaced by more sustainable and intensive utilization of urban land. Nowadays large scales of urban redevelopment have been taking place in China. Among which the redevelopment of urban villages has received substantial attention. Urban village is a unique phenomenon due to China's dual land system and residence registration system. Within urban areas, urban villages have unique social functions by providing low-rent housing for large amounts of low-income rural migrants. Under the risk of losing low-rent houses, the redevelopment activity will affect these migrants significantly. Right now in China, Shenzhen has become a leader among all the cities in the field of urban renewal, of which an important part is the renewal of urban villages. Owing to rapid urbanization on one hand and limited land resources on the other, Shenzhen has encountered unprecedented development bottleneck. Taking Shenzhen as a study area, this article investigates the gentrification process during the redevelopment of urban villages. The mechanism of gentrification, as well as the cause and effect of gentrification are analyzed based on typical case studies.

#### *Social Capital, Resilience and Self-Efficacy in Promoting Psychosocial Development Among Senior Middle School Students in Zhongshan, China*

Although social capital theory has been widely applied in western countries to investigate positive factors to children and youth's development outcomes, little attempt has been made to test the applicability of social capital theory to adolescents in mainland China, especially for those who are after the compulsory education in medium-sized cities. This research aims at understanding whether and how social capital from the family, school, peer, and community contexts relate to

the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students' interaction to school and teachers display significantly positive relation with adolescents' mental health, behavior adjustment, clear and positive identity, but not with students' social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students' behavioral adjustment. Students with more encouragement from teachers and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students' development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

[liurainfly@hotmail.com](mailto:liurainfly@hotmail.com))

#### *Educational Expansion of the Upper Secondary Schools in Taiwan*

After planning and designing "the Twelve-Year Compulsory Education Policy (TYCEP)" for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government has promoted the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP.

Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan's upper secondary schools and to analyze backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP's implementation.

#### *The Development of Inter-Firm Trust: Cases from the Animation Game Industry*

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the "soft sides" of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more internationalization and inter-firm collaboration takes place. Such topics as "how to select a trust-worthy partner", "how to continuously maintain good relationships with collaborators" are of great value for both academic studies and business practice. This paper explores the inter-firm trust issues in business collaboration. It creates a trust development process model together with an evaluation system. From literature review, the questions of "how inter-firm trust is developed", and "what the constructing components of trust are" need further investigation. With a theory building approach, a conceptual framework consisting of the dominating concepts – values of trust, and process of trust – are developed. Case studies into animation game industry in China, UK, USA and Japan are carried out to illustrate key issues of inter-firm trust, covering the crucial relationship between OEMs and outsource studios/operators/character manufacturers. Prioritized values are summarized from interviews and observations, which are further developed into trust dimensions. The main findings are: 16 dimensions to assess three basic types of trust – competence trust, reliability trust and goodwill trust; a 3-stage process model of trust with details of decision making areas – trust formation, trust development and trust continuation. Future research should seek to validate and improve the above models, along with a further linkage between trust and different national culture contexts.

#### *Disability and the Limits of Knowledge. Uncertainties of Expert Practices in Insurance Companies*

Disability is one of the most significant insurable risks in human life. Insuring disability, either statutorily or voluntarily, is not an easy task for insurance companies. Ability to work is more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entangled with each other. Experts of these institutions try to prevent disability, define it and control its consequences in distinct ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices related to disability insurance and rehabilitation in Finland. The focus is on statutory disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

#### *Conflicts Between Artisanal Miners and the Government in Mongolia*

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country's basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of 'Gold Program' in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate out of law. Those 65,000-100,000 people, so-called "micro miners" have been working and living without any legal coordination and official registration for the last decade. The Government made an effort on dissolving those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the two sides. Remarkably, no comprehensive survey was conducted on this newly generated community in Mongolian society.

Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners' activities, more risks in safety issues and many people were injured during their rudimentary operation.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

#### *Leisure in an Unequal World: Gender Differences in Australia*

This paper traces the development of leisure in Australia along gender lines. Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men's leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and provision. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.

[stewart.lockie@anu.edu.au](mailto:stewart.lockie@anu.edu.au))

*Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the "Wild" Landscapes of Northern Australia*

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples' involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

*Partners in Change: Using Patient Narratives for Service Co-Design*

**Objectives:** To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach ('Accelerated Experience-based Co-design' or AEBCD).

**The intervention** was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBCD draws on transportation theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients' eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from 12 to 6 months and halved costs.

**Evaluation:** An ethnographic process evaluation was conducted, including observations, interviews, questionnaires, and cost and documentary analysis (including comparison with previous EBCD evaluations).

**Results:** A total of 96 staff members and 63 patients participated in the four AEBCD projects. The accelerated approach proved readily acceptable to staff and patients; using films of national rather than local narratives did not adversely affect staff engagement, and may have made the process less threatening. Local patients felt the national films generally reflected important themes although a minority felt they were more negative than their own experience. However, they served their purpose as a trigger to discussion, and the resulting quality improvements were similar to those in traditional EBCD projects. But the element of the intervention that has left both staff and patients feeling energised and empowered is the direct encounter with each other; the active partnership in co-design to achieve change; and the sense of tangible results. Staff feedback suggests EBCD can reconnect staff with fundamental values of care and compassion. Patients, too, report a different level of appreciation for staff, a belief that they will be listened to and that change is possible, and a renewed sense of trust in healthcare services.

*Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?*

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who

are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.

*Employment and Health Consequences of Care-Giving for Older Workers in Australia*

In Australia there is continuing policy pressure on older adults to remain in paid work. For many, especially women, participation in paid work is undertaken in conjunction with providing care for sick, disabled or frail family members and/or grandchildren. Recent policy developments in Australia such as the National Carer Strategy Action Plan (2011-2014) articulate a commitment to 'recognise and respond' to the needs of carers including supporting their right to participate in social and economic life. To this end, the *Fair Work Act Amendment Bill 2013* extends the right to request flexible working arrangements to mature-age workers over 55 and workers with added caring responsibilities. At the same time, The Australian Human Rights Commission Report *'Investing in care: Recognising and valuing those who care'* (2013) acknowledges the potential disadvantages, particularly for women, associated with unpaid caring responsibilities and the impact on workforce participation, retirement income and health.

This paper explores the relationship between paid work and care-giving, with a particular focus on Australia's early baby boomer cohort and the gendered nature of care-giving. Analysis of longitudinal data from the Household Income and Labour Dynamics in Australia (HILDA) survey indicates that being female, having a health condition, higher education, being partnered, and being engaged in paid work and care-giving in 2002 increase the odds of engagement in concurrent activities in 2010 relative to engagement in paid work only. The finding that prior engagement is consistently related to future engagement in the same activity eight years later highlights the value of examining engagement over a longer time period. These findings will be interpreted within Australia's policy context and the potential employment and health related consequences of care-giving on those providing the care, their families, employers and the community.

[Hugo.Loiseau@USherbrooke.ca](mailto:Hugo.Loiseau@USherbrooke.ca))

*Cyberspace: A New "Fieldwork" Experience For Sociologists*

While cyberspace clearly is a new research field, scholars are just starting to study how to grasp the full meaning of social relations in cyberspace. This question puzzles numerous disciplines of social sciences. Traditionally, the explanation of the process of research means that researchers have to go back and forth between the theoretical perspective and the empirical reality. They essentially start from one of these two starting points to get towards the other. But how to do that in the digital world? This space shares characteristics of both theoretical and empirical worlds, but nevertheless, differs greatly from both. The paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a shortcoming found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper exposes three main reasons why and how cyberspace should be designed as a field of investigation: 1) because it is a place (cyberspace is a space in the geographical sense), 2) there are several methods to do research in cyberspace and 3) there is an ethic of research inherent to it. We therefore believe it is possible to say that cyberspace is not a field like any other. It is rather a new mediator between theory and reality. A better understanding of this cyberspace field should provide better tools and concepts to apprehend the social reality in the digital world. The originality of the paper is based on the current inability of different research methods to understand and analyze cyberspace as a research object but also on their inability to understand and properly analyze the social phenomenon of cyberspace.

**LOMBAARD, CHRISTO\*** (University of South Africa,  
[ChristoLombaard@gmail.com](mailto:ChristoLombaard@gmail.com))

### *Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate*

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the "Holy Word" of the Bible; and specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual "application" of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutical difficulties are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of "Western" exegesis combined with an uncritical appropriation of theologically conservative "Western" biblicism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, from a position of moral high ground, presented with firm conviction, may in this less instrumentalist engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

#### *Embodying Another Self for Western Shamanic Voyage*

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity.

Spiritual research and physical wellness are the two basic constituents through which the argumentation about health is built up in contemporary Western world.

Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and conjugated in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new "exotic" healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called "shamanic voyage" without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific "ritual face" capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

#### *Foundations of Global Giving*

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I situate philanthropic and charitable activity in what world polity scholars have called a 'global moral order' that champions virtue and positions voluntary associations, including foundations and charities, as legitimate actors for solving global problems. The first part of the study draws upon survey data to explore why individuals join charitable organizations in 35 countries. The second part of the study turns attention to the growth of philanthropic organizations in more than 100 countries since the 1970s. Results from the study find that models of charitable activity are structured in the culture of world society.

#### *Educational Changes: The Adoption of Standardizing Reforms*

The paper discusses the post-Soviet reform in two educational sectors – general education (lower secondary) and vocational education – from the viewpoint of adoption of standardizing policies by teachers in Estonia.

By being inspired by the concept of social innovation we concentrate on two questions: What has been the outcomes/social benefits (e.g. empowerment of teachers) resulting from the reform process, and secondly, how the reform policies (e.g. curricula changes) have been adopted by the teachers? We base our arguments on a) analysis of the documents and previous researches and b) empirical qualitative studies on adoption of curricula changes.

In the Soviet time, the education system and curricula development was highly centralised and ideologically controlled by Moscow. In 1987-1988, even before the independence, the transition period in Estonian general education began. The quickest changes were evident in general education where powerful movement of teachers started to innovate the curricula with the aim to de-ideologize it. The general education reform in the post-re-independence time comprised of two radical transformations: from Soviet system into independent education system and neoliberal transition from the second half of 1990. The latter period have comprised both standardization and decentralization (e.g. decentralization of school network and growing principals' autonomy) tendencies. In VET, as compared to the general education, the reform process started later and has been more inclusive.

