The paper provides an outline of the ways in which general theoretical concerns in the Sociology of Childhood relate to child mobility and transport. This paper raises questions about the kind of knowledge and insights such theorising can offer transport experts and decision makers. The argument proposed here is that the study of children and childhood is incomplete unless mobility and transport issues are located in an understanding of the complexities and varying realities of children's everyday life. The paper (1) examines children's social representation, inclusion and positioning within South Africa's transport policy and interventions, and (2) the extent to which these frameworks incorporate national data on children's daily transport and mobility activity patterns. This paper also contributes to the growing scholarship on the social perspectives on child mobility. This emergent field has occurred alongside the child rights movement and shifts towards evidence-based policy developments and practice interventions. Congruently, contemporary mobility and transport discourses promote the idea of transport as a public good and human right and this implies that all citizens' interests and needs are of equal importance. Yet, within the sector there is still a bias towards studying the impact of child mobility on adults' mobility, their daily lives and schedules with children's voices, experiences and needs remaining obscured. This empirical marginality and invisibility fuels knowledge gaps and generates a

passive, univocal and constrained view of children. It certainly impedes the development of child-centred and participatory transport policies and interventions.

#### *International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India*

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 along with his Holiness, the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore.

After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their University education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces.

They are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are a highly religious group but their religion is facing a competition from western influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

The study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to new social spaces. The paper tries to examine the gendered changes.

#### *Gender Segregation in Hospitality Sector – Extent and Consequences*

Hospitality is one industry in which women are preferred and are found in large numbers. However allocation of responsibilities and privileges in hospitality organisations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process. And disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite patterns with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further, positions at higher levels involving responsibilities and decision making tend to be monopolized by their male counterparts. It is the women staffs who are made to face and absorb the idiosyncrasies of the clients, who are mainly strangers, requiring them to work under stress, strain and risk. The findings further indicate that the extent of segregation appears to vary significantly with the size and sector of the establishment and the negative implications of such segregation appear to be more marked in smaller private establishments.

#### *Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin*

There has been an unprecedented increase in opportunities for migration from India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethno-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of culture conflict, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women's support networks to address issues of gender based violence.

The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

**RAMELLA, FRANCESCO\*** (University of Turin, [ramellaf@tiscali.it](mailto:ramellaf@tiscali.it))

#### *The «Italian Paradox» in the High-Tech Industries*

There is an "Italian Paradox" in the development of the high-tech industries. As it is well known, Italy is under-specialised in the high tech industries and, during the last decade, has recorded disappointing performances in these sectors. In particular, the innovative capacity of Italian firms is quite low. 1) Patenting is below the European average: 7.4 patents per million of inhabitants in Italy vs 19.6 per million of inhabitants in the EU. 2) Furthermore, despite being the fourth largest economy in the EU in terms of GDP, Italy is only sixth for high-tech applications to the European Patent Office.

However, Italy has a potential in these industries, which has not been fully exploited yet. In fact, it ranks third amongst European countries for the number of high tech firms and for added value. Moreover, the percentage of employment in high-tech and medium high-tech sectors on the total of workforce (8.1%) is similar to the European Union average.

On the basis of this data, how can the Italian Paradox be explained? I will try to answer this question focusing on two aspects of the "Italian case": 1) the weakness of its National system of innovation and 2) the territorial unbalances of its economic development. In fact, according to the 2013 European Innovation Scoreboard – which gives a comparative assessment of the strength of EU27 Member States' innovation systems – Italy ranks only fifteenth in Europe in terms of innovative capacity. Furthermore, Italy is characterized by a high degree of internal diversity. So national averages do not render the internal complexity and diversification of the economic development of a "regionalized form of capitalism" as that of the Italian case. To corroborate this thesis, I will present the results of an analysis carried out on the Italian geography of innovation.

#### *Greening in Construction: What Chances for Workplace Innovation?*

This paper investigates how construction companies innovate their organisations in response to the shift to energy-efficient construction. The changes in product and process induced by green construction confront companies with detailed technical instructions, severe accuracy requirements for all operations and no room for improvisation. As a result, construction involves more specialisation, a growing length and complexity of the value chain (with more contractors involved), more standardisation, the modularisation of construction components, a shortening of lead-times, etc. Overall the process becomes highly sensitive for disturbances and requires rigid coordination and logistics. To investigate the impact of these changes, case studies were carried out in two Belgian construction companies. Each included interviews with 6-7 management representatives, 5-6 workers and on-site visits. Two contrasting work organisations were observed. The first can be characterised as an 'enlightened' employee-centred organisation model based on participation. The work organisation combines the centralised design and off-site prefabrication of some components with on-site empowered teamwork and investments in skills of the workers. These aim at reinforcing decentralised process coordination and regulation capacities. Subcontractors are included as partners in the on-site construction teams. The need for contextualised knowledge, decentralised problem-solving and high involvement of all dominates in this corporate strategy. The second company, in contrast, opts for high levels of division of labour, standardised and short-cycled off-site preparation of prefabricated components, centralised and bureaucratised process coordination, risk-transfer based subcontracting and a strategy of constant productivity increases and rationalisation. High levels of control and process-orientation are the key-words in this corporate strategy. It appears that the 'greening' can as such not be identified as a main driver of workplace innovation in construction. The second corporate strategy may be reason for concerns for new risks affecting the sustainability of jobs in this industry against the background of an aging work force.

#### *Microcredit and Poverty Alleviation In The Mexico Contemporary*

Microcredit as strategy for poverty alleviation grows stronger in the last decades of the twentieth century, from successful experiences in different parts of the world, both in developing countries and the developed, numerous studies beginning to emerge about microcredit; however these studies are mostly empirical.

Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in overcoming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, addition, of creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the governments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called "Opciones Productivas", which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary Mexico.

#### *Social Changes and Social Responsibility*

Responsabilidad social y su impacto en la sociedad

Como bien se conoce la responsabilidad social es un modelo de gestión que está siendo aplicado por las empresas y organizaciones a nivel mundial. En este proceso de incorporación de políticas, acciones y estrategias de responsabilidad social en organizaciones de tipo público, privado y del tercer sector es preciso entender el cambio que estas acciones ocasionan no sólo en la propia empresa, sino también en la sociedad y en particular en sus grupos de interés o stakeholders.

Para poder explicar las variables de impacto, presentaremos el caso de estudio realizado en el contexto peruano. Para esto presentaremos resultados de la investigación desarrollada para el IDIC de la Universidad de Lima, sobre los casos de tres organizaciones que tienen presencia en el Perú, como son: BBVA- Continental, Petroperu y Caritas del Perú.

#### *Towards the Construction of an Ecological Model of Health from Social Science*

## HACIA LA CONSTRUCCIÓN DE UN MODELO ECOLÓGICO DE SALUD DESDE LAS CIENCIAS SOCIALES.

### Resumen.

Vivimos en un mundo en donde las relaciones causa y efecto han dejado de ser insignificantes, la capacidad de resiliencia del planeta ha venido disminuyendo con el aumento de las fuerzas productivas a lo largo de estos últimos treinta años que a diferencia de décadas anteriores las consecuencias son cada vez más importantes sobre la calidad de vida y diversidad ecológica del planeta; en la re-unión del club de Roma, se advirtió a los líderes mundiales la necesidad de poner límites al crecimiento debido a las posibles consecuencias irreversibles que su acción traería sobre la vida en el planeta, especialmente sobre los más jóvenes. Fenómenos como el calentamiento global, la escasez de agua, la pérdida acelerada de biodiversidad, el aumento de la violencia e ilegalidad serían realidades presentes de no asumir límites y formas de distribución justas frente al crecimiento. Frente a esta situación las ciencias sociales desarrollaron conceptos sobre salud pública, individual y colectiva, que sin embargo no han logrado una adecuada conceptualización de las relaciones salud/enfermedad, especialmente porque el paradigma mecanicista, newtoniano y el dualismo mente/cuerpo no ha sido superado completamente en dichas perspectivas teóricas que si bien abogan por una comprensión holística y relacional de los fenómenos sociales vinculados a las relaciones salud/enfermedad, no son suficientes para comprender de manera adecuada estos fenómenos. Ellos no permiten comprender la complejidad de la "trama de la vida" las complejas interrelaciones existentes entre ecosistemas, especies y sociedad. Ante esta situación vale la pena preguntarse ¿qué nuevo paradigma, qué nuevos conceptos y maneras de estudiar la realidad se necesitan para solucionar la situación por la que atravesamos en el mundo actual?

### Palabras clave.

Salud/enfermedad, crisis ecológica, mecanicismo, modelo ecológico.

### *Does Violence Begets Violence? Evidence from Mexico*

One familiar argument to explain violence rates is the common sense affirmation that violence begets violence. Imported from the biological sciences, this organic metaphor is well rooted in the discursive explanation of crime. However, the empiric evidence around this supposition is quite scarce. A typical combination of the "violence begets violence" argument with the lack of proper empirical evidence is easy to find in countries dealing with recent outbursts of criminal violence. This is the case of Mexico where the recent trend of criminal violence has been explained with a wide array of arguments including the spread-contagion argument. This one in particular has gained presence among the media and policy makers. Moreover, this assumption is being increasingly used to justify the design of prevention programs where significant amounts of public resources are being invested. In view of this, this paper presents the results of a study on the empirical validity of the hypotheses behind the "violence begets violence" assumption. For my research purposes I have selected a set of relevant hypotheses on the contagion of violence to verify its empirical validity for the case of México. With a combination of different quantitative techniques I have analyzed homicide rates at the local level for the city of México from 1990 to 2010. The results of this work will throw light on the empirical pertinence of the contagion of violence hypotheses, and it will help to inform public debate and public policy about the characteristics of criminal violence in México.

### *Placing Food and Nutrition Security: The Co-Production Of Land, Dietary and Livelihood Relations In Four Sites Of Northern India*

Patterns of land distribution in association with local agro-ecological conditions play crucial roles in shaping the dynamics of food and nutrition security in the global South. The relevance of 'the local' is highlighted in this paper, which examines the differences existing between four rural communities in northern India. Using evidence from 389 in-depth household interviews, the paper identifies the connections which exist between household assets, nutritional outcomes, and livelihood strategies. The paper argues that the considerable differences found by the study within and between case study communities underline the ongoing importance of processes of local embedding in determining food and nutrition security outcomes.

### *Trust Under Conditions of Extreme Risk: Exploring Trust Networks of Clandestine Activities*

Trust is important in all types of social relations, but its role is crucial in secret activities of clandestine organizations operating under conditions of extreme risk. The paper explores the sources of trust in secret activities of underground publications (so called samizdat) of Soviet Lithuania. Samizdat was one of the most persecuted means of oppositional activity in post-Stalinist Soviet Union. Therefore, building a network of samizdat publication and distribution required extremely high level of trust among collaborators.

What are the sources of trust in a situation when a correct judgement on trustworthiness of a person is a question of life-and-death? Using social network analysis, the paper explores the trust networks of several samizdat publications in Soviet Lithuania, including the most successful underground publication in the Soviet Union, 'The Chronicle of the Catholic Church of Lithuania' which was continuously published from 1972 until the breakdown of the regime in 1989. The data is drawn from face-to-face interviews with the main publishers of the selected publications. The results of the research refute the claim of the theory of secret societies that to solve the problem of trust clandestine networks are built on pre-existing strong ties among collaborators.

### *The Impact Of Cultural Capital On Students' Performances In Brazil*

The main goal of this study is to verify the effect of cultural capital on students' performances through an official test applied by the Brazilian government (*Prova Brasil*), the students are part of the Brazilian Elementary to High School Evaluation System (SAEB). The data set used is from the year of 2003 and involves 52.434 students. The standard test is applied every other year in the fields of mathematics and Portuguese. Along with the test a questionnaire is applied to identify students' demographic characteristics as well as their families' profile. The research question is: what is the impact of cultural capital on students' performances in the SAEB test controlling for their demographic characteristics and relations with other students and their teachers? The theoretical background is based on James Coleman (1997), Pierre Bourdieu (1982, 1998) and Basil Bernstein (1997). Among Brazilian scholars the study includes the ideas of Nelson Silva and Carlos Hasenbalg (2000) and Maria Ligia Barbosa (2009). The study model has as the dependent variable the students' grades in the SAEB test and the cultural capital as the main independent variable along with the control variables. Descriptive analyses are used as well as regression models to obtain the effect of the independent variables on the dependent variable. The preliminary and main results show that there is significant association between levels of cultural capital and students' performances in the SAEB test. Specifically, there is a significant and positive correlation between parents' education, ownership of computer, access to the internet and newspaper reading with the performances in the SAEB test.

### *Sociological Narrative Accounts Guiding Society: Work and Network of Production and Difussion of Three Chilean Sociologists (1970-2013)*

The most significant sociologists in Chile, in the academic field and the public sphere, have been makers of narrative accounts or stories about the reality of the country and its process of transformation which have served as guidance for social actors. Such sociological stories have helped to constitute the socio-political world and the processes occurring in it: structural transformations under Popular Unity Government (1970-1973), resistance and criticism under the military dictatorship (1973-1989), transition to democracy (late 1980s, early 1990s), etc. They have played a performative role, actively becoming part of the reality they describe. This is not merely the result of the force of ideas, but is rather a product of complex networks producing such narrative accounts, in which the authors are prominent nodes that manage to become obligatory passage point. The research examines three remarkable sociologists who have contrasting trajectories, orientations and institutional links. Tomás Moulian, with marxist and critical orientation, connected to left political parties; Pedro Morandé, in the Catholic intellectual tradition, connected with the Catholic Church; and Eugenio Tironi, in a Durkheimian tradition, with participation in the State. With regard to them and in reference to the period 1970-2013 three main matters are analyzed: (1) key axes of their

sociological accounts; (2) characteristics of their networks of connections that encourage and enable their work, and then contribute to its dissemination; and (3) features that give performative strength to their narratives. The study is based on works written by these authors and others, and interviews to the authors themselves and other members of the network of production and dissemination. The analysis considers relations between local and global production of knowledge and discuss approaches such as those who assert the existence of epistemic dependency and epistemological obstacles for the production of knowledge in peripheral or semiperipheral countries.

*Uncontested Science and Boundary Work: The Conceptualization and Measurement of Poverty in Chile (1987-2013)*

This paper addresses the social scientific construction of the poverty in Chile, whose measurement is coordinated from the State, being of great relevance for the design of social policies and programs, and to monitor government action. The currently applied theoretical and methodological construction remained uncontested from 1987 to 2012. Despite that long period in which the measurement was a tightly sealed black box, there were many aspects that could have been questioned, from both technical and political perspectives. In year 2012 a public controversy took place regarding this process. As a result, the Chilean government appointed a committee with the task of making changes in it. A first goal of the presentation is to study the factors that led to that great stability of the instrument, in spite of significant socioeconomic changes that long ago made changes advisable. Special attention is given to: (1) the origins of the measurement, in which the Economic Commission for Latin America (ECLAC) participates in an outstanding way and transferred a methodology developed for the whole region of Latin America; (2) the boundary work made by experts involved in the measurement; (3) the circulation of this epistemic construction between academic centers, state institutions and the public sphere, all of which strengthen its character of reality and hinder its questioning. A second objective is to analyze how the 2012 controversy was generated and developed. Attention is given to the intertwining of political and scientific concerns and to the rhetorical handlings associated to the boundary work done by rival factions. A third objective is to analyze the outcome of the controversy, in which the scientific demarcation is still used to hide political dilemmas and complex normative choices. The study gathers information through interviews and document reviews, and by following key players in their participation in the controversy.

*Gender Inequality in Higher Education: A Study of Girl Students of Conventional Courses in Nasik, India*

**Keywords:** Gender inequality, Higher education, Girl students, Nasik India  
Gender discrimination in developing world is a crucial reality. In modern times women are performing exceptionally well in different spheres of activities. The problem of gender inequality still prevails in all spheres of life. Though Indian constitution has granted equality to women in principle, in reality majority of Indian women are facing the problem of inequality and discrimination.

The paper tries to focus on gender discrimination in higher education in India where the situation is paradoxical. On the one hand girl students are performing very well in all faculties of education, many of them are topping the merit lists, the percentage of passing is more than the boys, but at the same time according to 2011 Indian census, 35% women are illiterate. Out of the remaining 65% literate women the percentage of higher education is very low. Again there are educational disparities on the ground of rural-urban, poor-rich, higher-lower caste etc. Government has provided various facilities and concessions to facilitate education to women and decrease the disparities.

The paper tries to highlight the challenges in education before the girl students of the Department of Sociology, their ambitions, career choice and hurdles in their education, their experience about gender discrimination in the family, family back ground, use of facilities or concessions given by the government, etc.

The data will be collected by the primary techniques like questionnaire and interview. The study will be limited to the students of conventional courses. It will be conducted in one of the leading women's college in Nasik city.

**Abstract**

As god is a creator of flora and fauna, a woman is a creator of family which leads to society and Nation. The Indian society considered women as weaker sex. Such sociological and cultural traditions have kept women dormant for quite a long time. Despite of all hurdles Indian women stand tall from the rest of the crowd and are applauded for their achievements in their respective field.

The aim of this study is to discuss the issues regarding women entrepreneurship in Kanpur. Different stakeholders are playing pivotal role in women's economic development. This paper is mostly based on Primary, secondary data and some observations as and when require. The paper talks about the status of women entrepreneurs and their competitive skills in world of business environment. Skill, knowledge and adaptability (SKAs) in business are the main reasons for women to emerge into business ventures. The Paper also focuses on the problems in front of women during setting up a business enterprise and running in the competitive world. Some issues related to lack of financial support, availability of resources as well as support of stake holder etc. are major barrier in development of women entrepreneurs in India. It will also suggest the way of eliminating and reducing hurdles of the women entrepreneurship development in Context of Kanpur.

*Improvisation Of Destination Awareness Through Festivals and Events: Special Reference To India*

As travelers become more sophisticated, destinations need to become more originaive in capturing those tourists. A potential tourist destination needs to create a brand image to compete in the global tourism marketplace. India, a land of vast cultural and regional diversities, has multi-faceted festivals. One can immediately draw a long list of religious festivals associated with various gods and goddesses, regions and traditions like holi, diwali, christmas, id (ul-fitr; ul-zuha), GurPurab, etc. The study focuses to examine the awareness of Indian festivals and their intent to travel. However, here the purpose is not to discuss the common religious festivals. It is an initiative to scrutinize upon only those festivals which are the main centers of tourist attraction. This study based upon several theories as theory of Reasoned Action, Theory of Planned Behavior, and marketing theories related to Awareness – Interest – Desire – Action (AIDA) sequence.

The research is positivistic, quantitative research paradigm in which consumer behavior approaches prevail. The study postulates there is significant relationship between promotions of festivals, events and awareness of destinations. The study reveals some promotional aspects which may help in transforming the attitude of tourist towards festivals and events in India.

'Festivals are the features of cultural diversity'

*Globalisation and Indian Media: Certain Policy Implications*

Media conglomerates and media corporatisation are phenomenon which have been studied by a number of scholars. The process of liberalisation, deregulation, globalisation and digitisation have transformed the media landscape. In India there has been a proliferation in the type of media. Simultaneously there has been growth in the quantity and quality of media content available for consumption. Like in other industries even in the media industry globalisation and diversification work hand in hand. Deregulation and convergence have also further affected the media industry. In the television industry there is segmentation and customization of content. Programmes like "who wants to be a millionaire" are adapted to the Indian scenario. Global content is transformed into local content by involving local actors. Internet is also fast becoming a segment of multi-media business. There has been a rise in the new form of communication known as mass-self communication (Manuel Castells). It is mass communication because it reaches potentially a global audience. It is self communication because individ-

uals generate their own content, choose the platform for emission and play an active role in shaping the reception process.

This paper seeks to study how globalisation has affected the Indian media industry especially television and internet. The policies of the Indian government has brought about changes in various institutions and functioning of the media. With the help of case studies this paper will examine and explore the effect of globalisation on media.

#### *Exploring the Environmental Consequences of Beef Production in Southern Africa*

The consequences of beef production for the environment have been a hot topic in recent years. The myriad of issues raised include: the copious amounts of methane released into the atmosphere by cattle, the large quantities of water and feed used to sustain cattle, and the amount of oil that is used throughout the commodity chain in order to produce such large quantities of beef. However, environmental discourses are often confined to industrial processing systems in industrialized countries. This paper shines a light on the unique environmental context of beef production in Southern Africa and the impact of conservation policies on producers in Southern Africa. Specifically, the paper will explore the unique interplay of cattle rearing within an arid and semi-arid environment, the environmental issues relevant to smallholder and pastoral systems of production, and the issues that emerge from the interaction of livestock and wild animals.

#### *Thai Seasonal Migrants Working for the Finnish Wild Berry Industry*

In 2005 one Finnish wild berry company invited 92 Thai-workers to pick wild berries for them. Today, there is over 3000 Thai-workers during the wild berry season in Finland. Thai-pickers are not employed by the companies and therefore lack protection from labour legislation. High number of pickers need to take loans to cover the cost of travel and recruiting from Thailand. Their position is precarious, and a crop failure in Finland can mean debt after the season. The Thai temporary workers can pick berries based on Finnish right of public access to natural resources, like wild berries. Heated debate has taken place in Finland concerning the vulnerable position of the migrant pickers. The income difference between North-East Thailand and Finland is considerable, and therefore taking the risk of picking wild berries is tempting. For many successful pickers the temporary work in Finland has turned into circular migration. The presentation is based on multi-sited ethnography conducted in Finland and Thailand. Thai-migrants views and experiences are related within the wild berry industry's global production chain where berries are manufactured and added value is produced. The research material includes ca. 50 interviews of Thai-pickers and field work, Thai and Finnish civil servant interviews, company manager interviews and interviews of recruiting agencies that recruit pickers in Thailand and manage the berry camps in Finland. Body of media material has been collected since 2005. The ethnographic and other material include extensive income information on workers, and differences between workers are shown to exist. Thai temporary workers are not a homogeneous group. There is considerable differences in wealth, and as a result possibilities of temporary migration vary. Pickers have less negotiating power towards other actors in the business, but recently there have been protests against their unequal position in the Finnish wild berry industry.

#### *"Inequalities and Dynamics in Health of Indian Tribal Women; An Empirical Perspective"*

Health is an important indicator of socio-economic development of any society. The studies of social inequalities, particularly those of health have received growing attention in all modern nation-states today. It has become a concern, owing to the deteriorating quality of life of women population of the third world countries. This paper focuses on the inequalities, disparities and dynamics in health status and health care of tribal women; a marginalized group of India. Data have been gathered from women respondents randomly selected from 141 families of three prominent tribes viz. Koraga, Marati Naika, and Kudubi. The field work was conducted in Udupi district of coastal Karnataka in Southern India during 2010-2012, fully supported by the minor research project of University Grants Commission, Government of India.

The paper seeks to address health care, early marriage practice, reproductive health status, awareness about small family norm, housing conditions and health, role of media in health, awareness, utilization of medical facilities, habits and health etc. The paper explores that health of tribal women is affected by many inter-related socio-economic and cultural factors. The study reveals that women in general and tribal women in particular are the worst sufferers. Despite modernization, medicalization, globalization, marked improvement in global health and other ongoing developmental processes, the exposure of tribes in general and tribal women in particular, to modern system of medicine is not significant. The paper explores the paradoxes of continuity study and change in the tribal health care practices and interventions. This could also be observed as the contrast between ethnicity and modern-post modern changes. Thus different patterns and levels of health inequalities could be identified among Indian tribal women. The findings will be a contribution to Medical Sociology, Sociology of Gender Studies, Social Anthropology, and to the health of tribal women.

#### *Open Your Own Data - Creating Individual High Value for Little People from Big Data*

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas.

Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - "know yourself" - you could generate more individual value when approaching a competing phone company. With full availability of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual's own interest.

#### *Children's and Preschool Teacher's Photographs of New Preschool Architecture: Issues of Participation and Interpretation*

#### **Children's and preschool teacher's photographs and experiences of new preschool architecture**

Kim Rasmussen

In an ongoing project (2013-2014) about children's and preschool teacher's interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the physical and social environment. A numbers of photo-elicited interviews with the preschool teachers had been held over the summer too. These actions have created increased awareness of the relationship between the physical and social environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, (inspired from action research, new childhood sociology, phenomenology) is to create knowledge (on basis of experiences, narratives, observations/field notes, photos/visual knowledge) about the preschool environment, which might qualify the discourse of kindergartens and the new architecture.

The architecture in new childcare-institutions breaks on several points with the former idea of "kindergarten" (small environments with an emphasis on domesticity, development and play). The new preschools in Denmark are bulky, contains many children (some more than 200 children), and are highly transparent (widespread use of glass in both interior and exterior walls). The new architecture is based on (neoliberal) ideas of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another

is how the buildings are "lived" and coded/decoded (Bernstein) and experienced by the participants.

The paper and presentation will focus on issues of interpretation visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the asymmetry between children and adults: preschool teachers play a key role in the interpretation of children's photos, while it is difficult to invite and involve children (2-5 years) to interpret their own photos and words.

[Peter.Ratcliffe@warwick.ac.uk](mailto:Peter.Ratcliffe@warwick.ac.uk))

#### *Public Sociology and the Impact Agenda: A Case Study*

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying 'impact' (in accord with the current neoliberal agenda demanding accountability and 'value for money'). The concepts 'public sociology' and 'impact' are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalizing impact in a research project that demands the deep, and unwavering, involvement and commitment of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the 'messiness' of the demonstrable 'impact' mirrors that of the research process itself, and the pursuit of a 'public sociology' in this context conflicts with dominant characterisations in the literature.

[Anna.ratecka@uj.edu.pl](mailto:Anna.ratecka@uj.edu.pl))

#### *La Strada Netowrk As an Example of Tansnational Mobilization Against Trafficking in Women*

My presentation will explore mobilization around trafficking in women for the purpose of sexual exploitation in the Central and Eastern Europe (CEE). I will focus especially on the La Strada Netowrk (LS) that is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking mobilization on the national level as well as internationally.

This network because of its roots as a cooperatiob between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activist networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists form Netherlands and CEE.

Secondly I will give a closer look to the framing of traffickingby the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location fo the actor, the views on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way particular LS members manage to reconcile a moderate framing of trafficking with gaining audience and support in local contexts.

Poland will serve as a case study for the analysis of the interplay between framing of trafficking by activists and relations between NGOs and the state agencies.

#### *Can Trade Unions (Be)Come Environmental Innovators?*

Thinking of environmental movements in the 21<sup>st</sup> century, trade unions are not the organisations that come to mind. They are more likely seen as part of the problem creating environmental degradation, not as part of the solution. However, especially since 2006, when the first international trade union assembly on labour and environment took place in Kenya, many unions across the world have acknowledged the need to incorporate environmental issues into their agendas. Based on two research projects investigating environmental strategies of trade unions in Brazil, India, South Africa, Sweden, Spain, and the UK, as well as those of international unions we will present some issues that characterize trade unions' environmental engagement. To take environmental issues on board unions need to transcend their present focus on workplace concerns and reinvent themselves as social movement unions. We are especially interested in the role of individuals in this transformation process. From which societal backgrounds do environmentally engaged trade unionists come and what are the conditions which

enable them to change trade union practices? What kind of social networks and relations to employers and governments are favourable to develop environmental policies of trade unions and what are the barriers for such transformations? Climate Change is a global issue and thus has to be tackled through cross-country and also inter-union alliances. However, unions are very different in terms of their histories and collective memories, political background, forms of organisation, and sectoral interests. We will discuss the impact of such differences on the unionists' positions regarding Climate Change and the strategies developed towards addressing it and their relations to other organisations (e.g., unions and governments). The paper is based on an analysis of trade union documents and histories and over 100 qualitative interviews including 80 life history interviews with unionists engaged in environmental policies.

#### *Trade Unions, Climate Change and Global Unequal Power Relations*

Especially since 2006 trade unions in the global north and the global south as well as international trade union federations and confederations have been developing strategies against climate change. There are many obstacles in the way of trade union strategies for climate change mitigation and adaptation. One of the most decisive is the policy conflict between unions in the global north and the global south. While there are north-north and south-south differences, the conflicts between trade unions in the global north and the global south have their origins both in the unequal living conditions of workers and the unequal power relations between unions in the global south and the global north. Based on two research projects investigating trade unions' environmental strategies in Brazil, South Africa, India, Sweden, and the UK, we discuss the different ways in which unions of the global north and south assess the causes and consequences of climate change and the relationship between labour and nature. While in both hemispheres the protection of jobs and the protection of nature need to go hand in hand, it is mainly in unions of the global south that Capital is seen as exploiting both the earth and the worker. This creates conflicts between northern and southern unions concerning the development of climate change strategies.

[henrike.rau@nuigalway.ie](mailto:henrike.rau@nuigalway.ie))

#### *Mapping the Consumption of Distance Across the Life-Course: Connecting Individuals' Mobility Milestones to the Histories of Mobility Practices*

Life events and life-course transitions can dramatically impact on people's consumption practices. There is ample evidence that key life events (e.g. arrival of first child, relocation, transition from education to work, retirement) coincide with more or less radical changes in consumption patterns (cf. Schaefer, Jaeger-Erben and Bamberg 2012). Understanding the role and significance of such 'tipping points' in people's consumption biography has the potential to significantly advance our knowledge of current patterns of (un)sustainable consumption and how to either encourage or transform them.

At the same time, individual consumption biographies reflect wider structural conditions in society, including prevailing 'systems of provision' (Evans 2011) that organise the delivery of goods and services and their subsequent consumption. Linking individual consumption biographies to the histories of particular practices can thus cast new light on the causes and consequences of (un)sustainable consumption and pave the way for more promising policies that work *with* rather than against people's established socio-environmental practices.

This paper argues for the development of longitudinal theoretical and empirical approaches to the study of everyday physical mobility and the associated 'consumption of distance'. The ability to adequately capture important mobility milestones across the life-course, that is, moments of radical change in how (much) people travel, must be central to these efforts. These milestones must in turn be linked to the history of key mobility practices such as walking, cycling and car use. Drawing on documentary evidence, policy papers and qualitative interview data from the Republic of Ireland, the paper identifies key mobility milestones in individuals' lives and connects them to the development of the modern Irish transport system and its implications for different mobility practices.

**RAULT, WILFRIED\*** (INED, [wilfried.rault@ined.fr](mailto:wilfried.rault@ined.fr))

#### *Pre-Marital Rituals in Contemporary France. Inventing a New "Tradition"?*

In 1960s France, marriage was an obligatory stage of couple and family formation and the marriage process followed a clear-cut pathway that remained rela-

tively uniform from one individual to the next. Newly formed couples went out together - without living together - for two years on average. During this period, the future spouses presented their partner to their families, often through an official celebration of their engagement. While more than half of all marriages at the time were preceded by an engagement, the practice then declined.

In this paper, we analyse trends in engagement since the 1970s. Has the practice disappeared, or do couples still choose to become engaged? If so, who are the fiancés of the 21<sup>st</sup> century? The actual content of the engagement process will then be analysed. Are family networks becoming increasingly autonomous, in the sense that engagement is no longer a direct concern of the parents of the future spouses? If so, are they replaced by friends, or is the engagement a more private affair?

Last, our attention will turn to a new form of pre-marital ritualization, namely "bachelor" or "bachelorette" parties, often seen as a "tradition" by the persons involved. We will examine the emergence and spread of these rituals among the social groups that practice them in order to test the idea that parties have now replaced formal engagement.

We will use the initial findings of the "Study of Individual and Conjugal Trajectories" survey conducted by INED and INSEE in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It includes a specific set of questions on rituals for detailed studies of engagement and bachelor/bachelorette parties.

COURTEL, FRANÇOISE (Ined)

### *The French "Study of Individual and Conjugal Trajectories" Survey (2013)*

This paper presents the new survey on couple formation in France. It was conducted by the National Institute for Demographic Studies and the National Institute of Statistics and Economic Studies in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It follows on from two previous studies on couple formation. The first took place in the late 1950s and concerned persons who married in or after 1914. The second, in the 1980s, focused on persons who were married or in a consensual union. The economic, legal and social context has changed dramatically since these first surveys were conducted: fewer people are in couple relationships, time spent in education has increased, more women are in employment, divorce is more common, and new forms of union - including the PACS civil partnership - have emerged, along with new ways of finding a partner, such as online dating for example.

The new study aims to update our knowledge about the lives of people with a partner, in a family or living alone, from youth to old age. We will use the initial findings of the "Study of Individuals and Conjugal Trajectories" to show how this new survey will shed light on continuity and change in couple formation and living arrangements, and also reveal how attitudes to couple relationships have evolved by age and by cohort. In this way, we would like to promote future collaboration and develop new opportunities for comparative research.

### *Gender Socialization of Youth in the Family*

India is the second most populous country in the world, with over 1.21 billion people (2011 census). According to the provisional figures of the 2011 census, the youth population in the country including adolescents is around 550 million. This phenomenal rise in the youth population has made India the youngest nation with a demographic dividend appearing to be a reality. Socialization of young in the family is very important.

Family is an important sociological and demographic unit. The first step of socialization of a person starts from the family. Gender socialization is the process of learning the social expectation and attitudes associated with one sex.

This paper is an empirical survey of young students of Ahmedabad. The main objective of this paper is to know the different dimensions of gender socialization of the youth in the family i.e. their gender role, gender stereotypes, gender relations etc.

The sample of 600 students is selected from undergraduate and postgraduate students. The questionnaire is designed as a tool of data collection.

This paper is divided into four parts. The first part introduces the Sociological concepts of youth, family, gender socialization, approaches of gender roles and socialization. The second part is on methodology. The third part consist the detailed analysis of the survey and final part is on findings and suggestions.

The study reveals that socio-cultural factors are important in gender socialization. The study indicated that there is a significant effect of gender socialization in the family on the young. The study also shows that there is quite a good relation between patriarchal system and inequality of socialization.

The study makes a number of recommendations for action.

### *Voluntary Risk-Taking As Habituated Action: How Can a Practice-Theoretical Approach Contribute to Risk Research?*

#### **Abstract**

Within the sociology of risk, the last 25 years have witnessed a development from viewing risk as something to be avoided towards viewing risk-taking as part of one's self-development. Researchers have argued that routinised everyday life compels us to make 'escape attempts' (Cohen & Taylor, 1992) in which we deliberately put ourselves at risk. Central in this line of theorizing is Stephen Lyng's notion of 'edgework' (Lyng, 1990; 2005); i.e. voluntary risk-taking which negotiates the 'edge' between control and loss-of-control (Lyng, 2005). The concept of 'edgework' sheds light on important aspects of risk-taking - but it also leaves some aspects of risk-taking in the dark.

The empirical case under study in this paper is youth recreational drug use; a form of voluntary risk-taking that has often been viewed in terms of edgework. However, viewing recreational drug use as edgework also entails some limitations: First, not all practices defined as risk-taking are actually experienced as such by the people involved. Experienced recreational drug users do not necessarily view their own drug use as 'risky'. And second, the notion of edgework builds on an underlying assumption about reflexivity; that risk-taking is a deliberate and carefully considered act. However, risk-taking is perhaps not always as well-considered; it may be more spontaneous or it may be non-reflexive.

To try to take these limitations into account, the present paper will allow for other views on risk-taking by drawing on insights from practice-theory, in particular notions of habituated action and embodied knowledge originating from the work of Bourdieu and Wacquant. In the paper I demonstrate how a practice-theoretical approach can contribute to our understanding of youth drug use by focusing on the subjective perceptions of risk, and on the bodily and embodied practice of risk-taking.

[Manashi.Ray@gmail.com](mailto:Manashi.Ray@gmail.com))

### *Navigating the Myanmar-Thailand-Malaysia Border: The Escape Strategies of Burmese Refugees from Chin State, Myanmar, to Battle Creek, Michigan*

Forced migrants who flee their home countries as part of a mass movement face significantly different realities than 'refugees', as conventionally understood and legally defined in the West. Forced migrants typically lack secure legal status and access to any form of welfare system. Additionally, because they lack social structures that support international migration, they often engage in 'step-migration'. Before arriving at their final destination, they move to nearby countries where they can obtain assistance from other migrants, employers and smugglers who are absent in their native communities. Scholars who study forced migration and/or illegal migration focus especially on how migrants use resources at their points of origin or destination or both, but they always overlook the actual border-crossing experience of these vulnerable migrants.

Based on twenty-one biographical narrative interviews with Burmese refugees in Battle Creek, Michigan, in 2012-2013, this paper examines how illegal border crossing from Myanmar's Chin State to Thailand and then to Malaysia (and later to the United States after migrants are accepted as refugees by the UNHCR in Malaysia) is a migration strategy rather than an 'end state' and, among other factors, is related to the enormous difficulties of migrating legally to Malaysia. The paper examines hazardous border crossing (which requires clandestine agents and smugglers for crossing and documentation) and 'irregular migrant' status - defined as the lack of legal residence in a nation-state - as essential components of forced migration, which is no longer related only to labor migration and is an expensive, much longer process. Thus, drawing on the concepts of increased border control, stricter immigration policy and definition of citizenship by nation-state, this paper considers the agency of Burmese migrants and raises the question of whether their ability to migrate 'irregularly' can be regarded as a resource in the particular context of forced migration.

### *Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India*

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women's safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers who perform intimate labor -- domestic workers and night nurses -- seek to navigate physical and "moral" risks as they move between their homes and their place of work.

**RAY, SAWMYA\*** (INDIAN INSTITUTE OF TECHNOLOGY GUWAHATI, [sawmyaray@iitg.ernet.in](mailto:sawmyaray@iitg.ernet.in))

### *To Violate with Impunity: Legal Constructions of Marital Rape*

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender based violence everyday, law has not proved to be an efficient mechanism to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. 'The Protection of Women from Domestic Violence Act 2005', does include sexual abuse within the definition of domestic violence, yet it does not clearly criminalize marital sexual assault. On the other hand legislations on "rape" including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of "marital rape". This paper attempts to understand such exemption of "marital rape" from Indian legal lexicon.

Legal constructions of "marital rape" is traced through analysis of legislations on "rape", observation of cases at two Mahila Police Stations (All Women's Police Station) at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women's groups patriarchal notions continue to influence legal understanding of "marital rape". Patriarchal and parochial notions such as "wifely duties", "marriage as inherent consent to sex" "wife as property", "divine ordinance" and others are invoked to justify the exemption of "marital rape". It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far and few. There is therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against "marital rape".

*Bulgaria Case Study: The Challenges of the 2013 Social Protests in Bulgaria*

The contemporary technologically determined information and communication environment is not only facilitating users' participation in the process of generation and dissemination of content, but is also creating new opportunities for democratic citizenship. A variety of texts on new communication characteristics (Carpentier, Castells, Deuze, Fidler, Friedman, Jakubowicz, Jensen, Lash, Patriarche, Todorov, etc.) offer multiplex approaches to this phenomenon, elucidating the interrelations between the audiences, the traditional and the social media.

The proposed text will discuss some major political and social implications of the new roles of the audiences viewed through the prism of the media activism in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose – for sustaining the democratic standards. On June 14, about 10,000 people summoned spontaneously via the social networks to protest against the Parliament for the non-transparent appointment of a controversial media mogul as a head of the State Agency of National Security. Although the Parliament withdrew the appointment immediately, since then (nearly three months) hundreds of activists are every day out in the streets protesting against other controversial measures of the new government. Both events enjoyed extensive mainstream media coverage.

The aim of the proposed research is to answer the question in what ways the ongoing audience transformations challenge the contemporary media mix in Bulgaria.

### *Cross-National Differences in Early Family Instability By Socioeconomic Status*

Extensive research has shown that family instability has negative consequences for children's well-being. At the same time, there is growing evidence that differences in children's experience of family instability by parental socioeconomic status are growing—at least in the U.S. Less well understood is the extent to which this may also be occurring across industrialized countries more broadly. In this paper, we add to the literature by evaluating the extent to which the gap by education in family instability during childhood appears to be growing in cross-national context, using data for 17 industrialized countries with multi-state life tables and country-specific hazard models. To the extent that our preliminary results hold true, this research suggests that inequality in children's family experiences may be an important feature of life across the Western industrialized world, and that protecting child wellbeing for those born to less advantaged parents may be a growing concern.

### *Procesos De Enmarcamiento y Diálogo De Saberes En El Movimiento Por La Defensa Del Río San Pedro Libre (México)*

#### **Procesos de enmarcamiento y diálogo de saberes en el movimiento por la defensa del Río San Pedro Libre (México).**

Esta ponencia analiza el movimiento por la sustentabilidad y contra la construcción del proyecto hidroeléctrico Las Cruces, en la Cuenca del Río San Pedro, en Nayarit (al Noroeste de México), concentrándose en sus procesos de enmarcamiento y sus orientaciones generales. Este movimiento nace del encuentro de universitarios, ong's, grupos de productores y comunidades indígenas por la defensa de este río, ante la iniciativa del gobierno federal mexicano de construir en él un sistema de presas. El movimiento, que se estructura a partir del Consejo Intercomunitario para el Desarrollo Sustentable de la Cuenca del Río San Pedro, del Consejo Indígena del pueblo Nayeri y del Consejo Interuniversitario por la Defensa del Río, ha incorporado en su historia enmarcamientos distintos provenientes del discurso académico, inspirados en el desarrollo sustentable, el equilibrio sustentable, el buen vivir y el diálogo de saberes. Esta secuencia de referentes teóricos, responde al proceso de complejización del problema y a la comprensión creciente de la naturaleza de los procesos socioambientales de la región por parte de sus impulsores. Evidentemente, el ajuste creativo de estos enmarcamientos por parte de la población local, en interacción con actores institucionales y no institucionales externos, aliados o adversarios, ha permitido su adecuada adaptación a las condiciones locales y ha enriquecido su configuración y orientación. Particularmente, los ha redefinido de manera profunda a partir de las visiones de las comunidades costeras y de los ejidos agrícolas; pero fundamentalmente, de la incorporación al movimiento de las comunidades Nayeris con su cosmovisión tradicional. Ese proceso ha significado una transición gradual, compleja y no sin tensiones y contradicciones, del desarrollo sustentable a posiciones no desarrollistas, en la que se aprecia crecientemente el énfasis en el diálogo de saberes.

### *Democracy, Social Movements and Rights: The Challenge Of Pluralism*

In recent years social movements around the world have been more and more explicitly related to the issue of democracy. Since the 90s and the triumph of neoliberalism, transnational movements have struggled for an idea of democracy focused on human rights and inclusive citizenship, and not simply on the freedom of voting, producing and consuming. With the alter-global movement, and more recently with 15-M and Occupy, the focus of collective action has shifted from the search of individual freedom – as in many post-1968 mobilizations – to collective rights as main goal of a democratic project compatible with an idea of global justice in a pluralist world. On the one hand, digital technologies have enhanced transnational communications and cross-fertilization of mobilizations situated in contexts still deeply differentiated in terms of culture, history and politics. On the other hand, social rights and human rights have become a general framework of reference hiding different internal positions and interpretations about rights themselves. In this presentation I will focus on the theoretical issues raised by pluralism in the recent history of social movements fighting for democracy and rights.

*Subjectivity and Human Rights: A Theoretical Investigation*

In spite of an enduring attention for ethics and morality, the interest of sociology for human rights is recent, although lively and prolific. Power, violence, domination, the idea that "Whoever says 'humanity' wants to betray" (Carl Schmitt), have been at the core of critical sociology much more than the analysis of subject's capability to struggle for human rights through social movements and everyday personal choices. Hence, not only positivistic tendencies have brought to mistrust towards the issue of rights, but critical and emancipative sociology as well – from Frankfurt School, to Foucault, Bourdieu and others – has been sceptical towards the topic of human rights. Indeed, a sociology of human rights is related not only to ethics, social justice and social inclusion, citizenship rights and critique of discriminations, but also to a sociology of the acting subject. A full sociological understanding of the issue of human rights needs as well a reflection on subjectivity in a pluralist, multicultural and globalized society. After a philosophical phase during which the concepts of subject and subjectivity have been criticized, deconstructed, reduced to the immanence of situated practices, the rise of the issue of human rights in the international sociological debate and in social movement studies highlights again the centrality of the problem of subjectivity (and humanity) in social theory. The aim of this presentation is to analyse the connections between contemporary sociology of human rights' movements and sociology of subjectivity.

*Post-, Trans-, or De-Nationalization? Fine-Tuning Political Identifications Above and Beyond Nation-State Allegiances*

The literature on emerging global identifications tends to use 'post-national', 'trans-national' and 'de-national' as convenient synonyms. However, these terms are better employed to single out distinct forms of disalignment of political identification from historically solid national identities. The paper describes these forms one by one and illustrates ideal-typical contents and conditions of such diverse configurations of detachment from nationhood in practices and attitudes. The empirical part of the paper draws on a 8,500 cases survey and 160 in-depth interviews with EU citizens living in six different countries (Denmark, Germany, Italy, Romania, Spain and the UK) as part of the EUCROSS project ([www.eucross.eu](http://www.eucross.eu)).

*Upper Classes, Wider Horizons? the Social Stratification of Travelling in Europe*

Social stratification research on leisure tends to focus on class differences in cultural consumption patterns. In this literature, seldom is travelling taken into account as a dependent variable, even if international journeys are exponentially rising worldwide. But how is the experience of travelling sorted across social strata? Do they increase linearly as we move up the social hierarchy, as a reflex of higher income and cultural capital? Or are they more than proportionally an elite prerogative, while the bulk of the population keeps nation-wide travel horizons? And are there societal differences in the association between social class and travelling?

In addition, this paper investigates differences in meanings of travels. We thus expand the cultural-sociological debate on the social stratification of cultural tastes to mobility behaviours. Is international travelling a form of 'omnivorous' consumption, to use the famous concept of Peterson, for the better off and most educated? Is it meant to incorporate holidays, business and sociability experiences among the upper class, while being more focused and limited in scope among lower classes? Do these differences help characterize class-specific cultural capitals, thus fostering class reproduction?

We address both sets of questions – the social stratification of the quantity and quality of mobility experiences – by analysing the distribution of national and international travels across social strata with data from the EUCROSS survey, covering six EU countries (Denmark, Germany, Italy, Romania, Spain and the UK). Preliminary analyses of EUCROSS data suggest that SES is an important predictor of mobility experiences; however, there are differences in motives of travels. Higher SES is associated with more travel for both holidays and professional trips. Furthermore, travelling patterns vary significantly depending on the countries from which they originate.

*Becoming Each Other: Interculturalisms, Grassroots Resistance and Cultural Creativity in Post-Colonial Trinidad and Tobago*

In addition to the overarching context or grand narrative of ethnic competition and contestation over cultural space, resources and recognition in multi-ethnic Trinidad and Tobago, there is also a *little tradition* of working class and grassroots interculturalisms and structural convergences taking place at the same time. In this paper, I examine cases of subordinate level interculturalisms that occur below the surface, often with little conscious awareness by the majority of the society. These include the often unnoticed adoption/adaption by all members of the society of common aspects of religious practice, language, food, music, styles of being, and celebration of special days. I argue that Trinbagonians construct and perform the narrative of plurality as well as that of hybridity or *creolisation* accepting the dissonance and contradictions as part of the everyday complexity of life. So while a grand narrative of difference and ethnic completion prevails the two major competing collectivities - Afro and Indo-Trinidadians are becoming more and more like each other.

*Capitalizing on Nigeria's Demographic Dividend*

Nigeria is the most populous country in Africa and the eighth most populous country in the world, and thus whether or not it realizes its potential demographic dividend is critically important. Nigeria is entering a period of potentially rapid economic growth due to the increase in the working-age population—the so-called *demographic dividend*. At first glance, Nigeria's age structure appears promising, with a large cohort of young people entering adulthood (and, presumably, the labor force) while fertility rates are presumably falling. The dependency ratio suggests that the working age population will support the dependents (children and elderly) of the population, and in fact produce a surplus. In order to do that, however, working-age adults must be employed. Unemployment has declined since 2003, but most of that decline is due in agricultural work, which may not be highly productive or ecologically sound. Unemployment rates remain high across nearly every region and every subgroup in the population, but with Nigeria's resources and oil wealth there is potential to invest in some creative forms of education, training, and job creation to realize the potential demographic dividend. Moreover, Nigeria's mortality and health indicators continue to lag far behind other countries as well. Life expectancy lags severely, due to the HIV/AIDS epidemic as well as other infectious diseases, and suggests a need for investment in public health infrastructure. Without a healthy population of workers, Nigeria cannot attain the demographic dividend.

*Race and Patriarchy: Gender and Migration in South Africa during and after Apartheid*

Apartheid was not only a racial project, but also a patriarchal project that encouraged family separation. By design, black men and women in South Africa had quite different experiences under the apartheid regime, although many times they did not follow the strict patriarchal and racial laws. There is not much good historical data about gender differences in migration in South Africa, so I use a unique data set (2000 South African Migration and Health Survey) that includes retrospective life histories for a nationally representative sample of the black population to investigate the impact of apartheid policies on both men's and women's past and present migration patterns. Overall, I find that both women and men became increasingly likely to move over time, both during after the apartheid years and that women were more likely to move with their families, contrary to conventional wisdom and unlike migration patterns in other contexts. Women may not have moved at the same rates as men, but this paper gives evidence that despite apartheid's intended effects of family separation, both women and men were moving as families. Gender and migration patterns are relatively understudied, especially for historical populations, so this paper has the potential to add to our understanding of both historical and current gendered migration patterns, particularly in South Africa.

*Modernity Reconfigured, or, Empire and the End of Habermas Versus Foucault*

Central to debates in social theory about the relationship between modernity and critique has been the opposition, variously construed, between Foucauldian and Habermasian perspectives. Particularly in the 1980s and 1990s, and into the 2000s, these iconic figures stood for differing positions on the nature and purpose of human rationality, the workings of power in modern (and perhaps post-modern) capitalist societies, and the meaning and purpose of "critical theory." As many papers and advanced course syllabi show, the opposition itself became a tool for thinking about democracy, capitalism, violence, and so on.

However, this opposition was underwritten by a surprisingly similar theoretical narrative of modernity informed by a comparative-historical sociology of national states and economies, and this narrative is in important ways incorrect and incomplete, for it excludes empire and colonization from its causal stories and cultural interpretations. A reading of the explicit and implicit historical sociologies of Foucault and of Habermas is presented, highlighting these absences. The paper then explores the recurrence of this absence in other theories of modernity or modernities, including Wittrock and Eisenstadt.

What, then, is the alternative? Too often, alternatives are themselves presented in terms informed by "Habermas versus Foucault," modern versus postmodern, etc. In an effort to resist this tendency, instead of proposing a new all-encompassing position, this paper examines how three concepts that are simultaneously analytic and normative would shift in their meaning and use, if we were to incorporate the sociology of empire into our understanding of modernity and critique. First, the relationship of the concept of *power* to the concept of instrumentality or instrumental reason is reconsidered. Second, the concept of *fantasy*, and the possibility of a hermeneutics of modern fantasies, is explored. This leads to a final reflection on the concept of *modernity* itself.

*Overcoming Institutional Barriers: The Relationship Between Basic Human Motivations and Immigrant Integration Across European Societies*

Research on the incorporation of immigrants into host societies has paid particular attention to the question of *who* is most likely to integrate, by distinguishing between individual, country of destination, and country of origin effects. Most of these debates have largely overlooked the question of *why* some people are more likely to integrate. In this study, we analyze integration at the micro-level by identifying what basic human motivations lead to greater socioeconomic success, cultural adaption and political participation. Social psychological research has identified four higher-order universal human values that are consistent with specific types of motivations: self-transcendence (motivation = social justice), conservation (motivation = social order), self-enhancement (motivation = self-esteem enhancement), and openness-to-change (motivation = creativity and independence of thought). Although each exists in every culture, there is much variation in regards to the distribution of these values within and between countries (Schwartz & Bardi, 2001). In this study, we posit that immigrant integration should depend on whether immigrants have the same values and motivations that are dominant among native residents. Moreover, we expect self-enhancement values in particular to be strongly correlated with integration. Yet, because immigrants are more likely than native-born citizens to experience discrimination, we expect this motivation to be more important for immigrant outcomes than for natives. Further, we hypothesize that the relationship between these values and integration will be strongest in societies that have additional institutional features that make immigrant integration more challenging (i.e. weaker welfare states, societies without multicultural policies, and societies without inclusive immigrant integration policies). To test these hypotheses, we analyze the 2002-2012 cumulative file of the European Social Survey, which includes the Schwartz' Portrait Values Questionnaire in addition to a number of social and political and attitudes and behavior.

*Welfare Magnetism within Public Opinion. Evaluating Welfare Opinions Among First and Second Generation Immigrants*

Invoking the metaphor of the magnet, an oft-heard concern about the sustainability of the welfare state is that generous social welfare provisions serve as an important pull-factor in immigrants' consideration of their preferred country of destination. With their accumulated social risks, immigrants are on average more likely to claim welfare benefits, fueling the idea that such generous provisions reinforce migration flows. If this concern would be justified, then the analysis of attitudes towards social welfare programs among immigrants would reflect such magnetism effect, namely that immigrants would exhibit stronger pro-welfare attitudes compared to the non-immigrant population, particularly in countries with higher per capita spending. To evaluate the extent to which immigrants reflect the idea of welfare magnetism, we analyze the 2008 'Welfare Attitudes' module of the European Social Survey, fielded in more than 20 countries. This survey allows us to untangle the extent to which self-interest motivations determine welfare attitudes among immigrants equally as they do among non-immigrants. Further, we can evaluate if pro-welfare attitudes are a function of the size of the welfare state immigrants reside in. While our analysis indicates that immigrants are indeed slightly more pro-welfare than the autochthonous population, it also shows that their welfare attitudes are an imprint of the welfare opinions of the majority population of the country they are living in. We conclude our contribution with the implications for the future of the welfare state, the theory of welfare magnetism, and the consequences for public policy.

*Subjectivity and Social Change In Social Struggles In Mexico*

Mexico is a key country to look at and analyze the forms of struggle and the projects of other sorts of life that are being put into practice in the Global South. The experience of Zapatista autonomous communities (since 1994), and the resistances of Atenco and Oaxaca in 2006, the processes of self-defense of villages in Guerrero and Michoacan, and other numerous indigenous struggles, whether rural or urban that are taking place in Mexican territory have been configured as a point of reference for the development of a new social imaginary in both the Latin American continent and other places around the world. In addition, these experiences have contributed to opening a path to a new cycle of mobilizations in Mexico and also in Latin America, mainly led by social subjects that have outweighed the North-centered analyses of collective action and also the traditional conception of social movements.

In this paper, we will present a proposal of analysis regarding social struggles taking place in current Mexico, from below and from the point of view of the leaders. Our starting point is the Latin American literature on social movements and the ethnographic work carried out by the authors in various social protests in the country in the past decade. Among our purposes, we aim to analyze how in these struggles people reinvent and re-codify non-institutional forms of doing politics in relation to collective needs and desires.

With this paper we attempt to contribute to the construction of a dialog between the experiences of struggle in the Global South and the Global North, where the starting point are not the theories far from social subjects nor their geographical location, but instead the everyday political practices of people.

*Obesity and Social Inequalities : Public Health Campaigns and Their Implementation*

In the context of a French "epidemic" of obesity, the question of social inequalities regarding the development of obesity and the implementation of nutritional recommendations coming from public health campaigns constitutes an important concern. Based on a statistical analysis of obesity prevalence (1), on a corpus of 85 semi-directive interviews (2), and on wide corpus of texts related to the French epidemic (3), this contribution will analyze the strong inequalities regarding obesity in France related to social classes, gender and generations, and it will examine the several factors explaining this social gap, in particular the integration of recommendation related to diet and body along the social scale and the way obesity is taken in account in public health campaigns. Emphasis will be placed on the ongoing existence of a strong social hierarchy in which well-to-do and low-income categories are at opposite ends of the scale, and the factors that determine the integration of dietary dictates are presented (economic factors ; mental representations of diet and body ; the symbolic of sickness and its relation to diet ; the collective mental representations and identities of each social class). The analysis also shows the social inequalities that exist in the development of norms and the complexity of the intermediate social groups, divided between submission to normative pressure regarding diet and corpulence, and a form of working class rejection.

We will thus highlight that the French public health campaigns, claiming to be universal, seem destined to fail : in order to raise a strong mobilization when it comes to obesity, public health campaign have neglected social disparities . In consequence, they may have deepened social inequality further because they have ignored – at least until recently - the social dimension of dietary consumption.

**REGOURD, SERGE\*** (Université Toulouse Capitole,  
[serge.regourd@ut-capitole.fr](mailto:serge.regourd@ut-capitole.fr))

#### *La Crise Racontée Par La Télévision Française*

Cette communication se présente en forme de décryptage et d'analyse, sur une période d'une année, des programmes de la télévision française (grandes chaînes historiques, TF1 et France Télévisions) concernant la représentation de la crise selon deux catégories d'émissions : fictions télévisées d'une part, et émissions de débats politiques, d'autre part, illustrant et légitimant conjointement un discours de l'inégalité.

S'agissant des fictions télévisées (séries et téléfilms), sous réserve de quelques notables exceptions qui donneront lieu à un éclairage spécifique, le modèle régulièrement dupliqué ignore la crise, en ne représentant que des milieux sociaux qui y échappent. Les exclus, lorsqu'ils apparaissent font figure d'accidents individuels. La télévision publique n'apparaît pas, à cet égard, fondamentalement différente de la télévision privée. L'exemple emblématique, de la série quotidienne *Plus belle la vie* (France 3), alors même qu'elle a la vertu d'illustrer les grandes questions sociétales du temps présent (racisme, homosexualité, environnement, problèmes familiaux...) ne comporte parmi ses personnages ni chômeur, ni ouvrier, en claire opposition avec les séries britanniques comparables. Les inégalités de représentation y apparaissent bien comme des inégalités de classe.

Des tendances comparables caractérisent, selon d'autres voies, les émissions de débat politique, nombreuses sur les chaînes publiques : la première traduction d'inégalités concerne les experts et « intellectuels » invités, quasiment toujours les mêmes, fondant la distinction entre une minorité « visible » et la majorité des « invisibles ». Et ces mêmes experts partagent le même discours néo-libéral d'appréhension de la crise, imputée à l'inadaptation des salariés aux nouveaux principes du marché du travail.

**REHNLUND, MATHILDE\*** (Södertörn university,  
[mathilde.rehnlund@sh.se](mailto:mathilde.rehnlund@sh.se))

#### *Public Transport in Times of Individualization*

Public transport is recognized by policy makers as a main tool in the combat against greenhouse gas emissions, and a key factor in sustainable urban development. Yet in Stockholm, the European Green Capital of 2010, systems for private transport are given a significant portion of space and funding in policy making and regional development plans. A recent prognosis shows that by 2050 Sweden will be far from reaching its zero-emission climate target for road traffic, given hitherto decided measures. This implies a gap between the rhetoric and set targets, and the physical plans made to reach these targets.

This paper is focused upon transport policy strategies for facing and responding to climate change in second modernity, and how modernization pressures are reconciled with sustainable development in policy for urban transport. As a major driver for policy changes, the second modernity has resulted in a step further towards individualization and a step back for the collective planning of the first modernity. How do the second modernity and sustainable development relate to each other and how do they affect urban transport policy? An assumption is that the mechanisms of the second modernity encourage "light" private, flexibility-enhancing solutions over those heavier collective solutions laden with distributive justice that the 1987 Brundtland Report promotes, making weak sustainability or ecological modernization more attractive as a policy direction.

I will relate Stockholm's urban transport policy to the regional development plan, to consider how policy relates to modernization and how well the theory of second modernity can explain the gaps between targets and prognosis for emissions. My hypothesis is that ecological modernization is a way to reconcile modernization and sustainable development, and that a bias towards modernization results in gaps between sustainability targets and the effects of plans made.

GRUBER, STEFAN (Munich Center for the Economics of Aging)  
RAUCH, ANGELA (Institute for Employment Research)

#### *Labour Market Re-Entry of People with Disabilities after Vocational Rehabilitation in Germany*

Employment is one important aspect for societal participation as well as social well-being. Besides providing a living, employment gives access to benefit entitlements in case of unemployment or retirement, but it also provides social prestige and social recognition.

Vocational rehabilitation, as an instrument of the German social welfare state designed to support societal participation, aims at (re-)gaining employment for people with disabilities. Due to a lack of data, there is little empirical evidence on the degree and quality of labour market integration of vocational rehabilitation in Germany.

Based on a three-wave panel survey of the Institute for Employment Research on vocational rehabilitation and the life course, our research focuses on rehabilitants in the financial responsibility of the German Federal Employment Agency (FEA), who require reintegration into the labour market. These people already have several years of working experience, but cannot continue their prior occupation due to health problems and thus, mainly participate in further training, retraining and/or integrational measures. We analyse employment transitions and respective determinants for the re-entry into the labour market and the sustainability of employment using event history analyses.

Results show that two third of the population obtains (mostly unsubsidised) employment only a few months after vocational rehabilitation and on average stays employed for almost three years. The transition in employment is highly determined by structural factors, but also by the type of measure attended during vocational rehabilitation. Integrational measures, like e.g. employment subsidies, are most successful for the placement in employment. Surprisingly, the type of disability does not play an important role in labour market integration, but the subjective well-being appears to be of high significance for both the transition in and the sustainability of employment. Those who report a (very) bad health condition have significantly worse employment chances and thus, reduced chances of social well-being.

[epreis1@gmail.com](mailto:epreis1@gmail.com))

#### *The Transformations of the Nation State As Challenges to Sociological Theory*

The great changes the world experiences in recent decades have had profound consequences for nation states. Yet, the impact of such changes has been under theorized. This theoretical deficit makes it difficult for us to contemplate the prospects of the historical fusion between national solidarity and state authority. Relevant as the criticisms directed to methodological nationalism were, their further implications remain poorly explored, giving margin to misplaced assessments of the future of the nation caught between the global and the local. In the paper I discuss two issues that bear a direct impact on the changed ways we conceive of the nation-state today: (a) the emergence of the idea of civil society itself as a third element, that together with market interests and state authority constitutes a third ideal type of societal resource organization; and (b) the idea that the presumed equality of the citizens of a nation-state can be compatible with the recognition of social differences. I argue that sociological theory must take into account the two aforementioned cultural-ideological changes to be able to provide sound guidance to empirical research on the future of the nation. I conclude with the argument that contributing to account for the cultural ideological changes in the way society sees the interactions between authority, interest and solidarity today, sociological theory will also contribute to a better understanding of the prospects nation-states confront.

#### *Billiomed: Journalism Ethics and Ideology in the Age of Open Participation*

Throughout the world, news is becoming a more open, collaborative project. In "We The Media" (2004), David Gillmor re-imagined journalism's role in society as a joint conversational process achieved by citizens and professionals. Later, the term "Participatory Journalism" was conceptualized by journalism scholars in order to transcend the citizen vs. professional journalism dichotomy.

"Participatory journalism" has been discussed in recent years in various contexts. First, there's the cultural change defined as "convergence culture": the gathering, filtering and editing of news produced by professionals transformed into a participatory culture of news in which the audience became "users" or "producers", and arguably achieved more control over news content, production and distribution. Second, is the social erosion of journalism as a profession: its boundaries, its gatekeeping function or the ideology and ethics which accounted for journalists authority, legitimacy and autonomy. And lastly is the marxist view of the ramifications of these developments: digital serfdom or exploitation (manifested in user generated content), precarious labor patterns (freelance contributors and news aggregation sites) and cultural work.

Despite overwhelming print circulation numbers, subscription base and advertisement revenues, Japanese newspapers experience a steady decline in profits.

Recently, major newspapers begun developing participatory platforms such as Asahi Shimbun's "Billiimedia". Newspaper reporters from the Asahi were also encouraged to open official Twitter accounts, converse with the audience and debate with their peers and competitors on-line.

Albeit limited, these actions are transforming the culture of news production, gathering and gatekeeping functions. Based on Japanese reporters interviews, my research focuses on these newly emerging participatory practices and the challenge they present to professional ethics and ideology. Employing concepts as user generated content, social curation or big data manipulation, Japanese reporters attempt to redefine journalism in order to reclaim their credibility and jurisdiction at a time of crisis and uncertainty.

#### *Muslims Social Exclusion in Canada and France: Does National Context Matter?*

This paper compares the experiences of Muslim minorities in three contexts: France, Quebec, and English Canada, and in so doing helps illuminate a number of issues of significance to current debates on immigration and multiculturalism, including the role of public attitudes, national integration 'models' and advantages of traditional 'nations of immigration' over recent European experience, and language and culture. The rise of an anti-Muslim sentiment in most of Western European societies, and especially in France, has not reached the same level in Canada, however Quebec's is clearly distinctive in this regard and more like France. How these differences among public opinions and in political discourses affect social integration prospects of Muslim minorities in the three settings? Both quantitative and qualitative data are used. On the quantitative side, for France the new government-mandated "Trajectories and Origins" (TeO) survey conducted in 2009 (over 21000 interviews) overcomes many limitations in existing statistics for identification of ethnic minorities. The comparable Canadian source is the "Ethnic Diversity Survey" conducted in 2002 by Statistics Canada (over 42000 interviews). The paper also draws from structured encounters between Muslims and non-Muslims conducted in Paris, Montreal and Toronto.

**REMES, JACOB\*** (SUNY Empire State College, [jacobremes@gmail.com](mailto:jacobremes@gmail.com))

#### *Transborder Disaster In The Progressive Era*

What can disaster teach us about diaspora? What can diaspora teach us about disaster? This paper explores two early 20th-century disasters in the U.S.-Canada borderlands. One, the Halifax Explosion of 1917, took place in a region that sent migrants south to the United States; the other, the Salem Fire of 1914, mostly affected French-Canadian immigrants to the U.S. and their descendants.

Each disaster illuminates experiences of migration and diaspora. The Salem Fire—which started at a rickety patent-leather factory and spread through the tenement district, eventually rendering 18,000 homeless or jobless—shows the relative unimportance of the Franco-American diaspora to the lives of its members. Contrary to what the historiographical literature would have us expect, Franco-American survivors mostly stayed near Salem, going neither to other New England centers of the diaspora nor back to Quebec. Local and regional communal organizations did little fund-raising or relief work. In contrast, the Halifax Explosion—which began as a fire on a munitions ship, killed 2,000, and left about 25,000 homeless or jobless—shows the importance of the Nova Scotia diaspora. Nova Scotian migrants to the "Boston States" donated money for relief and through their donations built a transnational political community that sought to influence relief and recovery efforts.

Likewise, attention to diaspora and migration can help us better explain the experience of disaster. As Erikson (1976) and others have recognized, displacement is a key trauma of disaster. Prior "displacement"—that is, migration—means that disaster refugees have more access to aid from outside the affected community and have a greater willingness and ability to relocate. These two historical disasters help shed light on the uses of diaspora and migration in disasters' aftermaths.

#### *Intergenerational Coresidence and Electricity Consumption: Age Effect, Retirement Effect and Scale Economies Effect*

Many studies have found that, even in the most modernized urban areas in China, intergenerational coresidence still account for a large proportion. Intergenerational coresidence, low retirement age, high female labor participation rate can make the household activity and the related energy consumption patterns

different from western countries. In this paper, we analysis the impact of inter-generation coresidence on energy consumption. Taking electricity as an example, we find that there are significant differences between intergenerational coresidence household and single generation household. electricity usage of single generation household is much higher than other intergenerational coresidence household. Also, the variance in single generation is much larger than others. We pooled data from the Chinese Family Panel Studies (CFPS) and used OLS regression model to decompose "Age effect", "Retirement effect" and "Scale economies effect". The decomposition model shows that (1) the presence of "Scale economies effect", which means that the household per person electricity usage declines not only when household members increase, but also when intergenerational household members live together; (2) "age effect" and "retirement effect" can be found that female over 50 years old live in a household can increase household per person electricity consumption, and all the other age-gender-specific group live in a household can reduce household per person electricity consumption, especially for male at the age of 30-40; male consume less electricity in household than female at all age group, except for age 10-20. Energy policy makers can benefit from better understanding of these effects.

#### *The Statistical Construction of Alterity: Governing National Population By Numbers in France and Germany (1860-1900)*

This paper is aimed to contribute to the history of statistics as science but also as governing tool (Foucault 2004). This abstract explores the role of official statistics in the nation building process in the second part of the 19<sup>th</sup> century in France and Germany. Following the analyses of Desrosières and Foucault the study asks how science produced "imagined communities" (Anderson 1983) by using and constructing statistical categories on migration. By doing that official statistics contributed to product differentiations between national and foreign populations, which both aim to be governed differently.

In the first step I will argue that the historical development of official statistics in the 19<sup>th</sup> century in France and Germany led to its use in both countries as a governing tool to administrate population, but in different national ways. In the second step the paper recontextualizes and deconstructs the statistical categories of foreigners and citizens, to show how official statistics took part in the historical process of nation building.

Scientific journals (*Journal de la Société de Statistique de Paris*, *Zeitschrift des königlich preussischen statistischen Bureaus* and *Allgemeines Statistisches Archiv*) between 1860 and 1900 form the empirical basis of the study. About 160 articles on migration statistics have been qualitatively analysed in order to sketch the statistical discourse about migration as well as the discursive construction of German and French nations by statisticians.

The author gratefully acknowledges the financial support of the Scientific Commission of the IEP Grenoble, the Doctoral School SHPT of the University of Grenoble and the Potsdam Graduate School.

**RENARD, MARIE-CHRISTINE\*** (Universidad Autónoma Chapingo, [mcrenard@gmail.com](mailto:mcrenard@gmail.com))

#### *Behind the Label: Always Fairly Traded?*

Since Fair Trade entered the mainstream market, a label symbolizing the quality of being "fairly traded" has mediated between the producers and the consumers instead of the more direct relationship existing when fair trade was an alternative trade organizations business. With the lengthening and a larger opacity of the commodity chain, the label is supposed to give information and a guarantee to the consumers about the conditions of trade offered to the producers. A system of standards and certification has been developed to deliver the label.

On the other side, as the literature on Fair Trade demonstrates, the corporations have developed multiple strategies to occupy the promising market niche that fair trade represents, through favoring competing labels that induce consumers' confusion or being themselves certificated by the fair trade institutions for a small part of their purchases.

Based on a case study in the Sierra Madre de Chiapas, South of México, the papers pretends to demonstrate how a single label, the Fair Trade International label (or FLO), covers (or hides) very different and opposite realities on the side of production and supply: on one side, autonomous cooperatives of coffee peasants, that have sold under Fair Trade conditions to Alternative Trade and Fair Trade Organizations in the North for long time; on the other side, producers organized and financed by one of the largest coffee trade corporations, engaged in a multi-label strategy in order to occupy all market niches, that buy up their coffee to be sold under the FLO label.

## *L'identité Entre Construction Et Renonciation. Réflexions De Ernesto De Martino Et Georges Devereux Sur La Sexualité Dans Une Dimension Transculturelle*

L'anthropologue italien Ernesto de Martino (1908-1965), dans sa vision historiciste du rapport entre psychisme et société, considère le sujet humain comme un produit historique dont les origines plongent dans ce qu'il appelle le « monde magique ». L'existence d'une frontière stable entre l'individu et le reste du monde est, pour de Martino, loin d'être un fait établi mais caractérise le monde occidental, qui a dépassé le phénomène de la « labilité de la présence » et dont l'angoisse face à la dissolution (il appelle *coironia* ces états psychiques d'« identité indifférenciée » qui hantent le monde magique) est désormais circonscrite à des situations bien précises (l'acte sexuel, la mort).

Georges Devereux (1908-1985), élève de Marcel Mauss et fondateur de l'ethnopsychanalyse, étudie de son côté la constitution d'une « identité intégrée » et théorise la possibilité d'une « renonciation à l'identité », comme un stratagème volontaire d'autodéfense psychique.

Je proposerai une analyse comparative de la notion de construction de l'identité chez de Martino et Devereux, et son corollaire, la perte de l'identité pour le premier, versus la renonciation à l'identité pour le second. J'essaierai d'élucider en particulier la place qui est faite tout au long de leurs écrits à la dimension de la sexualité, qui est traitée dans une perspective transculturelle par ces deux contemporains, mais qui est abordée selon des angles différents. En reconstruisant entre autres la réflexion sur la pudeur et le plaisir sexuel développée par de Martino, celle sur la déviance sexuelle chez Devereux, je voudrais souligner l'originalité et la complémentarité de la contribution de ces deux théoriciens.

## *Elites of São Paulo and Their Varied Relationships with Public Space*

The paper examines specific areas in São Paulo where elites cohabit with poorer populations and investigates the different ways they mediate this physical proximity. Our findings indicate that the relationships emerging from these dynamics vary from complete appropriation of public space by the elites to negotiation with other cohabiting social groups.

Until the 1970s, São Paulo's elites lived in the center of the city. Although they were one of the actors in the metropolis' macro-segregation configuration, the local literature traditionally emphasized the formation of urban peripheries inhabited homogeneously by poor populations. Recently, however, both quantitative and qualitative research have eloquently pointed to heterogeneous living spaces in São Paulo, indicating that portions of the elite have scattered throughout the metropolis, while others have stayed in the center.

The elite's varied choices of housing location since the 1980s led to different impacts on public space: some of the groups have closed streets with gates and walls; others have banned sidewalks, and so forth. At the same time, some of the groups that stayed in the center have not materially sealed off contact with other social groups. Therefore, our aim is to understand how elites view contact with other populations and which role public space plays in the establishment or avoidance of such contact.

We take three methodological steps: (a) using Geographic Information System, we select areas that are inhabited by the 10% richer extract of the population according to the 2010 Census data, provided that these areas also contain poorer populations; (b) conduct and analyze in-depth interviews with members of the elites and label them into groups according to shared lifestyles, as well as social, political and economic insertion; and (c) proceed to describe the relationship each elite group establishes with neighboring populations, focusing on the role of public space.

## *Mobility Policies in São Paulo: Redistributive Strategies Towards the Public Transport*

The paper focuses on a redistributive strategy that attacks poverty on one of its aspects – the impaired access to urban resources, specifically to mobility. It investigates two locally-designed São Paulo policies aimed at redistributing road space towards the public transport to make bus users travel faster and at lower costs.

While Brazil has been redistributing income towards the poor through a federal Conditional Cash Transfer policy, its poorer metropolitan inhabitants are still submitted to lesser-quality urban services, mobility being one of the most critical. Analyses of the 1987, 1997 and 2007 Origin/Destination survey conducted in the São Paulo Metropolitan Region show a positive and significant correlation between higher incomes and automobile use. According to the same data, travel

time for public transport users has been, on average, double the time it takes for car riders to move in the city. Automobiles take up more than 80% of road space in rush hour in São Paulo.

Data indicate that the two policies investigated here have redistributed road space and travel speed towards buses. The Sistema Interligado (2001-2004 administration) focused on the implementation of a BRT (bus rapid transit) network while introducing an integration system that allowed fixed-fare multiple-bus riding. The *Dá Licença para o Ônibus* (current administration) has implemented more than 200 kilometers of exclusive bus lanes and claims to have reduced travel time on these lanes by half. Both policies suffered from political and institutional setbacks, as the paper will detail.

The role of transportation in accessing other urban-life goods has been eloquently described as crucial by European literature. Research on the subject has been scarce in the Global South, however. With empirical data on mobility in São Paulo, this paper aims to make a contribution to the research agenda on strategies that go beyond the redistribution of income.

## *Information Sharing in Contemporary Operations: Lessons from Special Operation Forces*

Due to the complexity of contemporary operations, efficient information sharing has been identified as one of the main challenges of multinational coalitions. Today's operations are conducted by military personnel from a diverse background often operating in a foreign environment alongside host nation military and police forces. Drawing on the experiences of the special operations community in "counter-network operations" in Iraq and Afghanistan, some western military organizations are capturing the lessons of these units. By flattening their command structures, leveraging state-of-the-art technology and adopting a mindset of "need to share" instead of "need to know", these organizations strive for a shorter "sensor to decision time". Military organizations, while experimenting with the new possibilities of information technology such as Secure Video Tele Conference (SVTC) and collaborative chat rooms, at the same time are re-learning the importance of the human dimension. The age-old lessons of mission command still apply. The commander giving broad guidance and trusting the judgment of his subordinates seems to be the only alternative. This paper examines these trends in information management in modern military command centers and puts them in a broader societal and cultural context.

## *How the Radical Right Manages Internal Democratization: A Case Study on the French National Front*

The French radical right party "Front National" has proven responsive to new trends adopted by political parties such as the introduction of functional alternatives to party membership and the expansion of intra-party democracy. Our paper proposes to describe this phenomenon and to analyze its effects on the internal party economy.

The choice of an internal election to select a new president in 2011 was an absolutely new development in a party characterized by centralization, verticality and a great degree of control of the president and executive board. It generated visible conflicts at all party levels, from the executive board to the local federations and the grassroots members, resulting in a significant turnover of executives at different levels in the following elections.

Based on a methodology using archive research and interviews with both party members and executives, we show that despite the controversies that surrounded it, the introduction of this highly democratic process progressively emerged as an important tool enabling the new president, Marine Le Pen, to keep the organization under control. New faithful executives have been promoted at the national and local level.

The creation of new satellite organizations remaining independent from the party but named after its leader appears as an attempt to reach new non-member supporters while boosting party personalization and the president's legitimacy; the president's election by party members has fulfilled similar objectives.

These organizational responses have been assimilated in the party legacy and remain coherent with the populist tradition promoting a direct relationship between the leader and the people, and characterized by a strong loyalty and dedication to the leader. Hence, this internal democratic process has not changed the party's routine decision-making process in the least; on the opposite, it has arguably reinforced the typical organizational model of a radical right party dominated by its leader.

*The Image of Male Immigrant in Radical Right Parties' Discourses:  
 A Case Study on the French National Front*

Based on a qualitative study (semi-structured interviews with party executives, analysis of public speeches, parties' programmes) and using iconographical analysis of party posters, this paper describes the construction of the threatening male immigrant in the discourse of the main French radical right party "Front National" in the recent years. Analyzing how the otherness is constructed offers ways of understanding the symbolic boundaries of the national community drawn.

Immigration is criticized for three reasons: immigrants come from specific cultural backgrounds which cannot be integrated into the French one, male immigrants especially are connected to delinquency and represent a threat for the welfare state.

Their cultural background is principally characterized by religion. FN leaders draw a strong –often implicit– link between immigration and a risk of "islamization" of the French society. If FN executives avoid direct criticism, Muslims are associated to "communitarianism" and events from the news are used to stigmatize them. Those immigrants cannot be assimilated and hence represents a threat for national identity, and for European culture defined by Christian legacy.

Male immigrants are related to insecurity and "gang leader", systematically associated to poor suburbs subjugated by delinquency. Legacy of colonialism and animalization can also be observed since male immigrants are described as primitives, brutal, uncivilized people living in "ghettos" dominated by the "law of the jungle". Since the leadership of the new president, this image has been reinforced by a criticism of their authoritarianism and violence against women in order to reach new women voters.

Unemployed, benefiting from social and health assistance, ready to welcome their families and many children, male immigrants are taking advantage of the French welfare state. Based on an opposition to cosmopolitanism and multiculturalism, the risks of being dominated by an overwhelming number of illegal immigrants and asylum seekers are constantly dramatized in FN discourse.

*On Weather Disasters and International Migration: Empirical  
 Model and Worldwide Forecast to 2060 Under Business As Usual*

Weather Disasters (WDs) have played a role in promoting internal and international migrations in a number of episodes, but it is unclear if they play a systematic or idiosyncratic role. Part of the problem is that the statistical literature on migration has essentially ignored their impacts. This research question is important, for the intensity and frequency of WDs are expected to grow due to global warming, and there are reasons to suspect that large waves of immigration may lead to violence between natives and newcomers in destination areas. We provide a step in exploring the role WDs play in migration by developing statistical models that anticipate the potential for heterogeneous migration responses to disasters and policy levers that might modify these responses. The unit of analysis for our models is the country pair- or dyad-year and we employ panel data for bilateral migration flows between 190 countries, from 1980 to 2009. We use the estimated model to develop a conservative forecasts for the total number of people that might migrate worldwide due to WDs as climate change progresses to 2060, assuming all else remains the same. Finally, we examine implications of our findings for illegal immigration, the possibility of violence between native and residents in destination countries, and adaptation and mitigation policies.

*Competitive Edge of Migrant Filipino Teachers in Selected  
 Countries*

Recent history tells us that a number of Filipino teachers have extended their territorial milieu in teaching from the Philippines to various countries of Asia, the Middle East, and North America. This paper examined the global movement and experiences of Filipino migrant teachers vis-à-vis their competitive edge in the global labor market. It looked into the standards and requirements for teachers of receiving countries vis-à-vis the qualifications of the Filipino teachers as a result of institutional competencies of Teacher Education Institutions (TEIs) in the Philippines. Most importantly, it explored as well the phenomena of gendered migration. As the Philippines looks forward to be more competitive, it is important to analyze the nuances of what makes a Filipino teacher globally competitive. Results of this

research could be a good benchmark for improving the quality of teachers that the country produces.

There were four important migration phenomena about Filipino Teachers that were explored in this paper. First, it surveyed the migration and employment profile of teachers who usually worked in abroad as teachers. Demographic and socio-economic profiles were also dealt with in this paper. Second, it analyzed the experiences of teachers as regards their motivations in working abroad, finding and applying for teaching jobs, teaching experiences, and adaptation and adjustments in a foreign country. This part was highlighted by competitiveness level of teachers and their perceived losses and gains while teaching abroad. Teacher's competitiveness was indicated by their salaries, promotions, incentives and other benefits received due to their services to the host institutions. Third, the standards and required competencies among teachers from home country and receiving country were analyzed. Lastly, this paper examined as well the competitiveness of Filipino teachers using gender lens.

*Heritage As a Global Counter-Development Strategy to Fight  
 Transnational Mining Projects in Wirikuta, Mexico*

Wirikuta is a vast desert located in Northern Mexico. It is the place in which Wixaritari (Huichol) ethnic group have been depositing votive offerings for centuries in order to reproduce their worldview, named one of the purest amongst American natives since colonization. Wirikuta also hosts relevant desert flora and fauna. The region is protected as a Sacred Natural Site and Protected Natural Area by state laws; however its conservation is currently being threatened by the plans of two Foreign Direct Investment projects concerning gold and silver mining. Different kinds of resistance movements have appeared. Some of them have focused in creating global counter-development strategies to preserve Wirikuta from harsh environmental impacts related to large scale mining. A notorious resource used in struggle is to get Wirikuta inserted in the list of World Natural and Cultural Heritage Sites before Unesco. Local actors believe this action can stop the extractive projects. Due to global pressures Mexican government has initiated and supported a counter-proposal, which would lead Wirikuta to be enlisted under the Intangible Heritage scheme, putting aside the relevance of matter (nature) in conflict. This would give way to mining companies to drag the metals with any method, obviating particularities of territory and culture. By analyzing this case we aim to elaborate on: the role of institutional heritage in conflictive contexts, Unesco's role and limitations of heritage schemes, state trends in solving –or not– local conflicts and social innovations that actors perform in policy-culture realms in order to preserve the environments they live in.

*Comparative Sociology As an Inquiry and As a Teaching Discipline:  
 An Attempt of Comparative Analysis*

Andrey V. Rezaev,  
 Chair, Comparative Sociology Department,  
 St. Petersburg State University,  
[anrezaev@yandex.ru](mailto:anrezaev@yandex.ru)

Paper to be presented at the XVIII ISA World Congress, Research Committee on Comparative Sociology, RC 20

Session: Comparative Sociology: Present Status and Future Directions

The exponential growth in affirmation of or claims to comparative research have given rise to multiple discussions in recent years. The paper is an opportunity to analyze a very old yet really stimulating topic in scholarly production.

It explores into understanding the 'similarities' and 'differences' between "comparative analysis", "comparative method" in social sciences, "comparative sociological studies", "comparative sociology". It tries to show the real novelty of a 'comparative sociology' in a nowadays sociological business.

The paper examines the reality of comparative sociology in the classroom as a teaching discipline and its specifics as a scholarly enterprise.

The paper argues that a broad discourse on the role of comparative sociology for the intellectual life has not yet occurred in academia, despite many valiant efforts to help it take place.

The paper has two foci: the first is theoretical and methodological; it tries to depict general theoretical frames, methodological orientations for the current debates on "comparative analysis/method/sociology" issues in nowadays sociology.

The second aims to reposition comparative studies' production within policy practices. The output of academia is no longer confined to a pure intellectual/theoretical debate but is increasingly part of a current policy activity, a part of a broader public domain.

The specific data and field research materials come from the longitudinal researches developed by the research teams and teaching instructors during last

seven years (2006 -2013) at the International Center for Comparative and Institutional Research (InterComCenter) and Comparative Sociology Department of St. Petersburg State University, Russia.

#### *Macro Conditions of Class and Micro Patterns of Social Interaction: The Problem of Studying Labor Migrants' Discontent in the Time of Economic Instability*

Paper to be presented at the XVIII ISA World Congress, Research Committee on Sociology of Migration, RC 31

The paper aims to focus not only on the limited control over migrants' external situation in host societies, cultural discrimination or accessibility to legal protection, but to examine the problem of migrants' everyday life practices in their uncertain condition, specifically in the time of economic instability. We try to conceptualize this emergent experience within the framework of the sociology of emotions by labeling it as 'discontent', which is understood as a long-term emotion, (a) determined by the structural conditions, (b) created by and transmitted through the everyday social interaction, and (c) capable to result into collective action. This analytical move allows us to study 'discontent' at both macro- and micro-levels without losing its specific content.

In terms of theoretical and methodological foundations the research is oriented toward ethnographic institutionalism. We try to provide theoretical groundings and empirical evidence to justify an approach that link the micro experiences with the macro institutional arrangements through the detailed studies of migrants' everyday life practices.

The data come from the three longitudinal field research Projects jointly supported by Vietnamese state foundation (2008-2010), CARI - Greece (2010-2012), and Russian state foundation - RGNF (2013-2016). The field researches dealt with everyday life practices (including "alternate practices") of transnational labor migrants in Athens, Greece and St. Petersburg, Russia.

Milwaukee, [rezvani2@uwm.edu](mailto:rezvani2@uwm.edu))

#### *Constructing the Virtual and Material Public Spaces: The Cases of "We Are All Khaled Said" Facebook Page and Tahrir Square during Egypt 2011 Revolution*

Social movements use urban spaces for their representation. They demand a spatial setting for their full effectiveness. However, spatiality of social movements has entered into a new phase since the mid-1990s. The prevalence of the Internet as part of the daily lives of people has challenged traditional theories of social movement and political public space. Recent revolutions and social movements in the Middle East and North African countries, the Arab Spring, and the protests in reaction to the economic crisis and austerity programs of governments in different parts of the globe have created a new phase of research on the relationship between online activism and social movements. Scholars focus more on the role of social networking sites (SNS) and try to articulate their contribution to social movements. This essay has argued that Hannah Arendt's conception of public space can contribute to the definition of material and virtual public spaces in contemporary social movements. By investigating Tahrir Square as a material public space and 'We are All Khaled Said' Facebook page as a virtual public space during the Egypt 2011 revolution, this essay has studied the relationship between these spaces and the events of the revolution. It has showed that Arendt's concepts of action and speech can theorize the virtual and public spaces of the Egyptian revolution.

#### *The Social Clinical Approach and Social Change. /La Clinique Du Social Et Le Changement Social*

Analysant différentes formes de recherche et d'intervention en sociologie clinique, le récit de vie de collectivité, la psychodynamique du travail, les pratiques autobiographiques, nous explorons les possibilités et les limites de ces pratiques en regard d'une problématique du changement social. Sont présentées brièvement

des recherches en psychodynamique du travail auprès du personnel dans un centre de santé pour personnes âgées dépendantes, auprès du personnel d'une prison; des recherches sur des récits de vie dans des collectifs communautaires; des expériences de formation sur le roman familial et les trajectoires sociales. Le thème central de cette analyse est l'importance de la conscientisation personnelle et collective que permettent ces expériences et la nécessité de prendre en compte des facteurs institutionnels favorisant le changement. Cela conduit à une réflexion du type épistémologique sur l'échange des savoirs entre chercheurs et partenaires et la place du savoir critique dans ces expériences.

Through the analysis of a variety of action research practices in clinical sociology, like collective life stories, psychodynamic of work situations, autobiographic practices, we examine the possibilities and limits of those practices regarding social change issues. Are then briefly presented some researches in psychodynamic of work situations, workers in an aging and dependant persons health center, personal of a jail; researches using collective life stories in community groups; training experiences using the family novel and social trajectories approach. The central focus is the analysis of the consciousness raising process, personal and collective, as a result of these experiences, and the necessity to take into account structural or institutional factors facilitating change. Then there is need for and epistemological thinking about knowledge exchange between researchers and their partners and the central role of critical thinking in those experiences.

#### *Halal Katsu Wraps and Jerk Chicken Bagels - the Guts of a Postcolonial City*

In recent years there has been a growing recognition and celebration of culturally hybridised dishes as part of a Northern European and American street food revolution. As this paper discusses, this hybrid characteristic is nothing new for a port city such as London, which, for the majority of its history, has cooked up an assortment of transcultural dishes. Through a consideration of everyday lunches such as the halal chicken katsu wrap, jerk chicken bagels and the mince sandwich pakora, this paper examines the relationship between life in the city's margins, taste, transculturation, adaptation and entrepreneurship. Attracting some of the longest queues of the inner-city's urban food courts, the popularity of such dishes will be considered in terms of both economic necessity (offering the most calories for the least money) but also as important cultural meeting points, a role that is derived through histories of global exchange. Taking the increasingly ubiquitous chicken katsu curry wrap as its main focus, the paper reveals the origins of the 'authentic Japanese' dish amongst early twentieth century dialogue with European and American tastes. The more recent proliferation of the dish through the lunchtimes of working Londoners is related to the affordances delivered by this early moment of intercultural exchange. The paper also considers the importance of this earlier moment of cultural exchange in the light of the recent rise of Asian economic and cultural influence in the city. Through tracing the evolution of this dish and a taste for it the paper demonstrates the transformations local and global culinary cultures undergo as entrepreneurs strive to accommodate the super-diversity of globally embedded cities. Alongside the jerk bagel and deep fried mince sandwich, the importance of chicken katsu curry wraps will be emphasized for what they lend to an understanding of the complex genealogies of contemporary urban culture.

#### *Spend It As I Tell You, NOT As I Do: Children, Families and Money In Different Socio-Economic Contexts*

This article aims at contributing to a body of work about children and inequality, exploring the importance of socioeconomic context and social capital for understanding the ways in which money is perceived, obtained and used by children. Socioeconomic context seems to influence not only the level and structure of household expenditures but also how money and consumption are valued and understood. Social capital conditions the access to economic capital and embeds the practices of consumers and their social networks, concurring to various forms of inequality. Alleged contrasts, especially between middle and working classes, in terms of money management, consumption priorities and postponement of gratification have been debated. It seems thus relevant to investigate if this presumable relation applies to children and why. Do children from different socio-economic contexts reveal the traits that have been attributed to the socio-economic categories, namely class and income levels, to which their parents and households belong? Authors have considered the importance of socialization for developing notions of money and consumption and their subsequent use in adulthood and theories of consumption have mentioned the importance of social capital, social reproduction and habitus in this process. The material and symbolic world of

children is worth closer analysis as it may fall beyond the categorizations usually applied to adults. To this end, a mixed methods research project with 245 children attending different primary schools in Portugal – one private school targeted at upper class children and one state-sponsored school located in a working class area – was developed. The results revealed significant differences by school and household typology.

#### *What Makes Low and High Income Families Apportion Their Children's Education and Care to Early Childhood Education?*

Why do families apportion their children's education and care to Early Childhood Education? Are there motivational differences between low and high income families? Prompted by these questions, research was carried out on four families - being 2 low income families and 2 high income families, who enrolled their children in Early Childhood Education in Brasília, Distrito Federal, Brazil in 2013. Two interviews were held with parents addressing both family and Early Childhood Education topics. Using the concept of family arrangement (FONSECA, 2005) as a basis - which apart from the nuclear family, encompasses several other family structures and the idea that Early Childhood Education in Brazil is not only the parent's right but the child's, one can observe tendencies towards change in the standard of education for children aged 0 to 3. Previously exclusive to the family environment, the tendency now considers environments beyond the domestic parameters without considering the family a bearer of any social pathology (ROSEMBERG, 1995). The care and education process is neither natural nor exclusive to families. Given this scenario, it is possible to highlight some reasons for this change like alterations in peer relationships, modifications in the perception of children aged 0 to 3, universalisation of education in an institutional context - prior to mandatory formal education, co-responsabilisation of the State in care and education as well as socialisation processes beyond the family environment. This research discusses the reasons behind families apportioning their children's education and care to Early Childhood Education and seeks to pinpoint explanatory categories for the changes in the standard of education and care of young children. The final intention is to identify motivational convergences and divergences between low and high income families.

#### *Music As a Factor of Social Cohesion: At What Conditions?*

Music as a factor of social cohesion: at what conditions?  
 Music is often considered a universal language. As the most abstract of all arts it can easily be listened without considering the language as a boundary to its appreciation. As every artistic expressions is connected with a given social context, but also music has a code belonging to a certain relation to language and its sound. Each social context has a unique relation with imagination and the role of the arts in such context is the outcome of such peculiar relationship. Besides cultural and aesthetic values, every artistic expression has a potential social function: art and music can create a sense of belonging improving social cohesion as well as its contrary; art can also contribute either to the change of cultural taste opening the way to new social order conceptions, or confirming traditions and identities. Moreover, music as culture can play a crucial role in the process of understanding cultural dynamics acting in a given place. According to the results of a field research carried out in a trilingual land: "Music culture and social function of music in Alto Adige", this paper will go through a possible typology of the social role of the music, as well as the relation between language and music starting from the different repertoires, traditions and pedagogies in the three different

languages (Italian, German and Ladin). Is it possible to trace a social relation to music according to the different traditions and values? Is it possible to understand the culture of a place also through its music choices? Is music a generation factor of cohesion or a culture factor of cohesion? Can music preferences be influenced by the dimension of a society/community and its dominant language?

#### *Workshop: Stolen Bodies, Reclaimed Bodies*

Project Re+Vision is a Canadian Institute for Health Research funded research project that uses arts-based research methods (digital storytelling and drama workshops) to dismantle stereotypical understandings of disability and difference that create barriers to healthcare. We have completed two years of our project and have generated an impressive archive of over 70 digital stories from people living disabilities and differences and healthcare providers. The project emerges from a representational history of disabled people can largely be characterized as one of being put on display or hidden away. People living with disabilities and differences have been, and continue to be, displayed in freak shows, medical journals, charity campaigns, and as evil or pitiable tropes in novels and films. At the same time, disabled bodies have also been hidden in institutions, hospitals, group homes, and generally removed from the public eye. In his essay from which we borrow our title, Eli Clare writes, "Just as the disabled body has been stolen, it has also been reclaimed" (2001). In our proposed session, we screen and analyze a selection of digital stories on visible and invisible differences made through Project Re+Vision. We examine the ways bodies and experiences of difference are reclaimed in these films, which reveal the complexities—the pride, shame, pains, struggles for rights and wellness, and joys of community—of living with disability and difference. By pairing and sharing stories made by individuals and health providers on experiences of and encounters with disability and difference, we examine how our project helps to burr boundaries and breakdown barriers between the disabled and non-disabled worlds. The interweaving of these stories encourages reflection on how failure to fit with ablest standards of normal might open up other possibilities and deepen appreciation of the uncertainty and ambiguity that is the basis of life.

#### *On-Line Communities, Real Life Social Networks and Mental Well-Being in Senior Citizens: Results from a Two-Wave Survey in Three European Countries*

It is widely assumed that going on-line and joining on-line communities will boost well-being and quality of life in senior citizens. However, the quantitative empirical evidence on this issue is scarce. Many studies either utilize a qualitative design or suffer from methodological shortcomings (e.g., cross-sectional design, small sample sizes).

This paper reports results from a two-wave survey which has been conducted as part of the Third Age Online-Project (TAO) in the Netherlands, in Germany and in Switzerland. The research aimed at analyzing the psychosocial consequences of going on-line and of joining social media. In the first wave of the survey, more than 3,000 participants could be recruited, and were then categorized as either 'onliners' or as 'offliners'. The questionnaire contained sociodemographic variables, real life social inclusion variables and Internet usage variables. Mental well-being was assessed using the 'Mental Health Index -5' (MHI-5). Logistic regression models were used to analyze associations with Internet usage and with social media usage. After one year, the same participants were again approached to provide data for the second wave of the data collection. 670 on-liners provided sufficient data that could be matched with the wave one survey. Logistic regression models were again utilized to find out which variables from wave one would serve as predictors of wave two outcome indicators (mental well-being, real life social inclusion).

The results of the wave one data revealed that senior on-liners were very well socially included and had a high level of mental well-being. However, in the longitudinal analyses, Internet and social media related variables did not predict mental well-being and social networks. It was concluded that going on-line and joining on-line communities may, at best, help to maintain quality of life and social networks rather than enhancing seniors' psychosocial conditions.

#### *Verbal Aggression Against Health Care Staff – Mixed Methods Study*

Clinical staff in various settings has to cope with aggressive behavior from patients and visitors. In recent years, physical aggression has received a lot of attention and many prevention programs are available throughout Western societies. However, verbal aggression against health care staff is much more prevalent than physical aggression.

This paper reports on a mixed methods study which was conducted in the following settings in Germany: mental hospitals, forensic hospitals, acute care hospitals, nursing homes and residential homes for mentally ill residents. Eight focus group interviews were conducted with a total of 74 staff members (nurses, physicians, social workers, psychologists and nursing assistants). The interview guide contained questions about any kind of verbal aggression which had been experienced, about the differences between physical and verbal aggression and about the coping strategies of health care staff. Subsequently, 1,053 staff members from the various settings participated in a survey which focused on the frequency of verbal aggression and on the severity of aggressive acts.

The results revealed that verbal aggression is a very common phenomenon among health care staff. The following types of verbal aggression were identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff. 16 percent of staff reported having experienced verbal aggression on a daily basis during the six months prior to the survey data collection date. Threats were experienced as being the most severe form of verbal aggression, followed by refusal of cooperation. On average, verbal aggression is rated to be more severe than physical aggression.

Currently, prevention programs in healthcare institutions are focusing mainly on physical aggression. This focus needs to be altered by teaching staff how to cope better with verbal aggression.

#### *Religion in the Public Arena in Southern Europe: Comparing/Contrasting Italy, Spain and Portugal*

Observers of religious phenomena often tend to lump together Latin countries with Catholic roots – Italy, Spain and Portugal – excepting France, usually considered a separate case, a model of the secular State and of the society which characterizes it. Perhaps this is because there was in their past an epoch in which Catholicism exercised a hegemonic role in society, based on a quite normative ecclesiastical magisterium, over a widespread national network of parishes and a population totally exposed to clerical influence, after the pattern of militant commitment capable of getting a grip on the most dynamic and vital social sectors. Indeed, the these countries – in which Catholic culture is still prevalent – follow different paths through advanced modernity, and these can be seen in the forms assumed by the relationship between religion and civil society. In Italy, that relationship has in recent decades undergone three key moments which have paradoxically restored the Catholic church and its world to the centre of the public stage. This development was by no means inevitable, as is evidenced by the examples of Spain and Portugal who – although sharing analogous dynamics – have reached outcomes different from those of Italy. Drawing on evidence from an data investigation in the framework of the GERICR (Groupe Européen de Recherche Interdisciplinaire sur le Changement Religieux) project, the paper compares (and contrasts) three Southern European countries by analysing the evolution of the relations between religion and public sphere.