Our analysis will show that the impact of standardization has been differentiated on two levels: firstly, the different education sectors (general and vocational education) has been affected by reforms differently; secondly, in the course of the reform, teachers have adopted different coping strategies, in other words, the reform have divided the teachers into different adopters' categories according to the meanings attributed to changes. However, to a certain extent, the patterns of adopters' categories in both education sectors are similar.

#### *Organization within Organization Studies: From Core Object to Unspecified, Awkward Relic*

After the outbreak of the financial crises, scholars and public intellectuals have sought to uncover the roots of the current economic downturn. Prominent in this regard has been a renewed discussion of the appropriate balance between state regulation and laissez faire, as well as a critique of the preceding decades accelerated financial deregulation. The current crises, however, should also be seen in conjunction with its *organizational dimensions*. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizations, including banks, insurance companies, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of 'the organization' seems to have been problematized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies' core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by reconnecting with and re-appropriating this core object can OS revitalize itself as a practically useful and relevant academic discipline.

#### *Pharmaceuticalisation and Performance Consumption: Differences Between Young Workers and University Students*

In the current modernity, the management of personal capabilities gave rise to a broad market and a booming performance industry. Medications play an increasing role in this offering, focusing mainly on cognitive/mental and body performance. The so-called lifestyle drugs and smart drugs are the most visible side of this modern logic of self-management. The production of both pharmaceuticals and natural medicines/supplements participates in this range of purposes,

and the boundaries between them gradually fade as far as their social perception. Sociological approaches in this area have been aware of these more structural changes expressed by this type of consumption: (i) the therapeuticisation of performance; (ii) new dimensions of pharmaceuticalisation; and (iii) commodification and consumer culture in the production of new needs. In this communication, we intend to discuss performance consumptions focusing on the subjects' contexts - particularly labour and academic contexts. The goal is to shift the focus from the mechanisms of consumer culture to the *contextual effects*. We aim to discuss how social contexts structure individuals' investments on performance; how they participate in the construction of *social consumption needs*; how they generate *legitimacy to consume*; and how they shape *performance expectations*. For this purpose, it is intended to compare the performance consumptions between two young population groups - university students and young workers (without university education) - exploring the analytical triangulation between consumption, performance pressures perceived by respondents, and shared expectations. The empirical support for this questioning is based on extensive as well as qualitative data, collected within a study carried out in Portugal on young population [18 to 29 years old].

#### *Human Rights As Political Imaginary*

The language of human rights has become one of the most important normative and political idioms of our time. Along with the struggle for democracy, the quest for human rights resonates with a striking number of societal and political projects; indeed, for some, it is the uncontested emancipatory project of a globalized world. Due to their ineradicable normative nature, however, normative approaches predominate in the human rights field; this remains the case even in the important emerging sociological scholarship.

This paper draws attention to the fact that human rights do not exist as a ready-made object of sociological analysis; hence their sociological "thingness" needs to be elucidated. The paper addresses the type of conceptual and theoretical work that is required to make human rights an object of sociological analysis in order to avoid normative restatements of the origin of human rights in a sociological register.

A model of human rights as political imaginary is proposed and used to constructively review contemporary sociological accounts of human rights. However rather than a mere overview, the conceptual anchor provided by the political imaginary model makes possible a cartographical approach to the field. Thus the goal of the paper is not simply to catalogue existing approaches, but to theoretically relate them to one another in order to contribute to the development of a more synthetic sociological framework for analyzing human rights.

#### *La Formación De Profesionales Ante La Inequidad. Desafío ético De La Educación Universitaria*

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inequitativo. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendiente a la constitución del *ethos* de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhumana está predominando en la educación, particularmente en el nivel terciario, cuyos efectos en el desarrollo moral de los educandos son preocupantes, si tomamos en cuenta el desinterés que muestran por contribuir desde sus campos de conocimientos a la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades prioritarias en la universidad mexicana es concebir a la ética profesional no sólo como códigos de buen comportamiento sino, además, como un dispositivo intelectual y moral para hacer la crítica a la ausencia de equidad en la distribución de los bienes que la sociedad ha producido. Al observar lo que acontece en los escenarios institucionales y escuchar las opiniones de los estudiantes, así mismo, al identificar las limitadas expectativas socio-morales de los profesores en una universidad del noroeste del país, la cual seleccionamos para nuestro estudio, nos permitió apreciar los rasgos de esta problemática de la educación superior, analizada desde la perspectiva de la ética profesional. Crear conocimiento en este campo, hace posible imaginar alternativas para la intervención educativa con un sentido transformador y progresista.

#### *Socioética y Antropoética Profesional Para Una Educación Universitaria Contra La Desigualdad*

La modernidad que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para terminar con los males del mundo (Ugalde, 2013). Por el lado de la Ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apostó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En la vertiente marxista porque la ética era un elemento de la superestructura ideológica que justificaba el statu quo mientras que el modelo socialista construiría la igualdad cambiando la estructura socioeconómica a partir de la eliminación de la explotación que implicaba la propiedad privada de los medios de producción.

En este contexto, la educación universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, lo que produciría profesionales que en su práctica promoverían una sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la imposibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la revaloración de la ética como una disciplina que se ocupa de la reflexión y promoción del deseo estructural del ser humano por vivir para vivir (Morin, 2005). En este contexto, la educación universitaria está recuperando en los planes de estudio la ética profesional como una dimensión formativa indispensable para orientar la práctica profesional hacia el combate a la desigualdad.

A partir del principio fundamental de "exclusión de la exclusión" que sustenta la socioética y la antropoética que conforman la ética planetaria que propone Edgar Morin, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

#### *A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality*

In previous works (Fachelli, 2009; Fachelli & López-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2010, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. Within this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called "structural and articulated typology": we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into "m" factors. Then we apply cluster analysis to classify individuals into "key" groups or "types" on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to "inequality" level. The question that arises is how generate a composite indicator, that we call "social distance", based in a multidimensional measure taking into account the principal factorial components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will presents the results based on the analysis of the Labor Force Survey of Argentina in 2012.

#### *From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain*

For the past ten years, the management and promotion of circular migration flows has been a pivotal element of migration management policy in Spain, particularly of low-skilled workers in sectors such as seasonal agriculture and hospitality. It was commonly considered that this type of international mobility allows migrants to adapt to receiving countries labour market needs without incurring in the social costs of permanent settlement. Additionally, circular migration is regarded as a beneficial form of international mobility for migrants themselves and countries of origin. The aim of this paper is to analyse the Spanish policies developed in relation to the seasonal migrant workers for agriculture. We try to answer two key issues: (a) how Spanish policies regarding seasonal workers have been designed (b) and what purposes they responded to. We take into account three dimensions of the policy making: (a) national labour market demands (b) international relations framework (c) and the legitimization and meaning of these policies in the domestic political arena and economic relations between enterprises, trade

unions and levels of government. In this paper we assess the Spanish legislation on migration, particularly of the measures designed to manage the recruitment of circular seasonal foreign workers in the framework of the bilateral agreements signed by successive governments during the first decade of the XXI century. Our analysis suggests that labour market needs were a goal in the design and implementation of these policies which promoted forms of induced circularity. We highlight the idea that the seasonal labour mobility schemes in Spain have been shaped by a constellation of interests and a result of a consensual policymaking process at local and regional level in seasonal sectors with a high dependency on foreign workers. Economic crisis has change the whole implementation of these policies creating new forms of "spontaneous" circular migration.

#### *Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain*

Since the 1970's, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000's.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c), actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances

#### *Le Glissement Socialisateur Des Adolescents Jouant Au Jeu Video Les Sims (EA, 2000-2009) Ou Comment Grandir En S'amusant*

Aujourd'hui les jeux vidéo sont partout dans notre quotidien, sur nos écrans, dans nos écoles, sur nos téléphones (IFSE, 2012; ESA, 2012; Brand, 2013). Long-temps remis en cause par les médias, leur légitimation a été longue et chaotique (Octobre, 2009; Donnat, 2009; Lorentz, 2012) mais ils ont peu à peu conquis les sphères institutionnelles. Parmi la grande diversité de l'offre vidéo-ludique, un jeu a plus particulièrement attiré notre attention. *Les Sims*® (EA, 2000-2009) est le jeu vidéo le plus vendu au monde et ce depuis la sortie du premier opus en 2000. Son principe est pourtant simple : simuler la vie d'un foyer. Paradoxalement, très peu de recherches ont été menées sur cette « *Digital dollhouse* » hors ligne en dépit d'un succès sans précédent (Sihvonen, 2006; Wirman, 2011). Ainsi près de deux cents collégiens âgés de 12 à 16 ans scolarisés dans des établissements français à Strasbourg, Moscou et Abou Dhabi ont été interrogés. Puis dans un second temps, vingt entretiens collectifs ont été menés dans les trois établissements afin d'approfondir et d'affiner les résultats mis à jour lors de l'étude quantitative.

En partant des concepts développés par les sociologues de Chicago (Cooley, 2011a, 2011b; Mead, 1896, 1963, 2001; Goffman, 1959, 1967; Becker, 1970) et en associant ceux de Mihaly Csikszentmihalyi (1996) et des chercheurs des Game Studies (Klevjer, 2006; Bogost, 2008; Lankoski, 2010), nous avons dessiné l'odyssée virtuelle que les adolescents ont relatée et qui nous permet d'expliquer le processus de glissement socialisateur (Lorentz, 2013) en cours lors de cette activité.

Ce voyage à travers une multitude d'identités ponctuée par différentes escalas amènent les joueurs à vivre une traversée identitaire (Bartle, 2004; Turkle, 2005) qui participe à leur croissance grâce aux apports des activités de prise de rôle (Turner & Killian, 1972). Cette communication se propose de présenter cette exploration.

#### *Managing Heterogeneous Actors in the Reliable Embedding of Security Technology: Findings from a Comparative Study of Airports in Germany*

After 9/11 security measures, especially in the air traffic system, have been increased enormously. Complex technology is employed to protect the global circulation of passengers and goods. Recognizing this venue as a network of heterogeneous actors, it is instructive to see how they can manage to keep this more and more complex security system moving. In our contribution we want to interpret airport security as complex technology – in the sense that it transforms an unknown, potentially dangerous person into a safe passenger through a combination of different cause-and-effect chains – that is reliably embedded in the daily activities at the airport. Against the background of growing passenger numbers, even shorter turnaround times and increasing economic competition on different levels, we want to explore how it is possible to ensure this reliable embedding in spite of different dimensions of heterogeneity. We discuss findings of a comparative study of three airports in Germany which focuses on practices managing those diverse demands arising from 4 different sources of heterogeneity:

- (1) Differences in educational background and professional views on security
- (2) Differences in organizational backgrounds (bureaucracies, free-lancers, etc.)
- (3) Differences in institutional backgrounds (ministries, security services, airport management)
- (4) Differences between passengers and participants, staff

Each of these differences presents special challenges, inhabits various risks and is met by distinct sets of practices that buffer them in a way that the security processes do not collapse. Therefore the aim of our contribution is also to discover how these special forms of managing differences are interconnected and depend on, but also irritate each other.