#### *Cecilia Ridgeway: Framed by Gender: How Gender Persists in the Modern World*

In an advanced industrial society like the United States, where an array of processes work against gender inequality, how does this inequality persist? Integrating research from sociology, social cognition and psychology, and organizational behavior, *Framed by Gender* identifies the general processes through which gender as a principle of inequality rewrites itself into new forms of social and economic organization. The book argues that people confront uncertain circumstances with gender beliefs that are more traditional than those circumstances. They implicitly draw on the too-convenient cultural frame of gender to help organize new ways of doing things, thereby re-inscribing trailing gender stereotypes into the new activities, procedures, and forms of organization. This dynamic does not make equality unattainable, but suggests a constant struggle with uneven results. Demonstrating of how personal interactions translate into larger structures of inequality, the book offers a distinctive analysis of the troubling endurance of gender inequality.

**RIEBLING, JAN\*** (Otto-Friedrich University Bamberg,  
[jan.riebling@uni-bamberg.de](mailto:jan.riebling@uni-bamberg.de))

#### *Structural Coupling of Financial Markets and Media Coverage - the Case of the State Debt Crisis*

In our project we focus on interdependent processes between financial markets and media coverage during times of financial turmoil. The main goal is to identify explanations for price movements on financial markets that are beyond the comprehension of crisis as a problem between the state and the market. Thus, it is not the question whether there is too much or too little market regulation, instead we emphasize the importance of information processing on financial markets and the subsequent entanglement of financial markets with mass media. From a systemics perspective, these processes are part of the structural coupling of two social systems, which perceive and implement new information, but only through their own systemic logic.

By examining the structural coupling we reveal patterns and causalities that are crucial for the understanding of financial market coordination through mass media products and vice versa. Especially the so called "state debt crisis" and its media coverage can be empirically viewed as the cause for major changes in the configuration of the financial markets. During that process state bonds get more and more volatile, deviating from the century old long-term investment cycles. No longer are interest payments the only way to gain profits with bonds, instead, short-term speculation becomes possible due to the heavily pending bond prices of crisis states like Greece, Portugal or Spain. The starting point for those fluctuations strongly correlates with the international media coverage about the possibility that states can actually fail financially. As a consequence, traditional evidence of financial stability like macroeconomic indicators or debt ratings have no measurable impact after the crisis on the increasing bond volatility. The process underlying this development is that media publications are much faster and already incorporated in the market prices when the reactions of states or rating agencies get published.

**RIEDE, FELIX\*** (Aarhus University, [f.riede@cas.au.dk](mailto:f.riede@cas.au.dk))

#### *Towards a Science of Past Disasters*

Extreme climatic events are forecast to become more frequent in the future. This contribution argues that the past may hold clues to efficient, cost-effective, and culturally sensitive adaptations to and relief measures following such events. It is widely recognised that disasters emerge in the interplay between extreme geophysical events and the human communities affected by them. Whilst detailed knowledge of a given event is critical in understanding its impacts, an equally thorough understanding of the affected communities, their economies, ecologies, religious structures, and how all of these have developed over time is arguably as important. Many extreme events leave methodologically convenient traces in the geological and archaeological records. This contribution focuses on two volcanic eruptions that have significantly affected Europe – the eruption of the Laacher See volcano (Germany) in the 13<sup>th</sup> millennium BCE, the eruption of Thera (Greece) volcano in the early 17<sup>th</sup> century BCE and the eruption of Vulcán Ilopango (El Salvador) in the 6<sup>th</sup> century CE – to illustrate the power of a quasi case-control comparative method for examining vulnerability and impacts in the near- and far-fields of these eruptions. Although issues of data resolution often plague the study of past disasters, these limitations are counterbalanced by the access to unique long-term information on societies and their material expressions of livelihood, as well as a similarly long-term perspective on the critical magnitude/frequency relation-

ship of the geophysical trigger(s) in question. By drawing together aspects of disasters science, archaeology, volcanology and historical sociology, this contribution offers a programmatic statement and methodological roadmap for a science of past disasters that can make historically informed, evidence-based statements on general processes of cultural adaptations to climatic processes and events, and on contemporary vulnerability and impact from a deep time (historical and prehistoric) perspective.

**RIEDEL, SASCHA\*** (University of Cologne,  
[riedel@wiso.uni-koeln.de](mailto:riedel@wiso.uni-koeln.de))

#### *Drawing a Line Between Immigrants and Transmigrants*

The changes of international mobility are apparently visible in all immigration countries of the world. Today's migratory movements challenge classical concepts of labour- or forced migration theories. The pattern of permanent immigration lost its long lasting predominance in describing individual changes of location between countries. One of the most influential competing concepts in migration literature constitutes the idea of transnationalism. In this approach, individuals engage in lives, cultures, and activities in more than one country to the same extent. Although Germany is one of the main immigration countries of Europe, quantitative studies seizing the relevance of this conceptually new phenomenon are scarce. This is mostly due to the lack of data as the appropriate identification of transnationals requires multi-sited, mixed methods approaches with specific, often non-randomized, sampling procedures. But what can be done if there is no such survey at hand? This study tries to answer this question by presenting and discussing strategies of quantitatively operationalizing transnationalism with existing, secondary survey data.

In this respect, the primary objective of this paper is to discuss the strengths and limitations of a strict distinction between transmigrants and immigrants in contrast to a more continuous definition of transnational lifestyles. To this end, the research is arranged in three stages:

In a first step a multi-item measurement is developed in order to distinguish between immigrants and transmigrants in the most unambiguous manner possible. In contrast, the second step aims at accounting for gradual differences in the individuals' ways of living. To this end, a transnationalism index is constructed. Finally, results of bi- and multivariate analyses on the adaption of immigrants and transmigrants in Germany are presented. The paper closes with prospects for the future research of transnationalism.

**RIEDERER, BERNHARD\*** (University of Vienna,  
[bernhard.riederer@univie.ac.at](mailto:bernhard.riederer@univie.ac.at))

#### *Children: Pleasure or Pain? Effects of Parenthood on Subjective Well-Being*

Against the background of numerous public and academic debates on declining birth-rates and problems of reconciling professional work and family life, the present research addresses the association between children and subjective well-being. Most people believe that parenthood should make us happy. Notwithstanding, happiness research suggests that children are not important for the well-being of people living in contemporary western societies: Children might at most have a slightly negative effect on parental well-being. However, a closer look at existing research reveals that some studies report positive effects of parenthood on subjective well-being while other studies report negative effects.

The present research aims at contributing to the explanation of this variation in children's effects. Therefore, in line with social ecological theory, we identify several factors on individual level, couple or family level, and societal level that might affect the association between children and subjective well-being. The respective hypotheses are proved by means of multilevel modeling and structural equation modeling using individual data from 30 countries participating in the European Value Study 2008/2009 and couple data from a project covering three countries (Austria, Germany, Switzerland).

Results illustrate that both, factors on individual level as well as factors on societal level moderate the association between children and subjective well-being. On individual level, among other factors, the stage in one's life (age) proved to be relevant. On societal level, the welfare state based childcare system and dominant family values seem to be most important. In addition, individual level factors and processes on couple level mediate the association between children and subjective well-being. For example, the strain resulting from childcare that women feel indirectly affects men's subjective well-being via relationship conflict perceived by men. Findings are relevant to potential future parents (timing of first birth, division of work) and welfare states (childcare policy, existing norms).

### RC42-712.6

**RIEDERER, BERNHARD\*** (University of Vienna,  
[bernhard.riederer@univie.ac.at](mailto:bernhard.riederer@univie.ac.at))

#### *Parenthood and Subjective Well-Being within Couples: The Division of Work, the Relevance of Mutual Appreciation, and the Role of Partner Effects*

Sociological and psychological theories point to parenthood as means to personal development and social embeddedness, discuss its function for societal integration and highlight its meaning in structuring people's lives and providing purpose in life. But the widespread belief that parenthood promotes happiness and satisfaction with life seems to be contradicted by a bulk of research discussing problems of reconciling professional work and family life. Quantitative studies primarily report negative effects of children upon parental well-being and qualitative research often highlights that especially women are confronted with an additional burden and the second shift at home.

Current research argues that children have both, positive and negative effects on parental well-being. Analyses conducted by the author with data of the European Value Study 2008/2009 reveal that individual factors (e.g., the stage in one's life) as well as societal conditions (welfare state policy, dominant norms and values) contribute to variation in children's effects. But consequences from parenthood directly affect the couple and the relationship between spouses. Therefore, effects of children on well-being and life satisfaction should also be dependent on the spouses capability of mutual perspective taking, and their support for each other.

The present research uses data from dual earner couples with young children to analyze the mediating role of (a) the division of household work, childcare tasks, and professional work, (b) positive and negative spillover from work to family and vice versa, (c) the appreciation spouses receive from each other, and (d) relationship conflict. In addition to actor effects, partner effects are also considered. Results are in line with the qualitative research that points to the importance of giving and receiving gratitude. Furthermore, the quantitative findings support what A.R. Hochschild wrote: "If men share the second shift it affects them directly. If they don't share, it affects them through their wives."

#### *Life Strategies of Families in Marginalised Urban Neighbourhoods: Dealing with Social and Educational Inequalities*

Migration families often face challenges in Europe: unemployment issues, low income and the threat of poverty as well as an unequal education system, where children and young people are disadvantaged and consequently; their access to higher education and job perspectives is limited, hindering their chances and opportunities with regard to participation in society. These families frequently live in urban areas strongly influenced by migration movements and faced with processes of marginalization.

In our research project (within the framework of a larger, European research project), we focus on life strategies of families in marginalized urban neighbourhoods in Germany. Migration is frequently a family project, and family an important resource in dealing with educational, job-related and social challenges. In our theoretical approach, family members are seen as actively dealing and negotiating with societal circumstances and social meanings (Wacquant 2006). Their strategies are analyzed, taking relevant explanation contexts into consideration, which shape each person's scope of possibilities (Holzkamp 1983). Our research project aims to transcend beyond the deficit-oriented perspective without neglecting the social and societal challenges families have to deal with (Riegel/Yildiz 2011).

In this paper we will present analyses from biographical interviews, group discussions, and ethnographic data, on how family members describe and interpret educational pathways and which life strategies can be observed. We analyze biographical meanings and dynamics within a family and with regard to experiences centered on education, an area accentuated by the intersections of migration, class, gender and generation. First findings show that family members develop strategies and creative pathways to deal with challenges posed by everyday racism and the education system, using unconventional ways to negotiate solutions for structural challenges, demanding participation and inclusion. The ambivalences of these strategies - dealing with processes of inclusion and exclusion - within circumstances of social inequality will be discussed.

**RIEGEL, VIVIANE\*** (Goldsmiths University of London,  
[viviane\\_riegel@terra.com.br](mailto:viviane_riegel@terra.com.br))

#### *A Reflection on the Main Challenges of Comparative Research on Global Consumption Studies*

We face several methodological challenges once we are involved with comparative research. The scope of study to its phenomena demands a dialogue with writers from different nationalities, theoretical and methodological affiliations,

whose interests converge to collaborate in the comparison of different contexts. Specifically, the main discussion when comparing different contexts is whether to discover an underlying grammar to social life which is applicable globally, or to pay attention to the detail of local differences.

The complexity of social research on global consumption studies can be understood by the idea of a complex system that combines both issues related to the idea of a global culture, as well as specific characteristics concerning local contexts. Following Law and Mol (2002) ideas over complexities in social studies, it is necessary to face multiple domains and the complexity related to consumption practices that are research objects for sociology today.

Comparative research on global consumption studies faces a changing significance of empirical research, as it happens with contemporary social studies. This means that traditional methods, and the most conventional ones are increasingly dated research methods, which are unlikely to provide a robust base for empirical sociologists in the future. This is why it is important for sociologists to get involved with a 'politics of method', renewing their interests in methodological innovation, mixing methods and renewing critical reflection (Savage and Burrows, 2007).

Following this methodological discussion, the goal of this study is to discuss the main challenges of comparative research on global consumption studies, considering both the hypothesis of a global consumer culture (Ritzer, 2004) and of localization/ heterogeneity of consumption practices (Featherstone, 1991). In order to present these challenges, I am going to analyze three different research projects focused on global consumption practices that aim to compare the reality of these practices in different countries.

#### *Global Consumer Culture: A Theoretical Discussion Between The Centrality Of Consumption In The Contemporary Society and Its Possible Localizations As a Result Of Cultural Differences*

How can we understand the theoretical discussion concerning global consumer culture? Is it possible to affirm that such culture exists as global representation, central to contemporary society? Or should we consider possible localizations of consumption practices as a result of cultural differences from different individuals? Early in modern social theory, consumption has been object of discussion and, with the advent of post-modernist theory, its centrality has become a tonic in social analysis. Further, contemporary studies presented mainly two different perspectives: the centrality of consumption in society or localizations of this practice according to cultural differences. In order to understand global consumer culture, this paper proposes this theoretical discussion between both perspectives:

In the first perspective, there is a rationale that begins with modern social theorists, and their focus on production systems (Marx, Weber, Smith), and that moves to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or demonizing this practice. Post-modernists have detailed this critique in order to understand the structure of the consumer society (Baudrillard, Bauman, Lipovetsky), with consumption as the central practice of contemporary life. This centrality would also explain earlier studies that demonstrate the capillarity of consumption, not disjointed from the production system, but as a continuum that can be translated as prosumption (Ritzer).

The second perspective, present in most contemporary studies of consumption (Bourdieu, Campbell, Featherstone, Miller) has tried to steer a middle course that reconciles pessimistic classical theories with a recognition of the fact that consumption is not only indispensable, but also a domain in which people can express themselves positively in our society. They develop the notion of a consumer culture that refers to norms, values, and meanings associated with a society dominated by consumption. In this culture, there is possibility to localizations and the development of individuals with their respective differences.

**RIESS, JOHANNA\*** (BIGSAS, [johanna.riess@gmail.com](mailto:johanna.riess@gmail.com))

#### *Internet Usage and Socio-Cultural Change in Nairobi/Kenya*

Through technical improvements and cheaper access the Internet in Kenya is becoming more and more important. For many years mainly Internet cafés have been the most important source for Internet access. Nowadays there are more and more people who own a private Computer/Laptop or use their working place to access the Internet. But the most important change is the rapid spread of mobile use of the Internet in Kenya.

The Kenyan Internet- and Mobile phone market is growing fast and it cannot be ignored that thus the Kenyan society is changing. On the streets of Nairobi you can find Internet cafés nearly everywhere and you can pay nearly everywhere with M-Pesa. Mobile phone shops, repair services for computer and mobile phones and private computer colleges are an integral part of the road infrastructure.

Nearly every Kenyan has a mobile phone; for younger people it is very important to have a Facebook account.

In my research I wanted to find out what people do with on the Internet and how this is changing the life of the users. I visited three different cybercafés in

different areas in Nairobi. One cybercafé was in a big shopping mal, the second in the city centre and the third in the so-called slum area Mathare. The inequalities were obvious but it was also very surprising how widespread the Internet already was and how different the people used it.

Another aspect of the presentation will be the function of Facebook before, during and after the Kenyan election in March 2013. During the post election violence in 2007/2008 over 1100 people were killed. Everybody was watching the election 2013 with worries and tension. After the results were announced everything remained more or less peaceful on the streets but on Facebook there started an ethnic war with words.

#### *Social Inequalities in Preventive Care and Healthcare System Organization: The Case of Gynecological Cancers Screening in France*

Socioeconomic inequalities in health are high in France compared to other developed countries. This is unexpected considering that the National Health Insurance offers universal access and free care for disadvantaged people. Considering the case of gynecologic cancers screening, we intend to analyze the genesis of these health inequalities in relation to the features of the healthcare system.

Screening status was analyzed according to socioeconomic status among a random sample of 1819 women with logistic mixed models. We observed marked social gradients for cervical cancer, but lower ones for breast cancer for which an organized screening program alongside the individual one exists. However, the last prescriber was socially differentiated: gynecologists for the upper class, organized screening for the lower and GPs for the middle.

The modeling role of the healthcare system in producing inequalities through social norms it contributes to establish can be specified. Organized screening contributes to catch up patients with low social status. Gynecologists often ask for unregulated fees and receive patients with good socioeconomic level, whom they tend to overscreen. GPs are supposed to have a gatekeeper function toward specialists, but direct access to gynecologists is possible without referral. Although GPs involvement would be necessary to improve participation and lower inequalities, they lack legitimacy and tend to divest of these screenings. In addition to this suboptimal task division, information sharing and coordination between professionals are limited. This confusing situation has been settled by socio-historical processes, without any global vision of the interactions and perverse effects it would induce. Few people (patients, physicians or policymakers) are aware of the contribution of such an organization to inequalities. Despite the pressure on health funding and the bad demographic perspectives, it seems difficult to remodel professionals' routines or to re-regulate the screening of women on a more equal basis.

##### **Abstract**

The social hegemonization of the biomedical perspective in the beginning of the 21<sup>st</sup> century has been heavily criticized. But as pointed out by Kuhn (1962), criticism alone has never brought about major paradigm shifts (Kuhn 1962). Paradigm changes require a realistic, viable, research able alternative – a paradigm candidate, as Brante phrases it (2005). Therefore, one obvious question is, what the most feasible alternative to the existing neuropsychiatric modes of explanation is, and what challenges must be faced in trying to establish a viable and qualified alternative.

The dominance of certain forms of knowledge does not exist within an institutional and societal vacuum. It is produced and reproduced through political, managerial and economic discourses, institutional solutions and organizations, which should be taken into account to gain a complex understanding of the current scientific character and transformation of our knowledge, understanding and treatment of mental and social problems or social pathologies in contemporary society. Using concrete examples, I attend to focus on the close connection between the current debate about mental ailments and the treatment thereof and political ideologies and goals. Thus, the purpose is to inspire reflection on the way in which managerial forms enable the emergence of certain 'problem definitions', which in turn influence the scientific character, transformation, understanding and practice of psychiatry, at this time in history.

<sup>3</sup> Silesian University, Katowice (Poland)

Across Europe, since the late 20th century, urban shrinkage has become a normal pathway of urban development for many cities. Shrinkage results in a mismatch between supply and demand of built structures, urban space and infrastructure. Urban shrinkage impacts on almost all areas of urban life, one of them is on housing markets and the built environment. Typical for shrinking cities is a situation of disinvestment, since revenues from investments in housing are uncertain or improbable. The consequences of disinvestment in housing markets are undermaintenance, lacking modernization, housing vacancies and abandonment with subsequent physical decay. Mostly this concerns not the whole territory of a shrinking city, but distinct areas. What areas of a city are affected is dependent from the specificities of the respective local markets, the same is true for the concrete impacts on the built environment. The paper addresses specific problems related to vacancies, how they are perceived, what are typical impacts on the affected neighbourhoods and what are strategies to deal with.

Based on the European project "Shrink Smart", different shrinking cities in Northern, Central and Eastern Europe will be dealt with related to different housing markets. The paper draws on research undertaken within the EU 7 FP project SHRINK SMART (04/09-04/12; grant agreement no. 225193; [www.shrinksmart.eu](http://www.shrinksmart.eu)). The paper uses empirical evidence from Liverpool (UK), Leipzig (Germany) and Bytom (Poland).

*Rethinking Localism in the Global Risk Society: The Ethics of Care and Coalitions of Anxiety Confronting Gas Fracking in Lithuania*

**Rethinking Localism in the Global Risk Society: The Ethics of Care and Coalitions of Anxiety Confronting Gas Fracking in Lithuania**

Focusing on the global dimension of risk society, Ulrich Beck has made a case that earlier social and economic formations are increasingly replaced by the world risk society where risks and uncertainties are no longer bound by particular locales, but are distributed globally. To conceptualize this new political organization, Beck and others have developed the notion of cosmopolitization that refers to the emergence of new alliances and social movements that challenge and transform the nation state and its institutions. At the same time, scholars have also underscored the growing significance of localist movements that are actively promoting regional and national sovereignty agendas, while working to unplug from global economies and political infrastructures. The purpose of this paper is to articulate the connection between these two contradictory processes by employing conceptual tools developed in the scholarship focusing on care politics and ethics. Building on the work by N. Noddings, E. Kittay, and J. Tronto, we argue that care as a justification for political action links particular constellations of actors to coalitions organized through anxiety concerning particular issues or emphasis on particular aspects of discourse (see "coalitions of anxiety" by J. Zinn and "discourse coalitions" by M. Hajer). As a case study, we focus on the case of resistance against gas fracking in Zygaiciai community in western Lithuania, to highlight the ways in which the groups frame their civic and environmental anxiety under conditions of uncertainty "in-between" of calculable risks and incalculable social anxiety translated into bioethical care and specific sub-politics pertaining to local economic, political and environmental context. This case study and theoretical accounts connect local and national sub-politics with similar cases in Europe and elsewhere around the world.

*UN-Learned Lessons of Fukushima and Chernobyl: From ANTI-Nuclear Nationalism Towards Nuclear "Renaissance"?*

The year of 2011 marks both the Fukushima disaster in Japan, and a one-generation time distance from the nuclear disaster in Chernobyl in 1986. Does it also mark any new emergent – perhaps more reflexive, inclusive and participatory modes of nuclear power in CEE countries? Have these expectations of participatory governance materialized in new structures and modes of more inclusive decision making? This paper examines these questions by addressing the public controversies around new and old nuclear power facilities in divergent post-Soviet societies, particularly Lithuania, Belarus and the Ukraine. What are the lessons (if any) reflected in the public attitudes and public policies in terms of participatory governance of nuclear power in these countries, some of which are the EU newcomers, whereas the others are still characterized by rudiments of totalitarianism? Have they triggered environmental, climate and energy policy change towards more inclusive, participatory mode stemming from possible social trauma? By contrast, this paper concludes on the basis of empirical evidence from Lithuania and neighboring countries, the processes point to the opposite direction. This direction is geared towards privatization of the public domain, towards new forms of state-private oligarchy in the nuclear power sector, epitomized by the establishment of LEO LT nuclear power conglomerate in Lithuania. Instead of any new off-springs of participatory governance, as paper indicates, there are tendencies of the opposite. Inter-twined with the recent nuclear power "initiatives" by Russia and Belarus, these tendencies could be described as leading towards emergence of a nuclear "renaissance" as some observers have termed it. Is this "renaissance" a reflection of public attitudes towards energy security in the period of economic crisis? Or is a more general tendency of societal neglect of the Fukushima and Chernobyl lessons vis-à-vis globalizing uncertainties in the fields of economy, ethno-centric politics and climate change?

*Subjective Time to Retirement in Older Workers: Gender Differences in the Role of Social Networks and the Importance of Reasons to Retire*

Research has shown that males' and females' life course experiences in relation to work and family usually result in different retirement transitions and timing. Previous research has focused mainly on the effect of childbearing and caring responsibilities on females' labour force participation and retirement transitions. However, little is known about the influence of the importance of reasons to retire and social network characteristics – particularly social support and engagement – on older workers' expected retirement timing and how these differ for males and females. Therefore, this paper aims to identify gender differences in the determinants of subjective time to retirement, with a particular focus on social networks and the importance of reasons to retire.

The present analysis used the first wave [2010-2011] of the SNAP survey (Social Networks and Ageing Project, based at ANU), a nationwide survey of 2,122 National Seniors Australia members through a postal or online questionnaire. The analytical sample includes 662 older workers aged 50 years and over. Multiple regression was used to identify the factors that have a significant effect on subjective time to retirement. [run separately for males and females.]

Results show that several variables on the importance of reasons to retire are significant, illustrating the priorities and concerns that older workers have – different for males and females – when they balance personal life, work and retirement. For males, only work-related reasons had a significant effect whereas for females, work-related, personal and family-related reasons were significant. In addition, a number of social support and informal engagement indicators had a significant effect on females' subjective time to retirement. On the contrary, only formal engagement was significant for males. In sum, this study demonstrates that traditional gender roles are still present in the transition to retirement, particularly in relation to subjective time to retirement.

[phyllis.ripeyoung@uottawa.ca](mailto:phyllis.ripeyoung@uottawa.ca))

*Mandated Breastfeeding: Women's Bodies As a Solution to Global Poverty*

As a means to address high rates of child malnutrition, stunting, and infant mortality, in 2009 Indonesia enacted Health Law No. 36 stating that children have the right to be breastfed. Thus, exclusive breastfeeding is now mandatory until infants are 6 months old. To add teeth to the law, in 2011 the Indonesian legislature added stiff fines and potential jail time as penalties for employers, relatives, the general public or others who pose barriers to women's ability to achieve this goal (Soejarto and Zehner 2011).

In February 2013, the U.K. NGO Save the Children launched their campaign to promote breastfeeding in poor countries with their report "Superfood for Babies: How Overcoming Barriers to Breastfeeding will Save Children's Lives." Like a superhero, breastfeeding was touted as one of the most important solutions to the problems facing the most innocent of all victims—infants in developing coun-

tries. Fingers were pointed at formula companies, policy makers, grandparents, fathers, and health care providers for posing barriers to breastfeeding. The report focused on the heroic efforts NGOs and other actors can make to "empower" poor women to make the "right" feeding decisions; however little recognition was given to women as possible heroes. Rather, women were portrayed as either victims of their environments or ignorant villains doing the wrong thing.

In this talk, I will explore the implications of legislating women's bodies as a solution to structural problems, as well as the problematic structural barriers posed to women being able to do what they are told to do. By exploring the Indonesian case and the framing of breastfeeding campaigns, I aim to demonstrate how breastfeeding promotion can be both empowering and detrimental for women. I will conclude with a possible way forward drawing on an ethic of care and a praxis of humility.

### *Labour Precarity and Other Structural Forces Affecting Migrant Workers' Health: The Case of the Undocumented Workers in Ontario, Canada*

This paper will discuss the ways in which the labour dynamics that have emerged in the agricultural production in Ontario during the last decade have been organizing particular forms of precarity that affect the physical and mental health of the undocumented migrant workers and other migrant workers of precarious status (UMW and MWPS) that are employed in such industry. Likewise, it will analyze how this phenomenon of labour precarity, along with legal and linguistic barriers; fears of deportation; and perceived forms of racial subordination in the local health institutions, have prevented the workers from seeking and receiving medical services. Finally, the paper will discuss some of the ways by which the workers have contested the social forces affecting their health, and will offer some reflections on why such forms of collective action haven't been entirely successful.

This paper draws upon the analysis of twenty in-depth interviews with UMW and MWPS, as well as upon field notes generated as part of a sociological, ethnographic research carried out in Ontario, Canada.

### *Capabilities and Missing Users: Progress In Gender Analysis In Transport*

The paper uses a normative framework of transport justice to recognize the link between mobility and "capability enhancement" as articulated in Sen's writing and extended by others to the field of transport (Bezayit, 2011) (Creed, 2004) (Martens, 2012.) Transport justice reveals the mode of thinking and institutional mechanisms behind a nation's transportation planning and delivery systems (Vasconcellos, 2001) (Litman, 2012) to elucidate how and why particular social groups (e.g. low-income women and minority communities) often face the brunt of negative impacts of transportation investment in terms of access and transport-related burdens of poor safety and environmental standards.

'Gender' is a key analytical concept used alongside transport justice to address a set of policy concerns to show how particular understandings and values of "gender" influence the construction of categories of analysis in transport and spatial planning (Levy, 2013). Empirically, the study documents the needs and perspectives of urban transport users in Davao City, Philippines as related to their access, or lack thereof, to transport and their access to employment, education and services. These findings are contrasted with the realities of power and political processes in decision-making to show how concerns of users from low-income groups and how gender differentials in preferences, choice and agency are yet to be taken seriously by planners.

Recognizing methodological pluralism as important in interdisciplinary research, the study uses a combination of methods which have distinctive roles. The survey captured similarities and differences among 360 transport users, mostly of women traders and workers. Focus-group discussions with various sectors, field observations and in depth interviews with a subsample of 8 brought deeper insights on meanings of "safety" and "security" from the perspectives of women. Textual analyses looked into issues of misrepresentation and invisibility.

**RIVIERE, CLÉMENT\*** (Observatoire Sociologique du Changement, [clement.riviere@sciencespo.fr](mailto:clement.riviere@sciencespo.fr))

### *Ouvrir La Boîte Noire Des Peurs Féminines : Encadrement Parental Des Pratiques Urbaines Des Enfants Et Dimension De Genre*

Une large littérature a mis au jour la spécificité de l'expérience féminine des espaces publics, au sein desquels « féminité » tend à rimer avec « danger » (voir

notamment Warr 1985 ; Gardner 1990 ; Ferraro 1996 ; Condon et al. 2005). Posédant « une connotation sexuée et sexuelle très claire » (Lieber 2008), un type de peur spécifique au genre féminin se distingue, qui tend à être naturalisé par les hommes mais aussi les femmes vivant en milieu urbain.

Interrogeant la socialisation urbaine dans le cadre familial, l'approche compréhensive de l'encadrement parental des pratiques urbaines des enfants permet de mieux saisir la genèse de cette différenciation genrée de l'expérience des espaces publics. Menée auprès de parents de 123 enfants âgés de 8 à 14 ans à Paris et Milan, une enquête par entretiens (n=78) montre ainsi que les filles font l'objet d'un traitement différencié largement intentionnel. La forte prégnance de la représentation d'espaces publics à dominante masculine et hétéronormée conduit les parents à mettre en œuvre des précautions spécifiques pour les filles, qui recoupent largement celles prises par les femmes dans les espaces publics : évitement de lieux, recherche d'une escorte, contrôle de l'habillement et de manière plus générale de la présentation de soi.

Pour reprendre la typologie d'Albert Hirschman, les filles sont socialisées à l'évitement (*exit*) et à la discrétion (*loyalty*), mais pas à la remise en cause des normes de genre (*voice*). La transmission de normes genrées semble ainsi pouvoir être considérée comme la clé de voûte de la vulnérabilité ressentie et perçue des femmes dans les espaces publics urbains, l'encadrement parental contribuant dans cette perspective à la (re)production d'inégalités d'accès à la ville mais aussi à l'incorporation du genre par les enfants.

### *Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST*

This paper examines individuals' willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5<sup>th</sup> (2005-2008) wave of the *World Values Survey*. We will also analyze the sixth wave (2010-2014) once it becomes available in spring 2014 in order to draw comparisons with the 5<sup>th</sup> wave. Analysis with the 5<sup>th</sup> wave demonstrated that individuals' willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate between the 5<sup>th</sup> and 6<sup>th</sup> waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5<sup>th</sup> wave demonstrated that geopolitical beliefs have the most predictive power. Individuals' views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

### *The Road To Revolution and Egyptian Youth: Findings From The Value Surveys*

The Arab Spring that began in late 2010 captivated the world's attention, particularly in Egypt with the uprising that began on January 25, 2011 in Tahrir Square and ended Hosni Mubarak's reign as president 18 days later. Before December 2010, protesting against repression and injustice was risky and often seen as futile. El-Ghobashy (2011) argued that it was when the main protest sectors of the first decade of the 2000s finally came together, united in their demand for "bread, freedom, social justice!", that Mubarak was forced to resign. Both the media and scholars alike have noted that youth were some of the key players in the uprisings in Egypt and across the Arab world. Because of this recognition, Moaddel and de Jong (forthcoming) argue that it is necessary for scholars to move beyond anecdotal evidence and assumptions based on the young age structure of Arab countries to empirical research that documents the role of youth in the Arab spring. This includes shifting sociopolitical and cultural values over the past decade that led to the desire to mobilize for change. In Egypt, while the role of youth as key or-

ganizers of the January 25<sup>th</sup> uprising has been clearly documented, their changing values over the decade preceding the uprisings have not. This paper will examine how sociopolitical and cultural values that reflect the three demands of the January 25<sup>th</sup> uprising—bread, freedom and social justice—changed among Egyptians in the decade preceding 2011 and whether Egyptian youth exhibited attitudes that were more supportive of these goals than the rest of the population. We will use data from nationally representative value surveys conducted in Egypt in 2001, 2005 and 2008 to address our research questions.

#### *Multinational Compagnies, Social Responsibility and Human Resources Manager*

This communication analyzes the situation of six multinational companies' policy of "social responsibility" and of "sustainable development". The purpose of this communication is to define how these companies, especially the subsidiaries, are socially responsible and take into account environmental issues. This exploratory and qualitative study is based on the analysis of official discourse of six firms and those of human resources managers. We highlight different types of "social responsibility", the "stakeholders" that are taken into account by companies and the means implemented to achieve the policies of "sustainable development" and of "social responsibility". Our purpose is to show, beyond the official discourse, which role the subsidiaries play and which autonomy they have in their policies' implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new "social responsibility" and, conversely, if the new management involves the emergence of a new social responsibility. We will show that the types of responsibility, shown through the web site and in the HR discourses, are "ethic" (stands for the respect of the values, the standards and the requirements that stakeholders find fair) and "economic" (focuses on the production of goods and services). Those classifications depend on the firm's sector.

The Human Resources can be more regardful for the legal aspects or for the political aspects, especially in crisis situation. The human resources play different roles and highlight different priorities: respect of fundamental values, actions of the subsidiary that are presented as models, transparent communication, gather the employees around values and projects...

#### *The Embedded Economy and National Income Inequality*

The ubiquitous growth of national income inequality in developed and less-developed countries has raised major concerns amongst academics, policy-makers, and the general public. In response to this trend, researchers have offered a multitude of explanations for the persistence and growth in national income inequality, which has lead to substantial disagreement over the proximate and fundamental mechanisms of economic inequality. Drawing on insights for world-systems, world polity, and institutional theories of inequality, I develop and empirically evaluate an integrative theory of inequality. According to this perspective, the emergence global production networks indirectly affects income inequality by reshaping national labor laws and practices. This study evaluates this proposition using multi-level structural equation modeling and unbalanced panel data on 70 developed and less-developed countries over the 1985-2002 period. According to preliminary results, economic globalization exerts both direct and indirect effects on income inequality. In developed countries, global economic integration indirectly affects income inequality by inducing processes de-industrialization and labor market flexibility. In less-developed countries, investment-based global economic integration indirectly reduces inequality by promoting the development of collective labor laws and practices while trade-based integration indirectly increases inequality by hindering the development of these laws. Overall, the study suggests that researchers need to account for the interaction of economic globalization and labor market institutions to explain the recent growth in national income inequality.

#### *The World Has More Leisure! so What?*

The sociology of leisure (and leisure studies more generally) were born amid confidence that leisure would continue to grow and become a larger component of people's lives. This confidence has proved justified. Leisure has grown in time,

spending on leisure goods and services, and hence participation rates in many leisure activities. Meanwhile, researchers have identified and distinguished the various ways in which leisure plays a role in people's lives. Apart from re-creation – restoring body and mind to states fit to return to other social roles – leisure can enhance well-being (or ill-being), it can be a source of social bonds and belonging, identity, and capabilities that enhance performance in other social roles. However, this paper argues that the sole sense in which its growth has made leisure functionally more important is economic – as an object of investment and consumer spending, and as a source of employment. The paper explores the implications for leisure's additional functions, and its future in the twenty-first century.

#### *Youth and Leisure in Europe in an Age of Austerity*

Despite young people's above-average risks of unemployment in most countries, the evidence to date suggests that young people's leisure has remained largely austerity-free. This is explained not in terms of historically novel features of the recession itself, but in terms of changes in youth's leisure that occurred in preceding decades with the lengthening of the youth life stage, the advent of new leisure industries based on the latest information and communication technologies, and changes in the pattern of class inequalities. The evidence indicates that it is child-rearing households whose leisure has proved most vulnerable during the recession, which has implications for leisure socialisation during childhood, which will have lifelong consequences.

**ROBERTS, PATRICK\*** (Virginia Tech, [robertsp@vt.edu](mailto:robertsp@vt.edu))

#### *Focus On Fukushima: The IAEA's Response To Fukushima As a Focusing Event*

What does it mean for the Fukushima disasters to be a "focusing event"? A focusing event provides a "little push" to bring a problem onto the policy agenda. It acquires its power by aggregating harms in a short timespan and large number (Kingdon 2003; Birkland 1997; Downs 1972). Some scholars use the term to describe the event itself, while others locate causal power in the symbol surrounding it. Focusing events are sudden, relatively rare, and bring aggregated harms to public view through the media, and yet not all such events lead to policy change. How the IAEA responded to Fukushima promises to shed light on why some focusing events lead to only very limited change. Birkland and others (Walgrave and Verhulst 2009) find that nuclear power is a domain where advocacy coalitions (roughly pro-industry versus pro-environment) are in competition and therefore policy change after a focusing event is not likely. Yet the IAEA had similarly divided advocacy coalitions in safeguards and security, and these policy areas still underwent dramatic policy change after a focusing event. My paper investigates to what degree policy change occurred in IAEA's safety responsibilities in response to Fukushima. Preliminary research shows that some change did occur, especially relative the IAEA's limited power compared to states. My paper will also examine how and why change occurred, paying attention to the advocacy coalitions in competition hypothesis, theories of framing, as well as to internal bureaucratic competition and the technological limits on what the IAEA can accomplish. The IAEA's response to Fukushima may show that managers are able to shape the effects of some focusing events as much the literature suggests the media and policy entrepreneurs can do in other contexts.

#### *Virtual, Augmented or Real? Ageing Research in an Era of Spatial Technologies*

Population ageing has become the demographic phenomenon of the twenty-first century. Developed and developing countries are experiencing significant growth in the total number and proportion of their populations who now qualify as 'aged'. The rise and rise of ageing as the new 'crisis' in population theory and policy should not be a surprise since it is the inevitable result of more than a century of active policy interventions on the object we know as 'population'. Consequently we are experiencing a lag between the phenomenon of ageing and our conceptual and analytical understanding of ageing across multiple knowledge domains. The science of ageing remains highly developmental ranging from key

concepts (what are age and ageing?) through to the aetiology of the dementias and their impacts on aged care resourcing. Our societies are struggling to catch up with the consequences of two centuries of efforts to manage population. While spatial studies of ageing have been researched for several decades, these have largely remained particular to geography and to some interdisciplinary cross-overs such as geographical gerontology. In the meantime, spatial technologies have developed at a staggering pace. Goodchild coined the term 'gisience' in 1992 to flag the fact that many disparate spatial endeavours now constituted a shared scientific domain of activities, practices and theories. We now take for granted the capacity to spatially enable quantitative and qualitative data and to visually map, describe and inquire on outputs. We address the implications of the digital paradigm by investigating how ageing research will be altered through four key constructs of the digital era: simulation; visualisation; spatialisation and; representation. We illustrate these emerging issues using work we have conducted on population ageing phenomena in Australia and internationally which utilise spatial technology to engage with ageing in augmented, virtual and 'real' research encounters.

### *Schooling the 'vulnerable' Child*

Based on qualitative research with children (aged 4-11), parents, and educators, as well as historical socio-cultural discourses, this paper explores the relationship between 'childhood innocence', children's highly regulated access to knowledge of sexuality and the constitution of children as 'vulnerable' subjects. Incorporating a post-developmental framework and drawing on Foucault's concepts of governmentality and power/knowledge, this presentation highlights how censorship and moral panic, reinforced through discourses of childhood innocence, operate in communities, families, schooling, and within children's peer groups, to define and regulate 'normative' childhoods and adulthoods. I argue that regulating children's access to knowledge and knowledge production – associated with sexuality in particular – essentially in the name of protecting 'childhood innocence', operates to inscribe children as 'vulnerable' subjects.

This discussion is framed within an examination of children's sexual subjectivities – how children have been discursively constructed as sexual subjects, how children view and constitute themselves as sexual subjects and how children regulate the sexual subjectivities of their peers. Children actively engage in making meanings about sexuality and relationships from the limited information (often misinformation, stereotypes and myths) that they receive – bits and pieces of information of which they try to make sense. In order to help counteract children's vulnerabilities and to build strong ethical and respectful relationships early in life, children's access to knowledge, to open and frank conversations about sexual subjectivity, and the nurturing of children's agency are critical.

### *Everyday Masculinities and Extreme Sport-Re-Thinking Methodologies*

#### **Everyday Masculinities and Extreme Sport: Re-Thinking Methodologies** Victoria Robinson

This paper considers the taken-for-grantedness of everyday masculinity in relation to a UK research project on granting masculinities (Robinson, 2008 and 2013). In this study of rock climbers some participants found it hard to reflect on their experiences in gendered terms. However, some participants were able to be open about and critically engage with such processes, which can be seen to constitute 'masculinity' or 'masculinities'. This was partially due to the 'extreme' nature of many aspects of the embodied and emotional rock climbing experience, as extraordinary events such as death of a climbing partner or the need to trust another man, sometimes literally, with their life, entailed that taken-for-granted aspects of masculinity had to be renegotiated or rethought in the aftermath of moments of great sporting intensity or crisis. This paper will reflect upon such patterns and, in so doing, re-visit some general methodological issues, for example, on the insider/outsider status of the researcher. The paper will also be informed by a consideration of the author and her auto-biographical position to the research both during and after the study.

### *Unemployment and Precarious Occupational Integration: The Unequal Distribution of Risk. the Case of Switzerland*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

Labor relations have undergone significant changes over the last decades. Job precariousness and work precariousness weaken assured and stable occupational integrations. These changes challenge rigid, continuous and foreseeable conception of occupational career (the choice of a profession, training, labor market integration, promotion and retirement), and question both material and symbolic recognition that are linked to professional activities. Facing this rise of uncertainties, we first analyze how unemployment periods impact job recovery in terms of 1) level of individual and household income 2) job quality (job and work precariousness) 3) social mobility (using social stratification schemas: CAMSIS and CSP-CH), in order to determine if people know stability, improvement or deterioration of their situation. We then identify how particular groups of people are unequally exposed to these three potential forms of changes, and particularly in terms of nationality, sex, education, age and presence of children in the household. The relation between these variables and the observed effects are analyzed with a logistic regression that includes interactions between the dependent variables.

We use longitudinal data from the Swiss Household Panel (SHP) between 1999 and 2012. The SHP is a yearly conducted centralized CATI panel survey which started in 1999 with slightly more than 5,000 households, representative for the Swiss resident population.

### *Everyday Life and News Forms of Production Knowledge on Nuclear Power: A Study of Case in Caetité – Bahia*

The nuclear issue in Brazil is not a recent problem. Since the first half of the 20th century the country has conducted research related to energy production based on the model of nuclear fission and the location of the first uranium reserves in Brazilian territory date this same period. The construction of reactors for energy production based on this technology was realized with the construction of Angra I, located in the State of Rio de Janeiro. The two nuclear power plants, Angra I and Angra II, started construction even in dictatorial government and its operation only after the process of political liberalization in the country when it was agreed and guaranteed by the Federal Constitution that the country would not produce nuclear weapons. The uranium needed for nuclear power production was initially withdrawn from prospecting in Minas Gerais, in the city of Pocos de Caldas. In 1995 the Nuclear Industries of Brazil began beta testing and implementation of mine near the city of Caetité, Bahia, being operated for commercial purposes only in late 1999. The District of Lagoa Real is the only operating in the country and Latin America. In the research phase, this work aims to investigate the ways in which residents living near uranium mine producing knowledge on the uncertainties generated by the presence of the mine. From a perspective of actor-network-theory seeks to understand the heterogeneous networks that make up before the presence of the mine in the region.

### *The Impact of Drug Trafficking in the Dynamics of Homicides and Robberies: Causal Relations in 32 Metropolitan Areas in Latin America*

This paper presents an empirical verification of the influence of narcotics trafficking in the crimes of murder and robbery in 32 cities in Latin America, through the analysis of crimes reported by newspapers of those cities in the years 2006 and 2011. The aim of this study was to measure the impact at a continental level of illegal drug trade in prevalence to other crimes, taking also into account contextual variables. From the understanding that urban crime has a strong endogenous organizational component, the central hypothesis was that drug trafficking was the main factor of the outbreak of violence experienced in this region of the planet. To measure the weight of this illegal activity on other crimes, we used a quantitative methodology. Through multivariate statistical analysis, the rates of the three offenses were tested with control variables exogenous in relation to the crimes. The sociological findings are that there is a significant influence of the drug trade in the dynamics of the two crimes. In the case of robberies, the relation between crime rates was positive and strong in both periods studied. Homicides, however, were influenced by the drug trafficking only in the first period of time researched. In the second period researched, the rate of robberies (influenced by drug dealing) was the variable that impacted most in the prevalence of murders at a continental level.

*Participatory Budgeting: Considerations about the Global Spread of a Local Practice*

This article discusses the diffusion of the Participatory Budgeting (PB) as exemplary practice of governance and urban planning. In a context of democratic openness and strong needs of urban infrastructure, the PB was implemented for the first time in 1990 in Porto Alegre, as a local policy to meet demands for a more equitable distribution of public resources. In the following decades, the PB has spread among other major Brazilian cities like Belo Horizonte, Recife and São Paulo. The local democratic innovations linked to such experiences has crossed national borders and reached different social, economic and political contexts such as Montevideo, Buenos Aires, Lisbon and Berlin. Currently it is estimated that there are about 1000 PB's around the world. Several factors explain this global spread of the PB such as the synergies within the World Social Forum and its legitimacy as a good practice by international organizations. However, after more than twenty years of its setting up, in which extent this practice conceived in the context of the global South has contributed to the establishment of a counter-hegemonic model of urban governance? Focusing on a paradigmatic experience, the BP of Belo Horizonte (Brazil) – one of the most enduring and on two occasions honored as Best Practice by UN-Habitat –, we intend to answer to this question and critically discuss the recognition, promotion and dissemination of the BP as model for urban governance under a general context of neoliberal politics.

*Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events*

'Contextualising Sport Spectacles: Exploring Non-Spectacular Aspects of Spectacular Mega-Events'  
Mega-events, including sport mega-events like the Olympics and FIFA World Cup, have been increasingly studied over the past decade or more (e.g. Girginov ed. 2012, Tomlinson and Sugden 1998). This growth of mega-event studies as an interdisciplinary field has included an area of social scientific and sociological work (Roche 2000, Horne and Manzenreiter eds. 2006, Hayes and Karamichas eds. 2010, Foley et al 2012, Hiller 2012). This paper argues that the further development of the sociology of global mega-events and their implications for social inequalities requires the further development of a 'contextual' approach to event analysis. This approach is concerned with what will be referred to as, on the one hand, 'event-immanent' or 'backstage' contexts, and on the other of 'trans-event' contexts, particularly 'legacies' (Moragas et al eds. 2003, Kassens-Noor 2012). The paper is concerned with the heuristic utility of a 'spectacle'-based perspective on mega-events (Kellner 2010). This perspective is useful as far as it goes. However, the paper will argue that a 'spectacle' perspective is, nonetheless, essentially limited and ultimately unhelpful in relation to the sociological exploration of aspects of sport mega-events which are centrally important in understanding their general social nature, their long-term significance, and their implications for social inequality. Rather, drawing on work including my book 'Mega-Events and Modernity' (Roche 2000) this paper argues that these aspects require an event contexts-oriented perspective, one which is more interested in non-spectacular (e.g. backstage and long-term) features rather than spectacular features of sport mega-events. The paper will illustrate this argument in respect of the case of the London 2012 Olympic mega-event.

*Local Responses to Globalising Processes: The Use(s) of Pharmaceuticals in Maputo, Mozambique*

After the explosion of the pharmaceutical industry and the beginning of pharmaceuticals mass production in the mid-twenties century, these technologies quickly started to be disseminated all over the world, making them also available in poor countries. As widely discussed, globalisation involves both processes of standardization and hybridization. If it is true that medicines are nowadays part of the *materia medica* of all societies through the development of multinational companies, these resources assume a large variety of meanings and particularities within different contexts, and the way these instruments are engaged in local practices vary significantly. This paper is based on an ongoing research about medicines' consumption patterns in Mozambique, which aims to understand what dynamics of pharmaceuticalisation are emerging in local consumption cultures. The project focus on local responses to these globalizing processes, directing the main attention at lay practices and conceptions towards pharma-

ceuticals, and their relation with other options, such as traditional herbs or other substances. Medicines constitute a privileged object to analyze lay conceptions and practices towards biomedical technology, due to their intrinsic characteristics that not only enable a private and individual consumption, without the presence or vigilance of a health professional, but also increase the perception of certain conditions – whether health related or not – as something that can be managed. In a context where traditional medical systems co-exist with biomedicine, the main questions that arise are: *How is lay knowledge about pharmaceuticals constructed and how does it shape social practices? To what extent are pharmaceutical's consumption patterns in local contexts in Mozambique changing towards the modern trends of therapeutic, preventive and enhance consumption?* The findings presented in this paper result from the conduction of individual and group interviews to community members and health professionals, as well as from a household survey applied in Maputo.

*Glorified Taboo: Teacher-Student Sexual Relations In The 21st Century*

Teacher-student sexual relations, whether consensual or abusive, is a taboo topic of discussion in our culture and one that has seen much media attention in the 21<sup>st</sup> century. In particular, there has been a surge in reported incidents with a female teacher involved. It leaves one to wonder if sexual relations portrayed in various digital media via news, music, and film, have had a major influence on how normalcy of such relations are perceived. To what extent does society glorify this taboo via digital media while punishing through legal means?

After analyzing written works, forty-three popular songs, fifty films, and various tate laws that contain an element of teacher-student misconduct, statutory rape, or a very large gap in age difference, I sent out a questionnaire via SurveyMonkey.com and Facebook that asked volunteers if they were familiar with any of the aforementioned. The results showed a sincere lack of awareness to laws such as the age-of-consent, statutory rape, or child seduction, but much exposure to popular media condoning taboo actions with a possible correlation between the age of offenders and the amount of digital entertainment produced by decade.

Upon completing the aforementioned preliminary research, I sent an electronic message to each of the "Best Education Schools" as identified by U.S. News in 2012. This was to inquire whether they had courses for teacher candidates that reflect the various viewpoints of sexual misconduct for educators, coaches, and staff. To my surprise, there were no such courses in place. Though not limited to one research conclusion alone, I propose to establish a national requirement for teachers to take one course that introduces them to a well-rounded perspective on this serious social issue with the intent to reduce such professional misconduct.

*The DNA of Happiness and Satisfaction: Comparison of Logistic Models in 44 Countries*

The focus of this article is the causation and possible models of Happiness. Thinking on Happiness takes us above the individuals towards genuinely social spaces generated by social interaction. In that way we are able to move beyond the classical points of view of material satisfaction from economy or the psychologist grounded well-being. We specify the social dimension of Happiness with indicators of social interaction and social action. We propose a basic general model based on three dimensions: Love, Money and Health. We contrast this general model in 44 countries with data from the fifth wave of the World Values Survey. Given the close relationship between Happiness and Satisfaction, we want to test two rival models to explain Happiness and Satisfaction separately. In order to do it, we use binary logistic regression with its standardized coefficients. We discuss in detail our models in those 44 countries looking for explanatory patterns.

The statistical analysis of logistic regressions and their standardized coefficients are the raw material for the conceptual and material construction of a complex relational system between countries, between models and between countries and models. This approach leads us to a sort of DNA definer of social models of Happiness and Satisfaction. We use the Social Network Analysis as a way to explore the existence of different explanatory structures and their features. We conclude that, despite the close conceptual relationship between Happiness and Satisfaction, the explanation of Happiness is more complex and accurate. Love is a necessary condition for Happiness while to explain Satisfaction material and volatile aspects as Health and Money are more relevant. That points to a differ-

encing dimensionality in which to be satisfied depends on components of Happiness much more than Happiness needs Satisfaction. They clearly are different social phenomena.

#### *Constructing Transnational Polynesian Identities: Soldiers, Sportsmen and Illegitimate Masculinities*

For the small Polynesian island states of Tonga and Independent Samoa, their biggest export is labour – their people. Six out of ten Tongans and Samoans are born outside their home countries. In a climate of transmigration and globalization Polynesian men are sought out as sportsmen, heavy manual workers and standover men. They also have the highest over-representation of any racial group in the US military. This paper argues that contemporary Polynesian masculinity has been externally constructed through the physicality of Warrior in a colonial and post-colonial context and questions whether internalization of this representation as a "regime of truth" leads to an embodiment of race, class and cultural identity that is inherently informed by the physical. Through this lens of heightened and exaggerated physicality, acceptable expressions of Polynesian masculinity are readily acknowledged through work and sport. However, its illegitimate expression – as gang member – is less understood. Polynesian gangs have an extremely high profile in New Zealand and are now the fastest growing ethnically-identified gang population in the United States. Proportionally, this population group is progressively over-represented in the penal systems of destination countries. This paper will explore how this narrow range of acceptable masculinities, when combined with increasing socio-economic marginality, contributes to low civic engagement and greater interface with agencies of law and order. As conventional employment opportunities are reduced for unskilled labour, more young Polynesian men are at risk of being drawn into gangs and are likely to engage in other forms of criminal behaviour. This paper will therefore discuss how popular perceptions of Polynesian strength and aggression, so valuable as sporting commodities, are regarded as threatening and violent outside of sporting domains. Interviews were conducted with 48 Polynesian men aged 18-60 in two studies.

**RODRIGUEZ MORATO, ARTURO\*** (university of barcelona,  
[rodriguez.morato@ub.edu](mailto:rodriguez.morato@ub.edu))

#### *Assessing the Value of Art in the Culture Society*

Nowadays it is widely recognized that due to the great expansion of the arts sphere during the XXth century and the concomitant increase of the influence that the art paradigm exerts into other fields of practice culture and the arts have taken on a central strategic role in contemporary society. This is particularly visible in big cities today, to the extent that there we can speak of a culture society in the making, a new social configuration structurally dominated by culture (Rodríguez Morato 2012). As a result of these changes, since the late nineties and during the first decade of the new century the idea of creativity, which is closely linked to the arts from its origin, has gained a lot of prominence in the urban discourse, both political and academic, all over the world. From different perspectives and through different concepts, such as creative city, creative economy, creative class, or creative cluster, this attention to creativity has implied a new view on the relationship between the arts and society, and at the same time a renewed interest in assessing the value(s) of art for society. In this paper we will consider the ways in which this assessment is currently being carried out, through the aforementioned concepts and others, as well as through specific analytical strategies used in the grey and academic literatures, and the data, statistical or otherwise, produced for that matter.

#### *Fasting Centers in Contemporary Japan As an Expression of Alternative Medical Care*

Along with the modernization process in the Meiji era, Japan adopted the Western modern medical system. Although this remains the dominant paradigm in contemporary Japanese medical science, traditional health methods like (Japanized) Chinese medicine and martial arts physical therapies that existed prior to the introduction and prevalence of Western medicine have continued to be practiced to different degrees. In addition, new alternative healing practices from other cultures have also been introduced in the country, and the The Japanese Society for Complementary and Alternative Medicine is functioning since the late 1990s. From this diversity, new forms have developed which combine traditional notions of health, Western modern medicine and imported CAM methods. This

presentation will introduce the case of fasting centers, providing a description of their notions and practices. Next, the discussion will situate the development of these alternative facilities in social context. It will also point to changes in the representation of their therapeutic proposals, reflecting the dynamics of globalization (such as the spread of CAM and new spiritualities), as well as the impact of local factors (like the Aum Shinrikyo affair).

#### *Desafíos De La Adaptación Para La Prevención De Desastres En México*

La vulnerabilidad social se incrementa en condiciones de variabilidad climática asociada con el cambio climático antropogénico; los desastres asociados a fenómenos hidrometeorológicos ocurridos durante el siglo XXI en México nos dan la oportunidad de cuestionar teóricamente conceptos tales como "eventos extremos", "lluvias atípicas", pero principalmente "desastres naturales", que deforman la realidad desde las ideologías tecnócrata y naturalista.

El fracaso del desarrollo sustentable, dio lugar a la irrupción del cambio climático como uno de los efectos más perjudiciales para la humanidad, sobre todo para los sectores excluidos, sobrevivientes de la pobreza, en los territorios donde la vulnerabilidad social es el contexto cotidiano de la normalidad.

Con base en los postulados internacionales de adaptación y reducción de riesgos de desastres el gobierno mexicano ha asumido formalmente compromisos para diseñar y ejecutar políticas y programas orientados a fortalecer la resiliencia comunitaria y ciudadana, sin embargo las decisiones privilegian la resiliencia institucional, con énfasis en la política de protección civil, orientada a la atención coyuntural de emergencias, desatendiendo la prevención de desastres como eje de política pública. Recientemente el Plan Nacional de Desarrollo 2013-2018 define los lineamientos programáticos en materia de cambio climático, sin incluir la adaptación y la crisis de vulnerabilidad nacional.

Los desastres plantean el desafío de reducir la desigualdad social como premisa para también reducir la vulnerabilidad y los riesgos a la población. Se propone trabajar investigaciones futuras con las experiencias populares de autogestión social y comunitaria, mismas que requieren apoyos institucionales y académicos para consolidar procesos de planeación popular del territorio, fortaleciendo las capacidades locales para mejorar la calidad de vida y la preparación colectiva frente a los riesgos asociados a cambio climático, con experiencias en comunidades de los estados de Tabasco, Chiapas, Veracruz y Guerrero

#### *The Insecure Attachment of the Organization Theorist: Present Day and Past Responses to Health Care Scandals in the NHS*

In this paper I present a dramatic health care system collapse and scandal in the UK. I analyse the story about appalling suffering of a large amount of patients at Mid Staffordshire NHS foundation trust between 2005 and 2008, and the subsequent public inquiry in 2013 of the Stafford hospital and the trust's professional staff and directors. On this background, I discuss present day response to the scandal and show how this response departs from a preoccupation with operational truths, such as world-class management, regulatory transparency and openness, and culture of compassion. I argue that organization studies and work that critically reflect upon the context in which clinical malpractice occurs have been largely absent from this discussion. This is peculiar since the scandal seems to be an open invitation to organization theory and organization concepts to take on a life and role in the discussion. In addition to this, I argue, the scandal invites organization theorists to contribute to a discussion of how we choose to organize treatment and care of vulnerable citizens in our society. To follow this line of thought, I revisit the work of Isabel Menzies Lyth (1959, 1988) and central analyses of The Tavistock Institute of Human Relations (Jaques, 1951; Trist and Bamforth, 1951; Rice, 1958; Winnicott, 1958). I scrutinize whether, in light of the hospital scandal and the numerous failures of care, these classical endeavours add something to present day theorizing on organizations and how we think about and approach the activities and relations of organisations. To conclude, I argue that classical organization theory in the early Tavistock tradition provides us with old-new ways of thinking about and acting upon contemporary scandals in the NHS.

**ROGERS, PETER\*** (Macquarie University, [Peter.rogers@mq.edu.au](mailto:Peter.rogers@mq.edu.au))

#### *Transparency & Visible (Dis)Order: Surveillance and the Riots*

This paper links the UK riots of August 2011 to citizenship and the subject through the lens of risk and resilience. It suggests that the rhetoric of respon-

sibilisation and observational techniques/tactics in response to the riots reveal a moral ordering of the 'legitimate' citizen/subject at odds with the rhetoric of inclusive resilience. The visibility of the disorderly citizen was used to objectify the 'risky subject'; turning the riots from a societal reaction (to the negative impacts of neoliberalization) into wanton criminality inherent to the 'worst 100,000 families' in Britain. This paper situates the disorderly and 'risky' citizen/subject within a critical reflection on risk, order and surveillance. It is argued that a complex interplay of thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

#### *Protest, Conflict, and Class Struggle in South Korea: Two Cases of Urban Redevelopment in Incheon*

South Korea has suffered from major economic dislocations under the pressures of globalization, marketization, and economic restructuring particularly since the Asian Financial Crisis of 1997-98. Labor responded in the last decade with a wave of labor militancy that receded with the decline of the labor movement and a period of labor peace during the recent economic crisis. At the meantime the public has asked for more welfare spending. Throughout the period, though, there has been sustained resistance to capital in the form of protests against urban redevelopment. In recent years, urban protests have even taken a similar form to labor protests, with both involving sustained occupations and a common protest culture. This study reviews the recent trends in resistance against domestic (and foreign) capital and then looks at the specific cases of housing protests in the Kajwa and Dohwa neighborhoods of Incheon. In both cases, a lower-income community was displaced by landlords seeking profit by building more expensive housing in a pattern common throughout Korea despite plenty of housing stock that could be rehabilitated at lower cost. The capital drive to redevelop has continued in spite of a collapse in the luxury housing market, and a lack of affordable housing. The course of the occupations and protests are reviewed and linked to broader issues of class conflict in Incheon and South Korea.

#### *Being a Housewife – Is It a Traditional or Progressive Female Gender Role? Understanding Gender Role Constructions in a Transcultural Russian-German Research Setting*

This paper is based on a PhD project investigating the au pair migration from young Russian women to Germany. Two aspects of this project will be discussed: 1) What kind of biographical research design may be employed in a transcultural research setting and 2) how does this design help to reconstruct the socio-cultural constructiveness of social categories such as gender. The methodological design of the research project consisted of data collection with biographical narrative interviews mainly done in German language (to lesser extent in English or Russian with interpretation). Data were analysed by the method of sequential analysis with a group of researchers, who belong to German and Russian backgrounds, enabling the reconstruction of cultural specific social categories. Concerning the question of gender this project depicts how this category not only in everyday knowledge but also in research is formed by socio-cultural and historically shaped contexts.

[caterina.rohde@arcor.de](mailto:caterina.rohde@arcor.de))

#### *The Male Au Pair: Migrant Men Providing Domestic and Care Services In Au Pair Jobs*

Research on migrants working in low income jobs show a gender logic according to which female migrants typically work in domestic and care work, while male migrants hold jobs in the industrial sector. The increasing popularity of male au pairs offers a unique opportunity to research a specific case of migrants' labor market position contradictory to this logic. Since there do not exist any studies and statistics on male au pairs yet, I propose an explorative research project on male au pairs in Germany. It is based on 3 in-depth interviews with male au pairs, data from online forums, journalistic articles, advertising materials of au pair agencies as well as interviews with agency staff.

Au pair work is a specific type of reproductive labor because the working relation between au pair and the employing family is only very poorly regulated. Thus,

every case shows which specific tasks are delegated to the au pair and which according competencies are expected of the au pair. At the intersection of ethnicity/nationality and masculinity the male au pair is constructed as a suitable worker for families with sons. Alike the broad discussion about the importance of men for socializing male children, male au pairs are hired when the male parent is absent and are expected to fulfill the position of a male role model. The foreignness of the au pair is portrayed as a value of intercultural education. At the same time offering low waged work within the own household is legitimized as providing life chances to a young person from a less developed country. Biographical interviews show that male au pairs often feel overburdened by the expectation to be a male role model and report to feel pressured into adjusting to the families' cultural/individual routines instead of pursuing their own lifestyle.

[crojaslasch@gmail.com](mailto:crojaslasch@gmail.com))

#### *« Je Fais Ce Que Je Peux ». Les Pratiques d'accompagnement Et Assistance Aux Pauvres Au Chili*

Cette contribution porte sur les politiques contemporaines d'assistance au Chili. Plus spécifiquement, sur l'analyse des pratiques d'accompagnement psychosocial à familles vulnérables. Ce travail est le résultat d'une enquête ethnographique réalisée au travail de visitation domiciliaire des travailleurs sociaux à Santiago. J'interroge les enjeux de la pratique assistentielles contemporaine ainsi comme les limites d'action tant des intervenants comme des sujets assistés dans un contexte d'intervention précaire et précarisée. Cette politique a été associée à la nouvelle vague des politiques sociales inspirée dans l'approche de la Banque Mondiale : « la gestion du risque social ». Elle aspire à articuler des mécanismes de transferts monétaires conditionnés (« Conditional Cash Transfert Programs ») avec des pratiques de traitement de type assistentiels et promotionnels. À partir d'un approche de genre, l'analyse va se concentrer sur la gestion et le gouvernement du social au niveau local, notamment, à partir de la configuration sociologique des rapports assistentiels (entre assistants et assistés). Je propose discuter les formes de circulation et de transference des contraintes liées à la gestion assistentiels (bureaucratiques, administratives, financières) entre les familles et les intervenants et voir comment les mécanismes d'adaptation des uns, mettent en tension les subjectivités des autres (au niveau professionnel, éthique, affectif, etc.). Ainsi, je veux remarquer que la nouvelle logique de gestion du social s'appuie sur une intervention à double cible qui traite et qui met sous contraintes tant aux pauvres comme aux intervenants.

#### *Les Embûches De La Mémoire." L'éternate" Comme Metaphore Anticipatoire De La Dictature Argentine Et Relecture De Ses Séquelles*

Cette communication se propose d'aborder la bande dessinée de science-fiction *L'éternate*, devenue culte dans plusieurs pays et entendue comme une mise en scène des processus d'assujettissement, de répression violente et de reprise de la mémoire collective observés en Argentine pendant les dernières décennies. Publiée dans ce pays, cette bande dessinée a profondément marqué son public, devenant même une sorte d'hymne à la résistance. L'ancrage de l'ouvrage dans des lieux familiers de Buenos-Aires renforcera encore son réalisme, tout en faisant écho aux angoisses de la population de l'époque. L'engagement des protagonistes dans une lutte inégale face à un oppresseur cruel et inintelligible, leur sentiment d'insécurité, leurs peurs et leurs espoirs feront alors écho à la lutte du peuple contre la dictature argentine, expliquant au passage l'immense popularité de la saga. La « disparition » en 1977 du créateur, Hector German Oesterheld, enlevé et assassiné par les forces armées, ne fera d'ailleurs qu'augmenter l'importance d'un récit, dont la ligne argumentative reprend sa cohérence dans l'après-dictature. Cependant, *L'éternate* est beaucoup plus qu'une simple bande dessinée de science-fiction : elle s'amorce à partir d'un présent reconnaissable et se révèle page après page comme une métaphore anticipatoire, une prophétie qu'a pris son essor dans une première partie ou *saga mère*, créée entre 1957 et 1959 par Oesterheld et illustrée par Francisco Solano Lopez. Après quoi, elle permettra de relire les politiques sur la mémoire récente en Argentine dans une deuxième partie, sorte de *trilogie post-dictatoriale* due à Solano Lopez et au nouveau scénariste Pablo Maiztegui. Celle-ci illustrera, à partir de 2003 et jusqu'en 2011, « Le retour » du protagoniste, la mythique « Recherche d'Elena » et les eschatologies de « La fin du monde ».

#### *Social Psychology of Relationships of Domination in Hegel, Nietzsche and Fanon*

This paper explores the writings of G.W.F. Hegel, Friedrich Nietzsche and Frantz Fanon on the dynamics within relationships of domination and subordination. Although the three authors held quite different political perspectives, there are commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the minds of all involved in such relationships. Nietzsche and Fanon also discuss the role of *ressentiment* and the importance of physical coercion and repression in maintaining and then undermining domination. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three writers concur that the destruction of the inequality is an inevitability.

**PEREIRA, ALVARO\*** (University of São Paulo, [alvarolsp@yahoo.com](mailto:alvarolsp@yahoo.com))

### *The Financialization of Housing and Spatial Segregation: New Frontiers in Brazilian Cities*

Urban space plays a crucial role in the contemporary processes of capital accumulation, which is essential to analyse transformations on social housing policies and their impacts on patterns of socio-spatial segregation in the cities. More than mere effects of the financialization of the world economy, changes in the production and consumption of urban space have figured as driving forces of a new economic order, characterized by deep connections between financial markets and real estate.

Cities in general and the housing sector in particular have not only become fertile fields for commoditization of social needs and expansion of market relations, but also been progressively mobilized as guarantees for financial assets.

Social housing was not the sub-sector to be affected firstly by such phenomena, which has gone further where the expected rates of return are higher such as corporate buildings or luxury residences. However, it stands as a terrain of strategic relevance for business due to its large scale.

In this context, rather than ways of providing social rights, housing policies have been progressively conceived as means of opening new frontiers of financialization in low income residential markets. Like in many other countries, this is the case of "Minha Casa Minha Vida" program, the main housing policy implemented in Brazil, which subsidize homeownership to lower income households.

With the protagonist role of private developers in the formulation of social housing projects, their spatial dimension are conditioned by cost calculations made by economic agents seeking to maximize profits. Without taking into account urban policy goals, the definition of the projects' location is mainly guided by the criteria of the cheapest land available - generally also the most precarious places. As a consequence, social housing projects are reinforcing historical trends of segregation and ghettoification of the poor in Brazilian cities.

### *Lone Mothers and Long Hours. Work-Family Conflict In The Everyday Lives Of Lone Mothers In Sweden*

The gendered nature of the struggle to integrate caring, family and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the capabilities approach, which emphasizes that the options of an individual depend greatly on institutions and relations with others. Drawing on 38 in-depth interviews with lone mothers from different social backgrounds we explore i) how the proper relationship between motherhood and paid work is conceived of, ii) the institutional and relational factors that influence lone mothers' opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. Results show that paid work is integral to good motherhood to all mothers regardless of social class. They also show that lone mothers typically experience high levels of work-family conflict. Opportunities to reconcile paid work and family depend on employment conditions, accessibility to social support networks, the role of the absent father, household composition, and access to public childcare on irregularly hours. In the case of middle class mothers, blurred boundaries between work and family life and late meetings restrict opportunities to attain work-family balance. For working class mothers temporal employment, irregular working hours and low earnings are significant constraining factors. Reducing working hours, negotiating working schedules, and asking relatives and friends for help are examples of strategies used to reduce work-life conflicts. Reducing travelling time between the job and the home by moving from one place to another, and moving closer to relatives to increase the chances to get practical support are other examples. While middle-class women typically used flexi-time at work to alleviate conflicts between different responsibilities, several low-income mothers changed jobs in order to improve their situation.

### *Military Careers, Family and Private Dilemmas*

Work and family are the two most important areas of life for most people. Although the two are traditional areas of sociological study, and have occupied different fields of research. Today, the characteristics of these social institutions in contemporary society reinforce the need to discuss the relationship between work and family in the context of the social sciences, and very particularly in sociology. Interest of study that is even more evident in the field of the military profession, given the specificities associated with her, and also by the changes in society and the military.

A significant number of studies have enlighten the impact of military life on families, considering that the circumstances of risk, frequent mobility, long absences, uncertainty etc. products remarkable effects not only in military service personnel, but also in those who are close to them. Family and the military organization have in common the fact of being extraordinarily demanding in ties, energy and total dedication. Using the terms of Segal (1988), the "greediness" of both institutions may lead to conflicts between the family and the military realm, which may present several configurations and degrees, as well as several means of coping and dealing with the constraints. The aim of this paper is to compare the trajectories of man and women military personnel coming from the same promotion of officers formed at the Portuguese Military Academy. Specially, we will be seeking to map their expectations regarding couplehood and parenthood besides the adopted strategies to cope and conciliate the family and the professional projects. In methodological terms, the main data will be supported on depth interviews in the form of life stories applied to the first promotions of officers that included women.

### *Patterns of Migration, Working Conditions and Organizing in Globalized Care Work*

The 100th Session of the International Labour Conference in 2011 concluded with the adoption of the Convention on Domestic Workers, which recognized the "significant contribution of domestic workers to the global economy" that is "undervalued and invisible, and is mainly carried out by women and girls, many of whom are migrants or members of disadvantaged communities". The convention serves as an important initiative to develop a broad understanding of the work that migrant domestic workers do under restricted conditions or as undocumented. Drawing from recent NGO studies and reports, this paper offers an overview of the carework transformed to globalized care, which includes the state regulations of specific receiving countries that increasingly restrict the movement and labor choices available to migrant workers; the complexities and inequalities inherent to traditional notions of women's work and the intersections of race, class, ethnicity and citizenship in care work that is delivered globally; workers' migration patterns shaped by the various recruitment processes and citizenship restrictions; continued devaluation of work perceived as 'women's work', unskilled and outside of legal regulation offered to other workers. I conclude by highlighting the wide range of organizing activity among domestic workers around the world.

### *Cooperaci" N Aeroespacial ENTRE China Y Venezuela. La Formaci" N PARA La Transferencia EN Tecnología Satelital 2005 - 2013*

Venezuela ha establecido a partir del año 2005 acuerdos de cooperación científica con China para la transferencia de tecnología en materia aeroespacial, los cuales contemplan tanto la construcción y puesta en funcionamiento de sistemas de satélites como la formación científica de personal venezolano con relación al diseño, producción y manejo de los mismos a fin de alcanzar la soberanía tecnológica. El objeto principal del trabajo es mostrar que la formación científico-técnica constituye un factor clave para la consolidación de la transferencia de conocimiento. En este sentido, se analizan los alcances de estos acuerdos con relación a la educación de cuarto nivel en el área; considerando que hasta el año 2013 se ha logrado el lanzamiento de los satélites Simón Bolívar (VENESAT-1) y Miranda (VRSS - 01), al igual que la construcción de las correspondientes estaciones terrenas de control satelital producto de tales convenios. La reflexión acerca de estos resultados nos lleva a preguntar: ¿En qué medida el proceso de formación que se lleva a cabo en la actualidad puede dar cuenta de la transferencia tecnológica?, y ¿La transferencia del conocimiento aeroespacial, en el caso venezolano, puede constituir en si misma el factor más relevante para alcanzar la soberanía tecnológica?

*Age, Gender and Migration Status on the Labour Market – a Case for Accumulation of Advantages and Disadvantages?*

The analysis addressed in the presentation will show the situation of the older workers from the perspective of their minority status, namely belonging to the group of migrants, as well as from the perspective of gender. We will present the problem of the accumulation of certain advantages and disadvantages during the life-course of individuals with regard also to their socio-demographic characteristics. The questions this presentation will answer are the following: Are there significant differences in labour market outcomes between the workers with migration background and the workers without migration background? Do these differences increase with age? What is the impact of those two dimensions – age and migration status on one of the labour market outcomes, namely the wages? and finally, what is the role of gender in determining the changes in employment status?

The analyses in this paper draw on data from the SOEP (German Socio-Economic Panel) which is a representative, interdisciplinary, and longitudinal survey of the German population. For our analyses we apply the SOEP data from 1991 to 2011, distinguishing between population with and without migration background. To investigate wage differences between individuals we use the methodology developed by Oaxaca and Blinder (1973).

In the empirical analysis we have found that initial disadvantages in education of men with migration background cumulate across the life span resulting in large differences in labour market situation between older men with and without migration background. In the case of women we do not observe these increasing differences but mainly because both women with and without migration background have a pronounced negative development. Furthermore, the wage analysis reflects that wage differences between individuals with and without migration background are due to their different endowments and not an effect of direct discrimination.

**ROMPF, STEPHAN ALEXANDER\*** (University of Cologne, [stephan.rompf@gmx.de](mailto:stephan.rompf@gmx.de))

*System Trust and Cooperation: The Case of Recycling Behavior*

In this paper, I develop and test the hypothesis that system trust – trust in the reliability, effectiveness, and legitimacy of social institutions – promotes cooperation in social dilemmas and the provision of public goods, focusing here on the example of recycling. I discuss three models that can explain recycling behavior (rational choice, low-cost hypothesis, dual-process theory) and show how they link incentives and attitudes. All three models claim that incentives are an important factor mediating the attitude-behavior link, but they develop contradicting hypotheses about the direction of this effect. I use survey data collected by Sønderskov and Daugbjerg (2011) to advance an empirical test. I find a positive and significant interaction between the attitude of system trust and recycling costs, as well as a negative and significant interaction between system trust and recycling benefits. The data rule out the rational choice and low-cost hypothesis explanation of recycling behavior. Instead, they indicate that attitudes moderate the impact of the incentive structure, increasing cooperation in collective action dilemmas irrespective of the costs associated with compliance.

*Trust and Adaptive Rationality: Towards a Causal Explanation of Conditional and Unconditional Trust*

This paper provides a theoretical framework to reductively explain conditional and unconditional trust; it also presents an experimental test of the corresponding integrative model and its predictions. Trust research has neglected the importance of (1) an actor's context-dependent *definition of the situation* and (2) individual-level *adaptive rationality*. The diversity and fragmentation of trust research is rooted in an implicit duality between rational and non-rational approaches. This antagonism has permeated trust research across disciplines, both with respect to phenomenological description and causal explanation. But human cognition is guided by a flexible and dynamic degree of information processing: trust is as "multi-faceted" as there are cognitive routes that take us to the choice of a trusting act. The degree of rationality involved in interpretation and choice is a fundamental aspect of trust. However, *adaptive rationality has not been treated as an independent and orthogonal dimension of the typological space of trust*. By allowing for both automatic and rational modes of information processing, the

model demonstrates the impact of a flexible and dynamic degree of rationality in interpretation and choice on trust. It describes a finite set of parameters that guide the selection of the processing mode and provides a causal link between an actor's definition of the situation, individual-level adaptive rationality, and the behavioral outcome of trust. I predict a closed set of admissible interaction patterns in an experimental context using a measure of chronic norm accessibility (interpersonal trust scale) and two situational parameters. In a 2x2 factorial design, I vary the *context* and *initial endowments* in a standard investment game. The data show that negative incentive effects on trust in high-cost situations (5€ vs. 50€ real initial endowments) can be mediated by high norm accessibility or a positive social context. Decision-times analyses reveal a consistent pattern of interactions.

*Consumer Credit, Social Inequalities and the State in Postcommunist Central and Eastern Europe*

From the end of the 1980s, consumer credit grew quickly all over the developed capitalist world as the expanded access to consumer credit has come to be seen as a way to spur consumption and cushion the pains of growing income inequality as a result of the contraction of the welfare state (Crouch 2009; Prasad 2010; Krippner 2010; Trumbull in press; Kus 2013). The postcommunist region followed this trend in from the late 1990s as the neoliberal logic predominant in their economic policy thinking of that time shaped the course of the economic transformation. As the former socialist welfare states have been retrenching from providing for their citizens from cradle to grave, privatization, commodification and access to credit were ushered in to replace the state's obligations for free housing, higher education and rationed provision of deficit consumer durables. The expansion of consumer credit in East and Central Europe was achieved primarily through the enormous growth of formalized lending by retail banks but other alternative venues of lending have also sprung up. The paper investigates the effects of consumer credit on inequalities in Central and Eastern Europe and addresses the effects of the financial crisis on this new system of redistribution with special attention to Russia and Hungary.

*Emerging Patterns of Intergenerational Inequality in the Housing Market: The Shifting Position of Younger People in Cities in Europe and East Asia*

Across the developed world, market forms of housing provision and consumption were increasingly promoted towards the end of the last century. While state intervention and de-regulation combined in diverse ways in different contexts, the assumption pervaded that increasing numbers of new households would move into owner-occupied housing, stimulating urban economies and restructuring housing sectors around more marketized and privatized practices. This was expected to make urban housing markets more efficient and reduce the necessity for subsidized rental sectors. In context of the global housing boom and the Global Financial Crisis that followed, however, transformations in urban housing sectors have had a number of unexpected corollaries. One that has become particularly prominent in some cities is the divide between younger and older cohorts in terms of access to, and movement through housing markets. Timing of independent household formation and entry in the housing market, as well as access to wider family housing resources, have become increasingly important in shaping patterns of inequality both across and between different cohorts of urban residents. In this paper we explore intergenerational inequalities in a number of European and East Asian city contexts, with a focus on how housing market structures are reshaping housing careers, family formation and socioeconomic conditions among younger adults. The purpose of the East-West axis of analysis is to illustrate different manifestations of housing sector neo-liberalization as well as the more or less common outcomes in terms of spatial and economic polarization within and across different generations.

**ROODUIJN, MATTHIJS\*** (University of Amsterdam, [m.rooduijn@uva.nl](mailto:m.rooduijn@uva.nl))

*The Success of the Populist Message Explained*

Populism has become a regular feature of many liberal democracies. As a result, various studies have focused on the upsurge of parties that employ a populist discourse. However, comparative studies of populism mainly focus on one

specific form of the phenomenon: right-wing populism. Other forms of populism, such as left-wing populism or liberal populism, have received far less attention in comparative research. This paper conceives of populism as a set of ideas that can be combined with every political ideology. Moreover, it is assumed that political parties can employ the populist set of ideas to a larger or lesser extent. As such, populism becomes a matter of degree: parties – on both the left and the right – can be *more* or *less* populist. This raises the question as to how the success of the populist message can be explained. Why and under which circumstances do citizens vote for parties that employ a populist discourse? In order to answer that question, I focus on both micro-level explanations (socio-demographic characteristics and political attitudes on the individual level), and macro-level variables (corruption, social inequality, party system polarization and the electoral system). The paper combines the results of a computer-based content analysis of election manifestos with the European Social Survey (2002-2010). By means of multi-level analyses of parties and voters in 15 Western European countries, it is assessed how the success of parties that employ a populist discourse can be explained.

#### *Skills Exchange: The Politics of Collaboration and Co-Production*

This paper identifies the ethical and methodological significance of this project and discusses the productive blurring of the overlap between arts and visual research practice.

*Skills Exchange: Urban Transformation and the Politics of Care* was a collaborative art and social research project that took place over 6 years. It investigated the elderly in the city, relations of care and the civil spaces available for older people to participate in. The project from a notion that artists, researchers, older people, care-workers and others might exchange their skills, and, in this process, alter roles and well-rehearsed relations through processes of creative exchange. *Skills Exchange* challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. These methods were oriented towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes art works and social initiatives, opening events and manifestos in addition to interview transcripts and social mappings, each oriented towards the cultural and socio-political changes groups hoped to enact.

[a.rooke@gold.ac.uk](mailto:a.rooke@gold.ac.uk))

#### *This Is Not a Toolkit: Reclaiming Critical Evaluation of Participatory Arts*

This paper argues that 'evaluation' is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. In considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the 'norms' and 'forms' of evaluation. The histories of and motivations for evaluation include a governmental impulse to employ culture as a resource that can be put to work as part of a wider global project of managing social change (Yudice 2003, Bennett 1995) and a genuine desire to learn from and improve the effectiveness and possibilities of arts-based social interventions. This paper argues that in the current policy context evaluation has become a technocratic 'hoop' for arts organisations to jump through in an endless mutual narrative driven by cultural policy, instrumentality and accountability. In contrast this paper argues that the value of evaluation, however, lies in the opportunity it offers for critical and reflexive learning. This paper offers examples of critical approaches to evaluation based on a method of participation action research.

Focusing on a European and UK context, this paper considers the possibilities of reclaiming evaluation as an informative, generative, critical and non-partisan activity in the context of contemporary cultural policy. In a political and economic climate which emphasises the need for empirical justification for monies spent on the arts, the question of how to differentiate between evaluation, 'cost benefit analysis' and evidence-based policy is pressing. These differing conceptual, theoretical and policy threads will be brought together to consider ways of rethinking

evaluation as a critical practice and the relationship between participatory arts and cultural policy.

#### *Race/Ethnicity and Health Information Seeking and Use Outside of the Medical Encounter: Is It Associated with Chronic Conditions?*

Increasingly, adults in the United States of America (USA) are seeking and using health information (HI) within and outside their medical encounters. Patients actively involved in their self-care are more likely to manage chronic conditions (CC) effectively. But, HI use trends are unclear for those with CC, who use more health-care and are associated with aging. One study on older, racial/ethnic minority adults found HI seeking could change their eating, exercise, and illness treatments but did not lead to changes in health promotion/prevention or healthcare providers. The theory of uncertainty management suggests that patients reduce healthcare uncertainty by increasing their understanding of disease etiology or treatment options, improving patient-doctor communication, and enhancing disease self-management knowledge through HI seeking. My prior research found African Americans and Whites were similar in seeking and using HI when they talked with their doctors, but Latinos were significantly less likely to do so. However, African Americans and Latinos were significantly more likely than Whites to seek and use HI to change their approach to maintaining their health and better understand how to treat illnesses. We examine if race/ethnicity is related to HI use outside of medical encounters by CC. We use data from the 2007 USA Health Tracking Household survey, a nationally-representative survey of civilian, non-institutionalized Americans (n=12,549). Descriptive analysis showed Whites were more likely to seek HI from the Internet (35.7%), while a higher percentage of African Americans sought HI from books or magazines (33.3%) and friends or relatives (32.3%). Latinos were more likely to get HI from friends or relatives (24.0%) and books or magazines (23.1%). Logistic regression models using a knowledge/beliefs scale about care for CC, and alternatively stratifying by any CC or not, will aid our understanding of the self-care practices and needs of racial/ethnic adults with CC as they age.

#### *Work after Retirement or Work Instead of Retirement?*

Work after retirement or work instead of retirement?

In Europe the problem of population aging has aroused much worry. The debates on aging populations in need of care, consuming lots of resources, have been common. Consequently, the raising of the retirement age has been one of the themes in the discussion. There is strong opposition against increases in the retirement age. Therefore, alternatives are needed. There are also spontaneous developments which affect the retirement age debate. One alternative which has been tested is the elimination or raise in the upper age limit for retirement. In Finland people may retire already at 63 or 65, but they have to retire at 67 or 68. This upper limit could be raised to 70 without much protest, or eliminated completely.

Another new development is the combination of retirement and (paid) work. This has increased very quickly in the developed countries. One explanation is low pensions and/or need for good health coverage. But in countries where the level of pensions is decent, the reasons for working are mainly on the pull side. The retirees are healthy and wish to stay in the work life. This means that they do not wish to work full time, but on the other hand are not primarily interested in remuneration. In fact, there seems to be also an increase in the unpaid work, which is difficult to follow statistically.

In our Finnish Generational Transfers study we follow the Finnish baby boomers (born 1945-1950) and their activities. From our data we can see that working when retired is quite common and has interesting correlations with education, income, happiness etc. The paper will present these results and compare them to data from other European countries. On the basis of these results some recommendations about retirement policies are made.

#### *Between Rhetoric and Reality: Shari'a and Neo-Liberal Multiculturalism in Australia*

##### **Abstract**

The past decade has been characterized by attacks upon and critiques of multiculturalism. This has been particularly the case in Europe, where in the context of the European sovereign debt crisis a politically driven, anti-multicultural contagion has spread at rapid pace. It is clear that multiculturalism in Europe faces

immense political challenges from its opponents, many of whom currently constitute ruling governments. Leaders and or opposition parties in Switzerland, Germany, The United Kingdom, France and the Netherlands have made strong public statements against multiculturalism and linked this rejection to the presence of Muslim populations. Banting and Kymlicka note that even though multicultural policies may remain in place in many of these nations, the 'delegitimation of the word multiculturalism is not just a change in discourse, but jeopardises the very conditions under which multicultural policies can actually work'. It would be easy to consider that in this context, multiculturalism has a dim future.

This paper, based upon extensive research conducted for an Australian Research Council funded study examines the 'retreat from multiculturalism' in Australia through the debate about shari'a, legal pluralism and Islamic finance. It offers important insights into the dimensions of a new neoliberal multiculturalism in Australia.

#### Biography

**Joshua M. Roose** [[J.Roose@uws.edu.au](mailto:J.Roose@uws.edu.au)] is a senior research officer of the Religion and Society Research Centre at the University of Western Sydney, Australia working on an Australian Research Council-funded study examining shari'a and legal pluralism in Australia and the United States. In 2013, he served as a visiting scholar and researcher on the same project (with Professor Bryan Turner) at the Committee for the Study of Religion at City University of New York. He is also a co-convenor of *The Australian Sociological Association* (TASA) "Ethnicity, Migration and Multiculturalism" thematic group with a focus on religion and multiculturalism.

#### *Muslim Elites in the Neo-Liberal Sphere: Implications for Citizenship and the Future of Islam in the West*

In recent years there has been a vast array of studies examining Muslims in Western contexts at the level of radicalisation, impacts of negative representations and civic engagement. However, little research has examined the emergence of Western born Muslims into the elite professions that are central to the operation of the neo-liberal free market and that serve as a central location of economic and political power. Less research still has examined how this 'new Muslim elite' is shaping citizenship amongst Muslims and the future of Islam in the West (and the tensions this produces with traditional Muslim community leadership). This study aims to reveal important empirical and theoretical insights into these developments. Significantly, this study shifts the focus from the 'Muslim question' to how Muslims are actively contributing to a Muslim 'Solution'.

This paper is based on findings from a three year project (2012-2014) funded by the Australian Research Council and conducted by a multidisciplinary team (Law, Sociology, Criminology and Political Science) from the University of Western Sydney (UWS) and City University of New York (CUNY). Empirical research was conducted in the global cities of Sydney and New York with Muslim attorneys, Islamic finance specialists, Imams and community leaders. The study aims to explore the intersection of shari'a and the secular legal system, as well as gaining a broader insight into how shari'a shapes the daily lives of observant Muslims.

#### *The Temporality of the Good Life: Resonance As a Key-Concept in Critical Theory*

The modern reality of ethical pluralism implies that we cannot define the substance or content of a good life. However, perhaps it is possible to identify the temporality, or at least some of the crucial temporal aspects of a good life? The paper sets out to explore just this. In the first part, it identifies three time-levels that have to be brought in 'resonance' or coherence within a life: The temporality of everyday-life, the temporality of a life-time (or biographical time), and the temporality of one's age or epoch (historical time). In its second part, the paper seeks to establish the argument that the good life is achieved through a mediation between singular 'moments of resonance' (as opposed to situations of alienation) and stable 'axes of resonance' that allow for such moments. The crucial point here is that the establishing and preservation of such axes of resonance require a certain level of security and stability that is potentially threatened or undermined in an era of incessant social acceleration.

While moments of resonance are rare and shortlived, what subjects need are stable and reliable 'Axes of Resonance' which give access to such experiences. In modern society, such axes can be love and the family, work, but also nature, art and religion. I will explore these 'Spheres of Resonance' by contrasting them to 'Spheres of Alienation' which mirror the former and might be on the rise in a late-modern world governed by the imperatives of speed and competition.

#### *Can International Framework Agreements Facilitate Transnational Labor Cooperation?*

Marx & Engels predicted that globalization would lead workers of the world to unite. Indeed, the world economy is today "global." However, globalization seems to have hurt workers' organization as labor unions have lost membership and influence almost across the board. But in the past decade global unions have even been able to persuade more than 100 multinational corporations employing over 8 million workers to sign so-called international framework agreements ("IFAs"). At a minimum, all IFAs must submit to the "core labor rights" of the International Labor Organization ("ILO"), to wit, the right of freedom of association and effective collective bargaining, the right to be free from discrimination at work, the right against compulsory labor and the right against the worst forms of child labor. Could Marx & Engels have been correct, after all, about an international formation of workers acting in a class-conscious way for fundamental social change around the world? After doing empirical field research for about 6 months in Europe and the U.S.A., I do not think that IFAs yet signal a significant and new labor upsurge. First, I found out that the mostly German, Nordic, and French labor organizations seem to determine the specific meanings of the IFAs. These specific national labor organizations broker the IFAs and the relations that give IFAs meaning and life. In this sense IFAs are not truly "global." They have important national roots. Second, unions across economic sectors seem to have conflicting interests. No brokerage seems to mend those ruptures, leading some global unions and their IFAs to clash with others. The paper concludes by arguing that the ILO may help to broker these conflicts to propel IFAs forward.

#### *Communicating the Challenges of Climate Change Adaptation in the International Red Cross and Red Crescent Movement*

The paradigm of climate change adaptation (CCA) plays an increasingly important role in various types of civil society organizations (Foran/Widdick 2012; Hall 2013). The International Red Cross and Red Crescent Movement discussed the topic of climate change as a humanitarian challenge for the first time in 1999. The foundation of the Red Cross/Red Crescent Climate Centre (RCCC) in Den Haag in 2002 institutionalized this new organizational commitment to address climate change induced challenges in disaster preparedness and the securing of livelihoods. Today, CCA is being discussed as a cross-cutting issue in humanitarian

projects across the 187 national Red Cross/Red Crescent societies. The communication of climate risks to reach various target audiences from local communities to national stakeholders and volunteers to donors at the institutional and individual level has become a key challenge in the process of organizational change. This paper comparatively analyzes three different methods of communication that address CCA issues in the Red Cross/Red Crescent movement. First, the different visualization tools of the vulnerability and capacity assessment are analyzed with a focus on community based perceptions of climate change (RCCC 2010). Second, participatory games that model complex dynamic systems and that are facilitated by the RCCC from the local to the national level are discussed as a tool to foster awareness on the complexity of climate change impacts for local livelihoods and disaster preparedness at the level of donors and practitioners. Third, the climate change campaign of the German Youth Red Cross is analyzed with regards to its approach to motivate young people and the general public to address a complex issue in their volunteer work. Together, these case studies illustrate the need to find innovative ways to communicate and simplify the complexities and uncertainties that are linked to changing environmental factors.

*Innovative Strategies to Cope with Climate Change Across Time and Space - Local Preparedness As a Humanitarian Challenge?*

This paper addresses an innovative climate change adaptation strategy in the area of disaster preparedness developed by the German Red Cross in cooperation with its local partners in Africa such as the Ugandan and the Togolese Red Cross. Discussing the concept of "early warning/early action" and its practical implementation, this paper addresses organizational learning processes in transnational organizations from an actor centered perspective. By looking at a new project approach in the area of indicator based disaster preparedness systems, the importance of knowledge creation and transformation across time and space is highlighted. Time is important to respond adequately before a disaster strikes which requires new forms of institutionalized cooperation (for example, with meteorological departments and other stakeholders), while the spatial dimension refers to processes of organizational learning across borders and hierarchies from the local to the regional, national and transnational level. The role of both local communities and organizational change agents, meaning key persons within and outside the organizations, is addressed systematically to analyze the possibilities to foster climate change adaptation projects and their successful implementation in the long run.

*Talking about Sexuality in Order to Deal with Discrimination? Gay Men in Palestine*

In the context of a German-Israeli-Palestinian research project, we conducted biographical-narrative interviews with Palestinians in the West Bank and Jerusalem. We asked our interviewees to tell us their family and life histories without suggesting any other topic during the first (and main) part of the interview. In all our research settings we had several interviews with men who define themselves as homosexual or who experienced serious discrimination because of being defined as homosexuals. It became obvious that these men wanted to speak with us because we represent, from their perspective, the so-called Western culture that they associate with more sexual liberty and because they felt a need to speak about their suffering from discrimination. In order to understand and explain the interaction during the interview it is crucial to understand their specific definitions of the concrete relationship to the male interviewers from Germany.

These biographical self-presentations are marked by talking about experiences of discrimination and about struggling with their self-definition (Am I gay, transgender or heterosexual?). Thereby they touch on the issue of homosexuality being a 'Western' concept.

In our paper we will present our assumptions, that are based on several case studies, about the interrelation of these self-presentations and self-definitions with the hegemonic discourse about male homosexuality, or non-normative sexualities respectively, in Palestine. Furthermore we will discuss our impression (and assumption) that these interviewees, who are in a position of outsiders (in the sense of Norbert Elias) in Palestinian society, are talking more openly about internal conflicts inside the Palestinian community than other interviewees.

*Climate Upsurge: An Ethnography of the Climate Movement*

In this paper we report on a project analysing the emergence of a grassroots social movement dedicated to direct action against the root causes of climate change. The project investigates the dramatic turn in climate politics that occurred in the mid-2000s. Engendered by mounting evidence of climate change, and by the ongoing failure of international negotiations under the United Nations Framework Convention on Climate Change, and rejecting the pragmatism of professionalised non-government environmental organisations, this grassroots-based political movement launched a radical programme for climate action from below. Through public protests, civil disobedience involving direct actions, counter-summits, and deliberative events that created a sense of community, solidarity and personal political agency, climate activists sought to translate climate science into politics. The climate movement sought to build a political vision and the political capacity to challenge the elite politics of climate change, the 'climate pragmatism' that had dominated climate politics since the 1990s, and the legitimacy of the carbon-intensive economy. The paper explores this significant moment, when a radical climate politics introduced a new dynamic to the landscape. The authors are to publish this work in 2013 as an ethnography of the search for climate agency, based on the authors' involvements in the climate movement and in-depth interviews with climate activists from 2007 to 2010. Focusing particularly on the climate movement in Australia, a country reaping the economic benefits of the coal and gas boom, the book charts both the possibilities and pitfalls revealed by the upsurge, interpreting it as a pre-figurative moment for an anti-systemic climate agency.

*Imperialism In a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies*

**Imperialism in a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies**

National currencies, especially paper notes, are emblems of the nation-state and its power. This paper builds on these literatures to explore iconic representations of Canada's Aboriginal Peoples in its monies, using examples of colonial and (ostensibly) post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada's imperialist, colonialist legacy is a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives.

Beginning with an 1870 Dominion of Canada \$2 bill, and culminating in the 2004 *Canadian Journey* series \$20 bill, this paper asks whether Canada's claim of multiculturalism vis-à-vis First Nations Peoples is indeed supported by nation-building imagery on its own currency. Hudson's Bay Point Blankets were traded between colonisers and First Nations in 19th century Canada. These wool blankets were re-purposed by Aboriginal peoples as garments, ceremonial exchange and prestige goods. On the 1870 \$2 bill, the blanket draped across an Aboriginal man's body is an imperialist icon of *le doux commerce* that 'tames' the 'noble savage'. In the 2004 \$20 bill, First Nations are represented by a modern sculpture by a Haida artist, Bill Reid, depicting the creation of mankind, 'Raven and the First Men'. But on this bill is contemporary Aboriginal art and 'traditional culture' – the sculpture depicts a key event in Haida cosmology – presented as truly valuable?

*When 150 Becomes 100: Conversions and Denominations In Grocery Shopping*

**When 150 becomes 100: Conversions and Denominations in Grocery Shopping**

This paper explores two aspects of expatriate money practices with Russian rubles, focusing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currencies like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing 'sticker shock', a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of value and price for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish krona – talk of curious conversions that shift, so that a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handy conversion to assess prices, but also adjusting to new arithmetic based on

different monetary denominations, even when the base unit may be the same. I will argue that conversions are slowly adjusted to better match not official rates of currency conversion, but notions of worth and value that are linked to available denominations of money at 'home' and abroad.

#### *Ethnographic Studies Approaching Violence and the Transaction of Illegal Drugs in Montevideo, Uruguay*

The present work is a result of a process of ethnographic investigation that took place in three different social locations: the downtown area (with a population conformed by homeless teenagers and young adults); a peripheral suburb location in Montevideo (focusing on consumers of cocaine paste base); and, prison (within a system created for people with no criminal records). The focus of this study discusses the social interrelations and the transactions of illegal drugs. Given the general assumption that the foundation of social interrelations is exchange itself, the case of an exchange that occurs within an outlawed background will be debated- an illegal market which is necessarily (re)producing violence-; a market that is illegal due to the fact that those merchandises are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the Uruguayan government formulates the regulation of the market of marihuana, it also proposes to implement stricter measures against the traffic and transaction of cocaine paste base. This rationale implies contradictory policies and thus, drug-related social violence is strictly connected to an illegal framework of its transaction than to drug abuse psychological and physical effects.