#### *Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities*

The role of teacher expectations in pupils' achievements has been heavily researched during the past 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects on learning opportunities and on the pupils' academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

However, despite the fact that there is evidence speaking against discrimination in grading or track assignment against pupils with low socioeconomic background and/or immigrant background on part of teachers in Germany the role of self-fulfilling prophecies remains heavily underexplored. Whether they occur in German schools has not yet been answered. Therefore, their possible role for the emergence and maintenance of educational inequalities remains unknown.

This paper tries to shed light on the role teacher expectations play in pupils' academic performance within German primary schools. The first part of our work is a systematization of the current state of research. On that basis we propose the application of the frame-selection model in order to theoretically explain self-fulfilling prophecies within the schooling context. In doing so we identify conditions under which biased teacher expectations for certain groups of pupils may emerge and how they may be mediated through the class-room interaction. In a final step we empirically test the hypotheses and answer whether teacher expectation effects contribute to the emergence of social and/or ethnic educational inequalities or not.

#### *Employment Expansion, Wage Increases, and More Equal Opportunities: The Suspicious Disregard of Strong Labor Market Performance in Japan*

We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of »lost decade(s)« stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

Analyzing employment and wage data for the period from 1988 to 2010 we find that the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million more jobs than were to be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created

regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regular employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any petrified gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general "adaptation problem" referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

*Civil Liberties or Civil Rights? Muslim American Advocacy Organizations*

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current 'post-Civil Rights era'. I begin with an overview of what I call the "civil rights mode" of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a "civil liberties mode," a race-neutral or 'colour-blind' strategy that has recently gained favour in advocacy circles. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

*Etched In Stone: Preservation Of Cemeteries and Cultural Identity*

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining 'primitive' homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequestered repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represented and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

*Role of Sociological Theory in Deconstructing Sociological Phenomena in Africa – the Social Exchange Theory and the Small House in Zimbabwe*

*Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The 'small house practice' is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner outside official marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.*

*The Spatial Politics of 'Noise'*

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory altercations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociality in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

*Space as Material Culture*

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the "spatial turn" in the social sciences, relational definitions of space have prevailed, yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relationship between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

BIGGS, SIMON (University of Melbourne)

*Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World*

'Generational intelligence' (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of social ageism. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with reification based on lineage, cohort and chronological age. It also draws on a critical psychodynamic understanding of social relations in so far as a preconscious 'unthought known' is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.

*Dimensions of Exclusion in the Lived Experiences of Adult Survivors of Childhood Liver Transplant: A Micro-Analytic Perspective*

The first paediatric liver transplants were performed in the early 1980s and continue today, saving thousands of children's lives. Underlying syndromes, the transplant surgery, comorbidities and side effects of medication leave young people looking and feeling 'different' from their peers, especially in childhood. Through analysis of in-depth interviews with 27 now-adult survivors of the first cohort of childhood liver transplant recipients in Europe, we take a micro-analytic perspective in reporting how the processes of feared, felt, and enacted exclusion began in early childhood for this group. Exclusion through liver transplant is an additional intersectional dimension to more recognized societal exclusions such as age or gender, and appears to be fluid throughout the lifecourse. Adapting Goffman's work on stigma and presentation of the self, we see that problems of exclusion are only slowly resolved in a number of social role interactions, where others appear to feel free to comment on the appearance of individuals' bodies. For example, felt exclusion of schoolchildren often occurred through physical education, where the transplant scar could be observed unless the child learnt to hide their body in communal changing spaces. Learning how to present ones' identity to others continues throughout the lifecourse. Narrative restarts, such as changing school or employment, appear a common way to 'pass' by losing the identity of a liver transplant recipient. However, this strategy is fragile, being contingent on the medical history not being uncovered. Positively revealing oneself as a liver transplant recipient was reported to result in inclusionary practices more as an adult rather than a child. For most, a sense of inclusion appears to be reached by this 'new' ageing population only through growing older: the understanding that everybody has 'differences' and that being 'normal' is something not closely defined for self or others.

*Growing up with a Childhood Liver Transplant: Medical 'Pioneers' and Beck's Normativity of Diversity*

The concept of a stable biographical narrative and its potential undermining by long term health conditions is one that underpins much medical sociology. This is particularly true of chronic illness rather than acute conditions constituting forms of biographical disruption. More recently, the influence of approaches derived from theories of reflexive modernity have started to challenge the salience of the modernist or standardised life course, introducing notions of indeterminacy and contingency into how individuals construct individualised narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the 'side effects' of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a 'normativity of diversity' which has replaced the more simple normativity of previous societies. This is not only witnessed in terms of the makeup of household structures, sexuality, marriage and employment but also extends to notions of health, disability and human embodiment.