#### *In and out of the Mass Media System: Crisis Microblogging in a Social System Theory Perspective*

The large diffusion of social media platforms, together with the diffusion of mobile connectivity, has generated, during the last few years, a growing amount of real time production of user generated content. This broad phenomenon is even more interesting when it comes to crisis related communication. During crisis events traditional mass media communications might be slower less efficient and less accurate than user-generated information. This is why, over the last few years, we are seeing a growing number of research projects aiming at using these data for rescue operations or other civil protection activities. We are facing this kind of data from a different perspective. Within this paper we will claim that - within specific circumstances - user generated communication will act surrogating the traditional Mass Media System in its function of self observation of the Social System (Luhmann 2000) by applying the same operational selection between information and non-information. In addition we will claim that, as soon as the initial conditions disappear, user generated communication will evolve into a new - and still largely unexplored social function.

To support our thesis we will use Twitter data collected during the first five hours after the earthquake that struck Emilia Romagna region in Italy on May 20th 2012 monitoring the #terremoto hashtag. By focusing on the first 5 hours of the Twitter stream we have been able to detect the early user-led phase of the phenomenon, showing which type of users has been the first to fill the information gap and, by then, what happened until the early morning when traditional media came on stage. We will show how in this time span it is possible to observe how specific social network analysis metrics (Bruns, Stieglitz 2012) evolve from a specific mass media like structure toward a more conversational structure.

#### *Ageing and the Development of Community Care in East Asia - What Way Forward?*

With the ageing of societies, there is growing interest among also East Asian countries to implement new policies of long term care. Home care arrangements now predominate in OECD countries, reflecting older people's preferences for home based help and care but also as an attempt to reduce reliance on expensive institutional care, particularly for recipients with lower levels of disability (OECD, 2005). Countries without extensive formal community-based care systems such as the East Asian countries are in a demographic situation which requires them to consider how to organize and provide adequate, affordable and quality community-based care, in both urban and rural settings, and in a financially sustainable and culturally diverse way. They can draw on the lessons learned from other countries in the development of national community-based care models, but new

models of community care must develop according to their respective cultural, political and social background and taking into account financial and systemic capabilities. This paper investigates what models of community care have been implemented or is under way in 9 East Asian countries, outlining their characteristics and the challenges forward.

#### *The Gendering of Internet-Based ICTs in Everyday Life*

Dealing with the implications of ICTs for social inequality requires taking the everyday processes and actual situations into account in which ICTs are used and where participation is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being reproduced. Within the domestication process ICTs are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-orientated, interview-based long-term study "The Mediatized Home" analyzing the integration of the different internet-based ICTs into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that due to a technological framing, inequalities in internet use and skills are especially tied to gender roles and practices. Although the technological framing and thereby these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples, which is evidently affecting the use of internet-based ICTs.

In order to understand the ways in which internet-based ICTs interact with questions of social inequality, it is crucial to ask for its latent implications. Our study shows that looking at everyday life from a domestication perspective allows us to not only identify latent implications of internet-based ICTs, but also to understand how they unfold their effects on social inequality.

#### *Where Participation Is Negotiated: New Media in Everyday Life*

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being reproduced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-orientated, interview-based long-term study "The Mediatized Home" analyzing the integration of the different New Media Technologies into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that inequalities in internet use and skills are especially tied to gender roles and practices. Although these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples involving a gendered construction of New Media expertise, which is evidently affecting the use of New Media.

In order to understand the ways in which New Media can open up possibilities to participation, it is crucial to ask whether people are equally taking part in New Media or not. Our study helps explaining processes of inclusion as well as exclusion showing how participation in New Media is negotiated in everyday life.

#### *Unions and Childbearing: Converging Gender Roles in Finland*

One distinguishing trait of Finnish fertility during the last decades is the increase in the proportion of families having three or four children. We study how socio-economic status (SES) and numbers of unions relate to above-average (3+) parities among Finnish men and women across age cohorts. In previous studies of wealthy low-fertility countries, both male SES and number of unions has often been shown to increase fertility, while their effect on women is mixed or negative.

We use the FINNUNION data, a 11% sample of all Finnish-born persons resident in Finland during 1970–2010 and covering the fertility of age cohorts 1930–1960. It includes data on coresidential unions and marriages, childbearing and central socioeconomic indicators of the *index persons* on an annual basis. It also includes sociodemographic indicators and childbearing history of all partners in marriage or cohabitation of the index person.

Results show that across all male cohorts, higher social status increases the proportions of 3+ children. There is no comparable clear trend among women, although the negative effect of female education on higher parities diminishes over time. Interestingly, the gender differences appear to diminish among younger cohorts. We discuss reasons for the shift towards gender equality in mating patterns in families with many children.

[Laurence.Roulleau-Berger@ens-lyon.fr](mailto:Laurence.Roulleau-Berger@ens-lyon.fr))

### *Plural Modernities and Post-Western Sociologies : Individuation in Europe and in China*

In a context of plural modernities we have entered in a period of Post-Westernization of knowledge and coproduction of the construction of situated knowledge. We are in the midst of a "global change" which is distinct from previous changes and their ephemeral nature and which appears to be a turning point in the history of the social sciences. In this communication we will consider the diversity of epistemic injustices and reticular dominations, the emergence of *Post-Western sociology* through the dialogue between European and Chinese sociologies; finally we will be focused on theoretical *continuities and discontinuities* between Chinese and European sociologies through the analysis of the process of individuation in Europe and in China. The concept of the individual is not very highly developed in Chinese sociology, whereas it has assumed a central position in European sociologies. On the other hand, various theories of the *guanxi* have been developed; some Chinese sociologists advance the 'we' is produced, on the one hand, by *guanxi*, which delineate the particular boundaries of the 'self' in the construction of the individual, and, on the other hand, by categorisations, identifications and social affiliations. Over the past 20 years or more, it has been interesting to observe that in European sociology, and particularly French sociology, the contemporary individual, whether he appears uncertain, reflexive or autonomous, lies at the heart of sociological thinking, whereas he is scarcely visible on the Chinese sociological scene. This phenomenon highlights the affirmation of the process of individuation as a process of civilisation – in Norbert Elias's sense of the term – and shows that, whereas in the past it was social structures that sustained the individual and the level of reflexivity was consistent with the social structure. We would consider *discontinuous continuities* and *continuous discontinuities* between Chinese and European sociologies.

## WG01-896.3

**ROULLEAU-BERGER, LAURENCE\*** (CNRS,  
[Laurence.Roulleau-Berger@ens-lyon.fr](mailto:Laurence.Roulleau-Berger@ens-lyon.fr))

### *Sociologies and Methodological Cosmopolitanism*

Methodological reflection in sociology is linked to the development of the Western society which saw its birth. If the process of pluralisation of contemporary societies questions even the idea of society as a narrative attached to that of modernity, and in particular that of European modernity, European thinking has continued through methodological nationalism to see itself as universal mediator of all the other narratives (Chinese, Indian, Arabic, African, Brazilian and so on). Certain forms of scientific hegemony have marked the development of sociological thought. The most pressing task, however, is to produce *methodological cosmopolitanism* in which continuities and discontinuities, connections and disjunctions are constructed between different places in the world and potentially capable of bringing to light the multiplication of « regimes of alterity », the different ways of being with Others. The Others became a major methodological and epistemological scientific issue. Here, a methodological cosmopolitanism is based on a multisited ethnography of recognition, in which all Others are regarded and recognised with their experience, their competence, and his fluctuating, reversible and varied identities anchored in a diversity of locations and temporalities. Methodological cosmopolitanism is a way to access to the multivocality and the polyphonies of the plurality of narratives. Here methodological cosmopolitanism allows for a universal sociology, which means integrating different points of view, which European, Asian, American, Arabic, African societies construct together. We propose to create a transnational intermediate space of knowledge in sociology by favouring an harmonisation between different theoretical, epistemological and methodological traditions from Asia, Europe, Africa, North and South America and Arabic

countries. Methodological cosmopolitanism is related to a conceptual space based on the articulation between a critical sociology and a pragmatic sociology where structural processes, collective and individual action, interaction orders are thinking together in different places in the world and different temporalities.

KUZNETSOVA, IRINA (Kazan Federal University)

### *The Comprised Mobility of Moscow's Labour Migrants: States of Exception in a Super-Diverse City*

While Moscow is a super diverse city with between 4-5 million of its population international labour migrants, the majority from Central Asia, and despite the state recognising their economic importance, levels of integration and tolerance are extremely low. This paper argues that increasing xenophobia and unclear legislation forces many migrants to live and operate within shifting states of exception, ensuring a precarious everyday which impacts greatly on their mobility. While often used to describe migrant camps this paper argues that the state of exception concept applies to Moscow as a whole as even documented migrants are prey to state officials and, increasingly, its citizens due to the uncertain everyday life that imprecise legislation creates. Thus migrants share informal knowledge about the safest places in the city and the routes around it which reduce their chances of interactions with the police. Furthermore, many who desire formality are forced into informality by their employers and landlords refusing to register their documents correctly, increasing their vulnerability and denying welfare access. Compounding this, while it is extremely unclear who can demand a migrant's documentation they are routinely stopped by the police and increasingly by members of the public, with groups such as 'Moscow Shield' proclaiming themselves as the city's protectors. This ensures that migrants wish to spend as little time as possible in 'public' spaces to reduce the risk of confrontation, punishment and violence. For many their spatialities of Moscow are reduced to their work place and accommodation and there are very few places where integration occurs. Through the work of Lefebvre and de Certeau the paper then addresses how migrants develop informal tactics to 'cope' with these everyday realities and carve out spaces of the city for themselves.

## JS-80.6

**ROUND, JOHN\*** (Higher School of Economics,  
[j.round@me.com](mailto:j.round@me.com))

### *The Precarious Everyday of Moscow's Labour Migrants: Rising Xenophobia and the Migrant As a Political Subject of Disgust*

Since the collapse of the Soviet Union Moscow has positioned itself as a global city (re)built on the profits of its energy boom and the efforts of, currently, over four million labour migrants, the majority from Central Asia. Far too many migrants endure an extremely precarious everyday as they are forced to live in what the paper describes as a city wide state of exception, within which legal frameworks protecting migrants are ignored or misinterpreted to the benefit of the market. Many migrants who desire 'legality' are forced into 'illegality' by their employers and landlords refusing to register their documents correctly, increasing their vulnerability. Based on in-depth qualitative research this paper explores the human rights abuses that labour migrants experience, ranging from arbitrary fines by the police, a total disregard for their workplace safety to xenophobic attacks. The research demonstrates that migrants are simultaneously visible and invisible to the state, as for the latter the legal uncertainty denies them access to welfare and a voice within the city but they are visible for exploitation both in terms of their labour and the political capital gained from their presence. Migrants, the paper demonstrates, are constructed as 'illegal' regardless of their documentation status and politicians, pandering to growing nationalistic sentiments, castigate the migrant body (in all meanings of the word) as 'diseased' or 'criminal', to be seen as separate from the rest of the city. This feeds into xenophobic attitudes making migrants even more vulnerable with, for example, volunteer groups emerging to check their documents as they are seen as a danger to the city. Drawing upon the work of Lefebvre and de Certeau the paper concludes by exploring how migrants develop informal tactics to try and negate these problems to ensure their general well being.

### *"Equality and Challenge: The Case of 'Lysistrata' in Ancient Greek Drama"*

This paper concerns with the successful revival of the ancient Greek drama through the study of "Lysistrata" by Aristophanes. The educational and recreational character of the ancient Greek drama gives the audience messages for

equality, a notion useful in building sound personalities, ready to participate in a democratic state. In this paper I will present the analysis of "Lysistrata" through the mask/prosopoia of the ancient Greek drama. The results were acquired after going through and studying elements from a variety of sources, such as masks form pottery, bas-reliefs, sculptures, frescoes, statuettes and texts. Aristophanes, who is considered to be the best ancient Greek comedy writer, was well aware of the social problems faced by the Athenian republic during and after the Peloponnesian War and thus felt challenged to present these problems through his writings. One famous persona he made up was "Lysistrata", an audacious, vivid, powerful woman. Nowadays, "Lysistrata" is taught in philosophy schools and played in theatres around the world. The messages conveyed involve idea of the equality, peace, reconciliation, dialogue, human rights. The educational activities deriving from the ancient masks presented masks could take the form of articles, lectures, e-lectures, workshops, interactive programs, videos etc.

#### *Epistemological Standpoints and Steps in Social Sciences. Intersectionality in Gender Studies*

Human and social sciences are the subject of a long lasting confrontation between the ideal-type standpoint of the researcher's neutrality and the inevitable subjectivity in everyday life situations, between positivism and subjectivism. As a result of these paradigmatic oppositions, we encounter a cleavage between statistical quantitative methods applied to experimental data, "objective methods", and qualitative methods used in a contextual research.

Since 1980's, in information and communications sciences but also in management and gender studies, we are talking about the reliability of qualitative methods, the role of experience, memory and *standpoint*. The objectivity is actually non-achievable, so the subjectivity must be assumed, explored, transferred.

Feminist studies (sociological first, then communicational, discursive, historical) are designed to reveal the women's perspectives, as the feminist approaches had been ignored over the centuries. The main operator for the methodological change was the women's testimony through methods like life story, narrative analysis, and ethnography. It will be improper to talk about the exclusion of problematics and methods. What makes a quantitative or qualitative approach feminist is the focus on the topic of women and their issues. The feminist research prefers the individualization and not the generalization, the correction of the *view from nowhere* postulated by positivist research.

With this new orientation towards a "situated knowledge" (see D. Haraway), with the triangulation of methods and the intersectionality of sociological parameters, the traditional separation between the subject *connoisseur* and the object to be known is abolished and the group or community perspective can replace the neutral, individualizing perspective.

#### *La Dimension De Genre Dans Les Organisations*

La visée de cette intervention c'est de s'inscrire dans l'histoire des efforts entrepris pour éradiquer l'arbitraire, l'injustice et la discrimination envers les femmes en utilisant l'arme de l'information. Pour faire avancer la cause de l'égalité, il faut d'abord assurément prendre le pouls des inégalités, rendre visibles leurs causes et leurs effets, comprendre le degré de leur résistance et les implications de leur persistance.

En dépit des modifications *de jure* (loi contre la discrimination de genre-2002 pour la Roumanie), *de facto* les changements arrivent plus lentement. L'inégalité de genre reste une caractéristique majeure de la société globale et par voie de conséquence de la Roumanie postcommuniste aussi.

Dans les sociétés contemporaines marquées par la désindustrialisation, la production et la reproduction, le marché et la famille sont moins séparés ; ils deviennent des espaces où le sexe, la race, la classe se confrontent afin de donner une signification et valeur nouvelle au travail. La *crise* (de la production, du travail, de la famille etc.) entraîne des travaux temporaires, ce que des chercheuses féministes appellent du travail féminisé (moins payé, moins valorisé, etc.); c'est pourquoi on parle de féminisation de la pauvreté (accentuée par la crise).

Même si les femmes ont investi dans presque toutes les professions, la ségrégation sexuée du travail demeure une réalité qui se traduit notamment par la persistance de l'inégalité salariale et symbolique (ce que l'on va prouver par les

vingt entrevues en profondeur avec des femmes appartenant à des professions, catégories d'âge et de leadership différentes).

#### *Suffering and Aesthetic Identification in Cosmopolitan Cinema*

Looking at specific film examples of cosmopolitan cinema, this paper is concerned with both theorizing and probing how different modalities of aesthetic identification with the suffering hero – sympathetic, cathartic and ironic – are consequential for the ways in which the viewer is capable (or not) of detaching herself from the immediacy of the emotions underlying her identification (e.g. compassion, sympathetic tears, tragic emotion, estrangement) and rise to moral judgment and reflection about what is represented. It is through the fictional exercise of the imagination that audiences are invited to identify and empathize with the fate of individual characters and to consider the moral implications of their suffering in their life worlds. If fictional characters can become 'real', personalized and tangible as subjects experiencing pain, it is also because the suffering 'other' is perceived not as a distant object of pity but as a fully-fledged subject just like 'us'. We will see that some modalities of aesthetic identification with suffering characters have the potential to trigger cognitive linguistic deliberation – and, therefore, new cultural meanings of suffering – in a discursive ethical space where a range of interlocutors – audiences, filmmakers, creative personnel and critics – enter into conversation with each other about what constitutes human dignity and its violation. It is argued that cosmopolitan cinema challenges the idea that suffering is 'unrepresentable' by personalizing suffering and bringing its visual presence before us in ways that verbal representation cannot.

#### *Changing Society, Changing Sport? Social Diversity, Cultural Citizenship and the Sporting Nation*

Sport is routinely evident as a key signifier of nation around the world. But in Australia the unusually elevated place of sport in 'official' and popular national culture means that questions surrounding sport, citizenship and national fealty have an especially deep resonance. For example, sport is more prominent in the advisory information for Australia's citizenship test, and more closely connected to its characterisation of national cultural identity, than in equivalent documentation of comparable countries such as Canada and the United Kingdom. Key national sports events are also protected for free television viewing by the world's most rigorous 'anti-siphoning' regime in the name of safeguarding "events of national importance and cultural significance" from less accessible subscription television platforms. Affinity with sport, and to the nation through sport, is likely to be less secure as global population mobility alters the demographic composition of Australia's citizenry. It is for this reason that its most dynamically diverse region, Greater Western Sydney (GWS), was selected as the primary research site for a current project addressing sport's relationship to cultural citizenship in Australia. GWS has an estimated resident population approaching two million, with almost a third born overseas and of non-English speaking background, approximately half of whom arrived in Australia during or after 2001. With almost forty per cent of residents speaking a language other than English at home, over a half aged below thirty five and approximately a fifth in low income households, GWS is a highly appropriate context for exploring the process of 'nationing' through Australia's sporting system and its relationship to socio-cultural inequality and exclusion under conditions of advancing globalisation. The paper reports on this research-in-progress, and analyses the preliminary findings of its qualitative exploration of the sport-nation-culture nexus.

#### *'State-Formation From Below': Social Movement Of The Dam-Evictedes' and 'Legal Transformation' Of The State In Maharashtra (India), 1960-1976*

Dam-evictees' movements in Maharashtra have a long history. Peasants in Maharashtra fought the first struggle against dams in early 1920s, which opposed

the Mulshi dam built by the Tatas. Significantly, this is the first known movement organized by the dam-affected persons in India and throughout the world. However, for various reasons, this movement failed. From 1960 onwards, the dam-eevtees' movements in Maharashtra are being led by a federally structured organization named, *Maharashtra Rajya Dharangrasta va Prakalpagrasta Shetkari Parishad* (MRDPSP; Maharashtra State Dam-affected and Project-affected Farmer's Organization).

Many of the demands of MRDPSP, such as—equity in water distribution and civic amenities for the rehabilitated villages, have been largely fulfilled by the state. Moreover, these movements of the peasants have considerably transformed the structure of the state in Maharashtra. As a result of their mounting resistance, Maharashtra government mooted the first rehabilitation law in India, in the year 1976, which was further amended and replaced in the year 1986 and 1999. Though the movements of the dam displaced still continue to operate, in this paper I mainly discuss and analyse the initial period of the movements from 1960 to 1976, when the first rehabilitation law was formed in Maharashtra that legally empowered the dam evictees.

In this paper I argue that, dam-eevtees' movements in Maharashtra, were largely successful in getting their 'material' demands fulfilled because of having a long 'historical legacy' of movements against hydropower projects and mainly by their strategy of — a) raising purely local 'ecological concerns', in strategic disjuncture from global environmental issues, b) increasingly rationalizing their demands through legal 'rights based approach' and c) orienting their movement towards claim-making on the Maharashtra state resources, through recurring cycles of conflicts and negotiations that ultimately caused the 'legal transformation'.

### *Many Shades of Grey: Past, Present, and Future of Age Relations in America*

Population aging is considered one of the top three challenges of global development by the United Nations. By 2025 one in every seven Americans, one in five Japanese, and one in four Europeans will be over the age of 65. This presentation reflects on the key sociological question: in the context of this historically unique transition towards aging society, how does age matter to deviance and to social status? It describes how the 21st century cult of the youth is linked to the revolution in age relations circa 1776. It points out recent changes in family structure, migration patterns, and welfare regimes that underlie inter- and intra-generational conflicts in fragile urban communities. Drawing on my ongoing ethnographic and mixed methods research, it shows when age relations may become a matter of life and death. First, it brings up the media case of "disposable lives" of nursing home residents (the majority of whom were Black and poor) who died in the aftermath of hurricanes Katrina and Rita. Second, it discusses how American veterans' ideals of "successful aging" tell the story of the Old and the New ageism, or age-based discrimination, that exacerbates race, class, and gender divides in America.

### *"to be Controversial" - a Social View on the Russian Art Piece at the Venice Biennale in 2013 ("Russia: Never overturn")*

The author analyzes the art piece, which was established on the basis of national competition concept art with the focus of Russian national idea. The roly-poly, a 5-meter-high dynamic sculpture, featuring a wooden log crowned with a double-headed eagle, which rises back up when pushed over, is showcased at the biennial contemporary art fair in Venice.

Visual analysis of the subject contains a political representation: the conjunction of the images of majestic orb and traditional doll, the roly-poly, creates the effect of dynamics, together with the provocative slogan **"Try overturn"** as an invitation, defiant challenge to the aggressive counter-play with the audience.

The subject of textual analysis represents 458 art concepts involved in the digital competition, they demonstrate significant meaningful references for the understanding of the national idea in Russia. Several steps of coding in the qualitative tradition of grounded theory summarizes a thick description of the different thematic fields. As a result, the top ten most important components of the national idea in order of importance are: state symbols, family and children, Christian symbols, animalistic imagery, anthropocentric imagery, moral and humanitarian values, liberal values (2.4 % of the total number of ideas), environmental values, the idea of revival and patriotism. Interpretation of the narrative (N130) core focuses on the change, transformation, physical effort, glorious death, salvation and hope.

In general, the analysis of this art piece reflects an important condition for the modern media presentations - the idea of conflict, the collision of ideological spaces. But the authors of sculpture understanding of national idea as "a thought that gives us the strength to improve life" is visually aggressive, and substantively - rather archaic.

### *Birds of a Feather—a Study of Social Networks of Mainland Chinese Students in Hong Kong*

Our study addresses the issue of network building processes of mainland Chinese undergraduate students in Hong Kong, especially in terms of the homophily tendency in their social networks. Mainland Chinese students account for 10% of the university undergraduate population in Hong Kong today. Like all newcomers, they need to adjust to the new environment, and their social network members play a very important role in this process.

We shall study choice homophily: the type of homophily produced by individual preferences. Although people in mainland China and Hong Kong share the same culture, they are under very different political and economic systems. We shall also study induced homophily: the type of homophily produced by the opportunity structure. We want to find out why mainland students associate with, mostly, mainlanders, given the fact that there are plenty of opportunities for them to come into contacts with local students.

The data comes from a 2011 survey of Mainland undergraduate students in a Hong Kong university, and from in-depth interviews with them. Preliminary findings reveal three sets of factors that promote establishment of in-group contacts (discouraging out-group relationships) for mainland students in Hong Kong. First, differences in values, beliefs and behavior are major obstacles in establishing cross-group relations. The second factor is status homophily. Most of the mainland students are from upper-middle class or upper class families; whereas the majority of the local students come from middle class or lower middle class families. The two groups differ not only in terms of consumption patterns but also in terms of future career aspirations, making cross-group relationships more difficult. The third factor is about contact opportunities. Our findings show that it is not just the presence of opportunities that makes a difference. The timing, that is, when these opportunities become available, is also very important.

**RUBBERS, BENJAMIN\*** (Université de Liège, [brubbers@ulg.ac.be](mailto:brubbers@ulg.ac.be))

### *The Moral Economy Of Paternalism. Reflections From The Congolese Copperbelt*

Once the most important mining enterprise of Congo-Zaire, famed for its outward paternalism, the *Gécamines* – the former *Union minière du Haut-Katanga*, nationalized in 1967 – went into a steep decline in the 1990s. To address the situation, the World Bank advocated, in the early 2000s, the sale of company assets to private investors, and the dismissal of 10,000 *Gécamines* employees with more than 25 years service. Based on ethnographic research among these employees made redundant, this paper aims at reflecting upon the future of paternalism in the Congolese Copperbelt at the dawn of the 21<sup>st</sup> century. It shows that, with the decline of *Gécamines* and the impoverishment of its workers in the 1990s, the models of relationship once promoted by the company's paternalistic policy (the company as a benevolent father, the workforce as a unified community, the individual worker as a responsible, Christian, *pater familias*, and so on) came to be more and more put into question. Nevertheless, as several examples will make clear, these models, or norms, continue to influence workers' expectations – and to be used as a reference – in their relationships with public authorities, with their wife and children, with (former) colleagues, and with non-*Gécamines* workers. At a more general level, the paper suggests that, far from being limited to ex-*Gécamines* workers, this paternalistic "moral economy" underlies the relationship that most inhabitants of the Congolese copperbelt have with wage work and institutional employers. To avoid conflicts with workers, local communities and public authorities, the mining companies that came in Katanga during the last decade have but no choice to take such expectations into account. By doing so, they contribute to the emergence of a new form of paternalism, distinct from the one developed by *Gécamines* in the 20<sup>th</sup> century.

### *Aires De Discordia: Autonomía, Territorio y Relaciones Interétnicas Ante El Avance Eoleoeléctrico En El Istmo De Tehuantepec*

La expansión de las emprendimientos eoleoeléctricos en el Istmo de Tehuantepec ha dado lugar a un número importante de conflictos sociales. En una región socialmente diversa, los actores de tales conflictos han sido propietarios privados, ejidatarios y comuneros, pueblos, autoridades y empresas. Si bien no todos los conflictos han escalado y la gran mayoría han demostrado ser negociables, uno resulta especialmente complejo, el de San Dionisio del Mar, que in-

volucra autoridades civiles y agrarias, así como pueblos Ikojt y Zapoteco. En este caso, la implantación de la nueva tecnología se da en un escenario contradictorio signado por problemas entre núcleos agrarios y entre grupos étnicos que desde hace ya muchos años mantienen una relación tensa de dominio y representación. Mediante la discusión de este caso, el trabajo desarrolla la idea de que los proyectos de inversión han reactivado viejos enfrentamientos y promueven un realineamiento de los actores, así como permiten la reconstrucción de demandas de autogestión y autonomía local que, bajo la política y el discurso del agrarismo nacional habían sido eficazmente acallados. Nociones tales como zonas de refugio, colonialismo interno y larga duración, se vuelven entonces imprescindibles para comprender la complejidad de un proceso que difícilmente se agota en, aunque no excluya, ideas sobre resistencia, despojo y desposesión que son hoy las herramientas conceptuales centrales con las que se abordan los conflictos étnicos y socio ambientales en el sur global.

#### *Markets in Life Itself: Transnational Surrogacy in India As Intimate Labor*

Are the babies born through commercial surrogacy commodities or are they gifts? Based on interviews with seventy surrogate mothers and thirty-one egg donors who live in Bangalore, India, and twenty families who reside in various parts the U.S. and Australia and have engaged in surrogacy in Anand, Delhi, and Mumbai, I pose three interrelated questions:

1. What meanings do surrogate mothers make of the commodification of their pregnancies? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?
2. If the newborn baby is a gift to the commissioning family residing in India or elsewhere, then what is the ongoing relationship between surrogate mother as gift-giver and commissioning parents as gift-receivers?
3. Conversely, if pregnancy is wage labor, then how does one make sense of the baby as commodity, a product of market pregnancy?

Beginning with Titmuss's seminal *The Gift Relationship*, where he endorses the virtues of blood donation in the U.K. versus the demerits of blood distribution as a commodity in the U.S., the social circulation of bodily fluids, tissues and organs is well examined (Rabinow, 1999; Scheper-Hughes and Wacquant, 2003; Waldbay and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1923; Levi-Strauss, 1969; Rubin, 1975; Bourdieu, 1977; Appadurai, 1986; Strathern, 1988), and commodification (Polanyi, 1944; Hochschild, 1983, 2003, 2012; Boris and Parrenas, 2010), I ask why the various agents involved in global intimate industries assert that the baby is a commodity, or contest that the baby is a gift. This paper contributes to the growing literature on intimate industries (Parrenas and Silvey, forthcoming) through examining **the meanings attached to markets in life itself** among both Indian surrogate mothers and commissioning parents from the U.S. and Australia who travel to India for surrogacy purposes.

#### *Social Innovations for Sustainable Consumption – a Typology for Their Political Promotion and Further Development*

The current political debate in Europe ascribes importance to social innovations in regard to the transformation toward a sustainable society. Social innovation refers to utterly diverse phenomenon like citizen's communities, cooperatives, transition towns and intercultural gardens, new forms of participation as well as user- and consumer-driven innovations. In regard to consumption there is the hope that carbon-intensive and non-sustainable patterns will be transformed towards more sustainable practices. However it is often not clear how to understand the term social innovation – most definition-esteem fall short because they are not different from usual economic definitions or rely on an obsolete idea of technique trying to mark a difference between social and technical innovation. Before looking at sustainable consumption one has to answer questions about the meaning of social innovations, which are the criteria for the observation and analysis of diverse innovative consumption phenomena.

These questions are currently investigated by the project "Sustainable consumption by social innovation. Concepts and practice" funded by the German Federal Ministry of Environment and the Federal Environment Agency. Hereby 50 cases of social innovations within several consumption fields are closely investigated.

This paper presents considerations on the understanding of social innovation as the base for a typology of social innovations for sustainable consumption, which will be introduced. Social innovations are understood as novel social practices which differ from former routines, constitute solutions for social problems, and entail far reaching structural changes in society. Beside these structural ef-

fects of social innovations one has to consider the dynamic of change processes to make up criteria. An essential result of the analysis is the identification of five types of social innovations (do-it-together, strategic consumption, community based consumption, do-it-yourself, new offers for consumption), which are the basis for political intended promotion strategies and strategies for further development of the change agents.

**RUI, SANDRINE\*** (Université de Bordeaux, [sandrine.rui@u-bordeaux2.fr](mailto:sandrine.rui@u-bordeaux2.fr))

#### *Coping with Discrimination. from Subjective Experience to Social Consequences of Discriminations*

To what extent studying discrimination from the subjective experience of discriminated persons throws new light on the sociology of discrimination? Whereas most of the studies aim to measuring discriminations (usually with quantitative methods) or aim to evaluating policies implemented to reduce them, the point of view of those who are discriminated or susceptible to be discriminated is less often analyzed. This last perspective is at the core of the research this communication is based on. Our research has been led in France using 4 sociological interventions and 220 interviews with persons concerned by discriminations due to their origin, their culture, their sexuality or their sex. (Dubet F., Cousin O., Macé E. et Rui S. (2012), *Pourquoi Moi ? L'expérience des discriminations*, Paris, Seuil.)

Our study emphasizes the gap between the subjective experience and the objective situations people go through. The experience of discrimination is therefore determined by structural and individual factors, by institutional, economic and social mechanisms as well as personal resources and strategies. We will focus on the way people cope with the discriminations, the way they avoid, resist, abdicate or adapt, the way their strategies are successful or entail perverse side effects, in order to understand the effects on individuals as well as the collective consequences of discriminations. Ambivalent and uncertain, the experience of discrimination is all the less adjusted to its definition as a public problem since the links between discrimination and domination, discrimination and stigmatization, discrimination and inequalities are not obvious.

Regarding theoretical and methodological issue, we will insist on the relevance of *sociological intervention* (Touraine, 1978 ; Cousin & Rui, 2010) for the study of the discrimination's effects at the same time on individuals and on society.

#### *Exploring the Less-Educated and Lower-Income Migrant Young People's Experience of Transition to Adulthood – a Qualitative Research in Shenzhen, China*

In recent decades, many researchers have found that young people's transition to adulthood is greatly prolonged in terms of finishing education, entering job market, getting married and having children. Accordingly, they suggest that contemporary young people's transition trajectories have become radically different from those of their previous generations. Among researchers on youth transition, Jefferey Arnett even contends to regard this prolonged transition to adulthood as a separate and normative life stage – emerging adulthood – between adolescence and young adulthood. However, other researchers criticize that the prolonged transition is not a universal phenomenon for all the young people. They believe that those who are socially disadvantaged and excluded incline to enter adulthood at an earlier age. On the contrary, local researchers in China find that it is just the increasing life pressure that forces the young, especially those who lack of social resources, delaying their transition to adulthood. The contradictions among existing studies indicate that transition to adulthood does not obey a normative rule. In other words, individual transition to adulthood is socially constructed. Individuals under different social and cultural contexts may have various transition experiences. This study seeks to explore the transitional experiences of the less-educated and lower-income migrant young people (with age from 18 to 33) in Shenzhen – a migrant city in China's southeast coast, as well as how their transition experiences are socially constructed. Qualitative in-depth interview is used to collect information as rich as possible from the life stories of the participants. Grounded theory is used to analyze the data and develop new understanding of transition to adulthood. Implications of the findings for social welfare services and policies targeting disadvantaged young people are discussed.

#### *The Influence of Political Inequality in Vulnerability to Natural Hazards: An Analysis of Selected Mexican Municipalities*

The susceptibility of different territorial units to be affected by natural hazards has been usually associated with the nature of the hazard itself, together with the socio-economic conditions of the local population. However, the political conditions that underlie planning and emergency response are usually overlooked. We argue that vulnerability varies in relation to the political inequalities regarding law enforcement, effective planning, land use control, environmental knowledge and resources availability among different territories in response to hazards; and these inequalities would significantly influence vulnerability outcomes of municipalities subject to similar hazards. This paper reviews the debates of political inequalities and their spatial effects. It also discusses the differences in vulnerability outcomes in different territorial units in Mexico, associated with such inequalities, from a qualitative comparative approach.

**RUNCIMAN, CARIN\*** (University of Johannesburg, [crunciman@uj.ac.za](mailto:crunciman@uj.ac.za))

*Cycles of Contention Post-Apartheid: A Challenge to Current Theory*

Since 2004 South Africa has been undergoing a wave of protests predominately led by the unemployed within South Africa's impoverished townships and informal settlements. This protest wave reached a peak in 2012 where it has been estimated there was an average of three protests a day (IRIS, 2012). Furthermore, there has been a discernible rise in industrial unrest with an increasing number of wildcat strikes occurring as workers choose to take their demands outside organised trade unions and collective bargaining processes. The intensity of this movement and the hostility of the State to it was tragically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a wider global cycle of contention. This paper uses the South African experience in order to challenge Tarrow's theory of cycles of contention in order to advance social movement theory from a Southern perspective. It will be argued that Tarrow's framework, and social movement theory more generally, pays insufficient attention to the specificities of capitalist development. This paper seeks to expand social movement theory and the analysis of popular protest through an examination of the specificities of capitalist neoliberal development and how this has shaped the working classes post-apartheid. The paper will demonstrate how a greater emphasis on the role of capitalism within social movement theory has much to contribute not only to the understanding of protest and social movements in South Africa but also for the analysis of the global cycles of contention.

**RUOPPILA, SAMPO\*** (University of Turku, [sampo.ruoppila@utu.fi](mailto:sampo.ruoppila@utu.fi))

*Independent Cultural Centres As Amenities in Urban Regeneration*

This paper reports results of a research project on 15 independent cultural centres around Europe. These specific sites, promoting culture and arts and related industries, have often acted as "urban pioneers" in their neighbourhoods, converting spaces considered "difficult" in size or because they are listed properties. The centres involve combination of different creative actors and action.

They are professionally managed, and agree that visionary leadership is essential to succeed. They are usually organised as independent associations, but require acceptance and partnering of cities, often as owners of the properties. However, not all of them are dependent on subsidies, even in the form of land rent, but illustrate other examples how to organise such activity.

The paper discusses the role of independent cultural centres in urban regeneration. The current literature acknowledges both the supportive role of such activities in place-making and providing spaces that the market otherwise does not, but also highlights the paradox that if a development becomes commercially successful, rising rents may lead to their displacement, which eventually also lessens the character of the whole area. This study argues that instead of transitional activity in a particular property, planners should consider independent cultural centres as new kind of civic activity supporting heterogeneity and mix in changing urban areas. This use of vacant spaces should be conceptualised as amenity—non-profitable venue that has broader significance for area's atmosphere and liveability.

**RUSER, ALEXANDER\*** (Hertie School of Governance, [ruser@hertie-school.org](mailto:ruser@hertie-school.org))

*It's Climate Change, Stupid! the Role of Think Tanks in Maintaining a Knowledge Divide in Climate Politics. Evidence from Germany, the United States, Japan, and South Korea*

'Global environmental inequalities' are often used synonymously for the asymmetric tragedy of the commons problem posed by anthropogenic climate change: polluters (mostly countries in the developed world) are less affected and more capable to deal with the consequences of global climate change than the less industrialised countries in the global south. An important aspect of this problem is the rejection of national responsibilities or the outright denial of climate change by important emitting countries.

The consequences of environmental degradation and climate change can be felt directly at the local level. In contrast, public awareness as well as an understanding of the complex interplay of local and global aspects by national electorates is highly dependent on the production and distribution of scientific knowledge. While the production of relevant knowledge is institutionalised at the international level (e.g. IPCC), national level knowledge production and modes for distributing it to political elites and the wider public differ considerably. To estimate the impact of diverse patterns of knowledge production and distribution on 'climate scepticism', I will focus on the influence of environmental Think Tanks. Think Tanks are said to provide applied research and impartial advice as well as political advocacy in 'scientific disguise'. It's therefore important to analyse their network ties to government authorities and among each other in order to estimate whether they are part of an epistemic community or forming advocacy coalitions instead. Linking the findings for selected countries (Germany, the United States, Japan, and South Korea) with the theoretical framework of differing 'knowledge regimes' helps estimating the consequences of an unequal access to and the distinction between a biased and a more 'neutral' presentation of scientific findings for national climate politics and international burden sharing alike.

**RUSH, MICHAEL\*** (University College Dublin, [michael.rush@ucd.ie](mailto:michael.rush@ucd.ie))

SEWARD, RUDY RAY (University of North Texas)

*Fathers, Welfare and Gender*

This paper examines macro-level social policy influences on national variations in men's roles as fathers across different 'worlds of welfare'. It begins by identifying a paradox. On the one hand, the paper illustrates that the mid-1970s represented a historical turning point in social policy responses to the changing nature of fatherhood. On the other hand, national variations in the social politics of fatherhood have been largely overlooked by comparative welfare state analysis, with the notable exception of Hobson *et al* (2002), who proposed a typology of 'policy regimes and fatherhood regimes'. The paper addresses this paradox by locating fatherhood as a central concern of what Orloff (2010) identified as the "two intellectual big bangs" of social policy comparison: namely 'gender studies' and 'welfare regime analysis'. It does so through historical analysis of the social policy treatment of fathers and non-resident fathers in selected Nordic, Anglo-Saxon and East-Asian regimes and at the meta-level of European Union parental leave and gender equality directives. The analysis serves to illustrate the idea of a continuum of 'two worlds' of father regimes, typified at one end by the gender-egalitarian 'father friendly' regime in Sweden and at the other end by the targeted regime in the USA, which impacts most forcefully on a residuum of non-maintenance paying fathers. The paper concludes by discussing whether and how welfare states served to erode the patriarchal power of fathers during what Therborn (2004) identified as the long process of 'de-patriarchalisation', and by considering to what extent we are witnessing a feminist backlash in new discourses of re-patriarchalisation.

**RUSSELL, MEGAN\*** (University of New South Wales,  
[megan.russell@unsw.edu.au](mailto:megan.russell@unsw.edu.au))

*Consuming Cuteness: The Visual Code Of Youth In Kawaii (cute) Fashion Subcultures*

The *kawaii* (cute) fashion subcultural scene of Harajuku, Tokyo, presents a complex visual sphere in which youth produce and circulate images through the consumption and design of clothing products. This paper examines the power that the image can have in bringing together young designers and consumers. Using visual data from Harajuku and qualitative interviews with key cultural producers, it unpacks the idea that aesthetics in fashion subcultures can be used to signify wider thematics in the subculture. This paper aims to revive the use of semiotics in the study of fashion subcultures, working under the Birmingham Centre for Contemporary Cultural Studies' premise that there is resistance within fashion subcultures which is symbolic and counter hegemonic. It also integrates a discussion of cultural industries to map out how these images and their related mythologies are produced and circulated in the subculture. It combines the literature from these three fields to examine the ways in which *kawaii* fashion subcultures engage with residual and emergent social cultural forms, particularly pop culture. Youth in *kawaii* fashion subcultures claim images of childhood, and arrange them into a system of signs mediated through fashion styles as a form of symbolic resistance to hegemonic norms of Japanese adulthood. The clothing of *kawaii* fashion subcultures allows for self-transformation, as prints, motifs and textiles are used to signify individual identities and collective dreams centered around cuteness and passive doll-like archetypes. The streets of Harajuku become a public theatre in which participants act out these identities, utilizing a complex code of cuteness to communicate 'authenticity' to other subculturalists. Over the past decade, the subculture has been commercialized, and new codes are mediated through specialist magazines and shop fronts. This raises further questions around the extent to which subcultural resistance is formulated around active image making or consumption.

**RUSSIKH, LIUDMILA\*** (Southern-Ural State University,  
[ludmilaruss@mail.ru](mailto:ludmilaruss@mail.ru))

*Bologna Process in Russia: Common Rules or Inequality Chance?*

Russia joined the Bologna process in 2003. It has to become a full partner of the European system of education, but it has not happened. Europe joined the Bologna process through the objective processes taking place in contemporary European society (the emergence of transnational production and scientific associations, the formation of a single labor market, migration etc). For the Russian education system the accession to the Bologna process is an artificial process. From seven major provisions of the Bologna Declaration, Russia realized only one. A two-tier system of education has established: Bachelor's and master's programs.

The research focuses on the problems of convertibility of the Russian master's degrees with European diplomas. The **major research objective** was to examine the quality of higher education and the possibility of convertibility of Russian higher education diplomas. The **research methodology** combines qualitative and quantitative methods (depth interviews with experts and questionnaire).

**Findings and discussion.** Transition to the new system of higher education does not guarantee the majority of domestic graduates of universities the same equal opportunities for employment that graduates of European universities have. It was selected several federal universities that were competitive in the global job market before Russia's accession to the Bologna process. The other universities must meet the needs of the local labor market. It is the main reason for the low level of training of graduates. The domestic industry is a major consumer of the graduates and it lags behind the European standards. That's why there is no sense of raising the bar of education. In addition, the provincial universities have a large number of extra students who are poorly trained. It leads to the gap in the level of training of graduates of European and national universities and it reduces the chances of successful employment for graduates of Russian universities.

**RUWAIDA, IDA\*** (University of Indonesia, [idar.noor@gmail.com](mailto:idar.noor@gmail.com))

*Local Dynamics on Women's Economic Empowerment in Global Context*

**Local Dynamics on Women's Economic Empowerment  
In A Global Context**

Submitted by: **Dr. Ida Ruwaida**<sup>[1]</sup>

This paper focuses on the dynamics of women's economic participation at local level in decentralization era. Based on Indonesia's case, it has been reflected that local policies as well as programs on economic empowerment have not perceived women's participation as their basic right. The policies

or programs do not focus on stimulating women's critical consciousness and their capacities to articulate their interests individually as well as collectively. It's indicated that women's roles as economic actors are being positioned as instrumental roles, not substantive/transformational ones. The main root of this issue refers to the weakness of local government commitment and capacity which can not be separated with the national agendas on economic development. And the agendas might be based on economic assumptions (blinkers) that tends to disadvantage women's conditions as well as positions. It's has been reflected from several regions in Indonesia.

Referring to Chafetz (1988), empowerment as structural transformation efforts -- which only possible if local (also national) economy policy responsive to women's economic right. In term of relation between state and women, the other crucial issue is to enhance or to empower women's commitment as well as their capacities as a collective/interest group. This paper also raises women's strategies for organizing and enhancing their economic roles at local level.

**Key words:**

*Women's economic participation, local economic empowerment, institutional or structural transformation, women's collective action.*

<sup>[1]</sup> Dr. Ida Ruwaida is a Lecturer at Department of Sociology, Faculty of Social and Political Sciences, University of Indonesia. She is also a Chairperson of Sociological Studies Center, University of Indonesia.

*Population and Forest Land Use Cover Transition: The Case of Brgy. Putting Lupa, Mt. Makiling Forest Reserve, Laguna, Philippines*

Theoretical propositions about the adverse impacts of population growth to the natural system have found grounding in many empirical-based literature since the environmental discourse became global. Neo-Malthusians predict ecological destruction when there is unrestrained population growth coupled with advancement in technology and increase in per capita affluence in a society. When industrialization in Calamba legitimized by local and national policies materialized, the Makiling Forest Reserve (MFR) became vulnerable to on-site and off-site environmental pressures. In 1990, the University of the Philippines Los Baños (UPLB) was vested exclusive jurisdiction, control, and administration over MFR and in the following years, adopted a 'participatory' approach to management. Chronologically following the implementation of these policies is the abandonment of agricultural claims of state-owned forest land by settlers within and near the MFR buffer zone in Barangay Putting Lupa. Results of this study show that forest land use transition occurred in MFR-Calamba characterized by first, deforestation and forest land conversion to agriculture, then to gradual forest recovery. Spatial analysis of the 1993-2002 Calamba land cover shows that forest cover increased by 18%, agricultural land use decreased by as much as 29%, while built-up areas expanded by as much as 79%. Albeit forest land regenerated through time, land cover changed from forest species to agroforestry specifically in Barangay Putting Lupa. While industrialization is associated with increase in population and eventual environmental degradation, this study suggests that there are other socioeconomic elements that interact compatibly with each other to arrive at a different scenario of forest regrowth. Seemingly contradicting but synchronous commitments of policies of the university and of Calamba among other socioeconomic factors have a synergistic effect that amounts to the improved forest land use cover in the MFR buffer zone in Barangay Putting Lupa despite increase in population and pressures of industrialization.

*Labor and Populist Politics in Ukraine*

This paper looks at the labor movement in Ukraine by considering two types of workers' power (as defined by Wright): *structural*, resulting from their position within the economic system; and *associational*, contingent on the ability to form collective organizations – unions, parties, workers' councils or community organizations. Silver's observation that the role of workers' associational power is growing in the XXIst century and that therefore perspectives of the labor movement are conditioned on the broader political context, requires us to extend the definition of associational power also the alliances between labor and political movements. This paper discusses consequences of alliances between Ukrainian workers and various political projects since the break-up of the USSR, focusing

in particular on the growing support for populist demands of nationalization of key industries and natural resources, voiced in particular by a right-wing populist party "Svoboda" as well as by the Communist party. The paper questions long-term perspectives for the labor movement if populist politics take on a right-wing flavor, and a left-wing populist alternative is lacking. Furthermore, it discusses the role that politically-engaged social scientists can play in evaluating labor movements alliances with various political projects and in strengthening workers' associational power.

**RYAN, LYN\*** (Macquarie University, Australia, [lyn.ryan@mq.edu.au](mailto:lyn.ryan@mq.edu.au))

#### *Ageing, Ageism and Discrimination*

In Western society our populations are ageing, and even developing nations are showing increases in elderly populations. This is due to declining fertility, advances in medical science leading to greater longevity, immigration rates not keeping up with ageing, and also the Baby Boomer generation began to turn 65 in 2011. Older age is an inevitable part of life but some people use stereotypes of older people to discriminate against them due to their biological age. People hold views about ageing people which are not consistent with their views about other people and this forms the basis of prejudice, discrimination and ageism. While respect for elderly people has been a prominent part of Asian cultures which upheld Confucian principles, respect for the elderly has not been given such a prominent place in the history of Western society or its discourse. Issues around egregious abuse, such as violence and financial abuse have been commanding the attention of most social science researchers studying the maltreatment of older persons since the late 1970s. The more subtle, everyday experiences of disrespect, which arguably is a precursor to more notorious forms of abusive and violent behaviour; or respect which, arguably, can prevent such abuse from occurring, are less researched. Therefore, respect for elders is defined and disrespect versus respect, ageism, personhood and the quality of life of elderly people are all discussed.

Society categorises older people into socially constructed age groups. It is important to recognise that while age has a biological meaning, income, work and retirement construct groups and meanings about age that may reflect negatively on older people and, therefore, lead to experiences of disrespect amongst our older population.

#### *The Doctor-Patient Relationship and Type 2 Diabetes: What Can We Learn from a Cross-National Comparison of Three Qualitative Datasets?*

Background: Evidence suggests that higher levels of patient involvement results in more beneficial care. Patient involvement can be higher in long term conditions, such as type 2 diabetes, where self-management is important. But we need to better understand what happens in the shared decision process and which factors contribute to the inherent inequalities. In this paper, we explore models of doctor patient relationship in three qualitative datasets from Germany, Spain and the UK. The data were originally collected to explore the experiences of patients with type 2 diabetes. Lay summaries are published at [www.krankheitserfahrungen.de](http://www.krankheitserfahrungen.de), <http://www.dipex.es>, [www.healthtalkonline.org](http://www.healthtalkonline.org).

Methods: A secondary analysis of the datasets using a two strand approach. First, a thematic analysis of the individual datasets to identify models of doctor patient relationships, and examine what factors may contribute to these models. Second, a comparison of these findings to identify similarities or differences across the datasets in order to enhance our understanding of shared decision making.

Results: Early analysis suggests the importance of a trust within the doctor-patient-relationship and an enduring paternalistic model in the management of diabetes. While UK patients may suggest some partnership working in the way they articulate their self-management, in practice, they do what the doctor tells them. In contrast, German participants emphasize a desire to preserve a certain level of autonomy. This was most obvious with eating and weight management, where participants reported enjoying pleasures that their GPs regarded as unhealthy. Several Spanish interviewees experienced some lack of control from their professionals and felt their treatment was routine rather than an individually tailored process.

Conclusions: While management recommendations of diabetes are largely standardized, patient experience and expectations may differ according to cultural and national peculiarities. Interestingly, a paternalistic model is not necessarily experienced as a contrast to self-management.

#### *Postsekularizm of Modern Society: Russian Option*

We observe a social request for religion and religious values comeback in the public space today. This can be observed by the example of protests actions in defense of traditional family in France, protests actions in defense of keeping crucifixes in Italian schools, the Christmas tree as a Christian symbol of Christmas in the Benelux countries, etc. etc.

The Russian society lost faith in the communist ideas at the turn of the 80's and 90's., and later liberal ideas - which were approved during the epoch of liberal democratic reform of 90s - had become nothing for the vast majority of people.

This happened due to the fact that neither one nor the other idea contained the core of cultural and spiritual traditions of Russian society.

At what point and why the 'Orthodox believer' in Russia becomes the dominant force, the mechanism of social change? At the time of the Soviet Union collapse, the destruction of Soviet type societies institutional structure, during the state of anomie. At this point, the fabric of social relations becomes loose, able to sense even a small impact as triggers for deep and large-scale social change. At this point, the 'Orthodox believer' is gradually becoming a carrier of dominant Orthodox identity and ceases to be a 'stranger'.

During the 90's and early 2000's the number of carriers Orthodox identity and Orthodox believers, including churching Orthodox believers increased several times. 'Generation in the way' are those who have experienced religion and found a new identity for themselves after 1991.

'Generation in the way' is a notion which more or less accurately captures a new social set, which is characterized by varying degrees of perception by this Orthodox identity: from the identity of the Orthodox by self-identification to deeply churching orthodox believer.

#### *Chinese Migrants in the Russian Labor Market Competitors or the Driving Force of Economic Development?*

This presentation shows trends in labor migration from China to the Russian Federation for the period 2000-2010, including the regions and industries of employment of Chinese migrant workers. Described economic "niches" that are Chinese migrant workers in the Russian labor market. Chinese migrants adapted to the Russian labor market quite well. Mostly of them working in Chinese companies. Social and economic component of their integration can be considered particularly successful - they have jobs, relatively high level of income for labor migrants in Russia. Chinese are known as great farmers, who know perfectly well the characteristics of agro-climatic conditions, they are much more efficient, professional, and disciplined workers than Russians. The examples of ethnic Chinese business in Russia, including those identified a strong correlation between investment and labor migration from Chinese in Russia. Currently Chinese investors in Russia are represented by investments made by large Chinese state-owned companies which purposefully invest their funds in basic projects related to development of transportation system, communications, and exploration of mineral resources in Russia. This type of investments goes through official channels, legally, based on official contracts. The second type of Chinese investments includes private investments in development of business with quick pay off - trade, food service, restaurant and tourist business. In this part of investments Chinese private business is oriented at semi-legal and illegal methods of penetration in the Russian market. The presentation also discusses the features of labor migration and trade between China and Russia in the border regions of the Far East. It also describes features of the regulation of labor migration between Russia and China.

#### *Integration of Vietnamese Migrants in the Countries of Eastern Europe and Russia: A Comparative Study*

Questions of migration and integration of the Vietnamese migrants into social and economic processes of Russia, Ukraine and countries of Eastern Europe will be considered in presentation. Results of research revealed significant differences

es in the number of Vietnamese in comparison with official statistic data. So in Russia according to 2002 census number of Vietnamese made 26 thousand people, however, study results suggested 100-150 thousand people. Part of Vietnamese is "veiled" by integration process.

Based on the methodology developed by the authors, assessment of extent of integration of the Vietnamese migrants in host countries was given. The technique is based on allocation of integration components of Vietnamese in host countries, namely civil, economic, ecological, social and psychological, religious, cultural integration. Research was conducted in Russia, Ukraine, the Czech Republic, Hungary and Poland by interviewing scientists, representatives of government, business, they were offered to put points from 1 to 10 to each component.

Results showed that integration proceed differently. Vietnamese are most integrated in the Czech Republic and Hungary. According to experts, total score made 50 points out of 60 possible. State policy in the Czech Republic and Hungary was directed to the need for integration of Vietnamese in society through development of integration programs. In Hungary and the Czech Republic much of the Vietnamese citizens received citizenship in host countries, they became citizens. The success of economic integration is associated with high entrepreneurial activity, professional qualifications and access to the labor market of Vietnamese. Much less successful is integration of Vietnamese in Russia and Ukraine, civic, environmental, and socio-psychological component integration is low there. Evaluation of Russia is 40 points, Ukraine is 34 points.

Over the past few years, neither Russia nor Ukraine has developed mechanisms for integration of Vietnamese. Bureaucracy, absence of standard and legal base strongly complicated integration process.

##### *Higher Education and the Labour Market: A Polish Perspective*

The structural conditionality of normal sciences, including state ideologies and financial support, is essential for the structure of higher education. The system's transformation in Poland, based on the neo-liberal ideology, involved the dependent development model not only to the economy but also to science, with its dramatic decrease of expenditures. This reinforced a negative selection of the scientific cadres, who, by the inter-generation transmission of values and norms, were unable to adopt the traditional scientific ethos. The official ideology tends to transform the structure of academia in the market-oriented corporative management model. As many as over 400 private institutions of higher education were established, based on the ideology of 'practical' knowledge, which changed education in a commodity and the education process in a vocational training. The overproduction of formally well educated young people, hardly able to abstract thinking, resulted in a high unemployment of the youth. The government's remedy is to apply this model of education/training to public universities, which are expected to teach for the needs of the current market, notwithstanding the fact that the needs change faster than the education cycle. Instead of teaching students the ability of life-long learning in a flexible labour market, much governmental effort is made to produce formal education by bureaucratisation of universities.

[vost5@yandex.ru](mailto:vost5@yandex.ru))

##### *Global Citizenship – New Pedagogical Aim or Market Strategy?*

The development of education in the globalization context poses a lot of questions, being quite a challenge for scholars. The analysis of such new trends as integration processes in education, the growth of educational migration, the involvement of international organizations and NGOs, and the education policy of national states leads to referring to the seemingly established concepts of particular features of education.

The urgency to implement educational reforms is stressed by various international organizations. One of the promulgated aims of these new educational projects is bringing up global citizens.

In recent years the concept of "global citizenship" came into a broad use in European and American educational and public discourses. However, its meaning remains blurred, and its content is interpreted very broadly.

Analysis of the global education concept takes into account current sociological and political science discourses on the concepts of citizenship, nation and state. Previous understanding of citizenship as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.

The concept of education for global citizenship captures in what way this new understanding of citizenship and identity is interpreted in pedagogical discourse. Global citizenship is treated as a social engagement with the voluntary obligations undertaken, and priority is given to civil rights of the individual. It still stays unclear in what way state educational system as the key element in nation state building process should foster global identity formation.

Besides for many educational institutions and so called international students the engagement in "global citizen" educational programs is only a pragmatic tool to improve economic chances in the global educational and job markets.

##### *Against the State-Centered Model of Social Policy: The Moment of Schaffle in the Sociology of Durkheim*

Emile Durkheim, one of the founders of sociology, started his academic career in an interdisciplinary struggle. He refuted Spencer's self-interest based conception of society in *the Division of Labour in Society*, and rejected psychological approach for social studies in *the Rules of the Sociological Method*. But in order to acquire the institutional independence of sociology from neighbouring intellectual fields, he had to fight in another battlefield other than against economics and psychology, that is against the state-centred model of social policy.

In order to reinterpret the sociology of Durkheim in a broader interdisciplinary context, focusing on the moment of Schaffle is a helpful clue. Albert Schaffle was a German *Staatswissenschaftler*, economist, forerunner of sociology, and staunch opponent of authoritarian socialism. Durkheim reviewed the main work of Schaffle, *the Construction and Life of the Social Body* in his earliest academic article, and endorsed Schaffle's attack against state-directed socialism thereafter such as in *the Suicide* and the preface to the second edition of *the Division*. The protest against the hypertrophic tendency of state bureaucracy is not a mere manifestation of political adherence of Durkheim, but a careful strategy to define sociology as a distinctive science in the light of historical and intellectual circumstances of the epoch.

That was the time Durkheim was contending for sociology when French government embarked on implementing modern social policies. By contrast to free market policy favoured in the 1880s, the turn of the century France welcomed state-led intervention measures originated from Imperial Germany under Bismarck. The concern of Durkheim over the state-centered model of social policy and his alarm for the peril of individual liberty under the authoritarian regime is a theoretical response to the ongoing transformation of the state and society and to the state-oriented social thought at the time in France.

##### *Changing Patterns of Spending on Leisure? Case of Finland, 1998-2012*

In the 2000s, the landscapes of leisure consumption have changed dramatically in the Western societies. Many traditional industries such as tourism, sports, and cultural activities continue to flourish. In addition, the new information and communication technologies (ICTs) have become widely adopted in everyday life. Access to ICTs is often considered as essential while at work, home, and even when spending free-time outdoors. As the alternatives for leisure activities have increased, we have also witnessed a trend of narrowing population disparities in the consumption patterns. Against this development, it is possible to argue that engagement in various leisure activities has become more versatile and less connected with individuals' socio-demographic background. But does this assumption also apply to older consumers, people living outside urban and densely-populated areas, economically less well-off people, single parents, and the less educated population segments? Or, is it possible to argue that the expenditure patterns of the many disadvantaged population segments have changed differently from those of the better-off segments during the past decade? The paper examines temporal changes in leisure consumption by examining Finnish household expenditure patterns between 1998 and 2012. The data are derived from nationally representative set of household budget surveys (N= 17,412). Empirical analyses will concentrate on money allocation on cultural services, books and magazines, and household media and technology. In particular, structural disparities by educational level, economic background, age and life-stage, gender, and place of residence will be compared.

#### *How Can Decision-Makers Cope with the Heterogeneity of Values in Public Innovations*

In the last two decades the concept of innovation has been taken from Schumpeter's logic of competition at the market to the public sector. In the private sphere the making of profit is essential, and added profit can be seen as added value. For the public sector this is much more complicated, and it has been a large debate about the concept of "public value" since the publication of Moore's book "Creating Public Value" (1995). Values in the public sector can both be inputs (public ethos) or some sort of outcome (efficiency, improved quality etc.). But both for input and outcome there will be a heterogeneity of values. Beck Jørgensen & Bozeman (2007) are mentioning a "universe of public values". In the invitation heterogeneity is understood as the "coexistence of different rationales". We will argue that different set of values can be seen as different rationales. Creating new and innovative solutions in the public sector is part of the struggle for power in society. Different actors will use different parts of the "universe of values" to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about "public values", but especially on the case-studies in our edited volume "Framing innovations in Public Sector Services" (Fuglsang, Rønning, Enquist (eds.) (Routledge Oct.2013)

#### *Innovation in Nordic Elderly Care*

Innovations has for some decades now been seen as the engine for success in the competition at the market. Now the concept of innovation has made its way into public sector and even into elderly care.

This paper is about the efforts to innovate elderly care in the Nordic countries.

In many European countries there is a worry about the demographic changes in the population. The declining fertility rate and numerous cohorts from the after Second World War baby boom fading out of the labor market, are a challenges both for the pension system and the economy, as well as for the caring system. The challenges of the caring system are the focus for this chapter, especially the need for labour, or caring hands. The diagnosis is that too few people have to care for too many frail and elderly. Even if the Nordic countries do not have the most challenging rates between the generations, a caring deficit is seen as a growing and upcoming problem. In 2050 20% of the population is expected to be above 70 years, rising from 10% which is the situation today.

Most attention will be paid to the Norwegian situation. Because of the fortunate economic situation in Norway, the country has probably been able to maintain a (Nordic) model with a strong public responsibility to a larger extent than their neighbors. Attention will be given to three of the main paths to innovations of the elderly care in the Nordic countries, we have labeled them privatization, use of caring technology and extended use of voluntary work.

The paper is meant to be a "state of the art" paper, summing up the experiences so far, and reflecting on possible paths into the future.

[katrina.ronningen@rural.no](mailto:katrina.ronningen@rural.no))

FLEMSÆTER, FRODE (Centre for Rural Research)

#### *Modernisation of Rural Economies - the Unsettling of Land Use and Rights Following "Diversification"*

A significant process of modernization is going on in the rural North. The paper presents some findings from a study of the implications of agricultural and rural policies' emphasise on diversification through commodifying natural resources in which primary industries increasingly become a tertiary recreational and consumption deliverer. It also analyses how norms and practices of land use, land ownership and rights systems in the outfields and commons are unsettled and changing within a neoliberal context.

A strong increase in cabin/second home developments along with other developments – windmills, micro hydro power plants welcomed by the climate debate and systems of green certificates, has increased pressure on the land and escalated land use conflicts. Outfield commercialisation echoes widespread processes of enclosure and privatisation, which occur with regard to many kinds of commons.

One conclusion is that multifunctional agricultural policies and land use planning systems within a highly developed and modern country as Norway so far has not been able to handle the challenges of modernizing agricultural and rural economies in general and at the same time include long term sustainable land use systems (eg nomadic use by the increasingly marginalized South Sámis nor of that of wild reindeers) sufficiently in these processes, nor to secure the long term sustainable use of farm land and associated natural resources in other respects.

On the other hand, neo-productivism, associated with the increased focus on the need to increase global and national food production, is redefining objectives and policies of the previous strong Norwegian and European multifunctional model of agriculture and rural areas. Also, the increased focus on the bedrocks of the high north for mineral, is pointing to a turn towards strengthened primary sector interests in rural areas, challenging many of the ideas and notions linked to modernization of agriculture and rural areas.

RØNNINGEN, KATRINA (Centre for Rural Research)

#### *Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict*

The principle of food security is in recent agricultural policy documents in Norway being used to re-legitimise increasingly neoproductivist farming policies and systems. Thus conservation of agricultural land is once again prominently positioned on the political agenda. With only very limited availability of farmland, only 3% of Norway's land area is in productive agricultural use, the issues of agricultural land conservation and food security have become more or less inseparable in Norway. Further, Norway, as a non-EU member, has insisted internationally on maintaining a very protectionist agricultural policy to meet the objective of being 50% self-sufficient in calories produced from agriculture.

A large proportion of the best quality farmland is within the vicinity of the country's major urban areas. While Norway was urbanised relatively lately by European standards, there is now a very strong centralisation tendency with in-migration from rural areas. This, combined with increasing in-migration from abroad, is placing considerable pressure on the remaining farmland – particularly fertile land on the outskirts of major cities. Conflict between agricultural policy objectives for conserving farmland and an increasing financial interest following the demand for housing, roads and infrastructure is thus becoming a major issue in the public and political arenas. Based on a Norwegian case study, this paper will show how food provisioning and food security as collective goals is framed and positioned in discursive struggles on land between financialization, climate concerns and urban growth.

*Clinical Sociological Analysis Of The Issues and Challenges To Healthcare Delivery In Nigeria Today*

Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today By Abdul-Mumin Sa'ad Professor of sociology (Criminology) Provost, Federal College of Education, Yola, Nigeria And Ruth Bulus Iganus Medical Sociologist, Department of Sociology and Anthropology University of Maiduguri, Maiduguri, Nigeria Abstract Health care delivery refers to the work done in providing primary care, secondary care and tertiary care, as well as in public health. Health care is delivered by practitioners in medicine, chiropractic, dentistry, nursing, pharmacy, allied health, and other care providers such as medical social workers, clinical sociologists, etc. Constitutionally, health care provision in Nigeria is a concurrent responsibility of the three tiers of government. However, private providers of health play a visible role in the country's health care delivery. The federal government's role is mostly limited to coordinating the affairs of the tertiary health care (university teaching hospitals, Federal Medical Centres) while the state government manages the secondary health care (the various general hospitals) and the local government focuses on primary health care (dispensaries). In spite of this clear constitutional provision there are myriad of challenges regarding healthcare delivery in Nigeria. Of course health issues have always been issues that nations grapple with. Added to this is the fact that natural and manmade disasters are becoming frequent, catastrophic and unpredictable and these are posing great challenges to healthcare delivery. Nigeria, being an underdeveloped nation is even more vulnerable to these challenges. This paper therefore identifies and discusses those challenges and proffer solutions to them from clinical sociological perspective with a focus on the need and strategies for active collaboration of all stakeholders (especially the Clinical sociologists, health-care professionals, the government, the organized private sectors and the society generally) to effectively surmount the challenges.

*Citizenship Orientations in a Divided Society: A Comparison of Three Groups of Israeli Junior-High Students – Secular Jews, Religious Jews, and Israeli Arabs*

The present study identifies major preferences for combinations of rights and duties (henceforth, citizenship orientations), as reflected in the political worldview of Israeli junior-high school students. Two distinct orientations were found, termed here "liberal" and "ethno-republican." In order to contextualize the examination of citizenship orientations in the deeply divided Israeli society, the study compares three educational sectors which represent these rifts. Findings suggest that citizenship orientations are context-bound, in the sense that they depend upon the educational sector. As expected, ethno-republican orientations were more salient among religious-Jewish students than among either secular-Jewish or Israeli Arab students. Secular-Jewish and Israeli Arab students tend more strongly to endorse the liberal orientation, a propensity that is especially manifest among Arab adolescents. This trend supports the perception that Israeli Jewish population is bifurcated.

*Betwixt and Between Global and Domestic Forms Of Justice: The Israeli Case Over Time*

This article elaborates on the global/domestic binary division in the social psychology of justice judgments. We analyze the interplay between global and domestic perspectives on justice behavior and theoretically represent and empirically examine the dynamics of a society's domestic system of distributive justice within a global context. The intersection of these two contesting, though intertwined, perspectives of justice is explored in the case of Israel. Integrating conceptualizations of neoliberal globalization, social justice, and the socio-cultural and historical conditions of Israeli society, we gauge the effect of macro-level globalization trends on the Israeli domestic 'spheres of justice' as evaluated by a representative sample of secular youth. We find that neoliberal globalization trends present a considerable challenge to Israeli Zionism's foundational pioneering ethos. Yet the 2011 cohort of Israeli adolescents have not unanimously embraced

neoliberal principles of global justice. This suggests that individuals are guided by a complex justice belief-system that encompasses both neo-liberal global principles and the social-justice tenets of the domestic arena, creating co-existing and at times contradictory social justice judgment profiles.

*The Changing UAE Family*

Emirati families have been changing since the advent of oil and wealth. However, the recent socio-economic shifts in the society have affected the family on many levels. What the UAE family has endured recently in term of outside and inside pressure due to globalization is probably not comparable in many parts of the world. In no other country has the proportion of foreign nationals in a society been boosted so high in so short a time as in the UAE. As a consequence, Emiratis are not even the largest national group in their own country, and have had a hard time trying to sustain a culture among a continuously growing pool of foreigners. As communities from around the world have mushroomed around national families in both the public and private spheres, UAE households have turned global within. Although one could make comparisons with families in other Gulf States, the UAE's pioneering economic model and speed of change have had an unprecedented impact on the globalization of families.

This paper focuses particularly on women in the family (mothers and daughters) who are considered the gatekeepers of culture and social wellbeing. It looks at the main new challenges they are facing and the pressure exerted on them from different parts of the society and the state to perform to a role becoming increasingly difficult. The paper looks into such difficulties using a combination of quantitative and qualitative data gathered from National families of Zayed University students.

GUERRERO, LINDA LUZ (Social Weather Stations)

*Mapping Filipinos' Knowledge, Understanding, and Actions on Climate Change*

A recent Climate Change Vulnerability Index identified 16 out of 170 countries as extremely vulnerable to climate change; of this set, the Philippines was ranked sixth (Maplecroft 2010). Despite advancements in technical strategies to adapt to the impact of a changing global climate, understanding the complex socio-behavioral dimensions of climate change remains a challenge.

Using the data from a survey module on climate change commissioned by the World Bank and implemented by the Social Weather Stations (First Quarter 2013 National Survey), the study aims to know: (1) What factors shape Filipinos' awareness and knowledge on climate change? (2) In a more qualitative sense, how do they conceptualize or understand the effects of this phenomenon? (3) What factors affect citizens' participation in efforts to address climate change? Do awareness and knowledge actually translate into tangible efforts?

Correlation analyses reveal significant relationships (moderate to strong) between awareness and knowledge on climate change and these variables: locale (higher among urban dwellers), socio-economic class (higher among upper classes), and educational attainment (higher among those with greater education). Climate change resonate to average Filipinos as a public health issue. When asked to identify the effects of climate change, half of them cited "increased incidence of illnesses"—significantly greater compared to other responses such as degradation of natural resources, ozone layer depletion, and rise in sea level. Participation in efforts to mitigate climate change is higher among those in rural areas and the youth (with moderate to strong correlations). There exists very weak relationship between awareness on climate change and participation. However, there is moderate evidence to support that those with more extensive knowledge on the impact of climate change also have greater tendency to participate in actions on climate change.

**SABOUR, M'HAMMED\*** (University of Eastern Finland, [mhammed.sabour@uef.fi](mailto:mhammed.sabour@uef.fi))

*Social Inequality, Power Legitimacy, and the Future of Democracy in the MENA Countries*

In spite of their relatively similar religious, cultural and linguistic foundations, the MENA (Middle East and North Africa) countries consist of a diverse set of particularities in terms of their geography, socio-economic structures, human capital, and political institutions. As far as their governments and governance are concerned, these countries have traditionally been governed by authoritarian and autocratic regimes. Such governments have ruled autocratically and suppressed pluralism, limiting or totally denying fundamental societal, economic, and political

rights. This state of affairs has created widespread social disparities and injustice, a freedom deficit, and stagnation in the area of democratic change. In other words, a policy of social inequality that has come to be taken for granted. The ruling elites have been able to hold on to power ruthlessly by means of various manoeuvres. These have ranged from violent repression and the superficial practice of democratic simulacra to corruption and "enlightened authoritarianism". Global democratic change, and the visibility it has gained through the new media, has given people, especially the rising middle classes, the impetus to give voice to their grievances. In consequence, they have started expressing their disenchantment with the political status quo, in its place, demanding democracy and social equality. This can be seen in the emergence in 2011 of social movements in numerous MENA countries, otherwise known as the "Arab Spring". This paper aims at analyzing some of the main patterns of inequality that prevail in the MENA region and also their socio-cultural and economic origins. In addition, the paper will aim at assessing how long and how demanding the process of democratization may be in the context of the social and cultural complexity of the existing structures and their present legitimacy in such societies.

**SABRE, CLOTHILDE\*** (Hokkaido University, [c.sabre@hotmail.fr](mailto:c.sabre@hotmail.fr))

*From Matsuri to Anime Convention: The Experience of Festivals and Contents Tourism in Japan*

For foreign tourists, festivals are mostly associated to cultural events that present a colorful and picturesque image of a different and exotic culture. This work is then an attempt to question new forms of tourism, in order to draw a parallel between festivals and other types of gathering that attract foreign visitors. This study is lying on the idea that tourism is made significant by a specific imaginary of the visited place. The travelers choose and comprehend their destination and its culture through the picture they have before and during the trip, a picture elaborated on various references. When enjoying festivals in a foreign country, tourists can see a concretization of their imaginary about the culture they discover, and sometimes, participating to the event, they feel immersed in that exotic universe.

The aim of this presentation is to show that this process is also at work in the case of contents tourism, when the travelers experience media pilgrimage (i.e. visiting places with significance in media narratives, Couldry 2005), guided by a fantasy built on pop culture and media references. Taking the case of Japan, this comparative study intends to show the similarity between the experiences of traditional festivals and pop culture events. In addition to data collected among French tourists in Tokyo, fieldwork will be conducted during specific events in 2014. Then, some traditional *matsuri* will be compared to events like the Comic market in Tokyo or the Toyoko Festa in Toyoko (Hokkaido). The Sapporo snow festival, that mixes playful aspects of traditional festivals and pop cultural influences, will also be investigated. So, the analysis will question the structural similarity between these tourist experiences, in order to examine to what extent contents tourism renews cultural tourism

RC14-256.3

**SABRE, CLOTHILDE\*** (Hokkaido University, [c.sabre@hotmail.fr](mailto:c.sabre@hotmail.fr))

*Nature and (pop) Culture Tourism in Hokkaido*

For more than a decade now, the worldwide diffusion of Japanese pop culture has been analyzed as a soft power phenomenon, questioning the consequences of this success on the international image of Japan. Many studies have examined whether or not Japan is really gaining positive influence thanks to contents exports, while the Japanese officials acknowledged the idea of coolness associated to the country, consequently launching the "cool Japan" campaign. In the field of tourism, many initiatives have been taken to enhance contents tourism. Foreign travelers can now find information and activities about manga, animation, video games and so on, and some areas have been renewed and rebuilt to attract these tourists, Akihabara (Tokyo) being the main example. The idea of pilgrimage has been used to characterize the trip to these "sacred places", as the Japanese national Tourism Office delivers information about what is called "seichi jinrei" or "pilgrimage to sacred places" (<http://www.jnto.go.jp/eng/indepth/cultural/pilgrimage/index.html>; [http://otakumode.com/sp/visit\\_japan](http://otakumode.com/sp/visit_japan))

In that context, Hokkaido is a specific case, considering the traditional tourist activities in the island. The place is famous for its landscape and its countryside, with tourism linked to nature and outdoor sports (hike, ski). Nevertheless, some locations in Hokkaido attract many tourists for other reasons, linked to pop culture. For example, the success of two movies, *Love letter* and *If you are the one*, attracted Korean and Chinese tourists in Hokkaido, with many visitors who want to discover the places where the movies were shot. Then, the aim of this presentation is to question the possible shift from nature tourism to pop culture tourism in Hokkaido, through the comparative example of Japanese, Asian and Western tourists. The notion of soft power is also going to be examined as a means to influence image and meaning of sites.

WG01-891.1

**SACCA, FLAMINIA\*** (Tuscia University, [sacca@unitus.it](mailto:sacca@unitus.it))

*From Facebook to Parliament: Civic Participation through Social Network Organizations Between Success and Failure*

Computer Mediated Communication has given access to political participation to a large number of citizens around the world mostly regardless of their ideological, social, ethnic, economic background. People living in different Countries or even who have voted for opposite parties for years may unite for a single issue purpose, for a protest, a petition, for organizing a revolt or a deeper change in government. The No-Global Movement years ago and, more recently, the Arab Spring, have proved the possibilities of the Net in terms of political organization and impact. In Egypt and in Italy things have gone even further: Social Networks have become the *means* and the *place* for civic organization that later were transformed into political parties running for government. The paper will analyze possibilities and limits offered by the Web-Democracy in relation to these two recent examples.

RC26-457.2

**SACCA, FLAMINIA\*** (Tuscia University, [sacca@unitus.it](mailto:sacca@unitus.it))

*Web Democracy and Digital Rhetoric*

The relationship between communication and politics has always been a tight one, but information technologies have taken this relationship a step further: in many cases they are no longer just a mean through which political parties or movements disseminate policies, slogans and values processed off line. This process now seem to have been reversed: they have become the *means* and the *place* where policies, decisions slogans and positions are discussed, elaborated and voted. They have turned into a *milieu* of political organization as the Tahrir Square movement in Egypt and the 5Star Movement in Italy have shown us, contributing to a wide spread rhetoric over the democratization power of the Internet. But while it is indisputably true that Computer Mediated Communication allows an easy access to political discussion and participation virtually to anybody, we cannot disregard that it also carries the seeds of disengagement, self-consolation and amusement which could have the counter-effect of enhancing citizens de-democratization levels. The paper will analyze both aspects of information technologies' impact on political processes.

**SACCO, NICOLÁS\*** (Universidad de Buenos Aires, [nsacco@sociales.uba.ar](mailto:nsacco@sociales.uba.ar))

*"Veinte años No Es Nada": Social Change and Aging in Buenos Aires (1980-2011)*

Argentina's population it's experience irreversible changes in the age composition. This changes must involve the implementation of public policies related to the labor retirement that provide fair living to the retired population. Health systems and social security should be able to absorb a growing number of beneficiaries.

The socioeconomic conditions of life of the elderly depend not only on the mechanisms that provide social security systems, but the role that family and relationships between them. In the past, large families accounted for the greatest protection, however, demographic change will result in a huge change in family composition. Reducing the size of the family will have significant impacts in terms of living arrangements of older people and the relationships among its members.

How did change the older population over time? How are they alike and how they differ over yesterday and today? What are the socio-demographic profile of the cohort members in the coming years who will transit to older ages?

The goal of this communication is to investigate the changes observed in the last thirty years in the demographic profile of the population of 65 old years and over, based on cross-sectional analysis in four points in time, according to census data (1980-2010) and to describe the socioeconomic characteristics of the population over age 65 living in the city of Buenos Aires.

This should take into account current theoretical developments in sociology of population that formulate a new paradigm with significant analytical potential for understanding the phenomenon of aging (MacInnes & Diaz, 2008).

RC41-696.3

**SACHSE, CAROLIN\*** (University of Vechta, [carolin.sachse@uni-vechta.de](mailto:carolin.sachse@uni-vechta.de))

*Keeping Elderly Care Nurses through Organizational Commitment- an Inner-Organizational View*

The demographic trend influences the geriatric care sector twofold: While the demand for geriatric care increases constantly, the number of work force declines at the same time. For 2025 a shortage of about 125.000 full time nurses in Germa-

ny is estimated (Afentakis, Maier 2010). Additionally, the problem of fluctuation in the geriatric care sector causes a competition about qualified personnel among care-providing organizations.

Other sectors already use the idea of organizational commitment to keep their employees. The basic concept of commitment (Allen, Meyer 1990) distinguishes three components: affective, continuance and normative commitment. These components are not mutually exclusive but rather coexistent. So far no specific study has researched the concept of commitment considering the specifics of geriatric care.

This paper is based on preliminary results from a qualitative research project looking at this topic from an inner-organizational perspective. As geriatric care in Germany is provided by non-profit organizations as well as for-profit organizations both types will be looked at.

Results from interviews with elderly-home managers give an overview of problems about keeping qualified employees. The range of instruments, which are already used by organizations to strengthen organizational commitment and problems in everyday work, will be illustrated. In addition determining factors, which restrict human resource management in the geriatric sector, are identified. Besides general factors also organization-linked factors are included.

Furthermore, results from problem-centered interviews with elderly care nurses provide reasons and conditions for why they work for their current organization. These results will be set into context with the Allen/Meyers organizational commitment model to specify the three commitment components in the context of geriatric care.

Finally a guideline based on the research results is presented. It will help organizations in the geriatric care sector to strengthen the organizational commitment.

**SACKMANN, REINHOLD\*** (University Halle-Wittenberg, [reinhold.sackmann@soziologie.uni-halle.de](mailto:reinhold.sackmann@soziologie.uni-halle.de))

### *Education Inequality Among Shrinking Cities and Regions in East Germany*

When birth rates drop the education system is the first social field to be confronted with new challenges. Due to compulsory schooling the size of birth cohorts affects the general school system quasi-automatically with dwindling enrollments. Newspapers in shrinking regions announce regularly school closings, a topic which is highly controversial both among the decision makers in charge and the affected communities. Pupils do not only have to cover larger distances to school but also the affected places fear to lose their attractiveness as a business and housing location. As the number of shrinking cities and rural areas (especially in Europe and East Asia) increases, it becomes crucial to investigate which consequences declining cohort sizes have for the school system. Are declining birth rates increasing inter-regional education inequality?

The basic assumption of the proposed paper presentation is that some cities and rural areas are more resilient than others when their schooling infrastructure has to cope with declining birth rates. Cities and rural areas have different economic bases. This is not only true when cities and rural areas are compared with each other but also within these broad spatial categories. From this point of view it can be suspected that school infrastructures in more affluent regions will be more resilient to declining birth rates than those in economically poorer regions. However, as schools are part of public infrastructure in many countries, this theoretically plausible relationship might also be modified by political decisions.

The analysis is based on school level data from East German regions for the 1990 and 2000 years. This regional focus is especially interesting for East Germany faced a very steep decline in birth rates during the early 1990s. The empirical strategy applied (fixed effect) panel regression models which are especially suited to analyse changes over time.

**SACKMANN, REINHOLD\*** (University Halle-Wittenberg, [reinhold.sackmann@soziologie.uni-halle.de](mailto:reinhold.sackmann@soziologie.uni-halle.de))

### *Totalitarianism and Dead Ends in Sociology*

The 20<sup>th</sup> century did not only see the rise of academic sociology, but highlighted also strife within societies that resulted in specific forms of totalitarianism. Literature on the relationship of sociology and these totalitarianisms is controversial.

Some authors state that sociology is not a natural antipode to dictatorships: Some sociologists like Sombart and Michels were active proponents of totalitarian ideology, and most totalitarian regimes quite liked the technical expertise of social research.

Other authors propose that a flourishing sociology needs a certain form of society characterized by openness and tolerance to find a constructive climate for theoretical reflection, empirical research and practical relevance. From this position one could state that there is a "Wahlverwandschaft", a structural affinity, between sociology and democracy.

The presentation will use empirical material from a case study on the development of sociology at the University of Halle between 1900 and 1990. The Univer-

sity of Halle is an interesting case in so far as in this East German university the societal context varies between monarchy, democracy, fascism and communism. The empirical material focuses on published and unpublished work of Friedrich Hertz and Rudhard Stollberg, as well as archive material to their activities and conflicts. Specific dead ends of forms of historical sociology and empirical sociology are analysed with regard to the guiding question, whether there is a structural tension between forms of totalitarianism and sociology.

### *Dioxin Risk Controversy in Japan*

In this risk society, we are confronted to many kinds of environmental risk and involved risk controversy. Whether the risk is small or large, we have right to choose that risk or not. But we sociologist should try to grasp the quantitative size of the risk to analysis the discussions of scientists or experts in the public sphere. So I try to propose the sociological analytical method of symmetrical scientific controversy through the case study. The case I focused in this paper is Dioxin risk controversy in Japan.

Dioxin had caused a great deal of public concern in the 1990s. It was exhausted from industrial waste incinerators and municipal waste incinerators all around Japan. People around the incinerators started anti-pollution movements. And some of dioxin researches in Japan helped them and measured the exhaust of dioxins in environment. At last those movements resulted in the enactment of anti-dioxins law. However, risk studies in Japan consisted that dioxin's risk is not so large, according to their own risk comparative studies.

On the context of environmental movement, this kind of risk studies may be often criticized; "they are political." But in many cases it is not clear how it is political and on what point it is political. In this study, I analyzed the scientific paper of risk studies and compared those of dioxin researchers. As a result, several assumptions were found in the "scientific" paper of risk studies. Especially, average values they used are different from that of dioxin researchers. We can say this is political. And we have to pay attention to the point that this is not derive from the risk study, but it is from the attitudes of risk studies. This distinction is important in the debate in public sphere. Symmetrical analysis can make this distinction possible.

### *Defining Urban Renewal in Tehran: The Complex Dialogue Between Citizens and Municipality*

Since 2006 Tehran municipality has started a pilot environmental and urban development project in Beryanak, an old southern and popular neighbourhood particularly exposed to seismic dangers. This new urban experiment, part of a wider environmental seismic prevention project, aimed at implementing a participatory urban renewal based on a dialogue with inhabitants, the neighbourhood council, local associations and with a scientific mediation of a research unit of anthropologists and town planners.

This project involving professional and social dialogue was innovative in Tehran, where a centralized and technical approach was traditionally favoured. More broadly, it reflects the participatory shift in urban policies illustrated by the decentralization law of 1997 and the creation of elected neighbourhood councils in Tehran in the 2000's.

This paper will examine this complex dialogue and the way neighbourhood councils have progressively positioned themselves as key actors of urban development in Tehran. Indeed these collaborative and participatory organizations designed to integrate ordinary citizens to the definition of their city's public policies, have encountered many difficulties to fit in the local political space. Thus, this paper will focus on the different conditions and modalities of mediation and cooperation in the Beryanak project and how they evolved through time. We will both study the structure of the dialogue, mainly the habitus, backgrounds and representations of the actors (town planners, neighbourhood councils, municipality, etc.), and the tensions, conflicts or the asymmetry between them in terms of positions, knowledge, power, interest or resources.

This paper is mainly based on a long-term field study conducted in Beryanak (Teheran) since 2006 (participant observations of deliberative experiences, project's meetings observations and semi-structured interviews with City advisors, neighbourhood councillors, citizens, researchers, state representatives, religious field actors, etc.).

WATAMURA, EIICHIRO (Keio University / Japan Society for Promotion of Science)

*The Impact of Sentencing Decisions about Similar Cases and Others' Opinion on Sentencing Decision*

In 2009, Lay judge system started in Japan. Under this system, lay judges and professional judges determine guilty of criminals and sentences to the convicted criminals. After the determination of introduction of this system, some scholar have explored how that decision making is done by psychological experiments –mock trial study. However, the research which employed this method focuses on private lay judges' decision, not outcomes after deliberation. It is due to the difficulty of conducting mock trial study with deliberation.

Of course, the results of this research are useful when thinking about modification of trial procedure. However, the determination of sentences to the convicted defendants is not done privately, but is done through deliberation by lay judges and professional judges. In this paper, the impact of information which is given to lay judges is examined. In trials and sentencing deliberation, lay judges look graphs about past similar cases. This is basically shown in the form of graph of distribution, and it has powerful effect on lay judges' sentencing decision. In a psychological experiment, the impact of that graph and participants' opinion about how useful that graph is and how respectfully we should treat that graph are explored. In addition, there might be conflicting opinion with regard to sentencing outcomes by other lay judges. In the same experiment, reactions to those different opinions are also examined. This psychological experiment did not include sentencing deliberation itself, but due to that experiment, some important aspects about sentencing deliberation can be explored.

In this paper, the results of the psychological experiment are shown. Then, some practical implication about trial procedure is discussed based on the results. Especially, to incorporate general public opinion into judicial system is one of the goals of Lay Judge System in Japan. Therefore, the results are examined from this perspective.

SÁENZ, ROGELIO\* (University of Texas at San Antonio, [rogelio.saenz@utsa.edu](mailto:rogelio.saenz@utsa.edu))

*The Demographic Transition and Subsequent Transitions: The Case of the United States*

The United States has experienced major demographic shifts throughout its history. Like many other developed countries around the world, the traditional demographic transition associated with declining mortality and declining fertility has spawned subsequent demographic transitions. These transformations have included the urban transition, the marriage transition, the household transition, the aging transition, and the race/ethnic transition. Of these transitions, the two most prominent at the beginning of the 21<sup>st</sup> century are the latter two—the aging transition and the race/ethnic transition. In particular, the country is in the process of aging rapidly as the large cohort of baby-boomers start reaching age 65 between 2011 and 2029. In addition, as the white population begins to decline due to low fertility and major aging, the Latino population due to its youthfulness will dominate the nation's population growth. Indeed, population projections suggest that the Latino population will more than double from 50.5 million in 2010 to 111.7 million in 2050 compared to a 5 percent decline in the white population from 196.8 million to 186.3 million during this period. These major demographic transitions will have major impacts on demographic, social, and economic trends in the coming decades and in many ways is likely to lead to varying experiences between the United States and those of other developed countries. The implications of these trends in the future of the United States will be discussed.

*The End(s) of Diversity. the Struggle Between Nationalism and the Hyperdiverse City*

In the framework of the FP7-project Divercities, we investigate how urban policymakers deal with the increasing hyperdiversity in European cities (Tasan-Kok, van Kempen, Raco & Bolt, 2013). In reaction to immigration and the intense diversification of the population, nationalist parties have gained electoral success in several Western-European cities. As a political ideology that focuses on constructing and maintaining a homogeneous nation-state, nationalism seems to be at odds with the hyperdiversity in contemporary Western-European cities. Characterized by the coexistence of people with very diverse socio-economic and ethno-cultural backgrounds, the hyperdiverse city is an anomaly to most theories of nationalism. While authors like Anderson (1983), Gellner (1983) and Smith (1986) explained nationalism on a countrywide or regional scale, little has been written

about the relationship between nationalism and the city. In this paper, we want to address the question how nationalist policies deal with hyperdiversity in the city.

In order to answer this question, we take the example of Antwerp in Belgium. As the largest city of the Flemish region, Antwerp is an interesting case because of the electoral success of Flemish nationalist parties on the one hand and the diversity of its population on the other hand. While extreme right-wing Flemish nationalism has long been relegated to the opposition, a moderate Flemish nationalist party recently came to power in Antwerp. Based on a critical discourse analysis of policy documents and interviews with policymakers, we compare past and present integration policies regarding immigrants in Antwerp. This comparison illustrates how urban integration policies have shifted away from multicultural to assimilationist policies. Serving nation-building ideals rather than the pragmatic inclusion of immigrants in the city, the nationalist assimilation policies seem to be ill-equipped to deal with the increasing hyperdiversity in the contemporary Western-European city.

SAFONOVA, MARIA\* (National Research University, [safonovam@yandex.ru](mailto:safonovam@yandex.ru))

*Reproduction of Cultural Capital and Leisure Practices in the Russian Society: Does Bourdieu Work?*

Context specificity of stratifying factors is often alleged, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu's ideas on cultural consumption and leisure practices were lucky in this respect. Due to their centrality for the late XX century sociology of culture and stratification, and general feeling that they have specifically French flavour, their applicability have been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low leisure activities find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu's concept to the Russian context. We specifically evaluate one aspect of this notion which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu's work, but in largely the same vein, produce results much better fitting with his theorizing. As Bourdieu predicts, holders of high cultural capital tend to form a homogamous status group and cultural consumption remains structured. Counter to Bourdieu, instead of one dominant taste we find a plurality of segmented tastes, covering different forms and species of art. Investment in developing taste for and familiarity with one of them does not imply familiarity with homological others. We will conclude with discussion of possible solutions of this puzzle.

SAFONOVA, MARIA\* (National Research University, [safonovam@yandex.ru](mailto:safonovam@yandex.ru))

*The Academic Empires: The World-Society Argument and Colonial Legacies in the International Student Migration System*

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This paper tests the world-society theory by applying it to data on higher education students' migrations between countries. The expectation derived from WS theory is that (a) the migration flows will demonstrate rapidly diminishing or already minimal levels of clusterization, and (b) that particularistic cultural-institutional variables (e.g. common language, similar institutional structures caused by belonging to common political units) will have minimal or diminishing significance in predicting size of student flows. Volume of international student migration between pairs of countries (UNESCO statistics) in 1998-2012 is used to reconstruct the flows system. Network measures were calculated for each of the years to observe the dynamics of student migration system. For evaluating significance of cultural-institutional variables, negative binomial regression with historical experience of belonging to the same political system (colonial empire typically) was performed as an independent variable controlling for proximity, economic affluence, and size. Historical experience of dependency is chosen as the most general proxy for probability of massive institutional import since wide literature on international migrations argues that institutional (especially educational system) and transport infrastructure, which were established to connect imperial centre and the colonies in order to get steady flow of raw materials, reproduces imperial language use as well as certain type of dispositions and identities. All this evidence gives only limited

support to the world-society approach; cultural-institutional divisions retain and, eventually, even increase their influence.

#### *Becoming Cowardly: Automatic Rifles and the Change of Bodily Experiences in East African Battlefield*

The Daasanach in the border regions of Ethiopia, Kenya, and the South Sudan have fought with neighboring pastoral groups, viewed as "enemies", for more than a half-century. The Daasanach claim that their primary motive for going to war is the demonstration of masculinity, allowing men to be recognized as "brave" by community members. Various cultural mechanisms praise the "brave man" who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the youth are drawn to the destructive power of the automatic rifle, and their behaviour is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to "renounce war". Two main types of experiences contributed to such decisions. First was the bodily (including "physical" and "mental") pain of war, such as being grazed by a bullet or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanach during the course of a war. In wartime, the unity of "we Daasanach" could break down under the violence. Many persons who "renounce wars" said, "I became cowardly" as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.

#### *Empirical Measurement of Integration & Cohesion*

The empirical measurement of the integration and cohesion impacts of migration throw up key conceptual, practical and sociological challenges. The paper features the findings of a study of such impacts in the UK commissioned to develop evidence-based public policy. Integration and social cohesion are elusive concepts that are defined in different ways. There are impacts on national identity. Measures here refer to perceptions of feeling or belonging to a national society. In the British case, the trend over time is of a move from an ancestral understanding of identity, couched in ethno-cultural fixtures, to one based more on civic values and responsibilities. Secondly, migration impacts on integration, defined as group outcomes set against the societal average. Here migration's impact assumes a great deal of importance—as migration and policies that modulate migration have impacts on trajectories. Notwithstanding that the choice of measure is critical, it is clear that different immigrant groups perform very differently. Finally, migration impacts on cohesion, namely how migration affects neighborhoods, and is defined by people's perceptions of how people get along with each other in their local area. The paper reports UK empirical measures of this in two ways, first by perceived positive or negative changes in neighborliness and in respect and interaction between social groups; and second by levels of trust in local institutions (such as the police). The findings suggest that new migration does not notably affect cohesion but pre-existing diversity and high levels of poverty are predictors of lower social cohesion. There are important insights for social researchers examining issues around the size of migrant communities and for policymakers in respect of managing the pace of change in neighbourhoods.

#### *Aimless or Flexible? the Consequences of Uncertainty in Youth Career Plans*

The aspirations of young people have been extensively studied, and were key variables in early status attainment research in the late 1960s. The link between youth ambitions and eventual educational and occupational outcomes has never been doubted, although the ways in which the variables are related has been debated. Throughout this 50-plus years of research, it has always been thought that all young people had ambitions, but that how much, and for what attainments, needed to be explained. Only recently have researchers begun to pay more attention to the significance of youth's uncertainty about what they want to do later in life. Some researchers have referred to this as aimlessness or role exploration. Yet this uncertainty can be also viewed as flexibility which is typical or even beneficial in a world in which life-long careers are a thing of the past. In this study we investigate the consequences of uncertainty shown in youth educational and occupational ambitions. We conduct our study from a longitudinal perspective, and use the 2003 Cohort data of the national Longitudinal Study of Australian Youth (LSAY) which involved over 10,000 students. Following this cohort of youth

between ages 15 and 24 we will examine the consequences of uncertainty in educational and occupational ambitions focusing specifically on differences between those with and without aspirations and the possible various reasons behind them. We also discuss the implications of our findings for theories of youth social/psychological development, career development, and occupational attainment.

#### *5 Pm-10 Pm: Interrogating Domestic Inequality*

William J. Goode proposed rightly that world revolution toward industrialization and urbanization has led to the change in family pattern from extended towards conjugal. Talcott Parsons emphasized that in the absence of extended kinship ties, nuclear family has become important in the respect that it meets two major societal needs: socialization of children and satisfaction of emotional needs of family members namely husband, wife and dependent children. Modern nuclear families and their members i.e. husband and wife are not handicapped by multitude of obligations often conflicting to extended relatives and can take full advantage of occupational opportunities. Demands of modern industrial life and more recently globalization have brought about myriads of changes in the way in which traditional gendered roles and division of labour was constructed. Women today are empowered, independent, working in the public space along with the man. But what we need to interrogate at this juncture is how far the division of labour and responsibilities between spouses inside family space become degenerated? Do we have a situation of role-reversal for both the genders or do we have a situation of role addition/burden for the female gender. Contemporary educated, urban woman is a career woman working in the office from 10 am to 5 pm like her male counterpart, but after coming back home she has to play the traditional, ascribed role of the mother, wife, care-giver, nurturer and home organizer. In spite of the women working and earning, there is internal stratification of family life, in which men are in a more advantageous position. Husband-wife relationship can be identified as power relations, in which men dominate over women. Ideological legitimations of gender inequality are more often than not internalized by women themselves. My paper, on the basis of primary data would examine this gendered inequal domestic space in Kolkata.

#### *Changing Food Consumption Practices Among the Emerging Middle Classes in Metro Manila*

This paper will present preliminary research results from an ongoing research project that considers the dynamics of food consumption among the middle classes in Bangalore and Metro Manila, including consumption patterns, practices and policies. Asia is often seen as the center of gravity for the "new consumer" phenomenon, where a rise in affluence can translate to consumers who enjoy better diets, private transport, throwaway products, and fashionable versus functional clothing (Myers and Kent 2004). The focus of this paper is on Metro Manila and the emerging middle classes, who may not necessarily be experiencing 'better' diets, but where there does seem to be a trend towards 'organic' and 'local' food consumption and production among some people. This paper wishes to highlight the emergence of organic and/or local food and composting as entry topics for environmental concern, as well as the influence of globalization on environmental initiatives.

One main finding is that changes in food consumption practices are not only related to a rise in affluence, but to changes in other practices, such as changing the location of your home, joining a new workplace, or the employment of a domestic worker. Specifically, a change towards organic food consumption seems to be motivated by a different set of reasons, not directly related to environmental concerns: certain people interviewed as part of this research project and who have chosen this kind of diet claim to do so because of health reasons, proximity to certain markets, as well as the influence of travels abroad. Looking upstream at organic farming and further downstream at composting, people engaged in these new practices had all been 'elsewhere' and brought new ways of doing back with them, upon returning to the Philippines. The significance of demonstration projects towards more 'sustainable' practices will be discussed.

#### *Keeping Cool: Air Conditioning Consumption in the Philippines*

Southeast Asia is growing in every possible way. Addressing the electricity needs of the region's urban households is particularly relevant where cooling is concerned. This paper is about how people go about keeping cool in Metro Manila, the Philippines, focused on air-conditioning in the home. It is part of a grow-

ing body of research in 'sustainable consumption', tackling the related themes of air-conditioning consumption patterns, practices and policies, as well as the potential for change. Research was conducted among three socio-economic groups: households based in low-income housing, the growing middle classes in new housing developments, and affluent households based in gated communities.

As a backdrop, the paper provides information on the environmental impact of household electricity consumption, in relation to economic and population growth. The history of cooling practices and air-conditioner manufacturing is also briefly discussed. The central theme of the paper is how current practices are tied up with air-conditioning consumption, from sleeping at night, to caring for a child, or dressing fashionably. The material dimension of air-conditioning is discussed, specifically in relation to 'west is best' housing trends in Metro Manila: certain housing styles may be locking in the need for artificially cooled air for years to come.

General trends in the region will no doubt contribute to an increase in air-conditioning consumption, yet current consumption patterns are not homogenous: how people go about keeping cool in Metro Manila varies greatly. This paper considers what the future might hold for keeping cool in one of the hottest regions of the world – hot, both in terms of economic development and temperature levels. The conclusion provides insights, which may be relevant to other mega-cities in the region.

#### *Voluntary Risk Taking and Individual Emancipation*

**Background:** In France, the important proportion of teenagers who develop a repeated consumption of cannabis, tobacco or alcohol consumption worries the security and public health authorities. The consumption practices among young people are categorized by social and scientific discourse as a risk behavior. Many scientific researches try to explain why they develop a health, social and penal risk behaviors. However, very little one has analyzed the way that experience of consumption is lived by youth. How do teenagers perceive their consumption behavior, what meanings that they attach to their behavior?

**Methods:** In order to apprehend the subjective experience of drugs consumption, we have led a qualitative investigation. We carried out 42 biographic interviews to twenty-one girls and twenty-one boys between seventeen and twenty years old. They live in Ile-de-France. These interviews have permitted us to apprehend subjective signification about their consumption experience and analyze the dynamic by which the have developed the substances use.

**Results:** The public health categorization on consumption by youth does not tally with what happen in reality. The perception of the teenagers on their consumption moves away from the epidemiologic categorization. The drugs use means to the participants festivities or conviviality. Moreover, teenagers, who are currently looking for an autonomous identity, develop consumption, not to oppose to their parents or social and penal norms, limits. We observe that if the youth people develop the consumption of cannabis, alcohol and tabaco it is especially to build a personal and individual identity. It is in a context of individual emancipation (Kaufmann, 2004) that we consider voluntary risk taking is part of individualization process.

**Conclusion:** There is a contrast between the collective and scientific perception and perception of teenagers on drugs consumption. Voluntary risk taking is a subjective and positive experience which responds to his quest for identity

#### *Civil Society and Development Perspectives*

##### **Civil Society and Development Perspectives**

Voluntary action is an age old phenomenon in the Indian social landscape. In the past, say before colonial era it was embedded with cultural view, traditional values, social ethos which commonly atomized as humanistic, idealistic commonly act as bridging the gap of unjust social system. But in recent years, especially with the initiation of liberalisation, globalisation and privatisation, the formal Voluntary Organisation (VO) is emerging as key players in the plan development process initiated by the government. Currently, they have acquired as 'third sector' for innovative approach, flexible structure, ability to reach the unreached, dedicated, committed, capacity to mobilise the local initiatives. In light of such scenario, a study was conducted to comprehend voluntary organisation's application of own ideology, autonomy and accountability in implementation of various development programs under domain of child development, women empowerment and natural resource management supported by national and international aid agencies in the backward Marathwada region of Maharashtra State, India. The overall findings states that the development programmes are not demand driven rather supply driven through voluntary organisation which mostly eluded own independent vision, values, autonomy in planning and implementation; commonly adhere to financiers agenda, policy prescription and governance. Similarly, the experience, ideas, views, knowledge, of target groups and specific needs of the region is hardly considered while operating the programs. Such one side

approach, in fact, lead to over look inherent raising inequality, regional disparity, abject poverty, rampant casteism, growing exploitation, gender inequality, etc of the region. The VO as a 'catalytic' agency is largely lost in addressing these vital social issues and follows sectoral approach which do not encompass the entire fabric of human development system within which they live and survive, thus, fall short of bringing justice and ending unjust social system.

#### *Moroccan Emigrants, Ethnic Minorities and Development in Morocco: From Marginalization to Driving Force of Social Change*

This paper explores the relation between emigration and empowerment of Moroccan indigenous groups from the regions of Souss and Rif. It is based on semi-structured interviews conducted between September 2012 and January 2013 with six migrant community leaders engaged in transnational activities between France and Morocco, participant observation within a French-Moroccan NGO, as well as semi-structured interviews with three government officials and three migration scholars in Morocco. Regions inhabited by indigenous minorities, the Amazigh, in the North (Rif) and in the South (Souss) of Morocco, were essential sources of emigration in the 1960s and 1970s. These regions were particularly suspected of political unrest and large-scale emigration offered a safety valve as men left the country in significant numbers and began to send remittances back home (Lacroix, 2005). A few decades later, the engagement of diaspora-led NGOs started to play a role in the reconfiguration of power relationships in the Moroccan political and institutional landscape. As many Moroccan emigrants came from the most economically disadvantaged and politically marginalized regions, their engagement in development initiatives has called into question existing policies and role of the state. This paper makes the point that Moroccan communities abroad have undergone a process of political empowerment, from the marginalisation that characterized indigenous minorities in Morocco to the activism of NGOs in the diaspora. Without necessarily building upon 'ethnicity', but simply by supporting their regions of origin, these emigrants brought about social and economic change to their communities and regions. It is therefore argued that diaspora activism needs to be taken into account in the analysis of democratisation processes in Morocco. Research findings are presented in the broader framework of migration and transnationalism studies, and more specifically draw on earlier contributions on the Moroccan diaspora (Belguendouz, 2006; Iskander, 2010; de Haas, 2006; Daoud, 1997, 2011; Khachani, 2008).

#### *No Hours Guaranteed, No Pay Secured, No Employment Rights: The Social Implications of the Rise of Zero-Hours Contracts for Black, Asian and Minority Ethnic Women in the UK Labour Market*

This paper addresses the social implications of an increasing use of Zero Hours Contracts (ZHCs) in the UK, and its specific impacts on Black, Asian and Minority Ethnic (BAME) women. Workers on ZHCs have no set number of hours and therefore their income is not secured; furthermore they often have no sick and no holiday pay. The nature of this contract takes away rights related to dismissal as employers can simply reduce the number of hours to zero but still keep workers 'on call'. In summer 2013, the use of ZHCs in the UK attracted media's attention after the Chartered Institute of Personnel and Development estimated that 1 million workers were concerned. A sharp rise in the implementation of this type of contract was observed in recent years, especially in the care sector in the context of the privatisation of public services and the commodification of care.

The paper explores working conditions under ZHCs in the care sector and aims at shedding light on how precarisation of the workforce affects in particular BAME women in a segmented labour market. Concepts such as institutional racism, ethnic penalties, and intersectional discrimination inform the analysis. This paper also looks into the role of trade unions in supporting their members on ZHCs and informing the public debate.

Whilst being empirically grounded in an on-going fieldwork with trade union officers and BAME workers, which is expected to be completed in February 2014, the analysis also draws on earlier studies on vulnerable and precarious workers (TUC, 2008; European Foundation, 2010; McKay et al., 2012), ethnic penalties (Heath and Cheung, 2007; Raymond and Modood, 2007), as well as care regimes and gendered work (Pfau-Effinger and Rostgaard, 2011; Dahl et al., 2011; Simonazzi, 2009; Bettio and Plantenga, 2004).

### *Development Induced Protests in Contemporary India: Response from the State and Civil Society*

The issue of forced human mobility has been receiving much attention from the government, policy makers, civil society organizations, activists and academia in contemporary India. Social scientists interpret forced human mobility as involuntary mobility and internal displacement. The desire to take control over a certain territory and its resources becomes a cause of conflict which forces its residents to leave their current homes. The most visible are displacements associated with conflict over resources or antagonisms based on ethnic background. In the case of development-induced displacement or conservation-induced displacement, territory becomes an arena of specific conflicts between the interests of the public or private sector and the needs of people displaced or affected by particular development decisions. Development-caused displacement is often associated with conflict over resources which have led to landlessness and consequent problems.

The paper attempts to analyze the contemporary Indian society and development-induced displacement from a class-caste-gender perspective. The lower one is on that ladder, the greater the negative impact of changes introduced in their lives without their consent. The marginalised communities especially Dalits and tribals feel it more than the others do and women among them are the worst affected. They are deprived of the resources that were basic to their survival and are denied access to education, health services and nutrition. It forces them to deny their children right to childhood and to a decent adulthood. Women are deprived of the little autonomy they had. Development cannot be real till such failures are remedied and its benefits reach those who pay its price.

### *Democratization of Art Production and Voicing Subversive Vision of the World*

Tunisian youths are experiencing new form and styles of art production. This is especially true for rap music and graffiti. Facebook and YouTube networks are the preselected means of diffusing the products. One can see in this a wave of democratization of the production of art which sappers the old rules of ranking popular and mass arts. In the other hand, the content of these products are more and more subversive especially after a massive youth participation in the revolution which did not keep a real change. This widespread disappointment enhanced practices of anger and refusing. A subversive imaginary is more and more inspiring the youth vision of the world. Authorities are facing these new manifestations of the youth rebellion with police control of the scenes of shows, trials... Is this a new style of telling the crisis? Why does the social narration of inequalities take this form?

### *Spousal Violence Among Rural Women: A Sociological Study in North-East India*

Spousal violence is a grave challenge to a happy marital life. When proclivity of violence takes place in a dyad relationship, it crushes the bond of family. Therefore, spousal violence has been considered as one of the most serious social problems throughout the world. Hence, this issue has a sociological significance. The theoretical arguments regarding spousal violence can be classified into different categories. But in this study specific focus has been laid upon wife-battering only. This paper seeks to know the nature of violence and to find out the causes and consequences of spousal violence in rural areas of North-East India. Apart from these two objectives, awareness and knowledge of the victims towards legislative measures to save them from spousal violence have also been investigated with proper method. The field of the study concentrates around a village namely Gooskata in North-East India. Keeping in view the objectives of the study, basic information about spousal violence was gathered from 100 married women out of 208 households of Gooskata village. The data were collected purposively and in this context accidental sampling procedure was followed. The findings of this study have revealed that rural women of North East India have been suffering from spousal violence. The relationship in between the husband and wife became more crucial and complex in rural areas, but it is also true that most of the violence have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.

### *Leisure in Spiritualism : Alien to Male-Folk*

The present paper intends to make a comparison between the male and female members of the Marwari community in terms of their participation in socio-religious gatherings. Marwaris are known to have two religious sects: the first comprises idol-worshippers, like the Agarwals, Maheshwaris and Oswals, and the second, the non-idol-worshippers, like the Jains. Active involvement in religious gatherings is a commonplace characteristic of the Jains and this particular custom is seen improving social relations both within and outside the community.

The role of Marwari Jain women is noteworthy in this context. For most of the time they are found tied to their apron with little or no association outside the threshold. Obtuseness of husbands also adds to their misery. In such circumstances, religious organizations, mostly named 'GOSTIS' prove beneficial in venting their shriveled up emotions to other female peers and building ties with them. These women, irrespective of any predisposition, regularly gather in such meets, where through prayers and incantations (precisely, chanting of 'Samayak') some remarkably pleasant time is spent. Often, such assemblages are followed by refreshment at a member's place, where children of the member families also participate. Inter-generational ties are thus strengthened with such initiatives taken preeminently by these women.

Men, however, remain aloof from such settings and only partake when their 'Guruj' visits at any juncture. Marwari women thus, enjoy an upper hand in all

cases relating to spiritualism, and enjoy this authoritative position as it gives them the opportunity to spend their leisure in a healthy manner. A considerable demarcation thus separates the Marwari men and women in connection to their notion of leisure in spiritualism and this is what this paper intends to throw light upon. A detailed survey-work has been undertaken with some in-depth interviews to represent this field as accurately as possible.

[hsaito@wcfia.harvard.edu](mailto:hsaito@wcfia.harvard.edu))

### *Two Visions of Cosmopolitics*

This paper explores how Ulrich Beck's world risk society theory (WRST) and Bruno Latour's actor-network theory (ANT) can be combined to advance theory of cosmopolitics. On the one hand, WRST is good at illuminating how relevant political actors interact with each other to deal with global risks while negotiating the two logics of politics, cosmopolitanism and nationalism. On the other hand, ANT is good at showing how scientists participate in the construction of global risks and helps to elaborate how science and politics are intertwined in cosmopolitics. By combining the strengths of WRST and ANT, it becomes possible to examine simultaneously the tension between the two logics of politics and the co-constitution of science and politics, both of which, I argue, are crucial for theorization of cosmopolitics. The proposed synthesis of WRST and ANT also force sociologists to critically reflect on their role in cosmopolitics and envision a new form of critical theory.

### *Nation Consciousness and "Multiracialism" of the Singaporeans: Focusing on the Concept of "Racial Difference" and Their Interactions*

Singapore is well-known as a 'multi-racial' society, but then, how they form their identity as 'Singaporean'? Considering this problem, 'multiracialism' becomes an important concept in making 'Singaporeans'. However, its purpose is to make 'racial differences' obvious and emphasized. Therefore, how do people create Singaporean consciousness in these kind of society?

The aim of this research is to study this problem by using free talking interview and observation data carried out by the speaker. We can say that the government of Singapore reinforces the 'races' in order to make differences among 'races' highly visible by emphasizing the differences among the 'races'. In Singapore, differences among 'races' are visible even though people from different 'races' interact with each other daily. Moreover, a sense of community or even of being a 'Singaporean' begins to grow and maintains; at the same time, differences among 'races' are maintained.

### *Rainfall Variability, Coping Strategies and Livelihoods: Case Study from Godavari Basin, India*

Natural resource-dependent rural households are likely to ensure a disproportionate burden of the adverse impacts of climate change -- droughts, famines, floods, variability in rainfall, storms, coastal inundation, ecosystem degradation, heat waves, fires, epidemics, and even conflicts. In some parts of the world, these effects may already be in play with potentially disastrous consequences for the poor. Reliance on subsistence agriculture means the impact of stresses and shocks (such as droughts or floods) are felt keenly by rural poor people, who depend directly on food system outcomes for their survival, with profound implications for the security of their livelihoods and welfare.

Variability in rainfall had been plaguing the farmers of Andhra Pradesh during the recent past resulting in crop failure and indebtedness. It would be important to find out the coping mechanisms that are being developed by the farmers to deal with variability in rainfall and the support being provided by the government. In some parts of the state; farmers are opting for cultivation of commercial crops instead of food crops as they are finding better returns from these new types of crops which could lead to issues like food security and loss of livelihood for certain communities.

This paper focuses on identifying livelihood adaptation strategies of cultivators in Nizamsagar project, where farmers developed new water sharing mechanisms and brought about changes in farm practices to deal with rainfall variability.

### *Social Inclusion of Disabled People and Two Models of Risk*

In his article "From Dangerousness to Risk"<sup>1)</sup>, Robert Castel described the contemporary society as a "two-speed society". It is a society which consists of hyper-competitive and marginal sectors, and assign people to either of the two according to their abilities. Castel illustrates this strategy with sheltered employment of disabled people.

Unlike eugenics, according to Castel, confinement and sterilisation is used no more in the "two-speed society". In addition, special care becomes unnecessary by assigning disabled people to less competitive activities. Thus, Castel argues that the "two-speed society" enables risk prevention which can dispense with both repression and assistance.

Risk in Castel's argument refers to a combination of factors and is detached from personality. Once an individual comes to have certain risk factors, however, s/he receives a special treatment like sheltered employment. In this sense, risk here effectively makes specific people the "Other".

On the other hand, risk in Ulrich Beck's argument<sup>2)</sup> is universal, in that people all over the world more or less share the same risk. For instance, he points out that people who are able-bodied at present can be disabled at any time. Such common risk, once recognised, can engender solidarity.

In the context of disability, interpreting disability as a universal risk is quite popular, though such limitative understanding of disability as Castel's certainly exists. This presentation first locates some researches and programs concerning social inclusion of disabled people in reference to these two different approaches to risk and disability. Then the presentation goes on to examine the different consequences of these approaches.

### *What Drives Growth of Jobs and the Arts? a Chicken and Egg Analysis*

In the classical economic view, jobs attract workers to a city. The new workers patronize amenities, such as restaurants, shops, and entertainment, which in turn expand. Thus, in this view, jobs are the main factor for city growth. However, in our study, we add the hypothesis that the arts and related amenities also may attract people to a city. Arts and amenities may serve to attract workers, shifting where they choose to live. This in turn increases the growth of non-arts related industries in the region. Thus, do cities grow primarily due to the jobs created by non-arts industries, or also due to the presence of arts amenities and entertainment? This is the chicken and egg question.

We use zipcode data from the American census to analyze the relationship between the growth of the arts as related to other industries. We use cross-lagged regressions on fifteen years of data in more than 30,000 zip codes in the US. The analysis crosses data from different years and time spans, using the number of arts jobs as a reference to the growth of arts related-industries. Preliminary results show that arts and non-art industries take turns in influencing primarily the growth of cities, thus, providing evidence that both arts and other industries are relevant for the growth of cities. However, analyses are still being done to obtain more subtle results.

### *Still Facing High Barriers? the Factors Affecting Birth Experience Recognition of Female Workers in Japan*

Even though Japanese government implemented a lot of countermeasures, declining birth rate is still a serious problem in Japan. Previous research found that husband's socioeconomic status and housework support have strong impact on fertility behavior of females both with and without work. Over the last two decades, Japanese female workers have been facing a difficult trade-off between career continuity and the first child birth. This study focuses on female workers in Japan and examines empirically the factors affecting on the recognition of birth experience.

Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multiple regression analyses the effects of employment and marriage cohort, family resources, socioeconomic status of themselves and the support in the workplace, upon the recognition of birth experience. Our results indicate high housework frequency of the husband decreased their first birth hesitation. On the other hand, positive recognition toward birth experience is influenced by the support in the workplace. Smooth communication with both family and workplace members also have a positive impact. These findings advance our understanding of how Japanese companies can take specific measures to improve low fertility.

#### *The Effects of Using ICT on Work-Family Life: an Empirical Study Based on the Work-Family Border Theory*

One of the features of ICT use is greater alleviation of time and location restraints in communications. Although positive effects of ICT for improving work-family life have been reported, much of the ICT literature stresses negative effects on work-family life through increased extra work. Sakamoto and Spinks (2011) found that a higher degree of using ICT tools directly related to higher work-family conflict of Japanese workers. This study explores the effective mediating factors that can reduce the negative impact of ICT use, applying work-family border theory to measure the concepts and propose hypotheses.

Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use in their daily life and their perception of them. We analyze the mediating effect of domain identification, influence and across-the-border communication. Our findings advance our understanding of how we manage the permeability between work and family life.

#### *Work and Private Life of University Professors in Japan and Positive Action Taken By Japanese Universities*

This presentation will examine the work and private life situations of female and male university professors in Japan, and offers some examples of positive or affirmative action taken by Japanese universities and discuss its effectiveness.

In Japan, the ratio of female researchers is low, as is the case of other countries. In 2011, just 13.6% of university professors (full professor, associate professor, lecturer, assistant professor) were female. From around 2006, the Japanese government started a positive action policy to increase the ratio of women. The government grants subsidies to offer about 10 universities each year for three years. The universities offer support centers for women, gender equal office, childcare centers and so on.

The presenter has worked in one of the gender equal offices as a staff member. My observation there and a questionnaire research for university professors are the main data source of the presentation. First, the presenter will discuss their work and private life situations. Many researchers have shown that male productivity tends to be higher than that of females. However, the results show gender does not explain scientific productivity when we control other variables. Next, they have specific marriage patterns. For example, many female professors tend to be single or have partners who are professors. Many couples live separately. However, women tend to shoulder domestic work and child rearing, as is the case with other occupations.

In this situation, many universities have set the goals of numbers or ratio of women and introduced many types of positive action. The presenter will show examples of them and discuss effective ways to support both sex and foster gender equality in universities.

#### *Renewable Energy: A Study Ofvankuswade Wind PARK, India*

Man has been using the wind for sailing ships, for pumping water and for supplying mills with power for a very long time. The increasing concern for environment and the high price of oil have made generation of electricity from the wind a realistic alternative. The question today is whether the costs and other disadvantages of oil and nuclear power have reached the point where wind generators developed by modern technology can be considered to be competitive.

The wind power in India began in 1990 and has significantly increased in last few years. India has installed high capacity wind jammers to exploits wind and converts it as wind energy for its socio-economic inclusive development programme. As on 31 January 2013 the installed capacity of wind power in India was 19564.95 mw.

Maharashtra state has the second position in wind energy in India. The first wind power project in the state was installed at Jamsande in Sindhurg district in 1986. Vankuswade Wind Park is located on a high mountain plateau at 1,150 m. above the Koyana reservoir near Satara which is Asia's biggest wind power project. There are some issues like land acquiring and local perceptions. The attempt has been made to explore the situation which will help to solve the issues of conflict in future. The paper presents the overall situation of Vankuswade Wind Park, its need as well as ground level perceptions in Satara district of Maharashtra, India

#### *Role of Dalit Mahila Vikas Mandal Against Femalefeticides in Maharashtra, India*

Strong preference for sons over daughters exists in the Asian countries and Indian subcontinent. The female feticides over the last four- five decades have distorted sex ratios at birth in several Asian countries in general and in India particular. Foetal sex determination clinics have been established all over India in the last two decades. There are studies on the outcome of an intensive abuse of prenatal diagnostic techniques for sex selection in India. Parents tend to be calculative in choosing the sex of the next child and the decision is based on the birth order, sex sequence of previous children and number of sons. The misuse of medical technology in India is resulting in reinforcement of patriarchal values as professional medical organizations seem to be indifferent to ethical misconduct.

Indian medical researchers pioneered amniocentesis in 1975. Since then the contribution of sex determination tests (SDT) to the rising sex ratio has been vigorously debated. While urban feminists demanded legislation against SDT, some social scientists felt that SDT had little impact on sex ratio.

The paper presents the assertive action by 'Dalit Mahila Vikas Mandal', a social organization which was established in 1990 in Maharashtra. Female feticides done by medical fraternity have been exposed by this organization through sting operations carried out in Maharashtra and Gujarat state. The shocking facts found during the field work carried out by the author are also presented in the paper.

#### *Professional Turf Battles Vs. Inter-Professional Collaboration: Their Impact on Inequalities in Health and Social Care in the UK*

From a neo-Weberian perspective, it is argued that professions have long competed with each other in turf battles to enhance their respective positions in terms of income, status and power from the viewpoint of their professional self-interests. Using illustrations drawn from health and social care in the UK, it is argued that this has come at a substantial cost to both the user and the wider public - and has in particular exacerbated existing social inequalities. This paper outlines the growing trend for inter-professional collaboration in health and social care in the UK. Although there can be downsides to greater inter-professional working in relation to such issues as the complexity of communications and supervision arrangements, there are many positive generic reasons for such engagement - from creating a more satisfying work role for the professionals involved to enhancing the service given to the user. This paper specifically asks questions about the benefits or otherwise of inter-professional working in terms of social inequalities. In so doing, it acknowledges that inter-professional collaboration can take a number of forms. It also again draws on examples from health and social care in the UK to support its general argument that inter-professional collaboration can make a significant impact on social inequalities, not just in the UK but more globally.

[sanna.saksela@helsinki.fi](mailto:sanna.saksela@helsinki.fi))

*Broken Promises. Temporary Labour Migrants' Experiences of Working Conditions and Social Security in Finland*

West European countries, including Finland have started to recruit more labour migrants to low-income sectors in hope of a partial solution to the consequence of rapidly aging working population. This paper demonstrates how highly skilled labour migrants from non-EU member countries face social disqualification in their efforts to become part of the Finnish labour market. Particularly, African and South-Asian male workers find mainly cleaning or dish-washer jobs despite their academic background. Our study explored the temporary labour migrants' experiences of acquiring opportunities to working rights and social security. The results show that the majority of the interviewees had been reluctant to look for information either due to the fact that they were working only temporarily in Finland or due to their weak bargaining positions. The information of recruitment, working rights, the Finnish taxation system, and of the Finnish social security rarely reaches the labour migrants. These features can partly be explained by labour and migration policies, and by the natives' strong creation of 'otherness' between the native Finns and the non-white foreigners. In the analysis an intersection of gender, ethnicity and class has been applied to describe the unequal and sometimes precarious position of the labour migrants. The research material consists of documents, memos based on ethnographic observations and of seventy-eight semi-structured interviews, of which forty-nine were conducted among cleaners, bus drivers, and seasonal agricultural workers.

*Re-Creating Mutual Belonging: Filipino Labour Migrants' Local and Transnational Practices Between Finland and the Philippines*

This paper demonstrates the unequal embeddedness of transnational Filipino labour migrants in the Finnish and Filipino society. My study of Filipino labour migrants' working and living conditions in Finland explored the migrants' adaptation strategies in their efforts to become integrated in the Finnish society and in staying in touch with the ones left behind. The analysis showed how the integration of Filipino labour migrants to their new host society is influenced by their adaptation strategies, such as of the migrants' local and transnational practices and contacts. The active participation in sociocultural and religious practices helps the Filipinos to find their way of being in Finland without losing their contacts to the Philippines. The migrants' adaptive strategies strengthens the Filipinos ethnic identity and in its turn their ethnic belonging to an ethnic minority community in Finland as well as to a transnational community. These two communities should not be perceived as two opposites but as dual sites of mutual belonging consisting of a hybridity of transnational and ethnic collective identities. At the same time, the migrants' opportunities to become familiar with the Finnish society and to learn the Finnish language have been vague. There is a risk of segregation from the Finnish society if the Filipinos do not become familiar with the Finnish society and language. The research material consisted of open-ended interviews conducted among twenty Filipino cooks, nurses and cleaners and of memos based on ethnographic observations.

*Occupy Gezi: From an Uprising to a Social Movement?*

Occupy Gezi started as a small protest to oppose the demolition of a park in Istanbul and quickly transformed into a national grassroots initiative against the government's authoritarianism and a hybrid democracy, which locks political action into the ballot box. After a month of intense street protests leaving 5 dead, dozens wounded and under arrest, it has shifted to "park forums" as thousands gather in their neighborhood parks to discuss the future and come up with a game plan. This lecture will look into how the #OccupyGezi experience opened new social and political possibilities, spaces of political action (online and off) and a new kind of political language; what shook the so-called "apolitical" generation out of their comfort zones to the streets; and brought people from all walks of life and political spectrums together. It will also look into the chances of Occupy Gezi becoming a full-fledged social movement and the limitations it faces in the process.

*Contested Concept and Activities of Religions As Social Capital in Contemporary Japan*

As Japanese social policy has oriented to post welfare society due to the stagnated economy and its consequence, the drop of tax revenue for last twenty years, the government stressed the plural actors for social works in a community and the importance of social capital in regions as its facilitating potential. However, Japan has not focus on varieties of religious engagement in public sphere, in contrast with other countries where religious groups and their faith based organizations are regarded as social organizers and/or catalysts.

This research studies the recent social works by traditional and new religions, and then illustrates the dispute over whether a religion should be engaged in society among the press, academician, and religious denominations.

In conclusion, the author first suggests that both the public and religious denominations should not continue to adhere to the legacy of modernization in which Japanese Meiji government controlled religions and forced them to support its militarism and colonialism over seventy years after the World War Two. Second, we can have the cooperative relations between non-believers and religious, by which various social problems will be gradually solved and as a result general social trust will also restored.

*Mysteries of the Discourses That Encourage Cooperation. Ver.2*

Mysteries of the discourses that encourage cooperation. Ver.2

- Another important constant number on the human societies added to "Dunbar's Number"?

Yoshio Sakurai

(Kagoshima University)

[yoshiosakuraig@gmail.com](mailto:yoshiosakuraig@gmail.com)

**[Introduction]** We found some phenomena after 3.11 which had almost not been expected earlier. I would like to have attention to a phenomenon of "speeches advocating cooperation".

**[Methods]** I use a multi agent simulator. The structure of the pay-off of the game is composed by a kind of 'social dilemma' in her neighborhood, and other orientations with their costs. Each agent has a strategy which has two kinds of output values; [act cooperatively / act not cooperatively] and [speak to advocate cooperation /not speak]. There is also another parameter, 'threshold for speaking to advocate cooperation' parameter. Each agent will speak to advocate cooperation with 'a cost'; when and only when the 'cooperative actor rate' of her neighborhood is UNDER her 'threshold for speaking to advocate cooperation' parameter.

**[Results/Conclusion]** I tried to check whether "speaking to advocate cooperation" or "not speaking to advocate cooperation" has effects on the cooperators rates in the whole universe. The results are in Fig.1. Next, I tried a parameter survey on how values of the 'neighborhood radius' have effects on the cooperators rates. I did 100 trials where the 'neighborhood radius' were randomized with equal probability from 0 to 130. The result is in Fig.2. As the figure shows, in the cases that the 'neighborhood radius' ranges from 10 to 25, the 'cooperators rate's seem to be distinctly high. It seems that there is a 'threshold value' around 25 by which the 'cooperators rate's are discriminated between being high and being nearly zero. I think that these models are interesting in several points. We will discuss some at our conference.

*Indicators and Models Assessing the Relationship Between Ageing, Severe Disability and Socio-Economic Deprivation*

**Background and aims:** a previous pilot study on the Italian context has verified the existence of a significant relationship between the presence of a familial situation of severe disability and increased risk of poverty in people aged 65+ years and produced a model for measuring such risk at aggregate level, identifying the factors that determine the relationship between ageing, severe disability and socioeconomic deprivation. The aim of this paper is to develop similar models at individual level, using specific indicators available in database of the social and health sector, in order to contribute to the planning of local services at different geographic and administrative levels.

**Materials and methods:** the variables in the model proposed by the pilot study have been reviewed on the basis of the individual data available in the information systems of the local actors. They have been used for defining evaluation models based on the characteristics of the individuals, with the same techniques used in the pilot study. As a case study the municipality of Genoa, whose population is among the oldest in Europe, has been taken into account.

**Results and discussion:** The passage from regions to individuals in a large municipality confirms the validity of the model for people 65+ years old. ADL disabilities are the main disability dimension with highest association with the worsening of the SE condition, also due to the effect on the social relations dimension. The public strategies seem to better protect individuals and families, with the help of the informal network of support for the family care. The indicators in the models could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could be extended wherever these kind of data are routinely collected.

#### *What's the Impact of Coverage Error to the Study of Social Inequalities?*

In some European countries, including Italy, survey organizations use the Directory of Landline Phone Numbers as sampling frame to survey the general population and study social inequalities (Häder and al. 2012). Under certain conditions, the use of this sampling frame may be problematic.

In Italy, with the only exceptions of Callegaro's work (2004 and 2008), there is very little interest in this topic. Little is known, for example, on the extent to which coverage error occurs and its impact on survey estimates, although in 2011 only 50% of households are included in the sampling frame (e. g., the directory of landline phone numbers). We believe a clear understanding of the nature of coverage error is urgently needed (households may be excluded from the sampling frame for different reasons) to develop appropriate strategies to tackle the coverage problem.

The overall aim of the paper is to evaluate the impact of coverage error on the accuracy of the survey estimates for a set of key socio-economic variables and, should evidence for bias arise, to discuss possible strategies to correct for it.

We first describe changes over time in the pattern of coverage error by focusing on three groups of Italian households (household included in the sampling frame, households excluded from the sampling frame as they do not have a telephone and households excluded from the sampling frame as they do have a telephone but the telephone number is not listed). We then explore whether there are any differences in these groups in their socio-economic characteristics, including indicators of general trust and, for a selection of survey items (including income, health and social class), investigate the impact of coverage error on bias. We use the 1997-2012 Multiscopo survey ("Aspetti della vita quotidiana") run by the Italian Statistical Institute (n=20.000 households).

**SALAMÉ, DOUNIA\*** (Inst National Recherche Scientifique, [Dounia.Salame@UCS.INRS.Ca](mailto:Dounia.Salame@UCS.INRS.Ca))

#### *Memory, Resistance and the Everyday: Spatial Practices in the Rebuilding of Nahr El-Bared Camp*

Nahr el-Bared Palestinian refugee camp in Lebanon, home to around 27000 people, was nearly completely destroyed in 2007 by the Lebanese army in a confrontation with Islamist group Fatah al-Islam. Plans for reconstruction started even before the war ended, launched by a first design by the Government of Lebanon.

One of the issues in the rebuilding of the camp is the control of space. The government tried to impose a plan that ignored the spatial practices and configuration of the old camp, prioritizing security issues in a design that allowed total control and surveillance by the army. Palestinian civil society groups asked for a reconstruction preserving neighborhood relations, main streets and identity, similar to the destroyed camp. If literature on the reconstruction of Nahr el-Bared tackles issues of power, law and sovereignty in this enclave, no research explores how the population acts upon the space to infuse its meaning to the space again.

My research seeks to find how the population of Nahr el-Bared expresses their agency through everyday spatial practices. In the tension between the control of the space by the army and the history that makes the camps traditionally ruled by the Palestinians themselves, how do the inhabitants of Nahr el-Bared rebuild their camp themselves?

The camps in Lebanon are poor, closed, spatially limited areas that become representative both of the Palestinian identity and refugee condition. Nahr el-Bared, for example, was built informally by the refugees in a way reflecting geographical and cultural organization in Palestine. Today, I argue, it is through daily spatial practices, mnemonic recalling of the destroyed camp and dwellings as well

as everyday resistance that Nahr el-Bared inhabitants take back the control of the camp and rebuild their own space. My research examines these three elements in the way they are expressed in space.

#### *Think-Tank Networks in Mexico and How They Shape Economic and Political Reforms*

*Think tanks*, broadly defined as public policy research organizations, have proliferated in North America. In the case of Mexico they are a relatively new phenomenon associated to the retreat of the state from the economy. However, they have rapidly built networks which play a key role in coordinating elites in the country in order to influence the public policies and strategies promoted throughout the past two decades, in particular those associated to NAFTA and the reforms this agreement has entailed. This paper analyzes the most important characteristics of Mexican TT, who controls them, the networks they have constructed in the past decade, the strategies they pursue to influence policy-making, the most influential ideological orientations and the extent to which the Mexican TT network is linked to a regional or international network. I argue that the landscape of TT has undergone a very profound transformation in the past years leading towards: (1) an increasingly greater presence of independent TT and private consultancy firms that undertake not only research on public policies, but executive and legislative lobbying too; (2) a more challenging advocacy role of academic and business TT that actively participate in the media and multiple forums to build consensus around, and acceptance of, the neoliberal reforms proposed; (3) the disappearance or fading away of former state research centers, particularly those promoting developmentalist tasks; (4) the concentration of state research in autonomous public agencies requiring very specialized information; and (5) new and more complex forms of collaboration and cooperation between business affiliated, academic and other TT, national and regional. Formal network analysis will be carried out in order to examine the patterns of connections between TT, their centrality and the tensions or divisions emerging from the ideologies they espouse or from the technocratic knowledge produced.

#### *The Role of Parenting Practices and Preschool Education for Social Inequality in Learning Outcomes: A Cross-Country Comparison Using Test Scores*

Research on preschool education and day-care programs is gaining momentum since the discovery of its potential to reduce social inequalities in educational attainment. Much of this research relies on case studies to measure mid and long term effects of preschool attendance on academic performance and school transitions. In this paper we adopt a broader focus and a comparative approach by exploring the extent to which early (pre-primary school) child stimulation can reduce background differentials in learning outcomes across 28 countries from the Americas, Asia and Europe.

Particularly we seek to unveil the relative impact of direct parental involvement and preschool education, as different ways of child rearing, on educational disadvantages that stem social origins, and the extent to which this applies to all the countries in our sample. Are the effects of both practices (institutional vs. at parental home; formal vs. informal) substitutive or complementary? Are there measurable cross-country differences in the learning benefits of preschool education? Is kindergarten attendance equally stimulating for children from different socio-economic origins? Is the impact of different parenting practices sensitive to national contexts? How do institutional characteristics of the educational system affect performance at this stage?

To answer these questions we use PIRLS 2011, an international data source clustering students of primary education (4<sup>th</sup> grade) across countries. PIRLS provides a standardized measure of reading literacy among students in 4<sup>th</sup> grade. We estimate random-constant and random-slope multilevel models to assess the effect of the type of child care adopted by families on educational outcomes. This approach enables us to decompose the observed variance in reading skills into its constitutive parts at the country and student level. Beyond our substantive findings, we discuss the potential for a broad comparison of multi-layered processes that result in unequal life chances among children.

#### *Managing NGOs for Older Persons in East and Southeast Asia: Lessons and Good Practices from the Field*

The paper reviews the roles and experiences of non-governmental organizations for older persons (NGOs-OPs) in East and Southeast Asia. It is based on case studies of selected NGOs from Hong Kong, Japan, Korea, Indonesia, the Philippines, Singapore, Thailand and Vietnam. The study finds an increasing number of NGOs-OPs present in the region, working in diverse areas of service delivery, education, research, training, and advocacy. Community-based older persons' organizations or senior citizens associations are also becoming more active, with some organizations going beyond social and recreational activities, and venturing into policy advocacy and other areas traditionally served by non-community-based NGOs. Most NGOs are taking on multiple roles simultaneously, e.g., adding advocacy to their other programs, while a few are beginning to focus on a specific target group, activity, or service. On the organizational and management side, NGOs-OPs are also becoming more accountable and are taking creative and innovative steps in meeting the challenges of management. To be sure, NGOs-OPs need to address important gaps, notably the lack of capability-building at the community level, the lack of follow-through in policy implementation, and the need to solicit critical, hopefully constructive feedback from the older persons they are serving. Nevertheless, like the older persons they are working for and with, NGOs-OPs themselves are getting more active and growing wiser with age.

#### *L'Autre, un « escroc sentimental à but migratoire » : les discours politiques sur les hommes étrangers dans les couples binationaux en France*

Les politiques d'immigration en France depuis une dizaine d'années visent très particulièrement les couples binationaux dont le ressortissant étranger est sans papiers. Depuis 2003, sont inscrits dans la loi les délits de mariage « blanc » et mariage « gris » : le premier se réfère au délit de mariage de complaisance, et le deuxième concerne l'étranger extra-communautaire qui se pacte (pacte civil de solidarité) ou se marie seulement pour avoir des papiers de séjour, c'est-à-dire, et selon la formulation des personnalités politiques françaises « un escroc sentimental à but migratoire ». Or, ce discours et les politiques d'immigration ne visent pas tous les couples de la même manière. La sexualité, la nationalité, la « race », le genre, la classe ou l'âge de la personne étrangère sont des critères importants de la suspicion de l'authenticité d'un couple. À partir de mon travail de terrain effectué pendant trois ans auprès des couples binationaux de même sexe et de sexe différent, il s'agira, dans cette communication, d'analyser la manière dont cette politique régit et contrôle la vie intime de ces couples par le discours politique mais aussi par l'application de la loi. Celle-ci varie lorsqu'il s'agit des couples où l'homme est racisé, « d'origine maghrébine », ou « musulman pratiquant », ou « ressortissant d'Afrique subsaharienne » ; des masculinités qui posent problème à la « République ». Celui-ci est vu comme un escroc, un danger pour la femme blanche occidentale : l'administration française régit ainsi la vie intime des couples en jugeant l'authenticité de leur lien. Dans quelle mesure les mariages gris ou blancs sont-ils des constructions genrées et racisées de la politique d'immigration ? Et qu'en est-il de ces constructions de la « menace masculine étrangère » lorsqu'il s'agit des couples binationaux gays masculins ?

#### *Integrating Demographic and Visual Approaches in the Measurement of Gentrification*

Approaches commonly used to describe neighborhood change such as invasion-succession, tipping, and lifecycle models rely on demographic data for measurement and insight into these processes. However, a limited amount of empirical data on microbehavioral factors overlooks other indicators that might precede the more macro-level demographic shifts usually employed to measure change. An assessment of the neighborhood change literature demonstrates two shortcomings: the tendency to focus on individual residents without attention to other neighborhood organizations and institutions such as businesses and the place-based mechanisms underlying changes in race and socioeconomic status. Most models of neighborhood change miss a deeper understanding of the social processes involved in the construction of value. These cultural practices matter because they lead to increasing values (both monetarily and symbolically) that ultimately fuel further demographic transitions.

Using a comparative and mixed methods approach, this project examines neighborhood change in New York, Los Angeles, Chicago, and Detroit. Data from the Neighborhood Change Database spanning the years 1990-2010 are used to investigate census-based measures of gentrification. Systematic social observation of select neighborhoods using photography will also be used to document change visually, with an emphasis on commercial storefronts. This research seeks to integrate cultural and spatial analyses into demographic methods to ask how their combination can better assess the contours of neighborhood change. The three central research questions are: 1) Do traditional demographic measures (i.e. race and class) adequately capture the phenomena of change? 2) Why do neighborhoods experiencing gentrification seem to look similar to each other and utilize the same semiotic tropes? 3) What are the physical indicators of neighborhood change and how are they involved in symbolic boundary construction between old and new residents?

#### *An Experimental Study Of The Relationship Between Knowledge, Attitudes and Recycling Behavior In Iran*

It is often assumed that knowledge and attitude about the recycling will engage in recycling behavior. We used data from a survey on Mazandaran province, Iran in 2013 to investigate this premise. A survey method was utilized to conduct this investigation and by employing cluster sampling, a total of 300 respondents were selected randomly. A self-administered survey was employed to collect the data. Finally, 286 valid questionnaires were obtained. The research was conducted during February and March 2013. The data was analyzed using SPSS. We examined two types of knowledge: knowledge new programs and knowledge about recycling process and hypothesized that knowledge is associated with recycling attitude and behavior. We also hypothesized that attitude about the recycling would be a predictor of recycling behavior. The results showed a significant positive relationship between attitudes towards recycling and recycling behavior. The results also showed that there was no correlation between attitudes towards recycling and both types of knowledge about recycling. In addition, regression analysis indicated that there was no linear relationship between knowledge and behavior will not be approved. The paper concluded to offer some reasons for these findings and made some suggestions for future research.

#### *Between Market, Art and Politics: The Different Ways of Resignification of the Old Industrial Spaces in the City of São Paulo*

Since the beginning of this century, the old industrial buildings and spaces of the neighborhood of Mooca, in the city of São Paulo, have been the subject of economic, political and social practices guided by a cultural sense with an increasing aesthetic relevance.

Photography, painting, advertising, heritage practices, graffiti, have contributed to bring a new sense to these spaces, which goes from their private appropriation by real state market to the appreciation of public space by heritage state agencies. This implies in a redefinition of the relations between aesthetics and politics in a "postmodern" logic (Jameson, 2000; Harvey, 2000).

One of the consequences of this process is the construction of "postmodern urban landscapes" characterized by gentrification and disneyfication (Zukin, 2000; Smith, 2000). On the other hand, according to Huysens (2000), there is no pure space outside the market culture, which leads us to question the limits of these

processes, namely to consider the "specific strategies of representation and com-modification and the context in which they are represented" (2000:21), or the crit-ics to the regressive aestheticization of politics (and economy) by the politicization of art (W. Benjamin, 1985).

We will analyze the use of these strategies in the practices of artists, entrepre-neurs, experts, dwellers and their conflictual context - involving real estate boom and heritage practices (Pereira, 2010; 2013); the formation of gated communities (Caldeira, 1997) and the resistance against them (ibid., 2012). How they give new meanings to identities, places, revealing the tensions and complementarities be-tween advertising-driven aestheticization and politicization of art and problematize the construction of a singular public space: a heterogeneous urban landscape and a democratic political sphere, both institutional and non-institutional (Arendt, 1991; Habermas, 1984) in the city of São Paulo. We will use the methodology of visual sociology (Ferro, 2005), problematizing it in an interdisciplinary approach.

#### *Can Outsourced Workers Organize? a Case Study from the Philippines*

This presentation will detail an attempt by outsourced workers in the Philip-pines to form a labor union. These workers are in the "knowledge process out-sourcing" sector, meaning that they possess significant human capital and do skilled tasks for firms of the Global North. The case immediately presents two puzzles. First, given the many structural barriers known to impede unionization by outsourced workers in the Global South, how did a union campaign emerge? Second, why did this unionization attempt ultimately fail? My ethnographic re-search inside the outsourcing facility provides answers to these questions. Rep-resentation struggles were initiated by highly-skilled workers and in response to new, driving tactics on the part of local management. The latter were reacting to pressures put upon them by their Western clients. The unionization campaign appeared to have caught local managers by surprise, and throughout it they were very concerned to keep news of it from reaching the government, the press, and Western clients. In short, employees possessed significant structural and work-place power in their attempt to gain recognition. Ultimately, however, it was local management's ability to harness greater associational power that led to the de-feat of the union. One general implication is that studies of labor in global supply chains should theorize and examine empirically the vendor-client relationship. In these supply chains, vendor firms and client firms have different interests and resources.

#### *Foxconning Science: The Globalization of Academic Publishing*

This paper presents ethnographic work done inside an outsourcing firm in the Philippines. This firm is part of the emergent knowledge process outsourcing, or KPO, field. It contracts with publishers wishing to outsource such work as copy-editing, typesetting, authorial communications, and more. Most major scienti-fic publishers now contract with such firms. I present evidence that the nature of these contracts encourages suppliers to adopt despotic tactics for organizing work. Suppliers lack basic knowledge of the overall field of production (in this case, academic publishing), and so judge themselves against unknown compet-itors. They compete on price, rather than quality, and so continually engage in various "low road" techniques of management. Most notably: wage suppression, the "driving" of workers, and forced overtime. I conclude the paper by discussing at length one incident that provides a prism into the entire labor regime: a union-ization dispute that took place at this facility. Global pressures induced worker resistance which was then channeled into a unionization campaign. But ultimate-ly managers were able to deflect this campaign by mobilizing local networks and traditions. In this case, global and local forces collided to control the hidden work-ers in the new global production of science.

#### *Changes in Status, Reconfiguration of Identity. the Case of Educators in the French Youth Justice System*

In the aftermath of World War II, the French Youth Judicial Protection Service (YJPS), responsible for the rehabilitation of young offenders, gained its autonomy from the prison administration, and became an autonomous agency of the Min-istry of Justice. The YJPS now employs 8500 people, of which 4500 are educators. The latter, trained in a division of the YJPS, have the exceptional feature of bene-fiting from French civil servant employment status. For a long time, this protective

employment status has been interpreted as a sign of distinction and prestige. Represented by the YJPS national union (YJPS-UN), created in 1947, the YJPS edu-cators have cultivated this prestige by demonstrating their unconditional attach-ment to the political purpose of their administrative agency: the construction of a justice model based on the rejection of youth imprisonment. However, in the past fifteen years, these workers have been subject to an ideological shift, which requires the implementation of punitively-oriented policies. This has changed the interpretation of their employment status, less perceived as a sign of prestige, than considered as an instrument of subordination to these new policies. The le-gal obligation for the profession to intervene in new prisons for youths epitomizes this subordination. In this context, the YJPS-UN, remaining firmly wedded to the previous political identity of the profession, is progressively becoming marginal-ized. A growing number of educators are turning to a more conventional trade union, attached to the promotion of working conditions rather than defending the distinctive identity of the profession. By depicting the differences between these two forms of activism, which we name 'identity' versus 'utilitarian', we will analyze how a "new professionalism" has emerged among YJPS educators, and is symbolic of a general weakening in the symbolic status of this professional group.

#### *Rehabilitation and Punishment. a New Model of Rehabilitation in the French Youth Justice System*

According to recent research in policy transfer studies, youth justice systems across the western world are taking a "punitive turn" (Muncie, 2008), marked by the emergence of a new "culture of control" (Garland, 2001). This process is particularly significant in the United States and Great Britain, however it appears that other European countries are following suite (Bailleau & Cartuyvels, 2007). A closer look, however, reveals complexities: the level of youth incarceration, a commonly adopted indicator of punitiveness, differs considerably between coun-tries. The French youth justice system, analyzed in this paper, does not escape these complexities: since 2002, the youth incarceration rate is decreasing, while the content of political discourse and legislative changes seems to fuel the in-crease of a new punitiveness (Bailleau, 2008). To understand this apparent par-adox, we will describe how political injunctions aimed to "get tough" on young offenders, are translated and reworked, at a lower level, through the activity of the administrative agency responsible, in France, for the functioning of youth cen-ters: the Judicial Protection of Youth (JPY). This analysis will allow us to highlight the crystallization of a new model of *rehabilitation under constraint*. First, using quantitative data, we will describe the increasing use of semi-closed youth faci-lities as an alternative to prison. Tied to the development of new prisons for youth, supposedly "rehabilitative" (Chantraine & Sallée, 2013), this evolution is changing less the *level* of confinement than its *meaning*. Formerly perceived as anti-rehab-ilitative, confinement is now legitimized as an inseparable feature of rehabilitative processes. Second, we will analyze knowledge production practices, particularly child psychiatric and psychological knowledge, mobilized by the JPY to support this legitimization process. This paper will defend the idea that this *new* knowledge underpins *old* disciplinary recipes, and symbolizes the growing concern surround-ing, in France, the institutional fabric of socialized individuals.

#### *The Relationship Between First Principle Production in Brazil and the International Demand*

The following research approaches the criticism of the production system of knowledge in Brazil, focusing on a laboratory of Theoretical Physics which works with First Principle Model (FPM), order to analyze the institutional dilemma and the relationship between the laboratory and the central spaces of knowledge pro-duction linked to this research area. The production of science, how is the current in Social Studies of Science and Technology, demand an articulated network of elements which sustain and make circulate the knowledge production produced inside the area. In the FPM case, the space of production and circulation is very peculiar, since the production involves upgrades in the computers' servers when acquiring the resource, the lab does not spend much more money; on the other hand, the circulation occurs within the specific circle in physics, because the pro-duction not necessarily will become a product since the experimental relevance does not always happen. And yet we have the relationship with central spaces of central places of knowledge production, understood basically by The US and Europe which influence the content and the decisions of productions inside the laboratory. The methodology of this research consists of an interview which re-searchers and analysis of published material for one label of FPM which is related to a Brazilian University. With the following research, we aim to contribute for the debate about the production process of knowledge, bringing reflexive elements about the role of Brazil in the production of FPM knowledge.

*The Notions of Otherness and Critical Construction Sites:  
Theorizing Professional Boundaries within*

This paper is about social and symbolic boundaries (Lamont & Molnar 2002). The aim of this paper is to suggest a theoretical way to understand constructions of 'Otherness' within professional boundaries. I draw on the empirical case of the doctors with immigrant backgrounds in the Swedish medical profession and use the notion of critical *construction site* by Cornell & Hartmann 2007.

In order to bridge the gap between structure and agency the study started with a review of the Swedish research literature in order to see how 'ethnicity', 'race' and 'Otherness' had been received in research. In this review I found that 'Otherness' is often something that is ascribed to patients and not doctors. I then went on reviewing the professional debate around the issue of doctors with immigrant backgrounds in Sweden I found something what I theorized as underlying assumptions of 'the Other'. This ethnic 'Otherness' was not about doctors 'ethnicity' nor about 'race' instead it had to do with that the doctors had immigrated and was perceived as something stable and predetermined.

This notion of 'Otherness' was later also found in interviews with doctors with immigrant backgrounds. In the interviews I expectantly found stories of discrimination, prejudice and even racism but I also found stories of agency, and coping strategies where the 'Otherness' they were ascribed with was used as a way to construct their role in the Swedish health care system; to take care of patients with immigrant backgrounds.

The paper theorize this as doctors with immigrant backgrounds seem to be using a *primordial* definition of 'the Other' in *circumstantial* ways in order to find their place within the Swedish medical profession which I argue, is a *critical construction site*.

[lisa.salmonsson@soc.uu.se](mailto:lisa.salmonsson@soc.uu.se))

*The Other Doctor: When Professional Boundaries Conflate with  
Notions of Ethnic 'otherness'*

The paper suggests that field of Sociology of professional groups need to consider social position theory in order to theorize boundaries of 'Otherness' within them. The paper is based on some of my concluding remark from my dissertation where I interviewed medical doctor with immigrant backgrounds in Sweden about their feeling of belonging to the Swedish medical profession, among other things. The thesis is that the medical profession in general and the Swedish medical profession in particular have been successful in controlling the number of new doctors that are accepted to Swedish medical schools. Sweden has also experienced and increase in doctors with immigrant backgrounds working in the Swedish health organization. In my interviews with these doctors they often told me about something that could be understood as hierarchies within the profession on the basis of 'being and outsider within'. I have chosen to theorize this as 'ethnic Otherness' as it seem to have to do more with that they are ascribed with 'non-Swedishness' than about what 'ethnicity' they have. These divisions I argue are linked to ideas that can be found in EU legislation, in the Swedish research on ethnicity and health as well as in The Swedish Medical Association and can therefore be a case of another 'successful' boundary making.

University, [csaloma@ateneo.edu](mailto:csaloma@ateneo.edu))

*Set in the City: Condominiums As Settings of Technological  
Innovations Toward Sustainable Consumption*

One of the tangible signs of growth in Metro Manila, a Philippine mega-city of about 11.7 million people, is the proliferation of condominiums. A condominium is a form of housing tenure whose cost of land is prorated due to multi-story building and which makes it possible for many people to live closer to the workplace and shopping centers. This paper lays out the proposition that the condominium is both medium and outcome of technological innovations that either stimulate or stymie sustainable consumption. Technological innovations embodied in the design of spaces and rules of condominium living provide the material setting that defines interactions and images relating to inhabitants' consumption of technologies in the home and consequent social constructions of sustainable consumption. The paper focuses on social practices relating to the use of information, communication and entertainment technologies as well as domestic technologies by condominium-household members. The take off point is a body of data and insights from key informant interviews, direct observations, and secondary data analysis.

[Katja.Salomo@uni-jena.de](mailto:Katja.Salomo@uni-jena.de))

*Spatial Indicators of Right-Wing Extremist Attitudes*

Prevention programs for right-wing extremism in East Germany have been steadily conducted for the last decade. Recently, however, there have been increased efforts to tie local prevention programs closer to the up-to-date research in this field. Nevertheless, the exchange between social scientists and the organizers of prevention measures revealed a gap: Whereas the former rely on survey data to identify *who*, i.e. which socio-demographic groups show high risks for developing far-right attitudes and why, prevention programs need to know *where* – in which towns, rural communities or areas – these high risk groups are likely to be found. It therefore seems necessary to ascertain spatial indicators for right-wing extremist attitudes.

The analysis is based on cross-sectional survey data from the eastern German state Thuringia aggregated to the level of rural districts and up to three measurement points between 2001 and 2013, supplemented by corresponding spatial characteristics of these districts, describing them in respect to their economic, social, cultural and political status. To assure valid estimations for the effect sizes of spatial characteristics, it is necessary to choose a statistical approach that allows a) to test spatial characteristics against known predictors for right-wing extremist attitudes on individual level, b) to account for different roles various spatial characteristics are supposed to play (predictors, moderators) in regard to predictors on individual level and c) to ascertain to what extent changes in attitudes between measurement points can be ascribed to (changes in) the status of the rural districts.

As can be demonstrated, "conventional" path models accompanied by latent-change models meet this demands. Their adequacy and limitations for analysing effects of spatial characteristics on (aggregated) individual characteristics are further discussed. As well as the validity of the implemented research design in relation to the expected practical use of the results for preventing right-wing extremist attitudes.

**SALVATORE, ARMANDO\*** (National University of Singapore,  
[salvatore@fosr.net](mailto:salvatore@fosr.net))

*Contending Modernities and the Sociology of Islam*

The sociology of Islam has become a vital track of original research, in both historical and contemporary perspectives, on Muslim majority societies and Muslim minorities since after the 1980s, through establishing significant links to wider conceptual debates in social theory and cultural studies. This research program paralleled a larger sociological trend that privileged a comparative perspective in the exploration of modern developments and dilemmas in the West, East Asia, and the Muslim world, while also questioning (and reconstructing) the controversial notion of civilization.

The paper will argue that while the sociology of Islam benefits from a comparative perspective and a corresponding theoretical revision of Eurocentric postulates, it cannot be completely satisfied by them and should place its endeavors in a more explicit context of exploration of not just parallel and multiple, but of contending modernities. This field of study has thus the potential to unsettle evolutionist conceptions of modern society even more than purportedly anti-Eurocentric approaches and immanent critiques of modernity within social theory are able to do. This specific potential of the sociology of Islam is implemented by questioning the comparative perspective itself, to the extent it focuses on parallelisms and diversities more than on the complexity of entanglements (which are as much cultural as they are economic and political) between articulations of Western modernity and concurrent developments in the Muslim world.

The suggested path is to take charge of what is specific to Islam and Muslim actors vis-à-vis the parameters of Western-centered modernity without exceeding in any anti-essentialist immunisation, which if pushed too hard (e.g. as many scholars and analysts are doing under the impact of the recent and ongoing revolts in the Arab world) would bring us almost back to square one, i.e. to an absolutization of stale Western parameters of political, economic and cultural modernity.

*Decent Work and Social Justice for Informal Sector Workforce in  
South Asia*

The increased economic integration during the last decades of the twentieth century coincided with rising income inequality in some countries and increasing unemployment among the low skilled mainly on European continent. Community based schemes are springing up everywhere in the developing world, most frequently in Africa and parts of Asia.

The International Labour Organization unanimously adopted the ILO Declaration of social justice for a fair Globalization on 10<sup>th</sup> June 2008. The declaration expresses the universality of the Decent work Agenda. All members of the organization must pursue policies based on the strategic objectives, employment, social protection, social dialogue, and rights at work.

This paper examines the present position of the informal sector workers in South Asia. The study is based on information collected through secondary data.

At present, Multinational Corporations have entered in the global market; therefore, the nature of capitalist production has been changing. It is effect of weakening social dialogue institutions in developed and developing countries.

In the era of globalization, right to life and livelihood has become the central issue not only for organized sector workers but unorganized workers also. South Asian Association for Regional Cooperation (SAARC) is an economic and political organization of South Asian countries, which includes India, Sri Lanka, Bangladesh, Pakistan, Afghanistan, Nepal, Maldives, Bhutan.

Informal workers include all workers in the informal sector as well as in the formal sector performing informal jobs. Labour laws in the countries of the region are not universally applied and excluded several groups of workers or groups of establishments from their scope. It is generally the formal or organized sector that is covered by labour laws. As a result many labour laws apply only to a small proportion of the workforce.

There is a need to implement the ILO Declaration of social justice for a fair globalization.

#### *Does the Transition to (grand-)Parenthood Change Intergenerational Relationships?*

Existing studies suggest a close relationship between the presence of grandchildren and intergenerational relationships: For example, studies on grandparental involvement in parenting show that the birth of a child increases opportunities for associative solidarity between generations as well as it increases the demand and supply of functional solidarity, both with regard to material help or childcare as well as information and advice. This, in turn, may also result in increased affective solidarity. But it might also operate in opposing directions: If the demand for intergenerational solidarity meets supply from the grandparental side, this may enhance the existing intergenerational relationship; in case of incongruency, the event may result in increased intergenerational conflict or detachment. Yet, more research is needed on how intergenerational relations adapt to the new family structure and needs of family members after the generational transition. Past research mostly concentrate on the presence of grandchildren regardless of their age, consider only one direction (parents or grandparents perspective), or are analyze cross sectional data. The present study examines the transition to first parenthood and the associated development in intergenerational relations over a two year period concerning various dimensions of the Bengtson-Silverstein-solidarity-model. The German Family Panel (pairfam) is chosen as the appropriate data-set to addressing the research question, including reports from both perspectives, gathered in 2010 and 2012. Using difference score regression, N=7,163 dyads were analyzed. The analyses suggest an increase in the frequency of contact and practical support only from the elder to the younger generation. No changes were found for financial transfers. Regarding the frequency of conflicts, the generational transition has a decreasing impact.

**SAMBE, MICHIKO\*** (Ochanomizu University, [chikosam2012@gmail.com](mailto:chikosam2012@gmail.com))

#### *Invisibility of Sexual Minority "Women" in Japan*

There are no existing laws that either discriminate against or guarantee the rights of lesbian, gay men, bisexuals in Japan. It is partly because LGBs are quite invisible in every day life in Japan, except on TV shows. It is not strange to see a gay man or a man who appears to be so on TV. They often talk like women, cross-dress, and are expected to be teased or to play the fool. However, we hardly see a lesbian or a woman who can be seen as an FtM (Female to Male) transgender even on TV.

In a LGBT community, some says the number of lesbians is less than that of gay men, because they don't see them so often, and others mention most women are bisexual, so there not so many lesbians in Japan. Why do they appear to be fewer "lesbians" than gay men? Do most of them recognize themselves as "bisexual"? In this presentation, I will compare interviews of sexual minority men and women focusing not on "the number" but the invisibility of the sexuality of women in terms of three points; the first is their different experiences when coming out, the second is a sexual double bind, and the third is ambiguity of sexuality which is beyond description in binary categories (ex. homosexual and heterosexual). By introducing narrative, I will discuss how these elements make it difficult for "women" to talk about their sexual orientation and sexual identity.

#### *Wasted Opportunities - the Production of Power and the Challenges to Organizing Informal Reclaimers*

Movements and organizations attempting to organize informal workers are constantly faced with the challenge of overcoming social divisions and power relations between informal workers. And yet, the burgeoning literature on organizing informal workers pays curiously scant attention to the ways in which power relations between informal workers shape the ways in which they organize and circumscribe their terrain for political action. This paper explores how the informal institutions that reclaimers (waste pickers) develop in order to govern their labour process produce power laden social identities and relations that hinder their ability to organize collectively to transform their place within the value chain. Although grounded in an ethnographic study of reclaimers on a garbage dump in Soweto, South Africa, it draws on comparative experiences in Asia and Latin America in order to draw out the broader implications for the theorization and practice of organizing informal workers.

#### *Franchised Central America: Migration and Labor Dynamics*

Malgré d'incontestables progrès économiques et politiques au cours des deux dernières décennies, l'Amérique Centrale continue d'être une terre de forte émigration. Certes la recrudescence de la violence et de la criminalité dans la zone n'est pas un facteur qui contribuera à renverser la tendance, mais la plus grande intégration des économies centraméricaines dans les circuits de la mondialisation des activités productives laissait espérer aux populations de meilleures opportunités. Afin de comprendre les raisons d'une émigration quasi structurelle, nous inviterons le lecteur à faire un petit détour par l'histoire de l'économie coloniale et de ses divers modes de production et d'exploitation des richesses. Ce regard historique indique quelques pistes pour comprendre les formes productives adoptées à l'heure actuelle mais celles-ci seront principalement analysées à partir d'une cartographie de ses principaux flux migratoires. Cette cartographie tiendra compte de la diversité et de la spécificité des espaces productifs locaux, ruraux et urbains, les premiers étant porteur de nombreuses mutations sociales, dans la famille ou le travail par exemple; les seconds donnant l'occasion d'évoquer la place qu'occupent certains secteurs productifs dans la mise en mouvement des centraméricains, ceux de la *maquila*, de la construction ou encore du tourisme. Mais c'est bien à l'articulation de ces dimensions, à la fois géographique, économique et sociale que cette communication entend défendre la thèse d'une mise sous franchise de l'isthme centraméricain, bande de terre devenue réceptacle d'activités productives, légales ou illégales, le plus souvent déléguées et sous-traitées, et où la transnationalisation des espaces n'est pas tant synonyme d'ouverture que d'enclavement.

#### *Exploring Age and Aging Via the Life Course Perspective: A Filipino Perspective*

Aging is a natural and universal human phenomenon. It is natural as it is part of the human biological process and universal as it exempts no one, across time and space. The naturalness and universality of the aging process indicate a spectrum of how human beings experience it. It is both a collective and an individual experience, at the same time. As individuals add on years to their lives, the population also ages. This brings to mind the famous sociologist C. W. Mills' (1959) position that a person's biography is linked with world history. The sociological imagination, the frame of mind that Mills believes could enable one to understand the said linkage, reminds us to look into how social structures bear on one's personal life, how personal troubles can become public issues.

The institutionalized life course as conceptualized by Kohli (2007) lends a distinct tool in understanding how external forces such as social institutions, social structures and cultural elements interact with each other and with society's individual members thereby predicting actions and promoting relative stability. How age and the aging process along its four given dimensions (chronological, biological, psychological and social) are understood by the older persons themselves given their current situation as a senior citizen, is the problem focused on in this study.

The normative system of how to plan and live one's life as defined by the institutionalized life course is implicated in how the elderly Filipino older persons (60 years old and above, men and women) understand the phenomenon of ag-

ing. Selected older Filipino participants in a qualitative study that utilizes narrative gerontology as a methodological tool tell their stories as to what life domains they consider as significant and how they compartmentalize life accordingly.

#### *Building Global Worker Communities: The Case of Filipino Migrant Workers*

Building global worker communities: The Case of Filipino Migrant Workers  
Filipinos overseas are not wanting of associations or organizations to belong to wherever they may be. Commonplace are social organizations around common professions, sports, faith/religion; also based on geographic regions or ethnolinguistic origins in the Philippines to name a few. These formations are meant to provide support to the members, enhance their profession, religion/faith, ethnolinguistic identities and the like. Rarely do they get in conflict with the laws and policies of the host countries; neither were they inclined to have sustained campaigns critical of policies in the Philippines.

Fastforward, 4 decades later, we see an expanded and varied landscape of migrant communities. In Hongkong, migrant domestic workers are joining and forming their unions and merging into coalitions of different migrant nationalities.

In the Gulf Cooperating Council (GCC) countries where organizing of workers -local or migrants - in whatever form and orientation is almost a taboo, there is no stopping the migrant Filipinos from organizing cyber communities. Their "membership" knows neither boundaries nor time limits.

In other locations such as Taiwan, what is feasible are support groups such as Church/fair-based migrant formations that are spread out around the country. Every Sunday, these formations touch base with more than a thousand Filipino migrants who congregate in the churches for the worship service. Off and on the pulpits, migrant issues are raised; activities and campaigns are undertaken.

Increasingly, these new forms and ways of organizing migrants pave the way for more direct involvement of migrants on issues that impact them; for more consolidated actions and responses and for support and solidarity between migrants of one country and with migrants of other nationalities. Indeed, migrant worker organizing is the future, once that challenges the boundaries of nation-states in more ways than one. #

#### *New Configurations of Informal Work in Brazil: Besides the Informal, Short of Rights*

This work aims to examine the non-wage based labour relations and understand its implications for the State and Society. These kinds of labour relations have been referred to as "informal" or "non typical". In this sense, they have been viewed academically and politically as lacking or unviable.

However, if it is true that from the perspective of the traditional labour institutions (Unions, State, and the juridical forms of labour regulation) these labour relations are aliens and cannot be characterized but for absence of the key attributes that traditionally have defined labour, in the context of political and economical changes that took place in the past decades, these labour relations are an important part of the accumulation model and have generated new *fields of conflict* and have been trying to get politically organized, building identity and pushing forward with their agenda.

The first part of the work focus on understanding the theoretical and political implications of the non wage based relations for labour relations in general. On the second part, we try to understand the emergence of this new reality and the development of new political subjects with their own agendas and identities. However, although these labour relations and its workers are not informal, they still not recognized in their relation with the State as having rights

#### *The Solidarity Economy and the Social Struggles in Brazil: The Right to Associated Labor*

One of the most important examples of a collective subject rising in the public arena in Brazil is the solidarity economy, which for several years has been shaping itself as an autonomous social movement. In this process, it has been trying to build new social rights for Associated Labor. It is a description and analysis of this process that this work intends to develop.

With this objective, it starts by rebuilding the history of the Solidarity Economy in Brazil, emphasizing that despite its long history and connection with the Brazilian social struggles for more than a century, it is only in the last thirty years that it

has assumed a new configuration and new meanings as a result of the social and political changes that took place in Brazil after the eighties.

The second part of this work focuses on showing how the Solidarity economy today has become a new social, economical and political reality in the Brazilian society however; the subjects of the Solidarity Economy still lack the institutional recognition of its rights.

Lastly, we analyze how the subjects involved with the Solidarity Economy have been for years mobilizing and requesting the rights to Associated Labor and have achieved some successes in this process such as the creation of the National Secretary of Solidarity Economy and the approval of laws for the Solidarity Economy. As a result, the analysis of this movement in Brazil demonstrates that there are no natural rights but rights are political constructions consolidated from processes of social struggles that aim to expand democracy and transform society. It is some of these political agendas that we try to explore in this work focusing on showing the arenas where the struggles and debate around the development the right to Associated Labor take place.

#### *From Hara to Midam: Public Spaces of Youth in Cairo*

After the revolutionary events it is possible to appreciate a transformation in the uses of public space in downtown Cairo. That it is no longer surprising to see in public walls -even those of Cairo's administrative Mogamma building or Supreme Court- political graffiti represented this transformation, and convert the public space both as a site and instrument of revolutionary struggle. This transformation takes place against the backdrop of urban planning that sought to limit the availability of open spaces in which citizens might congregate, and the development of gated communities for the wealthy that, along with exclusive parks, constitute a privatisation of space. During last years, often these globalized spaces are remade by creating local and regional ties and design features that were not anticipated by the planners. The appropriation of public space -squares and streets-by youth groups for different uses that which it was conceived and planificated, have become in physical manifestations of a different Egypt. This different Egypt had roots in the understanding, production and living experience of public space of the traditional caireennes hara and ashabiyat -informal neighborhoods- where, also, the young people even has a significant role. Their living experience or urban space in the quarter permits to transform the public in a comunal space in the cosmopolitan areas that they transit. In this paper, I try to present the different manners of living both, the cosmopolitan and traditional urban spaces by youth groups.

#### *La Divulgacion Del Conocimiento a Traves De Lo Gadgets. Caso: Usabilidad Del Multimedia y La Hipermedia En México*

El presente trabajo se sustenta en el desarrollo de proyectos de investigación desde 2004 a la fecha del Cuerpo Académico Diseño y Cultura de la Universidad de Guanajuato, integrado por investigadores de diversas áreas (diseño, arquitectura, biología, educación, derecho) los cuales están enfocados a la divulgación del conocimiento en los niveles de preescolar hasta posgrado en el Estado de Guanajuato. Los productos realizados integraron el multimedia como punto de partida para ampliar la divulgación del conocimiento hasta interactivos para PODCAST y IPOD, actualmente se estan llevando a cabo propuestas de hipermedia con la finalidad de utilizar la cultura tecnológica para incrementar el número de usuarios.

La idea de implementar las nuevas tecnologías surge como respuesta a las modalidades de educación abierta y a distancia que actualmente se han constituido en una herramienta en la que no existe la coincidencia espacio-temporal entre alumno, contenido y profesor como tradicionalmente ocurre. Por tanto, dentro del diseño de los materiales de apoyo se considera el uso de los medios de comunicación alternos como los PODCAST que se han convertido en objeto de uso común entre los estudiantes, así como la audioconferencia, que permite la comunicación sincrónica e interactiva con el apoyo de imágenes para optimizar el logro de objetivos. La utilización de estos recursos tecnológicos aumentó el número de receptores significativamente en los años 2010 a 2012 situación que a impulsado el desarrollo una metodología que integra las fases de concepción de ideas, desarrollo de estrategias educativas en simuladores, determinación de parametros multimedia, y desarrollo de prototipo.

*Coffee, Certification Schemes and Standards in the Reshaping of Sustainability Markets, Tracing Global-Local Tensions*

In the last fifteen years, certification schemes (and the standards they enact) for producing sustainable products have become one of the most important strategies for enhancing sustainability into commodities (such as coffee) market. Similarly, certification schemes are introducing important changes in the governance of agriculture systems. Such transformations have been the focus on a wide set of works that critically highlight how certification schemes are embedded into a neoliberal project as well as the social dimensions of coffee production in the context of a moral economy. Although many of these approaches isolate technical and social dimensions as separated realms relative less attention have been put on how certification schemes are enacting sustainability in terms of trust, a key element in the material shaping of any differentiated market.

Following Busch (2011) contributions on standards, enacted in the Certifications schemes (Van Der Kamp, 2012), and trust I explore how certification schemes can produce two version of it in two different locations. First, trust as consistency in the International Coffee Organisation (ICO). Here I describe how certification schemes are designed to produce trust in the market related to the transparency and the consistency of coffee production according to international environmental standardised criteria. This trust, then, is limited to the boundaries of a certificate. Second, I describe the experience of a small coffee roaster and retailer with certification schemes in the UK, J. Atkinson & Co. What emerges there is a concept of trust as trustworthiness. Certification schemes are framed in terms of coffee relationships, these involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

*Marriage Selectivity and Stepfamily Formation*

Although child outcomes specific to stepfamilies have been well researched, the literature is not resolved on the process by which these families are formed, nor which persons are likely to enter these types of unions. It is well known that stepfathers are likely to significantly impact coresident stepchildren, yet we would expect this influence to differ depending on many factors, including stepfather characteristics. Thus, determining which men are prone to become stepfathers is paramount to understanding conditions that promote both negative and positive outcomes in stepchildren. Two potential explanations of stepfamily formation are frequently invoked in discussions of stepfamily formation: 1) marriage selectivity, in which the quality of male partners available to women with children varies with marriage market conditions; and 2) marital search theory, in which single mothers have an increased desire for partnering with "good providers" as opposed to childless women and will, therefore, abstain from remarriage in the absence of suitable mates. Yet, the literature has not sufficiently controlled for the marriage market conditions that are essential to each explanation. Using the first two waves of the National Survey of Families and Households (NSFH) collected in 1987-1988 and 1992-1994 respectively, we will estimate the impact of local marriage market conditions on the likelihood of a man entering into a stepfamily union. Our preliminary analysis identified sample of 471 men who formed stepfamilies and childless unions between NSFH1 and NSFH2. Preliminary findings do not unequivocally support the marriage selectivity perspective. While male partner education was not a significant predictor of forming stepfamilies, employment at NSFH1 was a positively significant predictor for only married stepfather families. In follow-up, we will incorporate characteristic-specific sex ratios of the local marriage market to determine whether stepfathers are likely to be "negatively selected" into stepfatherhood in marriage markets that are unfavorable to women.

**SANCTON, ANDREW\*** (University of Western Ontario, [asancton@uwo.ca](mailto:asancton@uwo.ca))

*Global Cities Making Policy or Policy-Making for Global Cities?*

Everyone acknowledges that cities have become increasingly important in the world economy. But there is much confusion about what this means for how they are governed. A natural assumption is that the municipal governments of the central-city municipalities of a global city-region are becoming more important for urban policy-making. But, unless the boundaries of such a municipality corresponds to the entire city-region (however defined), which is highly unlikely, then the central-city municipality will be quite incapable of responding to the most

important policy issues, especially those relating to urban sprawl. The result in many countries is a search for the perfect municipal structure to enable effective city-region policy-making.

But what is forgotten in this kind of analysis is that, if city-regions are becoming relatively more populous in relation to small towns and rural areas, then our national and sub-national legislatures are becoming increasingly dominated by urban voters. In countries with one dominant city (France, England) and in federations and countries with strong devolved regional legislatures, urban policy for city-regions will not be made at the municipal level, whatever the municipal boundaries and structures might be. We are used to hearing that "all politics is local." What we need to consider is the likelihood that "all politics is urban."

Although examples will be drawn from around the world, particular attention will be paid to the Toronto city-region (the Greater Golden Horseshoe) and Ontario, the Canadian province in which it is situated. Despite Ontario's vast territory, two-thirds of Ontario's population lives in the Toronto city-region. Ontario's politics is urban politics. Although the main argument of this paper derives from my 2008 book, *The Limits of Boundaries: Why City-regions Cannot be Self-governing*, the paper modifies the analysis in light of recent developments.

*Caring Responsibilities and Gainful Employment in Middle Age: A New Population Based Study in Sweden*

The Swedish welfare model is based on the premises 1) the society, not the family, has the main responsibility for care, and 2) all adults are gainfully employed, from the time of employment until retirement. Sweden has a high proportion of women in the work force, also in their 50-60ies. Nonetheless, it is estimated that about 70 percent of all elderly care is performed by relatives. This study is a mixed method study and focus on caring responsibilities for elderly parents or other family members. An enquiry was made during spring 2013, of a random sample of 6000 individuals 45-66 years old (61.1% responses) and interviews from 40 carers in various caring situations has been made. It focuses whether the caring responsibility have any impact on paid work, maintenance and everyday life as well as their experience of public care, possibility to leave job and payment for care. Theoretically the study is connected to feminist welfare research. Of central value is to analyse gender, class, ethnicity and age. Early results shows that over 40% of the respondents give help and 30% of women and 27% of men, help and old, disabled or ill family member at least once a week and 15% of women and 12% of men help daily or several times a week. Care affects life in different ways; feeling mentally and physically exhausted, having difficulties to focus on work, less time for leisure. More women than men have made changes in their working life in order to manage the situation. Corresponding to 7% of women and 4% of men 45-66 years in population we can see that 100 000 women and 50 000 men has made changes in their working life; reduced working hours, stopped working, take early retirement as a result of caring.

*Work-Life Balance. Welfare State, Family and Caregiving in Japan and Sweden*

Japan and Sweden share comparable situations. Both countries have a high and growing part of elderly in the population and high ambitions to handle the needs for care, even if they have different directions when it comes to organization and financing. Still the family is the main care giver for the elderly in both countries. This makes it interesting to compare and highlight the effects of care for family caregivers.

Until the early 1990's the Japanese policy on eldercare was based on the family as the main caregiving unit. In 1989 a ten year plan for institutional and home care marked a policy shift. Though family support was added into the Japanese system, cash reimbursement to family carers was not included, a deliberate decision, when the National care insurance was implemented in 2000, to secure that municipalities would not choose to lean on family carers instead of developing formal care services.

Sweden has a long policy on elder care, in which the formal services constitute the base and family care the supplement. The economic crises, during the 1990ies led to cutbacks in the formal care and since then there is an increased focus on caregiving roles of families, and the Swedish government have supported development of carer support. Despite eldercare being a societal responsibility the share of family caregiving has increased while the economic support to next of kin has diminished.

We are comparing results from a survey in Sweden and from secondary data in Japan on the perspective of family carers. In Sweden women and men give help to about the same degree. However, if we look to the consequences of family

caregiving; reduce working hours, stop working, taking early retirement etc, women are affected considerably more than men, which is the case in Japan as well.

#### *Living Conditions and Education*

The first large-scale research on living conditions in Norway was conducted in 1973/74 by a group of social researchers led by sociology professor Gudmund Hernes at the University of Bergen. The research project was initiated and sponsored by the Norwegian government. The study of living conditions was the first comprehensive study of living conditions in Norway focusing on how the conditions of childrens upbringing affected their education, which in its turn affected other social resources and thus the income and living conditions of people. Gudmund Hernes (1941-) had studied under James Coleman at John Hopkins University and was heavily influenced by the latter. Hernes, who later on also led the investigation on power and democracy in Norway, became a great entrepreneur of clinical sociology in the country. The study on living conditions became the first of a number of large-scale, government sponsored research project, based on mathematical models, large sets of data and an economic approach to sociology.

#### *Oil-Drilling in Arctic and Ecosystem-Management Plan of the Barents Sea*

In the High North, The Barents Sea has large resources of petroleum and sustainable populations of fish. The international challenge lies in implementing the conservation of marine biodiversity, at the same time managing sustainable exploitation of natural resources in the Arctic region. The Norwegian government has tried to solve conflicts of interest by the making of a large scale ecosystem-based national management plan for The Barents Sea and Lofoten Islands. The national goals are sustainable use of petroleum, fishery resources and conservation of the structure of the maritime ecosystem. In this paper, I present an empirical case study of Norwegian national decision-making in ecosystem-based management of The Barents Sea. This new system of planning is implemented as the second sea area in the world. Australia has implemented a large ecosystem management plan at the east-coast with the Great Barrier Reef. In the paper, I discuss in a critical perspective of sociology of knowledge the social effects of the new environmental policy and environmental institutions of problem-solving of management of large sea area in the Arctic area. In the paper I want to investigate the social effects of the development of national planning of the sea ecosystems in the Arctic area. The question is: Does the government eco-system management planning of the Barents Sea provide a suitable institutional framework for solving the social conflicting interests between oil-drilling and conservation of nature in the Norwegian societies?

#### *Integration and Belonging in Two U.S. New Destinations*

The extension of border politics, and specifically, a politico-legal context characterized by increased surveillance of immigrant populations and the hardening of immigration controls, is concomitant with the emergence of new destinations (Massey 2008). In this sense, the border has been "pushed inward" (Coleman, 2007). Additionally, a growing number of state and local governments have proposed and/or enacted a wide range of policies with consequences for the lives of immigrants and their families. Some such policies are aimed at local policing and enforcing of immigration controls while others regulate access to jobs and housing, and more generally, the provision of services. This "variegated landscape" of local policies (Walker and Leitner, 2011) results in contexts of reception that vary significantly across U.S. spaces. From a research standpoint, questions about the interaction between socio-spatial scales (the global, the national, the regional, and the local) in the shaping of the conditions facing Latin@ immigrants gain centrality. How does the broader context interact with local contexts to shape the conditions facing immigrants? How do policies, social relations (shaped by power, as they are), and institutional arrangements at these various scales interact to produce particular outcomes for immigrants? We investigate these questions by exploring the experiences of Latin@ immigrants in two rural new destination communities in the U.S. Midwest region. We draw upon a theoretical framework that understands immigration and integration as racialized and gendered, political-economic processes. We utilize quantitative and qualitative data gathered through original research in rural new destinations in Southwest Kansas and Central Iowa.

#### *'People Can't Live There Unless There Is Economic Activity': Agriculture and the Structural Impediments to Groundwater Sustainability in the U.S. High Plains*

The High Plains region of the U.S. is one of the most important agricultural regions in the world. Much agricultural production in this semi-arid region, however, depends on the consumption of nonrenewable groundwater from the High Plains Aquifer. Although the problem has drawn significant attention from policymakers and citizens for over 40 years, depletion of the Aquifer has worsened. Why does depletion persist despite widespread and ongoing concern? We explore this conundrum by placing the region into an historical, political-economic context. We argue that the contemporary problem is rooted in the ways in which the region was articulated into broader circuits of capital and exchange. Private capital and the state incorporated the region as a source of primary raw materials, mainly agricultural products. Water-dependent agricultural resource extraction opened up a metabolic rift in the hydrological cycle that has only been exacerbated over time through unequal ecological exchange with more politically and economically central places. These structural dynamics associated with political-economic incorporation have impeded efforts to develop more sustainable uses of groundwater consumption in the region.

#### *Writing about Japan in Post-Soviet Russia: Nobody to be Afraid of?*

The objective of this paper is to focus on popular literature written about Japan in post-Soviet Russia. Japan has for long time occupied a special place in Russian and Soviet people's consciousness: this neighbor country was, and still remains, the object of numerous books depicting practically every aspect of Japanese society.

The peak of such literature was in 1970s-1980s, when the rapid economic growth was put in the focus of many writers, journalists and travelers. At some point Japan was even considered to be a model country for perestroika.

Concerning the general tone of those publications, they were ideologically critical of the "capitalistic blunders" of Japanese society, at the same time giving an adequate evaluation of the positive moments such as high standards of life etc.

However, situation changed drastically after the collapse of Soviet Union. Though 1990s witnessed almost absolute lack of literature about not only Japan, but also other foreign countries, travelogues and diaries written in the 21<sup>st</sup> century have one common feature that distinguishes them from the previous massive of literature. That is, they are written in quite a critical and personal manner.

This critics, however, is not ideologically colored, but rather tends to break numerous myths and stereotypes that prevailed in discourse on Japanese society until now. And personality refers to a very unique personal style that distinguishes practically every literary work from the uniform Soviet-style depictions.

By giving a detailed account of the manner of writing as well as contents of books about Japan in post-Soviet Russia, I aim at offering a new understanding of the place Japan occupies in the consciousness of Russian people in the 21<sup>st</sup> century.

#### *"Strong" Men Will Save the World? a Gender-Focused Analysis of Fukushima and Chernobyl-Related Discourses*

"Middle-aged men especially welcome", say the fliers, because they are less vulnerable to radiation". (Fresh Currents 2012e)

This is a quotation concerning announcement that is searching for new workers at crippled Fukushima Daiichi plant in Fukushima prefecture, Japan. Such fliers, posted around Tohoku, were advertising the work for 14,000 yen a day.

It is in fact an announcement very typical for discourse regarding post-disaster nuclear plants and nuclear industry in general. In similar fashion, children are considered to be "most vulnerable" to radiation, then come women, elder people and men – in the end. However, I will emphasize that the important thing is not the level of vulnerability, but the fact that radiation poses possible threats for all living organisms regardless of their age or sex.

In this paper, by focusing on gender-related discourse involving post-disaster Chernobyl and Fukushima, as well as on rules and regulations in nuclear industry, I will argue that the "gender issue" in post-disaster discourse might serve for switching the discussion points from attempts to really protect people who might

suffer to just making them the small coin in the policies of nuclear companies or government actors.

#### *Youth in Social Transformation Through Education*

India, known as a country of youth, with the potential to help build a stronger democracy through social entrepreneurship. There is a need of enthusiastic and pro-active youth for any transformation. They need a balance while addressing country's growth and social issues.

Education is a progressive approach for transforming society. Existing education policies has many shortcomings. There are many discriminatory practices applied at ground level. However, despite this adverse situation the young generation is engaged in creating an atmosphere for change in rural Maharashtra, India.

Idea of bringing students in the main stream of education has been established. But, due to distress & seasonal migration of deprived sections of the societies with family, education of students gets affected badly. Some experimental learning centres such as SAKHARSHALA for sugarcane workers and PASHANSHALA for stone crusher workers have been started for the education of deprived communities.

In tribal area, language is a big issue which cuts masses from education. In Gadchiroli (Indian Village), youth started translating the formal text books in Gondi, a colloquial tribal language, which was successful, and tribal students continued in school.

The formal set of the government is fixed, & the decision makers are not in a frame of mind to change the structure. It is observed that if changes done in the realm of style, time, language, location leads to education reaching to the masses and particularly the deprived sections of the society.

The mission is to empower the marginalized & oppressed through facilitating concrete processes. Which is based on collective, reflective & sustainable actions initiated by youth; who explore & criticize the oppressive foundations of the society and possess desire to transform it through education.

[b.s.sanghera@kent.ac.uk](mailto:b.s.sanghera@kent.ac.uk))

#### *Everyday Morality and Moral Concerns and Their Implications for Charitable Giving in the UK*

This paper examines how individuals are morally evaluative beings, who interpret the social world in relation to things that matter to them, and how charitable acts are embedded in their lives with different degrees of meaning and importance. The paper offers some criticisms of the Bourdieusian theory on giving, which depict individuals lacking reflexivity, emotions and disinterestedness. Drawing upon various literature that view individuals as evaluative beings, I will suggest that there are three modes of moral reflexivity that have various implications for charitable giving, moral obligations and civil society. First, moral conventionalists, who value familial and social networks, use charity events as an opportunity to socialise and to have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society.

The paper draws upon an ESRC-funded investigation into charitable giving that involved 41 semi-structured interviews with men and women of working and middle class social backgrounds, mostly white interviewees. Each interview lasted on average 2.25 hours, divided into two parts: the first part asked the interviewees to recount their life history, describing the twists and turns in their lives, their personal goals and their everyday practices, and in the second part, they recalled significant acts of giving and volunteering, describing their feelings and motivations.

[b.s.sanghera@kent.ac.uk](mailto:b.s.sanghera@kent.ac.uk))

#### *Social Justice, Liberalism and Philanthropy in the UK*

This paper examines how charitable and community foundations as normative institutions relate to issues of social justice, legitimacy and accountability. We will argue that grant-making foundations use their resources to support basic liberties and to assist the most disadvantaged groups in society, pursuing a liberal conception of social justice and equality. But there are some tensions and limitations, partly arising from their historical legacy, internal features and structural positions within the polity. Foundations tend to have UK-focused mission statements, operate with minimal accountability, have parasitic endowment and sources of philanthropic donations, have privileged and conservative trustees, and face pressure from the right-wing media. To achieve a Rawlsian liberal form of social

justice, foundations have to change their institutional practices and routines, aiming for justice and a socialised and democratic production system, rather than regulating economic and social inequalities.

The paper draws upon an ESRC-funded investigation into philanthropy that involved 34 semi-structured interviews with executive directors or senior project managers of charitable and community foundations and grant-makers. Each interview lasted on average 1.5 hours, divided into two parts: the first part asked the interviewees to describe the history of their organisations, and to outline their current strategic themes and priorities; and in the second part, they explained the use or the lack of the concept 'social justice' in their organisation. In addition, further interviews were conducted with sixteen participants from the first round either via Skype or emails to collect extra information.

#### *Becoming Kathoey Prostitute: Voices of the Excluded*

Labeling as deviant has long been imposed difficulties on those who take up Queer gender identity in some ways depending upon to what extent they have technology of self. Even though rainbow movement strives and wins some social space for certain acceptance especially in terms of human rights, still discrimination is reproduced in both private and public spheres. The main argument in this paper is that vicious cycle of inequality prevails. This makes the issue of Queer identity complicated and chains it with an extended long winded problem arisen in a person's life and affects some form of social problems. Kathoey or Thai Male to Female transgender, a sexual minority group, is to be emphasized in paper as they are at risk to be excluded and as a result are pushed to become prostitutes. In fact, many of Kathoey are as competent as others. However, not many of them are successful in the job market and have comparatively narrow alternative in choosing how to maintain their life. Many of them, then, take this path. By listening to their voices and stories using narrative approach, themes from narrative analysis can be concretely emerged to reveal the social conditions framing Thai Kathoey towards it. All in all this paper has a strong desire to propose policy recommendations to attain a total equality goal and to cherish a non-discriminatory process of sexual diversity inclusion in the society.

#### *The Meaning of Leaning National Language to the "Mobility People"?*

I will introduce some of the biography interviews of famine migrations at "integration course", which are "by the national government" organized. and, quoting a Malaysian [methodology](#), examine their biographies to try to reveal, how they built identities and confront the concept of "national states" in the globalization.

"Integration Course" is a German language class, which was set up by German government since the year of 2005 for the migrants, who are not good at German. Its object is to enable migrants to be integrated easily and participate in Germany.

But is the idea based on too archaic figure of immigration moving only between origin and host country? It is not unusual today that man has Networks among many countries; for example, a woman, who was born in Russia, lives now in Germany and whose daughter is in England. What means for her to learn German? Or those people, whom I define "mobility people", who have Networks among plural countries?

According to Shansul, a Malaysian Anthropologist, identity formation takes place within what he would call a "two social reality" context: first, the "authority-defined" social reality, and second the "everyday-defined" social reality. The former is one which is authoritatively defined by people who are part of the dominant power structure and generally with text recorded. Quoting his hypothesis, "Integration Course" is not only a German course but also a means of transmitting German "authority-defined" social reality and could be of creating German identity.

However does it work well as the government intended, especially to the "mobility people"? Based on my research, the biography interviews to the participants of "Integration Course", I will consider the meaning of "national language" and "national identity" in the globalization era.

#### *Increased Precarity and Widening Disparity of Youth Transitions, and Inclusion in the Labour Markets*

The Youth Cohort Study of Japan (YCSJ) was a major programme of longitudinal research undertaken to monitor transitions from school to work in Japan from 2007-2011. The first survey was undertaken when respondents were aged 20. The respondents, who were selected nationally through random sampling, were

followed up annually for five years. The achieved sample size and response rates of the YCSJ are as follows: 1678, 40.2 % (2007); 1361, 82.0 % (2008); 1141, 86.2 % (2009); 1009, 90.7 % (2010); 891, 88.3% (2011). Based on the datasets of the YCSJ, we explore four main topics in this paper.

First, we analyse youth transitions to work, documenting the increasing precarity of youth labour markets. Here we have used indices such as low income, irregular jobs, and unemployment, to examine the extent to which vulnerable situations in youth labour markets have expanded. Second, we investigate which cohorts are more likely to become precarious. Against precarity indices, we found key variables of disadvantage in relation to individual attributes, family socio-economic backgrounds, residential area, and current jobs were relevant to risk factors with statistical significance. Third, we consider forms of disparity in working conditions including work content and developmental opportunities. Here we find that there remains a significant structural disparity between genders and amongst transition types in working conditions.

Forth and finally, we investigate the mechanism of inclusion in the labour market. We find amongst most of the transition types, irrespective of gender, that demands for high commitment to work – such as acceptance of long working hours and heavy responsibility – has increased every year despite an apparent disparity in many aspects. We propose two key factors to enable inclusion in labour with high commitment: discretion and participative involvement; and positive human relationships in the workplace.

#### *Economic, Social Change and Son-Preference in Nepal*

The purpose of this study is to clarify the promotion factors of son-preference, such as the neglect of female child, trafficking of girls and the interruption of the female fetus, in Nepal. According to UNDP (2010), the number of the "missing women" in Nepal is estimated to be about 0.1million. *Repubblica*, local newspaper, on 29 Nov 2012 reported that the female population is 2.3 percent less than male in the 0-10 year age group in the latest census.

In this study, the findings of the ongoing research implemented in seven districts in Nepal, during Mar 2012 –Mar 2014, will be shown. The questionnaire survey of 1500 men and women both married and unmarried 18-80 year-old were selected based on a multi-staged random sampling technique. The data will be analyzed by modified framework of *sustainable livelihood approach*. This framework consists of three components such as livelihood assets, policy institution process and livelihood outcome (Chambers and Conway1992). This leads to analyze consequences among these three components. Livelihood assets, furthermore, consist of financial capital, natural capital, physical capital, human capital and social capital.

Former studies reveals the correlation between the property (financial capital, natural capital), relatively high educational level (human capital) and son preference (Clark2008; Banerjee2012; Repubblica 2012). In this study, the correlation among social institution such as family structure, 5 capitals and son preference, will be analyzed, in addition to the former studies.

As the result, following three findings have been verified; (1) Even though luck of some of capitals, those who has variety of network does not tend to be son preference, (2) Even though abundant in capitals, those who live in extended family tend to be son preference, (3) Those who have female family member who support family economically does not tend to be son preference.

#### *Unequal Identities: The Attainment of National Identity and Ethnic Identity Among Children of Immigrants in Canada*

Despite growing interest in "the new second generation," quantitative analyses on the psychosocial adaptation among non-white offspring are limited, especially in Canada. This study addresses this gap by assessing the impact of ethno-racial characteristics among children of immigrants on the establishment of self-labelled national and ethnic identities using a nationally representative survey, the 2002 Ethnic Diversity Survey. Results from binary logistic regression suggest that while white children of immigrants are more likely to form national identity, ethnic identity is more likely to be established among their non-white counterparts. While this is consistent with the segmented assimilation theory, the study also reveals that the level of parental education does not explain the results, countering the theory. This paper concludes by highlighting the impact of ethnic concentration, home language, and experience of discrimination on the identity formation and discussing implications for immigrant integration policies and future immigration research.

#### *Married and Cohabiting Adults with Ill and Old Parents: Does Intergenerational Solidarity Change According to Family Conditions?*

The objective of this paper is to compare the patterns of intergenerational solidarity of adult children who cohabit or are married, with their own parents and those of their partners. To this aim, I report the results of qualitative research I performed in Italy, based on 50 in-depth interviews of cohabiting and married couples, with an age range between 26 and 56 years. The dimensions of family solidarity investigated, included the financial support provided by parents to their offspring, help in child-minding the grandchildren, the frequency of phone calls and visits and finally, the willingness (also in the past) of the offspring to look after one of their own parents or their partner's parents when ill and old. The analysis of the interviews has highlighted the varied types of interpersonal relationships established with parents by the cohabiting partners. While those who were married kept closer relationships and appeared to be more willing to help their parents and in-laws when ill and old, among those in cohabitation, only those who had a background of formation of a traditional family model, similar to marriage, adopted the same manner of solidarity. Those who had begun cohabitation, following separation or co-habited with a partner who was separated, felt less responsible towards their partner's family members, to the extent that they did not perceive any kinship ties nor obligations. Consequently, they felt that caregiving activities were not their responsibility. Finally, the length of the marriage or cohabitation was seen to have no effect.

#### *Between Subordination and Protagonism: Violence Experience of Young Women through Biographic Narratives*

The involvement of women in violent actions and criminal activities is growing in Brazil. Even though, sociologists are not given an adequate attention to this issue. This paper discusses the relation between young women and violence in Brazil, stressing the main interpretations available in Brazilian sociology, which mostly emphasizes, on the one side, the secondary position of women, dominated by their male partners and peers, and, on the other side, the structural conditions of the Brazilian society – for instance, inequalities, uncertainty in work market, drug uses and school evasion – as the main reasons for this phenomenon. Besides this, the literature stresses the position of women as victim in violent actions, almost monopolizing the analysis when violence and women are connected. Another emphasis seen in the most influential approach in Brazil is the approach that stresses the disruption of norms and legal rules, neglecting this way another component of the practice of violence, that means, a subjective interpretation of reality. Biographic narrative approach permits to offer other possible interpretations to the engagement of young female in violent and in criminal activities. Based on preliminary findings of a research that are investigating direct and indirect experience of violence of young females, the paper presents the main antagonist positions founded, that means, between the subordination to dominant males and a more relevant and protagonist role played by women. The results show that using this kind of "insider" approach is possible to obtain new elements for the interpretation of the experience of violence, in which the women' role as victims and perpetrators are not always well defined.

#### *Narratives on Violence and the Everyday Life of Children and Families Living in Favelas of Rio De Janeiro, Brazil*

This paper discusses the everyday life experience of violence of children and families living in *favelas* - impoverished communities - of Rio de Janeiro, Brazil. This research was conducted during 2012 and 2013 and aimed to understand the different possibilities of biographical construction in social contexts marked by intense violence, perpetrated by the police, by drug dealers and by parents against their own children. For that purpose, it was conducted two different narrative research instruments: biographical narrative interviews with two generations of families, and biographical episodic narratives interviews with groups of small children. Even though the violence issue was not put directly as a topic to be discussed by children and family members, the two instruments allowed the investigation on how violence is part of their everyday life, as well as the different

strategies used by those living in *favelas* to deal with this reality, having their own perspective as the starting point for our analysis. The narratives of children aged 6 to 8 years old were collected through a discussion on drawings about their families and their communities, and then submitted to the discourse reconstructive analysis as proposed by Gabriele Rosenthal and Bettina Völter. The biographical narrative interviews of two generations of three families were conducted and analysed according to the approach proposed by Gabriele Rosenthal. The results showed that using this kind of "insider" approach enables access to new elements for the interpretation of violence experiences, in which the roles of victims and perpetrators are not very and always well defined.

**SANTOS-HERNANDEZ, JENNIFFER\*** (University of Puerto Rico, [jennifer.santos@gmail.com](mailto:jennifer.santos@gmail.com))

#### *Social Vulnerability to Disasters in Puerto Rico: An Outlook of Evolving Structural and Behavioral Forces*

The study of social vulnerability to disasters has generally focused on understanding how social stratification relates to disasters and how social forces can create the possibility of a hazard to become a disaster. Ben Wisner and his colleagues assembled a working definition of social vulnerability as they were studying the famine that unfolded in the Sahel from 1967 to 1973. In the book *At Risk: Natural Hazards, People's Vulnerability and Disasters* (2004), Wisner and his colleagues defined social vulnerability as "the characteristics of a person or group and their situation that influence their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard". Their definition includes the difficulties and chances that people may encounter as they mitigate, prepare for, deal with, respond to, and recover from the impact of a natural hazard. However, there is no firm definition of social vulnerability. Rather, it can be considered as an evolving concept. Despite its focus on process, applications of the concept of social vulnerability in research often fall short in capturing the elements and dynamics of social vulnerability. This research uses Puerto Rico as a case study in which social vulnerability is conceptualized as steaming from evolving structural and behavioral forces. This research presents a dynamic situational approach to social vulnerability and explores how the practice of emergency management may impact, address, or fail to address the needs of impoverished marginal communities and their contrasting perceptions. The findings provide insights that could assist emergency management practitioners and disaster researchers and practitioners working in the areas of marginality, development, emergency management, bureaucratic change, rationalization, decision-making, and policy making.