This presentation will look at how social theory can help us understand the situation of the cohort of adults who were the first European recipients of liver transplants as children. The first childhood liver transplants took place in the early 1980s and this group has had to act as a 'pioneer' cohort all through their lives, dealing with the risks of transplant surgery, underlying syndromes, comorbidities and side-effects of medication as previously unencountered phenomena. Through analysis of in-depth interviews with 27 now-adult survivors of this cohort, we report how both biographical narrative is constructed in the face of ever present risk and how these 'pioneers' represent aspects of the normativity of diversity.

*Comparing Mobile Phone, PC and Paper-and-Pencil Survey Experience: A Lab Experiment on Mode Effects*

This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and on laptop computer and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants' willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 gr, while the online surveys involved the video projection of both organic foods. For the online versions, paradata on time and changes of answers were collected. The results and experiences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents' performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

*Evaluating Government's Environmental Performance: Evidence from China*

While China has achieved miraculous economic growth over the past 30 years, this process are accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government's environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government's environmental performance in the first decade of 21<sup>st</sup> century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents argue that their government has done too little; while 6.17% of the respondents think that their central government has done too much. (2) Environmental performance whether in central government or local government become even worse in 2010 than in 2003 CGSS data. (3) As for central government's environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban respondents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government's performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government's environmental performance. These results suggest that government's environmental performance in China today are a mixed system, in which objective environmental problems and resident's subject perception and social characteristics coexist to determine how the Chinese evaluate their government's environmental performance.

*The Reproduction of Intangible Heritage Successors in Heritage Tourism*

With the development of heritage tourism, intangible heritage became a kind of tourism attraction, which holds a fascination for the tourists all over the world who try to touch the landscape, human heritage, and customs of other places. In this way, intangible heritage successors became attractions, for they can be good guides for the tourists. They can tell the legend, the origin, the meaning of the intangible heritage and they can also show some skill about the intangible for the tourists. What's more, they can get some financial support from the government because they have the duty to pass the skill on. Gradually, the way of selection of the successors, the explanation of the intangible heritage and the inheritance of the intangible heritage are changing. For they will inherit the heritage within the ethnic group, they will deal with all kinds of relations outside the group, and then another kind of reproduction within themselves can be seen. In this article, the writers will discuss the reproductions of the successor of Fire Ritual of Yi People, the successor of Husa Knife-forging of Jingpo and the successor of King Yalu Heroic Poetry of Hmong.

*The Formation and Change of Taiwanese Young Adults' Attitudes Toward Gender-Role: From Adolescence to Adulthood*

This study examined patterns and predictors of changing young adults' attitudes toward gender-role during Taiwan's social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of highly supportive for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents' gender-role attitudes as consist with socialization perspective. The study also suggests that the parental attitudes have larger effect on adolescents' attitudes than does parents' behavioral modeling as indicated by parents' household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents' attitudes and the changes that occur along the subsequent years, as indicated by the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents' attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

#### *Copreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan*

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature has conceptualized women's invisibility through patriarchy in family businesses, certain studies have indicated women's substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between entrepreneurship and patriarchy. The market uncertainty and the firms' adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives' bargaining power in copreneurial firms may vary with copreneurs' entrepreneurial capability, the nature of their specific industry, and family relationships. Wives' adaptive entrepreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms' risk management in coping with market uncertainty. Wives' roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a strong patriarchal culture, particularly those in an extended-family environment, are more likely to work as unpaid laborers and have no say in firms' decisions.

The observations further reveal that wives' entrepreneurial identity is shaped by the power relationships at work within the context of daily organizational routines, which can increase their self-empowerment and improve women's agency. However, lack of opportunity to cultivate their entrepreneurship asserts their gendered identity and reinforces marginality.

HIBBERT, SALLY (University of Nottingham)

#### *From Information to Interaction: A Collaborative Approach to Health Improvement Programmes*

**Background:** The information driven behavioural approach adopted by health promotion programmes has been criticised for focusing on individual agency while neglecting the impact of structural factors on health. Recent scholarship argues for a relational paradigm in public health which emphasises collaboration with citizens and other network actors as a key to reduce health inequalities. There is little evidence how this collaborative interactional process is supported and experienced in a health promotion context. **Objectives:** The study examines a collaborative interactional model of promoting lifestyle changes to improve health with a focus on how networks, relationships between various actors, including members of the public, public service users, service staff and health professionals, and the roles they assume in this context shape the process. **Methods:** The paper draws on network and social practices theories, interviews with different actors engaged in a public health programme in England and field

observation. **Findings:** A collaborative interaction approach may balance the focus on structure (institutional actors) and agency (individuals). Collaborating with existing support services to develop health programmes provides access to the special insight these actors have about their users facilitating a better understanding of the world of each individual. Interaction and dialogue were identified as ways to empower and support people to take action to change. However, the encounters between different actors were shaped by power relationships which enabled or constrained individual participation. In the light of the limitations of behavioural theories, network and social practice theories are proposed as offering a comprehensive conceptualization to better understand and address the interplay between structures and agency. **Conclusions:** Interaction does not substitute information in health improvement programmes. However, an interaction based approach encourages actor participation while creating the space for open dialogue, shared learning and collaboration in health improvement programmes.