JOYE, DOMINIQUE (Université de Lausanne)

#### *Personal Networks and Changing Openness Toward Immigrants: Social Network Analysis Measurement Versus Traditional Survey Instrument of Personal Networks*

Recent literature underlines the surprising integrative role of the family (DiPrete et al., 2011). The growing heterogeneity of families produce family based social networks that are less segregated on a number of dimensions than are other social circles. Heterogeneous family networks might favor changing norms and more open attitudes. The aim of this paper consists in comparing two instruments measuring family networks and in testing their predictive power on norms and attitudes such as the openness towards immigrants. In MOSAiCH2013 survey, including both ISSP modules 2012 and 2013 in Switzerland, respondents were asked to answer to two distinct personal network instruments. The first one has a classical survey format and consist to interview respondents on the proportion of immigrants in their family network, on the frequency of contact with the immigrants in their family networks and on the quality of their relationships with them. The second instrument follows a social network analyses perspective, letting respondents define themselves the boundaries of their family network, asking about several characteristics of the networks members, such as their nationalities, and finally measuring the complex web of relationships between networks members. Results are discussed in the perspective of the strengths and weaknesses of both approaches.

**SAPINSKI, J.P.\*** (University of Victoria, [sapinski@uvic.ca](mailto:sapinski@uvic.ca))

#### *Green Capitalism and the Global Environmental Policy-Planning Network*

The Rio+20 conference that took place in June 2012 confirmed the hegemony of green capitalism to address the global environmental crisis. Supporters of the "green economy" believe that putting a price on ecosystem services will allow to internalize environmental costs into the capitalist process of production. In the case of climate change, this involves the creation of greenhouse gases emissions

trading markets. For their part, critics of green capitalism describe this process, including carbon trading, as the commodification of nature and as a new system of accumulation by dispossession that mostly benefits large corporations with little effect on actual greenhouse gas emissions.

Corporate-led policy-planning groups such as the World Business Council for Sustainable Development or the Global Climate Forum have long been active to promote carbon markets and green capitalism. In this paper, I use a purposive sample of eleven such policy groups as an entry point to explore corporate involvement in the field of climate and environmental politics. At the level of organizations, the analysis of board interlocks reveals the structure of the environmental and climate policy network that links the corporate sector, the NGO sector and the transnational state, and emphasises the mediating role played by policy-planning groups. At the level of individuals, the linkages between members of the global corporate, political, and scientific elites involved in producing and mobilizing environmental knowledge suggest the emergence of a green capitalist class faction, whose ascendancy nevertheless remains highly uncertain.

#### *School Divide and Social Fragmentation in Mexico*

Inequality seems to be endemic in Mexico. After a decade of moderate economic growth and improvements in some social indicators, the country continues to show very high levels of social inequality. In a context of contradictory trends, a new model of "unequal inclusion," is emerging. Privilege and deprivation exist side by side, ignoring each other and even tacitly accepting each other. Inequality has taken a qualitative leap towards fragmenting the social structure through spaces of inclusion that are not only unequal, but also socially and culturally distant. This paper will explore the contribution of educational segmentation to this broad process of social fragmentation. Access to education in Mexico has increased substantially in the past few decades. Between 1990 and 2010, basic education coverage became almost universal, and the average years of schooling of youth age 25 to 29 increased from 7.9 to 10.2. In addition, there were several constitutional reforms that extended compulsory education, most recently, in 2011, making it compulsory until the age of 12. But, parallel to this process, the educational system has experienced a deep fragmentation. Thus, privileged children and youth attend the same private schools, have more and better resources for learning at school and at home, and receive an education of higher quality and greater variety. Among poorer groups, children and youth also attend socially homogeneous schools, but with a more precarious infrastructure and fewer pedagogical resources to support students that come from homes with little social or cultural capital. The consequences of this segmentation are not limited to educational achievement; they extend to school experiences and the meaning of education. Drawing on qualitative fieldwork, interviews and focus groups with privileged and disadvantaged youth in Mexico City, This paper explore the consequences of this process in terms of social fragmentation.

**SARBU, MIHAI\*** (University of Ottawa, [msarb016@uottawa.ca](mailto:msarb016@uottawa.ca))

#### *Transcending Frontiers: A Contribution to Overcoming Instrumental Rationality in Our Relationships with Nature and with One Another*

Environmental sociology is uniquely positioned to analyze the relationships between humans and nature and expose the societal factors that lock our civilization into carbon dependence; it can also analyze why the issue of climate change is becoming increasingly politicized and divisive. Moreover, it can examine how social inequalities—ubiquitous in this era of unemployment and economic decline—compound environmental crises and aggravate the suffering of the most vulnerable.

This paper argues that the social and environmental hierarchies prevalent in the world today can be meaningfully analyzed using the theoretical framework of instrumental rationality. In a nutshell, using instrumental rationality means applying the means of reason short-sightedly to solve a problem without considering the larger context—burning fossil fuels to fulfill most of our energy needs is a prime example.

Instrumental rationality has been linked to the drive for self-preservation and using this link as a conceptual tool can offer new insights: The first insight is that—paradoxically—we often hurt nature because we are (partially) *from* nature; the second insight is that our drive for self-preservation can be easily fused with an apparent and shallow (instrumental) rationality, leading to a substantially *irrational* state of mind which is very dangerous for nature as well as for other human beings.

The challenge then becomes to find ways to overcome instrumental rationality and this is the main purpose of this paper. It is an arduous task and one that needs to be assumed urgently to help us decouple from the unsustainable path we currently follow.

**SARDJO, SULASTRI\*** (University of Indonesia, [sulastri@ui.ac.id](mailto:sulastri@ui.ac.id))*Between the Corporate and the Government Responsibility: The Livelihood Issues Experienced By the Local Community in the Surrounding Conservation Forest in West Java, Indonesia*

Until about ten years ago forest had ever been the primary source of income for the community living in the surrounding area of the Halimun-Salak mountain, West Java. This situation has been changing since the government launched the new regulation that prohibited people to get anything from the forest because the area was designated as forest conservation. Since that time the community has been experiencing a decline in their standard of living, especially who were only had the forest as their source of income. Besides, for many years, the community has only been provided by inadequate basic infrastructure (i.e. health, education, transportation) that supposed to be the government's responsibility. The situation becomes increasingly critical when the people knew that there was a multinational company that has been exploring geothermal energy within the conservation area which has further caused anxiety and uncertainty in local people livelihood. The latest development seemingly has been overlooked by the local government since it has not been taken any significant action to help the people. Moreover, the conflict between local people and the MNC sometime has been raised as critical issues for the economic or political interests of certain actors in the community. Pressures to the company have been increasing since the government regulation stated that the company should perform the social and environmental responsibilities. Based on the ongoing research in the area of Halimun-Salak Mountain, this paper analyzes the relation between state, market and society (Martinussen, 1997) that might be applied in the case of the production of geothermal energy in West Java, Indonesia. This paper also examines the issue of local conflicts over foreign investment and the corporate practices when the host country government has the tendency to corrupt or indifferent to environmental protection and community development (Vogel, 2006).

## JS-73.1

**SARMA, PRANJAL\*** (Dibrugarh University, [sarmapranjal1@yahoo.co.in](mailto:sarmapranjal1@yahoo.co.in))**BHATTACHARYYA, IPSITA\*** (DHSK Commerce College, Dibrugarh, [ipsita31@gmail.com](mailto:ipsita31@gmail.com))*: Comparison of Leisure Activities of Children of Tea Garden Community and Other Groups in Anganwadi Schools: A Case Study of Dibrugarh District, Assam, India*

Dibrugarh is an easternmost city situated in the Banks of the river Brahmaputra. The place has the highest number of tea gardens giving it the status of 'Tea Capital of Assam'. Though tea is a big industry, the children of the tea garden community do not get adequate facility of good education, health and leisure facilities. There are Anganwadi schools in the tea garden areas which look after the mental, physical, and emotional development of children between the age of 0-6 years. They also provide nutrition and value based education to children in the age group of 3 to 6 year. The conditions of these schools are not satisfactory to provide the pre-schoolers the pleasure of enjoying their childhood as compared to the Anganwadi centers for children in other parts of the city.

The dropout rate from the schools in tea gardens is very high, as a large number of the children are engaged in child labour and some help their parents to look after the younger siblings or help in the household work. Some children, who go to school, go there for the food provided as the mid-day meal. The leisure time activities of these children include playing with other children or helping their parents. They play in groups but very few have access to playing equipments.

The facilities provided at school are not adequate as compared to other Anganwadi schools and in some cases, the teacher do not come to school regularly. These children are thus deprived of quality education, satisfactory leisure activities etc. as compared to the schools and Anganwadi centres in the city.

The paper attempts to do a comparative study of education and leisure activities provided by Anganwadi schools to tea garden community and other children in Dibrugarh.

## JS-45.5

**SARMA, PRANJAL\*** (Dibrugarh University, [sarmapranjal1@yahoo.co.in](mailto:sarmapranjal1@yahoo.co.in))*Leisure, Tourism and Environmental Degradation—a Study Based on Assam, India*

Tourism in Assam holds large prospects as the land is bestowed with natural beauty and resources. Tourism in Assam is essentially nature based. Assam has a rich cultural and ethnic heritage that has also made it a favourite tourist-spot. It is counted as one of the prime Eco-Tourism destinations in India. The rich bio-diver-

sity of the region encourages eco-tourism. But compared to some other states in India, eco tourism is not yet developed in the real sense in Assam.

A lot of tourists come to Assam for different leisure activities as the region is still less explored and provides for peaceful existence with nature. The eco-camps set up in areas like Nameri in Sonitpur, Tipam Phake village in Eastern Assam, camps in and around Kaziranga National park, famous for the one horned Rhino, attracts lot of foreign as well as domestic tourists. They are provided with facilities like boating, fishing, trekking in the wild etc. and misuse of these can lead to severe environmental degradation. Illegal destruction of forests to set up hotels for tourists near Kaziranga, excessive boating and fishing etc. has also been increased.

The land has the opportunity to develop several leisure activities based on eco-tourism where the rich bio-diversity of the region can be explored without environmental degradation. But activities like using the areas as picnic spots and then leaving behind plastic waste has already destroyed some of the natural spots. A systematic development of tourism involving local population, who can look after the protection of environment, is needed to increase the inflow of tourists.

This paper attempts to analyse the tourism scenario, development of eco-tourism inspired leisure activities and how tourism can be used positively to lessen social inequality, and lead the way towards a more socially and environmentally responsible tourism practices.

## RC46-763.1

**SARPAVAARA, HARRI\*** (University of Tampere, [harri.sarpavaara@uta.fi](mailto:harri.sarpavaara@uta.fi))*Meanings Of Friendships In Substance Abuse Clients' Talk In The Probation Service*

Although several studies have examined the influence of friendships on clients' substance abuse and treatment outcome, there is a paucity of research examining clients' talk about their experience of the meaning of friendships. This paper explores the meanings substance-abusing clients attach to friendships during motivational treatment sessions in probation service. By using semiotic framework, this paper examines client's change-related talk utterance about friendships as a symbolic sign. The analyses are based on videotaped data consisting of 98 motivational counseling sessions. This database involves the first two sessions of 49 client-counselor pairs. Sessions were videotaped in 12 Probation Service offices in Finland in 2007–2009. In general, the findings of this qualitative study indicate that the friendships play an important role in the substance-abusing clients' motivation to change. The results of the study display that the meanings of friendship were divided into four categories: a support to change, a reason to change, an obstacle or a threat to change, and a surmounted obstacle to change. The study also suggests that the personal meanings of clients' utterances in motivational counseling sessions could be seen as potential predictors of their future behavior.

## RC55-886.2

**SARRACINO, FRANCESCO\*** (STATEC, [f.sarracino@gmail.com](mailto:f.sarracino@gmail.com))  
**BARTOLINI, STEFANO** (University of Siena, Italy)*What Was All That Growth for? Explaining Chinese Decreasing Well-Being in Times of Economic Growth*

China is one of the countries that experienced the most impressive and sustained rate of economic growth.

Since 1990s its economy has been increasing on average by 9.7% each year. Arguably, economic growth allowed a general improvement of several social, economic and sanitary dimensions of people's life. However, in the same period people's satisfaction with their life decreased.

What does explain this outcome? And who are the winners and the losers from economic growth? Finally, if economic growth did not improve the human lot, did it at least reduce well-being inequalities?

Using data from the World Values Survey, this paper identifies the determinants that shaped people's life satisfaction in China between 1990 and 2007. Results suggest that the erosion of social capital and social comparisons are the two main factors explaining why economic growth did not turn into higher people's well-being. Moreover, economic growth resulted in higher well-being disparities among people: those in the lowest three deciles and the middle-class experienced a significant reduction in well-being, whereas richer people substantially improved their conditions.

## RC26-453.2

**SARRIS, NIKOS\*** (National Centre for Social Research, [nsarris@ath.forthnet.gr](mailto:nsarris@ath.forthnet.gr))*"the Influence of Institutional Framework on Local Community Schemes in the Period of Economic Crisis 2011-2013: The Example of the Municipality of Athens"*

The aim of the paper is first to present the institutional framework concerning the role of participative action in Greece. The institutional foundation for cooperatives and unions is primarily set by Article 12 of the Greek Constitution, while specific laws provide the role of Social Cooperatives in Greece. After a short analysis of the legal framework the paper will examine the main sectors of activities of NGO's and other bodies (organizations) that belong to the civil society, especially those acting in Athens.

More specifically this paper examines the schemes of the municipality of Athens to promote specific policies and **volunteerism** in order to contribute to the solution of problems that vulnerable social groups, who live in the city of Athens in the period of economic crisis 2011-2013, face. An emphasis is given both to Law 4071/2012, which concerns the possibility of local authorities to set up social supermarkets, and the possibility of collaboration between local authorities and NGO's. Structural impediments to such policy developments are also elaborated.

Overall, the present paper will attempt to answer the main critical questions of how the top-down and bottom-up models can co-exist in the implementation of public policies at a local level, and of how ways of cooperation concerning everyday problems can emerge from the economic crisis.

PLANCARTE, RAFAEL (Universidad Autonoma de Queretaro)

#### *Micro-Motives and Collective Action: Measuring Individuals' Reasons for Participate in the #YoSoy132 Movement in Mexico*

Individual's political mobilization has been explained by rational choice theory according to the general tenets of its approach to human behavior (Becker, 1968; Olson 1971). Following the well-known distinction between the narrow theory and the broad theory of rationality (Elster, 1988), this work presents a more extensive view of political mobilization, considering the individuals' strategic calculus for their participation in a contentious collective action (Tarrow, 1997). Following the broad theory of rational choice, the work incorporates cognitive, normative and emotive factors to the explanation. So, first we propose that the movement can be treated as a production's function with two phases, where in each of them there are different mechanisms and games that help to explain the process of collective action. The first phase, which we call accelerative, is triggered by a political opportunity, and it incorporates elements such as coordination between groups, high expectations, and a focal point equilibrium. The second phase, called not-accelerative, arises once the election finishes and it is characterized by a lack of coordination, internal conflicts between groups, and lack of participation. From a set of thirty interviews to active participants in the movement # YoSoy132 Mexico City (14 women and 16 men), the findings show the variety of reasons present in the interviewees, and that some actors may have a predisposition to behave according to a kind of reason (*i.e.*, instrumental vs. normative). The main conclusion we arrive is that the two versions of rational choice allow a better approximation to the individual and collective action in the movement # YoSoy132 in Mexico.

#### *Clinicians in Governance: Evidence for Hospital Performance from the Italian NHS*

The study explores the effects of clinicians' involvement in governance on hospital performance through an empirical investigation in the Italian NHS.

By drawing on the *board human capital* literature (Hillman & Dalziel, 2003; Kor & Sundaramurthy, 2008; Kroll et al., 2008) and the empirical evidences on clinicians in hospital governance (Dorgan et al., 2010; Goodall, 2011; Molinari et al., 1995; Veronesi et al., 2013), we develop our research hypotheses. More specifically we conjecture that hospital chief executive officer (CEO)'s (i) clinical expertise, (ii) previous governance experiences in the NHS, (iii) public health specialization, and (iv) business/administration specialization, have individually a good effect on the organizational performance.

We focus on public hospitals. Data are collected for 3 years and the sample is composed by 278 observations. CEO's expertise, experience and specialization are main independent variables. Six indicators in terms of financial/non-financial performance are instead used to measure the hospital performance. We employ a panel data approach and we estimate different empirical fixed/random effect models.

Main findings report a positive (negative) effect of clinical CEOs on non-financial (financial) performance. By contrast, non-clinical CEOs negatively (positively) influence the non-financial (financial) dimension. Paper argues a differentiation in the provision of skills to the strategic process, as well as in the relationships with

the clinical/non-clinical staffs. Findings also report good effects of CEO's previous governance experiences and public health specialization.

Paper contributes to research in different ways. First, we corroborate the relevance of *human capital* in governance for the organizational performance. Second, we discuss the dissimilar effects of clinical/non-clinical expertise by arguing their reasons in setting peculiarities. Finally we investigate never explored effects of clinical/non-clinical *specializations* and *experiential background*.

For what concerns the practice, we suggest policy makers to pay more attention to the expertise legal requirements for CEO candidates.

#### *Cultures, Strategies, and Organizations for Mobilizing Social Movements: Divergence and Convergence Between Social Movements and Labor Movements*

There have been few comparative studies of social movements and labor movements. Social movement studies have examined the conditions, development, and outcomes of social movements using various theoretical frameworks. In contrast, largely driven by Marxist and post-Marxist theories, labor movement studies have often focused on whether and how workers have organized themselves as a coherent force—*i.e.*, as a class. In brief, in labor movement studies, workers' movements have often constituted a sub-topic of the study of class, and the ways workers have organized as workers. But how exactly do these two movements differ? Or what do these movements share? By examining a Japanese social movement, the protest against the revision of the U.S.-Japan Security Treaty (commonly referred to as the 1960 Anpo protests, named after the acronym of the treaty in Japanese), this paper explores divergence and convergence of movement cultures, ideologies, and strategies, and the organization of social movement and labor movement groups. I compare two groups that participated in the 1960 Anpo protests—the Bund, a new left student movement group that became prominent during the 1960 Anpo protests, and a new left faction of the Ōsaka Central Telegraph union that became prominent among new left labor unions in the 1960s. This paper argues that despite similarities in ideology between the two groups, external constraints on their organizations shaped different strategies for mobilization. Furthermore, the two groups never merged nor worked together, although they explored possibility, despite their common political goals and similar ideologies. This was due to intergroup culture differences, as well as problems with mutual trust acting as a wedge between them. The empirical data collected from interviews, for instance, show that while knowledge was a key issue for mobilizing student movements, trust was a key issue for organizing the workers' movements.

#### *Alternative Art-Production Networks in Lower Manhattan in the 1960s-1970s: An Organizational Account of the Soho's Gentrification*

This paper deals with an early period of an artists-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo's gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolical and institutional boundaries of art districts. These former studies contributed to examined that the artists' spaces and their aesthetical images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo's gentrification; alternative arts-production-networks in downtown also critically contributed to construct physical and symbolical bases there.

In order to explore this issue, I will focus on artists' activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourish of art museums and commercial galleries in uptown. These anti-uptown ideologies consisted of organizational fields of art productions in downtown. Analyzing the arts-productions-networks in downtown in the 1960s and 1970s, this paper focuses on especially cooperative galleries and alternative spaces. These alternative arts venues were critical aesthetical bases in SoHo.

### Historical Overview of Migratory Flows Between Brazil and Japan

This paper will present an historical overview of the migratory flows between Brazil and Japan. The first part discusses the immigration of Japanese to Brazil at the beginning of the 20th century. During this time, their presence in that country sparked a heated debate among the politicians of the Brazilian elite as to whether or not they should be accepted. The Japanese were labeled as "not white", an undesirable state according to the eugenicist policies of the time. At the same time, Japanese government closely accompanied the entire migratory process, helping to establish the Japanese immigrants in Brazil. In the second part, I will focus in the inverse route, upon the ending of the 20th century and beginning of the 21st century, when Brazilians of Japanese descent began to migrate to Japan. They were favorably contemplated in Japan's 1990 immigration reform law, a factor which contributed to the increase of the population, especially during the first half of the 1990's. From that time on, the Brazilian presence began establishing itself and consolidating social networks within the host country, losing sight of its original temporary expectations and intensifying the flow of people moving between Brazil and Japan. However, after more than two decades, the Brazilian population in Japan began decreasing in 2008. At this time, the world financial crisis resulted in a rising unemployment and one third of the Brazilians in Japan returned to Brazil. They are facing great difficulties as they try to reinsert themselves into a new or different social and cultural reality in their own homeland, encountering problems in linguistic and educational fields as well as the local labor market.

### Hope or Fear? How My Voice Could be Represented – Public Understanding of Nationwide Electronic patients' Records in the UK

This presentation is a response to the issues of citizens' right arising from the emergence of IT technology vis-a-vis the former British national policies, Information for Health and Connecting for Health. The main purpose of these British policies was to develop computer databases of patient records 'from cradle to grave' whereby clinicians and medical researchers could access patients' clinical records and medical history. The anticipated benefits of accumulated data included enhancing both public health and the quality of medical services and research. Whilst it could be said that these policies have been aborted, the core theme has still survived vis-à-vis the Social Care Act 2012 and other policies.

The downsizing of these policies could mainly be attributed to the shortage of financial and human resources, but certain issues arising from them contributed to the scrapping process of the policies, too. Specifically it evoked questions regarding, for example, citizens' rights over their own medical data and the security of the e-database. The first issue deeply involves the matter of 'informed consent' in medicine, specifically on what terms and in what ways a personal and anonymised medical record can be used for medical treatment and research. The second question is that current research has revealed this the first issue to be deeply entangled with public concerns over data security. Hence further consultation is necessary over the development of such electronic medical records. In view of this, the presentation explores in what ways and on what grounds these questions have so far been articulated. Through mapping out the issues, this paper argues how those issues would have been encompassed within a range of other important sociological contexts of empowerment of citizens and communities—such as the representation of the voices of disabled and ethnic minorities, and of youth and the elderly.

### Wandering Career Paths Among Japanese Youths: An Analysis of Jgss Life Course Study

In Japan, there had been a standard life model that many youths follow. Once students entered the labor force, their full-time employment was virtually guaranteed until retirement. Since the mid-1990s, however, many young Japanese did not (or were unable to) follow this standard life model. Increasingly, Japanese youths have started their careers as contingent employees. For many younger adults with unstable careers, incomes did not grow, and thus the gap between regular employees and contingent employees expanded. In addition, for many Japanese, marriage and childbirth became no longer an ordinary path of life.

The goal of this study is to illustrate diversified career paths of Japanese youths and investigate the causes and effects of the career paths. JGSS Life Course Study contains detailed life history, including educational background, work experience, marital record, with a national sample of men and women aged 28 to 42. Mixture modeling with longitudinal data was employed to classify Japanese career paths. In this model, retrospective data were treated as if we collected types of respondents' employment each year.

The results show that there are clear gender differences in the career paths among Japanese youths. Younger men's career is more likely to be unstable, whereas younger women's career is more likely to be stable. Educational attainment does not predict career paths among men, whereas highly educated women's career is more likely to be stable. Men whose career path was unstable are less likely to make money and get married, and more likely to be unhealthy and unhappy. Women whose career path was stable are more likely to make money but be unhealthy, and less likely to get married. Recent economic recession and the popularity of higher education are presumed causes of diversified career paths among Japanese youths.

### The Meaning of the International Marriage in Korea

Nowadays in Korea, international marriage has increased since 2000 rapidly. Increase in this international marriage is not the change of the marriage from the influences of globalization. Because Korean people have protected their blood principle rigidly for a long time. It is a big change increasing to international marriage in Korea, and it is shaking now family value from the bottom.

In this report I ask why has international marriages increased in Korea rapidly these days? Also, who and why do people choose an international marriage? I pay attention to the change of the marriage and the family in Korea today and intended to consider the meaning of international marriage.

This study developed the result of the data analysis of the census (1995, 2010) that I analyzed before. In the former analysis, I compared the change that was in the marriage form with the census of 1995 and 2010 according to sex, age, and educational background. The result implies from the rapid increase of international marriage today in Korea that it is due to the increase in high educational background of the woman from the 1990s and the economic power drop of the man from the late 1990s. Based on these findings, I will include variables such as economic activities state, occupation, occupational position and compare and contrast according to the man, woman and combination of couples who chose international marriage using census data. Furthermore, I will use the "dynamics statistics data" and cast the education level between the couples who married a person from a different nationality, the variable such as the nationality of the partner and consider the meaning of the international marriage in Korea these days by clarifying the sociodemographic characteristic of the couple who choose to international marriage.

### Expulsions: When Complexity Produces Elementary Brutalities

The past two decades have seen a sharp growth in the number of people, enterprises, and places expelled from the core social and economic orders of our time. This tipping into radical expulsion was enabled by elementary decisions in some cases, but in others by some of our most advanced economic and technical achievements. I use the notion of expulsions to go beyond the more familiar notion of growing inequality, and get at some of the more complex pathologies of today's global capitalism. It brings to the fore the fact that forms of knowledge and intelligence we respect and admire are often at the origin of long transaction chains that can end in simple expulsions.

The talk is based on Saskia Sassen's forthcoming book *Expulsions: Brutality and Complexity in the Global Economy* (Harvard University Press 2014)

### *Food Sovereignty and the Solidarity Economy Alternative*

This paper explores the relationship between food sovereignty and the solidarity economy. It brings out the extent to which food sovereignty as an attempt to address corporate control of food systems, engender adaptation to and mitigation of climate change and ensure popular control of food systems embraces and articulates with the solidarity economy. The solidarity economy in this paper is not understood as a codified definition but rather a transformative practice emerging from below with an emancipatory utopian dimension, a new conception of constitutive popular power and a commitment to deepening democracy. This exploration is carried out through the prism of two case studies. The CECO-SESOLA worker cooperative movement in Venezuela and its attempts at popular control of a food economy and the emergent food sovereignty movement in South Africa.

#### *Structure of the Issues Surrounding the Nuclear Accident Evacuees: What Has Been Seen While Supporting Town Meetings*

Since August 2011, "Tomioka sub group" of the Sociology Study Group of Large-scale evacuation (representative YAMASHITA, Yusuke) has been conducting interviews with Tomioka town residents in Fukushima Prefecture that were forced to evacuate from their home town due to the Fukushima Daiichi nuclear accident. While supporting town meetings organized by stakeholders, we recognized the following issues clear;

- 1) Problems that evacuees have faced are complex and very extensive.
- 2) However, those issues are not correctly recognized by policy makers.
- 3) Therefore, the present policy does not effectively relieve the affected people.
- 4) As regional restoration plans were decided hastily, the problems of the affected people deteriorated.
- 5) The problem of Japanese legal system which surrounds local autonomy is behind such issues.
- 6) In addition to these issues, it is not possible to deny the existence of public opinion to boost the seriousness of these problems.

As those issues are caused by the deviation between the premise on current reconstruction policies and problems that nuclear accident evacuees are facing, the situation might lead to collapse of the current policy and municipalities. In order to improve the situation, the following initiatives are required; survival and continuation of the affected communities, feedbacks from communities to decision makers by way of the town government, and long-term policies that take account of the lifestyles that vary as time goes on.

#### *Women's Empowerment Beyond 'Smart Economics': A Transnational Feminist Perspective*

Since the economic crisis of the last decade, integrating women into development has become the major 'smart economic' strategy. UN Women states that "equality means business" and the year 2012's World Bank report set gender equality as their top priority. Today, in the global South, Northern private corporations, like Coca Cola, aim to empower women in their value chains or at the bottom of the pyramid by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming 'ethically'.

Critical feminist scholars separately argue that each approach may be functional to structural inequalities. However, from a comparative perspective, both approaches involve women in market-oriented activities, see women as caring mothers and responsible consumers and frame investment in women as 'smart economics.' In order to strengthen existing analyses, 'ethical' consumption and southern livelihoods, presented thus far separately by critical feminist scholars, should be studied together. Such a study will, necessarily, be transnational and will draw on the theory and methods of both those who study the Northern consumer society (e.g. lifestyles and marketing) and those who focus on low-income societies (e.g. sustainable livelihoods).

This paper uses a transnational feminist perspective to examine existing feminist literature in a comparative study of the practices through which women generate livelihoods and the lifestyles women produce through their participation in Northern corporation led market-oriented development activities. This paper links inter-related constructions of mothers in the North and South in order to generate and test the foundations necessary to later study empirically if and how market-led corporate sponsored 'smart economic' development approaches obscure and/or transform structural inequalities in the name of women's empowerment.

#### *Atypical Employment in Japan*

The aim of this panel session is to outline the changing practice of the Japanese employment system. The Japanese system has been classified as "organization-oriented", the key feature being the security of long-term employment within the same firm. The main feature of the Japanese industrial relations system is the enterprise union, which appears to have reinforced the employment security. The Japanese practice of offering new recruits work straight after completing their education enables students to immediately begin their work-life as 'regular employees'.

The Japanese employment practice, however, is also faced with different employment practices of other countries due to globalization, and it is becoming more difficult to maintain the high level of job security for various types of work in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

#### *Shifting Risk Perception after Shocking Events: Counter-Terrorism in the United States and Energy Policy Change in Germany*

Risks are not objective "facts" that are directly experienced. Our risk perception not only changes in social and political contexts but is also mediated through pre-existing cultural patterns. By investigating an American and a German case, we would like to show how shocking events bring about decisive shifts in our risk perception and governance and how specific cultural patterns frame those shifts. In both cases, a minimal risk ceased to be a mere theoretical possibility and turned into a real "threat" which imposed a political "necessity" to act. After 9/11, the hypothetical "ticking bomb scenario" became a matter of national security that justified US-led wars, US detention and interrogation policies as well as extensive global surveillance. The anticipated threat of terrorists in possession of biological or nuclear weapons had to be averted – whatever it took. Similarly, the shocking accident at the Fukushima nuclear plant following the big earthquake had a profound impact on the risk perception of nuclear energy in Germany and changed the government policies. A "residual risk" (*Restrisiko*) of nuclear energy, which had thus far been regarded as controllable by means of science and technology, became an allegedly life-threatening danger to be eliminated at all costs. But these discursive and political shifts cannot be thought of as a direct consequence of these events. It is rather the specific framing of events in particular national contexts that leads to shifts in risk perception and governance. This is particularly clear in the German case: the recent energy policy change was mediated through a discursive pattern of nuclear resistance, which is deeply rooted in the German political culture. Similarly, the American response to 9/11 was shaped by national memory and popular culture, for example "Pearl Harbor", the "phantasm of bioterror" and the "law-defying hero".

#### *Health Discourse, Ruling Relations and Work Knowledge*

Research in Institutional Ethnography (IE) has increasingly shown how institutional discourse frames the way individuals think and act within their everyday practices. For example, Luken and Vaughn provide compelling evidence that state affiliated organizations created a discourse about family housing that structured parents talk and actions concerning their living arrangements (2006, 300). This further highlights those ruling relations that served to organize parent's daily family life.

This presentation will argue that an analogous case can be made in relation to modern discourses involving the use of 'health' and 'physical activity'. It focuses on the case of rural female workers who live outside the mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim

is to explicate some of the ruling relations that organize work activities in relation to women's health in these different cultural settings.

A key resource for this research is the concept 'work knowledge'. 'Work' in IE points to anything that requires time and effort, that is conducted under specific conditions with specific resources and which may need to be thought about. This view helps the institutional ethnographer stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the kind of work and physical activity that they engage in. I further demonstrate how work, health and physical activity are not isolated as in urban settings and explore what consequences this has on the way ruling relations influence rural female attitudes to work and health.

## RC27-468.2

**SATO, SHIHO\*** (The Norwegian School of Sport Sciences,  
[shiho.sato@nih.no](mailto:shiho.sato@nih.no))

### *Rural Life, Physical Activity, and Health*

It is often the case that sport and sporting activities are presented as preventing various health risks due to inactive lifestyles. This type of lifestyle is perhaps most readily seen in urban settings where both work and leisure can encourage a sedentary routine and an unhealthy life. This presentation examines the possible connections between sport, health and risk from the alternative perspective seen within rural communities. It focuses on the case of rural female workers living outside of the more mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim will be to show how sport is largely absent from these females lives but that physical activity is central for how they conceive of their work and health.

A key resource for this research is the conception of 'work' found in institutional ethnography (IE). In IE 'work' points to anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about. This view of work helps researchers to stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in such rural settings work, health and physical activity are interconnected and not isolated as in their urban counterparts. The importance of a healthy lifestyle is then a product of the physical activity that is part of their overall work life and is not derived from sporting activities or government policies and recommendations.

### *Meta Rational Choice Analysis of Social Action*

Various behavioral models have been proposed to explain human behavior. However, it seems to be under way to create a general theoretical framework that deals with the models in a coherent way. This paper proposes a theoretical first step toward such a framework. More concretely, I propose a mechanism that shifts the two mode of rational action: Forward-looking rational action and backward-looking rational action. In conventional rational choice theory and game theory in particular the former model has been used. The model assumes that an actor chooses his/her action based on his/her calculation of expected utility. The backward-looking rational action model, in contrast, has been used in evolutionary game theory and assumes that an actor chooses his/her action based on his/her experience in the past. Although both of them are plausible models of human behavior, an actor uses both of them in reality. Suppose that a person catches a cold and needs to go to a doctor. Then he/she would visit his/her family doctor without serious consideration. Suppose, in contrast, that the person is diagnosed with lung cancer during an annual checkup. He/she would collect as much medical information on the cancer as possible and try to find the best doctor who would properly deal with the cancer. The same person uses the backward-looking rational action model in the first case and the forward-looking rational action model in the second case. In other words he/she swings between the two models. How do we explain this swing? My argument is that an actor chooses one of the two models depending on the cost of searching for the information and the benefit of the result of the search. I will try to generalize this idea and present a more comprehensive theoretical framework.

### *Contesting the Uncertain Promises of Rehabilitation: Struggles and Coping Strategies Among Slum Dwellers in Ahmedabad, India*

The 'slum-free India' slogan that came to the fore in urban policy discourses in the mid-2000s has marked the draconian shift from *in-situ* slum improvement to slum relocation. Accordingly, the burgeoning literature on urban governance in India has portrayed slum dwellers as victims of such new, neoliberal forms of development. Despite its unique focus on the socio-spatial configuration of poor people's exclusion, it has not paid due attention to their resilience to such processes. Drawing on qualitative data obtained from two slums in Ahmedabad, an India's globalising mega city, this paper examines the manner in which some residents collectively negotiated with the local state either in defence of their housing rights and livelihood or in pursuit of personal gains through manipulating the compensation for relocation. This paper has three objectives. Firstly, it gives an overview of the Slum Networking Project (SNP), which was launched in 1996 through a partnership between aid agencies, local government bodies, NGOs and community-based organisations, as an example of *in-situ* slum improvement. Secondly, it portrays the process by which the SNP was replaced with some rehabilitation schemes as evident in the provision of dwelling units in multi-storied housing blocks, which are typically located in urban fringes. Thirdly, it presents the diverse strategies that slum dwellers took to claim their right to housing and livelihood. Some residents sought redress with an NGO and the opposition party. Some residents sought co-operation from their neighbours through coercive means and attempted to obtain more compensation than would be available to them by claiming fake figures on their households and neighbourhood. This paper concludes by stressing that the powerful in a slum can mobilise an 'illegitimate' means of survival when they are at risk of eviction and deprived of access to 'legitimate' channels of claim-making such as NGOs.

### *Japanese Climate Change Discourse Coalitions*

The presentation shows the Japanese discourse and discourse coalition on climate change based on the content analysis of main newspapers. For the analysis, our Japanese Compton team engaged in the following: (1) To follow historical changes to the discourse, we sampled articles from 1985 to 2006 from one of the largest progressive national newspapers, Asahi Newspaper. (2) To analyze in more detail the structure of the current discourse, we used two other main newspapers in addition to Asahi newspaper for articles published between 2007 and 2009, the Nikkei economic and Yomiuri conservative newspapers. The results of our analysis indicate the characteristic features of the Japanese discourse on climate change. The majority of articles do not cover the views of skeptics with regard to the existence of the climate change problem itself. In addition, there appears to be an overall agreement within Japanese society on the need to save energy. The main flow of the discourse is along the lines of how climate change is framed within the broader context and measures to be taken. One side of the discourse coalition, which is primarily lead by the Ministry of Economy, Trade and Industry, and industrial sectors frames the problem in the context of energy itself. Accordingly, this coalition essentially pursues the improvement of energy use efficiency through voluntary action and the shift to nuclear energy sources. The other coalition, led by the Ministry of Environment, a progressive newspaper, and NGOs—though their coverage in the media is limited—recognizes the need for a more structural change toward a more sustainable market and industry. Historically, this coalition gradually imported policy ideas from other countries, such as green tax, emission trade, and Feed-in tariffs, some of which were introduced by the DPJ government between 2009 and 2012.

### *Infrastructure for a Post-Nuclear Society: From the Survey on Japanese Civil Society Organizations in Nuclear Energy Policy Domain*

Despite the unclearness of the Japanese government's attitude toward the future of Japanese energy policy, I will argue in this presentation based on the empirical research results that the condition for the post nuclear society is emerging in the Japanese civil society.

Keiji Takeuchi, a journalist at Asahi newspaper, states in his book that in order to precede post nuclear society supports from both institution and public opinion are needed, and he continues, that of importance is the existence of the civil organizations which continually appeal to the publics and connect citizens with

political parties. I will call those civil organizations here as *infrastructures* for a post-nuclear society. They were, however, rather isolated before the Fukushima Daiichi accident. Whether was the situation changed or not?

To analyze it, *Study Group on Infrastructure and Society* conducted a survey during February and March in the year 2013 on 904 civil organizations, and got 326 answers from them (the collection rate was 32.6%).

We find that firstly organizations which worked in the nuclear energy policy domain increased more than two and half times than before the Fukushima accident. Secondly, those new comer organizations handle new issues such as recovery from the disaster and measuring radiation level. Consequently, they widened the context of the nuclear related issue and broadened the connection between civic life and policy. Thirdly, those organizations discuss the policy based on data and information and sometimes collaborate with public sectors, which are crucial criteria for the post nuclear society. Fourthly, however, a coalition between the organizations only formed when they succeeded to set a clear enemy such as the government and TEPCO, but they do not share the concrete image of post new clear society.

#### *Handmade Housewives : Between Production Labor and Reproduction Labor*

The aim of this presentation is to clarify and better understand the relation between production labor and reproduction labor. I focus on Japanese housewives who make handmade goods and sell these. Since enforcing Basic Law for a Gender-Equal Society at 1999, the Japanese Government switched a "kind treatment" policy to the housewife and has aimed at making women work force. But it is difficult to continue working due to not only the heavy burden of parenting but also the unsupport system of raising children. Therefore women cannot help being a housewife through a birth. In other words women hold dilemma between the difficulty to participate in production labor by child care and the pressure which they should do production labor. In such a dilemma, what kind of compromise do housewives have? To clarify the question, I paid attention to "Sakka-san" and their group who are not only housewives but also making and selling handmade goods which are fabric accessories, leather crafts, woodworks, knits, etc. I investigated the reason of the act why they produce and sell goods through the field work to them. As it turned out, It might be the act from the gender division of labor at first, but they transcended that unawares and present the new way of labor to us.

#### *The Influence of Drug Characteristics, Social Environment, and Personal Characteristics on Cognitive Enhancement Drug Use*

Cognitive enhancement (CE) via pharmaceutical agents has been intensively and controversially discussed by scientists and the media. We investigate several drivers of and obstacles to the non-medical use of prescription drugs to augment brain capacity by using an extended version of the Rational Choice Theory (RCT).

We conducted a web-based study among 2,877 students from randomly selected disciplines and German universities. Via a factorial survey, respondents expressed their willingness to take a hypothetical CE drug described by five experimentally varied drug characteristics (costs and benefits) and three varied characteristics of the social environment. Personal characteristics and demographic controls were also measured.

We found that 65.3% of the respondents strongly refused to use CE drugs. The results of a multivariate negative binomial regression indicated that drugs promising strong augmentations of brain capacity (benefits) and a high probability of achieving this amplification increased respondents' willingness to use CE drugs. A high probability of side effects (costs) and a high price decreased this willingness. Prevalent CE drug use among peers increased willingness, whereas a social environment that strongly disapproves of these drugs decreased it. Regarding the respondents' characteristics, strong academic procrastination, high cognitive test anxiety, low intrinsic motivation, low internalization of social norms against CE drug use, and experiences with CE drugs increased willingness. No effects were found for the severity of side effects, social recommendations about using CE drugs, risk preferences, and competencies.

The application of the rational choice theory and our findings contribute to the understanding of factors influencing CE drug use. They support the assumption of instrumental drug use and may contribute to the development of prevention, policy, and educational strategies.

#### *Loud Rebels: Politics Of 'Revolutionary Women' In Kyrgyzstan*

Drawing upon Bourdieusian class analysis and Andrew Sayer's ideas on social class and lay normativity, this paper explores how class, emotions and moral worth shape everyday politics in southern Kyrgyzstan. The research paper focuses on so-called 'revolutionary women' (also derogatively referred to as OBON - *Otryad Bab Osobogo Naznachenia* [Women Units for Special Purposes]), who have emerged as a visible and vocal political group, often engaging in protests and sit-ins. The study shows how this group of stigmatized women capitalizes on their limited symbolic capital as 'elderly mothers', class emotions (such as shame, anger and resentment) and moral worth and egalitarianism to counter the neoliberal policies and domination in all spheres of life. The paper argues that class and moral sentiments are an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data collected in southern Kyrgyzstan that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

#### *Why Class Matters In Kyrgyzstan: Everyday Experiences, Class and Moral Sentiments*

Contemporary Central Asian literature on society and politics face two significant problems: first, an absence of class analysis of everyday practices; and second, reductionist accounts of human agency that are devoid of moral emotions and deliberations. Drawing upon Bourdieusian class analysis and Andrew Sayer's ideas on social class and lay normativity, this paper examines class and moral sentiments among poor rural migrants and working and middle classes in southern Kyrgyzstan. The paper will focus on how different groups (such as rural Kyrgyz migrants and the so-called 'revolutionary' women) view each other and negotiate claims for economic resources and recognition. I will also discuss the ethnicized violence between ethnic Kyrgyz and Uzbeks in June 2010 in Osh in terms of class and recognition. I will argue that subjectivities and identities in Central Asia are class-based and cannot be reduced to ethnicity, clans, and localities. Furthermore, moral sentiments and evaluations are examined as an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

#### *Comparing Climate Policy Networks in the Germany and the UK*

This paper compares, contrasts and accounts for the different outcomes of the climate policy networks of two western industrialised nations: Germany and the UK. Both are generally considered to have undergone changes in their environmental policy discourse from end-of-pipe solutions to more integrated forms of environmental management associated with ecological modernisation. Yet the two countries differ in terms of their climate policy networks. In Germany, the most influential policy actors are drawn mostly from policy arenas, industry and science. This is typical of what we might expect under conditions of ecological modernisation. In the UK, in contrast, the most influential actors represent either government or quasi-governmental institutions or the NGO sector. The UK has probably the most ambitious climate change legislation across the world, instituted in the Climate Change Act (2008), which calls for cuts in carbon dioxide of 80% on 1990 levels by 2050. However, little serious effort is underway to make headway towards achieving the targets. Thus, climate policy in the UK represents what one might anticipate given the nature of the policy network: the presence of strong advocacy coalition calling for large-scale cuts in GHG emissions, but one that has relatively little influence compared to climate policy network actors advocating business as usual. What is surprising, though, is the relative lack of influence of the energy giants. In Germany, less ambitious targets for reducing emissions and a set of more discrete concrete actions to address climate change could be considered the result of a policy network of ecological modernists, where pragmatic realism pervades.

### *The Changing Profiles Of Inequality and Exclusion In Australia*

Despite evidence that income inequality has increased and is of community concern, Australian policy makers have emphasised their commitment to the 'fair go' but redistribution rarely features in political debate, reflecting the fears of a voter backlash in the face of reforms that involve losers as well as winners. Both major parties favour 'growing the pie' over 'dividing up the slices' yet fail to recognise that even a larger pie must be distributed fairly. Establishing how inequality has changed is complicated by definitional changes that have undermined the comparability of income distribution data, and the confusing picture portrayed by public opinion data on attitudes to inequality provides little guidance about how much actual redistribution (as opposed to how little inequality) the community is prepared to support. The emergence of social inclusion as a policy priority has given impetus to the relationship between inequality and social exclusion, although this relationship is poorly understood conceptually and inadequately documented empirically. This paper draws on a range of survey data to examine recent trends in different dimensions of economic inequality and social exclusion in Australia. Attention focuses on how the profile of social exclusion varies across the income distribution, on the extent and nature of exclusion inequality itself, and on the association between these measures (in isolation and in combination) and the subjective well-being of those affected. The paper will conclude with some reflections on the implications of the emergence of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

### *Contesting Time and Space in Istanbul: Differential Civic Activism in Urban Development*

The paper explores the re-appropriation of urban space as a practice of collective contestation against established frames of *time* and *space* in urban policy making. Crisis and uncertainty in the governing of urban form have showed the spillovers of a rational model of spatial organization, based on long term future prediction of city growth and supply-oriented urban policy making. Civic society and urban users have been generally regarded as customers or users of urban space, while participatory examples sometimes become choreographic practices of cooptation. We argue that contemporary urban policy making are too much framing urban agency as a 'governmentally designed object', through preconstituted notions of space and time despite few attempts to enable self-organization. These linear models of space and time are evident in consolidated policies of urban development, that compartmentalize collective action into rigid boundaries of intervention and programming timelines. The paper explores the features civic political activism as a practice of opposition against these space-time frames in urban policy making. It defines urban activism as the creation of 'differential space-time frames', driven by the objective to manipulate 'time-space boundaries' of urban intervention. These borders constitute the major coordinates of contested urban agendas. The paper discusses how practices of creative resistance are targeted at governmentally defined time-space borders and underline that emerging conflicts lead to specific problems, which we call of *spatial disaggregation*. Evidences will be provided from Istanbul city region. The recent wave of protest in Turkey have been linked to a restructuring of urban activism against authoritative governmental policies. Despite its broad social and economic implications, we will particularly focus on the practices of framing urban interventions in the city and on the conflict between the modern logics of governmental intervention and the emerging relational spaces of urban activism.

### *Family Structure, Socioeconomic Well-Being and Elderly Chronic Illness In Thailand*

Thai culture which is related to caring of the elderly has been named as one of a very strengthen one in the world. The family, in general, has to look at their elder in every perspectives. This study focuses on Thai elderly ages between 65 and 84 years old quality of life, under the rapid changing of Thai society that moving from agriculture form to industrialize one. The research examines effect of family structure, household socioeconomic well-being on elderly quality of life that measured from chronic illness. The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Finding shows that the elder who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and lonesome when compare to those who live in extended family. Family support is more likely depending on

household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would to receive support from government need to have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elder, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.

### *ICT As a Communication Tool for Older People (aged 80) in an Urban Area*

While ICT (Information and Communication Technology) has been spreading dramatically in Japan, little is known about how seniors use it as a tool to communicate with non-relatives.

The authors conducted interviews with residents (aged 80) of Suginami City, Metropolitan Tokyo, in October and November 2013, regarding communication with non-relatives. A total of 513 people responded.

About 60% of the respondents met and spoke with "friends" and "people they have known from childhood"; men were more likely to do so than women. In all types of relationships, a conventional phone was the most popular choice as a usual communication tool, followed by "letter" for "people they have known from childhood", as well as "face-to-face meeting" and "cell phone" for "friends" and "people in the group they are members of." In all types of relationships, 10% of the respondents chose "e-mail." Men were more likely to send e-mails from a computer.

In North American urban sociology, there is great interest in how the faster communication, resulting from the increasing availability of affordable and efficient transportation and ICT, affects interaction among individuals. As the usage of ICT becomes more common among seniors, the ways the very old persons communicate with others are also expected to change.

### *Social Policies and Political Identity: Analysis of Bolsa Família Program in Brazil*

There are few studies analyzing how policies impact on political identity construction. Following the cognitive approach in policies, recent studies show that State actions creates new social actors: individuals that become beneficiaries but who didn't constitute their identities in relation to the State before. Therefore the State is a space of cultural and symbolic production, where new identities are constructed and new political lessons are learned.

The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contentions that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policies design. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, govern and public approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way beneficiaries understand themselves and their space in the political sphere.

This paper analyzes the social construction of image between beneficiaries from the national conditional cash-transfer Bolsa Família Program in Brazil as a dimension of the political identity. It analyses the role of the State, the media and sociability relations. These three elements are tightly connected and the beneficiaries are aware of the constant contention around the program's legitimacy. They react actively to the negative image constructed by the media and that is reproduced inside their sociability relations.

## *A New Middle Class? Challenges for Inequality in an Emerging Country*

The changes in the contemporary world have been quick and frequent, particularly in countries considered as emerging nations. They have an impact on the living standards and consumption, creating new social groups, resulting from those dynamics. Recently in Brazil, the debate on the emergence of a new class "average" gained relevance and academic crossed the borders, having an enormous impact in the public arena. Some economists define this "new middle class", from their income. While recognizing the importance of this element in the study of inequality, the concept of class demand more complex analyzes that include socio-occupational factors, as well as perceptions, values, expectations and worldviews regarding personal projects and processes of distinction.

As the task of studying multiple and varied dimensions of social life can not be restricted to a specific focus, either theoretical or methodological, we have been working with quantitative and qualitative methodologies. The study we propose to present is based on the fieldwork we carried out in Rio de Janeiro with individuals who fall into the two groups that we are defining "traditional middle class" and "new middle class". Our goal is to understand their trajectories, as well as, their projects for maintaining or improving their live conditions in the future.

## *Multilevel Climate Governance In Europe: Are Cities Undermining Nation-States Role In Climate Policy?*

Global environmental problems are increasingly showing the nation-states lack of will, as well as their inability, to take the path of sustainability. Climate change is probably the best example of the downsizing role of the nation-state in the pursuing and diffusion of environmental policies and actions. That's the case in Europe, where the European Commission is becoming a global leader in this field, and, at the same time, an increasing number of cities and regions are getting involved in climate governance. Furthermore, climate initiatives like Covenant of Mayors are showing how sub-nationals and supranational institutions interact with each other by circumventing national governments. Starting from these considerations, this paper presents an empirical study on the involvement of Italian cities in the Covenant of Mayors. Taking a multi-level governance perspective, its aim is to understand the role of the nation-state with respect to that of a supranational institution like the European Commission. Our results show that the inaction of the Italian government in the past years related to environmental and climate issues, as well the proactive role of the European Commission, explain the massive participation of Italian cities in the Covenant of Mayors. The Italian case is paradigmatic, to the extent that of 5000 signatories of the Covenant, half of them are Italian. However, even if the role of Italian cities in climate and energy sectors is shifting from that of policy-takers to that of policy-makers, and that what it means to be the "state" is being reconfigured and contested, the nation-state remains a key actor, notably with respect to national policies that can foster and strengthen local and global climate actions. Nation-states scope and powers remain crucial in climate policy, and the day when local institutions take their place in the environmental domain still seems distant.

## *The Standardized Transition to Parenthood: How Standardized Practices Produce Gendered Subjects at the Transition to Parenthood*

The transition to parenthood in Austria is constituted through a set of standardized practices that includes medical care, legal processes, public discourses on women's health and decisions around public aid affect every pregnant women and most of their partners. In Austria the transition to parenthood leads to more traditional role configurations and to an increase in unequal distribution of labor. However, since young women in Austria are in general highly educated, have full access to the labor market and value and demand gender-equality, it seems crucial that throughout all levels of education women experience a retraditionalization of gender roles during the transition to parenthood. A focus on standardized practices is a sufficient way to show how even highly educated, career oriented and breadwinning women become non-working mothers in a traditional relationship after the transition to parenthood. Standardized practices enforce and attenuate specific figurations of men and women. Since they are a major part of the transition to parenthood we suggest to pay closer attention to the sequence

of those practices and the formations of men and women they seem to favor. Our questions are: How do standardized practices at the transition to parenthood produce gendered subjects? Which formations of women and men do they enforce?

We answer those questions by deriving practices from 40 interviews with men and women during pregnancy and 40 interviews with men and women six months after birth. In addition we collected documents used in those practices. Within an ethnographic interpretation process lead by the theoretical principles of new materialism we derived sets of activities and participants, which later on where categorized into practices. The focus of our paper is on four processes of retraditionalization of the relationship between mothers and fathers during the transition to parenthood and how they are embedded into standardized practices.

## *We Have Never Been Individuals – New Materialist Ethnography*

In 2011 I finished an ethnographic project on the transition to parenthood from the perspective of new materialism (Schadler 2013a, 2013b) and started another empirical project on definitions of family from this perspective. My talk will summarize the theoretical principles and onto-epistemological foundations of these theories and how they are transformed into an apparatus (Barad) that act as a tool for actual empirical research. I will also discuss how the researcher, research and a research field are established within this process. Theoretically we cannot perceive the researcher as a subject acting on a field, but the researcher is becoming with and figured with it during research. However, this process is also producing research outcomes, which are therefore not a product created by the actions of the researcher, but a part of the practice of researching. The researcher is formed as the part of the practice that assembles outcomes and provides them in writing and talking to research communities.

In particular I rely on the work of Karen Barad, Rosi Braidotti, Donna Haraway and Stefan Hirschauer. In my talk I also want to provide information how I derived a concrete method of analysis from the principles of new materialism. To collect data I used interviews, observations, documents and self enactments. For analysis I developed a coding process, that reconstructs practices and the establishment of the boundaries, which separate components/participants in order to make them perceivable. The consequence is an ethnographic transcription of the figurations of interest (e.g. becoming parents) and the worlds they are becoming with. The researchers' tools become an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the "object", while we study how the object is figured.

## *Ethnic Inequalities in Educational Returns: Overeducation, Language Skills and Social Capital*

According to existing studies, the persistence of ethnic inequalities on Western labour markets is largely due to ethnic differences in educational attainment. Empirically less important, but socially more relevant are differences in educational returns: why is education less beneficial for immigrant minorities in meritocratic societies? Apart of taste based and statistical discrimination, we argue that missing language skills and a lack of social capital could explain why immigrants and their children cannot make full use of their education. For income, we additionally assume "lagged" consequences of lower employment returns to education: Because education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

Using data from the German Microzensus 2006-2009, we show lower educational employment and income returns for first and second generation Spätaussiedler as well as persons of Italian, Greek and Turkish origin as compared to native Germans. Results of simultaneous conditional quantile regressions show similarly stark percentile and median differences for first and to a lesser degree also second generation immigrants. Missing language skills and social capital seem unlikely candidates, given the equal pattern of differences for different percentiles. Yet, these differences in educational returns are largely accounted for by the larger degree of overeducation among persons of immigrant origin. The results also show that lower returns to education have two sides of a coin: The returns are lower, but lacks of education in terms of undereducation are less disadvantageous. If education counts less, so does its lack.

*The All-Pervasiveness of Racism in Germany: Difficulties and Challenges in Addressing Racism*

Racism is a societal imbalance relationship which structures social order, with social practices of difference, the construction of social groups and social meanings and inclusions and exclusions.

When looking at the mechanisms, attributions and manifestations of racism in Germany, global, European and national "lines of tradition" and histories of racism have a powerful effect. If one speaks about racism in Germany, its specific expressions and effects, the history of racism in Germany needs to be taken into consideration.

Studies show that racism today is institutionalised. For example in state employment agencies with regard to social security allotment or in institutions of education and social work and in the actions of professionals (Melter 2006, Flam 2007, Gomolla/Radtke 2007).

The focus of this paper will be on a reconstruction of a racist normality in Germany, constantly present as a societal relationship in the everyday life of people to whom a migration history is attributed, as everyday occurrence and manifested in normalised practices of differentiation, isolation and exclusion. The analytic perspective of this paper will be on the subjective experience and interpretation and consequent strategies of action and negotiation of young people, whose everyday life is negatively impacted by racism.

In the international context of the conference it will be interesting to discuss with other researchers different discourse lines of racism and their influence on today's understanding of and acting on racism in the world.

The research presented in this paper is based on group discussions, and problem-centred interviews with eight young adults (age 14-20). Part of the data was collected during a 4-day workshop with young adults with a migration background, where reflections and discussion about experiences and strategies among participants took place.

[s.schenk@em.uni-frankfurt.de](mailto:s.schenk@em.uni-frankfurt.de))

*Nonreligious Actors and Their "Others" – How Questions of Justice Become Matters of Identity*

Whether in a highly secular context, as in Sweden, or in countries where religion plays a more influential role in the public sphere: Nonreligious groups, like humanist or atheist organizations, often construe "religion" and/or religious actors as obstacles to social progress. In social conflicts and public debates, e.g. on education, gender equality, religious freedom etc., such processes of "othering" and the various imaginations of state, secularism, social justice and modernity intersect and manifest themselves in concrete ways. They thus provide an ideal framework for analysing the complex dynamics and multiple entanglements of (non)religion with questions of justice, equality, and ethics from a sociological perspective. In my paper I use the debate about religious education in Sweden as such an "entry point" for exploring those dynamics and relationships empirically in their cultural specific context. By looking at how humanists engage in such debates, at how they link ontological visions to normative orders, at how they position themselves in relation to religious actors – thereby navigating through the sometimes narrow path between mere advocacy for a secular state and social justice on the one hand and anti-religious criticism of faith communities on the other –, the socio-political dimension of being nonreligious becomes apparent – a dimension which so far has been hardly scrutinized by social scientists.

*The Belgian Health Care System. General Practitioners and Medical Specialists*

9/30/2013

**The Belgian health care state: general practitioners en medical specialists**  
**Prof. Dr. Rita Schepers, Centre for Sociological Research (CeSo), KU Leuven, Belgium.**

Klein (2000) described the health care state as different from the welfare state because among other reasons, the medical professions are service professions with high specialized knowledge and also because of medical technology is advancing rapidly and creates demand.

In Belgium, the sickness funds play a crucial role. (In modern terminology, the purchasers of care)

The paper will briefly introduce the role of the sickness funds in Belgian health care. Then, the attention will be focused on the professionalization processes of

doctors in medicine, surgery and gynecology. (Original title in 1849.) Specialization processes started already in the 19<sup>th</sup> century but the coming into prominence of medical specialists started after the second World War, together with the introduction of obligatory health insurance (1944). The already existing rivalry between 'general practitioners' and medical specialists became very prominent. A sort of solution was reached at the end of the 20<sup>th</sup> century. In the meantime the position of general practitioners has improved.

*Life-Course Influences on Paid Work Beyond Retirement Age: Quantitative and Qualitative Evidence*

Work post retirement age is on the rise in many Western countries. Our contribution aims at shedding light on the factors driving post-retirement work in Germany and the UK. Our perspective is cross-sectional, but will nonetheless focus on individual life-course influences on post-retirement work. Regarding these influences, two intertwined areas can be distinguished: influences connected to the employment history, and influences connected to the family and the personal network.

As to employment histories, they shape the ability, the opportunities and the desire to work beyond retirement age in different ways. However, the underlying patterns are not unidirectional: On the one hand, interruptions and non-standard employment are related to lower old-age incomes and a potential higher desire for additional income in old age – a relationship that is at the same time differentiated by the specific institutional setting. On the other hand, a continuous employment career, especially in higher occupational classes, seems to be connected with better employment opportunities in old age and a stronger work identity. The latter relationships are also mediated by family histories. Additionally, family histories and personal networks also constitute important independent influences.

The contribution will first present quantitative evidence on these relationships, based on the English Longitudinal Study of Ageing and the German Ageing Survey. In a second step, evidence from qualitative interviews with working pensioners from the UK and Germany will be presented. This evidence helps to elucidate the (complex) subjective mechanisms 'behind' some of the quantitative relationships. The interviews suggest that the experience of work beyond retirement age is overall positive, with paid work being seen as a way to do something meaningful, to stay in touch with other people, or to structure one's day. In the final discussion these results will be connected to the country-specific debates around work in old age.

*Naming and Framing the 'problems' of Minority Youth. a Comparative Analysis of Teachers' Discourse on Ethnic Difference in Europe*

To what extent are teachers' perceptions of ethnic minority students influenced by the national framework of majority-minority relations and the educational tradition prevalent in their particular country? The paper will address this question using some of the result from the EDUMIGROM comparative project on immigrant and Roma minorities and secondary schooling which was carried out in nine western and central European countries. By adopting an analytical framework informed by comparative education research, it will analyse how teachers in the various countries approach the "problems" of minority students and the arguments they put forth in order to explain the situations and attitudes of these students. The salient dimensions of alterity (racial, cultural, social, linguistic) and the labels used by teachers to name minority students, as well as the arguments put forth to make sense of the difficulties and challenges they encounter in schools with high concentrations of ethnic minority, vary widely depending on the national and to a lesser extent the local context. While in certain situations, such as those encountered in Germany or in most of the Central European countries, teachers emphasise divergences in cultural and educational styles between minority families and the dominant group, in other contexts, such as in France or in the Scandinavian countries, school personnel downplay such issues, focusing rather on minority students' disadvantaged socio-economic backgrounds or on their particularities as bilingual students. The paper will underscore how much the frameworks for discussing, explaining, and resolving difficulties in school based inter-ethnic relations vary between countries. For this reason the experiences of minority students offer insight into the cultural traits of the majority society, since they reflect both the national history and ideological frameworks of minority-majority relations and the manner in which student-teacher relations are conceived within the particular society.

**SCHIFF, REBECCA\*** (U.S. Naval War College, [rschiff1@msn.com](mailto:rschiff1@msn.com))*Nato's Quest for Greater Operational Effectiveness: Concordance Theory and Civilian-Military Personnel Relations*

Many defense organizations are comprised of both military and civilian personnel working in partnership towards the realization of defense goals. Civilian personnel in defense organizations often work closely with their military counterparts. The issue of civilian-military personnel collaboration *within* defense organizations is an important issue that affects both operational and organizational effectiveness.

Personnel collaboration also has significant impact on civil-military relations theory. Civilian and military institutional separations has been the hallmark of the civil-military relations field since the post-World War II era. Focusing on the need for greater collaboration among civilian and military personnel in defense organizations challenges the traditional focus on separation. Objective civilian control does not exist at all levels of the civil-military relationship spectrum. The reality is that civil-military relations may call for broad institutional separations *as well as* more fluid and collaborative roles within defense establishments. Personnel relationships in defense organizations, often warrant more integrative dynamics and directly affect the development and execution of military strategy as well as operational and organizational effectiveness. Enhancing collaboration between military and civilian personnel points to a theoretical model, such as concordance theory, which embraces broader institutional separations as well as cultural conditions requiring more flexible civilian and military relationships. This presentation is created within the context of a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative.

**SCHINDLAUER, SANDRA\*** (Bauhaus University Weimar, [sandra.schindlauer@gmail.com](mailto:sandra.schindlauer@gmail.com))*The Alienation of Public Spaces by the Homeless*

Since the 1970s, German researchers have turned their back on the topic of homelessness. As a result, Germany has neither a universal definition, nor an official statistic on the amount of homeless people living in the country.

Today, most German cities are facing a significant lack of affordable housing. Additionally, the borders of the EU have been opened towards Eastern Europe (2004 and 2007). In the hope of jobs and wealth, Eastern Europeans flock to Germany. However, a lot of them fail to fulfill their dreams and end up homeless as they are not eligible for German welfare. Hence, the number of homeless people being visible on the public spaces of German cities increased constantly in recent years.

As the cities are afraid that the ascending presence of homeless people constricts the consumer climate (especially in pedestrian and representative areas), they are seeing themselves forced to act. In contrast to the USA, where the cities usually follow a containment strategy, the method of choice in Germany is the displacement and decentralization of the homeless. During my presentation, I would like to focus on one of the most subtle ways to achieve these goals: structural modifications and installations which aim to prevent the "alienation" of public spaces by the homeless and other undesirable groups. I would like to complement my remarks with a discussion on how these actions are being implemented and justified by the cities and why people who do not belong to the "target group" are not able to decode their function.

People say that public spaces are a reflection of the society. The stepwise exclusion of unwanted persons from public spaces not only creates a distorted picture of the reality; it also calls a fundamental characteristic of modern democracy into question. We are talking about participation.

**SCHINDLER, SETH\*** (Humboldt University of Berlin, [schindse@hu-berlin.de](mailto:schindse@hu-berlin.de))*Governing CO2 Emissions in Delhi, India: The Clean Development Mechanism and the Informal Recycling Sector*

There is a consensus among policy makers that climate change must be addressed through global governance frameworks based on the measurement and reduction of CO<sub>2</sub> emissions. This 'carbon control regime' at the global scale requires cooperation from municipal governments whose task is to monitor and enforce its implementation locally. Scholarly research on metropolises in the global South tends to focus on policies aimed at adapting to climate change, and this paper seeks to contribute to a growing body of scholarship focused on the efforts of municipal governments in the global South to mitigate CO<sub>2</sub> emissions. I examine the impact of the UNFCCC's Clean Development Mechanism (CDM) on solid waste management in Delhi, India. The main argument of this paper is that the CDM has contributed to the emergence of an environmental urban governance regime based on calculating and reducing CO<sub>2</sub> emissions. This *data fetishism* obscures the relatively high recycling rates achieved by Delhi's large informal sector,

which is ubiquitous but difficult-to-measure. This has justified a dramatic shift in Delhi's waste management strategy, as plans to build sanitary landfills have been abandoned in favor of waste-to-energy incinerators, three of which have been approved by the CDM. This policy shift has precipitated conflict over the ownership and control of waste between small-scale informal enterprises and large formal-sector enterprises, and it relocates value from the labor of informal-sector waste collectors to waste matter itself which is required for the operation of waste-to-energy plants. I conclude that the overriding principle of this emergent governance regime is capital accumulation rather than the mitigation of CO<sub>2</sub> emissions, and its inability to incorporate extensive informal environmental management systems calls into question its overall effectiveness.

## RC21-358.4

**SCHINDLER, SETH\*** (Humboldt University of Berlin, [schindse@hu-berlin.de](mailto:schindse@hu-berlin.de))*Making Delhi 'world-Class': Relations Between Informal Service Sector Workers and the 'new' Middle Class*

Governments at multiple levels have ambitiously committed to transforming India's metropolises. In this context formal electoral politics increasingly favor the so-called 'new middle class,' while the urban poor are typically excluded from formal politics and the formal economy. While scholarship tends to compartmentalize the politics of the new middle class and the urban poor by focusing on how they interact with the state, little is known about inter-class relations. In this talk I present original research on relations between workers in the informal service sector (i.e. street hawkers and wastepickers) and associations that represent the new middle class (i.e. resident welfare associations and market traders' associations). I show that in the case of Delhi, conflict between these groups is typically over the *terms of use* of urban space rather than zero-sum conflicts over space. Furthermore, the analysis shows that these classes are interdependent; the poor depend on demand for services from the new middle class for their livelihoods, and the lifestyles of new middle class are enabled by services provided by the informal service sector. However, both groups also require access to space; it is the most important means of subsistence for the poor working in the informal service sector, while members of the new middle class require the production 'world-class' spaces where they can practice cosmopolitan lifestyles that serve as the basis of class membership. I conclude that through their labor the poor undoubtedly enable and participate in Delhi's transformation into a so-called 'world-class' city. However, the reconciliation of competing visions of urbanization – one geared toward subsistence and the other social reproduction – is what is at stake in contemporary inter-class relations in Delhi.

## RC24-432.24

**SCHINKEL, WILLEM\*** (Erasmus University Rotterdam, [Schinkel@fsw.eur.nl](mailto:Schinkel@fsw.eur.nl))*Climate (F)Acts. Climate and/As the Social*

This paper investigates the ways in which 'climate' can be considered as social assemblage. It does so by showing how climate facts and factors have often been construed as climate acts and actors. This is illustrated by considering three ways in which climate has historically been construed in relation to the social.

The first is to consider *climate as a causal (factor)*. This has been prevalent from classical authors such as Hippocrates and Ovid to modern authors such as Montesquieu, and has persisted up until the origins of modern climate science. This is illustrated with historical examples.

The second construes *climate as an enrolment assemblage*. Here, climate becomes an assemblage of various heterogeneous (f)actors working together with human actors to produce what we now call climate. This is illustrated in this paper using data from an ethnographic field study among paleoclimatologists.

The third way to consider climate as a social assemblage is to construe *climate as medium* of relationality. In this view, inspired by authors ranging from Watsuji Tetsuro to Tim Ingold, climate is a relational web that is the space in which life unfolds. The paper concludes by illustrating climate as medium in a speculative way, arguing that this conception implies a significantly different social ontology from that which has characterized modernity.

## RC37-634.1

**SCHINKEL, WILLEM\*** (Erasmus University Rotterdam, [Schinkel@fsw.eur.nl](mailto:Schinkel@fsw.eur.nl))*The Art of the Other. the Paradox of Universality in Western Conceptions of 'Japanese Art' (1860-1940)*

The era of the rise of modernism involved the emergence of art as an autonomous and universal category. This paper argues that, given the universal claims of the category of art, it saw an expansion to Asia in general and Japan in particular. This expansion, shaped through various orientalist categories of 'Asian' or 'Japanese' similarity and commonality as juxtaposed to 'the West', helped to provide

plausibility for modernist conceptions of art. It universalized the category of art by giving it a global meaning both in spatial and in temporal terms.

At the same time, this universalization meant that cultural hierarchies informed by western hegemony were threatened. This paper looks at the ways influential western observers of Japanese art between 1860 and 1940 dealt with this by contributing to the simultaneous universalization of the category of art and the particularization of the concept of 'Japanese art'. This 'paradox of universality' involved a differentiation between on the one hand particular, local, traditional and most often historical realizations of what was nonetheless a universal category of art, and on the other hand its truly modern and advanced contemporaneous realizations of universality.

At the height of the modernizing movements in the west, Japan proved to be the site of an 'exemplary expansion' of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as an autonomous and potentially universal yet practically bounded category, the emergence of which has been analyzed by, for instance, Bourdieu, Heinrich and Luhmann.

**SCHLEICHER, NORA\*** (University of Applied Sciences,  
[nschleicher@bkf.hu](mailto:nschleicher@bkf.hu))

*Impression Management for Diverse Audiences: Identity Practices on Facebook*

In my presentation, I pose the question: how can we apply the concept of impression management as outlined in Goffman's (1959) seminal work<sup>[1]</sup> to the context of social media and to the behavior of Facebook users in particular. Goffman claimed that we perform certain roles for certain audiences and attempt to keep these audiences separate. However, on Facebook, audiences become mixed in the form of diverse 'friends' potentially consuming the multimodal messages users of the social media site share with others.

How does this fact influence users identity performances on Facebook? What strategies they use to deal with this situation and how these strategies are reflected in their stance taking practices? Does the lack of physical contact with their audiences offer more freedom and agency in constructing their 'fronts' resulting in more diverse and potentially subversive identities or, on the contrary, self-censorship constraining free identity performances result in more conformist, more socially acceptable identities on Facebook?

The data I use to attempt to answer these questions come from a representative survey on Hungarian high school students (aged 14-18), from focus group interviews, as well as from discourse analysis of Facebook profiles of members of the same nationality and age group.

Preliminary analysis of the data suggests the existence of a variety of strategies used including the creation of double profiles, a control over the publicity and content of the posts, 'defriending' certain people including parents, deleting earlier profiles and leaving Facebook completely.

The analysis focusing specifically on gender identity performances on Facebook suggests, on the one hand, strong peer group pressure, but, on the other hand, affordances of Facebook are also used to break away from traditional constraints of femininity.

WEINMANN, NICO (University of Kassel)

*Two Crises, Two Cycles of Contention. Workers' Protests in Western Europe in Comparison*

The paper compares two cycles of labor unrest and its relationship to capitalist crises in Western Europe. In the first cycle, starting around 1968, workers were able to mobilize high power resources and to push for wage increases and new institutional rights on the plant level. However, the offensive phase of the Western European workers' movement was eventually stopped by the crisis of 1974/75, thus raising unemployment and weakening labor's workplace bargaining power. As a consequence, since the 1980s, Western European trade unions lost members and faced increasingly complicated economic and institutional conditions. With the global financial crisis 2008, a new cycle of labor unrest has started, and the nature of social conflict has changed. First, the uneven and combined development of European integration has led to a spatially uneven distribution of workers' protests. While countries such as Germany and Austria are characterized by low protest activities, social unrest in Southern European countries has increased significantly. Also, workers' repertoire of contention seems to have changed throughout the crisis period: In the current wave of conflict, forms of "non-normed conflicts" such as plant occupations ("bossnapping" in France) and riots (London, Stockholm) have soared, indicating not only the severe consequences of the crisis but

also trade unions' growing representation gap. The paper draws theoretically on the "Jena power resource approach" and empirically on a database on social conflict (JenaConDa).

*The Worldwide Outlook for Children: A Model for Monitoring and Studying Children's Rights?*

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. It may serve as a model for human rights research, particularly for investigations of experiences and statuses of indigenous youth. WOC is designed for use by everyone, from scholars to policy makers to young people, and will be available in multiple languages. WOC is a useful resource for identifying, understanding, and explaining young people's experience across the world. WOC presents vast evidence about children, including indicators of their physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. WOC will raise awareness as well about indicators of children's wellbeing that are not yet available for many countries. As such, WOC may be instrument for identifying what we do *not* know about indigenous young people's wellbeing, rights, and interests. Over time, WOC will work from a global perspective to share information regarding young people's wellbeing, rights, and interests.

**RC53-852.4**

**SCHMEECKLE, MARIA\*** (Illinois State University,

*The Worldwide Outlook for Children: A Web Resource of Young People's Wellbeing, Rights, and Interests*

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. WOC is available to social scientists who seek to identify, understand consequences of, and explain sources of inequalities young people experience. WOC is a web resource designed for use by everyone, from scholars to policy makers to young people, and is available in multiple languages. Recent innovations in the Sociology of Childhood have focused attention on children as active agents with interests and perspectives worth knowing about. Widespread ratification of the UN Convention on the Rights of the Child has led to a greater focus on children's rights and on many aspects of their wellbeing. WOC demonstrates how social scientific evidence can sharpen our awareness about the variety of structural disadvantages children experience worldwide and the countries and regions in which multiple disadvantages and inequalities exist. Among different resources, WOC presents evidence of children's physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. As sociologists learn more about children's legal and informal rights, interests and aspirations, psychological wellbeing, social interactions, choices, levels of resilience, and spiritual beliefs, we become aware of much more that we want to know about young people and the range of inequalities they experience from a global perspective. During this presentation, we will discuss methodological challenges and substantive gaps in global knowledge of children's wellbeing, rights, and interests, and how we might move forward to develop more comprehensive and holistic understandings. We will consider how measurement, theoretical, and cross-cultural questions challenge sociology's ability to grasp outlooks for young people worldwide.

*The Influence of Real Life and Online Peer Groups on Caring Fathers at the Transition to Parenthood*

While the transition to parenthood is still linked to a retraditionalisation of gender roles, a small but growing number of fathers aims at taking up an equal or major share of care-work, and reduce their work hours or take parental leave to do so.

Our analysis of in-depth 20 interviews with fathers-to-be, bulletin boards and website shows how those fathers reflect, organize and perform this work within structures that (in Austria) still favor breadwinning fathers. Our data derive from two different pieces of work: a study on fathers on parental leave and a study on the "gendered transition to parenthood" (within the consortium FamiliesAndSocieties, funded by the European Commission FP-7).

Contacts to other fathers that are or have been in the same position play an important role for those "new fathers". Some fathers already have access to other caring fathers within their peer group. Some try to find contact to other fathers through the use of new and social media. They attend "new fathers" groups on facebook, are members of bulletin boards that are crowded mainly by fathers, or use blogs and photo-diaries focusing on the fathering process. On these sites, they often share their opinions, the everyday obstacles they encounter being stay-at-home fathers, or happy times and events with their children. In our talk we explore how those communities help fathers to maintain their role as caring fathers, within sometimes hostile or non-encouraging environments. The ability to share their experiences interplays with their wellbeing, their persistence against structural disadvantages and adverse comments, and the quality of the father's relationship to the mother and the child.

##### *Sociotechnics of Economy*

Joachim K.H.W. Schmidt  
Sociotechnics of Economy  
Revisiting my sociotechnically informed economic theory on autonomous humans (Göteborg 2010), Onati and Athens (2011), not any longer based on Capital, Market, etc., as done by mainstream economists who failed for several hundred years. Mainstream theories have been *spatially* based, time only occurred as *space-time* as well as all other properties as measurements within space, and humans only as objects like game pieces. - My present paper will enlarge the common Factors of Productivity, traditionally Land, Labor, and Capital, by Time. Autonomous humans are characterized by Time as *duration* of their life which they have again and again to invest in portions as resource for their reproductive survival. An economic theory ignoring real time must fail, cutting out some hours being sold for inauthentic slavery work. Excesses of present financial markets condemn the inefficiency of traditional economic theories responsible for such perversity. - Sociotechnics as empirical science designs and implements institutions, and these going concerns are dramatically changing; we move out of an age predetermined by analogous Greek ideology focusing on the organization of respective closed spaces, cf. Plato's Parable of the Cave, without time and movement, becoming manifest in positions, prohibiting time and movement. Greek world: A GIVEN one circling around positions. In opposition to this autonomous humans succeeding to leave Platonic Cave of perverted life, see themselves confronted with a *digital* reality, and experience themselves as homeless, being asked to construct their >homes< themselves by way of computation. Greek-Western institutions must necessarily be replaced, since nearly all passed down institutions of analogous Greek-Western world prove inadequate in present digital age, including presently still prevailing economic theories. In digital age social life will not any longer turn around positions, but will happen in networks in which being will be replaced by relation.

##### *The Cultural Influence on Social Institutions*

**The Cultural Influence on Social Institutions**  
Joachim K.H.W. Schmidt, Berlin/FRG  
Social institutions are culturally predetermined, the going concerns of people express beliefs in way of reality-perception. Cultures are different round the globe. Diversity of cultures contains a gigantic richness of human resources. Cultures actualize in human relations via common actions, and/or communication. Every culture has developed an own language for its communication. Western languages, especially Anglo-American languages, have presently become globally dominant, including Western civilizing culture which they embody. - The powerfulness of Western languages is subject to Greek ideology, its assumed fictional identity of thought and being, first expressed by Parmenides 2500 years ago. Greek ideology circles around an absolutely perfect and analogously conceived spatial Being, a fictive replication of an ideal world excluding change by Time and Movement. Greek ideology gets manifest in fictive positions: its *operational* base. All Western languages share the COPULA as constitutive element, expressing that everything will be defined either as *this* or *that*, e.g. either Greek or barbarian, or e.g. Nazis defined Jews as non-human and sent them into the gas chamber, or e.g. formerly Christians victimized heretics on auto-da-fé, and presently victimization of humans labeled terrorists by *obamacare*, using areal drones as killing machines. And we should not forget the multiple bio-, culture-, and genocides committed by Western people under the influence of Greek ideology. - As can be not overlooked by everyone, Western analogous civilization and culture is decaying with dramatic speed, getting its deathblow by digitalization of Western societies, and consequentially all central institutions have to be redesigned, adapted to starting digital life of Western populations in the Third Millennium. My paper will create awareness of the problems to be faced in near future: A job for sociotechnicians.

**SCHMIDT, LISA-MARIAN\*** (Alice Salomon Hochschule Berlin, [schmidt@ash-berlin.eu](mailto:schmidt@ash-berlin.eu))

##### *Circulating Ideas and Visualizations in Educational Transition Discourses*

Circulating representations of knowledge have been a central concern of Science and Technology Studies (STS). Depending on the conceptual approaches, they highlight either the stabilizing or flexible aspects of distributing and bridging knowledge through social worlds (e.g. Latour, Griesemer/Star).

For conceptualizing the circulation and transformation of ideas and knowledge (Latour), I will focus on commonly used circulating visualizations (maps, lists, graphs etc.) and related practices that visualize and facilitate the transition from school to work. Visualizations can be conceived as mediators, instruments and symbols of specific social orders and related knowledge formations. They typically serve to stabilize the relationships in which they are embedded. As representations and material artifacts they enable and/or constrain the distribution of knowledge. For a systematic analysis and a deeper understanding of the relationship between ideas, knowledge, and their visualizations I will combine STS concepts (e.g. immutable mobiles and boundary objects) with a discourse perspective from the sociology of knowledge (Keller).

In current German developing educational discourse there are typical ways to visualize the transition from school to work, which I regard as travelling ideas and symbols. On the one hand, these maps and charts represent specific theories and classifications of career paths, the function of school in society and classifications of the students and their skills. On the other hand, past negotiations and practices of sorting relevant and irrelevant aspects of transition knowledge are made invisible in these representations.

The study of the circulation of ideas, knowledge, and symbols needs to take these aspects into account. In addition, it should focus on the practices of translating and transforming the visualizations between different social worlds or the strategic use of certain communicative forms e.g. in arenas, where the constitutions of relevant topics or problems are negotiated.

#### RC35-610.2

**SCHMIDT, LISA-MARIAN\*** (Alice Salomon Hochschule Berlin, [schmidt@ash-berlin.eu](mailto:schmidt@ash-berlin.eu))

##### *Producing Individuality: How Occupational Trajectories Are Embedded in Educational Practices*

Referring to the pragmatist process perspective of social order and the constitution of self (Dewey, Mead, Strauss) I'd like to propose a conceptual suggestion and present empirical findings, that combine this perspective with a socio-historical understanding of the subject matter (Foucault). The concept will be presented in interplay of theoretical considerations and empirical results that derive from a current research project about the transition preparations in school and mentoring projects (school to work transition). I will specifically focus on schools because they are major institutions for the organized production of subjects.

Mead and Strauss described the different processes, phases and social interrelations that shape identity/the individual. On this perspective, identity is a constant course of action and interaction between different concerned actors, things and the work of the individual on the integration of the plenty "me's" to a self. This process can be conceptualized as a trajectory of the subject that helps to study this ongoing transformation. The trajectory concept allows the analysis of two perspectives. On the one hand all the situated and participating actors and (inter-) actions come into focus. On the other hand the perception and experience of the subject in this process can be understood.

Interwoven with these practices of the self are typical historical knowledge formations of the subject itself. In contrast to the pragmatist process perspective Foucault offers such a historical conceptualization about the emergence of the individual. This includes sensitivity towards questions of power and their productive effects in specific institutions. Linking pragmatist concepts with a discourse approach will enable a balanced theoretical conceptualization of individuality in modern societies and elaborate analytical tools for research.

##### *Fukushima and Media Discourses on Traditional and Future Nuclear Energy*

This paper presents results of a collaborative research funded by the European Fusion Development Agreement, consisting in an international comparison of media coverage of fusion and fission energy in three countries (Germany, Spain and Portugal) and in the English language international print media addressing transnational elite, from 2008 to 2012.

The analysis showed that the accident in Fukushima in March 2010 did not have significant impact on media framing of nuclear fusion in the major part of print media under investigation. In fact, fusion is clearly dissociated from traditional nuclear (fission) energy and from nuclear accidents. It tends to be portrayed as a safe, clean and unlimited source of energy, although less credited when confronted with research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fission is portrayed as a hazardous source of energy, expensive when compared to research costs of renewables, hardly a long-term energy option, susceptible to contribute to the proliferation of nuclear weapons or rogue military use. Fukushima accident was consistently discussed in the context of safety problems of nuclear power plants and in many cases appeared not as an isolated event but rather as a reminder of previous nuclear disasters such as Three Miles Island and Chernobyl.

The analysis suggests that the public discourse on fusion is constructed mainly around research challenges, clamorous events and scientific and technological achievements, rather than energy policy debate, climate protection or future economic compensations of fusion research.

[robert.schmidt@tu-berlin.de](mailto:robert.schmidt@tu-berlin.de))

#### *Collective Action, Trust and Robust Innovation: The Case of a Regional Network of Research-Groups*

Cooperation between working groups with heterogeneous disciplinary backgrounds is an important phenomenon for modern sciences. It stems on the one hand from growing complexity in expertise and technology needed to answer fertile research questions, to succeed in scientific competition and on the other hand it is required by many forms of research-funding. The contribution focusses on a special form to deal with both: an enduring network between research-groups, which realizes different lines of research and funded projects in a remarkably successful way. Success hereby not only means that they get funded, they also managed to create highly relevant findings in a robust way (Ferrary/Granovetter 2009).

The case study concentrates on the phenomenon of emerging project-networks to enable flexible and also enduring, reliable collaboration between heterogeneous actors (e.g. Windeler/Sydow 2001) but conceptualizes it as one of the actualization of collective action. Within a practice-theoretical perspective (Giddens 1984), we can describe the latter as collective agency, as differences in praxis done collaboratively in a highly bounded way towards an end collectively framed. The first part of the presentation explores different roles collective action between heterogeneous actors play in the episode of robust innovation in the network during 2005-2013.

The second part focuses on trust as a specific quality of network-relations that makes it possible to actualize these lines of collective action between research-groups. It shows the importance of trust-relations in different sub-populations of the network for the network as a whole and its robust ability to produce relevant findings. In the end, the study can provide a more detailed picture of the emergence of a specific bundle of trust-relations through a cycle of efforts in managing the complexity of the scientific field. Such a view emphasizes the inherent recursive nature and historicity of social capital in organizations and populations of organizational units.

#### *Dilemmas and Politics in Chicago: The Theory and Practice of Addams, Alinsky, and Obama*

This paper uses the city of Chicago as a site to explore the work of three celebrated community organizers and intellectuals: Jane Addams, Saul Alinsky, and Barack Obama. All three faced similar challenges across one hundred years of helping people in Chicago, particularly the struggle to help others in a city controlled by powerful elites who reinforced racial, gender, and class inequality. And all three individuals, each in their own unique way, got "stuck" and became political as a way to continue to move forward and continue to make change. How are we to make sense of each individual's efforts to negotiate the tensions between community and politics? This paper draws on the work of Robert Merton and John Dewey (among others) to develop a theoretical framework for making sense of dilemmas and political action in community organizing. It uses this framework to analyze the work of Addams, Alinsky, and Obama as they tried to help others in Chicago. The paper also provides an element of historical sociology, showing the previously overlooked legacy of practice and ideas running from Addams, through Alinsky, to Obama.

#### *On Professional Ethics of Medical Doctors Working for the Pharmaceutical Industries*

The formalization and codification of professional ethics has always been a central element of the professionalization of professional groups and a legitimization of professional autonomy, social privileges and market shelters. The anticipation of ethical standards by individual professionals is sociologically explained with the process of professional socialisation and integration into the epistemic and moral community of the profession. In the paper consequences on the concept of professional ethics associated with dimensions of economisation in the field of professional work are discussed. It is referred to empirical findings of a study on highly specialized medical doctors working for the pharmaceutical industries.

#### *Professionalism Between Individualism and Collectivity in the Field of Knowledge Work*

The paper discusses the interplay of three features of knowledge work: (1) professionalism, based on knowledge, work experience and identification, (2) a strong drive of individualism, resulting from a highly competitive market, and (3) collectivity within the professional field. After re-conceptualising knowledge work from a sociology of professions perspective the limitations and potentialities of the mobilisation of collective action are empirically reconstructed on the basis of two professional associations in the formation process within the cultural sector in Germany.

#### *Do Tertiary Dropout Students Really Not Succeed in European Labour Markets?*

Tertiary education has been expanding hugely over the last decades, so that tertiary dropout students will constitute a growing distinctive group in future labour markets. University dropout is regularly discussed as a 'negative' indicator in terms of reinforcing socio-economic inequalities and being a sign of university inefficiency. However, research on actual career trajectory of dropout students is virtually non-existent. Using data from the 2011 Programme for the International Assessment of Adult Competencies (PIAAC) this study first validates the uncommon self-reported measure of dropout used and compares the percentage of adults with tertiary dropout experience between OECD countries. Second, we examine whether tertiary dropout is a permanent decision as a considerable part of literature assumes. In a third step, we investigate characteristics of adults with dropout experience. Finally, we estimate the effect of dropout in terms of their employment status and success of entering managerial professions comparing results of logistic regressions and propensity score matching taking individuals' socio-economic and demographic background, work experience and cognitive skills into account. Results indicate that consistently across countries dropout is repeatedly a 'positive' indicator in the labour market. This is first due to the fact that the dropout decision is often not a permanent one as well as that for those adults who do not reenrol into tertiary education labour market chances are better than for equally educated adults in about half of the countries examined.

#### *How the Prison System Affects the Health Care System*

United States incarceration rates have increased fivefold in the past four decades, placing untold pressures on other social institutions. Using state- and individual-level data, this article tests whether the number of former inmates affects the functioning and quality of the health care system. The aggregate-level results show that a within-state increase in the number of former inmates is associated with growth in the uninsured population, more frequent use of emergency rooms per capita, and a decline in the supply of hospital beds. Similarly, states that incarcerate more people also report fewer ambulatory visits per capita, fewer mammograms, and lower levels of essential diagnostic tests among diabetic Medicare enrollees, all indicators of a lower overall quality of care. Similar processes are evident even when examining behavioral outcomes in individual-level data. Results from a nationally representative survey, show that individuals residing in states with a large number of former inmates report more unmet need, lower utilization, and lower quality care. These patterns are found even among those far removed from the prison system, including women, the insured, and the well-educated. The implications of broad spillovers from the prison system to the health care system are discussed.

*Passing As Italian: The Image of the Friendly Southerner As a Crisis-Solution Strategy*

People in a southern region of Austria (Carinthia), where over decades sharp conflicts between the German-speaking majority and the Slovenian-speaking minority reigned, some people claim an Italian family background in order to bypass discrimination as "Slovenian". While relations with Slovenia are still tense, in several cities colourful "Italy festivals" have been held. In another regional context, Vienna, a similar phenomenon could be witnessed. In the 1970s and 1980s quite large number Palestinians came to live in Vienna – as a consequence of the political engagement of Bruno Kreisky in the Middle East. Some of them opted to open a business in gastronomy. But since the image of the Middle East was crisis driven, and food from this area (as well as a multiplicity of ethnic places) were still unknown to most Austrians, they opened "pizzerias" – in this way using the positive reputation such "Italian" establishments had built up at that time. And in a yet very different regional setting, in New York after 9/11, Iranians adopted a similar strategy. As one middle-aged man in a documentary showing the life of this community claimed: "Passing as Italian became a kind of survival strategy."

All these examples have in common that the image of the friendly Italian is used and adopted by non-Italians in order to bypass ethnic, political, social and cultural conflict and to deal with ambiguous situations full of hatred and resentment against certain groups. The first goal of this paper is to explore the image of the friendly Italian constructed by way of such narrations and to highlight the persistence of stereotypes as well as milieu-specific alterations. The second goal of the paper is to propose a methodological approach to images as a symbolic strategy to confront and defer conflicts and discomforts in everyday life.

*Patient Participation in Rehabilitation Centres: How Professionals Integrate Patients' Expectations about Discharge Plans*

Today, patient participation is considered "best practice". Yet, there are different perspectives on what patient participation means. While there is a line of argument that patient participation "is justified on humane grounds alone" and in line with patients' right to self-determination (Guadagnoli & Ward, 1998), there is evidence that not all patients desire to be involved (Thompson et al, 2007). Policies on discharge planning from rehabilitation centres stipulate moreover that patients participate actively. It is less clear, however, how patient participation occurs and how this process is achieved interactionally. The goal of this paper is to analyse how patients participate in planning their discharge from rehabilitation centres in multidisciplinary meetings and within the health providers-patient interaction.

Three rehabilitation centres in Switzerland with a total of 37 patients and their teams of health professionals (physicians, nurses, occupational therapists, physiotherapists, etc.) participated in the study. Over 150 meetings were video recorded and analysed using Conversation Analysis, an inductive, observational method.

Patient participation is shaped by organisational structure, by health professionals' communicative practices and by opportunities for patients to engage actively: 1) Patients participate in weekly interdisciplinary meetings, and have the opportunity to intervene directly and thereby shape decisions. 2) Primary nurses coordinate care for patients throughout their stay, and relay the patient's point of view to other health professionals. Professionals' way to integrate patients' opinion into final decisions might differ significantly. 3) When interdisciplinary meetings are held without patients, the patients' point of view is thus indirectly integrated into decision-making: different professionals work as mediators. The analysis of three sites allows a reflection on professional competencies and best practices with regard to patient participation and proposes recommendations for education and practice.

*Comparison of Legal Aid in Belgium, France and the Netherlands: Do Remuneration Systems Influence the Evolution of Contentious Mass?*

**Comparison of legal aid in Belgium, France and the Netherlands: do remuneration systems influence the evolution of contentious mass?**

Frédéric Schoenaers, Kathleen Adelaire, Christophe Mincke, Laurent Nisen, Jean-François Reynaert

In Belgium, the current system of remuneration for legal aid causes dissatisfaction both among government authorities and lawyers. In addition, the adoption of the "Saldus law", which allows any person heard for the first time by the police or a judge to be assisted by a lawyer, is going to weigh on the use of the legal aid. Legal aid has experienced strong growth in recent years in Belgium (+ 229.26% of closed cases between 1998 and 2011). It is useful to observe whether this growth is present in other European countries. We selected France and the Netherlands. This contribution presents a comparison of the modes of organization of legal aid in the three countries as well as of the modalities for financing it. Secondly this contribution aims to compare the evolution of the mass of disputes benefiting from legal aid. We see that beyond the differences between the three countries, the use of legal aid is constantly growing. We will attempt to provide an interpretation of this fact by mobilizing the following explanatory factors: higher income limits allowing more people to access to legal aid with a strengthening effect due to the current economic crisis in northern Europe, a better information of the citizens (by media or advertising by lawyers), a new "grammar of responsibility", a phenomenon of juridification, the development of new public policies and the development of new "rights."

*Detainee and Mother... What Is the Situation in Belgium?*

**Detainee and mother... what is the situation in Belgium?**

Frédéric Schoenaers, Marie-Thérèse Casman, Stéphanie Linchet, Salim Megherbi, Laurent Nisen  
 University of Liège - Belgium

In recent years, the penitentiary institution seems to be changing. Following constant criticism from all origins (European Parliament, Council of Europe, European Court of Human Rights, International Observatory of Prisons), Belgium has adopted in 2005 a "Principle Law" about the prison administration and the legal status of inmates. The will to limit the negative effects of detention introduces a principle of "normalization" that "involves the creation of a framework of existence closer to the general standards of living (...) closer to the current reality."

Facing these changes, contemporary researches about prison tend to focus on the situation of incarcerated men, leaving somewhat the theme of female detainees. In Belgium, they represent 4% of the prison population. This contribution aims to study the situation of sentenced women who are mothers of children (0-6 years old) in a twofold perspective. First, we propose to clarify the legal framework around this problematic. The regulations governing the accommodation and access to children but also the conditions of detention of women with a child are coming from various sources. This will provide a detailed inventory of their legal situation and will question the place and effectiveness of the 2005 law. Second, we develop a sociological analysis declined in two stages. A quantitative approach will take into account the number of children whose mothers are incarcerated in Belgium, the number of incarcerated mothers and socio-demographic data of the study population. Then, in a perspective of multilevel analysis of public policy, we question the role and involvement of the (internal and external) stake holders involved in this problematic.

*Labour Market Returns of Higher Education Drop-Outs: Human Capital or Signalling?*

In Germany, around one fourth of all first year students leave university without a degree. While reasons for drop out are well examined, the consequences are rather unknown, especially in terms of labour market outcomes. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. We also examine in which way the lack of formal qualifications can be compensated by alternative resources like social capital. In a first step we study the probability of entering the labour market. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about social capital to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with

vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. The acquired human capital however, can be better translated into labour market returns by those with better social capital. We therefore conclude that social networks are an important compensation strategy for a lack of credentials.

#### *School-to-Work Transitions of Higher Education Drop-Outs: Human Capital or Signalling?*

Graduates from tertiary education have good labour market perspectives but it is not well examined yet how the career perspectives of tertiary drop out differ from those of graduates. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. The focus will be on the different returns of different educational levels. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. Especially in economic crises we expect that tertiary education drop outs will have huge difficulties in entering the labour market as jobs are scarce and the competition is hard. In a first step we study the probability of entering the labour market and job search durations of the different educational levels. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about economic crises to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. In times of economic prosperity job search durations of tertiary graduates and non-completers are the same, while tertiary education completers fare better in economic crises.

**SCHOLTZ, HANNO\*** (University of Konstanz,  
[hanno.scholtz@unifr.ch](mailto:hanno.scholtz@unifr.ch))

#### *Debating Alternative Conventions and Defying False Friends: The Concept of Crisis in the Rational Choice Theory of Institutions and Historical Social Change*

Although the term „crisis“ seems to be ubiquitous, there are historical phases when it more abundant than in others. For the years since 1989, or the 1930s, the term has (in most parts of the worlds) a higher importance than for the 1950s and 1960s. This can be understood from the fact that these times are phases in which institutional change is both going on and being prepared.

In rational choice perspective, institutions are added game elements in the game structure of human interaction, and they have both conventional and normative aspects. This perspective allow to study institutional change as characteristically depending on the complexity of organizational interaction: Independent organizations allow for early and smooth institutional change, as in the case of changing family concepts. However, there are cases as economic regulation, where organizations act in strong interdependencies and finding a new institutional setting becomes a question of social debate while the performance of old institutions degrades: These are crises. In crises, many solutions are discussed, including those with biased consequences and ‚false friends‘ for which lower adaptation costs go together with a lower long-run adequacy. Hence sociological imagination and the deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and disastrous consequences for solving crises.

For the case study of the economic regulation of industrial society it can be said that unexpected consequences of the disaster (i.e. experiences of modern warfare) did probably the larger part of preparing the Post-War solutions. For the case study of introducing non-smoking policies, that was not the case. The currently greater degree of population access to information may explain the difference, giving rise to the hope that sociological imagination in the general public may add to solving the current transition problems.

**SCHOLTZ, HANNO\*** (University of Fribourg,  
[hanno.scholtz@unifr.ch](mailto:hanno.scholtz@unifr.ch))

#### *The Two-Step Nature of Modernity*

Over the last decades, the discourse over the end of industrial society and the coming of a second modernity has found evidence in recent phenomena that resemble parallels between 1860 and 1945, as globalizations, economic crises, democratizations, violence, social inequality, and global shifts in resource distributions. An understanding of the mechanisms behind these phases of crisis

would be socially helpful since it is rather probable that the current one has not yet ended. The rational choice theory of institutions offers the tools to do so, but has not yet been applied to this question. The proposed paper (part of a larger book project) intends to fill the gap.

The paper develops a model of the two step nature of modernity by concentrating on the following arguments: 1. Modernity increases the availability of resources. 2. This results in changes in information relations, i.e. between positional and situation-specific information. 3. Multi-actor decisionmaking has two focal points of either relying on positional (domination / authority) or on situation-specific information (deliberation / argument). 4. A rational-choice understanding of tradition and modernity hence equates the two with applying the two focal points. 5. Not all games of human interaction are created equal, since organizations offer social structure and the transformation of situation-specific in positional information. 6. Hence an intermediate phase arises, with authority within and argument between organizations. This modelled intermediate phase is equated with the historical phase "industrial society".

Additional arguments analyze the nature of institutional innovations in the transitions between the phases, allowing for the confrontation with empirical evidence and for the prediction of upcoming institutional changes.

[maren.schorch@uni-siegen.de](mailto:maren.schorch@uni-siegen.de))

#### *The Hidden Patients - a Qualitative Study on Informal Caregivers in Germany*

Regarding the aged population, we also detect a parallel growth of age related illnesses like dementia, Alzheimer's disease or the like. In many countries worldwide, the majority of care for people suffering from these illnesses is realised at home by *informal* caregivers – their spouses, family members or close friends – due to cost or personal reasons. Often, the caregivers themselves are also at an advanced age. Both, elderly and still working-age family carers bear the heavy physical, psychological and emotional burden of taking care of their beloved ones at home. They are then at increased risk for psychical and physical morbidity like depression or burnout and can be described as our society's "hidden patients" (Schulz & Beach, 1999). The contribution will present first findings from a sociological, qualitative study (observation and open interviewing) with this special group of elderly, informal caregivers in a rural area of Germany (Siegen and surroundings). The study is part of a larger, international and interdisciplinary research project called TOPIC (The Online Platform for Informal Caregivers), funded by European Commission and the Federal Ministry of Education and Research with partners in Vienna (Austria) and Troyes (France). First observations focussed on the every-day activities and routines within the households and underline the above-mentioned challenges for the informal caregivers in respect to time, energy and attention. Beyond that, the caring persons expressed the need for help in our talks, and not only in terms of financial assistance as often proposed by social institutions, but also for information and emotional support. This point is especially interesting from our point of view as we observed some people's difficulties to express their feelings respectively their own needs.

HALVORSEN, RUNE (NOVA Norwegian Social Research)

#### *Looking for a Balanced Treatment of Successive Generations: What Can Social Policy Learn from Perspectives on Sustainable Development?*

This paper argues that social policy scholars have good reasons to engage with the literature on *sustainable development* when analysing the challenges of how to make policies and welfare states *sustainable*. While many analysts have discussed the need to ensure the sustainability of welfare states and concerns for future generations, they rarely spell out the conditions for achieving welfare sustainability or provide an adequate theory of what such sustainability involves. Attempting to address these shortcomings, the paper asks what the scholarship on social policy can learn from perspectives on *sustainable development*.

In a European context, current debates on the need to create sustainable welfare states and how to promote sustainable development both raise difficult issues of intergenerational fairness and governance problems including tensions between policymaking and democratic legitimacy. The mantra is: 'for a better future, citizens must make sacrifices today!' Thus, the proposed paper is premised on the view that these areas intersect in important ways. However, they also differ, since generally questions about the welfare state are treated as problems of social/economic policy while debates about sustainable development put concerns for the environment at the centre. Hence, linking the rich literature on sustainable development and the notion of sustainable welfare states, promises to bring new conceptual and empirical insights into the debate about welfare state futures.

The paper first introduces the notion of sustainable development. Next, we discuss how we can enrich the conceptualisation of welfare sustainability by taking on-board a broader sustainable development perspective. In addition, we ask how we might transform this improved definition into operational indicators which enable cross-national comparisons. Third, in view of the framework developed we tentatively compare a set of European countries. In conclusion we address the implications our framework has for the question of intergenerational fairness, and we highlight avenues for future research.

**SCHRECKER, CHERRY\*** (Université de Lorraine/2L2S,  
[cherry.schrecker@univ-lorraine.fr](mailto:cherry.schrecker@univ-lorraine.fr))

### *(How) Does "Home Hospitalization" Transform The Relationship Between Patients and Healthcare Professionals?*

"Home hospitalization" was officially instituted in France by an act of parliament in 1970. It has been largely developed over the last ten years.

Two major arguments are advanced in its favor of this mode of healthcare. The first, is that this form of hospitalization is chosen by patients who prefer to undergo long-term treatment (often with a fatal outcome, as many of those concerned are undergoing palliative care) surrounded by their families. The second is that of its cost-effectiveness. This factor is important in a traditionally public-dominated health service which is presently under pressure to comply with managerial objectives more often found in private enterprise.

Our ongoing empirical study, carried out between 2012 and 2014, in a service of home hospitalization situated in a French province, has revealed the complexity of the situation which, among other things, transforms the domestic environment, exerts pressure on the carers (usually other members of the family) and transfers running costs to the home. As far as professionals are concerned, it is sometimes difficult to conciliate professional practice and the domestic environment. Various pressures on practitioners seem to reinforce prescription of this mode of care.

If home hospitalization does transform the relationship between healthcare staff and patients, this does not necessarily "empower" the latter or otherwise reverse hierarchical relations. As is usual in human relationships, inequality is not a two dimensional phenomenon. On some counts home hospitalization may reinforce structures of inequality, whilst modifying them on others. With reference to interviews with professionals and patients and observations carried out in the home and the work base, I will show the complexity of the adjustments made by all participants whose actions respond to diverse and conflicting pressures; economic, moral and relational, among others.

### *In The Shadow Of Alfred Schutz: Two "Ordinary" Sociologists In Extraordinary Circumstances*

Peter Berger (interviewed at Boston 22<sup>nd</sup> October 2010) has qualified the three lecturers at the Graduate Faculty who most influenced both him and Thomas Luckmann as the "Holy Trinity". The triumvirate was composed of Carl Mayer, Albert Salomon and Alfred Schutz. Though the latter has acquired a considerable reputation posthumously, Mayer and Salomon, apart from a short mention in the introduction to *The Social Construction of Reality* have been very little published and have remained almost entirely unnoticed. It is in this sense that they can be qualified as "ordinary" (that is to say not renowned) sociologists.

Their ordinariness contrasts with the extraordinary circumstances which affected their lives. Both Mayer and Salomon studied and eventually obtained positions in German universities during the first decades of the 20<sup>th</sup> century and both emigrated to the United-States at the beginning of the 1930s to become members of the *Graduate Faculty* of the New School for Social Research (Salomon was Jewish and Mayer married to a Jewish woman). Archival material, the few published documents available and my interviews with Berger and Luckmann lead me to suggest that the reasons for the lack of impact differ. Though Mayer headed a research project on religion in Germany he never succeeded in publishing the results of his study. Salomon's work was largely theoretical and did give rise to some publications; others were rejected as inappropriate for American audiences.

By contextualizing the production of these two men I will try to explain some of the reasons for their academic in-success. Where they really so "ordinary"?

This will of course lead me to examine the criteria by which success is established in academia.

## RC04-98.9

**SCHREYER, FRANZISKA\*** (Institute for Employment Research,  
[franziska.schreyer@iab.de](mailto:franziska.schreyer@iab.de))

### *Legal Status and Inequality: Young Tolerated Refugees and Vocational Training in Germany*

Young migrants unsuccessfully claiming refugee status may be 'tolerated' in Germany. This specific legal status positions them in the host society nearly at the end of a vertical model of civic stratification, implying restrictions in accessing central institutions of the society such as the education system or the labour market. Besides, they are constantly facing a high risk of being deported to the country of origin.

However, the impending shortage of the skilled workforce in Germany enforced a new political discourse. As a consequence young tolerated refugees hesitantly have been re-defined as educational subjects and labour market resource. Despite the still persisting inequalities in the access to vocational training of tolerated youths as compared to young citizens or migrants being granted a residence permit, legal changes at the federal level have been introduced since 2009. They are to reduce vocational training boundaries for these residents with the highly precarious toleration status across Germany. But empirical evidence from our ongoing research project reveals a heterogeneous application of the new regulations. Especially migration authorities may act as institutional gatekeepers either supporting or constraining their access to vocational training. This results in regionally unequal vocational training chances for tolerated youths that cause new inequalities within this group.

What does the twofold inequality regarding the access to vocational training mean for other spheres of the social life and future prospects of tolerated youths? This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative regional case studies that are based on document analyses, semi-structured individual interviews and group discussions with experts. The findings argue for an enhanced consideration of institutionalised inequalities that are bound to a person's legal status in the sociology of education.

### *Organized Movement or Moving Organization – the Case of the World Social Forum*

Since the 1990s there has been a significant growth in the number of Non-Governmental-Organizations (NGO) operating on a transnational level. This was called 'NGO-Boom' and was largely considered as a positive sign towards an emerging *global civil society* (Keck und Sikkink 1998). Some of these 'new' transnational civil society actors organized themselves to influence the politics of international institutions and to challenge multinationals. Doing 'lobbying' requires an effective and efficient way of organization to compete with transnational companies. The organizational forms of these actors are often comparable to those of private business companies (Mintzberg und Westley 2000). Other civil society actors deny any form of hierarchical organization and experiment with horizontal ways of organizing themselves. One example is the World Social Forum (WSF) with its 'open space' concept (Whitaker 2007). In 2001 a transnational coalition of civil society actors organized the first WSF event. The last WSF took place in Tunis (Tunisia) in spring 2013. In this paper I will present some insights of an in-depth ethnographical research on the organizational forms of the WSF. I will present the major mechanism and structures which help to stick together the transnational coalition who organizes the WSF since 2001. By doing so, I will discuss the possibilities and limits of the WSF between *organized movement* and *moving organization*.

### *Breaking the Silence at Spanish Universities*

This paper focuses on the impunity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem and most prestigious universities have implemented measures to combat this phenomenon, in Spain it is still silenced although first steps have demonstrated the need for researching this phenomenon. The project "Gender-based violence in Spanish universities" funded under the Spanish National RTD Program (Valls, 2006-2008) was pioneer. For the first time in Spain, a questionnaire with 1083 students, 13 in-depth interviews with professors and university staff, and 16 communicative daily life stories with students on this issue were conducted. The results, similar to international numbers, show that a high percentage of the participants knew someone or have suffered some kind of situation of VAW at the university. Besides, it evidenced that people supporting the victims of VAW become "second order victims". This research was crucial in breaking the silence on VAW in Spain.

ish universities and has also suggested evidence-based actions to fight against it. Once the results had been presented on a national level, universities increasingly started implementing actions to address VAW, asking CREA research for support. As a result of this process some faculties have introduced protocols for cases of harassment. This is also due to the political impact of the results since the Law for effective equality between women and men (Spanish Government, 2007) obliges all public offices to establish procedures on cases of harassment. Even if there is still resistance to changing these dynamics, the article in the Spanish law for equality is an important step to challenging the dynamics of gender, power and knowledge at Spanish universities.

#### *Preventive Socialization from Zero Years*

In this paper, we present the violence prevention programs implemented in Schools as Learning Communities. These schools have been analyzed under the INCLUD-ED project (FP6 of the European Commission) and are outstanding for the great results in very diverse social areas going beyond positive academic results. Research on violence against women (VAW) highlights that patterns linked to it are included in the socialization processes. The results presented here stem from research on preventive socialization that emphasizes the social character of love and the attraction towards violence (Gómez, 2004; CREA, 2010-2012). According to this research line, the existence of a mainstream socialization that promotes the models of attraction linked to violence implies the need to socialize from early childhood in attraction to relationships that reject any kind of violence. Socialization in accepting violence that can lead to future VAW is prevented. According to a common analysis of violent actions in early childhood such as a bite is considered as an emotional expression and as a consequence the victim is forced to receive a kiss from the perpetrator as a sign of excuse and forgiveness. These actions socialize in the acceptance of the violence and set the bases for future gender violence. Zero tolerance of violence from zero years is the premise to socialize into relationships without violence and to ensure the development of childhood free of violence. In this line, in Schools as Learning Communities any kind of violence is rejected and children are socialized in this general rejection of violence and learn to avoid violent behaviors. They also learn the values of respect towards others and to insist themselves in being treated with respect. Consequently Schools as Learning Communities contribute to preventing the mainstream socialization in attraction towards violence.

#### *Globalized Management Practices and Local Cultures*

The paper will give an overview of management practices in different world regions based on the existing literature in the social and economic sciences and case studies. One of the main questions will be: What is the future of "management"? The global discourse on management focuses on the principles of the market that have been introduced in all spheres of social life through university programs, training seminars, organizational strategies, government policies, and personal counseling literature. This knowledge is produced, distributed, and consumed by social actors in the South, North, and East. These forms of disciplinary knowledge have contributed to the creation of a world controlled by managers and management technologies.

One of the most important societal influences in the last quarter of the 20th century was this growing importance of the management discourse. There was a spread of the idea of management from large firms to the professions, NGOs, the public sector, and the daily lives of social actors. This management discourse consists of a given language and practices that global players produce in the socio-economic world. This discourse is so widespread today that it seems difficult to escape its grip.

This paper gives an overview of its increasing propagation in non-western societies. One aspect of this research is: How do groups cope with the global discourse of management in a globalized world? For the last twenty years, management practices were propagated throughout the globalized world but only few studies on its local acceptance exist even if there are studies on the problematics of market fundamentalism (Albers *et al.* 2006). Because of the challenges related to globalization and the global financial crisis, it is important to understand this discourse of management and its functioning in global companies in order to better plan future developments of the socioeconomic world.

#### *Social and Civic Dialogue: Confronting The Challenges Of The Post-Neoliberal Economy*

This paper will show that social dialogue establishes a balance of bargaining power in the employment relationship. Globalization has changed the labor markets and contributed to a decline in union membership in a number of countries. It seems that the expansion of global production and the increasing mobility of capital has caused a shift of bargaining power in favor of employers. Growing inequality globally and within a number of companies and the growth of insecurity among those excluded from social dialogue are the empirical expression. In this situation, social dialogue remains a mechanism to protect workers and ensure stable labor relations for employers. Several countries have been able to use it to find ways out of the recent financial crisis: they were able to preserve jobs and to facilitate adjustment of companies.

The analysis of social dialogue in the world realized in this paper will reveal new aspects of social dialogue closer to civic dialogue. If we concede that the current democracy can not be limited to the distribution of resources, but should also include a discussion of the means of production, the dominant idea is that the business world can not be separated from society and that it must therefore participate in the discussion on the objectives of the economic world. The increasing flexibility of the labor market requires what A. Sen and Hirschman called the capability to express oneself so that workers and capital owners together may introduce new thinking about the business world. If social Europe becomes a reality, a new model of prosperity must be built with ideas and actors from civil society. To do this, the organizations of employers and workers and the states should create new initiatives and adapt new strategies to meet the challenges of the 21st century.

#### *Christian Enclaves, Freedom of Education and the Quality of Time: Contested Secularity in the Netherlands*

The Netherlands are highly secular –only one third of the population being a church member; euthanasia and same sex marriage are broadly supported – against recurrent religious opposition. In some areas though, one finds an almost reversed religious-secular setup: In the Dutch 'Bible Belt' orthodox reformed groups strongly influence the organization of public life. Here it is not about accommodating religious minorities – rather, given the majority relations, Christian legal traditions and the structural pluralism of Dutch secular order, these places constitute religious counter publics.

At the same time - due to e.g. population mobility - these places are changing, thereby becoming *contact zones* (Pratt, 1991) of religious and secular lifestyles. Central sources of conflict are Sunday rest and religious schools. The secular-religious divide becomes more complex with regards to non-western migrant populations and their (socio-economic) integration.

These secular-religious conflicts help discussing two central questions regarding the public sphere in religiously diverse countries: 1) what are (competing) notions of the public and how are they related to religious-secular history and 2) in what way can the state allow for multiple publics without failing to maintain social cohesion.

I discuss the conflict around Sunday openings and religious schools with regards to a changing Dutch secular model. Further I sketch how local contexts become arenas for conflict over secularity, and how these conflicts differ according to context. Based on my empirical findings I discuss the relation of secular models with religious/secular majority relations as well as the functioning of contact zones in stipulating secular identity formation.

#### *Transforming Struggles: Organizational Modes, Mobilization Outcomes, and Occupy Wall Street*

Encampments at Zuccotti Park and elsewhere have been violently dismantled, the mass media spotlight moved on, the spectacle stopped. Fissures between different tactical and organization approaches widened. Yet, the mobilization continued through manifold spin-offs, ranging from Occupy Sandy, which provided rapid relief in response to a devastating hurricane, to groups such as the Alternative Banking Working Group, which worked on new policy proposals, and Strike Debt, which developed new kinds of direct action. Although Occupy Wall Street inspired public debate and imagination, there are hardly any tangible policy achievements while recent data point to even further increasing socio-economic inequality. Assessments of the leaderless, General Assembly-based organizational form were divided over whether these were the essence of a prefigurative politics for real change and attracting participants or whether the lengthy, consensus-requiring deliberations prevented tactical efficiency, liaisons with large unions and NGOs,

and negotiations with the political establishment to win concrete legislations. What lessons can be drawn from the Occupy experience so far? How can social movement theory help to explain the rise, fall, or metamorphosis of the mobilizations? How do existing theories need to be revised in light of the new empirical experiences and the challenges ahead? Multi-method focus on the experience in select cities shows not only enormous local variation but also varied modes of connecting sites of struggle. The paper concludes with a discussion of options for future action.

#### *Bothering Pays for Sociologists*

Bothering pays.  
Segmentary societies bear inequality. All of them. Urbanized even more. Cities have proven to be inequality carved in concrete and stone.  
The more abundance of material culture, the more inequality. Chiefs in tribes have to bother.  
They remain chiefs only if they impress bothering and solving conflicts. Bothering glues even the smallest tribe.

Today's large scale social units call themselves 'modern' to claim their qualitative difference to chiefdoms and the like. Here, nobody even considers an end of inequality, it is purely unthinkable as necessarily linked with the total dismissal of the material abundance (which could and should be achieved, plans have been made).

More, bothering has become a specialized task, a branch, a profession.  
Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother.

This is why we bother about inequality – sometimes. Have a happy conference!

#### *Social Movements and the Political Invention of Future. Considering Recent Argentina*

During the 1990's, neoliberal policies drove Argentina to huge transformations of the state, economy and labour. The process left a large number of poor and unemployed people and concluded with a monster crisis in 2001. During that time, there was a very important change in the field of social movements. As a consequence of the neoliberal policies, labour movement (which has been the most important movement in whole country contemporary history) diminished roughly its statistical presence in social mobilization. This happened in 1993 and in 1996 a new kind of movements grew up. That was the case of territorial movements, established in the poor neighbourhoods and small towns in a few provinces. They were composed mostly by unemployed, who asked for elementary rights to survive. By the end of the century those movements (often known as *piquet-eros*) reached the main cities suburbs and constitute the most important social and political agent in the country. Since 2003, when a new President was elected, the country began its normalisation. With the recovery of employment, Unions regained strength and power, but the territorial movements, even diminished, didn't disappear. They have been recognized by political agents, some of them entered the parties, other even the state and many of them still have the capacity to mobilize and defy political system, at the local, province or federal level.

In this paper we analyse this process and consider why and how these new social movements have emerged as political agents and what influence they had in the recent political period. To do that we use a data base of our own (created by the *Grupo de Estudios de Acción Colectiva y Protesta Social*, that I lead). It has 10000 cases of contentious mobilization actions and goes from 1984 to 2011. The paper include statistical and qualitative analysis.

#### *Culture and Morality: Intercultural Interactions during Military Deployments*

In peacekeeping and training missions foreign soldiers come in close contact with the local population. How do they experience this intercultural contact? To what extent do they experience a conflict between their moral principles and the moral principles of the local population? To what extent are (some of) these principles culture specific or are universal moral principles violated? And what does this imply for military missions in different cultural contexts, such as the Kunduz Police Trainings Missions?

We focus on the close relation between morality and culture in military deployments. The main issue in this paper is twofold, namely theoretical and practical. The first one considers the relation between morality and culture according to leading theories on these concepts. The second one is about the extent to which military personnel experience the relationship between morality and culture (whether or not conflicting) during their deployments as described in literature. We study these issues on the basis of research data collected during and after military deployments.

#### *'Bastards' in a Globalizing World: Subverting Ethno-Racial Hierarchies*

Whether phenotypical or cultural, perceived human difference spawned boundaries of belonging and exclusion along hierarchical lines. The binary or rigid ethno-racial categorization created through essentialist conceptions of 'purity' was and still is intolerant of intermediate forms. These are generally seen as subversions of the prevailing classificatory scheme. The ensuing defense of a rigid classificatory scheme, especially by authoritarian societies, range from nihilation to the enforcement and assignment of 'place' to these 'deviants in the existing hierarchy'. In a globalizing world of dense patterns of human communication, interaction and movements across geographical, social and cultural boundaries these schemes are manifestations of entrenched power relations that have lost their meaning. Hybrid humanity and immigrants who do not fit pre-existing categories are socially and legally forced into denigratory niches symbolic of their low status and diminished life-chances. The paper examines the resulting alienation of 'misfits' and the ways they resist and change authoritarian hierarchies in a globalizing world.

#### *Global Garlic and Its Labor Consequences*

This paper investigates the dynamics of China's integration into global commodity chains and a simultaneous race to the bottom. I explore this globalization-labor topic with a case study of garlic. Even in the garlic kingdom, the race to the bottom is visible.

1) China took off as the global exporter of garlic around 1982 and has been the dominant exporter since then. In 2009, 84 percent of the globally traded garlic came from China.

2) China's 2002 adherence to WTO allowed it to export to previously closed or high-tariff markets such as the United States. In 2002, China surpassed Mexico in capturing the U.S. market.

The race to the bottom began with North-South competition. As the U.S. economy continued to contract firms sought even cheaper labor, moving significant parts of the production process to Asia. Such moves threatened to undermine Mexico's payoff from NAFTA. This capital mobility unleashed a race to the bottom in labor standards and working conditions. It is not possible for every nation to be a net exporter: one country's gain is another's loss. Although they do not initiate the race, governments become complicit because they, as much as foreign investors, want to hold onto their "competitive advantage" of cheap labor, lax working conditions, and lenient environmental regulations.

The South-South competition is reflected in the shifts in trade and investment flows. China's export and foreign investment gains and Mexico's losses are not simply those of two nations acting independently.

Labor conditions are oppressive, but firm owners, processors, exporters, and governments are not alone in their responsibility. 'Bottoming out' is a response to global importers who search for better prices.

In this research I investigate the conditions of garlic workers in China and Mexico as they relate to U.S. producers and the import market.

*From Statistical Category to Social Category: Organized Politics and Official Categorizations of 'People with a Migration Background' in Germany*

Social scientists disagree over whether it is acceptable for states to collect statistical data on the racial or ethnic composition of their populations and thus institutionalize these differences. Seeking to reconcile normative concerns with political desires to combat discrimination and reduce social inequality, some countries, like Germany, have chosen the 'migration paradigm' (i.e. using place of birth and parents' place of birth to focus on the act of international migration) over the 'ethnic paradigm' (i.e. using phenotypical markers and/or cultural and linguistic links to a particular national group) as a 'color-blind' measure of difference. However, while much attention has been paid to categorizations deriving from survey and census variables, debates about whether and how to measure immigration-related population differences often ignore other processes of categorization operating at the nation-state level, such as interactions in the arena of organized politics.

In this paper, we expand the terms of the debate by examining the relationship between statistical classifications and their mobilization in political interactions, in order to examine the validity of the distinction between the 'migration' and 'ethnic' paradigms in population statistics. The category of 'persons with a migration background' (*Personen mit Migrationshintergrund*), which was introduced in the German microcensus in 2005, serves as our case study. Drawing on a qualitative content analysis of 60 parliamentary documents originating in the years 2005 to 2013, we show that the way the migration paradigm is deployed by representatives of the state differs from the statistical categorization: it is implicitly ethnic, with strong class associations. Insofar as the social categorizations created by elected representatives out of statistical categorizations facilitate the construction of a stigmatizing public image, they may be of personal and material – not just symbolic – consequence to individuals thus categorized.

**SCHWARZ, CHRISTOPH\*** (Frankfurt University of Applied Sciences, [schwarz@e-mail.de](mailto:schwarz@e-mail.de))

*Educational Policies and Questions of "Inclusion" in the Middle East: The Case of the Palestinian Refugees*

Palestinian refugees are the only ethnically defined refugee group worldwide that has an UN organization dedicated exclusively at its needs: the UNRWA (United Nations Relief and Works Agency), whose mandate originally was limited to a three year relief program for the 750 000 Palestinian refugees who in 1948 fled the territory of what is nowadays Israel. By now, UNRWA is catering to the third generation of those refugees, which, due to the demographic development, today comprise almost 5 Million persons.

Regarding questions of inclusion and educational policy, UNRWA represents a unique case: financed by Western governments, the agency has set up 700 schools in the West Bank, Gaza, Jordan, Syria, and Lebanon, thereby providing free education to almost 500.000 children and youths – separated from the respective national school systems, and drawing on a staff of 22 000 teachers who are mainly refugees themselves. The international debate on inclusion has also had its repercussions in UNRWA, and in January 2013 the agency presented its own concept of inclusion. However, because UNRWA is officially an aid organization without a political mandate, the paper does not explicitly broach the issue of the social exclusion (and victimhood to violence) of their clients in the "host states".

This presentation aims at depicting an outline of the paradoxes of UNRWA as an organization when it comes to "inclusion"; excerpts from interviews will illustrate the biographical relevance of UNRWA education and the exclusion of Palestinian refugees.

**SCHWARZ, CHRISTOPH\*** (Frankfurt University of Applied Sciences, [schwarz@e-mail.de](mailto:schwarz@e-mail.de))

*The Only Constant Thing Is Change? Education, Adolescence, and the Need for Innovation in Late Modernity*

Educational policies in many countries increasingly aim at preparing pupils for a globalized world of permanently accelerating social change; the ideal type of subjectivity they produce is a skilled, self-employed entrepreneur, flexible enough to adapt both life plan and identity to the always changing needs of global markets. For a sociology of education which aims to analyze all aspects of these contradictory processes, a socio-psychological concept of adolescence offers an interesting perspective: here, adolescence is considered the life phase most directly associated with individual change as well as social innovation. Educational institutions in the classic modern nation state aimed to contain and channel the dynamics of adolescence by offering youths a "psycho-social moratorium" (Erikson) or "potential space of adolescence" (King). In contrast to rituals of initiation

in traditional communities, modern nation states thus made use of the innovative potential of adolescence. Following debates about education in Germany and other European countries it seems that on the one hand adolescents are expected to be "innovative", while at the same time curricula demand an always increasing workload and integrate working and learning more intimately or anticipate work environments, which makes it more and more difficult to consider high school any kind of "moratorium" – especially as it is a decisive phase for social mobility.

I want to present and discuss several theses regarding the relationship between educational institutions and the dynamics of adolescence, both in Western and (de)colonized societies.

**SCHWARZ, ORI\*** (Bar-Ilan University, [ori.schwarz@gmail.com](mailto:ori.schwarz@gmail.com))

*The Symbolic Economy of Authenticity As a Form of Symbolic Violence: The Case of Middle-Class Minorities*

In contemporary societies, the language of authenticity has become central to the organization of work, manners, social ties, and most interestingly: social and moral evaluation. The paper explores how the ethic of authenticity informs symbolic economies of worth in Israel and the US. These new symbolic economies differ from Bourdieu's: mastery of legitimate practices and dispositions may indeed enhance the social worth of some actors, but also devalue other actors, those whose class habitus and identity are considered 'inauthentic' independently of their performance. Based on analysis of wide empirical literatures on raced and classed identities in Israel and the US, the paper explores how this symbolic economy disadvantages social minorities. When dominant ethnic groups monopolize the symbolic recognition of authentic middle-classness, middle-class members of dominated ethnic groups are at risk of being accused of mimicry ('acting white', 'Ashkenazization'). This also applies to second-generation middle-class actors: following the racialization of class culture, their deeply entrenched middle-class tastes and dispositions may be suspected as inauthentic. While dispositions are often acquired in classed contexts and their distribution is hence class-based, the recognition of authenticity often follows race/ethnicity lines. In some cases, middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Far from being an emancipatory power that disempowers whimsical actors from social structure, the ethic of authenticity is embedded in structures of unequal recognition, and may thus encourage actors to participate in their own subjection. Inequalities in recognized authenticity are discursive products of the same symbolic power that naturalize hierarchies, yet they rely on ascriptive categories more than embodied habitus. Studying these inequalities as a unique form of symbolic violence necessitates expanding the Bourdieusian framework while sticking to its mission.

*Submit, Exit or Change: Strategies of Coping with Generational Order(s) in a Transition Society*

This paper aims at conceptualizing problematic conditions of transitions to adulthood in the Central Asian country of Kyrgyzstan. Previous research in Kyrgyzstan has revealed that the social order in this society comprises a strong age- and gender hierarchy. Such restrictive generational order shows as well in my qualitative study of young Kyrgyz adults. Respondents describe experiences of inter- and intrapersonal conflict when their freedom of choice (concerning study subject, marriage partner, lifestyle) is confined by their parents. While this can be said to match Kyrgyz traditions and notions of "collectivistic" culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyzstani cope with such conflicts in a variety of ways which I divided into three categories: "submit", "change" and "exit". The first category refers to strategies which imply the submission of the young under the rule and decisions of the elders (mainly parents or parents-in-law). "Change" subsumes all those strategies with which the young manage to follow through with at least part of their personal aims, engaging in compromises, trade-offs or negotiations. With the last category "exit" I labeled attempts of full or partial escapes or withdrawals from the existing social order. Furthermore, my analyses indicate, that certain narratives are used to legitimize the respective strategies: While people who engage in "change"-strategies (paradoxically) often relate to traditionalized narratives, those who submit under others' demands in most cases deploy an individualized and self-related explanation. In the paper I wish to present the above concepts more closely, and to discuss the seemingly paradox patterns of applying and legitimizing solutions of intergenerational personal conflicts. Beyond that, I would like to discuss which implications such patterns have for the potentials and barriers of social change in a so called "transition society".

MAYERL, JOCHEN (University of Kaiserslautern)

*Identifying Sensitive Questions with Non-Reactive Methods*

Sensitive questions result in misrepresented responses and identifying those questions is a crucial task to get straight answers to sensitive topics. Using paradata as non-reactive data should reflect the uncertainty and the perceived social desirability while answering the questionnaire. By tracking response change and page change in addition to item non-response and response latencies, the researcher has a powerful tool to reveal exceptional response patterns in web surveys. In pretests these methods can also help to cut costs of further surveys that are usually used to identify sensitive questions and they can also show problems with wording and too high cognitive effort in earlier stages.

Non-reactive methods such as measuring response latencies and event tracking adds information to be analyzed without adding load to the respondents. Such events while filling in the questionnaire can be, for example, changing the page and selecting or changing an answer option. Tracking these events not only by time, but with multiple answers over time per item, view the process of completing the questionnaire instead of leaving the black box untouched, which is between handing out the form and getting the (final) responses. In this way it is possible to reveal answers of first choice, response change and page change as event types besides response latencies and the order of completion.

The paradata from a web survey is compared to data from a questionnaire about the perceived social desirability and threat of disclosure of the questions used in the former one. The response patterns uncovered by the event tracking should correlate with these sensitivity measurements. Sensitive questions should have, in addition to the occurrence of non-response, a) higher response latencies, b) multiple page views, c) more response changes and d) lower intra-item correlation between the first and final answer.

*The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across 21 European Countries*

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. During the last two decades a whole set of EU and national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While these policies usually are seen as separate, the first addressing discrimination, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

We will address this lacunae by looking at the impact of work, family and gender equality policies on vertical occupational sex segregation. The study starts with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 21 European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, female concentration at the lower end might be less affected. Since low representation of women at the top often is mirrored by a clustering of women in so called 'pink collar' service sector jobs, we will additionally include policies regarding low-wage work to cover their impact on occupational stratification among women. The multilevel model applied uses data from Multilink and the EU-SILC for the year 2010/2011. Concluding remarks will reflect on the complex interaction of welfare state policies, employment systems and women's labor market integration.

*The Tourist Experiences of Fathers*

The lack of research into fathers on holiday is a reminder that understandings of masculinities and gender relations in tourism are absent compared to other disciplinary areas such as family studies. Research on family holiday experiences is largely informed by feminist gender representations rather than examinations of femininities and masculinities. Previous studies highlight the never-ending physical and emotional work of motherhood both at home and when travelling with little acknowledgment of any gender-related constraints that fathers

might face. True gender scholarship requires a more critical appraisal of gender relations that is inclusive of the male voice in family tourism. There has been whole-family research highlighting the role of fathers in taking on primary responsibilities as entertainer of the children and facilitator of mothers' own interests (Schänzel and Smith, 2011) which requires further inquiry. However, research into fatherhood also needs to be more inclusive of diverse family forms and a range of fathering experiences, such as, solo-fathers, non-resident fathers and gay fathers. This study extends previous research into nuclear families and focuses on the family holiday experiences of fathers travelling with their children without the mothers. It will be based on 6-8 semi-structured interviews with a range of solo and non-resident fathers in Auckland, New Zealand and conducted after the summer holidays in January/ February 2014. Because of the explorative nature of this research an interpretative paradigm and in-depth interviewing is chosen. The aim of this study is to understand the experiences and meanings gained by single fathers travelling with their children. The findings of this research and comparisons to earlier research on nuclear families will be presented.

*European (Social) Science Policy-Making: Setting the Agenda of the Social Sciences and Humanities in the EU Framework Programmes*

The social sciences and humanities (SSH) funding schemes of the European Union (EU) framework programmes are the largest of their kind in Europe (Kastrinos 2010). The larger EU policy context has had direct impact on EU SSH research policy and indirect impact on national research funding strategies. Setting the agenda of research policy takes place on two levels in the European Union: first, the definition of large thematic priorities, funding instruments, rules of participation and the overall budget available to the different domains are defined in the multi-annual EU Framework Programmes. Second, the precise topics, research questions and favoured approaches are defined in the regularly updated work programmes.

The paper will discuss how the agenda is set in EU SSH research policy and in particular focus on the role of the Treaties (Rome, Amsterdam, Maastricht, Lisbon) in framing SSH research policy since FP4 (1994-1998), when a SSH priority was first introduced. It will be shown that the (geo)political landscape of Europe and the degree of European integration has first limited and later facilitated SSH subjects. It will also consider how changes, first in discourse and later in governance, affected practices of stakeholders (researchers, research associations, funding bodies) and public participation in setting the agenda for the SSH. The process of setting the agenda is understood on the one hand as a social practice of knowledge production, in the sense that setting research priorities and especially defining more precise calls for proposals on a political level also influences the approaches and results of SSH research. On the other hand it is understood as a form of political bargaining, where public and stakeholder participation is taking place in the political sphere. The research relies on existing studies, interviews with Commission officials and national contact points, participant observation and document analysis.

*Leaning Towards The Middle? Collective Manifestations Of Normative Beliefs In Developed Countries and Their Implications For Developing Countries*

There is a vast and ongoing debate on the middle class in the field of political sociology. Undoubtedly, studies on its role and functions should not be restricted to developed societies as the global importance of developing countries (with emerging middle classes) will definitely be growing.

We would like to take up this understanding by contributing a piece of ground-work research that focuses on the middle class in comparatively developed countries because it may serve as some sort of 'reference frame' for an improved understanding of socio-structural driving forces perceptible in developing countries.

With these preliminary reflections in mind, we use data of the *International Social Survey Programme* (2009; module "social inequality") in order to compare perceptions and evaluations of stratification realities and aspirations. On the basis of five distinct types of stratification, respondents of 26 primarily European countries were asked for their assessments regarding the current and the desired stratification of their respective society. By performing multinomial logistic multi-level regressions we identify individual- and country-level determinants.

Concerning *stratification realities* gender, age, education and (subjective) socio-economic status prove to be significant predictors. On the country-level, the objective socio-structural shape (income-based percentage of lower, middle and upper class), the GDP per capita and social expenditure (as a percentage of GDP) turn out to be relevant. With regard to *stratification aspirations* results indicate that respondents in the majority of countries under study opt for a society with a broad middle segment – in fact, irrespective of any stratification realities. Thus, context effects impact solely on perceptions of stratification realities, whereas we observe a universalistic preference for the 'middle class society'.

In our view an understanding of the normative leaning towards the middle class in developed countries may improve the comprehension of mental mechanisms and orientations in developing countries.

**SCODELLARO, CLAIRE\*** (Université de Lorraine, [claire.scodellaro@univ-lorraine.fr](mailto:claire.scodellaro@univ-lorraine.fr))

#### *Le "Libre Choix" Des Patients Dans Une Relation Plurielle Et Diachronique*

Le droit des usagers au « libre choix », tel qu'il est formulé dans la loi du 2 janvier 2002 en France, semble sous-tendre que les patients s'inscrivent dans une relation duale avec les médecins au sein de laquelle ils seraient des sujets singuliers, rationnels et autonomes dans leurs décisions. Les travaux sociologiques ont cependant montré d'une part que la réalisation de ce modèle bute contre des obstacles notamment liés à aux positions de classe, genre et âge des patients et aux situations de crise qu'ils rencontrent ; d'autre part que les malades sont rarement seuls dans leur parcours de soins mais souvent aidés par des membres de l'entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous faisons donc l'hypothèse que les décisions de soins doivent être analysées dans le cadre d'une relation *plurielle* autour du patient, qui questionne la voix au chapitre de chaque acteur. Par ailleurs, les choix sont théoriquement révocables à tout moment, ce qui invite à les analyser de manière diachronique.

Notre recherche porte, dans ce cadre, sur les décisions de primo-entrée en hospitalisation à domicile (HAD) et de sortie du dispositif. En fort développement en France sous l'impulsion des pouvoirs publics, l'HAD est censée constituer une solution économique pour les finances publiques et répondre au souhait des malades d'être soignés chez eux. Elle s'appuie, de fait, sur la disponibilité d'un entourage aidant dont le consentement à l'HAD n'est cependant pas prévu par la loi.

A partir d'un matériau qualitatif (entretiens auprès de professionnels d'HAD, observation de réunions de coordination, monographies de patients), et d'un matériau quantitatif, nous montrons si le « choix » de l'HAD relève d'un ordre négocié entre les différents acteurs ou s'il relève d'une magistrature médico-sociale de la part des professionnels de santé.

**SCOTT, BERNARD\*** (Centre for Sociocybernetics Studies, [BernCES1@gmail.com](mailto:BernCES1@gmail.com))

#### *Reflections on the Sociocybernetics of "Cybernation" and the Emerging "Cyber-Nation"*

The term "cybernation" refers to the existing and imminent cybernetic technologies of control and communication, data storage and retrieval, social media, user modelling and intelligent support for man-machine conversational interaction. The term "cyber-nation" refers to the emerging internet-based communities that promote social change and, explicitly or implicitly, practice forms of non-hierarchical (heterarchical) democracy. Well-known examples are Wikipedia ([http://en.wikipedia.org/wiki/Main\\_Page\[1\]](http://en.wikipedia.org/wiki/Main_Page[1])), Avaaz (<http://www.avaaz.org/en/>) and Change.org (<http://www.change.org/en-GB>). A less well-known example is the Zeitgeist movement ([http://en.wikipedia.org/wiki/The\\_Zeitgeist\\_Movement](http://en.wikipedia.org/wiki/The_Zeitgeist_Movement)), that developed from the Venus Project ([http://en.wikipedia.org/wiki/The\\_Venus\\_Project](http://en.wikipedia.org/wiki/The_Venus_Project)), initiated by the late Jaques Fresco and Roxanne Meadows. Fresco coined the term "sociocyberneering". There is a Facebook page dedicated to his work (<https://www.facebook.com/pages/Sociocyberneeringworld-a-better-place/175409582509717>). A well-known example of an hierarchical organisation that works towards social change through cybernation is Google (<http://www.google.org/>). There are many other organisations that use the internet to promote their particular vision of global harmony and utopian futures. A useful list can be found here: [http://www.peacefromharmony.org/?cat=en\\_1](http://www.peacefromharmony.org/?cat=en_1). Questions addressed in the paper include:

- What is the current state of play?
- What does the future hold?
- What influences are at work in terms of checks and balances on privacy and social control?
- Who owns cybernation (hardware, processes, data)?
- How viable is the concept of a cyber-nation in the context of existing dominant belief systems and institutionalised practices?

LAINE, JUSSI (University of Eastern Finland)

#### *Border Regimes in the European Neighbourhood: Is Their Multilevel Negotiation Possible?*

Tensions between securitisation and cross-border interaction have been a major focus of European border studies - particularly as a result of human suffering and deaths of immigrants "sans papiers" attempting to enter the EU from the South and East. Perceptions of a Fortress Europe and a unilateral imposition of border security regimes in many ways challenge the European project of cross-border and regional partnership with its neighbours. As part of the negotiation of such regional partnerships (e.g. within the scope of the European Neighbourhood Policy - ENP) security and border management have been defined as policy areas conducive to "co-development" and, to an extent, "co-ownership". Yet it is unclear to what extent a true multilateral and multilevel process along these lines has materialised or is indeed possible under present circumstances. The paper will explore the evolution of new border regimes between the European Union and its eastern neighbours. It investigates the negotiation of border regimes between the EU and Russia, Ukraine and Moldova, we will identify to what extent the co-ownership and/or co-development of border policy has been possible. Do the EU and its neighbours indeed share common interests in terms of border-related issues, including security? We will also investigate the extent to which local development concerns have been considered as part of negotiating such border regimes and the possibilities for greater local participation in future.

**SCRASE, TIM\*** (Australian Catholic University, [tim.scrase@acu.edu.au](mailto:tim.scrase@acu.edu.au))

#### *In the Middle or in a Muddle: Socio-Cultural Politics and the Indian Middle Classes*

The state of middle class culture and politics in India is complex and often contradictory. While many among the estimated 200 million middle class have experienced upward economic and social mobility over the past 20 years, large numbers of salaried professionals in government service and small companies have seen their status and incomes decline relatively over the same period of time. As such, we see notable schisms within the middle class: the new rich and the entrepreneurs as compared to traditional salaried workers; the middle classes in India's many regional towns, as opposed to those residing in vast urban metropolises; and differing cultural outlooks from generation to generation, region to region. Interesting political differences are also evident with many of the "traditional" middle classes, for instance, exhibiting a cultural conservativeness while holding politically progressive views. Based on extensive research among the Indian middle classes over the past 15 years, I contend in this paper that the middle classes are not homogenous, are deeply divided politically and culturally but nevertheless they remain significant as brokers of political and cultural change within India. Examples drawn from Kolkata and Darjeeling in West Bengal will be the basis for the discussions in this paper.

#### *The Paradoxical Politics of South African Labour: Unions and the the Fight Against Precarity*

As neoliberalism has undermined formal wage work across the global South, labor scholars have increasingly turned their attention away from organized and formally employed workers and towards the growing sections of the "precariat". A large literature has blossomed examining the politics of precarious, informal, and unemployed workers. Behind this precarious turn in labor studies is an assumption that these workers will be the primary source of a new labor politics that looks beyond issues of wages and working conditions and towards broader questions of livelihood and social reproduction. However, in South Africa, while precarious workers' movements have remained disparate and unorganized, formal workers unions have taken up a range of issues---such as a universal national health insurance, a basic income grant, and land reform---that constitute a new politics of the precarious. This is surprising given that many of the policies that unions advocate would involve the subsidization of precarious workers' livelihoods by the minority of formally employed organized workers. In order to explain this paradox the paper draws on nationally representative household survey data as well as one year of field work in three rural areas and one major urban center. The data show that the decline of formal wage labor has led to an increasing social and economic interdependence between large sections of South Africa's precarious and formally employed workers. The case shows the importance of understanding the ways in which the rise of precarity has reshaped not only work, but also workers' house-

holds and broader social lives. It also shows the role that "old" organizations can play in the "new" politics of labor.

**SEDA, FRANCISIA S. S. E.\*** (University of Indonesia, [saveria09@yahoo.com](mailto:saveria09@yahoo.com))

#### *The Triangular Relations of Society, State, and Market in the Context of the Processes of Contestations Between Globalization and Decentralization: A Sociological Perspective*

This paper gives a general description of the triangular relations between Society, State, and Market from a Sociological Perspective. Within the context of this triangular relations, a major challenge facing contemporary Indonesian Society will be explained, which is the social problem of Poverty and Social Exclusion. Before using the triangular relations between Society, State, and Market as a conceptual analytical tool for explaining poverty and social exclusion, there are several important caveats to be addressed. These important caveats are related to the relations between Nation-State, and Nationalism within the context of the processes of contestations between globalization and decentralization (democratization on the local level). The discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. The paper is based on primary data using qualitative methodological approach and a specific case study from Indonesia.

#### RC18-325.13

**SEDA, FRANCISIA S. S. E.\*** (University of Indonesia, [saveria09@yahoo.com](mailto:saveria09@yahoo.com))

#### *When There Is No State*

The Decentralization processes in the context of this case study have not yet resulted in a more flexible and decentralized structural relations between the Central Government and the Local Governments (both at the Provincial and at the Regency Levels) generally and also specifically in the Industrialization Strategy in The Oil and Gas Sector (1999-2009). The triangular relations between State, Market, and Society are fluid and internally fragmented within each pillar and externally contested between the three pillars.

Inclusive policies by the local governments have not yet been effective and efficient in targeting the most marginalized and socially excluded members of the local communities. The local governments need to have a clear and more affirmative policies focusing on the local communities welfare, including in-migration policies. The MNC (BP) Programs need to take into reconsideration the categorization of DAV and IAV local communities and the internal fragmentation within these communities.

The relations between the local communities and the local government are not as strong nor as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, so far only the IAV local communities have done so against the MNC (BP). At present, there is no indication yet of any process of social movement in the making on the local level.

The condition of no real role carried out by the State in the context of decentralization and industrialization strategy in West Papua can be traced back to several factors. These factors are the relations between natural resources and development, the process of decentralization, and the specific nature of the BP Tangguh Project in The Bay of Bintuni regency.

**SEDAS NUNES, JOÃO\*** (New University of Lisbon, [joaosedasnunes@fcsh.unl.pt](mailto:joaosedasnunes@fcsh.unl.pt))

#### *Getting (in the) Sack(ed). Gender Domination and Male Honor*

Three years ago an American college girl presented a sort of replica of an academic essay evaluating like a professor would do to his/her students her male sexual partners means and performance (some were commended, others rather not). It got out of hand in no time. With considerable discomfort building up (in the networks she was implicated in), soon she was forced to apologise to everyone involved, namely her sexual partners, and remove her outrageous paper from public sphere. What was so ignominious about her conduct, one might ask. In other words, what contemporary Lebenswelt aspects particularly of manhood where unsettled by miss Owen's daring? Was it simply a matter of a diffuse moral economy that censors women whom tell/brag too much about their sexual activities and deeds or the rejection of the "experienced woman"? We, of course, think not. Based on interviews with men and women of different ages, in this paper we'll be presenting the core idea that unbearable intimidation (or what made miss Owen an unusual troublesome/frightening figure) comes from the special kind of power her classifying assertions conveyed. Partly reversing/disputing the righ-

teous self-evidence that goes along with the categorisation of experienced woman as "sluts" and the like, we shall argue that any woman with a history of multiple sexual partners constitutes a threat to men's ontological security, unintelligible unless one spotlights the social production of man's honour as "proven virility", that is, someone capable of taking possession both physically and symbolically of his partners. That woman might even overturn male's domination agency. The "mature" woman, who knows the ways of the world through bygone practice, carries a comparative index enabling her to "grade" her lovers manhood. "She can and does tell", a (discursive) condition to halt man's possession and, therefore, a possible tenure-taker of gender relations.

#### *What's in a Dreamed Profession? Training to Become a Football Professional Player*

The last few years have witnessed a widespread (with greater impact in side-line countries like Portugal) dissolution of the virtuous relationship between the type and level of education, profession, remuneration and social status. This standstill has favoured young people to look for alternative life pathways. In Portugal, schools of football are playing a relevant part in this shift. Mainly concentrated in the big cities (Lisbon, Oporto), they respond to the training solicitation of an increasing number of young males. At the base of this solicitation is the fact that football has recently been subjected to social reconfiguration and symbolic (re)valorisation, concerning diverse dimensions besides professionalization: criativization, idealization and mediatization are also drawn in.

In this paper, we shall be looking into the subjectivities of male youngsters training to be professional football players. By which meanings do they qualify football? What role those meanings play in the construction of their identities? How is the process of transition to work they face? How is transition to adulthood affected by their "football stake"? Answering these questions lead us to examine three analytical dimensions: 1) dream production pathways: how is the idealization order of the profession socially produced and experienced; 2) dream accomplishment pathways, namely the social circumstances that involve the transformation of the dream into a project; finally 3) dream professionalization pathways: specially focusing on possible (mis)matching between the dream, the project and the realities of professional performance.

The main hypothesis we'll be discussing is that the choice of football is, at the same time, a strategy to extend and to accomplish a fulltime identity that often is not allowed to be expressed within the more conventional professional spheres; and a decision that shows new ways for young people to cope with uncertainty in transition to the labour market and to adulthood.

#### *Understanding How We Learn*

Students in South Africa face a series of challenges when making attempts to process information from the teacher and write tests in the classroom. One of the key challenges that has been identified for students is the mismatch between learning style and testing methods. Large numbers of learners of all races and socio economic backgrounds find themselves receiving poor results on exams. This paper seeks to address the reasons why students perform poorly, and how this poor performance can be corrected through a clinical approach. As such I have developed a programme that is currently being trialed in South Africa. This programme seeks to understand; the learners style; the attention span; the memory bank as well as the way in which learners process information. Individual programmes are then designed and the results have been very successful. This paper will present the detailed findings of 10 students that have completed this programme.

#### *Mobilising Migrant Workers in the South African Post-Migrant Labour Regime: Precariousness, Invisibility and Xenophobia*

The critical role played by the migrant labour system in allowing formidable levels of accumulation in core sectors of the South African economy (mining, agriculture) has been documented extensively over the past 30 years (First et al. 1972, Burawoy 1976, Legassick & Wolpe 1976, Arrighi et al. 2010, Crush, 2007). The mobilisation of this migrant workforce from within and beyond South African borders and its critical role in the emergence of independent Black unions in the

1980s are also well documented (Webster 1985, Sitas 1983). However, what most analysts have failed to capture is the shift from this highly formalised and disciplinary migrant labour regime, historically framed through government-to-government agreements, to the current reality of deregulated labour migration to South Africa. Following restructuring in the mining sector and political pressure to recruit locally, the share of contract workers plummeted in the early 2000s while at the same time, emerging sectors such as outsourced construction, hospitality, and domestic work started relying increasingly on foreign labour. This structural shift largely caught South African unions unprepared and very limited organisation has taken place. Drawing on research undertaken within MiWORC ([www.miworc.org.za](http://www.miworc.org.za)) over the past two years, this paper explores more specifically the mobilisation challenges posed by this regime shift and strategies developed by both unions and migrant workers. While some micro-local experiences of mobilisation point to unions' ability to conceptualise new forms of transnational solidarity, the study shows overall that current fragmentation in the South African union movement is a major obstacle to migrant workers' organisation, particularly in those critically precarious sub-sectors of the economy. In this context workers develop multiple solidarity networks (ethnic, religious, and at times political) and strategies to circumvent exploitative and discriminatory practices, albeit in a fragmented and mostly underground manner, including through deliberate avoidance of the historical unions.

**SEIBEL, VERENA\*** (Humboldt University, [verena.seibel@yale.edu](mailto:verena.seibel@yale.edu))

##### *The Partner's Role in Immigrants' Labor Market Outcomes: Explaining the Mechanism*

This paper explores why and how partnership impacts labor market outcomes of immigrants over the life course. Drawing on household specialization and social capital theory I first state hypotheses about whether and to what extent a higher educated and/or native spouse has a positive impact on immigrant occupational outcomes. I then explore the specific resources spouses provide differentiating between instrumental support and emotional support. Instrumental support refers to the provision of labor market information, ability to employ own spouse and help with the application writing. Emotional support implies willingness to discuss important matters and encouragement of the spouse's career. These forms of social capital have been linked to occupational outcomes only theoretically and, mainly due to lack of data, not empirically.

I first hypothesize that partnership with a native and/or higher educated spouse has a direct positive effect on occupational outcomes due to their higher ability to provide those resources. Secondly, I assume that instrumental support has a stronger positive effect on occupational outcomes than emotional support. Lastly, I argue that partnership also has an indirect effect on occupational outcomes by facilitating important immigrant-specific processes such as recognition of foreign credentials and post-migration investment into education.

To test my hypotheses I use novel data from the German National Educational Panel Study (NEPS) which provides detailed biographical information about migration, education, occupation and family formation, thereby allowing for causal inference. First results show that partnership increases the likelihood of post-migration investment in education, however, only if the partner holds at least higher secondary education. Also, having a native spouse who is highly educated provides the most labor market related resources in terms of information, reference and help with application writing compared to lower educated and co-ethnic spouses. Education and social resources then both positively affect occupational status.

##### *Maintaining Identities of Distinction in Taiwan through the Foregrounding of Linguistic Abilities*

In his seminal work *Distinction: A Social Critique of the Judgment of Taste*, Pierre Bourdieu demonstrates how the cultivation of taste serves to reproduce class differences. In this talk, I argue that class divisions are similarly being reproduced today based on proficiency in languages of wider communication – particularly English. After discussing the mechanisms by which identities of distinction (or any identities, for that matter) are produced in interaction, I will present interview data from a longitudinal multi-case study illustrating how this process of practices and performance indexing dominant ideologies plays out in Taiwanese society. The study's multilingual Taiwanese participants repeatedly point out instances in which they have distinguished themselves from those around them through their use of and (relative) proficiency in English (and to a lesser degree, French). For these participants, images of themselves as more worldly and sophisticated than their peers started to be nurtured quite early in life through tuition classes and private tutoring, and from that point on, they continuously struggled to maintain these identities of distinction, often resorting to performativity to foreground their linguistic practices. These participants, however, viewed their differentiated status as somewhat precarious, for accompanying their repeated reports of attempting to stand out through English use was a frequently expressed anxiety about the fact that their English abilities alone might not continue to adequately differentiate them from others, particularly in the employment arena, as more and more Taiwanese gain English proficiency.

##### *A Paradox of Coercive Power: Institutionally Founded Power Relationship and Rationality of Action*

Reviewing the literatures on social power, it is found that so many different kinds of power concept as well as measures of magnitude of power have been proposed. Hence, without an appropriate specification of power concept, no meaningful analysis is possible. This research focuses on the coercive power which is defined as follows; an individual A is wielded a coercive power by B when A is forced to choose an action x which she/he would not choose if B's action schedule following A's action were somehow different. In other words, B forces A to choose x by preparing a punishment to A's non-x choice. (Strictly speaking this is "negative" coercive power. There is also "positive" one in which B prepares a positive sanction to A's choice of x.) This concept of coercive power involves individuals' rational choice. A is forced to choose x because it is her/his rational choice under a given situation.

It is frequently supposed that a power relationship is asymmetrical in which the power holder and the power subordinate are fixed. If A is the power subordinate in relation to B in one situation, this asymmetrical relationship applies to other situations. Especially, if the relationship is institutional, that is, if it is institutionally stipulated that B is entitled to control A's action by preparing a punishment to A's normatively deviant action, B is identified as the power holder in relation to A.

However, there are paradoxical cases in which the presumed subordinate A can control B's sanction schedule in such a way that B is forced to choose a sanction which does not punish A's deviant action. This happens because B also has to choose the sanction rationally. This study shows the mechanism of this paradox and analyzes mathematically the conditions that this paradox emerges,

##### *Income Disparity Among Elderly People in Japan: Life Course Factors on Retired Life*

With societies being increasingly aged, the inequality among the retired population should be more focused in stratification study. My previous study (Seiyama 2009) had analyzed, using 1995 SSM data, the reason for the larger income disparity among the elderly in Japan to some extent, but there were two serious defects in the data: that is, people aged more than 70 were excluded and the information on income sources including pension were not available. This is a new analysis on the income disparity among the elderly, based on a new nation-wide survey conducted in 2010, headed by Shirahase, with effective 6,442 respondents from

50 to 84 years old population, comprising various stratification variables such as income source.

The main results are; (a) in Japan the income of the male elderly is mainly composed of working income and pension, while capital income is quite negligible. (b) Gini coefficient within age group is larger for the groups aged 60 or more than for two groups of 50's, mainly because of the fact that for the elderly the proportion of those with only meager income is large. (c) After 65, the main source of income becomes pension (more than 2/3 of total income), though exceptional cases are blessed with significant amount of working income (mainly administrative or self-employed.) (d) The overall income inequality among the retired reflects the inequality in pension. (e) The main factors on the pension inequality are education and occupational career characteristics at working age, but controlling for the latter the effect of education is largely reduced. (f) The important occupational career characteristics are the size of company and the experience of executive post. (g) Because the single earner family model had been prominent for the cohorts of our survey respondents, a basically similar conclusion is derived for household income.

#### *Labor Relations, Neoliberal Agri-Food Policies and Disasters In Japan*

This paper probes the issue of changes in the agri-food labor structure under neoliberal globalization. Employing two cases from Japan, the paper documents the continuous crisis of independent farmers and their replacement by hired labor. This process, it is argued, was accelerated by the implementation of neoliberal policies and by the effects of natural and human made disasters that affected Japan in recent years. More specifically, this work illustrates: 1) the manner in which neoliberal agri-food policies engendered changes in agri-food labor relations; 2) the characteristics of the new forms of agricultural labor relations under neoliberalism and 3) the specific alterations of labor relations that occurred in the aftermath of recent disasters in Japan. In the first of the two cases presented, labor relations in farms controlled by the transnational corporation, Dole Food Company, are illustrated. The second case analyzes the neoliberal agricultural reforms introduced in the aftermath of the March 2011 earthquake. Also considered in this case are labor relations in the fishing sector and the responses of fishermen to the neoliberal reforms of the sector.

#### *CEDAW As an Instrument to Foster Women's Political Equality in Central and Eastern Europe?*

All countries of the Central and Eastern European region adopted the Convention for the Elimination of All Forms of Discrimination Against Women. Its' implementation in these countries can be seen not only as a fulfillment of social justice but also as one of the mechanisms of democratization. Based on the comparative content analysis of the official country reports and information delivered by non-governmental organizations the impact of CEDAW on the implementation of gender equality in new European democracies will be assessed. The special attention will be devoted to the problem of the enhancement of women's political rights in Central and Eastern European democracies. What it means to implement the provisions of the CEDAW concerning political and public life in these countries? Can there be seen progress in their implementation? Is the Convention (and if yes, in what ways) used by women's organizations in order to demand institutional measures to strengthen women's representation in political institutions? Is CEDAW a point of reference for those who argue for legal changes – including gender quotas and zipper system – to help increase women's political representation? Is the Convention a tool used by these actors who engage in supporting women deciding to be politically active both on local and national levels? What are the similarities and differences between the countries of the region in implementing the Convention and its' promotion as a tool of effective social change leading to women's political empowerment?

#### *Modernity As Tragedy. Adam Ferguson on the Decline of Community*

Adam Ferguson was one of the major figures of the Scottish Enlightenment. And he has been rightly credited as a precursor of modern sociology. For instance, Ferdinand Tönnies famous distinction between "Gemeinschaft" and "Gesellschaft" strongly resembles passages from Fergusons seminal "Essay on the History of Civil Society". The difference between a German and an Anglosaxon semantic of community in mind, it seems paradoxical that especially the romantic German idea of community has been heavily influenced by Ferguson. His conception of an authentic civic life had a high impact in the German tradition of social thought and social criticism, and it is only a slight exaggeration to say that he was one of the inventors of an emphatic idea of political community. Ferguson also anticipated central features of the critique of modernity known by Karl Marx and Max Weber. In contrast to his contemporary friends, most notably David Hume and Adam Smith, he emphasized the political perils and the dangerous dynamics of modern market society. Modern society rests, according to Ferguson, on an increasingly powerful state, the expansion of the division of labor and a weakening of the public spirit in favor of self-interested behaviour. Consequently the public sphere and the sense of political community dissolves. The paper will examine Fergusons concept of community, his conjoined critique of modern society and its semantic of alienation. The tragedy of modern society lies in its dialectical process of liberation. This process leads to individualization and it has an alienating tendency: in the name of individual freedom, people become "gear wheels in the machine".

**SELKE, STEFAN\*** (Furtwangen University, [ses@hs-furtwangen.de](mailto:ses@hs-furtwangen.de))

#### *Foodsharing - A Contemporary Way Of Converting Perishable Food Into a Common Good*

The paper discusses foodsharing as an controversial issue and thereby focusses on the role of a smartphone application which has recently been launched in Germany.

Foodsharing seems to fit perfectly into the sharing economy. A debate about food waste in affluent societies has created a new public mood concerning the discussion about the ethics of food thrown away. A foodsharing app has been introduced in 2012. The app is sponsored by the German Federal Ministry of Food, Agriculture and Consumer Protection (BMELV) and promoted by the prominent filmmaker Valentin Thurn („Taste the Waste"). It enables consumers to announce surplus stocks to be shared with others.

Several paradoxes appear by analysing this idea. Firstly, a foodsharing app is an example of what Guy Débord calls the "Society of the Spectacle". It is becoming fashionable to receive public approval for symbolic solutions instead of executing sustainable politics (e.g. against food waste). Secondly, a foodsharing app is an example for de-skilling people in modern societies, who have forgotten basic abilities, like asking their own neighbour if they need left over food. This reveals the main social mechanism of the app: It serves to re-skill people about cooperation and sharing.

Some more questions arise from this perspective. If foodsharing transforms food into a common good a new informal consumer market emerges in which trust is privatised. New solutions for domestic consumer concerns have to be found and requirements and responsibilities have to be balanced out.

The paper discusses the example of foodsharing focussed on its social impact. It is a contribution to the discussion about social sustainability in the form of a (national) case study. However, the findings can be generalised for similar fields of practise.

#### *Lifeloggng – Consequences Of Tracking The Self and Transforming It Into a Digital Self*

Today life data is archived and presented publicly in networked digital media. The term "lifeloggng" subsumes digital media systems that document, as comprehensively as possible, traces of human behaviour and put them into long-term storage. Four types of lifeloggng can be distinguished: 1. Health Monitoring, 2. Human Tracking, 3. Digital Memory and 4. Sousveillance. Lifeloggng is a marked attempt to break the boundaries of human existence by means of digital media. According to the most prominent advocates in this field it demonstrates the increasing belief in numbers and data and therefore could be called a neo-empiristic movement.

However, the complete recording of one's life brings up new questions about personal information management and emerging inequalities. Cases studies of methodological, epistemological and social aspects of lifelogging already show fundamental concerns about the relationship between one's own life and the data set created by lifelogs. Critics warn that people using lifelogging and producing large amounts of information become unwitting subjects of surveillance.

The critical discussion of lifelogging refers to the theory of "shifting baselines". Three main shifts have to be considered: 1. From subject to object (loss of individualism). 2. From action to function (loss of autonomy or agency). 3. From privacy to post-privacy.

'Technoapartheit', 'over-diagnosis', the standardisation of human behaviour, the emergence of new social norms and the shame punishment of deviant people are examples of new inequalities caused by extensive lifelogging. Against a background of research projects on media of the future and empirical data, this paper discusses lifelogging as a controversial issue, focusing on the role of recently developed digital devices. Even if related developments in the area of lifelogging are not yet in the public domain, important questions about shifting boundaries are emerging and need to be discussed.

#### *Aged Population and Social Disability in Rural South India: The Social Exclusion and Inclusion Perspective*

Ageing is a natural process that begins at birth, or to be more precise, at conception, a process that progresses throughout one's life and ends at death. With prolonged human life, reduced mortality and fertility rates due to recent developments in science and technology, ageing has become a global phenomenon in the 21st century. World Health Organisation (WHO) views ageing as a privilege and a societal achievement. This process started in developed countries and slowly shifting to developing countries like India with increase in number of graying population. Elderly life is considered or assumed as a burdened life, full of struggle, illness, depression, exploitation, abuse etc. Traditionally, the joint family took care of the aged but rapid urbanization and the migration of persons from rural to urban areas have created a vicious situation. In the absence of the ability to earn, and without community support, in the form of kinsmen or the extended family, the aged are rendered destitute. It is also evident from Indian data that 40% of the elderly live below the poverty line and 90 % are neither covered by any state pension nor have any family to take care of them. Increased rate of survival beyond 60 years have implications for financial burden from both family as well as state. Social disability is the unproductiveness, redundancy and social maladjustment to the environments. This paper aims to underpin the socio-economic inequality that exists among the elderly population and causes social disability. Also it exposes the determinants of poverty and discrimination among elder people in the study area. And analyze about the social, economic and psychological problems experienced by old persons and advocate an action plan for effective implementation of welfare, care and support of the aged populations in the study area as part of social intervention.

**SELSTAD, LEIF\*** (University of Stavanger, [leif.selstad@uis.no](mailto:leif.selstad@uis.no))

#### *International Tourists at a Japanese Festival*

The paper concerns the experiences of international tourists visiting a traditional festival in Japan. The festival, Tsukuda Ōmatsuri, is a shrine festival held every third year in August in an old neighborhood in Tokyo, and attracts thousands of spectators and tourists. I have had the privilege to observe this festival for thirty years. Over the years the festival's relationship with tourists has changed. At one time during the 1990s, when the local area was threatened by urbanization, tourism was encouraged to boost political support and protection. Once the area avoided demolition, the crowds of tourists were seen as disturbing to festival performances, and the festival was no longer advertised for tourism. In spite of this, tourists continue to visit the festival in great numbers, mostly Japanese, but to some extent also international visitors. Contrary to expectations the decision not to promote the festival or encourage tourism has not diminished its value as a tourist experience. People appreciate the lessened crowds and heightened authenticity of getting closer to local performers and events. Also the few international visitors who come feel that they get a better understanding of the festival with lesser crowds. This raises the question if tourist events such as festivals have to be completely adapted for tourism in order to be enjoyable for tourists. It is often forgotten that small banter and incidental events may be as memorable for tourists as well rehearsed performances. As long as safety is preserved and conflicts are avoided, tourists can relate to limited information about an event and still see it as a good experience. In fact, such partial or ad hoc knowledge may be the norm rather than exception when tourists take part in special events; matters may still run fairly smoothly and provide good experiences.

**SEMENOVA, VICTORIA\*** (professor, [victoria-sem@yandex.ru](mailto:victoria-sem@yandex.ru))

#### *Construction of Solidarity through Language Mode: Sociocultural Approach to Internet Discussion Forum*

The situation of social inclusion could be considered as situation of 'entering' into community that brings the sense of individual/collective solidarity. The virtual community and internet forums could serve as example to follow and investigate that mechanism as the Internet provides a social space in which people can construct participation in different types of social groups (Mann and Steward, 2000). These groups could construct sub-cultures (Williams, 2006) or small cultures (Holliday, 2004). The culture of each community is based on members' lived experiences in various communities. Digital community has some specifics: in forms of participation, social status of participants, modes of identity and behavior, etc. (Mann and Steward, 2000). Researcher do not have any cultural markers beyond language reveals. Nevertheless these disembodied forum participants pass their subjective meanings and solidarity moods by digital texts as cultural markers and construct different forms of social (virtual) solidarity. So the mechanism of forum solidarity could serve as a source for analyzing the nature of solidarity through linguistic approach.

This empirical research was based on the discourse features of messages posted to several Internet discussion forums (mainly 'knowledge of practice' forums – medical, tourism forums and political solidarity forums in Russian-language blogs). The message texts were classified into three types (Morrow, 2006): *problem messages*, *advice messages* and *thanks messages*, and salient discourse features of each message type were described and analyzed in terms of discourse function. "Thanks messages" in this case were interpreted as the first linguistic sign of virtual solidarity.

That result turned author to the discussion of the notion of 'emotional climate' in new social media as the 'intermediary between social structure and agency' and as 'a deeper structural reaction on political and social inequality' (Alice Baker, 2013).

**SEMENZA, RENATA\*** (University of Milan, [renata.semenza@unimi.it](mailto:renata.semenza@unimi.it))

#### *Facing Inequalities: Internal-External Labour Market Interplay*

##### **Facing Inequalities: Internal-External Labour Market Interplay**

From the theoretical perspective the paper aims to revisit the traditional *theory of labour market segmentation* and its key model based on *insiders-outsiders divide*. The development of a new paradigm supported by *original empirical evidence* of

an increased interdependency and competition between external and internal labour markets is proposed.

More than forty years later we reconsider the relevance of *Internal labour market* theory (Doeringer, Piore 1971) from a contemporary perspective. The strategic use of core-periphery has shifted towards market-mediated employment relationships and affects indifferently high and low-skilled sectors.

This issue is part of the wider socio-economic debate on *inequality associated to labour and ranking and sorting process in labour markets* (Granovetter, Tilly 1988).

Many European countries have undertaken reforms in order to increase flexibility. From this perspective the framing refined by Varieties of Capitalism (VoC) literature has been evolving, as companies situated in different countries -facing the global competition- seem to be adopting similar employment practices.

Recent studies (Herrmann 2008) showed the ways by which firms can compete circumvent pragmatically their own rigidities through *functional equivalent practices*, by using nonstandard contracts or importing the required skills from international labour markets. Firms seem to be doing what their institutional contexts do not encourage.

We consider new forms of division and distribution of labour between firm-based and market-based labour force and their social implications, from the key point that skills and competences are crucial factors of productivity and competitiveness.

Following Streeck's contemporary Durkheimian interpretation that "economic efficiency is to an extent conditional on the effective enforcement of social constraints" (Streeck 1997) we aim to better understand if there is a sort of collective awareness of the reduced social value of work or if, in alternative, companies are implementing new and still unclear cost-effectiveness strategies.

#### *Gender Justice in the Global Manufacturing: Where Does It Stand? an Evidence from Garment Industry of Bangladesh*

Globalization of production has yielded contradictory consequences to the lives of women workers which question about gender justice. Supporters argue that globalization ensure gender justice because it brings positives changes to lives of women workers' in various forms, like, expansion of employment opportunities leading to income earnings (Barrientos, 1995; Razavi, 2001; Kabeer, 2004), breaking patriarchal bond (Lim, 1997), growth of self-awareness about rights and duties and participation in collective bargaining association (Gills, 2002), shifts in gender roles and value structure, reconfiguration of the public-private and production-reproduction dichotomies (Unni, 2002). On the other hand, critics reject the claim of economic benefit of women; rather state that it is pushing women into more vulnerable situation than they were before (Boserup, 1970; Elson and Pearson, 1981, 1997; Nash and Fernandez-Kelly, 1983; Acker, 2004; Caraway, 2007). They argue that working conditions and labour rights in global factories are characterized by unjust labour practices, such as insufficient wages, extremely long working hours with minimum compensation, lack of occupational safety and health, little access to maternity and childcare benefits, arbitrary punishment and workplace harassment, absence of union and low workers' participation, presence of forced and compulsory labour, persisting workplace discrimination. Based on empirical evidences from Readymade Garment Industry of Bangladesh, this paper explores that gender justice is yet to achieve at the global factories following the conceptual framework of social justice by Amartya Sen (Sen, 2009). This paper concludes that labour justice can be ensured if all local-global actors (state, employers, employees, corporations, NGOs, consumers' groups) play responsible and ethical role towards unfortunate workers.

**SEMI, GIOVANNI\*** (University of Torino, [giovanni.semi@unito.it](mailto:giovanni.semi@unito.it))

#### *A City, Two Neighborhoods, Ten Years: Observing Gentrification before and during the Crisis*

In gentrification studies most of the empirical literature draws on in-depth analysis of single case study or on multi-site comparative analysis having time as a fixed variable. This paper aims at introducing and problematizing the time dimension in a multi-site comparative analysis. The paper we propose here is based on a double fieldwork in two neighborhoods of Torino, Italy, known as *Quadrilatero Romano* and *San Salvario*, that have been facing gentrification from the early Nineties up to recent times, following one another as subsequent targets of public interventions and market dynamics. The time-span of more than ten years allows us to reach some major conclusions on the overall regeneration of the city of Torino, the role of gentrification in the remaking of the central city and the effects of the financial crisis on households, commercial activities and the image of the city.

The data are qualitative, mostly fieldwork notes, interviews and observations.

The contributions of this paper are both theoretical and methodological. On the one hand, it offers new understandings of fourth-wave gentrification phe-

nomena in a peripheral Western country such as Italy, on the other hand, it adds further knowledge on multi-site longitudinal and qualitative analysis. Moreover, we will provide evidences from a city that have long been the one-company town of Italy, hosting FIAT and IVECO industries among others, and it is now betting on cultural economy, tourism and entertainment as new path of re-development after hosting the Winter Olympics games in 2006.

#### *Do We Stay or Do We Leave?: The Views of UJ Students with Regard to Living in South Africa*

This paper focuses on UJ students' views on remaining or leaving South Africa. This is based on the degree of trust students perceive the government of being worthy of and the degree of engagement in the affairs of the country students are prepared to expend in the context of perceived threats to SA citizens. A survey was conducted in 2011 on the basis of a stratified random sample of 1214 undergraduate students on all four UJ campuses. The data is analyzed in terms of a typology that considers the extent to which people either respond to real or perceived threats on the basis of trust in the government's ability and willingness to protect their interests as citizens and the derived trust in the future of the country or from a position of distrust in this regard. On this basis they could furthermore either engage the threatening reality or disengage from it altogether. The paper analyses the extent to which patterns can be identified among different groups of UJ undergraduate students with regard to the four possible responses that emerge: Trusting engagement, trusting disengagement, distrusting engagement and distrusting disengagement. The paper concludes by briefly considering the possible implications of the four responses for the long term stability and prosperity of South Africa.

#### *Future Urbanisms: Technology, Science Fiction and Extrapolated Cities*

An unavoidable dilemma of looking into the future is demonstrated by our pondering whether to filter reality through Google glasses (smart phones, tablets etc.) - providing data about location, proximity and resources - or to resist this new temptation to stream information and explore the reality of our environment. Technology has two sides, providing new social possibilities such as digital art and communications, while taking away the need to go shopping in person. The importance of science fiction in our consideration and construction of futures is illustrated through E.M. Forester's short story titled 'The Machine Stops', written in 1909, which describes a future for humanity based upon a complete reliance on technology, and predicts the internet. The story serves as a warning of a future so completely reliant on technology that humanity is disabled. Science fiction utilises several methods to extrapolate possible futures and identifies both the obvious relationship between urbanity and imagined futures, and the distinction between approaches based on extrapolation and fantasy. The process of extrapolation based on existing socio-material realities provides an avenue to work with the city as an open-ended system. This paper will demonstrate how 'systemic diagramming' (Sengupta and Iossifova, 2012) can be used to extrapolate 'potential' futures providing a frame of reference for current actions and future speculations. Just

as in science fiction the methodology is based on empirical socio-spatial findings (knowability), technological projection, epistemological growth and speculation regarding potential tangents and tipping points. The ability to act positively towards desirable futures is deeply embedded in possibilities of change, identifiable trajectories and an acknowledgement of the fact that cities and society continually transform. By positioning urban change in context of resilience (Walker et al., 2004)(Holling, 1996), adaptation and assemblage (DeLanda, 2006), potential urban futures become the space of socio-spatial speculation and resultant action.

#### *"What I Want to Do" As a Form of Strategy to Survive on the Job-Hunting Process: The Case of Japanese University Students*

In Japan, university students are facing challenges to get a job today. For example, only 60 percent of university graduates can find a full-time job now. Many quantitative researchers conducted researches on job-hunting for university students to understand how social structure impacts the job-hunting process. These studies pointed out that the labor market requires university students not only to have a better educational background but also to have higher motivation, like "yaritakoto (what I want to do)", because the labor market requires them to work for other reasons besides money. However, no one has analyzed how the word "yaritakoto" has been used by students.

My research aims to describe the job-hunting process for Japanese new graduates by analyzing the use of word, "yaritakoto." I conducted interviews with 11 students who were in the middle of job-hunting activities. Each person was interviewed two to four times during February to July in 2012. Using Goffman's "warm-up" and "cool-down" theory (Goffman 1952) as an analytical framework, I shall raise the following points. First, they used the word "yaritakoto" to warm themselves up to get into job-hunting mode; however, many of them failed in job competitions. Second, they let themselves cool down their "yaritakoto." Third, they changed the meaning of "yaritakoto", reinterpreted it and warmed their "yaritakoto" up again for the next competitions. Therefore, students have to continue to change their "yaritakoto" during the process until they get a job. It is hard for them, however, to deny their "yaritakoto" and adapt to the job market. Students need the word "yaritakoto" only to survive in job competition but not in their real lives, which means, interestingly, that they are not able to meet the expectation that the labor market has for them as long as they use the word.

#### *Consolidating Patients' Rights in South Korea : The Case of the Breast Cancer Patients' Movement*

The promotion of patients' rights and quality care have been rapidly spreading in South Korean hospitals since the 1990s. The most conspicuous method of spreading these two concepts has been the breast cancer patients' group. This paper will treat the evolution of the breast cancer patients' movement since 2011, focusing on an organization that claims to represent female breast cancer patients in South Korea, the Union of Korean Breast Cancer Patients (hereafter UKBCP). Established by Korean women with breast cancer, the distinctive characteristics of the UKBCP will be presented and analyzed; these characteristics derive from the birth of patients' self-help groups promoted by biomedical professionals in university hospitals.

My theoretical approach is indebted to the present scholarship on the sociology of individuals, particularly Danilo Martuccelli's work on subjectivity (2002) and the theoretical framework of Health Social Movements (Brown, Zavestoski et al. 2005). In my analysis, I will refer to materials collected from different sources: web information provided by the UKBCP, participant observation and in-depth interviews.

The study will lead to a better understanding of objectives and strategies of the UKBCP. My hypothesis is that the heteronormative femininity has developed with the current regime of breast cancer. In this perspective, I will further examine the impact the regime has had on the biomedical world and the life of patients. I will also explore actions specifically concerning the rights claimed by patients and amendments in legislation. This paper will discuss the regime of breast cancer, which resonates with the cultural and political characteristics of reframing a South Korean welfare state and particular elements constituting the subjectivity of breast cancer patients.

**SERCOMBE, HOWARD\*** (University of Strathclyde, [sercombe@strath.ac.uk](mailto:sercombe@strath.ac.uk))

#### *Youth Work in the Context of a Global Sociology of Youth*

This paper explores how modern youth work has arisen through the social construction of "youth" as a delineated category of adults through a range of key

processes. The youth category is created through the exclusion of this group of [biological] adults from the workforce and their incarceration in age-streamed cohorts in educational institutions. This is systemically supported by a scientific discourse of adolescence that resides clearly within a deficit paradigm with a wide range of associated cultural artifacts to disempower young people. The elimination of relationships with older adults and the exclusion of young people from economic life feeds and maintains youth cultures while simultaneously marking young people out for prejudicial and discriminatory treatment. The resulting economic dependency in young people, their incoherent social role, the emergence of distinct youth cultures and the generation gap provides the ground for disproportionate public fear rooted in young peoples' "otherness", and the "social problem" of youth is created and maintained.

This leads to simultaneous and contradictory pressures for the control and containment of young people and for their social and economic participation and agency. This occurs in a social context already riven by class and other contradictions, the technological and industrial transitions involved in the collapse of 'heavy' modernity and the emergence of more 'liquid' forms, and by globalization, including global modernisation and the globalisation of capital. Youth work emerges in the flux of those contradictions. The paper explores the responsibility for youth workers to partner with young people to manage and challenge the conditions of their disenfranchisement and to find compensatory processes which facilitate young people's renewed agency.

#### *The Past on Social Network Sites: The (Dis)Embodiment in the Digital Era*

Private archives (the letters and photos of ordinary people) have been an invaluable resource for historians, biographers and researchers of society. Since few messages of online social networking sites will be printed out or saved by correspondents, future researchers will have far fewer writing documents as source materials than in the past. Digital writing and images have no physical substance. To some degree, then, we may be returning to the pattern of oral cultures: much digitally expressed cultural activity will leave no record.

As the popularity of online social networking like Facebook sites grows, so do concerns about the impact of such sites on the process of cultural memory construction. Our research has concentrated on the presentation of the past of Russian elderly (60+) through social networking profiles (our subjects are two modern Russian social networks "Vkontakte" and "My Former Classmates"). This study has looked at social networking profile pages as a single text including iconic, audio and textual elements.

We analyze two strategies of networking which are characterized of senior users. The first important characteristic of old people sites is the way personal identity is subsumed within the sense of being historical generation. The second strategy shows contradictory intentions of elderly who "play" with time changing the personal contemporary image. Deep interviews with senior users help to reconstruct some practices in situation if the profile owner died.

We discuss inequality problem in terms of "digital divide" and "power over time" between elderly who use new technologies and non-users.

#### *New and Old Path to Economic Power: Social Origins and Recruitment of Managing Elites*

The transition to the new century in Latin America display several changes and challenges. Democratization processes had to overcome multiple economic and political crises, left turn over and new economic growth cycle. Despite of Uruguay is a small country has high human development and outstanding democratic legacy in Latin America. As well as many countries during the last decades had many political and economic changes.

Economic globalization in the last two decades modifies the structure of economic power and impact into business elite integration. On the one hand, the increasing influence of the transnational companies rose to new managing elites. Corporate elites are based on cultural capital background, management abilities and specialized knowledge, university management professions, social global networks. On the other hand, the traditional entrepreneurs recruited through family prestige and inherited capital, exclusive business membership and local networks linked to political power.

Moreover, the left turn over in Uruguay had several consequences on recruitment of management elites based on trade union and political capital background.

The study inquires about recruitment processes and careers of senior managers (CEO, MD). The paper identifies business elites' relationships (social origins, family, education, work, leisure time) and political networks. The study researches

100 senior managers' biographies of the majors companies (private and public sector) in Uruguay. The study is based on biographical and prosopographical methodologies - obituaries, curriculum vitae, social networks -.

#### *Crisis and Challenges for Families Facing Global Diversity and Inequality - Can Families Still Function As Educators in Multicultural Societies?*

The paper presents a research study on the sociological and educational impact of global cultural diversity on the role of families as educators. Specifically, it presents the field work and findings of qualitative research, involving educational settings in which innovative methods have been developed to include families from diverse cultures as educators in their children's educational process.

The study's outcomes include methods of facilitating an authentic dialogue between families and educators, a creative model for the incorporation of family traditions and narratives as enrichment resources for the school curriculum, developing curricula, developing and conducting educators training sessions. The study's findings demonstrate that an effective partnership forming between the family and the educational framework, which relates to the child's cultural world improves the learning process. It is enhancing the children's scholastic achievements, building families' resilience thereby promoting equality among families, helping the family to regain its leadership role and culturally assigning responsibility for strengthening their cultural identity and their self esteem. The study's conclusions show the contribution of families' multiple intelligences to the child's development and to the school's success in achieving its goals and the educational agenda. Therefore, such school-family collaboration has the potential to minimize the risk of crises in the family's structure which commonly include social changes such as the loss of parental authority, the man/father changing status in a democratic society, children acting as the parents' translators, different social norms, conflicting values with society, adaptation of migrating families to new realities etc.

It also encourages acquiring formal education as a vehicle for minimizing inequality and enabling social mobility. The paper will present studies conducted in a widely diverse type of families and schools in Israel along with innovative educational programs developed, tested and implemented during and after the study.

#### *Managerial Doctors: Medical Technocracies Revisited*

Across European countries, the relationship between professionalism and managerialism indicate new emergent configurations of hybrid professionals and mixed forms of governance in health care. Studies concerning Portuguese case (Serra, 2010; Carvalho, 2012; Correia, 2012; Kuhlmann, et al. 2012) show a specific situation due to the power the medical profession stills to exert over health regulation. Definitely, doctor's influence on state regulation seems to counter the dynamics that have been described in sociology of professions and organisations, which point out the increasing criticism of medical autonomy, the growing managerial control over medical authority and the state regulation of medical procedures.

In Portugal, the control of technologies is an example of the intersection between state and medical regulation. Serra (2010) had already described different systems of governance based on the physician's technical skills in a given medical area of expert knowledge (medical technocracies); systems in which medical experts are in control and where decision-makers are selected on the strength of their degree of skill and qualification.

Also, the need for public investment coexists with the relative inability to maintain the state's regulation over the effective control of medical technologies. For hospitals and medical specialties in particular, the domination of a technology is important insofar as it boosts the self-regulation mechanisms of the profession whilst also allowing the organisation to attract investment that brings greater financial sustainability. From the notion of medical technocracies (Serra, 2010) the aim of this paper is to look to key question of technological dependence and the control of management instruments by medical profession, which allows medical procedures to meet the demands of the 3Es - economy, effectiveness and efficiency (Rhodes, 1994) and, simultaneously, boost the self-regulated professional power, defined as medical technocracy. To a certain extent, it is the increasing introduction of NGP criteria that strengthens medical technocracy.

#### *The Movimento 5 Stelle (M5S) Between Populism and Direct Democracy*

This article presents a study on the Movimento 5 Stelle (M5S), founded in Italy in 2009 by the comedian Beppe Grillo. The elections of February 2013, established the success of this movement that with a result of 25.5 per cent, has placed 163 members in Parliament between Deputies and Senators.

The Movimento 5 Stelle promotes initiatives to bring citizens at the center of public life through practices of direct democracy, while underlining the crisis of representation of the traditional political parties.

The study is aimed at understanding the political, social, cultural meanings of this movement and in particular it examines the way in which its members oppose to and are distinguished by the traditional parties, in facing and developing interventions through participation and direct democracy in the fields of interest of the movement, namely energy, water, waste collection, connectivity, social services.

The Movimento 5 Stelle will be analyzed through three dimensions: the space represented by the online Beppe Grillo's blog, the online and off line meet-up tools and the institutional places. The work is also interested in showing the controversial elements of the movement in relation to the presence of a charismatic leadership, the intolerance towards dissenting voices, the emphasis on the democratic nature of the network, as well as some populist features such as the opposition people versus *élite*, the simplification of the social and political reality.

The study suggests an interpretation of the Movimento 5 Stelle as a controversial political and cultural movement that in some ways can be considered populist.

#### *Strategies of Mobility Among Romanian Roma and Its Contribution to the EU Citizenship*

The Spanish RTD project "TRANSROMA. Strategies of mobility, return and transnational practices between Romanian Roma people" funded by the Spanish Ministry of Science and Innovation from 2012 to 2014, is aimed at analyzing strategies for mobility and return and transnational economic and political practices developed by the Romanian Roma in Spain and Romania. While the EU is defining a common political strategy for their inclusion, the Romanian Roma population has been involved in episodes of European history have deeply questioned the effectiveness of anti-discrimination legislation and the preservation of freedom of movement among EU citizens, as well as basic principles of living together and social cohesion. The economic recession and the scarce scientific knowledge about this group have reinforced the stigmatization and infringement of fundamental rights, ignoring their contribution to the societies of origin and destination. From a transnational vision that goes beyond methodological nationalism, this paper aims to present some of the results obtained by this RTD project. Specifically it aims to provide new scientific knowledge on migration processes such as circular migration and transnational spaces of the Romanian Roma, and analyze how they contribute both to origin and host societies and the process of construction a EU from the bottom up where the basic rights and living a reality for all its citizens.

#### *Privileging the Postcolonial: Emerging Epistemologies in the Sociology of African Religions*

#### **Privileging The Postcolonial: Emerging Epistemologies In The Sociology Of African Religions**

##### **(Religious Migrants and Marginality in South Africa)**

For more than a decade South Africa has seen an enormous influx of migrants from across the continent. Significantly, these migrant communities have visibly impacted the fabric of South African public culture through language, economy, ritual and religion. In the context of South Africa, Ethiopian Orthodox Christians and Nigerian Pentecostals have respectively devised strategies for navigating their distinct national and religious identities. These strategies offer a lens through which to examine how such groups variously mediated their distinct transnational identities through the reconfiguring ritual and liturgical practices. Thus I ask, to what extent do such practices reduce the migrants' marginality. In particular, I am concerned with how migrants' religious practices produce new forms of knowledge.

In examining how the embodiment of ritual practice relates to the everyday experience of the migrant, I propose that we turn our gaze and our method to

the reading of the migrant body as site of knowledge production in the African context. Situating my sociological practice in the context of postcolonial theory, I draw on the work of Donna Haraway (body in performance and resistance), Bryan Turner (corporealization) and Frantz Fanon (lived experience of the black body) to analyse the various ways in which bodies are regulated, managed and disciplined, and conversely, the ways in which migrant bodies also serve as sites of resistance – sites for the production of new epistemologies.

Quiet significantly, the case studies of the Ethiopian Orthodox and Nigerian Pentecostal migrant communities, point to the multiple ways in which the religious body in ritual performance also 'act' in resistance to the muting and governing practices of social exclusion, xenophobia and nationality, while simultaneously forging transnational identities.

#### *Redefining Gender Reform in Indonesia: Oligarchy and Exclusion of Marginalized Women*

Gender reform is regarded as a precondition for democratization since it results in women's empowerment. In Indonesia, gender reform implicated in gender mainstreaming policy and affirmative action policy which assure women across classes, ethnicities and ages as significant beneficiaries of democratization that is currently taking place in the country. This study examines the impacts of gender reform policy toward marginalized women. Using Banten, a province headed by a women governor, as a case, this study employed a qualitative method (i.e. FGD and in-depth interviews) for its data gathering strategy. This study indicates that gender reform has mainly benefited elite women. They have captured local discourses on women political participation and gender mainstreaming programs through the practices of oligarchy and control over resources in various domains. Moreover, the elite women have used their access to political power for continuing practices of nepotism, corruption, and the accumulation of the ruler's wealth. As the consequences, marginalized women, particularly the poor, have been excluded from the access to political and economic resources. Gender reform policy has not yet contributed to the transformation of marginalized women to have a better living. This study contends that women are not a homogenous entity. Their gender identity intersects with class, ethnics and other identities. Accordingly, women have various interests and regard gender reform as opportunities in different ways. Hence, the practice of oligarchy done by women elites has confirmed the heterogeneity of women based on their intersectional identities. Therefore, gender reform policy promoted by the Indonesian government, does not necessarily benefitting all women citizens in equal basis.

#### *The Limits of Ethnic Politics in Indonesia: A Case Study of Riau Politics*

Revitalization of ethnic identity has signified the implementation of Indonesian decentralization and democratization. It is marked by competition over political and economic resources among ethnic groups at the local level (provincial and district levels). The dominant ethnic group utilized ethnic politics to control over political power. This study examines the impacts of ethnic politics in Riau-Sumatra, an Indonesian province, after more than 10 years decentralization. The Malay as the dominant ethnic group exercised ethnic politics through various channels including in the political, economy and socio-cultural domains. The study employed a qualitative approach. The results found that cartel politics, fragmentation of Malayness, and the weak of local activism in Riau has weakened the strategy of ethnic politics that previously promoted by the Malay ethnic group. Thus, local politics dominated by coalition among elites regardless their ethnicity. Political party and access to economic resources became the main influential factors in Riau politics. This coalition has caused the gap between elite and non-elite groups. Hence, political activism involved only the elite and excluded non elite citizens (both Malay and non Malay). Meanwhile, heterogeneity of Malayness has fragmented the ethnic group and caused the lack of solidarity among Malay in employing the ethnic politic strategy in local politics. This study illustrates class as an important dimension in the way the ethnic politic work at the local level. Thus, ethnic politics has benefited elites regardless their ethnic background and been positioning the lower class at the margin. The findings argue that political cartel, fragmentation of Malayness, and the weak of local activism have caused the limit of ethnic politics.

#### *Why Do Immigrants Overestimate Their Language Proficiency?*

The use of self-reported language proficiency as an indicator for immigrants' actual language proficiency is a commonly used measure in the social sciences. However, the validity of self-reported language proficiency is highly disputed. Based on a Rational Choice approach of respondent behavior this contribution analyses the determinants of self-ratings and the conditions under which self-reports of language proficiency are accurate or not. For the analysis we use data of the German National Educational Panel Study (NEPS) of starting cohort 4 (grade 9) which contains tested as well as self-reported first and second language proficiency of students of either Russian (N=628) or Turkish (N=809) origin. Our results confirm that self-reports seriously deviate from test results, with a predominant tendency of students overestimating their language proficiency. The bias of self-reports systematically vary by gender, ethnic origin and duration of stay in destination country. Further analyses indicate that the accuracy of self-reports depends on learning experience, language use, the available frames of references of the students.

#### *Attitudes, Motivations and Barriers Among Third Age Learners Toward Lifelong Learning and Education*

With the advent of the growing ageing population, the focus on lifelong learning for older adults known as – third age learning, later life learning and adult education, has emerged in the past decades.

In the Asia Pacific region, especially in the Philippines and other developing countries, old age and ageing issues have received minimal attention from government, social thinkers and educators. Lifelong learning and education opportunities for ageing have not been a high priority.

This study aims to explore the interplay between and among attitudes, motivations and barriers of third age learners toward lifelong learning and education. A three-part questionnaire was administered to third age learners to describe the underlying dimensions of their attitudes, motivations and barriers. The instruments were validated by experts in adult education. These were analyzed through the use of factor analysis.

It was noted that although many now advocate the need for education and learning over the life course, it is becoming increasingly clear that the attitudes of third age learners toward lifelong learning are key to developing such educational opportunities. This study has shown further that having a positive attitude does not necessarily mean that they will participate in lifelong learning rather they have to be motivated. Two intentions for pursuing lifelong learning appear to motivate third age adults to seek educational and learning opportunities: instrumental ambitions and expressive aspirations. Finally, findings also identified barriers that prevent the third age adults from accessing and participating in lifelong learning. Results of the study provided a clearer understanding of the third age learners and valuable insights for social gerontologic educators in planning and designing a more relevant and functional future lifelong learning and education programs for third age learners.

**SEVÄNEN, ERKKI\*** (University of Eastern Finland, [erkki.sevanen@uef.fi](mailto:erkki.sevanen@uef.fi))

#### *Knowing Society through Literature*

It was in the 19th century that novelists such as Honoré de Balzac and Émile Zola, two leading figures in French and European realistic-naturalistic literature, saw their own literary creation as an imaginative or "experimental" way of studying society. At this stage, sociology - literature's competitor in the field of societal knowledge - was a dawning discipline whose position in the academic world was insecure. At the beginning of the 20th century it became a legitimate discipline, still it would not gain a monopoly in relation to questions regarding societal knowledge.

In addition, literature offers insights into society. In his *Temps et Récit* (1983), Paul Ricoeur speaks about triple mimesis. In their social interaction people create institutions, rules, common meanings, myths, and representations of the world (mimesis 1). At the next level (mimesis 2), popular stories, literature and other arts describe the first level and take material from it when creating fictional or alternative worlds. Thus, these cultural products give us representations of society and a more or less critical sense of alternative worlds, whose order differs from the normal societal order. Finally, readers or receivers (mimesis 3) recognize that these products function simultaneously as representations of the real world and as critical deviations from it.

Literature's cognitive function does not, however, limit itself to representational knowledge and alternative or utopian world models. Literature is not a mere description of society; it also shows how people experience their lives in society - or how they experience society's economic and political structures that cannot, as such, entirely be an object of literary description.

Consequently, literature is a fruitful research object for the sociology of knowledge and the study of ideologies. Likewise, it can be utilized as a documentary material in social-historical research.

#### *Physical Activity Programs Promoting Health, Families, and Community Among Elders: An Exploratory Study*

Aspects of successful aging have become common media messages as older adults make up a greater proportion of national populations. These seniors typically know the dangers of smoking, poor diet, obesity, and high blood pressure but often lack motivation to make appropriate life style changes. Motivating and empowering older people to be active and healthy, even with support from family and community, is a challenge. Seniors in Motion (SIM), a non-profit fitness facility, was established in 2003 in Denton, Texas, U. S. A. to implement an intervention program encompassing physical fitness, education, and family and community support. Building on results of a feasibility study conducted in 2007-2008, SIM participants were given the opportunity to sign up for ongoing research designed to assess individual progress and program effectiveness. Since September 2009, over 300 volunteers have completed one or more of the following: initial assessment, Senior Fitness test, completed World Health Organization's Quality of Life survey, and other follow-up reassessments. Comparisons of muscle strength, joint flexibility, gait performance and body composition have been made over at least a 6-month period for almost all participants. Most indicators measuring muscle strength and flexibility showed significant improvement. Most seniors reported an increased in the time they devoted to several different types of exercise, activities in and related to the home, while reducing the time devoted to sedentary activities. Most seniors reported a more active and higher quality of life and less sedentary lifestyle than at the initial assessments. Beyond making people stronger and more flexible an unanticipated bonus was the spirit of kinship and community that grew out of the seniors continuing participation. The opportunity to engage in meaningful social contact provided many a most powerful antidote in the battle against health problems and their frequent companion loneliness.

#### *Impact of Long Distance Commuting on Israel and United States Couples' Satisfaction*

An important shift has occurred in employment related mobility. Long distance commuting has become an option to permanent migration. Details on voluntary long distance time-extended commuting participants' practices and consequences for partner relationships were gathered from 2010 to 2012. Quantitative and qualitative data were gathered from a non-probability convenience sample of 434 respondents in Israel and 130 in United States (U. S.). The static-group comparison research design dictated gathering comparable respondents from both commuting and non-commuting couples to better assess the impact of commuting. Deficit and resilience theoretical perspectives guided assessments of commuting's impact on couple satisfaction. Commuters versus non-commuters characteristics, commuting patterns, and initial assessments of impact of commuting on couples' satisfaction (Landesman & Seward, Forthcoming) provided the basis for further analyses and findings. Commuting had the greatest negative impact upon couples' satisfaction among women in Israel. Among the indexes constructed, respondents in non-commuting couples in Israel reported significantly higher satisfaction with communication, division of labor, and involvement with children when compared to respondents in commuting couples. Among U. S. respondents only involvement with children index follows this pattern. Israel and U. S. women plus U. S. men in non-commuting couples had significantly higher satisfaction index scores than those in commuting couples. Frequency of commutes during the year in the U. S. had a negative impact on overall couple satisfaction. Satisfaction with communication and division of labor indexes explained about a third of the variation in the satisfaction index in Israel and U. S. samples. In Israel the time spent in leisure activities index was also a significant predictor. Data limitations identify avenues for further research.