#### *Communication As a Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks*

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. However, the real contributions of social networks to the organization at the internal level are not clear enough because it is consider that the commercial issues tend to prevail. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization?

In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a "brand new" type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

**LUCAS, SAMUEL R.\*** (University of California-Berkeley, [lucas@demog.berkeley.edu](mailto:lucas@demog.berkeley.edu))

#### *Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States*

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others' sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

## Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen for this particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of ethics, security, and safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the 'relationships' (with the sex workers). Length of time of researcher's immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research on men's sexuality and sexual risk-taking behaviour, strengthening ethics in methods and research approaches, and looking for more ways in understanding the AIDS epidemic through a gender perspective.

### *The Beauty Of Advertisement. Searching For Ultimate and Proximate Causes In Cross-Cultural Study*

The presentation summarizes the results of empirical research conducted simultaneously in Poland and in the United States in 2013. The main research questions were related to taste for some aesthetic forms used by the advertisers. 240 subjects took part in the study in both countries by filling out the questionnaire concerning 45 different images. All images were chosen on the basis of a content analysis of five Polish color magazines addressed to various audiences.

Theoretical underpinnings of the presented study stem from the works of Pierre Bourdieu, but they are not limited to this perspective. The other important perspective is evolutionary theory informed by modern biology. Thus, presentation focuses on both proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste.

The main research hypothesis states that individuals with folk cultural capital (inhabitants of rural areas, with low educational level, and low income) exhibit preferences described by sociologists as "low" (i.e. visual expressions drawing on the so-called "Hudson River Biedermeier" style characterized by realistic and emotionally marked landscapes). Such preferences resemble to a large extent the "universal aesthetic predispositions" discussed in the evolutionary theory. These preferences can be also referred to as 'conservative' (or 'collectivist'). However, according to evolutionary theory, these preferences should be found across all social strata. Contrary to this belief, building on Pierre Bourdieu's class-based understanding of taste diversification, I presume that a natural aesthetic taste is related to folk-type of cultural capital. In other words, my intention is to verify whether the aesthetic universals as described by evolutionists and cognitivists are subject to diversification based on cultural capital.

### *Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action*

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city's University of Bamako with more than 80 000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment.

Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academics cope with a situation characterized by uncertainty and unpredictability?

Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

### *Hukou Inter-marriage and Mate Selection Process of Rural Migrants in Urban China*

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao's era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified "hukou system" (household registration) in various ways. First, this system links people's accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from "marrying up." However, facing these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting "modern" urban cultures and values so that their status is comparable to the average urbanites.

### *Power without Representation: The Coherence and Closeness of a Transnational Governance Network*

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain this claim, they must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America's transnational arena. To analyze it, we approach it in two steps. First, we review the membership of NAS at three levels: the entire NAS, its executive committee, and its three national groups. This analysis shows that even though NAS is highly coherent, it is excessively endogamous: rather than reflecting the diversity of North America, it only reunites a select group of U.S. or pro-US leaders, members of transnational corporations and partisans of free trade. Then, we focus on the agendas of the NAS' annual regional meetings. This makes clear that, judged by the origins of participants and the subjects discussed, these meetings are very exclusive. Thus, our general conclusion is that NAS is a coherent but closed network, very powerful but scarcely representative. Although it is extraordinarily able to express the views and interests of a powerful elite, it fails to articulate the diversity of North America's public opinion. Ironically, a network that promotes the use of "soft power" in the international arena—a power founded on opinion, rather than on force and material interests—heavily depends on the hard power of established hierarchies.

### *The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars*

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of 'boasting' in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

#### *Social Science and Alienation In School*

School can in many ways be seen as a place distant from life in general: In classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school became more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

#### *Young Consumers In Sweden*

In this presentation the question of how economic resources influence children's peer relations will be addressed, with focus on the Scandinavian setting. This question is of particularly importance in times of changing discourses surrounding children's role in the consumer society. The ways Scandinavian children are portrayed as consumers have gradually changed, from vulnerable beings towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceive possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children's social relationships. If children perceive peer pressure of having "cool" things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

#### *Behind Europe's Care Curtain. Migrant Care Workers from Europe's East and Children Left behind*

This paper interrogates the features of the Global Care Chain (GCC) from the angle of Eastern Europe. Since the early 1990s, Eastern Europe became the main sending region of migrant care workers to the West and South of Europe resulting in an intimate connection of the *care deficit* in the 'old' EU with *care provision* from the 'new' Europe'. Although the emerging picture shares certain characteristics with the GCC, there are many discrepancies in this geo-political setting, and I argue that Eastern Europe cannot easily be subsumed into the Global South. Instead, the legacy of state socialism and the destructive forces of the rampant capitalism that was introduced during the transition period play an important role in the understanding of this migration. In opposition to 'the West', co-bread-winning in 'the East' was a key element of the gender equality politics of state socialisms. The female care migration from this region is therefore a result of women's specific understanding of their citizenship obligations as 'earner' and as 'care giver'. However, while women, many mothers among them, migrate in large numbers and become bread winners, there are severe counter currents in their home countries hampering their mobility. My paper focuses on public debates in sending countries entailing moral outrage about migrant parents who leave their children behind. These children are referred to as 'Euro-orphans' and women are eventually accused of bad motherhood performance. I consider the analysis of the orphan debate a litmus test for *Europe's Care Curtain* by showing that next to gender, class, and nationality a universalized form of 'good motherhood behavior' or likewise the deviance of it becomes an important component of the 'othering' of migrant mothers.