#### *Pierre Monbeig: Les Différents Traits D'un Entrepreneur Scientifique*

En 1957 la création à l'Université de Paris de l'Institut des Hautes Etudes de l'Amérique Latine visait à donner plus de visibilité scientifique aux études sur cette aire culturelle jusque-là peu développée. Depuis sa création et jusqu'à 1977, cet Institut a été dirigé par Pierre Monbeig. Géographe des franges pionnières, il a été ensuite future Directeur Adjoint pour les Sciences Humaines au CNRS et créateur d'une importante plateforme institutionnelle pour les études latino-américanistes en France, le Centre de Recherche et Documentation sur l'Amérique Latine. L'analyse de la trajectoire de Pierre Monbeig est particulièrement révélatrice des dynamiques, à la fois sociales et scientifiques, visant à développer les échanges entre la France et le Brésil. Notamment lorsqu'on se penche sur sa participation dans la création des institutions responsables pour des échanges scientifiques et universitaires. D'une part, son rôle précurseur pour la géographie humaine au Brésil grâce à son séjour avec la mission française ou encore son mandat comme président de l'Association des géographes brésiliens entre 1936 et 1946, sont révélateurs d'un projet qui visait le rapprochement scientifique et institutionnelle entre les deux pays. On peut s'interroger également sur son rôle particulièrement actif en tant que maillon fort d'une « chaîne de savoirs » de toute une génération des géographes brésiliens et français et « patron » d'une école de pensée sur les franges pionnières qui est loin d'être négligeable. D'autre part, son séjour au Brésil ne le permet pas de participer activement dans le processus d'autonomisation de la géographie en tant que discipline universitaire vis-à-vis de l'histoire. Or, l'hypothèse est qu'en occupant une position marginale dans le champ en raison de cette expérience à l'étranger, Monbeig s'est orienté vers l'international. L'analyse de sa trajectoire offre l'occasion de saisir les mécanismes institutionnels à l'œuvre dans la création des nouveaux réseaux scientifiques.

#### *Model Of Happiness In The Former USSR Countries*

The phenomenon of happiness being studied by scientists from different fields of science, the concept of "Happiness" is multifaceted and polysemantic. Happiness is determined not only satisfaction of primary human needs for food, clothing, shelter and security, but also in meeting the spiritual needs, the internal state of the person. At the same time happiness can be characterized by opportunities for citizens to participate in public and political life of their country, attached to the masterpieces of world culture, the possibility of complete rest.

In this work will be presented comparative data from sociological surveys conducted in framework of the project HITT-CIS - Health in Times of Transition, it is an international research project supported by the Seventh Framework Program of the European Union (FP7-Health). Field works were conducted in 2010, across nine former Soviet Union countries: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine. The objectives of this research were to study the conditions of lifestyle, health, social well-being, political views and their relationship. A total 18,000 respondents were surveyed by standardized personal interview. Sample represents the population at the age of 18 years and older, also represents distribution by region and type of settlement.

Results of the regression analysis will be presented, where the dependent variable is subjective feeling of happiness, measured on a ten-point scale, as well as influencing variables - number of variables, including not only the socio-demographic characteristics, but also the level of satisfaction with various aspects of social and political development of countries.

### *Changing Nature of Conflict in Post 2014 Situation and Its Implication in South Asia*

Pakistan emerged as the frontline state during the Cold War era and especially Afghan conflict (1979 – 1988). Pakistan remained the focus of attention during this time. After the 9/11 and later in war against terror, Pakistan again became part of this new war. But the nature of country's involvement in both wars was totally different. In the mean time during 1989 to 2001, Pakistan developed its own parallel agenda to play at different fronts simultaneously. But that policy miserably proved faulty, resulting killing of more than 45,000 civilian and 3000 soldiers and police officials in the last decade.

This paper analysis Pakistan's future policy in the post 2014 scenario and how it plans to move forward. Will this policy be helpful in resolving conflict or it would further sharpen the existing conflicts. Paper also focuses how regional and international forces may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of global and especially regional peace.

**SHAIKH, RIAZ\*** (Institute of Science and Technology , [riazsheikh06@yahoo.com](mailto:riazsheikh06@yahoo.com))

### *War, Conflict and Human Rights Violation: New Debates and Discourses in Pakistan*

Eventual aim of human beings is to have a peaceful society where human dignity and human rights are well respected. But during the war and conflict times situation totally rejects the concept of the such values and norms and especially in situation where conflicts persists for decades on asymmetric pattern. Situation becomes more complex in those cases where states provide covert support to the non-state actors to further toe their agenda. Pakistan's military developed nexus with the jihadist with the financial backing of other countries, but eventually the jihadists are now haunting the patron itself.

Now conflict between militants and state has turned to situation that where the level of violence has reached to new zenith. In this situation, abuse of human rights from both sides becomes a very common issue. But due to protest of civil society bodies and judicial activism at least debate on human rights violation is being taking place in Pakistan. Human rights organizations and judiciary are pursuing the agenda of missing persons and other sensitive situation vigorously.

Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.

### *Who Participates in Encompassing Protests and Why Does It Matter? Israel and Spain in 2011*

In Spain and Israel in the spring and summer of 2011, multiple demonstrations each mobilized hundreds of thousands of participants in the framework of Occupy-type protests. The Spanish *Indignados* (15M) and Israel's social justice movement were instances of an unusual variety of protest, labeled "encompassing" because it combines massive mobilizations with high levels of public support. Such encompassingness does not necessarily imply society-wide solidarity, but may instead be based on what are in effect multiple parallel protests in which some social sectors are under-represented or even altogether absent. This paper reports analyses of national sample surveys carried out in both countries, showing the effects of political cleavages and other social divisions on the passive and active engagement of individuals in these instances of encompassing protest. For Israel only, these conventional sources are supplemented by data collected via

mobile phone signals, which make it possible to paint a reliable portrait of the social, cultural and political characteristics of demonstrators.

### *Hoping for More: Renewing and Redeveloping Public Housing without Marginalizing Low-Income Residents*

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace troubled public housing projects in the United States. Although the term is used to describe a growing number of developments, "mixed-income" has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have been redeveloped into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to projects that attempt to preserve a substantial majority of units for low-income households. In addition, we develop a new way of identifying and categorizing mixed-income developments in terms of *how* income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together roughly equal proportions of low-income and high-income families into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly all low-income communities.

### *'to Foster the Spirit or to Secure One's Future': Competing Models of Field of Study Choice Among Middle-Class Students*

The growing interest in horizontal stratification has led researchers to recognize qualitative differentiation in the choice of academic fields of study (FOS), mainly along the lines of professional and non-professional fields. Still, adopting either rational action theory or Bourdieusian perspective, most researchers still evaluates FOS through their future utility, and accordingly assume a calculative or strategic choice process. This portrayal may reflect the stratifying effect of higher-education, as its ongoing professionalization. Nevertheless, higher-education and choice are associated with autotelic and expressive cultural ideals, such as the ideal of 'pure knowledge', the model of liberal-arts education and models of choice as an expressive action. To date, these ideals and their relationship with FOS choice have been mainly overlooked.

Drawing upon 'culture as tool-kit' perspective, I argue that when choosing FOS, students use dominant cultural perception of higher-education, as models through which they make sense and assign value to their choice. Accordingly, I show how the choice of professional or non-professional fields, reflects two distinct cultural models of higher-education and choice.

This paper is based on in-depth interviewsssh of middle-class students from professional and non-professional fields. In light of a review of cultural representations of higher-education, two ideal-types of FOS choice are elucidated. The first, draws upon the ideal of acquiring knowledge as a tool for the future; characterized by a calculative FOS choice; and a utilitarian approach towards studying. The second, draws upon the ideal of knowledge for its own sake; characterized by an expressive FOS choice process and an autotelic approach toward studying. Moreover, all students experienced their choice as a tradeoff between the two models - between success and personal authenticity. These findings support recent challenges to current line of explanations, and their implications for present and future research are discussed.

### *Health Needs of Jewish Immigrants in the U.S. and in Israel and Faith-Based Opportunities to Address Them*

Introduction: Jewish immigrant needs vary from both other Jews and other immigrant groups because of differences in group characteristics, context of re-

ception, and home country life. Although Jews are a longstanding religious U.S. minority, there is a paucity of research on recent Jewish immigrants and their health needs.

**Objectives:** 1) What are the health needs of recent Jewish immigrants in the U.S and in Israel? 2) How do these needs vary by home country and how do they compare to non-Jewish immigrants? 3) What are the findings' policy implications for faith-based interventions and how do they vary between the U.S and Israel?

**Methods:** Adult Jewish immigrants were surveyed as part of the randomized U.S. New Immigrant Survey data set and the Israel National Health Survey. The surveys included extensive health, religion, immigration, and other demographic variables. Outcome measures included health status, health behaviors, chronic diseases, and mental health. Univariate and bivariate analyses were performed. Variations by ethnicity were analyzed and outcomes comparisons made between the U.S and Israel and with non-Jewish immigrant groups. Over 25 key informant interviews with faith-based and Jewish community leaders in the U.S and in Israel were then conducted.

**Results:** Health needs were identified and variations were found in health outcome measures by key religious, immigrant and demographic factors, with implications for faith-based interventions such as synagogue programs. Opportunities for widespread faith-based interventions suggested by these findings and the informant interviews will be discussed, spotlighting contextual variations by denomination, home country and host country.

**Conclusion:** Opportunities may exist for faith-based health interventions among immigrant Jews by leveraging the social and religious capital in this understudied community. Efforts to target Jewish immigrant needs by faith communities and take their varying characteristics into account, including country, are important.

**SHAPIRO, EPHRAIM\*** (Columbia University, [eas97@caa.columbia.edu](mailto:eas97@caa.columbia.edu))

### *Religious Capital and Addressing Latino Immigrant Health Inequalities in the U.S*

**Background:** There is much evidence linking participation in an organization with health outcomes, more than the relationship of faith outside of a religious organizational context with health. For example, church attendance is the measure of religiosity most of often linked with better health outcomes. While some attribute the religion-health connection to social capital, there is insufficient attention to how aspects of religion itself can also be a resource contributing to the health of members of a religious community through religious capital. While it has primarily been used in other contexts, religious capital can be an important resource for health. There is a paucity of both theory and evidence, however, in understanding how religious capital may be related to positive health outcomes and, in particular, how it can affect inequalities for vulnerable populations such as immigrants.

**Objectives/results:** To fill this gap in the literature, this study draws from theoretical concepts in the field of sociology to examine whether religious involvement is associated with better health status and health behaviors among Latino immigrants, with potential to reduce health inequalities through increased religious capital. The study will describe in detail the theoretical framework for religious capital, with relevant constructs explained. Quantitative evidence supportive of the theory will be brought from multivariate analyses the author performed of over 1000 Latino immigrants from the randomized New Immigrant Survey (NIS), controlling for demographics, as well as from a review of the literature to support the study's theses.

**Conclusion:** Religious involvement can be related to better Latino immigrant health because of religious capital found among churchgoers. As a result, opportunities may exist to leverage widespread church-going already taking place by Latino immigrants to reduce inequalities by creating faith-based interventions which draw upon this religious capital.

### *Teaching Across Borders: Making Local-Global Connections in Sociology Teaching*

In recent years, there is a growing awareness that teaching sociology should include topics related to globalization. While a limited number of authors provide important suggestions for sociological curricula, we feel that there should be a more systematic approach to introducing theories and concepts of globalization in sociology classes. In this paper, we present our strategies of teaching about globalization in sociology. We understand globalization as a series of significant changes in social relations due to interconnectedness of the world. We look at different economic, political, social, and cultural *connections* between different countries and locales. We developed class activities to examine each dimension of globalization. By analytically emphasizing economic, political, social, and cultural

flows of globalization, we want our students to see how different institutions and actors initiate, cooperate, and negotiate transnational connections within each sphere.

### *One Country Two Realities: Work Values of Jews and Muslims in Israel*

This study examines work values of 909 Jews and 219 Arab Muslims, (or Palestinians that have Israeli citizenship). It is a unique study since there are very few studies on cultural values and no studies on work values, which compare between different ethno religious groups who have been living in the same country/ land for more than century and shares a long ethnic conflict. The findings reveal a significant difference between the two ethno religious groups regards the importance of all life domains and in most of the preferred work goals and the regression analysis of the main demographic variables cannot explain these differences. The MDS of Jews and Muslims also demonstrate different perceptions and internalization of work values among the two ethno religious groups. The value gaps can be explained by the cultural differences (individualistic Jewish culture vs. collectivistic Arab culture), by high degree of segregation, by the employment discrimination and primarily by the Israeli- Arab/Palestinian conflict.

### *Global Dis-Connectedness of Labour: 'Living Well for Less', Class, Race and Trafficking in Human Beings in the UK*

By reflecting upon the impact of the current recession on the continuing commodification of migrant labour in Europe, this paper will contribute towards the sociological exploration of the re-emerged tensions and 'dis-connects', along the lines of race, social class and gender, between people who produce and people who consume, between those who profit and those whose reward for their back-breaking labour is just enough to get going. It will question how the neoliberal organisations of production, circulation and consumption operate within the context of inflated racist, sexist, islamophobic and anti-immigration rhetoric, and how they serve to legitimise and normalise the continuing dismantling of the welfare state and labour market de-regulation to accommodate the governing ideology of our times: 'living well for less'.

The paper is based on the current research exploring the links between anti-trafficking policies in Europe and public knowledge and understanding of human trafficking. It will focus on the role of current anti-trafficking policies in the UK in reducing the complexity of human trafficking to the issues of illegal immigration and criminality. In describing human trafficking as 'modern slave trade' with the blame firmly placed on 'ruthless criminal gangs', the current UK government approach reduces the problem to the individual behaviour of devious criminals and of naïve and passive victims. Within this context, any suggestion that human trafficking remains epiphenomenal to class, race and gender, and directly responds to the growing demand for exploitable and disposable, usually immigrant, labour to satisfy the appetite of Western consumers to 'live well for less' seems so hard to fathom, so 'not-Wilberforce' and 'not-democracy', yet so close to neoliberal reality.

**SHARMA, NANDITA\*** (University of Hawaii at Manoa, [nsharma@hawaii.edu](mailto:nsharma@hawaii.edu))

### *Categorical Divisions: The Hostilities Between "Indigenous" and "Immigrants" As a 'State Effect'*

Nationalist politics has increasingly become one of the main ways that people constituted as "natives" have attempted to overthrow colonial domination. Together, the state language of "sovereignty" and the national language of "self-determination" have shaped notions of identity and have tended to anchor such identities to particular places. All this has figured into how contemporary "indigenous" nationalists have staked their claim to a place within a global system of national states. Over time, a stark delineation between "Natives" and "non-Natives" has been asserted. Today, a growing number of scholars who identify as indigenous, as well as those who position themselves as their allies, portray *all* "non-Natives" as colonizers. In this paper, I examine how a nationalized politics of decolonization has come to mark "Natives" and "migrants" as mutually antagonistic positions. Focusing on such politics of place in the national states of Canada and the United States, I question the conflation of processes of colonization with those of migration. I historicize such politics within their social, political, economic context by looking at the continuation between colonial state practices and contemporary indigenous nationalisms. I also contrast contemporary indigenous nationalisms with other political strategies of decolonization, particularly politics

that have refused the differentiations of "race" and "nation" and the Leviathan of national sovereignty.

#### *Making Housing Affordable for Urban Poor- Approaches Adopted in India*

Housing is one of the basic necessity of an individual. However, the dream of having a house remains distinct for than one-third urban population. They remain marginalised in terms of civic services, housing and other socio-economic parameters. The cost of this marginalisation is often very high and many studies have shown that it may be upto 2-5 times of the formal system.

By 2030, an estimated 5 billion of the world's 8.1 billion people will live in cities. About 2 billion of them will live in slums, primarily in Africa and Asia, lacking basic services, unsecured tenure, congestion and surrounded by desperation and crime. In India, the urban housing shortage has been estimated as 18.78 million, of which almost 96 per cent pertains to urban poor. Affordable housing has been considered as the only option to meet this challenge. A Task Force on "Affordable Housing for All", constitute by the Government of India, Ministry of Housing and Urban Poverty Alleviation, defined affordable housing in terms of (a) multiples of household income; (b) size of the tenement; and (c) percentage of household income, in case of rented accommodation.

#### **3.0 Approach of this Paper**

This paper will address the following issues, in the perspective of earlier discussions:

1. The need for a multi-pronged strategy for housing delivery to all sections of the society. This includes housing delivery system, target group and housing typology.
2. Incentives and subsidies to make housing within the reach of target group and mechanisms to retain the ownership. Right policy instruments for subsidy transfer are needed to make people shop for their dream house, without any restraint on size or location.
3. The access of urban poor to sources of institutional lending.

#### *Equal Leisure in an Unequal World*

Equal Leisure in an Unequal World Though the globe today is characterized by deep and different layers in in terms of capital accumulation and resource appropriation, the leisure experience may display a different type of demarcation – one that may have the possibility of enriching different social groups if they drew from each other. Societies in which leisure has come to be characterised by the consumption of the fruits of production individuals may appear to be bound by a stimulus-response mode of leisure behaviour. What should be 'done' during 'leisure time' is fed into the psyche through media pressure and socialisation resulting in activities that may or may not be self-enhancing even though they feed into the leisure industry. In conventional understanding of leisure, there continues to be a simplistic dichotomy between work and leisure and 'free' and 'occupied' time as though these were easily separable categories. In this same layered global society there are groups of people who still live with values that recognize the organic unity of all things, are aware of a sense of continuum, as a movement from matter to spirit and vice versa, and see an interconnectedness of all things. As a result there arises a tendency to respect the environment and other beings. The 'leisure' of such societies need not be time abstracted from other day to day activities but a mindset that characterizes the whole. The presentation will look into the possibility of interaction of these segments on each other so as to enable a more holistic attitude to the environment and to other existents on earth.

**SHARONOVA, SVETLANA\*** (St.Tikhon's Orthodox University, [s\\_sharonova@mail.ru](mailto:s_sharonova@mail.ru))

#### *The National Russian Model of University in the Era of Academic Capitalism*

The transformation of the national model of Russian university is under the influence of academic capitalism. The very same academic capitalism born in the depths of the neo-liberal capitalism. The basic principles of the neoliberalization fully implemented within the transformation of national educational systems:

- the creation of conditions of accumulation of capital and power of the economic elite;
- the denial of a nation, and therefore the promotion of the idea of the dangers of government intervention in the economy (in this case is to minimize the interference of the state in education);

- promoting free and stable functioning of the education system is not in general, and of its individual elements (schools, institutes, universities, etc.).

In Russia, and in other countries, this leads to the destruction of national educational systems. Yet Durkheim said that in society there are many cultures of each of them has its own education system. Simmel argued that cultural diversity enriches the world community. However, the implementation of neoliberal policies in the field of education under the slogan of "globalization" ignores the law and seeks to simplify the interaction between the educational systems in order to achieve clarity and transparency of market exchange. Author analyzes the example of Russia are the trends that are happening as a result, of the modernization of the education system that implements neoliberal principles and creating academic capitalism. Virtually all non-liberal utopian promises of the project, in practice, lead to quite the opposite of the expected results.

**SHARONOVA, SVETLANA\*** (St.Tikhon's Orthodox University, [s\\_sharonova@mail.ru](mailto:s_sharonova@mail.ru))

#### *The Spiritual Capital As a Fundamental Element Of Cultural Capital*

Cultural capital is usually regarded as a mechanism of influence on personality. Largely contributed to this study Coleman, although Bourdieu introduced the concept of a theoretical understanding of capital varieties. He was interested in the convergence of social, cultural and economic capital. We propose to focus on the cultural capital of both the qualitative characteristics of the state of society. The problem is that in the presence of cultural capital as a funded system of values in the form of works of art and science, society degrades morally. Any cultural capital based on traditional religious values. This does not mean the broadcasting of religious themes in works of art, although it excludes, but rather a philosophical position of artists and researchers, through which the public receives the interpretation of events, their assessment of a certain value-regulatory system of coordinates. This element is the spiritual capital of the company and is a fundamental element of cultural capital. Qualitative state of society, its morality depends on the amount of spiritual capital, which he occupies in the field of cultural capital. A striking example of how the degradation and spiritual revival of capital in society can serve as the processes that took place during the last century.

**SHAW, VIVIAN\*** (University of Texas at Austin, [Vivianshaw@utexas.edu](mailto:Vivianshaw@utexas.edu))

#### *Energy and Identity: Women, History, and Anti-Nuclear Social Movements in Japan*

Since March 11, 2011 (3/11), some Japanese citizens have responded to the ongoing Fukushima nuclear crisis by staging large protests against the use of nuclear energy in major metropolitan areas. Within this revival of anti-nuclear collective action, scholars and global news media have argued that the prominent role of women, who have been observed leading "tent city" occupations in Tokyo and organizing rallies in other cities, signals an important event with potential implications for the changing status of gender in Japanese public politics.

Applying a historical frame to the contemporary case of women's leadership in post-3/11 activism, this paper challenges a simplified narrative of feminist emergence, instead arguing that contemporary anti-nuclear politics must be read as part of a longer context of women's organizing in Japan throughout the twentieth century. Moreover, this history of social movements also reveals important divisions within Japanese women's movements across lines of race, coloniality, and citizenship. In this paper, I deconstruct the concept of "anti-nuclear" and examine how this politics converges with other histories of post-war women's collective organizing, particularly examining the roles of Japanese women in the related histories of peace and anti-militarization social movements.

In arguing how gender has politically and rhetorically functioned as a method of organizing Japanese public politics, I challenge notions that Japanese women, in the context of social movements, should be viewed simply as a formation of collective identity. Rather, the different meanings of women's identities within these cases suggests the importance of reading Japanese women's social movements in relation to various political contestations at the "local" and transnational levels and moreover, in terms of what they are able to signify about race, coloniality, and citizenship.

### JS-44.13

**SHCHERBAK, ANDREY\*** (Higher School of Economics, [ascherbak@hse.ru](mailto:ascherbak@hse.ru))

#### *Nationalism in the USSR: Historical and Comparative Perspective*

The late 1980s and early 1990s were characterized by the sudden rise of nationalist movements in almost all Soviet ethnic regions. It is argued that the rise of political nationalism since the late 1980s can be explained by development of cul-

*tural* nationalism in the previous decades, as an unintended outcome of communist nationalities policy. The Soviet political and cultural nationalism is studied in historical and comparative perspective. All ethnic regions are examined throughout their entire history of the Soviet Union (49 regions, 1917-91), using a structural equation modeling approach. This paper aims to make at least three contributions to the field. Firstly, it is a methodological contribution for studying nationalism: a 'quantification of history' approach. Quantitative values are assigned to historical trends and events. Having constructed variables from historical data, I use conventional statistical methods like SEM. Secondly, this paper contributes to the theoretical debate about the role of cultural autonomy in multiethnic states. The results challenge the concept of 'cultural autonomy' as solution to interethnic conflict. Cultural nationalism matters, it indirectly reinforces political nationalism. Concessions in the cultural domain failed to stop the growth of political nationalism in the late 1980-s. Finally, the paper statistically proves that the break between early Soviet and Stalinist nationalities policy explains the entire Soviet nationalities policy. In fact, the late Soviet nationalities policy was inherited from the Stalin's rule period. This finding revealed in other studies now gets statistical evidence.

### RC34-598.2

**SHEN, JIE\*** (Chinese University, [jie.shen@hotmail.com](mailto:jie.shen@hotmail.com))

#### *Chinese Youth's Post-Materialist Values in an Era of Multi-Modernity*

Today's China's society is in a compound of multiple dimensions of time and space. Characteristics of China's modernization are late and exogenous onset. When the mainstream direction of China's social development is manifested as the transformation from traditional society to modern one, the developed Western societies that have completed the modernization goal constitute the environmental conditions affecting the development of China's society. As a consequence, China's society more clearly than ever in the history is at the same time being affected by three dimensions of time, or, put another way, in the present there are three dimensions of time – traditional, modern, postmodern – coexist in the same space.

If so, although the total direction of social psychological changes in the course of the China's modernization is the transformation from the tradition to modernity, this is not intended to preclude the possibility that the present Chinese social psychological changes will present a more complex pattern than in any previous eras and societies.

Just as using Inglehart's two important theoretical tools -- scarcity hypothesis, socialization hypothesis can attest that when China entered the take-off stage of its modernization, changing from a society of scarcity to one of prosperity, the spiritual world of the social members is undergoing rapid and profound changes, along with gradual improvement of their hierarchy of needs. It is Chinese youth who first shows these changes. In China, the post-materialist values have begun to emerge in these people born in the 1980s, and have further manifested by these groups born in the 1990s.

Occurrence and development of the post-materialist values among Chinese young people will definitely lead to changes in their activities of daily life and ways of social participation, and to affect the appearance of China's society especially when they enter the society in an all-round way.

#### *The Value Of Mixed Methods: How Does Certifiability Of Job Requirements Determine The Channels Of Job-Person Matching?*

Using qualitative collected in three representative Chinese cities and quantitative data drawn from the 2003 China General Social Survey, in this study I have built up a theoretical framework to understand the interdependence of formal and informal employment channels. I argue that a job-person matching process should be understood from a dual perspective of the employer and the job applicant. From the employer's perspective, requirements for certain job positions are composed of two parts, namely, certifiable and uncertifiable qualifications. The variation in the relative importance of these two types of qualifications determines that employers' recruitment strategies vary from formal channels only, to formal-informal-joint channels, and then to informal channels only. From the job applicant's perspective, quantitative analysis shows that an applicant's pre-hiring resources—human capital, political capital, and social capital—match up with the targeted employer's expectations of both certifiable and uncertifiable qualifications in a successful job-person match. By articulating the three typical scenarios of employment activities, I highlight the great importance of joint formal and informal employment channels. I argue that studies on employment need to take a formal-informal-joint approach, instead of focusing on formal or informal employment channels alone.

#### *Two Decades of Educational Expansion in Taiwan: Social Equity Concerned*

During the past two decades, Taiwan experienced a movement of expansion of senior secondary education and higher education (the expansion in brief). In the meantime the entrance system of higher education institutions and senior high schools has changed accordingly in response to the open enrollments demands from the public.

One of the causes of the expansion was to achieve social equity in terms of offering more educational opportunities to those students from the disadvantaged groups. However, until 2013 even though the gross enrollment ratio of upper secondary education and tertiary education reached 98.33% and 84.43% separately, those students with disadvantaged background were still left far behind with their counterparts from better family background in terms of educational achievements, such as being admitted into the academic senior high schools and universities with good reputation.

The central argument here is the increase of senior high schools and higher education institutions (HEI) actually enrolled more students from the disadvantaged groups, the differentiation and stratification of senior high schools and HEI in terms of preference and various ability requirements, still made the social equity an unfulfilled dream.

The paper examines the expansion, first through the reveal of the statistical data illustrating the extent of the expansion; then through the investigation of the reform claims proposed since the 1990s; and finally through the collection of the issues resulting from the expansion mentioned above.

#### *The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers*

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. The data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second, in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers' human resource management in Kaohsiung and future studies were discussed.

#### *Managing Authorship in Chinese Research Organizations*

Scientists put great stock in authorship as a form of universal recognition for originality in the profession of science. Yet, despite accounts of various authorship practices across disciplines and countries, scholarly literature has had little to say about how this professional norm emerge in research organizations in the advent of managerialism. This study, based on in-depth interviews with 26 research teams in two Chinese medical schools, explores into this question in by looking at the Chinese case. China has been characterized by its recent surge in scientific publications and an overwhelming "publish-or-perish" orientation in evaluating not only scientists but also institutions. The two medical schools, while both explicitly highlight "more, higher publication" in their organizational goals, have different incentive systems. Firstly, I compare the rules and discourses surrounding authorship in each research team within the two schools. Researchers invoked four distinct discourses on authorship: 1) "sponsorship of students" 2) "contribution-based distribution", 3) "need-based distribution", and 4) "fairness in the long-run." In both schools, researchers regarded "sponsorship of students" and "contribution-based distribution" as institutional demands from the profession. However, more teams in one organization than the other made "sponsorship" an explicit rule, and "contribution" is defined differently in the two settings.

"Need-based distribution" and "fairness in the long run" were characterized as innovations by some teams and enacted under certain conditions. Secondly, I examine three organizational factors that contribute to these differences: the incentive system of each organization, the hierarchy of each team, and finally the constraints and opportunities each team faces inside and outside of the organization. Depending on the organizational circumstances of each team, certain discourses about authorship prevailed while others were impeded, generating systematic difference at the organizational level.

CHEN, YING (Keele University)

#### *Exploring Reactions to Risk and Uncertainty in the Context of Smoking and Lung Cancer*

Research examining the sociology of diagnosis has demonstrated how the provision of a clinical diagnosis from a health professional can promote identification of illness or disease, facilitate behaviour change, and enhance adoption or resistance of illness identities (Jutel and Nettleton, 2011). Further examination of such frameworks could contribute towards achieving a richer understanding of health communication compliancy, thus enabling better management or avoidance of ill health and disease.

The current study examines such frameworks within the context of a Stop Smoking Service (FagEnds, Liverpool) and the study has been designed to replicate a recognised model of diagnosis. However, rather than a clinical diagnosis, smokers receive a personalised lung cancer risk assessment – essentially providing them with a diagnosis of uncertainty. The primary aim of this study will be to ascertain whether provision of personalised lung cancer risk information alongside health advice, will enhance smoking cessation.

This mixed-method paper will disseminate the findings of a randomised controlled study consisting of ~300 smokers, in which the control arm receive generalised lung cancer risk information and the intervention arm receive a personalised lung cancer risk assessment, using the Liverpool Lung Project risk model (Cassidy et al., 2008). It is anticipated that provision of personalised lung cancer risk information may encourage behaviour change i.e. smoking cessation and long-term maintenance of this change at six-month follow-up. In support of the aforementioned quantitative survey, qualitative interviews will also be conducted with a selection of participants (N=30), which aims to provide further explanation as to the impact of receipt of a diagnosis of uncertainty and the subsequent behaviour and attitudes of which it may entail. Overall, it is anticipated that the findings will contribute towards our understanding of the sociology of diagnosis and may help to inform the development of future health risk communications.

#### *Complex Trauma a Conduit for Inequality*

Over the last century we as citizens of a united world Nation have been appalled by the atrocities that have been meted out to our brothers and sisters living in all corners of the world by their enemies or colonisers. Similarly we have been moved by the grief and loss of survivors of climatic disasters that frequent this planet. The Mental health profession has sought ways to assist those who have experienced these deep life-changing terrors. Trauma has been an event and part of every cultures story line. The recovery and healing from such traumas has been dealt with successfully over a millennium by Indigenous communities with their ways of knowing. However the dominant culture's exclusion other cultural standpoints is to the detriment and wellbeing of those they seek to help. In Australia most Indigenous Australians have been prevented from receiving culturally appropriate healing in a manner that would meet their needs. The western oppressor uses many strategies to thwart healing and resilience of Indigenous peoples while simultaneously rolling out colonial policy targeted at causing harm, injury and genocide. The legacy of traumas has reverberated along many generations, re-traumatising Aboriginal peoples and their communities. The western solution to the disarray that this has caused has been to provide a [safe] lock up opportunity for those who suffer from significant mental health dis-ease as a result of unresolved grief, loss and untreated complex trauma. The safe lock-up places are prisons, keeping westerners safe and further punishing those already deemed not quite human and criminal. The numbers of Indigenous Australians in juvenile and adult detention centres under the auspice of corrections is escalating each year, especially the juveniles and women. This is the story of the journey and pathway to prison for Aboriginal Australians.

**SHESTAKOFSKY, BENJAMIN\*** (University of California, Berkeley, [bshestakofsky@berkeley.edu](mailto:bshestakofsky@berkeley.edu))

#### *The Triangular Market: Reworking, Reproducing, and Repairing an Online Marketplace*

The Internet has revolutionized how consumer goods are bought and sold in the United States. Yet the market for local services – semi-skilled or skilled professionals hired by consumers to perform a service – still operates largely as it did before the emergence of the Internet. I will present preliminary findings gleaned from 19 months of ethnographic research at a firm aiming to do for the local service sector what Amazon has done to retail. The firm planned to create a venue in which buyers and sellers of local services would be connected more efficiently than ever before; in so doing, the company hoped that each party, in pursuing its own self-interest, could create a better world for all involved by making it easier for consumers to hire local service professionals than ever before. My research reveals that tensions continually arose in the market because, rather than creating a horizontal relationship between buyers and sellers, the firm had created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market's inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market is distributed across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

#### **Abstract**

Maternal health is a critical topic in global development. Maternal ill health and deaths impacts families, communities and societies and has far reaching effect across socio-economic strata. Despite recent data showing a positive turning point in the battle to keep mothers alive through pregnancy and child birth, the maternal mortality rate are still high in India and significant gender-based health disparities remain in India. With limited access to education and employment, high illiterates and increasing poverty level in India making health improvements for women exceedingly difficult. Female disability is especially in attributable to maternal causes and maternal deaths. The present paper is an effort in understanding maternal health and care in rural parts of Karnataka.

The objectives of the paper are to know the status of maternal health and consequent problems and also to analyze the socio-economic factors that act as barriers to access good health facilities. The data for this paper are based on the complete birth histories collected from the 200 ever married women age 20-49 years, selected from 4 villages of Dharwad district in Karnataka.

The findings suggest that inspite of the Government's efforts in improving maternal health in rural India, women have been suffering from health problems resulted from complications during pregnancy and child birth and also anemia and malnutrition. Hence the existing health facilities need to be strengthened to improve such health problems of pregnant women.

#### *"Problems and Prospects of Women Police: A Study of Gender Inequality in Indian Society*

Revised:

**Keywords:** Gender inequality, Indian society, Women Police, Hubli-Dharwad.

**Affiliation:** Karnatak University, Dharwad.

Research Committee = **RC 41**, Session: Population, Gender Inequality and International Migration.

Title of Abstract : **Gender Inequality in Indian society: A Study of Women Police in Hubli-Dharwad.**

Name and Address of author(s) : Prof. Shakuntala. C. Shettar, Professor of Sociology, Dept. of Sociology, Karnatak University, Dharwad.

#### Abstract

A middle class woman working outside in different jobs is post-independence phenomenon in India. It is only in recent past, women have been working in police department. Until then, it was male a dominated profession that requires lot of physical stamina, power, wisdom, rational thinking, capability to control the situation and confidence. At present, India has got the distinction of having not only first women police station but also having large number of women police.

The nature of police system is altogether different from work in the other departments such as banks, schools, hospitals, or business organization. The police work demands to work more hours, to work at late night and to work in dangerous and uncongenial places. Such a situation poses many problems for women police. The present study is an effort in understanding the problems of police women at their work place and at their family. The study is confined to 50 women police of Hubli-Dharwad Municipal Corporation, Karnataka, India. The findings of the study suggest that women police have been emerging as a significant development especially among the lower middle class group. It has not only changed their economic status but also overall status. At the same time, women police have been facing problems at work place in respect of working hours, wages, gender discrimination, promotion, career etc. Still majority of women have a sense of satisfaction of serving a society by joining this service.

#### *Power Asymmetry and Resource Use Conflict Between Farmers and Pastoralists in Northern Nigeria*

Northern Nigeria can be described as a "zone of instability" in Nigeria. Since the country's independence in 1960, Nigeria has witnessed a myriad of conflicts ranging from religious, ethnic to political including a brutal three year civil war. Though many of the conflicts are widespread, the northern region appears to have been the epicentre of several interlocking conflicts. The north of Nigeria is characterised by three major types of conflict, which are different but interrelated in nature, namely: inter-ethnic, religious and resource conflicts. This paper focuses on resource use conflict between farmers and pastoralists which can be explained by a variety of factors including scarcity of resources, growth in the population of herds and humans, the political economy of land use and asymmetry in power relations between the two resource users. The paper argues that historically the control of political power has vacillated between the two resource users. In the past, pastoralists were politically powerful in many states in the African savannah and Sahel including northern Nigeria; and hence, had access to land and land based resources for their livestock. In the contemporary dispensation, sedentary crop farmers are the politically dominant and "landed" group, and have often made it difficult for the pastoralists, the "landless" group, to access land and land based resources for their livestock. There is thus a fierce contest for environmental resources between the two resource users, mediated by power relations, and often resulting in violent conflict. The paper concludes that though scarcity of resources is often considered as a key explanatory variable in resource use conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in the "unequal world" of farmers and pastoralists in Northern Nigeria.

#### *Changing Politics of Social Policy in China: Blame Avoidance and Credit Claiming in an Adaptive Authoritarian State*

Blame avoidance and credit claiming are two popular concepts for explaining the politics of welfare retrenchment in the mature welfare state. They indicate the crucial impact of electorates in competitive democracies on the policymaking that renders welfare institutions resilient even under the pressure of permanent austerity. This article modifies these concepts to account for the politics of social policy in China, an authoritarian state often viewed as capable of implementing reforms without difficulties. I argue that this view is far from reality as the government officials also hold accountable for their policies mainly to their superior party supervisors who evaluate their political performances. The specific political institutions in China namely entail different mechanisms that influence the logic of blame avoidance and credit claiming, and accordingly, the politics of social policy from those of Western democracies. To explore this aspect, an explanatory framework from the perspective of central-local relations is employed to understand the devolution of social policy and its impact on welfare politics. Given the economic and fiscal decentralization, central and local governments essentially follow different logics of blame avoidance and credit claiming when it comes

to expanding or dismantling redistributive social policy and social service: Central government tends to claim credit by setting up social policies whose financial responsibilities rest on the shoulders of local governments, or avoid blame in case of dismantlement by passing the buck to local cadres responsible for implementation. Local governments, by contrast, avoid blame by either delaying or selectively implementing policies dictated by the center. They can also claim credit by experimenting with new policy models that may find nationwide application later. Health reforms and social service for migrant workers are used as two examples to illuminate the driving force behind the politics of social policy in China.

#### *Forced Migrants and Their Connection to Their Homeland: A Case Study of Inter-Country Adoptions and Cultural-Discursiveness in Second Modern Transformation in East Asia*

The forced migrants, as Castle (2008) noted, have dramatically grown in numbers in relation to the changing global order. One of the forms of forced migration we should take note of is the trafficking of people across international boundaries for the purposes of exploitation, which includes the children expected to fill the "vacancy in a family" through inter-country adoptions. Meanwhile, human security counts on culture as having an initiative role in establishing the stability of permanent peace. The Hague Convention insists that it is in the "best interest of the child" to keep the inter-country adoptees in touch with the culture of their origin. However, some Korean adoptees have found themselves in another situation. Their culture transformation has been such that they perceive themselves as having been "forced to be separated from their biological mothers and to relinquish their Korean nationality." This had led them into forming a global movement that demands legislation of the Dual Citizenship Act and rights for unwed mothers in Korea.

The objective of this research is to show the process how the forced-migration group, that here will be referred to as inter-country adoptees from East Asia, came to be the subject in a cultural-discursiveness of 'second modern transformation (Han and Shim 2010),' which incorporates global risks, individualizations and cosmopolitanizations. In particular, I will examine the reasons why the adoptees can be counted as forced migrants while referring to the Korean adoptees' statements in the movements. I will also draw attention to their values and social capitals acquired in the Western countries and their influence on Asian traditional cultural beliefs through the movements, which could be a potential to reform the social structure. Based on this discussion, I will make an implication on their leading roles in the second modern transformation in East Asia.

#### *Japanese "Solidarity" Experience: A Suggestion for Polish Disaster Preparedness*

The paper suggests effective use of the socio-political culture of "Solidarity" as a potential basis for disaster preparedness in Poland from the perspective of Japanese experiences.

Poland holds a cultural tradition known as the Solidarity Movement, whose potential for mobilizing society continues to this day. Through a unique mechanism of self-organization, it unifies individuals with diverse interests and beliefs to concentrate the impact of different regions and local communities; the "subjectivized" activities of Polish citizens attained its primary aim of a change in the country's political system at the end of the 1980s, while presenting its operative revitalization in the face of prolonged European economic crisis in the 21<sup>st</sup> century.

Crucially, Japan's disaster experiences, especially those of the Great Hanshin-Awaji Earthquake (1995) and the Great East-Japan Earthquake (2011), show the rise of *its own* solidarity. In the two contrasting disaster-hit communities, i.e. Kobe City and the rural Tohoku Area, activists call for the mobilization of the cultural tradition of "bonds (*kizuna*)". These bonds have been functioning not only in the first phase of collective euphoria, but also in the long-term process of building social subjectivity and community rehabilitation to see the rise of sustainable civil society after disaster situations.

Through the lens of Japanese experiences, the paper suggests a conscious activation of the socio-political culture of Solidarity in the approaches of disaster policy in Poland, due to its lack of preparedness despite frequent damage from different natural and human-caused catastrophes including flooding. By analyzing cases of cooperation among Japanese citizens, social organizations, and local as well as national governmental institutions, the paper presents the option of transferring Polish Solidarity experiences from the field of polarized politics to that of potential disaster policies to fortify Poland's future resilience.

*"Japanese" Approaches to the Music of Frédéric Chopin*

The paper examines the "Japanese" understanding of the music of Frédéric Chopin as it appears in the narrative discourse of Japanese pianists who have studied in Poland and France.

The works of Chopin occupy an undoubted position in Japanese music institutions for their accomplished artistry in piano techniques. Musicological studies show that having quickly appeared as crucial in concert repertoires of the first years of the twentieth century, Chopin became an icon of "Western" culture to which the "civilized" Japanese should aspire. Japanese music universities came to emphasize the importance of his technically demanding works, e.g. Etudes, Ballades and Scherzos while mostly neglecting Mazurkas and Waltzes.

The paper sheds light on critical thoughts regarding "Japanese" education held by some of the country's contemporary musicians who have formulated their professional identities vis-à-vis "French," "Polish," or "European" traditions of Chopin's music. Semi-structured interviews with Japanese pianists who underwent studies in France and Poland are put through a method of critical discourse analysis that draws upon structuration theory and allows effective inquiry into an agency's narrative in the face of established institutional discourse.

What is the general view on the teaching of Chopin's music nurtured in Japanese music institutions? How does it affect individuals' approaches to Chopin's works? How do pianists confront or develop the "Japaneseness" of their performance after education in France or Poland? What are the renovated "Japanese" elements in the understanding of Frédéric Chopin's music after study in Europe?

Analysis conducted under the umbrella of such questions attests to several things including pianists' recognition of "delicate" Japaneseness resonating with Chopin's works, notable critique on the "Japanese" pursuit of sophisticated techniques extracted from the fuller universe of Chopin's music, and the unique refurbishment of a sense of nature through the performance of Mazurkas.

*An Exploring Study on Networked Market Disruption and Resilience*

The main objective of this study is to explore the core of socially restrained buying trends of the agricultural foods and products made from Tohoku Area. Actually these cases mean that many people do feel something unfavorable and they are not going to buy foods made from Tohoku Area. And these trends are still often observable anywhere ever since the Fukushima Nuclear Disaster of the Tohoku Quake (11<sup>th</sup>, Mar. 2011). Certainly, this social phenomenon is rational to understand the social anxiety and unsafely suspicions of naive people for nuclear polluted contaminations within foods. Of course, these safety matters were temporarily, but some consumers still feel unsafely sentiments now.

In this concern, I presume that these social trends are underlying in the information-asymmetry as the market for 'Lemons'. And I define this presumption as an agent-based model on social cascading, social uncertainty, networked market disruptions and percolation process. As results of simulating runs, I clarified my hypotheses and these are possibly actualized in configured conditions. Namely I can conclude that the emergent cascading of socially restrained buying trends of agricultural foods made from Tohoku Area can be engendered by information-asymmetry as the market for 'Lemons', and its networked market is also crucially ruled in the percolation principle. Finally, I will show these details and discuss the relatives.

*Freedom Markets: The Moral and Political Economies of Human Trafficking in China, Thailand and the U.S*

This project is a global and multi-sited ethnography of the transnational social movement to combat human trafficking through state- and market-based approaches to managing low-wage labor migration and women's work. Empirically, this project compares faith-based and secular approaches to anti-human trafficking work in China and Thailand. From 2008-2013, I completed 40 months of ethnographic participant observation at an evangelical Christian vocational training center and secular anti-trafficking governance project in both Beijing and Bangkok, and their sites of movement organizing and consumer activism in Los Angeles. Studying global sites across this movement, the dissertation dissects the "global connections" as well as disconnections between transnational social movement activists, global governance institutions, states, markets and movement subjects—low wage women workers, inclusive of both those who are identified and unidentified as 'trafficked.'

My dissertation argues that despite global justice goals, faith-based and secular factions of the human trafficking movement reproduce women's global subordination at the discursive and labor process levels. American evangelical Christian missionary organizations recruit sex workers in Beijing and Bangkok to work as jewelry-makers and sell this jewelry through the bustling anti-trafficking movement in the U.S. Arguing that jewelry represents a proxy commodity for freedom from enslavement and a virtuous wage, these programs create a *transnational moral economy of low wage women's work*, where traditional exchanges of wage for labor are replaced with affective commitments between First World rescuers and their purported victims in the Global South. On the other hand, secular governance efforts, like the United Nations Inter-Agency Project on Human Trafficking focuses their attention on holding nation states accountable to transnational norms and treaties. They graft existing state institutions of labor, migration, gender rights onto the framework of human trafficking, thereby inadvertently strengthen nation states' ability to control and punish marginalized populations, including migrant workers, marriage migrants and sex workers.

**SHIH, ELENA\*** (University of California, Los Angeles, [elena.shih@gmail.com](mailto:elena.shih@gmail.com))

*Intimate Economies of Rehabilitative Work: Policing Sexuality through Wage Labor and Re-Education through Labor in China*

This paper begins to theorize the intimate labor regimes of the "rehabilitation industry" in China. It examines the collusion between transnational interests, the state and the market through two types of vocational training programs for sex workers in China. In China, state-sanctioned *rehabilitation through labor* (RTL) programs serve as mandatory sanctions for prostitution offenses; at the same time, American evangelical Christian missionaries recruit sex workers to work as jewelry makers, and label them as victims of human trafficking to transnational consumers and activists. These programs aim to generate economic alternatives to labor migration and sex work. However, the focus on labor training and re-education as the animating force of social mobility ignores the complex labor, gender and ethnic hierarchies that exist within the intimate labor industries. Opening the black box of this new industry, my work will investigate the connections between the local and global and question the optimism around the transformative potential of "good work."

This paper is based off 28 months of ethnographic participant observation at an evangelical Christian vocational training center in Beijing, China, and pairs this with preliminary analysis into the historical and contemporary practices of rehabilitation through labor in China.

*Culture As the Parenting Toolkit: Class and Globalization in East Asian Families*

By using ethnographic documents in Taiwan, this paper aims to examine how three different formats of local and global cultural capital are constructed and distributed unequally between the middle and working class families, particularly via their management of afterschool activities for elementary school children. I use interviews with family members (N=72) to examine how parents' cultural capital is transmitted through the popular routines of Taiwanese children: the afterschool activities, such as piano playing, English lessons, or math lessons, or through the fabric of their family life. Lareau and P. DiMaggio both employed Bourdieu's "distinction" approach to childhood inequality: the former derives from Melvin Kohn's theory on child-rearing values and treats art participation as part of the middle class "concerted cultivation" pattern; while the latter pinpoints children's art activities as a form of status culture participation. In this paper I imply culture without national boundaries and present the Taiwanese case to show how global/western culture are adopted and embedded in contemporary Asian parenting, which interplays with the local structure of class reproduction. I find three fields of child-rearing: Educational achievement, talent development and the western cultural capital. These fields are closely related to parental class position in a univore-omnivore spectrum. All families emphasized core-value on academic success; the middle class and upper class families focused on talent development; and the upper class families emphasized "being international." This paper further reveals that, in East Asian societies, the local families are adopting western culture in their child-rearing, which further generates "western cultural capital", a rising field of distinction for upper class children in East Asia. With lowest fertility rate in the world at 2009, Taiwan is a unique case to understand class variation of child-rearing.

#### «Cellular Globalization» and Communicative Inequality

In view of high speed of development and inculcation of the new informational technologies, growth of consumerism, space globalization in the contemporary societies the high level of social dynamics remains. At present the world community experiences increasing influence of the informational and communicational technologies. At the beginning this changes weren't very visible, but now we already don't imagine our life without social networks and connection which is available constantly. Our friends are increasingly not real people, but simulacra. New trends of world development, their orientation on an innovation and modernization create the conditions for new social phenomena formation, one of which is communicative inequality. Communicative space is constantly changing, and with the emergence of advanced communicative technologies new vectors of its formation appearance. Between those who have the technical capacity and the necessary educational level for using the Internet and those who have no such possibility the border lies. The new mobile communication potential influence the individuals' behavior. Communicative inequality develop in the new telephony using and in obtaining information from a variety of sources including the media which price isn't available for wide range of customers. Recently the gap between rich and poor in the sphere of information has become more and more conditioned by the technological characteristics, when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

#### A Sociological Approach to Varying Treatment Outcomes of Complementary and Alternative Medicine

Social sciences of medicine have not given much attention to the variations in the real-world treatment outcomes of CAM situated in different social contexts yet. This neglect is surprising, because the wisdom has long existed in social sciences of medicine that the effects of medical interventions are significantly influenced by social and cultural circumstances. Along with this neglect, a problematic view seems to be revived and reproduced among the medical science community that any deficiency or efficacy in the treatment outcomes of acupuncture and herbal medicine is attributable to the characteristics of the treatment in itself detached from its medical and social environments. However, the limitation of this view becomes clear when acupuncture or herbal medicine of the identical quality and design leads to varying treatment outcomes in different trial sites. As a way to consider these puzzling variations and to propose a sociological explanation of the varying effects of acupuncture and herbal medicine, this paper examines systematically how divergent treatment outcomes are in acupuncture and herbal medicine in Japan and the U.S. and how they are related with the social environments of these medical interventions. In particular, this paper highlights the significance of coordinating these CAM treatments with the mainstream biomedicine at multiple levels in order to get tangible health care benefits. It concludes with reflections on the limitations of the current discourses on the social determinants of the effects of medicine and the inter-cultural medicine and cultural competency.

#### Family-Related Risk Perception and Individualization in East Asia

Based on a survey research conducted to citizens of three capital cities of East Asia, Seoul, Beijing, and Tokyo, this paper is aimed at comparing the family-related risk perception in the three cities with a perspective of individualization theory and a typology of risks developed for East Asia. More specifically, it is aimed at

revealing how the citizens of the three cities feel about the recent changes in the family such as divorce, low fertility, decrease in the parent's role in home education, isolation and suicide of the elderly, individualist tendency, decrease in mutual help in the family, and conflict in the property distribution. The research questions are as follows: First, how do the citizens of three cities perceive about the various family-related risks? Second, what influences the family-related risk perception? As to the first question, it turned out that perception of the first modernity-related risks are higher in Beijing, while that of the second modernity-related ones are higher in Seoul and Tokyo. As to the second question, it turned out that not only the family-related macro changes as revealed in law and policy changes and statistical indices in the area of fertility, divorce and marriage, but also individualization turned out to be significant. This suggests that the three cities seem to be in different stages of development and that the three cities have both the first modern and second modern risks.

#### Funeral Ceremony As an Embedded Social Capital

Funeral ceremony is one of the institutionalized social facts in each society. It could be carried out with family, relative and community members in the traditional societies. But in the modernized society, funerals tend to be held only by family and closer friends. We compared the East Asian funeral ceremonies in *Invisible Population: the Place of the Dead in East Asian Megacities* (ed. N. Avline-Dubach, Lexington Books). We found the great changes of funeral customs in Japan, China and South Korea. The undertakers became the new actor of the funeral services and we can't conduct it without them in the urbanized cities. We can call that tendency as "the commercialization of funeral ceremony". Now the funeral service can be served only by the professional undertakers.

But in the East Asia the relations and friends are yet important actors. They help the family members for organizing the funerals. So the social networks that the dead and family members have are "the embedded social capital" for the funeral ceremony. We shall compare the properties of the societies from this point of view.

The Center for Social Capital Studies in Senshu University held the researches in East Asian Societies cooperated with the organizations in these countries; Vietnam, Laos, Cambodia, South Korea, China, Taiwan and Thailand. We asked the people about social relation, social trust, security, customs and ceremonies. I will show their attitudes about the participations for the funeral ceremonies of relations, friends, neighbors and colleagues.

LOPES, JOÃO MARCOS (University of São Paulo)

#### Too Much Business and Few Policies: The Role of Major Construction Companies in the Housing Program "Minha Casa, Minha Vida" in Non-Metropolitan Cities in Brazil

Brazil is now passing through an unprecedented moment regarding housing production due to the large volume of public funds focused in just one single program: the "Minha Casa, Minha Vida" (PMCMV). It was released in 2009 with the goal of building 3.4 million housing units in six years only. Since then, the role of the real estate market was consolidated in Brazilian contemporary housing policy, which had already been outlining since the late 1990s, characterized by the performance of major construction companies and by the scale and standardized production housing throughout the country. This geographic expansion covered cities and regions that weren't major companies' priorities so far, such as São Paulo state country cities and other states capitals (beyond the axis Rio-São Paulo), causing significant changes in the local real estate dynamics and in the socio-spatial configurations in these cities. This article aims to analyze such changes under two different approaches that are related to each other. The first looks at how the production of PMCMV is revealed socio-spatially in non-metropolitan areas, having as territorial focus, the cities in central region of São Paulo state, in which it is possible to note the high concentration of housing units produced by only a few major construction companies. The second approach focuses on understanding the production structure of PMCMV, starting from the analysis of a major company that currently accounts for 10% of the housing units hired by the PMCMV and 30% of the units in the study area. The hypothesis is that the recent phase of housing production is controlled by a market policy, rather than a housing policy, in which the state provides funds and companies design and produce the city, delineating a private conception of urban design and housing product.

### *Estimation of Hedonic Single-Family House Price Function Considering "Scenes"*

In this study, hedonic house price functions are formulated using the single-family house market in the 23 wards of Tokyo as the subject. In the formulation of hedonic models, the generation of omitted variable bias is thought to occur in cases when, in addition to locational factors (i.e., factors involved in decision making when buying a property) and building structures which affect the house prices, local environmental variables or "scenes" and the individual characteristics of house buyers, such as their income, are not taken into consideration. However, since it is difficult to obtain local environmental information in a small neighborhood unit or "scenes" and to observe individual characteristics of house buyers in the property market, these variables have not been sufficiently considered in previous studies. In the current study, I aim to improve the hedonic model by incorporating local environmental factors or "scenes" and data on family income in a small neighborhood unit using a geographic information system (GIS). I demonstrate that, without considering these variables, non-negligible levels of omitted variable bias are generated in the variables that are major factors in determining house prices, such as ground area, front road width, distance to the nearest station, and the travel time to the central business district. Results showed that, in the model considering neighborhood effect variables or "scenes", the explanatory power was improved compared with the simple linear model. At the same time, each of the neighborhood effect variables or "scenes", which served as subjects of urban policies, was adopted with statistical significance.

### *Medicalization and Demedicalization of Mild Depression in Japanese Occupational Health*

From 1999 to 2008 the number of patients with depression in Japan is thought to have increased by 2.4 times. Overdiagnosis of depression has attracted much attention both from the health professionals and the public. Previously, the concept of mild depression did not even exist until the 1990s in Japanese psychiatry. Some experts argue that the introduction of the DSM and ICD as a diagnostic tool is a possible factor of increasing depression in Japan. In this study I analyze the conflict between the medicalized and demedicalized views of mild depression in Japanese occupational health from the viewpoint of conflicting diagnostic contexts in Japanese psychiatry.

I conducted several interviews with physicians and psychiatrists active in the field of occupational health and attended various conferences and meetings of experts dealing with mild depression in occupational settings. Two findings are especially of significance to understand the current trend of depression epidemic. 1) There are double contexts in which depression diagnosis is made. Whereas the DSM or ICD is used as a tool to diagnose depression, they do not explain any etiology of the disease but just provide the criteria of the symptoms. Thus in those cases for which the explanation of the disease causes is needed, conventional Japanese psychiatry is referred, in which depression is modeled by major depression rather than by mild depression. 2) Major depression model in Japanese psychiatry includes a moralistic judgment about the "industrious" personality of the patient. As this aspect does not coincide with the mild depression patients, there is a strong tendency to demedicalize the mild depression on the side of psychiatry. The same tendency is also found in the media coverage of the disease. Thus the status of mild depression patients especially in occupational settings is unstable and vulnerable to the moral criticism on them.

### *Daniel Bell As Post-Cold War Intellectual: The Idea of Triunity Beyond the Cognitive Frameworks of the Cold War*

Interpretations of Daniel Bell's works are typical cases of cognitive bias in Cold War social sciences. Bell has been regarded as an anti-communist ideologue, a conservative sociologist, and a neoconservative intellectual. Today, therefore, his works are not discussed in earnest. This study reevaluates Daniel Bell by clarifying that he held post-Cold War perspectives.

As Bell himself noted, *The End of Ideology* is better known for its title than for its content. During the Cold War era, attention was paid not to what he said but the sensational title. Because readers took "the end of ideology" to mean that all ideologies would vanish despite severe ideological conflicts, Bell was considered an anti-communist ideologue. Similarly, because in *The Cultural Contradictions of Capitalism* he took an anti-modernist position and placed value on religion, many scholars have regarded him as neoconservative.

Certainly, he criticized Stalinism and the Communist Party of the United States. He recalled that members of the Communist Party did not know about Kronstadt in which Trotsky shot rebels in 1921. His criticism was based on experiences from his youth.

At the end of the Cold War, he indicated that his position was different from that of anti-communism. He insisted that the end of communism should not be admired, and he also suggested that capitalism would extend indefinitely. Although Bell was close friends with Irving Kristol, who was nicknamed "the godfather of neoconservatism," and funded *The Public Interest* with him, they conflicted politically and ideologically after the presidential election of 1972.

In 1977, Bell articulated his three positions: "socialist in economics, liberal in politics and conservative in culture." He tried to transcend the binary oppositions peculiar to the Cold War through his idea of *triunity*. This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neoconservatism.

### *About World Championships in Athletics and TV Broadcast*

This study examines changes in the nature of Japanese TV broadcasts of the World Athletics Championship from 1997-2013 using a qualitative methodology. Specifically, the study examines the changes in the Tokyo Broadcasting System coverage between the 1997 Athens event and the 2013 Moscow event. The results indicate that TV broadcasts became more professional from the point of the Berlin event in 2009. Up until the 2009 Berlin event, broadcasts featured much screaming-like behaviour from television commentators such as Yuji Oda. However, the screaming-like broadcasts decreased after the Berlin event and the screaming of Yuji Oda was not seen in Moscow in 2013. In addition, the nicknames of the players were not used in the Moscow TV broadcasts. This may be due, in part, to the request of the Japan Association of Athletic Federations to the Tokyo Broadcasting System to eliminate the use of nicknames. The nature of live coverage of sports events varies according to different events. In addition, they are different depending on whether or not there are Japanese players involved, and depending on whether or not there are star "foreign" players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

### *Why Does Inequality Keep Rising In South Korea?*

This paper explores the rise of economic inequality in South Korea, focusing on changing income distribution of individuals and families after financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual's wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. The financial crisis in 1997 has exacerbated the tendency of the rising income inequality as neoliberal economic reforms, policy measures to resolve the financial-cum-economic crisis, were implemented by the Korean government. Another financial crisis in 2008, triggered by the crisis of the subprime mortgage in the USA, made it harder to roll back the rising inequality. In addition to impacts of globalization, under the poor social welfare system, endogenous social changes such as fast aging of population and family dissolution, partly associated with neoliberal economic reforms, have contributed to the drastic rise of family income inequality in the 2000s.

### *Labor Movement, Environmental Movement in Regime Change in South Korea*

This paper explores the relationship between labor movement and environmental movement in South Korea, showing that the movement dynamics in South Korea which has experienced compressed political and social change is different from those in the advanced industrial democracy. Both labor movement and environmental movement are new social movements in the sense that new labor movement organizations were emerged during the transition from authoritarianism to democracy and environmental movement also began to appear in the post-transition era. Thus the political dynamics has significantly affected the trajectory of both movements, contributing the formation social movement unionism in the 1990s. However, the financial crisis in 1997 made directions of two movement organizations divert from each other. Political democratization and economic crisis made the relationship between the two more independent and autonomous from each other. Democratization also gave negative impact on the development of alliance between the two because each movement had different relationship with the new democratic regime. While labor has been hostile to the democratic regime pursuing neoliberal economic reforms, environmental

movement organizations has shown ambiguous attitudes toward the democratic regime. The consecutive defeat of democratic political parties in the presidential elections has severely undermined the social bases of both movement in the 2000s.

*Rethinking "Medicalization of Death and Dying": Explications through Examining Japanese Case*

What does "medicalization of death and dying" precisely and really mean? This paper tries to focus on the medicalization of death and dying, and tries to show 1) the historical process of the social transformations surrounding death and dying in Japan, and then 2) theoretical reconsiderations concerning the concept of medicalization itself.

Medicalization of death and dying has been customarily and representatively meant to be "hospitalization". The radical change in the place of human death recalled the sense of something familiar being lost, and the medical-hospital environments coupled especially with the high-tech medical treatment in the 1970s have long been viewed as something unfamiliar, unhuman, and even anti-human. Cultural interpretations regarding this process as "denial of death" or "pornography of death" in modern societies have been presented, and prepared for the seemingly backlash movement tentatively called the de-medicalization. However, what does these medicalization and de-medicalization really mean?

Japanese situation could present strategically suggestive one, partly because it is the heaviest aged society and partly because it is also the most densely crowded society with medical facilities. It seems to follow that the medicalization of death and dying would advance most in Japanese society. The situation is complicated. The health policy have tried to de-medicalize /de-hospitalize the aged, and promote nursing home care and community care ever since 1980s. The people in general wish for sudden death, or for natural death in home, and both of them share in common one element: with lesser medical interventions. It is both interesting and somewhat paradoxical. Interesting, because the directions aimed seem to be converge: demedicalization. Paradoxical, because the intentions fundamentally diverge between the two.

This paper tries to contribute to broaden the scope of the discussion of medicalization empirically, and to enrich it theoretically by reexamine the validity of the concept of medicalization.

*Human-Billboards: The Commodification of Invisible People*

According to Zygmunt Bauman, since mid-20<sup>th</sup> century modern society has been experiencing a gradual shift toward a "consumer society", whose main characteristic is the transformation of consumers into commodities. In this context, the objective of consuming is to grant social status to individuals, who worth as much as they are able to consume. Bauman posits that people consume to invest in their own social affiliation. By consuming, individuals become a more valuable commodity, recasting themselves as products capable of drawing attention and standing out from the monotony and dull invisibility of ordinary things. Those who do not have enough resources to consume are considered invalids, commodities that will never be noticed or coveted, and that can only resign themselves to their invisibility. However, by analyzing Brazilian human-billboards, this study intends to show that even those individuals are salvageable in the world of consumption.

In the city of São Paulo (Brazil), legislation has established several restrictions on advertising placement in order to avoid visual pollution. The real estate sector has circumvented that legislation by using the so-called "human-billboards": men and women from under-age to elderly who remain standing for periods up to 8 hours without breaks and regardless the weather, in corners of upper middle class neighborhoods with signposts hanging in their necks. For this job they are paid under 10 dollars a day, with payment discount if their supervisor finds them sitting.

In principle these people would be considered "invalids" in the society of consumers. Nevertheless, they end up being "recycled" and become functional to it. The case study intends to reflect on how the society of consumers absorbs the dysfunctions that it produces itself. In this case, people's invisibility is not equivalent to death: it is also turned into merchandise.

*Healthcare Work and Cross-Cultural Understanding in Globalization: Social Issues and Responses in Indonesia and Japan*

The Economic Partnership Agreement (EPA) has initiated healthcare worker migration from Indonesia to Japan since 2008. Issues and challenges concerning regulations and cross-cultural understandings of healthcare have emerged around such EPA healthcare work and workers in both societies. What issues have arisen and been reported in Indonesia and Japan? How do the media, policy makers, healthcare institutions and workers themselves, and other specialists react and respond to such new issues and challenges? In what way do Indonesian and Japanese social and workers' understandings of healthcare work and worker migration differ? Our paper shows how national contexts affected by globalization shape and re-shape social understandings of healthcare migration and their policies in Indonesia and Japan over time. Analyses of the national media reporting, information from the governments, and interviews in Indonesia and Japan reveal a contrast of social responses to healthcare worker migration. In Indonesia where healthcare workers have been sent to Japan and other countries, this tends to be understood positively, overall, as economic benefits and Indonesian professionals' contributions to the care worker shortage in Japan. In contrast, Japanese are more likely to respond negatively to these issues; yet, they intend to face cross-cultural challenges, although slowly, making revisions in the language and license examination policies. We pay particular attention to social issue construction and policy institutionalization processes around EPA healthcare workers in Indonesia and Japan. Our study contributes to our sociological understanding of healthcare worker migration, cross-cultural understandings of healthcare and related concepts, and how national contexts and globalization construct and re-construct social issues and policies toward a new social change.

*Discourses in the Magazine "Keisei Jidai": The Popularization Process of Higher Education in Postwar Japan*

At a time when it was called the "examination hell" in postwar Japan, the magazine KEISEI JIDAI was popular among students that take the entrance examination in higher education.

It has a history of more than eighty years, but this time, how the magazine has changed?

The purpose of this study is the analysis of magazines in the 1950s-1960s. I would like to declare that KEISEI JIDAI has a function of career guidance through the late 1950s. The tendency changed subjects, contributors, quantities of the magazine, and their consciousness. It's mean to liberate students from some superstitions. A practical learning and a scientific method was directed to solve problems. In particular, the issue was a difference between urban and rural areas, which have dates and skills of an entrance exam. Some difficulties confronted them, conflicts and barriers surrounding the higher education, such as gender difference and economic issue.

This study may suggest a new history about the severe competition in school entrance exam.

*The Effect of Environmental Education at School and Home on How Students Behave Towards the Natural Environment in Japan*

Several studies on the factors that promote pro-environmental behavior have found the importance of environmental education. A number of environmental educational programs that aim to nurture ethical behavior towards the environment have been developed worldwide. For example, in Japan, some students in a junior high school take part in diving programs to study marine environments. The aim of this study is to examine the effect of environmental education at school and home on students' pro-environmental behavior. In November 2010, we conducted a quantitative survey of all third-year students and their parents at all the junior high schools located in the city of Minamata, Japan. Pollution has had a severely detrimental effect on the health of the residents of Minamata since the 1950s, and the disease caused by pollution has come to be known as Minamata disease. The negative experiences with pollution have led to the implementation of various interesting environmental education programs in all the junior high schools in the city.

The analysis of the results indicates the important factor that effects on the pro-environmental behaviors of students: It was their perception of the contributions their parents made to address environmental challenges, instead of the actual contributions or behavior of the parents. The pro-environmental behavior that parents took had a mediating effect on the way students' perception on their parental contributions to the environment. The results also indicate that experience-based environmental education, such as related volunteering activities at school, promoted students' pro-environmental behavior significantly more than classroom-based environmental education that focused on knowledge creation. However, classroom-based environmental knowledge creation remains critical

because it provides an opportunity to influence pro-environmental behavior through the discoveries and the surprises by learning.

#### *Career Strategies and Spatial (im-)Mobility Among Skilled Migrants Between Asia and Europe: The Role of Gender Power Dynamics in the Work-Family Interaction*

This paper aims to unravel the gendered career strategies of skilled migrants in Germany's financial and academic sectors, which are being developed not only in tandem, but also often in negotiation, with gender relations in the family. Much of the current scholarly effort in the field of skilled migration and mobility has concentrated on the principal migrant and work-related context, treating the family as a rather secondary, separate and essentially 'female' terrain. Drawing on participant observation and interviews with highly skilled mobile workers from Asia, this paper shows that these two terrains, work and family, are closely inter-related in building skilled migrant workers' career pathways. Germany has lately joined the "global war for talent" to seek out highly skilled migrant workers, but although the number of skilled women entering through Germany's skilled migratory regime may in fact be small, the experiences of migrant, dual career couples show that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. The overall aim of this paper is to show the contrasting – and often gendered – strategies devised by highly skilled couples, which can widen our understanding of the role that the family plays in international skilled mobility.

#### *Conceptualizing Spatial Ambivalence Among Migrant Academics: The Dimension of Temporalities in Understanding Career Strategies*

Highly skilled migrants are often deemed to have 'mobility capital': extant studies have shown that for career advancement they mobilize the capacity to be spatially mobile across borders, drawing on their cultural, social and economic capital. In policy, too, the debate around "gain and retain" has popularized the construction of mobile skilled migrants. In fact, Germany, the country which this paper focuses on, has been widening its channel for skilled and highly skilled migration streams and opened a route for long-term and permanent settlement for migrants entering through its skilled migration regime. This new, skill-b(i)ased migration governance radically rewrites the established understanding of German citizenship, based on "Selecting by Origin".

Recent scholarship has brought about a nuanced understanding about spatial mobility capital and its negotiated nature, by considering the work-family interaction. While these studies put forth ambivalence and gendered power dynamics in realizing career aspirations among highly skilled migrants, I argue that less attention has been paid to the temporal dimension in capturing spatial ambivalence and career strategies. By focusing on migrant academics in three German cities, this paper aims to conceptualize their spatial ambivalence, which is influenced by three temporal points in their own and family lives: past, present and future. However, rather than treating these three 'points' in isolation from one another, I want to make sense of them in a continuum, that would together affect migrant academics' decision/orientation to stay, move on, or return. Drawing on a quantitative survey and problem-centered interviews, I aim to demonstrate that the temporalities intersect with, and give meaning to, locally specific experiences along the social division of race/ethnicity, gender, country of origin, and age in the workplace, family, neighborhood and local administration. In addition, I will discuss the strengths and challenges in using these methods.

#### *Between Freedom and Neglect: Community-Based Approaches and Neoliberalism In Policies For Asylum Seekers In Australia*

Policies regarding asylum seekers in Australia have changed frequently since the late 2000s. The federal Labor government that came into power in 2007 decided to abolish the notorious policies of the former conservative government, namely, the "Pacific Solution" and Temporary Protection Visa (TPV) scheme, both of which aimed to reduce the numbers of Irregular Maritime Arrivals (IMAs) and violated their human rights. On the other hand, the Labor government maintained the problematic policy of mandatory detention for asylum seekers, and therefore sought to develop "Community-based" approaches for asylum seekers to argue

that the government guaranteed their human rights. Thus, the Labor government developed the Community Detention program and expanded of the number of asylum seekers who were issued a Bridging Visa E (BVE) and released into local communities. While human rights lobbies and refugee service providers tended to welcome the policy change because it released asylum seekers from detention centers, the advancement of the Community-based approaches was also a response to the need to bring down the high costs of the existing asylum seekers policy. In other words, the Community-based approaches for asylum seekers can be recognized as a segment of the neoliberal reforms of Australian social policy. In this paper, I will examine the details of the Community-based approach to asylum-seeker policy in Australia from 2007-2013, using policy and discourse analysis from a sociological point of view. I suggest that the policy aimed to promote freedom for ethnic minorities can result in their neglect when the discourse of neoliberalism and spatial management are utilized to justify the policy.

#### *Dynamism Among Japanese Railway Fans: Transition of Taste in the Dimension of Hobby*

In this paper, I intend to examine "shumi" (Japanese word for "hobby") in contemporary Japan, revealing its mechanism and dynamism. "Shumi" is composed of three aspects: "omomuki", taste and hobby. "Omomuki" is a Japanese word for a concept of aesthetics in the nature. Taste is a concept of value judgment. Hobby is a concept of enjoyable activities. In sociology, taste and hobby have been researched, so far depicting how the concept of taste has been regulating the concept of hobby in a class society. However, it is necessary to study this matter from the perspective of hobby. Railway fans have been chosen to conduct the survey for the purpose of this study. This is because they participate in activities that are rich in variety, as well as complexity. According to some surveys, there are around 20,000 serious railway fans and roughly from 1.5 to 2 million casual fans. A distinguished characteristic is that although the age distribution is widely covered from under 10 to over 90, at least 80% of them are males. Also, based on my field research related to railways, conducted from July 2009 to October 2012, railway fans have been found to enjoy various kinds of activities, which are not limited to competitions, such as "Agon" that Caillois refers to. Focusing on Bourdieu's theory of "champ", or "distinction", I examine the new framework to analyze the conceptual interaction between taste and hobby. Specifically, I introduce "games" as the sub-concept of hobby, revealing that each fan transitions between values to values of different realms within the dimension of hobby. Thus, I aim to show the possibility that interaction taste and hobby takes place in a non-class society.

**SHIPUNOVA, TATIANA\*** (Saint Petersburg State University, [shitspbp@yandex.ru](mailto:shitspbp@yandex.ru))

#### *Fundamental Paradoxes of the Theory and Practice of the Criminal Law*

The "crisis of punishment" as well as negative phenomena of the modern system of justice determinates to the ideological handicap. Let's focus only on two mainframe ideas.

Understanding of the social justice

Social justice is a measure of public benefits from laws and other regulators based on an agreement which establish and maintain the life order of individuals and institutions. This order promotes the survival and development of the society, as well as provides integration and decent life of its members. The "decent life" is a compilation of all the benefits proclaiming in modern society: freedom, equality, social security, etc. Therefore the justice system should be aimed primarily at preventing crime, restoration of the rights and rehabilitation of the victims, and only then – on the prosecution, punishment and / or rehabilitation of criminals.

Economic pragmatism of the "social protection" concept

The concept of punishment stakes on the state control based on a quality management underlining efficiency and effectiveness. In this regard, in Western societies are widely discussing concepts of "safety" and "protection". However, they are discussing without an analysis of what, in fact, should be protected. So "reliability" becomes symbolic notion and goes back to the "retribution".

If we should still expect the socially significant effect of the penal system, it is necessary to decide from which perspective we should evaluate its quality. From producer's perspective? But what exactly it produces: improvement of criminals, retribution, or citizens' safety? From consumer's perspective? But who is consumer: prisoner, society, State? From market's perspective? But what are the objectives of the government regarding to prisoners, actual and potential victims, or crime policy? These estimates could differ, as well as the answers to the questions.

The elimination of these paradoxes could fundamentally change the concept and practice of the law in modern society.

*Intergenerational Transfer within Families from the Perspective of Social Inequality in Japan*

As in Europe and the US, Japan's ageing population, and the accompanying generational imbalance, has become one of today's most pressing social policy issues. My paper principally examines the relationship between social and private intergenerational transfers in Japan. I will discuss how intergenerational transfer within families takes place, and whether this process contributes to expanding inequality between families.

I focus on three kinds of private intergenerational transfer: co-residency, remittance, and asset inheritance. In particular, I intensively discuss different directions of transfer, both from parents to children, and from children to parents. The aim of my research is to identify similarities in determinants of all three types of intergenerational transfer, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People's Living Conditions (CSLC), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-age and Elderly People (PSMEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. The survey, with a sample size of 6,442, includes detailed information on financial and care support between parents and children, and on household assets and savings.

According to my preliminary results, the meaning of co-residency has changed. The elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic support to younger family members. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

**RC19-338.3**

**SHIRAHASE, SAWAKO\*** (University of Tokyo, [sshiraha@u-tokyo.ac.jp](mailto:sshiraha@u-tokyo.ac.jp))

*Intergenerational Transfer, Social and Private, in Japan*

Largely because of generational imbalance, the ageing population of Japan is one of the most urgent topics in social policy. My paper principally examines the relationship of social and private intergenerational transfers in Japan. I analyze two kinds of data. The first is that of the "Comprehensive Survey of People's Living Conditions," which was conducted by the Ministry of Health, Labour and Welfare, and the second is that of "National Survey of Living Conditions among Middle-Age and Old-Age People in 2010."

The public pension system, which produces social transfers from the younger to the older generation, can be regarded as a form of intergenerational re-distribution. I first examine the extent that public pensions limit poverty among the elderly in Japan as a way to gauge the impact of public transfers in improving social equality. The main research question here is the extent to which public pensions reduce the risk of poverty as the generational imbalance worsens.

I study two-fold private transfers, co-residency and remittance. In Japan's welfare society, the family has played a critical role in providing basic economic security to its members. The elderly have secured their economic well-being through co-residency with their off-spring. I examine how private transfers across generations, as in co-residency and remittance, have taken place. My second research question is whether such transfers have been enhanced by population aging. According to my preliminary result, the meaning of co-residency has now changed: the elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic well-being to the resident younger generation. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

**SHIRATORI, YOSHIHIKO\*** (Kobe University, [yshira@lit.kobe-u.ac.jp](mailto:yshira@lit.kobe-u.ac.jp))

*Comparative Study on Vocational Education in Japan and in France*

In this paper, I will discuss on the vocational education at the level of secondary education in Japan and in France with a comparative point of view.

In France, there are mainly three types of high school (*lycée*): *lycée général*, *lycée technologique* and *lycée professionnel*. When the pupils accomplish their study at

high school and pass the final examination (*baccalauréat*), they receive a diploma which corresponds to their study course (*baccalauréat général*, *baccalauréat technologique* and *baccalauréat professionnel*). Though all these three types institutionally give the right to enter the higher education, the courses of pupils after graduation of each type of high school show a clear difference: continuing to study at higher education or entering employment; types of institution (*grandes écoles*, university, professional junior college ...) when they continue to study... Historically, 'technological' and 'professional' courses are introduced for the purpose of vocational education, but the situation of the pupils after accomplishing their study at high school shows a significant difference.

In Japan, there are general education course, specialized education course and comprehensive education course in high school. I will discuss the tendency of the way that the pupils of each course take after their graduation as comparing with the situation in France.

With these discussions, I will try to examine concepts of ability, career and so on, in a wider sense.

**SHIRATORI, YOSHIHIKO\*** (Kobe University, [yshira@lit.kobe-u.ac.jp](mailto:yshira@lit.kobe-u.ac.jp))

*On Intermediate Groups in Japanese Sociology*

Since A. de Tocqueville and E. Durkheim, intermediate group occupies an important position in sociology. In this paper, I will discuss a history of Japanese sociology and Japanese society by focusing on this aspect.

There is a conceptual dichotomy between community and association in sociology. The former is based on common attributes of the members, whereas the latter is based on the will of the members to unite. It is theoretically said that old communities are diminishing and the importance of the individual is increasing with the process of modernization. Generally speaking, this process can be found in Japan especially after the World War II.

It is said that the importance of intermediate group is rediscovered in Japan after the Great Hanshin earthquake in 1995. A law which prescribes to give the right of juridical person to a NPO, one of the forms of intermediate group, is founded in 1988. Since then, there are more discussions on NPO than before. I will reconsider these discussions to analyze the significance of intermediate groups in contemporary society and sociology in Japan. I will also treat other intermediate groups, such as neighborhood associations for example, to deepen the discussion.

**SHIRE, KAREN A.\*** (University Duisburg-Essen, [karen.shire@uni-due.de](mailto:karen.shire@uni-due.de))

*Family Supports and Insecure Work: The Politics of Household Service Employment in Conservative Gender Regimes*

In the late 2000s Austria and Germany introduced policies aimed at expanding the employment of household services in order to support families in their ability to reconcile work and family. Both sets of policies targeted the use of a particular form of marginal part-time work, to make formal employment relations more attractive to households. The effect however, has been to constitute household service work as insecure low wage work, and to introduce new lines of inequalities between working women. While neither the Austrian or German reforms have succeeded in bringing informal work in private households into registered employment, they have strengthened the traditional path of women's labor force (re-) entry into part-time work, while creating large differences in the forms of part-time employment taken up by educated and less skilled women. These two worlds of women's employment meet directly in private households, largely as the result of family support policies, and are one of the ways in which the modernization of conservative welfare contexts with strong male breadwinner models are creating new class-based inequalities between women. The findings suggest the need to pay more attention to the employment conditions and new risks in drives to formalize and expand personal and household service work, now an explicit aim of European employment policy.

**SHIRE, KAREN A.\*** (University Duisburg-Essen, [karen.shire@uni-due.de](mailto:karen.shire@uni-due.de))

*Gender Dynamics in the Dualisation of Coordinated Market Economies*

Recent research about growing inequalities in some of the most protected employment economies has pointed to the dualisation of employment conditions originating in the expansion of non-standard employment and the deregulation of social protection coverage for significant segments of the workforce. This paper will focus on the gendered dynamics of dualisation in Germany and Japan, and show that dualisation is not novel, but rather deeply rooted (1) in the failure in both countries to pursue social and family policy changes in strong male bread-

winner models of employment and (2) well established occupational segregation of work by gender. As a result, class-based inequalities have become more salient, though these were considered less relevant in the coordinated market economies. In Japan, the expansion of temporary and part-time labor over four decades has exposed women and less educated youth to market-based employment systems at odds with the employment conditions of better educated segments and older cohorts of the male core workforce. German policies and practices designed to protect skilled male workers in manufacturing have failed to transfer to occupations performed mainly by women, while sub-forms of part-time and temporary work have deepened the divisions between men and women in non-standard employment.

### *A Current Picture and Overall Trends of Japanese Family Based on Japanese General Social Survey Cumulative Data 2000-2012*

The Japanese General Social Surveys project conducts a nationwide social survey every two years since 2000 to study the attitudes and behavior of Japanese people. As the U.S. GSS, the JGSS questionnaire covers a wide range of topics including family issues.

Working with Korean General Social Survey, Taiwan Social Change Survey, and Chinese General Social Survey, JGSS shares some modules of questions with East Asian Social Surveys (EASS). The theme for the first EASS (EASS 2006) is Family, for the second (EASS 2008) is Culture and Globalization, for the third (EASS 2010) is Health and Society, and for the fourth is Network Social Capital, and for the fifth (planned in 2015) is Work and Life. EASS aims to continue valid and reliable cross-national surveys by using repeated research that has already generated robust results.

In this presentation, we will illustrate the change in Japanese family and capture the current picture based on the results of cumulative JGSS data. The overall trends between 2000 and 2012 will be described. While swayed by unstable job climate, both individuals and families suppress dissatisfaction and come to grips with reality. The number of unemployment and contingent employment among youths has been enlarged, the percentage of unmarried people has increased, and unmarried adult children have increasingly been living together with their parents. A growing number of women in all ages entered into labor force and the bottom of the M-shaped employment rates among women have become shallow. Following favorability towards socialization of livelihood security and care of the elderly, increasing people favor socialization of childrearing and education. The changes in employment among youths and women should have a strong impact on Japanese family in the future, and thus a whole picture of the reform in taxation system, employment policy, and social welfare should gain attention.

## RC22-390.7

**SHIVELY, KIM\*** (Kutztown University of Pennsylvania, [shively@kutztown.edu](mailto:shively@kutztown.edu))

### *Investing in the Afterlife: Inequality, Charity, and Hopes for Salvation in the Hizmet Movement*

As Turkey's economy has liberalized over the last 20 years, economic inequality has intensified and become a major focus of public concern and discussion. A response to this inequality has been an increase in the number of charitable non-governmental organizations, including faith-based benevolent groups spearheaded by upwardly mobile, pious Turks who seek to "do good" for society as a form of religious devotion. One such religiously oriented Turkish philanthropic association, the Hizmet ("service") movement, is organized by followers of the influential Turkish preacher, Fethullah Gülen. Based on ethnographic research among members of the Hizmet movement in Turkey and the United States, this paper will demonstrate how Gülen's teachings on economic activity and social responsibility suggest that a path to salvation for the wealthy emerges from the plight of the poor. More specifically, the movement has promoted an idea that individual financial success may serve as a type of worship by which the believer gains God's reward in the afterlife. However, this conversion of economic success into religious merit depends on the believer's intentions (*niyet*), in that economic activities are recognized as worship only if the believer maintains the proper spiritual disposition toward God. This includes the acknowledgment that a person's economic attainment is only partially attributable to the individual's own efforts, but ultimately it is God's blessing (*ihlas*) that is responsible for success. Reciprocally, an affluent individual should repay God's beneficence with material beneficence to society through zakat (alms-giving) and other charitable activities organized by the Hizmet movement. These charitable acts will potentially earn that philanthropist a place in heaven. Such a notion that the wealthy rely on the needy for salvation serves to reinforce inequality, even as the effects of that inequality may be mitigated by acts of pious benevolence.

### *Sociology of, By and for Sovereign People: Towards a Truly Global Sociology*

A truly global sociology can be created as an overcoming of the civil society paradigm. The bourgeois, rich citizens, conquered the globe with their enterprises of 'one share, one vote' principle, guarded by their absolutist and nation states, and colonized the most parts of the world. On the other hand, these citizens were forced to open the door by the American and French Revolutions, and to concede repeatedly by the universal suffrage movements of workers, ethnic minorities and women, to enlarge democratic societies of 'one person, one vote' principle. The paradigm has been formed and reinforced in this process. The colonized peoples, resisting this forced paradigm, have transformed it to open perspectives toward truly democratic societies, though being troubled by dictatorships caused by development and the military. Most peoples have now the sovereignty, although being subalterns who have been largely out of sight. If we see things from their standpoint, the people's will has not been rightly reflected on the governments even in advanced societies because of their imperfect election and party systems, while the world economy has been controlled by their corporate and globalized enterprises. The advanced societies have not been sufficiently democratized, so that most of the citizens still remain actually substantially as subalterns. Rejecting any academic imperialism and not being afraid of multi-versalism, we must create a sociology to democratize all national societies and the international society. For this, we need not only a political sociology to promote the right reflection of the people's will on the government, but also an economic sociology to facilitate people's non-profit enterprises and organizations such as co-operatives, trade unions and others. A cultural sociology, integrating these political and economic ones meaningfully, will sublate the old paradigm onto a new highly qualified democratic society paradigm.

### *Is a Multilingual Mind Possible for the Japanese?*

Japan has been conceived as a highly monolithic and monolingual society by both the Japanese and others. Monolingual policy was strengthened particularly after the WW II, when Japan was forced to abandon all its overseas territories. Ignoring the existence of indigenous Ainu and migrant language speakers, Japan has been devoted, by means of educational and administrative institutions, to integration of its people around the national language, Japanese, and Japanese culture. Mass media played equally important roles. The myth of Japanese homogeneity has probably helped to create and reinforce the national feelings, and was supposedly advantageous for Japan's economic development in recent decades.

Japan's monolingual regime was thus brought into being, through political, societal and ideological circumstances. One could get by with Japanese language only in almost all places and situations. No one had to worry whether a customer, authority, employer, employee, neighbor or even stranger on the street might not understand Japanese.

Dark sides of monolingualism began to reveal themselves with growing globalism, particularly since the 1980's, although some were already recognized before. One of the most familiar examples has been the modest English capacity of the Japanese. It was widely believed that with an almost absolute lack of contact with foreign languages, learning foreign languages was not simply realistic. Yet, even now, in the midst of globalization with many contacts with foreigners, and many reasons to communicate with them, the people's perpetual efforts to learn English have not brought notable results.

The problem perhaps is more deep-rooted. Does a conceptual monolingualism underlay the Japanese mind? In the presentation I will relate Japanese conceptual monolingualism to linguo-behavioristic phenomena, and consider if there are any signs of breakthrough in the present society out of the monolingual cul-de-sac.

### *Policies That Shape How Australian Patients Navigate the Healthcare Maze: A Critical Discourse Analysis*

Governments around the world are endeavouring to work out how to meet patients' expectations regarding universal health coverage. Even wealthy nations such as Australia that formally enjoy universal health coverage experience gaps and inequities in access to health care. Not all patients enjoy an equal capacity to choose. Inequities in access to care, long waiting times for surgery and increasing out-of-pocket expenses are creating a divide in healthcare between those who can afford to pay either out-of-pocket or via private health insurance, and those who cannot. The aim of this project is to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

The study is informed by a critical discourse analysis of selected Labor and Coalition Federal policy texts to examine how patient choice is spoken about, shaped and enacted at the federal level in Australia. The content of speeches and statements by key politicians was accessed through the database services of the Commonwealth Parliamentary Library. The sample comprises speeches and statements pertaining to health policies made by Prime Ministers, Ministers of Health, and Opposition Leaders and Health Spokespersons.

Critical discourse analysis reveals the core policy messages that emerged during the Howard Coalition (1996-2007) and Rudd/Gillard/Rudd Labor (2007-2013) governments. Our study compares and contrasts Labor and Coalition policies in relation to access to health care in order to explicate the underlying assumptions regarding patient participation and choice within the context of universal health coverage.

#### *Education Reform in Lebanon: Nationalism Versus Social Justice As Means for Building Social Cohesion*

The paper will examine education policies in Lebanon post the civil war period (1989) up to 2010. This period witnessed two education reforms: 1995 and 2010. The main priority for these two reforms was building a sustainable peace and cohesion amongst the various sectarian groups. A nationalistic citizenship education was proposed as a means for building social cohesion in 1995 reform. The importance of social justice as a means for promoting cohesion in Lebanon was overlooked. Twenty years later, this approach proved to be of limited effect as sectarian fractions in Lebanon continued to grow while school drop-out rates soared particularly amongst disadvantaged groups. In 2010, a new education strategy was developed. Promoting Lebanese nationalism again occupied the priority. However, access to education featured too in this strategy. My analysis will focus on the current understanding of equity and equality of education in this new reform plan and its consequences on the disadvantaged and marginalised groups in Lebanon and consequently on the social cohesion of Lebanon. In the paper, I criticise the neo-liberal and distributive notion of social justice which characterises the new education strategy in Lebanon and argues for a recognitive concept of social justice.

#### *Crofting Is the Future: Small Farms after Agricultural Modernisation*

This paper discusses crofting reform as an instance of the emergence of locally-rooted alternatives to agricultural modernisation and neoliberalism. Crofting is a distinctive and highly regulated form of land tenure specific to the northern half of Scotland; it is also a cultural heritage of major international significance, under threat from marketisation. In 2007-8 an independent review of crofting (which I chaired) proposed a major reformulation of government policy. Instead of agricultural modernisation, this proposed an approach based on concepts of neo-endogenous rural development and place-shaping, with local mobilisation encouraged by the generative power of the state and other actors, harmonising managerial technologies, addressing the challenges of multi-scalar governance and vertical integration, regulating land occupancy, and releasing new potentialities. Using the neo-endogenous approach, this sought to build the capacity of crofting communities to mobilise strategically and collaboratively, empowering communities at various levels. This approach was broadly adopted by the Scottish Government, with new legislation in 2010 leading to tighter regulation of land use and absenteeism, a map-based land register, and local elections for the regulatory body. Finally the paper considers what wider relevance this case might have, given that the Crofting Inquiry report was recently translated into Japanese.

#### *Is There an Emerging Transnational Advocacy Network in Opposition to Weaponized Drones?*

The use of unmanned aerial vehicles (UAVs) or drones by the United States for carrying out targeted killings in territories throughout the Middle East, South Asia, and Africa has by now become a routine, but controversial, American counter-terrorism practice. In recent years, these drone strikes have been regularly denounced by human rights organizations and have also drawn the critical attention of United Nations special rapporteurs on account of the civilian casualties such attacks frequently cause in apparent violation of international norms governing the use of military force. Perhaps just as significant, however, in continuing to resist the normalization of drone warfare, has been the increasing activism of a variety of like-minded norm entrepreneurs involved in the production and dissemination of knowledge about its legal aspects and realities created on the ground. Volunteer lawyers representing victims/survivors of drone attacks have been pursuing litigation in different national jurisdictions, most notably in the United Kingdom and in Pakistan, to identify liable parties and publicize their alleged complicity. Concurrently, the epistemic community of international law scholars and practitioners has been engaged in public intellectual debates concerning the legality and morality of drone warfare, while investigative journalists have (often at their own peril) continued to document attack incidents and play a significant role in bringing these facts to public attention. This paper explores whether, and to what extent, these separate, yet complementary, initiatives may be indicative of an emerging transnational advocacy network opposed to the use and proliferation of weaponized drones.

#### *The Democratic Peace Debate: Theory and Fact*

The concept of a Democratic Peace (DP) is a major theoretical strand within International Relations (IR). Depending on precisely how democracy is defined, the number of wars between such states over the last two centuries varies from zero to a handful. Moreover, democratic states have never fought on opposing sides in a general war involving all, or nearly all, the great powers. Such a record cannot be claimed by any other form of government – monarchies, Communist and authoritarian states have all fought against one another. The only zone of peace that is grounded in a shared political system is that of liberal democracies. In a field in which there are relatively few empirical regularities of even modest strength, scholars were energized to validate or invalidate the findings. Thus, DP provides an almost perfect focal point to grapple with contentious issues involving theory in IR. First, DP will be differentiated from the liberal (or Kantian) peace, a concept with which it is often conflated. Second, the main debates about theory within IR that DP helps to illuminate will be discussed. These debates can be categorized as follows: 1) Rationalist vs. Reflexivist (paradigm debate); 2) Quantitative vs. Qualitative (methodology debate); and, 3) Methodological Unity vs. Methodological Pluralism (philosophy of science debate). Hence, concerns about theory-building in IR (as reflected through DP) are delineated: defining variables, confounding of variable effects, and fleshing out causal mechanisms that connect the variables to each other. The position taken here is that methodological pluralism is a pre-requisite and, furthermore, such a flexible and wide-ranging approach should also prove highly beneficial for delineating real-world connections.

#### *Gender Inequalities and Socio-Cultural Themes of Leisure in Contemporary Societies: Illustrations from Pakistan*

This paper takes into account the cultural and social themes of leisure that explicate how women's leisure has been marginalized in a contemporary society. It attempts to understand and use the perspectives of inequality to look at leisure experiences of women and weigh women's own perceptions and experiences with respect to leisure and social transformations. Reflecting the intersection of social and cultural themes of leisure, and progress towards the Millennium Development Goals, this paper views gender disparity paradox and contradictions whether gender segregation and disparity is found in hetero-social dimension in Pakistani society. Equal rights to leisure are given in a range of UN declarations even if it is frequently viewed as less important than basic human needs of food and shelter. Its purpose is to suggest how women's participation and perceptions, and concepts central to understanding gender dynamics may alter and enrich analysis and characterization of contemporary global society. The studies on gender inequalities have given theories and methods; therefore, this paper argues that women having developed different educational and organizational talents and have the capacity to make a distinct and positive contribution to contemporary global societies. The paper will try to narrow down to types of theories, methodological and ethical challenges and present a model for more equitable

leisure policies and new resolutions for more leisure opportunities for women that enable leisure to serve as a force for human growth. Finally, in drawing together some themes of leisure and gender equality, the paper will indicate how these realities have the capacity to add to our understanding of the complexity of contemporary global society. Leisure and gender inequality will be seen in a socio-cultural framework.

#### *Inequalities of Gender, Violence and Dehumanization in Multiple Forms in a Conflicting Cultural Values Outlook in Pakistan*

This paper provides a theoretical framework of understanding, experience and struggle of gender and pursuit of women rights concerning inequality, violence and dehumanization, and how multiple forms of such disparities overlap and interrelate with social categories and cultural values. The paper's main theme will be a theoretical enquiry into the way 'violence' is conceptualized in relation to the conflicting cultural values in traditional and modern theories. Theoretically and methodologically the paper will be designed so as to allow the interpretation of maltreatment of women with reference to sexual and gender options concerning violence, class, and discrimination in the background of conflicting cultural values. It will focus on Pakistani society since it got its Independence in 1947 and build its argument on previous research conducted among indigenous groups in Pakistan. It will be discussed here that an examination of multiple forms of inequalities of gender, violence and dehumanization in the lives of women in Pakistan, the interpretation would be that of a society surrounded with violence. Central to this theory of violence is accounts of the ways Pakistani women find themselves between being modern women and traditional women to illustrate the limits of the dichotomy of the theories of traditionalism and modernism. This paper will focus on the rights of the women who suffer from violence and dehumanization. These rights will include socioeconomic rights of getting jobs, social security, health facilities and shelter. In the end the paper will give a model of gendered approach for rehabilitation of the women who have faced such inequalities considering into view the legal Act against women victimization in Pakistan.

#### *Crisis of Labour: Macro- and Micro-Level of Social Analysis*

The report focuses on the phenomenon of labor crisis and its macro- and micro-level analysis.

At the macro-level labor crisis is a transition to a postindustrial society; one of its features is a weakening of the need for hard work for industrial production. Labor in its classic sense is a thing of the past. Due to globalization, the processes of labour mobility across countries and the emergence of the international labor market play an important role in the contemporary world. And at this level the study focuses on the problems of the prospects of labor as an activity, changing the nature of work, etc. Therefore a researcher faces new challenges such as: identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of priority in the lifestyle and day-to-day activities.

At the micro-level, labour crisis can be described as a particular person and/or a family living in terms of increasing tensions of life and the growth of its pace. With changing strategies in the field of labour and employment on a global scale and due to the prospect of joining the conditions of flexible/part-time/freelance job the real work schedule of large numbers of people is becoming more and more intense. An Individual still, if not more, values their work, willing to work overtime. Labourholism is becoming a common disease.

In the center of our attention is the dichotomy of liberation from rigid labour and labour dependence, which more people around the world suffer from.

#### *Students' Educational Achievements or Practicing of Citizenship: Disjunction or Alternative*

Countries that are striving to upgrade their education most of the time take part in international educational projects such as PISA (OECD) and TIMSS, PIRLS, or CIVED/ICCS (IEA). Moreover, the participation in educational comparisons of students' achievements is a country's response to the onslaught of new requirements to account for school performance. Usually they have taken up some form of external evaluation and permanent monitoring of students' achievements. The

mandatory and regular use of testing tools exerts the pressure on students who are imposed now to much more intense effort than in past decades. Consequently, many activities praised at this stage of individual development, i.e. contacts with peers, community endorsement activities have to be abandoned or reduced. This side effect of new accountability practices of educational institutions can be shown on the aggregate level of countries and on the individual level (students). Frequently scholars meet either students of good grades but socially passive or socially active students who have poor educational achievements. IEA International Civic and Citizenship Educational Study 2009 provide the empirical foundation for this conclusion and these data will be first of all discussed.

Sociologists look for social consequences of new educational accountability practices. The most visible effect is the widespread and paid by parents supplementary training in post-school hours. The school neuroses and school violence accompanying the educational process despite reforms can be related to the new accountability practices. To compile the full list of these consequences is the task for sociologists. Authors have some additional hypotheses about these consequences. The main question, however, is whether the formal education can be in the same time effective and non-oppressive for students.

### RC30-514.7

**SIGAUD, THOMAS\*** (IRISSO - Université Paris Dauphine, [thomas.sigaud@dauphine.fr](mailto:thomas.sigaud@dauphine.fr))

#### *L'accompagnement Des Mobilités Résidentielles Des Salariés à L'épreuve De La Crise : La Perte D'efficacité D'un Dispositif De Conciliation Des Trajectoires Professionnelles Et Personnelles*

Les mobilités résidentielles liées à l'emploi posent directement la question de l'articulation de la vie professionnelle et de la vie privée des salariés. Sous l'impulsion de l'organisation paritaire du « 1% Logement », des dispositifs ont été mis en place en France au début des années 2000 pour faciliter cette articulation, notamment en favorisant l'accès des salariés à des prestations professionnelles d'accompagnement des mobilités résidentielles. Cette initiative a su séduire les employeurs comme les salariés. Elle aide à mieux concilier les dimensions professionnelle et privée des trajectoires de ces derniers par la prise en compte des enjeux territoriaux liés aux mobilités géographiques et par un réel soutien aux salariés les moins bien dotés pour y faire face.

On verra comment le contexte économique de la fin des années 2000 en France a remis en cause ce dispositif. La fragilisation financière du 1% Logement a joué un rôle, mais aussi le changement de comportement des employeurs eux-mêmes qui exercent une forte pression à la baisse sur les prix des prestations. Dans un contexte de ralentissement économique général, et donc de recul des mobilités géographiques liées à l'emploi, les prestataires adoptent eux-mêmes des pratiques commerciales de plus en plus agressives qui mettent progressivement au second plan l'accompagnement des salariés à proprement parler.