#### *Estimating the Causal Effect of Education on Discrimination -- CANCELLED*

We use data from the UK British Social Attitudes Survey 1983-2009 to examine the effect of education on indicators of discrimination and racism. Importantly, we make use of the 1972 Raising of the School Leaving Age (RoSLA) reform to identify the causal effect that education may have on such indicators, using a regression discontinuity design. Our results show that naive OLS estimates describe a negative relation between education and discrimination (more education is related to lower levels of discrimination) whilst using the 1972 RoSLA events as an identifying mechanism suggests that education and discriminatory attitudes are not so connected as is commonly presumed. We comment on the implications of this result in light of contemporary educational policy reforms in Britain.

#### *Employee Representation in the German Craft Sector – a Neglected Form of Industrial Democracy*

The German Crafts and Trade Code ("Handwerksordnung", HWO) with its strict rules for market access is often regarded as a pure anachronism and it is regularly put into question by the European Commission who sees it as a barrier to the freedom of trade. However, the German regulation of craft is also an example of industrial democracy as since the enactment of the Crafts and Trade Code in 1953 employee representatives are part of the regulatory bodies, the chambers of craft and in particular the vocational training committees. Since this time employee participation has been further developed and democratized.

The paper will analyse the historical background of these developments and carve out the strengths and shortcomings of employee participation in the autonomous regulation of German craft sectors. It will discuss the impact of employee representation on setting standards for the sector in general and vocational training in particular. On the basis of this analyses the paper will draw conclusions regarding the viability of this form of participation in a context that is increasingly shaped by rules of a liberal market economy. Finally, it will ask if employee representation in the German craft sector can be a model for other sectors and countries.

#### *Welcome Watching : Paradoxes of Surveillance and Visibility*

Surveillance often sparks responses relating to "privacy." The era of state surveillance, read through warnings like Orwell's, makes being watched seem negative, undesirable. We want to escape, to hide, or just be "private." But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillers. The desire to discover (large scale surveillance) meets the passion for publicness in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, in a sense, to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

*Transformation – Reality or Simulacrum?*

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by what Urry calls complexity and certain changes became their permanent characteristic. So is it possible to differentiate between a transition and a societal change? These and other questions will be addressed in the report.

*Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context*

The paper is aimed at examination of the difference of nature and characteristics of alienation and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomic behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

*Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy*

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980's and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

### *Reconsidering the within-Country Digital Divide and the Global Digital Gap: Comparing Students' Daily Life Experiences with Information and Communication Technologies from 40 Countries*

The rapid development in Information and Communication Technologies (ICTs) has drawn scholars' attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students' experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies centering on the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students' digital usage across 40 countries. I use Cook's distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

### *Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members*

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

### *Why Should I Know? the Reluctance of Absorbing and Sharing ERP Knowledge*

In an ERP (Enterprise Resource Planning) system, all necessary business functions, such as financial, manufacturing, human resources, and distribution, are tightly integrated into a single information system with a shared database. Such a system potentially allows firms to manage their integrated business processes and associated knowledge, and to have more control of information and data in the organization. However, ERP systems are very knowledge intensive and require high levels of knowledge absorption and knowledge sharing between organizational members in order to be used successfully.

In the military organization we study, ERP systems are aimed at improving supportive, secondary processes. This means that many military employees prioritize efforts related to the primary process of the military over actions connected to the ERP system. Still, top management mandates employees to use the ERP system and perform these secondary tasks, leading to tensions/user resistance including the reluctance to incorporate or share ERP knowledge. In turn, this lack of knowledge exchange can become dysfunctional since it prevents the use of IT that could benefit the organization.

We applied qualitative methods including 40 semi-structured interviews with ERP users and their managers in three separate business-units, who have been using the ERP for two years. In the study we assess why and how users of the ERP system become averse to the exchange of knowledge and how military organizations are able to overcome tensions between primary processes and ERP im-

plementation/knowledge sharing as a secondary process. By combining theories about user resistance and informal/formal knowledge structures we grasp the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barley, 1986).

### *Cybercultura @ and Cultural Management For Development*

México is a multicultural and mega-diverse country. With this richness and abundance in natural and cultural resources, Why Mexico is a country with a high index of poverty and low social development? How could we work in terms of community development? This paper focuses primarily on a proposal for the development of a thinking culture development as a large system formed by multiple sub-systems. We argue how Sociocybernetics let us understanding and explaining the culture as a ethno-ecosystem. In this proposal, Central System is the culture for development, and each sub-system is related and complemented with each other in building concrete procedures of observation and analysis units, as the elements of a larger system analyzed from a constructivist operational methodology. Specifically each subsystem may have different value and processing degree, and they are part of "culture for development" system. Each subsystem invites communities to making decisions and taking actions with a methodological model by the Sociocybernetics proposal and from a cybercultural perspective. Then, we explain how sociocybernetics allow us to construct a methodological proposal based on an Emerging Community of Local Knowledge system, CECL's, in order to understand culture and development as a ethno-ecosystem; we explain how the ethno-ecological processes in a community are multidimensional and multi-relational processes. These processes permit the culture to appear as a fundamental component of a sustainable development.