L'évolution de l'accompagnement des mobilités géographiques des salariés en période d'austérité se fait donc au détriment des salariés les moins bien dotés, et durcit sensiblement les termes de l'arbitrage entre vie professionnelle et vie privée. Elle les resserre sur des choix plus tranchés, par exemple entre l'immobilité et le sacrifice de la vie personnelle et familiale. On verra cependant que le contexte d'austérité est aussi propice aux tentatives d'innovation de la part des salariés mobiles, notamment par le recours à la multilocalité résidentielle.

#### *Building a Hybrid Culture in Multinational Military Operations: The Perceptions of Eufor Peacekeepers on Collaboration and Negotiation for a Better Information Sharing*

Information sharing describes the exchange of data between various organizations and people. A hybrid culture based on collaboration and negotiation may pave the way for better information sharing within an organization. In the meantime, the nature of the organizational work is changing with the help of globalization, technological developments, complexity and today's sophisticated social and political problems. To remain competitive and to gain an advantage of these developments by solving conflicts effectively (Hocker and Wilmot, 2009), some new "multinational collaborative work arrangements" are being established both in civilian and military multicultural working environments. These working environments are also in place for military multinational military operations (Pedersen, 2001). In fact, if the cultural diversities are being managed well, organization can use advantages of this situation. In this case, the concepts "collaboration" and "negotiation" have become much more vital to manage the intercultural process effectively, to prevent some misunderstandings and create a better information sharing between the partners.

The research questions of this study are;

- How diverse military groups in a multinational military operation are united under one umbrella to achieve a better information sharing?
- What are the similarities and differences in definitions of "negotiation and collaboration" across different cultures?
- How to create a "third-hybrid culture" in multinational military operations?

The methodology of the study is based on qualitative research methodology. An interview to explore these research questions -designed by the writer while he was the Chief of Capacity Building Department at EUFOR in 2012- was applied face-to-face to 55 peacekeepers of 13 different countries within EUFOR Peace Operation in Bosnia and Herzegovina between April-October 2012. The gathered data will be analyzed by "content analysis" method to find out the answers to research questions and to propose strategies on a better information sharing within the light of the findings.

**SIKORSKA, MALGORZATA\*** (University of Warsaw, [malgorzata\\_sikorska@wp.pl](mailto:malgorzata_sikorska@wp.pl))

#### *From 'Absent-from-Home Father' to 'Committed Father': Changes in the Model of Fatherhood in Poland and Role of Mothers-'gatekeepers'*

The current situation of fathers in Poland is an excellent example of the gap between on the one hand - the level of social expectations, and on the other hand - everyday practice.

Social expectations have tended to climb as a result of the promotion of a new fatherhood model, extensively discussed by the media and by experts, which has led to the creation of new social patterns and a new model of 'the father'. The majority of press, radio, and TV programmes present the idea of the committed father, involved in childcare in a very positive way, as an opportunity for men to benefit from developing close relations with their children.

In the same time, Polish fathers rarely get involved in dealing with children, do not spend a lot of time with them, do not decide on matters that are important for children, etc. The question is: why?

There are many reasons for that, one of them is the attitude of some Polish mothers which could be described as 'Gatekeepers'.

Many of mothers admit that the fathers of their children are able to look after children, but they treat them as if they were children themselves. They claim that men need detailed instruction, and when faced with a task of taking care of a child, the mother has to prepare everything for him. Due to this, many women prefer to have fathers 'under control' even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously 'push men away' from children, because male commitment threatens their identity as built on being the mother, and thus the sole caregiver and expert in children's affairs.

The main purpose of my presentation is to describe the situation of fathers in the context of mothers' attitudes and behaviors.

**ARMESTO, ALEJANDRA** (Universidad Autónoma Metropolitana)  
*Community Responses to Drug Related Violence in Mexico*

The violent conflict that emerged in Mexico -due to drug trafficking and the Government's response- has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuernavaca and Jiutepec in the state of Morelos, Saltillo and Torreón in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees -men and women- from lower middle class neighborhoods. Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens' rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens' linkages to public security and justice institutions. These changes are expressed in emotions, discourse, meanings and experiences. Increased victimization and social embeddedness of powerful groups of organized crime have weakened community organization and collective action to face the more violent scenario. As a result, the main strategies to prevent or cope with victimization reported by the interviewees refer to individual behavior, family isolation, and the weakening of community networks.

**SILVA, CARLOS\*** (Universidad Nacional Autónoma de México, [carlos\\_silvaforne@yahoo.com.mx](mailto:carlos_silvaforne@yahoo.com.mx))

#### *Police and Excessive Use of Force in Mexico City*

In Mexico City, excessive use of force by police officers from different police forces is a problem acknowledged by the public and some political actors. This concern resulted in the enactment of a 2008 law governing the use of force by police forces of the Federal District. However, there is little research and systematic information about situations in which police abuse is concentrated. In developing democratic societies civilian control agencies has been one of the most important efforts to constraints police abuse and achieve a better level of compliance of basic rights. The main mechanism is the assessment of complaints against illegal police behavior. In Mexico City this responsibility lies with the Federal District Human Rights Commission. Since its founding in 1993 around a fifth of all registered complaints involve policemen (either from the Secretary of Public Security or the Attorney General of the Federal District). Based on the analysis of 600 complaints regarding police abuse between 2007-2011, this study describes the main characteristics of abuse in the use of force, and accounts for its severity by looking at social, spatial, situational, and individual factors. Police abuse is concentrated in a limited set of situations linked to the specific functions of each corporation, the motives and interests of police officers, as well as in spatial patterns.

#### *Questions, Answers and Pleas in Portuguese Exams during Seven Decades*

Keeping in mind the central part national exams have been performing in the design and implementation of learning and curricula, the analysis of the evolution of the Physics and Chemistry national exams shows the dynamic implications between the exams (different contents and learning) and the curricula, in the realm of the curricular reforms that happened in Portugal.

The paper reports and provides examples of questions, answers and pleas in Portuguese exams from 1940 to 2010. As it is never too much to highlight, it is not possible to reflect on the exams focusing exclusively around the students and the technical concern of measuring their performance without keeping in mind the factors in play regarding learning, such as curriculum, Portuguese cultural characteristics, the organization of the School Community, and the educational legislation driven by several national and international historical factors.

This approach does not aim at showing a compilation of the negative moments of the reforms throughout those decades, but to show that nowadays our school system has a higher demanding level, both at the teaching level and at the curricular level, highlighting a higher level of competence in abstract thinking.

#### RC01-29.2

#### *"If You Were a Man, You Would Be a Captain": Observations, Strategies and Experiences Of a Woman Anthropologist Among The Military In Brazil*

This presentation aims to explore the relationship between the researcher and the researched perceptions in ethnographic approaches of the military in Brazil, showing methodological features and general practices in this field, together with observations from my own background and experiences of research in military organizations from southeastern and north of the country. The way the military reality is classified and arranged is, to some extent, revealed in contacts between anthropologists and military personnel which are initially marked by the experience of the anthropologists' perception as "civilians", i.e. "outsiders" of the "military world/environment".

There are a lot of positions and relations being built and acquired in the development of research, that refer to the poles "military / civilian", and that, far from being fixed categories, reveal themselves as relational and contextual regarding the role of the researcher (Castro & Leirner, 2009). By addressing issues such as women in the Armed Forces and military families in my studies, this paper aims to compare the entry in the fieldwork into units that are military academies in relation to other garrisons, as border platoons in the Brazilian Amazon. I will present the strategies for approaching and contact, positions acquired in the research context (experience as a researcher, woman and "friend of the Army") and extend the reflection to the gender issue that permeates my research trajectory.

**SILVA, LUCÉLIA DE ALMEIDA\*** (Universidade de Brasília, [lucmagalhaes@gmail.com](mailto:lucmagalhaes@gmail.com))

MULLER, FERNANDA (Universidade de Brasília)

*How Is Time Organised By and for Babies?*

By and large, time studies have been carried out in the sociological area, converging in theoretical as much as methodological aspects when analysing time use by adults in contemporary western societies. However, research on time use by children is still incipient and until now the main topics addressed refer to daily socialisation experiences (Larson and Verma, 1999), the differences in time use considering social class and gender differences (Carvalho and Machado, 2006), childhood life in urban and rural areas (Christensen and James, 2008) and the comparison between activities developed over different decades (Cruz and Teixeira, 2008). It is important to emphasise that such research only considered children over 6. For this reason, the present undertaking seeks to understand time use *by and for* babies under 12 months old, and hence complete the gap found in studies based on this age range. Firstly an instrument to record daily time use was elaborated, for completion over 24 hours in observation of both baby and parent. This instrument was used twice - once on a weekday and the other on a weekend. Interviews were later carried out with the parents in order to further explore the information recorded. The sample comprised two babies - one girl and one boy and their respective parents. If on the one hand, babies receive recurrent external determinations leading us to understand time as an instrument of social regulation (Elias, 1998), despite such impositions they also determine their own time use on the other.

*Sweeping Floor and Building Identities: Centrality and Contradictions of Paid Work for Women in Brazil*

The XXI Century Brazilian Society has undergone to several transformations, whether in the political, economic, technological or social aspects. This new situation has led to changes in gender roles and labor relations, including women's work. Inserted in this context, this research presents a retrospective of Brazilian women's struggle for the conquest of their labor rights and interprets these changes empirically. We conducted a comparative case study on two organizations: one public another private- of Higher Education in the South Region of Brazil, with women that work in a cleaning sector for at least five years. We sought to understand how these women construct their identities at their social space of work and at home, as housewives. The data were collected through semi-structured interviews and focus group. It was found that for these women, the paid work has a centrality that builds contradictory feelings and actions. At first glance, the work promoted financial independence and increased self-esteem of these women. On the other hand they have experienced an invisibility as citizens and a lack of recognition of their activities in the organizations and at home. The consequence of this process has been a conflict in the construction of their identities as workers and as housewives.

*The Role of Small Cooperatives and Communitarian Agents in Brazil: Strategy of Action to Sustainable Food Security and Struggle Against Poverty*

Food security understood as a process that goes beyond the production and access to food, has been an important topic of discussion in the Central Countries as well as in the Developing Countries. FAO, UNESCO and Local Governments have presented several programs to guarantee the right to food security and a sustainable development. However, many of them has not been succeeded because of the disregard for local knowledge, great bureaucracy and a lack of involvement by the local population. In order to face this reality in Brazilian Society on XXI century, this proposal aims to identify, disseminate and replicate possible actions undertaken by organizations and agricultural cooperatives, and local agents and leaderships who are focused on the preservation of food traditions and enhancement of capabilities and local knowledge. These possible actions can create a favorable environment for the use of social technologies, with low cost and commitment of communities. The research has been done in the South Part of Brazil, through a qualitative perspective, using the techniques of interviews, workshops and participative diagnostics including visits to cooperatives and small

towns. The data will be systematized in the form of booklet, video and articles in order to stimulate new actions in other regions and countries

*A Spatial Analysis of Residential Segregation By Race and Income Gap in a Brazilian Metropolitan Area*

Inequalities between White and Black people are known in many countries around the world. It affects, for example, the income, educational and health outcomes having multiple causes, as discrimination, composition variations and forms of segregation. Therefore, this paper proposes to analyze the residential segregation pattern by race on Belo Horizonte's Metropolitan Area, the third bigger in Brazil, and its variation related with racial income gap. The choice for this Metropolis was made, once bigger Metropolises, as São Paulo and Rio de Janeiro, was already analyzed; but the techniques used here is not generally applied, due to being the first time that racial information are in universe questionnaire of census. Then, to this goal, data from 2010 Brazilian demographic census are analyzed through spatial analysis techniques, as "spatial lag" and "spatial error", adding a spatially lagged variable, differently of some "aspatial" indexes currently used - as Dissimilarity Index, for example. The main goal is to show that residential segregation by race exists on Brazilians Metropolises, unlike the greater part of the literature claim the opposite, pointing socio-occupational status as unique cause of segregation. The results shows a large concentration of White people in the center of Metropolis, while Black people are in the periphery. Indeed, there is some overlap between household income and racial distribution on urban space, but is not only this that explains the existing segregation. Therefore, the proposal is to discuss how residential segregation conforms this Metropolitan Area, and how it is related with income gap between White and Black. The conclusion shows that residential segregation by race exists in this context and has relations with racial inequality in Brazilian Metropolises.

*The Unequal Distribution of Employer-Provided Training. Empirical Findings and Sociological Conceptualisations*

The aim of this paper is to analyse learning and training opportunities, and participation in employer-provided training (in-company training, in-service training, personnel training). Which employee groups are trained the most? And who are those who do not participate in workplace training at all and who lack the learning opportunities? Employer-provided training has been theorized mainly by economists (originally Gary S. Becker [1964] Human Capital; Jacob Mincer [1962] On the job training: Cost, returns, and implications.) In economical literature employer-provided training has been conceptualized as human capital. Today when skills are the most important single asset an employee has in the labour market, sociological theorizing on employer-provided is needed. How should employer-provided training be conceptualized and theorized in relation work place hierarchies and class structure? What kind of capital workplace training is (e.g. Bourdieu)? The question is about class based skill strategies.

In international comparison the participation rate in employer-provided training is very high in Finland. What is typical for Finnish workplace training is its uneven distribution among employees. In the long run the participation in employer-provided training has grown. However, the differences in participation between levels of hierarchy (social classes) have been remarkably persistent. The differences have not diminished in 30 years.

The empirical data used in the study are *The Adult Education Surveys by Statistics Finland*. Adult education surveys study not only participation in education and learning and skills among the adult population; in addition, they produce data about people's opinions and experiences of adult education, their motivations and willingness and need to participate in it, and obstacles to and preconditions for it. The data from the survey are based on face-to-face interviewing of a sample of more than 5 000 people. The survey 2012 was a part of a European co-operative project co-ordinated by the Statistical Office of the European Communities.

*Geopolitical Turmoil and the Fate of the Labor Movement in the 21st Century: 10 Years after Forces of Labor*

My paper revisits the conceptual framework elaborated in *Forces of Labor* as a tool for understanding the roots of (and prospects for) the recent global upsurge of labor unrest. This upsurge has taken a variety of forms from strikes by factory workers in China and fast food workers in the United States to protests against austerity in the European Union and by unemployed and precariously employed

workers in various parts of the world. I deploy a theoretical perspective that sees historical capitalism as a system characterized by ceaseless change—"all that is solid melts into air"—and therefore as a system that is recurrently making, unmaking and remaking working classes on a world scale. The paper traces how various capitalist "fixes"—spatial, technological, product and financial—reshaped working classes locally and globally in recent decades; strengthening/weakening labor; creating challenges and opportunities. The paper develops several arguments that can be found in embryonic form in *Forces of Labor*. One, the combination of technological and financial fixes has been destroying livelihoods faster than it has been creating new livelihoods, leading to a generalized crisis of subsistence for workers, and a crisis of legitimacy for capitalism. Two, the profitability of the financial fix results almost entirely from the redistribution of income from labor to capital. Redistribution was key to resolving the 1970s crisis of capitalist profitability, but at the cost of an intensifying crisis of legitimacy. Three, financialization, crisis of legitimacy and hegemonic decline go hand-in-hand. We are at the end of the neoliberal era and of the era of US world hegemony. Thus, the geopolitical terrain is critical for understanding 'what is to be done', including the prospects for labor solidarity across borders and status divides in the very unequal world bequeathed to us by centuries of world capitalist development.

### *Reshuffling of the World Proletariat*

#### **A Reshuffling of the World Proletariat**

The transformation of historical capitalism over the past several decades has resulted in a "reshuffling" of the proletariat and proletarian movements on a world-scale. In my previous writings, I focused, among other things, on how the rapid industrialization of parts of the global South has led to the emergence of large new (and militant) working classes. The escalating waves of labor unrest in China are the latest manifestation of this dynamic process of capital mobility and new working class formation. These writings focused on the "active industrial army". Another important dynamic underlying the contemporary reshuffling of the proletariat is the secular trend toward increasing capital intensity, and thus the growing mismatch between global labor supply and demand. As such, a deep re-theorization of the concept of the reserve army is imperative—a concept which is both critical to but distressingly unelaborated in volume 1 of *Capital*. This paper seeks to contribute to this task by theorizing (1) the distinction between, and the relative historical weight of, *exploitation* and *exclusion* in the development of capitalism; (2) the ways in which capitalist accumulation has depended historically on the externalization of the costs of reproduction of labor and nature, and therefore some of the ambiguities of 'exclusion'; (3) the unevenness of these processes in time and space, and the resulting deep divisions within the world proletariat along lines of gender, race and citizenship; (4) the ways in which this unevenness is reflected in the patterning of world labor unrest in recent years; and (5) the implications of all this for moving toward a post-capitalist world system which guarantees a decent and secure livelihood for all.

### *Placing Panethnicity: Performing Arab Space on Sonnenallee*

The multicultural Berlin district of Neukölln is home to a large number of very diverse foreign-born and migrant-background residents. Some 140 nationalities make up 40% of the population in 2010. Among the migrants least welcome by the dwindling, sometimes xenophobic, native German majority are the asylum-seekers from the Middle East. Unlike their Turkish neighbors, the Arabic-speaking refugees from Lebanon, Egypt, Syria, Afghanistan, Iran, and other countries in the region have a precarious foothold in Berlin. Establishing a small business, even if it is unprofitable, demonstrates self-sufficiency to the authorities. Ironically, immigration laws partly account for the "parallel societies" so deplored by the likes of Thilo Sarrazin, who characterized Turkish and Arab immigrants as lacking "a productive function, except for running fruit and vegetable business." This research looked into the ethnic enclave of distinctively Arab businesses and institutions clustered around a segment of the five kilometer long artery, Sonnenallee. These businesses do not sell fruits and vegetables, but rather goods and services that demarcate a specifically Arab space. The Arab businesses are frequently engaged in illicit or off-the-books activities to make ends meet in an economy from which they are formally excluded. Based upon field work and interviews with shopkeepers and customers, religious and ethnic association leaders and members, government officials, and Turkish competitors who cluster along a different Neukölln street, I report on the place-making activities of Arab Berliners. I find this street offers "safe" public space for Arab political and cultural expression and the forging of "pan-ethnic" community. Beyond common Arabic language, this street and nearby square is the location of pan-ethnic demonstrations and the center of ethnic associations, mosques, and predominantly Arab parks, schools, and other institutions in which solidarity crosses national lines. The symbolic boundaries of pan-ethnic space separate Arabs from both Turks and Germans.

### *New Experiences of Inclusion: Affirmative Action for Blacks and Natives in Brazil*

After several decades of black social movement struggles for rights in Brazilian "racial democracy", it was recognized by the nation-state the practice of racial discrimination in the country, as well as affirmative action as a policy to correct inequality. In this scenario, the passage of Law 12.711 on Affirmative Action, in 2012, presupposes a set of substantive changes that alters the access to public high education in Brazil. To understand the social context that has led to the mandatory status of education on racial and ethnic relations as well as African and African-Brazilian history and culture for school system requires analysis of the democratization process of the Brazilian State. This paper focuses on three aspects: 1) the change in state policy related to inclusion of blacks, native population, and poor people; 2) the impact of these actions in the academic debate; 3) the role of black social movement in this process. The research fieldwork gathers the legislation that have changed the normative field in relation to the ethnic and racial issues after the Constitution of 1988; collects official data on the expansion of blacks, natives and poor people to public high education; and review the literature on racial affirmative action and black social movements producing a typology of the arguments.

### *Filial Piety Expectations of Older Adults in Urban and Rural China*

Due to declining fertility rates and growing life-expectancy, China will have one of the world's oldest populations by the middle of the 21st century with more than one in three individuals over the age of 60. Reductions in family size—the result of the one-child policy in urban areas and 1.5-child policy in rural areas—will also lessen the availability adult children who currently serve as the backbone of the elder-support system. Although China's older population is still predominantly rural, little is known comparatively between urban and rural elders in terms of filial support expectations and the factors that may differentially drive the strength with which filial piety is valued by older adults. This presentation will make use of 2012-13 pilot data from the Chinese General Social Survey of Aging, a national study of older adults (60+) in China that yielded 1,126 individuals about evenly divided between urban and rural locations. Questions in the survey about filial expectations concerned whether children should be financial providers to their parents, whether children should live close to their parents, whether children should live with their parents, and the special obligation of sons to insure the old age security of their parents. Descriptive and multivariate statistics will be presented to determine if aging in urban and rural China is truly a tale of two family types and identify the social, economic, and health factors that may be responsible for any differences detected.

### *Crime Control in São Paulo/Brazil: Military Police and Criminal Justice System*

This paper discusses the State actions of crime control in São Paulo State/Brazil in the last decade. We seek to analyze how institutions and State agents engaged to crime control and criminal justice management are affected by the emergence of new "criminal organizations." An expressive growth of the incarceration rates, and increased number of prisons, is linked to the emergence of the "Primeiro Comando da Capital – PCC", bringing a new dynamic to the relations inside the 'world crime'. Research (under data collection) has identified two main strategies of crime control to face the new crime dynamic: i) a militarized combat based on lethal confrontation led by the Military Police against supposed criminals and ii) a classic judicial control producing both imprisonment for specific population and low rates of punishment, especially for homicides and police violence, showing the high selectivity of the penal system. Two empirical cases exemplify each strategy mentioned, and allowed to describe some of their characteristics. First data indicates some affinities between classic crime control and police violence.

### *Slow Birth and Fast Growth of a World-Class Post-Secondary Education in Singapore*

This paper examines the background and strategies behind the slow start but fast expansion of a world-class post-secondary education in Singapore and presents an overview of its current trends and future directions.

When Singapore gained its sudden independence with its separation from the Malaysian Federation in 1965, one of the legacies of the British colonial heritage was its low investment in the infrastructure of schools and teacher training. This is reflected by the low literacy rate of 73% in 1970, and a high 83% of population aged 25 years and above having qualifications below secondary level even in the year 1980, based on data released by the Department of Statistics.

However, as the small city-state transforms itself from an entrepôt to an industrialized economy, rapid school construction and large scale teacher development were initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least post-secondary education were about 56%, 32% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010.

Apart from expanding enrollment at the post-secondary level, Singapore also had to shift its efficiency-driven education to an ability-driven one in the past decade, to respond to growing educational aspirations among the young and the deep impact of the digital knowledge-based era. This paper will conclude with a discussion on the new challenges, opportunities and measures to adapt to the ever-changing landscape of post-secondary education.

### *The Forbidden Discipline: The Impact of the Pinochet Dictatorship on Chilean Sociology and Sociologists*

In 1972, during the height of Allende's presidency, Santiago de Chile hosted the Conference of the Latin American Sociological Association (ALAS). The conference would not return to Chile for 41 years, until September 2013.

At the time, Chile was the Latin American center of social scientific exchange and collaboration (Franco, 2007). Besides, Chile's path towards socialism and its changing society attracted many sociologists from Latin America and overseas. This golden era of Chilean sociology immediately came to a halt with Pinochet's coup d'état on 11<sup>th</sup> September 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociologists and sociology as leftist ideology, with many having to migrate to save their lives (Barrios and Brunner, 1988; Brunner, 1988; Garretón, 1997, 2005). At the same time, with the forceful implementation of neoliberalism in all areas of life under the guidance of the Chicago Boys, neoliberal economics became the queen of the social sciences, leaving little space for what seemed to be 'ideology' and thus altering the understanding of accepted knowledge in the social sciences.

This paper studies the fundamental transformations of Chilean sociology and sociologists' lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship altered sociology and sociologists' lives: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

### *"Popular-Ing" the Satellite City: Conceptions of Ownership and Idle Behavior As Poverty Frontierism in the Occupation of Cairo's Gated Suburbs*

On October 27th 2011, far away from cyclical occupations of Cairo's Tahrir Square, 1800 people collectively invaded and squatted Orascom's Haram City, one of many 'fully-integrated' private communities dotting Cairo's state-built satellite cities. Angered that UNDP promoted, privately operated housing on publicly subsidised land is selling to an upper-middleclass market, the group travelled from central Cairo's impoverished Duweika district to claim 891 flats, connecting utilities, converting villa facades into storefronts, and building a market with a microbus terminal for transport to the city-centre.

Presented by Orascom as the "slum-ification" of its gated-community, the accidental integration of new consumerist aspirations with *shaabi* (popular/common) survival in a tabula rasa masterplan defies a central epistemological formal/informal binary of contemporary urban development practice and scholarship. Research on ways the urban poor constitute the city, entrenching livelihoods in spatial practices and creating economies around shelter, stands to benefit from case-studies of cross-class economic consolidation and shifting conceptions of place ownership or housing tenure.

This ethnography re-evaluates James Holston's research on insurgent claims at the urban periphery in terms of the instrumentalisation of state categories such as 'activist' and 'middle class' by residents as strategies for consolidating territory against eviction in a fully privatised landscape. It explores how Egyptian street subjectivities of figures 'appearing to succeed in life without trying or doing' combine with the popularisation of revolutionary social justice discourses across the great psycho-social exodus from urban to suburban Cairo (described by one participant as an "internal immigration"). As deep economic ties grow between Haram City's extremes, public stances stressing the appearance of idle behavior elide with a perceived threat of collective violence to sustain a temporary commons, contingent on taut antagonisms yet outlasting all major political shifts of the last two-and-a-half years.

### *The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas*

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980's and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist and women's movements encompasses the civic participation of Brazilian women in the transition from a military dictatorship to a democratic regime as well as participation in the transnational women's movement and Brazil's ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive managerial organs for such policies at the national (the national Special Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism –currently reflected in the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism

operating between local, national and international agendas have proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement worldwide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

##### *Referencing Actors in Change Processes*

From the very beginning the role of the actor was an important concept in cybernetics. Whereas classical approaches, first-order cybernetics, kept up to externalize the actor, second-order cybernetics tries to include the actor into the (material or epistemic) feedback loops. In first-order cybernetics the definition and adjustment of goals in control behavior is not part of the control structure. Only the activities of an actor in changing the actuating variable (stellgröße) are included. Second-order cybernetics a much broader picture of the interactions between problem, feedback loop, and goal-seeking processes is drawn. In social system theory the concept of the observer plays a similar role. Complexity is increased by introducing 2<sup>nd</sup> and 3<sup>rd</sup> order observers when trying to explain social situations.

The role of actors is an important issue in sustainability research and politics. Suggestions for agency alternate between appeal to individual, concerned people, and attempts to design new technical and social frameworks. Change agents, for example, are addressed as those to have the crucial influences on future strands of development. Up to now, these are conceptualized in a first-order mode, reflecting neither the origin of their ideas nor the function they have for adjusting social systems to changing framework conditions. A second-order perspective could contribute to approaching these questions in a wider perspective.

There is an important, yet widely ignored, report by Y Dror on the Capacity to Govern. Cybernetic theory and epistemology does not play an important role in his conceptions. However, it seems helpful to re-interpret some of his suggestions applying cybernetic concepts. Especially the differentiation of actors and their role in change processes will contribute to a better understanding of sustainability strategies.

##### *Informal Community at the Workplace As a Defense Strategy in the Situation of Emotional Dissonance or Emotional Alienation: Sociological Study of Emotional Labor of Cardio-Surgical Nurses in Today's Russia*

The paper based on the results of the pilot study into the peculiarities of emotional labor of hospital nurses at the cardiac surgery departments in Moscow and Rostov-on-don in the framework of the sociology of emotions of Arlie Hochschild. The analysis of 15 semi-structured interviews with female professional nurses aged between 25 and 40 showed that emotional work was the essential part of their job, they were conscious of the need of expressing special emotions for patients and their relatives. It was discovered that due to rigid professional hierarchy and hard working conditions the nurses perform autonomous emotional labor (term used by Martin Tolich). Such labor is not regulated by the hospital management, but it is consistent with the norms of general emotional culture requiring nurses to express care, sympathy, empathy, etc. The nurses of the cardiac surgery are not specially trained for emotional labor, so they have to develop these skills on the job. It's possible to say that the nurses present philanthropic emotion management (according to classification of S. C. Bolton). They are persuaded of underestimation of their labor by doctors in particular and by patients and society in general (via the social crisis in Russia). Hence the nurses are faced with the syndrome of emotional burnout and emotional self-alienation. They try to control negative emotions (annoyance, anger, despair) and to "humanize" the relationships with patients, but it is very difficult for them. In these circumstances the nurses *form a close-knit community*, whose members support each other. Such informal community incorporates the following features: openness, humor, talking about colleagues and patients, solidarity. This community helps neutralize the emotional tensions, dissonances and supports the emotional balance. So the nurses rather try to adjust to requirements and problems of their profession and maybe therefore they don't experience bitter emotional self-alienation.

##### *Understanding the Market: An Ethnographic Exploration of the City of London*

Reflecting on the role markets play in shaping the interests and actions of social life, this paper presents the argument for how institutional ethnography furthers our understanding of the discursive creation and enactment of markets as part of daily life. Drawing on data emerging from an ethnographic study of financial institutions within the City of London, this paper asks how markets are created, maintained and ideologically positioned through the everyday actions of economic actors located within key financial institutions.

Informed by Goffman's (1961; 1963) work on the body as a site of cultural inscription, it is argued that markets are essentially constructed and managed through the production of dominant cultural sensibilities. This blended approach of cultural economics identifies the market as an enacted phenomenon, bounded socially and spatially within institutions of finance. By focusing on the embedded cultures, enacted through the daily practices within the City's financial institutions, we can explore how the market operates in terms of its agenda, practices and conflicts with the outside world.

Through exploring the lived experiences of those working within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market actors, seek to utilise existing technologies, architecture and habits to create a more efficient market – one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social costs of economic action. Reclaiming the study of the market from economists, institutional ethnography serves to ameliorate our understanding of how embedded cultures of finance actively create and manage markets.

##### *Remote Management as Risk Management: Enclavisation in Afghanistan*

The paper presents an analysis of 'state-building' intervention and civil-military practice in the context of global terrorist-related and conflict-related risk. The paper is based on qualitative field research conducted in Afghanistan, and in particular focuses on the international intervention as 'risk management', at two levels. The paper first considers 'state-building' intervention as management of the global risk of terrorism, or of conflict-related regional instability as continuous with global terrorism. At the level of everyday practice, the paper considers the intervention operations of both civil and military organisations as in part driven by management of the risks of operating in a high-risk environment. In this the paper brings together Shaw's concept of risk warfare (2005) on the military side with Duffield's concept of the fortification of development aid (2010) on the civil side. Practice in both cases converges on a risk-averse model of intervention emphasising 'enclavisation' and remote management, with extensive and expensive devolution of implementation to local and private contractors on the civil side, continuous with use of private contractors and local proxies on the military side. Evidence for egalitarian distribution of risk, a condition central to sociological models of risk such as 'risk society', is limited. Risk-averse 'enclavised' intervention operates as a transfer of risk to local and civil populations, whether as inadvertent civilian casualties of military operations, or as populations excluded from, or marginalised in, urban spaces that have become enclaves for international organisations. This model of intervention is potentially counter-productive, as it increases local conditions of insecurity and instability, and questionably cost-effective, owing to the significant expense of the apparatus of 'enclavisation' and remote management, notably for infrastructure and private security provision. The paper concludes by considering possibilities for a less risk-averse and more locally owned model of intervention in conflict-prone spaces such as Afghanistan.

##### *Self, Otherness and the Israeli Sociology*

The paper concerns the question of identity construction in Israel and offers to regard the early Israeli sociology as a source that articulates and reflects its transformation. By focusing on the late Prof. S. N. Eisenstadt's sociological language, its use of myths and prevalent national narratives, the paper examines 1. how self and otherness are formulated 2. how the academic study of society had become an advocate of a specific discourse in which Zionism – the main ideological framework of the time – had enjoyed a hegemonic position. The paper therefore considers how sociological knowledge, built from this ideological ground, projected the ideal image of society and propagated the notion of a collective "we". To illustrate the centrality of this identity politics in the Israeli sociology, the paper discusses the relation of the early Eisenstadian sociology to the question of the Arab-Jews as its study case. It argues that the sociological view of Arab-Jews of the early 1950's was crucial in shaping the ideal border of identity. Given that the Arab-Jews (Mizrahi) were not seen, from the hegemonic view, precisely as "Israelis" (a coherent part of the in-group) and not exactly as Arabs (the ultimate "other" in the Zionist discourse), a new barrier-category had been created – that of the

"Other within". Seen from an orientalist perspective, the sociological description of the Arab-Jews had engendered a negative reflection of these communities. At the same time it paved the way for a contrasting and a more "legitimate" model upon which the ideal Israeli archetype could be defined. The main endeavor of this paper is to show how an Israeli "legitimate" identity has been constructed in the course of the sociological analysis in a way that strengthened the political legitimacy and bolster its national inner logic.

#### *Music As Leisure in the 21st Century: The 'sportisation' of Music Fandom*

The term 'sportisation' (Elias and Dunning, 2008) is used by figurationalists in a general sense to document the development of rules and regulations for previously chaotic games (e.g. boxing and football) into the commercialised, controlled 'sports' that occupy such an important position in modern society. King (1997) focuses on the role that commercial forces, in particular the introduction of modern all-seater football stadiums, have had on the emotional management and masculine identities of sports fans. This paper readdresses the focus on leisure (in this case music fandom) in the figurational sociology of sport and leisure, charting the impact that 'sportisation' processes and marketplace influences have had on the live music experience of heavy metal fans.

Drawing from a three year study of heavy metal subculture which incorporated data from participant-observation and interviews, this paper examines how transformations in modern music 'arenas' has significantly diminished the quality of the live music experience. This is encapsulated by the problematic issues raised in terms of emotional management and identity projection that fans have experienced in the context of such transformations. In particular, focus is attributed to the importance of the heavy metal rituals (moshing, crowd-surfing) which have previously been facilitated in 'controlled' environments that allowed for the 'de-controlling' of emotions and exaggerated displays of masculinity. Following the changes in such subcultural spaces, particularly the increased seating in large music venues, the strategies used by fans to reconceptualise 'established' notions of masculinity within the scene and to demonstrate their heavy metal identity are explored.

#### *Focus Group Interview As Research Method inside the Military*

In the proposed paper I would like to focus on the several dimensions, as shape, establishing and duration of relationship between different groups in the military institution perceived in the context of chosen research methods. The starting point of the paper is the reflection on the use of Focus Group Interview as a tool for qualitative research in the Polish Armed Forces. The history of use of FGI starts in military studies in Poland begins in the mid of 90. (XX c). FGI as a method was used in the research mainly focused on the issues of women in the service, conscripts and lowest rank professional soldiers. The social process, that is activated as a result of use of FGI includes the re-creation of social relations and identity construction in the group of respondents of given kind. In the case of marginalized target groups, the situation of research creates a friendly environment, where the process of building a positive group-definitions appears. The reality of the research and its consequences may form the forum for the subordinated and/or marginalized group in the institution. In this context it influences the social actions and processes inside the institution, finally affecting the organizational culture of the military.

#### *Developmental Logics Beyond the Divide*

Developmental projects have been the common denominator of the post-1945 global order irrespective of political divides and divergent economic systems. Whether we look at the emerging postcolonial states of the South, state socialist Europe or the industrialized Atlantic, development policies directed at industrializing 'homogenous' national spaces were adopted across the globe. However, by the 1970s this model showed signs of exhaustion. At the time when 'Limits to Growth' came out in 1972, the Romanian state was implementing a new strategy for economic progress: it had negotiated with IMF and EBRD the 'developing country' status in order to facilitate foreign-debt financed investments and embark on export-led growth.

This paper aims to shed new light on a particular kind of developmental continuum in an effort to question the wide-spread assumptions about the relationship between local variations and global structural constraints, namely the tendency in terms of explanatory frameworks to emphasize only particular local specificities,

and to ignore external factors for certain socio-spatial formations. Drawing on extensive fieldwork in a Romanian Danube-riparian port city, I argue that it was the contingency of the 1977 earthquake that turned the city and the surrounding region into a laboratory for a new kind of developmental logic. After the downfall of the socialist regime in 1989, the very same region became yet again part of a new understanding of development. In accordance with pre-accession criteria for EU membership, Less Favored Zones have been established in 1998 in order to attract foreign direct investment through long term tax exemptions.

Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize 'contingent development' as a way to look into improvement schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.

#### *Beyond the Stereotype of 'Slum': A Sociological Study of a Slum in Amritsar (India)*

*The slum in a city is considered as a poor area and it is assumed that all slum dwellers are alike. The present paper is an attempt to study the micro level discourse related to the issue of inequality within a slum. Inequality has been studied at various levels: such as national, regional and city, but not within a slum. A slum, like a city, is a heterogeneous entity, in which various categories of poor people share the same space and dwellings. The findings suggest that there are clear-cut inequalities among the slum dwellers in social, economic and political spheres.*

### RC15-258.9

**SINGH, JAGSIR\*** (CSSS/SSS, JNU, [jagsirbrar1@yahoo.co.in](mailto:jagsirbrar1@yahoo.co.in))

#### *Urban Inequality and Health*

*This paper is a modest attempt to underline the urban inequality and its impact on health. It describes the health implications of social inequalities within city. It also describes the health problems from which low-income groups in urban areas suffer more than richer groups including those that are not linked to poor sanitary conditions and those that are more linked to relative poverty (and thus the level of inequality) than to absolute poverty. Study on the health of rich and poor households within cities show the much larger burden of disease, injury, and premature death that low-income groups face. Most of this burden is easily prevented because it is a result of their unequal access to homes which have provision for piped water, sanitation, drainage and garbage collection, and adequate health care. Thus with this we can say that health inequality never been an independent phenomenon. By using health and social impacts of urban inequality as a focal point of the discussion, the paper also intends to provoke thought on some of the fundamental issues of human development trajectories.*

#### *Role of New Communication Technology Initiatives (NCTI) in Bridging the Digital Divide: The Case of a North Indian State*

Communication technology includes the hardware equipment, organizational structure and social values by which individual collect process and exchange information. The new communication technology (NCT), such as satellites, cable, television, wireless telephony, the internet, computers, laptop, iPod, have certain characteristics that are similar in some respect of those of both interpersonal communication as well as of mass communication. This NCT, also called as *new media*, integrates the characteristics of both interpersonal and of mass communication. Information exchange via the new media is interactive, meaning that the participants in a communication process have control over, and can exchange roles in their mutual discourse. The present paper is aimed to explore the role of NCT in bridging the gap created by the forces of globalization in developing societies like India by focusing on a NCTI launched recently by the state government of Uttar Pradesh i.e. Scheme of distributing laptop to every undergraduate student who took admission in the year 2012 or later in any college/university of the state irrespective of their social background. A cluster sample (N=399) drawn from a PG College of Western UP includes both the males and females. The study indicates that the representation of females was relatively high in all social categories. About half of the respondents were having their own mobile phones. The tendency of keeping mobile phone was low among the students of upper castes. Thus, this NCTI may be helpful not only in bridging the digital divide but also be a powerful instrument of women empowerment in rural and urban areas.

SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

*Critical Policy Studies: The Contribution of Basil Bernstein's Knowledge Code Theory*

Critical policy studies adopts a discourse analytic approach to policy research, drawing specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panoptic surveillance principles), and subject positions; and the Bourdieuan concepts of field, capital and habitus. A core aim of critical policy studies is to analyse the ways in which supranational organisations, such as the OECD, increasingly regulate official national curriculums given their role in the development, administration and reportage of tests which are 'closely linked with the debate about national standards' expressed as comparative performance on basic mathematics, scientific and literacy skills (Tyler, 2010: 145). However, missing from such theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein's sociological theory of education. This approach, Bernstein (1995: 392) proposed, distinguished his 'particular corpus of work from that of Foucault or Bourdieu'.

This paper undertakes three tasks. Firstly, it critically reviews the literature that has compared and contrasted the sociological approach of Bernstein to Bourdieu (Maton, 2008; Harker and May, 1993; Hasan, 1999) and Foucault (Diaz, 1984; Tyler, 1988). Specifically, the paper focuses on the theory of school knowledge, specifically the knowledge codes underpinning supranational, national and local school curriculum models, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein's claim about his distinctive contribution to modelling knowledge codes (the structuring of curriculum). Thirdly, it tests the usefulness of Bernstein's theory of knowledge codes to analysing policy enactment around standardised national testing drawing on examples from two contexts, namely Queensland, Australia and Newark, New Jersey, USA.

SINGH, PARLO\* (Griffith University, [parlo.singh@griffith.edu.au](mailto:parlo.singh@griffith.edu.au))  
SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

*Totally Pedagogised Societies. Sociologies of the Pedagogic Communication of Knowledges*

Basil Bernstein (2000: 365) asks: 'How real is the contemporary pedagogic panic? And then suggests that a new sociological project might 'focus on the diverse sites, generating both claims for changes in knowledge forms and displacement of and replacement by new forms, creating a new field of knowledge positions, sponsors, designers, and transmitters' (2000: 368). Bernstein's ideas have been the springboard for an analysis of: (1) the intellectual field of the new sociology of education (Moore, 2013; Young & Muller, 2010); (2) the possibilities of a social realist project on knowledge (Moore, 2013) and geographies of knowledge (Pasias & Roussakis, 2012); (3) the transformation of teachers' work (Robertson, 2013) and teacher professionalism (Beck, 2012); (4) the bio-politics of education and health politics (Evans, 2012); and (5) lifelong learning and new apprenticeship discourses (Gerwitz, 2008; Poulet, 2010).

Our paper aims to build on this work in two ways. First, we undertake a meta-analysis of the research literature drawing on Bernstein's concept of the totally pedagogised society, as well as literature forging a new direction for the sociology of education on the basis of Bernstein's work. Second, we distinguish between (1) knowledge codes – the structuring of curricula and (2) pedagogic codes – the structuring of specialised communication for teaching. In so doing, we propose an alternative intellectual trajectory for the sociology of education. Specifically, we are interested in analysing new modes of global governance through pedagogic communication devices taken up in a range of formal and informal agencies to construct 24/7 spaces of learning, particular modes of learning engagement, and pedagogic identities. Our objective here is to simply lay out the possibilities for developing a sociology to examine new modes of pedagogic governance and the new spatial and temporal configurations of new pedagogic modes (see Tyler, 2001).

*Globalization, ICT and Professional Education in India*

The process of globalization has posed new challenges in every sphere of social, economic and cultural life of both the developed and developing societies. The transnational mobility of professionals has been increased in last two decades throughout the world. The professional education in India is also under process of transformation as a result of the pressing demands of globalization of professions. Apart from the existing professions, new categories of professions

with new work ethos and work atmosphere have been emerged. The professional education in India also needs to transform in order to compete at the global level. It also demands the homogenization of certain basic elements of the professional education on the one hand and a thrust to include the context of the socio-cultural milieu of the given society on the other. As the professional education requires huge financial resources, the quality of professional education and institutions varies between and within the developed and developing societies. The poor countries have invested more on the expansion of basic professional manpower rather than on the post-secondary professionals particularly in the field of education and health looking into their pressing development needs. The rich developed countries, however, have focused more on the expansion of post-secondary professional manpower in order to stop outsourcing from their countries. In India, however, there have been expansions of both the basic professional training as well as of the post-secondary professional education. E-learning through ICT is an essential component of professional education in the globalized unequal world. The present paper analyses the various dimensions of intricate relationship between globalization, ICT and professional education in post-globalization era.

*Religion and Colonial Encounters in the Straits Settlements: From Self-Governance to Institutional Regulation*

The interface between non-Christian religions in the colonies and the British Empire has attracted considerable scholarly interest and produced by now exciting social science and historical literature from all corners of the globe. In comparison to the rich and nuanced African and Indian material, one struggles to find similar works on the former British colonies in Southeast Asia. This paper attempts to redress this imbalance by turning the gaze to the religious landscape of the Straits Settlements, an administrative unit of British colonial initiative under which these rather diverse and scattered geographical entities were united between 1826 and 1945. I demonstrate that the adopted method of dealing with the religious pluralism of colonized populations was an adherence to the broad articulated principles of religious tolerance and non-intervention, but which often could not be followed through in practice. Through the 19<sup>th</sup> century, the colonial context in the Straits Settlements was not, by and large, detrimental for expressions of non-Christian religiosity. The absence of restraints and control in this arena, undoubtedly, enabled expressions of non-Christian religions and facilitated their early institutionalization in this region.

I thus argue that from the mid-19<sup>th</sup> Century onwards, the colonial context in the Straits Settlements was 'enabling' for religious communities in the Straits Settlements. We see in these times a vigorous sense of religious solidarity and community, witnessed in intense institution building and founding places of worship, cultural and religious organizations across Hindu, Muslim, Christian, Buddhist and Sikh communities. However, by the early decades of the 20<sup>th</sup> century, this 'liberal' attitude was supplanted by a new vocabulary of regulation, supervision and administration of non-Christian religions. With this shift, new institutional structures, laws and mechanisms were established for managing non-Christian religions in the Straits Settlements signaling a move away from self-governance towards greater institutional regulation and supervision.

*Intergenerational and Life-Course Determinants of Upward Mobility*

Offspring originating from families with fewer socioeconomic resources are in a greater risk of entering lower social positions and attaining lower educational qualifications. Also life events in early adulthood may have an effect on socioeconomic attainment. These effects, however, may be weaker among those with higher compared to lower parental background.

This study examines the intergenerational and life-course mechanisms of upward mobility. We observe which life-course characteristics in early adulthood (such as educational attainments, unemployment, living arrangements, marital status and health) decrease the risk of entering upper non-manual social class among those who originate from other social classes. Second, the contribution of factors indicating parental resources is analyzed in order to find out whether higher parental background protects from the effect of risky life-course characteristics.

The longitudinal register-based data-set used in this study are a representative 11 % sample of the whole Finnish population. We follow a birth cohort born between 1973 and 1977 from 1987 till 2007: a 20-year follow-up from adolescence till the age of 30+ offers a chance to estimate the processes of accumulating disadvantages among individuals and households. Analyses will be conducted in event history model framework. Our objective is to broaden the perspective on intergenerational transmission of inequalities by describing the life-course mechanisms of occupational attainment in more detail.

*Childhood Inequalities in French Speaking and Anglo-Saxon Sociologies*

Childhood inequalities in French speaking and Anglo-Saxon sociologies According to academic traditions or sociopolitical context, the issue of inequalities in childhood has been addressed in different ways. The French speaking sociological discussion has been quite specific compared to the Anglo-Saxon. Those differences will be presented and discussed. Paradoxically, it is in putting aside the question of democratization and inequalities of opportunities that the child emerged as an actor in French speaking sociology, on a first step. As in the French context, the "Republican Universalism" has been the main reference, childhood inequalities have been mainly studied in terms of social stratification. On the other side, in the Anglo-Saxon context, diversity has been the main reference, priority being given to problematics as gender or ethnicity. We intend to examine how do those differences influence the way childhood inequalities are studied and how these categorizations are transformed, and their intersectionality addressed.

La question des inégalités de l'enfance s'est posée de manière différente suivant les traditions académiques et les contextes socio-politiques. On s'interrogera sur la spécificité du contexte francophone, par rapport aux contextes anglophones. Paradoxalement, c'est dans un premier temps en se dégageant des problématiques de démocratisation et d'égalité des chances qu'est apparu l'enfant comme acteur sur la scène sociologique francophone. Le poids de l'universalisme républicain a amené à repenser la question des inégalités dans un régime d'interprétation différent du contexte anglo-saxon où les questions de la diversité s'imposent pour penser ces inégalités, qu'elles soient posées en termes de classes sociales, de genre ou ethniques. Dans quelle mesure la prise en compte de l'enfance remet-elle en jeu ces problématiques ? En quoi penser les inégalités à cet âge de la vie oblige à affronter certaines catégorisations et inversement en quoi penser les inégalités donne une vision différente de l'enfance et des enfances ?

*Projection of Family in Representation of Intellectual Youth in Russia*

Russian demographic health should be based on development of positive trends in fertility, marriage and family relations of young generation of the country. Considering that the generation born in «new» Russia, characterized by new ideas about life strategies, value orientations, enters in reproductive age, it is important to assess similarities and differences between role of families and children in this generation representations regarding previous historical period.

Our study aims to determine specifics of modern marriage and reproductive behavior of young people receiving professional education in Russia. This group of young people is more demanding to high standards of living, thereby extending these requirements to sphere of marriage and family. This specificity necessitates more detailed study of their attitudes and motivations in marriage and reproductive behavior. Identification of possible limits of marriage and family and reproductive student's attitudes is scientific problem of this study.

In 2012-2013 Center of Social Demography and Economic Sociology, Institute of Socio-Political Research conducted a survey of students in higher and secondary education full-time and extramural studies. The study was conducted in form of distribution questionnaire prepared by the Center. The survey was conducted in the cities of Central, North Caucasus, Urals and Volga federal districts.

The study had a multidimensional nature, and it is focused on identification of general and specific issues of reproductive behavior of most educated part of Russian society to clarify the state family policy for more effective implementation and stabilization of demographic situation in the country. On this basis, were selected areas (subjects) to conduct the survey, which allowed us to identify the specifics of students ideas and their reproductive and matrimonial intentions between metropolis and provinces, between different regions of the country, between subjects of different types of administrative-territorial formations.

*Social Work Discretion between Professionalism and Managerialism in Denmark*

Professionalism and managerialism are important and conflicting concepts in the study of professionals working in public service organizations. By focusing on street-level social workers and social work discretion, it is possible to see how welfare-to-work policies are practiced as well as how organizational guidelines frame discretionary powers. This paper seeks to account for how management organizes, supervises and seeks control over social work discretion. The paper also addresses how management influences the discretionary powers of social workers in a Danish municipality working with clients who are unfit for work or labour market due to health problems. In Denmark the local municipal Job Centre delivers services related to welfare-to-work. Here values, interests and policies, transformed into rules and regulation, meet the concrete practices of welfare-to-work service inside the specific street-level organization. This is a fundamental democratic process of implementation. It makes discretion inevitable and crucial as professional judgments and decision making, determines the client's eligibility to benefits and need for special attention or intervention before returning to work. Here professionalism is institutionalized in bureaucratic organizations. Hence the social workers must control clients' legal access to sick leave programmes and at the same time deliver individualized services to promote the workability of the client in order to help them become self-supporting after sick leave. As well as examining how social work discretion is made possible in the job centre, the research behind the paper discusses the issue of new forms of professionalism emerging in social work. In the light of policy changes and reforms of welfare services a new type of social interventions towards people on sick leave is demanded. This can place pressure on the street-level organization to develop new or more professionalism.

*The Rule of Law in the Globalizing World. Polish Investors Abroad*

According to the famous argument of Max Weber, emergence and establishment of the rational legal order and formation of law-based political authority present important factors which explain rapid economic growth. These theses of Weber, as it is believed, are corroborated by the long lasting and deeply embedded European (or broader - Western) legal cultures and mentalities, characterized by the high value of the rule of law. Therefore processes of "new comers" west-

ernization are often conceptualized as "learning" i.e., as formation of pro-legal cultures based on an unquestioned value of the rule of law. Empirical research on the Polish investors abroad put in question such simplistic views. Firstly, in light of this research, the processes of learning are much more complicated, multidimensional and multidirectional. Secondly, the state and its agencies play here an important role - both in form of protection of rights and interests of domestic actors (national markets), and in form of protection of rights and interests of investors abroad (rights and interests of its citizens and companies). Therefore, the rule of law in a globalizing world presents a complicated negotiation game not only of values, but also of interests, between strong and weak agents, private and public.

#### *Risk, Rumour, Radiation: Japan's Nuclear Catastrophe and the Politics of the Apolitical*

This paper analyzes the particularities of the Japanese approach to risk communication around radiation after 3/11. Radioactive contamination in Japan was first measured and its results published by the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the Japan Atomic Energy Agency on March 14, 2011, three days after the Great East Japan Earthquake ravaged the country, leaving tens of thousands dead and many more displaced. Official radiation monitoring in the following weeks continued in an haphazard manner, yielding vague and at times misleading data that failed to provide actionable information on the necessities of evacuation to the local population.

Within a week of the disaster, various groups had hacked Geiger counters to enable collective radiation monitoring, resulting in a higher degree of granularity of data available to the affected population. Still, while the provided data was more transparent and comprehensive than that which had previously been made publicly available, the groups made few attempts at interpreting the data for the public. The groups insisted that their actions were complementary to, rather than antagonistic to, those of the government and TEPCO and that they therefore should not be seen as political.

The paper explores the role of digital media and technology in altering the production of and access to vital information after disasters.

#### PLEN-8.2

**SKEGGS, BEVERLY\*** (University of London, [B.Skeggs@gold.ac.uk](mailto:B.Skeggs@gold.ac.uk))

#### *A Global Sociology of Value and Values: How to Move beyond the Analytic of Capital?*

Many theories adopt the metaphors of capital to explore power (e.g. Bourdieu), and/or to analyse personhood (e.g. via human capital), or action (via rational action theories), leading some sociologists to suggest that not just capital but the capital analytic has subsumed all areas of life. The relationship between quantification and qualification has been complicated further by the incursion of calculation (via algorithms) into many aspects of our daily life.

Whilst, no doubt, capital behaves according to its own logic, finding new lines of flight, converting affects such as sentiment and suffering into value, making multi-culturalism marketable, generating new forms of bio-capital, and making many of our actions subject to the logic of calculation (academic writing for instance), why should sociologists do likewise?

If we only understand the world from the perspective of capital relations what do we miss seeing? Are there any values remaining or remaindered? How do we understand the relationship between value and values?

#### *The Motivations of the Opponents of a Social Memory Implant. the Re/Building of the Royal Castle in Poznań (2010-2014)*

In 2010 began the re/building of the Royal Castle in the city of Poznań, which was demolished in 1796. The process, which was initiated by the Committee for the Rebuilding of the Royal Castle arouses strong controversy. The builders of the castle are accused of falsifying history (it is not sure how the building looked like before being taken to pieces) and destroying the original remains of the old castle. However, the committee was able to reach both political and social support for the re/building and collect money for this aim.

Due to a very long absence of the castle in the urban space and lack of any confidence when it comes to its outlook, the object which is being built can be called an implant of social memory. An implant of memory is an object, which function is to construct a particular knowledge of the past, becoming the carrier of this knowledge through its own form - imitating forms of ancient objects, buildings etc.

The speech will be devoted to the motivations of the people who publicly criticize the re/construction process and take part in different protests against it - the opponents of the Committee for the Rebuilding of the Royal Castle. There will be presented strategies with the help of which those people explain their engagement in the protests and their resistance to the re/building process. Conclusions will be presented on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

#### *Architects and Urban Planning*

This presentation discusses to what degree the architect profession is able to define what counts as relevant knowledge in urban development and urban planning processes, based on material from Norway. Urban planning is a field constituted by numerous actors/stakeholders representing different knowledge traditions implying that they do not always speak the same language. However, in order to handle environmental problems, transport and other infrastructure and land use, multidisciplinary knowledge and cooperation between different sectors are required. In Norway, the architectural profession has long had a key role in urban planning and positions as heads of urban planning administrations have been a power base for architects. However, architects' judgments and forms of knowledge are no longer hegemonic and their power base is thus weakening. This is partly caused by an increasing proportion of planning propositions (like zoning plans) prepared by private actors. Moreover, local authorities increasingly seem to depend on private funding to accomplish housing and infrastructure projects.

#### *Architecture As a Hybrid Profession*

Hybrid organizations and professions are characterized by conflicting goals, which may cause tensions. For architects, such tensions are typically between art and market, and between ideal ideas and conceptions of design, and preferences and claims from clients/principals and others. Although market dependence is intrinsic in the role and history of the profession, this still represents tension for architects. When dealing with this tension, some architects are quite pragmatic and accept and adjust to prevailing conditions. Other architects are more uncompromising and insist that creativity requires freedom from external constraints. Particular architect "heroes" espouse autonomy and distance from the service part of the profession. This may seem like a paradox as architects more than most other professionals depend on, and have to adjust to, the power, wealth, favor and money of their clients.

#### *Rockefeller Foundation's Role in Promoting Social Sciences in Interwar Czechoslovakia*

This paper discusses the place of geopolitical concerns in the policy of the Rockefeller Foundation towards social sciences in Czechoslovakia between the two world wars. The RF provided scholarships for Czechoslovak social scientists (around 35) and sponsored social science work at various Czechoslovak institutions. The scholars supported by the RF were sociologists, lawyers, and economists, both German and Czech-speaking. Their individual fates display wide variation: several perished during WWII, others escaped and became recipients of displaced scholars grants, still others were exiled after 1948, a handful joined the Nazi and later the Communist structures. Only those who chose emigration produced academic work of some importance. The dominant geopolitical concerns were reflected in the effort of the RF to maintain a balance between German and Czech scholars and institutions supported or in promoting research in areas that were expected to contribute to maintaining the stability of the Czechoslovak state or Central Europe such as unemployment and social welfare, interethnic relations or the so-called Danubian studies. Key among Czechoslovak institutions in social sciences that received support from the RF was the Social Institute, affiliated with the Ministry of social welfare, the incubator of innovative ideas that directly influenced Czechoslovak social welfare legislation and policies. RF also funded a large research project on the suburbanization of Prague that became the first major empirical study in Czech sociology while another study on German-Czech relations could not materialize due to the dismemberment of Czechoslovakia. The RF made a significant contribution to the development of empirical social research and social policy in Czechoslovakia, but the overall impact of its funding was virtually erased by adverse geopolitical conditions and turbulent political developments in the period 1938-1948.

*The Elusive Code: Anomalous Cultures of Civil Society*

This paper attempts to add new evidence and theoretical insight to the literature on the discourses of civil society inaugurated within cultural sociology by Jeffrey Alexander and Philip Smith. It argues, first, that unlike the US case, the codes of civil society in ethnically heterogeneous places are the product of multiple external oppositions which can, in certain cases, result in alternative or contrary codings. For instance, some currents in the Czech, Polish and other Slavic nationalisms in the 19<sup>th</sup> century construed the Germans, their principal "other", as rational and efficient, taking pride to the contrary in being emotional and impractical. Second, the paper shows that civil societies are fragmented and the general code of civil society is appropriated differentially by different social groups whose interpretation of the basic binaries is dependent on their particular social experience as well as their relative position to other groups. For example, as pointed out by Marada, Buchowski and other authors, the cultural codings characteristic of the heirs of the anti-Communist dissent in East Central Europe are in some aspects, including the role of formal procedures and professionalism, completely at odds with the codes represented by Western-style social movement organizations. With its roots in a conspirative underground community this dissident culture doesn't code personal ties and secrecy as counter-democratic. On a general level, the paper argues for a more historically-oriented approach to the study of cultural structures of civil society that recognizes that the generalized codes are embedded in contingent interpretive traditions and, as such, are unstable, contested and often ambiguous.

*Medical and Legislative Gatekeeping in ART: Narrow Trajectories in the Realm of Miracles*

The techniques of assisted reproduction have the potential to free us from the bodily limitations and open the physical reproduction to people who would not conceive without medical intervention. The access to this type of treatment is regulated by numerous ways, both formally and informally. Reproductive medicine, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients.

The Czech Republic, with its long tradition of infertility treatment, wide network of infertility clinics, competitive success rates and liberal regulation of the ART regarding the range of procedures allowed, became one of the most popular destination of reproductive tourism. On the other hand, there is a strict regulation of the access to the ART based on the characteristics of patients such as their age, sexuality and partnership. The paper will focus on the process of the legislative and medical gatekeeping as a genuine example of the foucauldian biopower, as a control over bodies, interaction and norms of population performed by the medical professionals and by the administration and regulation of treatment. The paper is based on the two sources of data: interviews with 15 medical professionals working in the field of ART and the analysis of the Czech parliament debate over the new legislative limits of ART (2011). The analysis focused on the following questions: what is the position of various actors in the process, how is nature and normality, in the context of ART, discussed, what kinds of citizens/patients are defined by the clinicians and parliament members as deserving candidates for infertility treatment, and, how these regulatory mechanisms can be reflected in the context of "biotech age" and globalized biopolitics.

TOMESCU-DUBROW, IRINA (Institute of Philosophy and Sociology of the Polish Academy of Sciences)

*Causes and Consequences of Time Investment in Friendship Networks: A Dynamic Analysis of the Polish Panel Survey Polpan 1988-2013*

Time investment in one's friendship network depends on the utility function  $U_i = \alpha \log Y_i + (1 - \alpha) \log O_i$ , that people maximize, where  $\alpha$  is the social tie parameter (between 0 and 1) measuring the  $i$ -th actor's taste for bonding with friends, and  $O$  refers to the taste for all other leisure-time activities. In the theoretical part of the paper, we connect this utility function with time investment in friendship network (I) assuming that the numbers of friends and the density of their contacts are crucial for the amount of time that people actually spend with friends. The Polish Panel Survey POLPAN 1988-2013 contains information on how frequently respon-

dents meet with friends ( $I_{it}$ , our main leisure-time variable), numbers of friends ( $N_{it}$ ), density of their contacts ( $D_{it}$ ) and several socio-demographic characteristics of respondents for the period of measurement ( $t$ ) and earlier periods ( $t-1, \dots, t-5$ , where the period-units are 5-year waves of the POLPAN study). In the empirical part of the paper we examine main determinants of time investment in one's friendship network, focusing on family formation variables. We show that time investment, as well as the change in number of friends and the change in density of contacts among friends, depend on marital status, number of children, and number of people in the household. In addition, we confirm previous findings that "non-redundant ties among friends" influence income attainment and that having friends with entrepreneurial experience increases people's chances of establishing their own businesses, independently of the number of potential bridges between friends. The paper concludes with a discussion on meeting friends as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

PROHASKA, ARIANE (University of Alabama)

*Hazard Vulnerability and Housing Inequality after the Tuscaloosa, Alabama Tornado: A Critical Analysis of Rebuilding Efforts*

The tornadoes that struck Tuscaloosa, AL and surrounding areas on April 27, 2011 caused tremendous destruction to both residences and businesses. The highest levels of damage occurred among low-income residences, both single and multifamily. In this paper, we apply hazard vulnerability theory to the rebuilding of infrastructure in Tuscaloosa. Hazard vulnerability theory focuses on how social factors, including race, gender, place, and socio-economic status, affect a population's preparedness for a natural disaster. We extend this perspective into the recovery process, particularly on the availability of low-income, multifamily housing approximately two years after the storm. Data from multiple sources, including city planning resources, apartment websites, and interviews with city personnel, indicate that multifamily residences that have been constructed to replace destroyed or damaged housing complexes generally demand higher rents and have fewer units available for rent than the complexes that existed before the storm. Additionally, even as a residential construction boom has occurred in Tuscaloosa following the storm, the new complexes are almost entirely marketed to the college student population, even though none of the multifamily housing complexes destroyed in the storm solely housed college students. Although low-income populations were more affected than student populations, the economic advantages of building for student populations (i.e. "disaster capitalism") have outweighed the social responsibility of rebuilding residences for low-income individuals. We conclude that low-income residents of Tuscaloosa were doubly vulnerable to natural disasters; not only were they more likely to be living in structurally flawed housing before the storm, they were also left out of the rebuilding process after the tornado. We discuss some of the potential consequences of the reconstruction of Tuscaloosa, and propose suggestions that can limit social inequality in the rebuilding process for Tuscaloosa and other cities that have been harmed by natural disasters.

**SMEBY, JENS-CHRISTIAN\*** (Oslo and Akershus University College of Applied Sciences, [jens-christian.smeby@hioa.no](mailto:jens-christian.smeby@hioa.no))

*Professional Knowledge and Expertise*

Professions are according to Abbott the most important way expertise is institutionalised in modern societies. Sociologists have studied the characteristics of professionalism as well as the role of professionals in society. Even though an abstract knowledge is considered a core if not the core characteristics of professions, sociologists have examined the characteristics of professional knowledge used in occupational practise only to a limited extent. In my paper I discuss important contributions within the literature on expertise and argue that some of these perspectives are highly relevant to complement sociologists understanding of professional knowledge.

While sociologists have emphasised that abstract knowledge acquired in higher education is an important characteristics of professionalism, practical training and tacit knowledge is found to be the most important preconditions in the literature of expertise. Sociologists do not deny the need for practical training, but tacit knowledge is a somewhat mysterious term often considered as opposed to abstract explicit knowledge. Based on questioning why knowledge is tacit, Harry Collins (2010) distinguishes between three types of tacit knowledge. This distinction opens up for a more nuanced perspective on the relationship between tacit and explicit abstract knowledge. His perspective also imply that explicit knowledge play an important role in the development of expertise and transmission of knowledge.

Professional work is characterised by uncertainty. Inspired by Collins different types of tacit knowledge, I distinguish between three types of uncertainty that have significant importance for the reliability of professional expertise: 1) Explicit uncertainty related to uncertain knowledge; 2) Cognitive uncertainty related to

characteristics of the human mind (heuristics and biases) and; 3) Interactional uncertainty related to interpretation and interaction. An explicit abstract knowledge base is an important resource in handling all these types of uncertainty, but these uncertainties can never be totally abolished.

##### *Tap Water and the Public Policy*

Water is the source of life on the earth and the driving force of human development. The diamond-water paradox presented by A. Smith shows the underestimated economic value of water. However, it has its social value that can be viewed from human dimension perspective.

The knowledge of how citizens perceive the drinking water is essential to understanding the political, economic, technological context of the public policy. According to sociological survey, 82% of citizens in Saint-Petersburg are not satisfied with the quality of tap water. These figures demonstrate, that despite the fact the city water is cleaned by ultraviolet and has biomonitoring system to meet the high requirements of international water standards, there are some hidden issues explaining this situation.

SPb water is a nexus of generations inhabiting this place: it keeps the memory of past times, preserves the spiritual fabric of the society and gives an incentive to new generations for further development. However, the industrialization has destroyed this consciousness. The growth of scientific knowledge has enabled experts to make a strict distinction between bad natural water that had adverse effects on people health and good filtered water that had the status of paid public services.

It is believed, SPb water is rusty and dangerous to drink, because city officials take bribes and do not provide the modernization of water infrastructure system in time. Public dissatisfaction takes the form of disagreement with the public policy. It prompts citizens to buy bottled water sold by water transnationals, although it is the same tap water, in fact. As a result, SPb water market is showing 12% annual growth.

Basing on the citizens' concerns on the water problem, one can construct the Index of tap water as an indicator of the level of public confidence in the public policy.

##### *Daily Practises of Home Making and Belonging Among Owner-Occupiers and Tenants in a Disadvantaged Neighbourhood in the Netherlands*

In this period of globalisation daily practises of local home making and feeling at home are considered important. In order to illustrate such practises the focus of this paper is on a street in a disadvantaged neighbourhood in a Southern city in the Netherlands. In this street tenants and owner-occupiers with a different ethnic background – including native born – are interviewed and observed. In this natural laboratory, the street was divided into clusters; those with only tenants, those with only owner-occupiers, and those having a mix of both. This offers insight into the role class and ethnicity play in the homogeneous and mixed micro-settings and its impact on physical and social practices of home making and belonging/ feeling at home. Therefore attention is paid to narratives and the informal organization of different living spaces, territory-making activities, and practices in the different domestic clusters. This shows that the domestic space can be experienced as a vehicle of intimacy and sociability and in other clusters as encouraging alienation. Such practices can also take place in the same cluster, resulting in mechanisms of inclusion and exclusion which in turn go together with boundaries between public, private and community spaces.

**SMIRNOV, PETR\*** (Grigory Smirnov, [smirnovpi@mail.ru](mailto:smirnovpi@mail.ru))

##### *Future Of Democracy In The Modern World*

Democracy is one of the ancient forms of social self-government, which possesses many advantages and democratization of a society is a progressive process. However, today mass media spread illusory ideas about democracy as the terminal value which presence will provide the peace and well-being on the Earth. Relying on this illusion, Western democracies, headed by the USA, stimulate democratization process in the world, using ideological, political, economic and military means.

However the facts of real history disprove this illusion. Democratic states are not less aggressive, than authoritarian ones. Athens, Sparta and Rome, all European democracies during epoch of colonialism and the USA (during all its history) were aggressive.

We consider democracy as an instrumental value. It appears to be effective and naturally arises when society reaches sufficient consent in regards to basic values (one God for everyone, nation, person, society, etc.). When such agreement not exists, a dictatorship provides the minimum order in a society. For example, dictatorships of Cromwell, Napoleon, Stalin, Pinochet, etc.

There is no consent regarding basic universal values in the modern world. Hardly a man and his rights will be recognized as the highest values by billions of people in the near future. The policy of Western countries aimed at their promotion, leads to anarchy and violence. Therefore it is difficult to expect peaceful expansion of democracy on a global scale. Today's biggest task for social scientists is to reveal basic values in regards to which mankind can come to the consent.

##### *Transnational Family Life from the Perspective of Zimbabwean Male Migrants in South Africa*

The early years of the new millennium saw a rise in the influx of Zimbabwean migrants to neighbouring South Africa. Due to the growing economic turmoil, political crisis and human rights violations in Zimbabwe many citizens from this country have crossed the border into South Africa to find employment and/or seek political refuge. Using qualitative data collected from in-depth interviews this paper seeks to gain a better understanding of the reality of transnational family life from the perspective of Zimbabwean men who have migrated to South Africa and live in the inner-city area of Johannesburg. Close family ties both 'here' (the country of destination) and 'back home' (the country of origin) were mapped. The focus fell on how the respondents sustain families across these transnational spaces and what impact their transnational experiences have on their relationship with their wives/partners and children. Moreover, attention was paid to the role high-speed information and communications technology (ITCs) play in maintaining family relationships and acting transnationally in a digital age. In light of the challenges these Zimbabwean men face on a daily basis in South Africa, where there are xenophobic sentiments and a relative high unemployment rate, the attention also fell on how these men view their multiple family commitments and the significance of remittances in maintaining a sense of self within the ambit of the family. The respondents' reflections on family dynamics across transnational spaces show a variety of experiences and their narratives provide a window into their different lived realities as migrants with family ties across borders.

##### *Emotion Work in the Practice of Medicine: The Case of Physician Assistants of Color*

We focus on the concepts of emotional labor or emotion work and white racial framing to describe the experiences of Physician Assistants (PAs) of color as they navigate racialized barriers in the medical field. We first present results from a nationally representative sample of 15,275 PAs and then examine the more detailed personal experiences of PAs of color from an online survey. Finally we use the personal narratives of ten African American PAs. We identify and analyze emotion themes resulting from work-related experiences and stressful encounters that arise from interactions with faculty, staff, nurses, physicians, and patients in the workplace. Odds ratios from the online survey show that African Americans experience more emotion work than other groups. African American PAs were 26 times more likely than white PAs to report patient refusals to treat them. When we examined only Black women PAs, they were 46 times more likely to report patient refusals. Other ethnic groups experience elevated levels of emotionally negative experience, but they were not always statistically significant when other variables were included in the analysis. Women in general experienced a variety of discriminatory behaviors. Narrative accounts exhibit large amounts of emotion as the African American PAs detailed their encounters with patients and medical providers.

**SMITH, GAVIN\*** (The Australian National University, [gavin.smith@anu.edu.au](mailto:gavin.smith@anu.edu.au))

##### *The Art of Governing in an Age of Revelation: On the Biopolitics of Biovisuality*

This paper examines the transforming value, resolution and vitalism of the social body as it is increasingly informationalized, visualized and anatomized by multivalent systems of exposure. Multiplex biopolitical interests influence and

incite these practices: wills to discern and direct consumption habits; ambitions to inscribe structured meanings upon somatic territories; and desires to better identify, verify and assess corporal components. An emerging confluence of bio-visual imperatives, practices and flows are placing unique demands on embodied subjects, specifically concerning (a) the control, ownership and arrangement of personal information deriving from bodily interference, and (b) the types of performative exertions and authentication protocols that are now routinely requested and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshy topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivation effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confidences and revealing subjective states in the form of informatic particles (Foucault 1988). In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

#### WG02-909.4

**SMITH, JEREMY\*** (University of Ballarat, [jeremy.smith@federation.edu.au](mailto:jeremy.smith@federation.edu.au))

#### *Civilizational Discourse and Models Of Modernity In The Meiji Revolution*

During the Meiji revolution, Japanese writings on international arena, Western empires and the Western tradition nourished a discourse on civilization. At the same time, Japan's civilizational works also reflected debate on models of modernity. Over the course of consolidation of the Meiji regime, deep engagement with different foreign traditions produced an exceptionally intense phase of inter-civilizational engagement which left a significant legacy. In this paper, three episodes of interpretation of civilization and modernity are explored: the construction of an urban public sphere in which this civilizational discourse emerged, creation (through conceptual and linguistic translation) of entirely new vocabularies for philosophy and sociology, and the conflicts around political perspectives expressed by the popular democracy movement of the 1870s. In the urban public sphere and the popular movement, Japanese intellectuals actively interpreted and relativized the cultures, religions and ideologies of other civilizations against a native cultural core. The famous Meirokusha publishing house and its journal *Meiroku Zasshi* instituted a centre of civilizational discourse for intellectual elites and the urban public sphere that they participated in. Within that public sphere, the Meirokusha set in train historically and culturally specific processes of translation of Western thought which included translation of the concept of 'society' itself and the development of Japanese vocabularies for philosophy and sociology. Social and political conflict around modernity manifested also in the wider movement for popular rights that arose in the 1870s and then subsided. A main claim of the paper is that consolidation of Japan's imperial polity in the 1890s superseded all three sets of interpretations developed by the Meirokusha intelligentsia and the popular movement, but not the civilizational discourse that they instituted.

#### *Debating Civilizations: Sociology and The Inter-Disciplinary Field Of Civilizations Analysis*

In the early twentieth century, civilizations analysis combined perspectives from anthropology to archaeology through to world history. Founding thinkers in sociology contributed greatly to this inter-disciplinary field. In a phase that stretched from Weber, Durkheim and Mauss to Sorokin and Elias, a 'classical era' of civilizations analysis generated a program of research problems that was productive in critical and multidisciplinary ways and limited in scope and vision in others. The field was lost as a suppressed tradition during the postwar institutionalization of disciplines. This paper will examine what was gained for sociology in the early traditions of civilizations analysis as well as what was displaced when it subsided. Potential paths for renewal of multidisciplinary scholarship involving sociology will be sketched out based on the contemporary experiences of neo-Weberian revival of civilizations analysis in the work of Benjamin Nelson and S.N Eisenstadt. The paper will also identify intrinsic limitations in latter-day approaches.

#### *Understanding the Impact of Major Life Events on Young People's Academic Achievement and Post-Schooling Careers*

Instability and conflict are pervasive features of the transition from adolescence to early adulthood, as young people learn to manage an expanding array of academic, social and familial commitments. Recently, theorists of inequality have suggested that young people's exposure to such uncertainty during this time is potentially exacerbated by broader processes of individualisation and social change, placing them at heightened risk of marginalisation. In this paper we test this proposition with respect to young people's emerging career pathways, using longitudinal data from a large cohort of 7,000 secondary school students in Queensland, Australia, participating in the Our Lives research project. We do so by assessing the impact of a range of major life events during high school, such as changes in familial, social, or romantic relationships, on students' academic achievement at the end of high school. Our results indicate that such events had a negative influence on young people's secondary school exit scores which, at a time when university participation has become the norm in most Western societies, can adversely impact the quality and scope of young people's post-schooling career options. We also find that this cost is distributed unevenly across the student population, with the performance of (typically wealthier) private school students, and students living in urban areas, less affected by such events than the performance of public school students and those living in non-metropolitan and regional areas. Finally, we review the implications of these findings in light of contemporary debates about individualisation, uncertainty, and inequality in young people's educational and occupational futures.

**SMITH, MARSHALL\*** (University of Colorado Boulder, [drmarshallsmith@gmail.com](mailto:drmarshallsmith@gmail.com))

#### *Sexually Explicit Material, Scripting, Simulacra, and Sexuality - Theorizing the Changing Landscape of Learning about Sex*

This paper explores the relationship between the marked increase in availability of sexually explicit material in the U.S. that accompanied widespread high-speed internet, sexuality, scripting theory, and the concept of a simulacrum. The data are from open-ended interviews with 51 young adults about their experiences as adolescents learning about sexuality in the United States. Participants reported viewing sexually explicit material online as adolescents to learn about sexual behaviors and sexual interaction, often before participating in those behaviors. The ways adolescents referenced sexually explicit material, both amateur and professionally produced, in order to learn about sexual behaviors represent a significant departure from historic means of learning about sex. This development is best understood as presenting a new level of sexual scripts, intermediate scripts, within the model developed by Gagnon and Simon (1973). Participants' descriptions of viewing video examples of sexual behaviors revealed they provided an intermediate script that was more specific and personal to the participants than a cultural scenario, yet did not involve direct interaction as with interpersonal scripts. This learning by viewing sexually explicit material prior to engaging in sexual behaviors approximates the concept of a simulacrum. Adolescents referenced representations of sexuality and then modeled their own behaviors on those representations. These theoretical concepts of an intermediate script and simulacra, are useful for understanding of the shifting landscape of adolescent sexuality. As all aspects of our sexual world continue to be increasingly recorded, viewed, and represented, these concepts may contribute to developing theories of sexuality applicable to other populations.

#### *Cumulative Disadvantage and Gender Differences in Early Career Earnings: Evidence from Canada's National Graduates Survey*

Over the last several decades women have entered educational programs in lucrative fields like law and medicine. England (*Gender and Society*, 2010) has argued that, in the US, the effect of this has been to narrow the gender earnings gap in the upper part of the educational distribution and to reduce the aggregate gap. Women in Canada have also entered the legal and medical professions in large numbers. One would expect to see a similarly declining gender pay gap between the better educated. In fact, the evidence on this suggests a more complicated evolution of gender pay differences. Statistics Canada's National Graduates Survey has collected data on field of study of successive cohorts of university graduates (at approximately five year intervals) and, then on labour force status, earnings, and family status two and five years after graduation. This makes it possible to i) determine the raw gender differences in pay both across cohorts (the

first cohort analysed graduated in 1986, the last in 2000) and, within cohorts, the changes in the differences after graduation; ii) to determine the extent to which field of study continues to cause a gender difference in pay; iii) the factors other than field of study that cause a gender difference in pay, including family responsibilities. The paper reports i) analysis of the effect of gender on labour force status, focusing on statuses likely to subsequently increase pay; ii) consecutive cross-sectional Oaxaca-Blinder decompositions within and across cohorts; and iii) panel analyses within cohorts. The results suggest that, even within this highly educated sample, in the short period after graduation, women tend to cumulate a number of experiences that contribute to a widening gender pay gap.

#### *Did Rising Inequality Cause the Recent Financial Crisis?*

One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (*Fault Lines*, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, exacerbated the financial problems caused by defaulting mortgage holders. Rajan provides little evidence in support of this interpretation. This paper addresses the following questions. i) Did incomes stagnate or decline in the lower part of the income distribution in the decades leading up to the crisis? ii) Did distributional conflict cause the liberalization of credit in the form of sub prime mortgages? iii) Was it the provision of mortgages to low income house buyers that caused the boom and subsequent bust in house prices. iv) To what degree was increased risk in the financial system caused by policies encouraging the issue of sub prime mortgages? On the whole, the evidence raises doubts about the rising inequality account of the financial crisis.

**SMITH, PHILIP\*** (Yale University, [philip.smith@yale.edu](mailto:philip.smith@yale.edu))

#### *On Dry Othering*

Existing theories of Othering can be thought of as 'wet Othering'. They focus in metaphorical and material ways on the slimy and ambivalent. In such theories othering is associated with intense emotional reactions. Those perceiving the 'Other' feel intense hatred, disgust and dread. This paper introduces the new concept of 'dry othering'. This involves a completely different logic. Those doing the Othering feel - or are believed to feel - nothing at all. The victim of Othering is a mere object to them - one that does not evoke emotional responses. The logic of action is not symbolic as in wet othering but rather overly-instrumental. Victims of this kind of Othering are traumatized not by an awareness that others think they are disgusting and enjoy their humiliation (an emotional response) but rather by realizing that they are mere objects to the Otherer (who has no emotional response). Social theory on the gaze is used to make sense of this situation. The theory is illustrated with reference to accounts of unethical medical experiments, Alien abduction narratives, animal attacks, torture and serial killing.

#### *The Urban Fabric, Repair and the 'Good Enough' City*

This paper considers the work that repair might do in mending and smoothing over material and social transgressions in the city. Small acts of maintenance and care can seem inconsequential in the face of the global risks that menace the modern city and the brutal conditions, exclusions and exploitation that some of those cities are home to. Yet a humanist sociology might be sympathetic towards piecemeal and everyday activities which aim to put right, one step at a time, things gone wrong - deviant occurrences, ugly moments when life in the city breaks down or does not play out as we might want it to. Ken Plummer's recent call for a *sociology of hope* takes this line, insisting on the need for 'a down-to-earth pragmatism of empathy, justice, kindness and care' and inviting sociologists to 'think small in a big way'.

Something similar - thinking small, in a big way - can be found in the writings of human geographer Thrift, though differently inflected. Thrift directs attention to mundane activities of urban care and maintenance - street cleaning, roadside

repair, emergency call-out - and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the physical - palpable, material, mute - fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift's thesis neglects this history.

#### *Methodological Complexities Involved When Using Visual Methods in Dementia Research*

**Methodological complexities involved when using visual methods in dementia research**

**Sarah Kate Smith & Gail Ann Mountain, School of Health & Related Research (ScHARR), University of Sheffield**

In our study of the subjective experiences of older people with dementia when interacting with others and with technology, we have used video recording as a key method. Dementia impairs verbal communication, and this can have significant impact on how researchers may explore individual's subjective experiences. Non-verbal communication such as gestures, body language, facial expression and posture therefore has greater significance when creating this understanding. The benefits of using video based methods in dementia research are two-fold. First, these methods are key to the faithful representation of non-verbal behaviour. Second, these methods can overcome some of the communication issues that can be encountered when interacting with people with a dementia diagnosis.

We report how our use of video recordings has provided us with important data to make sense of people with dementia's interactions with technology, the challenges of visual data analysis, and how the project has led to new understandings of how such data can be analysed and represented. Data will be presented and discussed, providing an arena for methodological discussion and debate. Some of the methodological issues to be discussed include: the need for greater focus on the processes of visual data analysis (Schnettler and Raab, 2008); whether more rigorous approaches to visual data analysis will lead to objectification, generalisation and loss of quality and expressivity (cf. Pink, 2011); and ethical issues in the use of visual data.

#### *The Origin and Diffusion of Comparative Survey Research*

Cross-national, survey research emerged out of and developed along with many seminal megatrends of the 20th century including globalization and democratization. It was also shaped by such major historical events as World War II, post-bellum collective multilateralism, and the spread and collapse of Communism.

The development of cross-national, survey research is an example of what Rogers calls the diffusion of innovation. Public opinion polls were created in the United States in the mid-1930s and spread to other countries. Like all diffusions, its development was innovation specific and was both aided and hindered by particular characteristics of survey research.

Its expansion was part of the general process of globalization. For survey research, globalization involved considerable interaction between the global product (survey research) and the local markets and cultures.

Additionally, as Oberschall has noted "(t)he expansion of surveys in general and public opinion polling in particular was part of the general growth of democracy within and across societies." Surveys in general and public opinion polls in particular typically develop and only thrive in open, democratic societies. Democratization in general and decolonization in particular opened up more countries to surveys.

Besides being shaped by these megatrends, the development of cross-national, survey research was influenced by historical events such as World War II, post-war collective multilateralism and the founding of the UN, and the Cold War.

This paper examines 1) the emergence of cross-national, survey research including the role of early adopters (e.g. survey-research organizations), 2) the initial diffusion of survey research, 3) foundational survey-research meetings and associations, 4) the impact of World War II, 5) the role of the UN and other international organizations including the International Sociological Association, 6) initial comparative surveys, 7) the contributions of international exchanges, 8) later developments, and 9) impediments to development and diffusion.

**SNEE, HELENE\*** (University of Manchester, [helene.snee@manchester.ac.uk](mailto:helene.snee@manchester.ac.uk))

*Gap Years, Cosmopolitan Cultural Capital and Transnational Justice*

This paper considers if gap years are a cosmopolitan endeavour. It draws on a qualitative study of the online travel narratives of young people from the UK who blog about their year out between school and university. The analysis focuses on the bloggers' representations of people and places as 'different' in their travel stories. Volunteering overseas as part of a gap year is often promoted as a way for young people to become 'global citizens', and independent travel as a way to have 'authentic' inter-cultural experiences.

Can such gap years build a transnational sense of justice, or are they simply a way for already privileged youth to claim they are doing something 'worthwhile'? Gap year students gain personal benefits, which I conceptualise as 'cosmopolitan cultural capital'. This suggests they may be primarily concerned with self-interest rather than a commitment to the Other.

While young people may have good intentions, I argue that the way the bloggers frame their gap year stories tends to reproduce dominant meanings and values, and are shaped by historical legacies and structural forces. Their narratives also contain instances of more reflexive engagements with difference and diversity, however. Drawing on these findings, I consider the future prospects for gap years as an agent of positive social change. I suggest how young people might be encouraged to critically engage with wider issues of global justice before, during and after taking time out overseas.

*The Role of Assistive Technology for Personal Care Activities of Daily Living to Enable Families to Care for Relatives with Dementia in Their Location of Choice*

The UK's National Dementia Strategy objectives include: i) ensuring that people with dementia live well (whether in their own home or in a care home) and ii) a call for more research on the role of Assistive Technology (AT) to address the social care needs of people with dementia (PWD) and their carers. This research focussed specifically on AT for personal care Activities of Daily Living (ADLs); bathing and washing, dressing and grooming, toileting and continence and feeding tasks. Examples include; brightly-coloured raised toilet seats, easy-use tap heads and easy-grip cutlery. Such AT is now provided by some Local Authority Social Services in the UK. This research aimed to determine the extent to which PWD and their familial carers were provided with AT for personal care ADLs by formal social care services, or sourced by themselves, and utilised whilst they lived at home in the community. The same individuals were also assessed whilst living in a care home for their AT use for personal care ADLs. Furthermore, the study examined the role AT can play in enabling those caring for a relative with dementia to make choices about their location of care (particularly, whether the use of AT could delay an institutionalisation decision).

An in-depth multiple contrasting case study design explored perceptions and experiences of formal (care home keyworkers) and familial carers of care home residents with a clinical diagnosis of dementia on AT use for personal care ADLs. The results aimed to ascertain the difficulties and preferences carers of PWD have when attaining, using and maintaining AT and its contribution to the quality-of-life of such individuals. This method also enabled comparisons and similarities between individuals residing in different geographical locations to be compared and establish whether inequality in AT provision exists in the UK.

*Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle*

**Rising Class Conflict, Resilient Communist Party-State:  
Interpreting the Chinese Puzzle**  
Alvin Y. SO and Yin-Wah CHU\*\*

After the collapse of Maoist socialist regime in 1978, China has experienced rising social equality and class conflict. Within a short span of 40 years, China has transformed itself from one of the most egalitarian to one of the most unequal societies in the world. With the rising social inequality, it is only natural that rising social inequality is accompanied by rising class conflict. The number

of "mass incidents" has skyrocketed from 8,700 in 1993 to more than 200,000 in 2011.

What is surprising is the fact that despite the explosion of class conflict and civil unrest, the Chinese communist party-state is highly resilient and is not under any threat of regime change. There is no large-scale national labor protest, no violent peasant rebellion, and no robust democracy movement to challenge the legitimacy of the communist party-state.

The aim of this paper is to interpreting this Chinese puzzle of resilient party-state in the midst of rising social conflict from the workers, peasants, and the new middle class. Why the rising social conflict and civil unrest did not lead to any political instability and regime change, like it did in other post-socialist societies?

This paper argues that the Chinese communist party-state has done an excellent job in managing the class conflict among the workers, the peasants, and the new middle class in the Chinese society. Indeed, the Chinese party-state not only was able to stay in power, but it also was able to formulate and implement all sorts of developmental policies propelling the rise of China at the turn of the 21<sup>st</sup> century.

*'Housing-Based Welfare'? Empirical Perspectives from the UK*

Economic crisis, fiscal austerity, conservative policies and the new demography of ageing societies have given rise to the idea of 'asset-based welfare' as a key complement of the UK's shrinking welfare state. For instance, concerning elderly care, retirement and education, housing wealth has become central to family welfare through life course and across generations. However, given variations in housing wealth across regional and local markets, between 'boom-and-bust' cycles, and across socioeconomic groups and age cohorts, positioning housing at the core of an 'asset-based welfare' regime should be questioned. In this paper, we scrutinise people's views and strategies towards what might be paraphrased as 'housing-based welfare'. What are the opportunities and limitations for positioning housing wealth as a base for family welfare for different cohorts and socioeconomic groups? By analysing 100 in-depth interviews with homeowners (with or without mortgages) and social and private tenants, we conclude that socioeconomic inequality challenges the potential for housing to form an 'asset-based welfare' system. The affluent have various assets to engage in the provision for their own and their children's welfare with no need to resort to the wealth embedded in their home. For marginal homeowners, relying on housing wealth might result in spirals of debt and drop them out of homeownership whereas long-term tenants are least able to afford alternative welfare provisions. Yet, numerous participants pursue (re)-active strategies of 'housing-based welfare' by traditional routes – building up housing careers in order to live rent-free and eventually downsize – or increasingly by letting out buy-to-let or inherited property. However, many of these participants are unsure of the potential of 'housing-based welfare' in the long term since they have 'no crystal ball to look into the future' in order to manage complex personal, familial and societal risks; this, in turn, reinforces social and familial solidarity.

*'Why Should I Trust You?' an Empirical Investigation of Determinants of Trust and Distrust in Romanian Post-Socialist Urban Society*

Trust is a key factor in the development of collective action, and thus in the performance of communities, institutions and society. Seminal scholarship has greatly valued the social virtues of trust and to a lesser degree those of caution. Consequently, scholars have expressed concerns regarding the socialist 'legacy of distrust', which have negatively influenced processes of democracy and development in the post-socialist states. While quantitative measurements of trust have become standard in cross-national surveys, in depth qualitative research has remained exceptional but helpful. By employing a mixed-method design of cross-national analysis of secondary data and qualitative examination of 69 in-depth interviews in a post-'socialist city', this paper investigates the determinants of (dis)-trust in post-socialist Romania. The analysis draws attention to the entwined social and rational origin of trust and distrust. Findings show that institutional trust has risen from practically zero due to better public management and freedom to express opinions. However, institutional trust has remained low due to perceptions of widespread bribery and favouritism – not necessarily experienced but reinforced through social learning and the media – and to a general discontent with some institutions, particularly the police, the political elite and the judiciary. Conversely, interpersonal trust has been rapidly declining though

it had not entirely vanished and has remained generally confined to families and bounded groups. By growing social distrust, people have reacted to the increasing social inequality during the post-socialist transition and its associated figures of the insular individualist and predatory capitalist. This does not invalidate the thesis of socialist 'legacy of distrust', but significantly adds to it. Data quantification suggests that the effect of increasing social inequality during transition is six times stronger than the effect of persistent communist legacies on current levels of social distrust. This has important policy implications, which are outlined in this paper.

*Relations Between Individuals at Work in a Contemporary Context: Necessary Changes in Communication in Organizational Context*

Companies organize themselves around objectives that seek the maximum return to its shareholders or founders. However, when forming the individuals in a group to which these goals are achieved, dreams as well as desires and ambitions emerge.

Typically, subjects align with organizational interests in the expectation that their own goals are also achieved, existing three important issues in these working relationships. The first question relates to the symbolism of the "notion of work". The second issue reinforces the role of work in social relations. Despite all the discussions involving the centrality of work (OFFE, 1989; BAUMAN, 2008), it still remains one of the central points of life. The third issue concerns the lack of work, the possibility of unemployment and frustration as reality (BALDISSERA, 2010). The subjects experience these conflicts and tensions of force paradoxically (BALDISSERA, 2010; KUNSCH, 2012).

Some factors explain this movement transformation in communication directed to employees: a new technological context (social networks); new relations between people and organizations, caused, for example, a new employee profile and fewer permanent links with companies, besides the existence of an internal environment of conflict and tension.

Employees need time to develop relationships and coherent narratives in their experiences within the organizations, but in a world where the future is already the day after tomorrow, in a fragmented environment, focused on project execution and flexibility, employees are not allowed to develop strong relationships (SENNETT, 2009). Communications directed to employees will be impacted.

The safety at workplace, employment and career in one organization is replaced by employability. The needs of the organizations are more important than the needs of its workers. The imperative of aligning organizational strategies can find counterpoint in the desires of the individuals in the organization. As professionals working in this field, communicators must understand those changes and challenges.

**SOARES MENEZES, MARIA ZEFISA\*** (University of Barcelona, [mzefisa@hotmail.com](mailto:mzefisa@hotmail.com))

*Decentralization: From the Constitution's Dream to Reality*

This paper aims to analyze the decentralization of public policies in the state of Ceará, Brazil, as supported in the Federal Constitution of 1988. The decentralization agenda, mobilizing social and institutional players, proposed the partaking of decisions during the elaboration and management of public policies in order to strengthen and expand citizenship bonds. The establishment of structures for the arbitration and recognition of organized sectors within civil society bolstered the public sphere for the discussion and negotiation amongst various social and institutional segments. This allowed in specific circumstances for a communal decision-making process in turn strengthening the bonds of a new civic and partnership culture across Brazilian constituencies. The hypothesis presented in this article is that investments in this joint model and the assertion of a shared politic and civic culture were weak due to of the lack of institutional support from the local, state and Federal government. However, the dilemmas that emerged during the self-organization and creation of representation instances closer to the social actors have strengthened the local democracy.

*Gender Attitudes in the World of Work: Cross-Cultural Comparison*

The paper deals with factors determining work-related gender attitudes. With the spread of emancipative values the difference between gender roles becomes vaguer but is still strongly dependent upon country characteristics. While values

are usually regarded as factors impacting socio-economic behavior, my research underlines a less explored aspect: they are themselves formed and changed in the process of economic interactions. The objective is to assess the role of education and job characteristics among factors determining gender attitudes in different types of countries. More specifically, I focus on the interaction effect between education and employment characteristics on micro- and macro-level. Female labor force participation rate and ratio of female to male tertiary enrollment are used as the indicators of female involvement in labor market activities. The 5<sup>th</sup> wave of World Values Survey (2005-2008) serves as empirical base. The targeted group of population is the employed. Multilevel regression modeling is used. According to the results, work-related gender attitudes vary considerably by country. Education is a stronger predictor of gender attitudes than occupation and job characteristics. At the same time the higher occupational status and intellectual jobs and jobs with higher independence lead to more egalitarian gender attitudes. On the country-level the higher is female labor force participation rate and ratio of female to male tertiary enrollment, the more egalitarian are work-related gender attitudes in the country. In the countries with the higher women's involvement in education and labor market activities education and job characteristics impact gender attitudes to a lesser extent. Furthermore, there is less difference in female and male gender attitudes in such countries.

*Rethinking Citizenship in a Post-National Constellation*

Classical citizenship was understood as a status attributed to all those who are full members of a national state. Around the inclusion in this status and its expansion with new rights many social movements have fought their struggles. However, internal inequalities that have survived in many countries led some authors to suggest the subsistence of a hierarchy of citizenship. In other contexts, the mobility of people has reinforced fears and xenophobia, and consequently the citizenship is becoming there increasingly the legal basis for demarcating boundaries of inclusion and exclusion. New discursive semantics, such as communitarianism and postcolonial studies, react claiming for singularities on community bases to define belongingness previously expressed by citizenship and nation. The text deals with the question how the notion of citizenship could be extended to maintain its relevance today.

*Ribeirinho Communities: Identity and Social Cohesion in the Brazilian Amazon*

This article aims to observe the general processes of identity construction and social cohesion of the *ribeirinho* communities of Combu Island, an Environmental Protection Area, located on the left bank of the Guamá River, near the city of Belém, in the Brazilian Amazon Forest. These populations are concentrated along the rivers due to the lack of means of rail and road transport, using as a primary means of travel inland waterway vessels. In this sense, they are considered part of the so called *ribeirinho* communities, descendants of indigenous people and also the region of northeastern migrants coming from the great drought in the Northeast in the late eighteenth century and large integration projects in the Amazon from the twentieth century. This indicates that the interaction between ethnicity and multiculturalism is that this migratory movement qualify as social construct, in other words, individuals are not the region's natural, but are adapted to the conditions and integrate historical, social and cultural inheritances with indigenous, colonial and migratory people. Thus, we propose to present some reflections on identity and social cohesion present in this part of the population of the Brazilian Amazon. *Ribeirinho* Communities are a blend of simplicity and complexity and based on social characteristics and demographic dynamics, we present the way of life of these different communities, through the relationship between territory and identity. The intention of this paper is to open a range of new interpretive possibilities on these communities, with no claim rule out pre-erit analysis or establish universal truths.

#### *Rôyama Masamichi's East Asian Cooperative Community Theory*

Rôyama Masamichi's East Asian Cooperative Community Theory

While I was conducting the long-term project "Northeast Asia's Transnational Space", I was interested in the problem of when and how East Asia became identified as a unit. Soon, I became interested in the way that 'East Asia' is called and requested.

To approach the task, I have been interested in East Asian Cooperative Community(EACC) theorists such as the philosopher Miki Kiyoshi, economist Kada Tetzi, and international politics scholar Rôyama Masamichi, and I will mainly talk about Rôyama Masamichi in the presentation.

The core of Rôyama's EACC Theory is a region or regionalism. I would like to talk about the issues related to regionalism in the relationship between East Asia and the world, which is the relationship between particularity and universality speaking in the abstract. I will divide Rôyama's regionalism into three aspects based on universalism.

First, it is the attempt to escape from the international universal order caused by the Manchuria issue.

Second, it is the attempt to make 'East Asia' into a meaningful region, emphasizing the special identity of East Asia.

Third, it is not that the regionalism of the EACC is a particularization of the world order but that the EACC itself constructs a universal world order.

Lastly I will wrap up my paper by discussing following 3 topics. 1)Japan's leadership position 2)Horizontal regional order vs. Vertical intra-region order 3)The fact that the vertical intra-region order, which was attempted by Japan through the war, was realized by the U.S. after Japan's defeat.

#### *Women, Disaster and Challenges: A Case Study from Iran*

During the past decades, Iran's natural disasters such as earthquakes, droughts and floods have caused a considerable loss of human lives and livelihoods, environmental damages and the destruction of economic and social infrastructure. Although 49.6% of Iranian population are female but gender analysis has been ignored in the most national reports and surveys related to different aspects of disaster management. This study aimed to highlight the challenges of women before, during and after natural disasters and to investigate the capacity of Iranian women to reduce the consequences of natural hazards. Data collection was done by the interview with affected women of Varzaghan and Bushehr earthquake (2013, 2012), field observation, and review of related documents as well. The find-

ings indicated that although the investigated women were affected more than men but their needs and problems were not identified sufficiently. On the other hand, women vulnerabilities were highlighted more than their capacities and capabilities in handling the disasters. In conclusion, it is important to consider women participation in all phases of disaster management (mitigation, preparedness, response and recovery). Gender analysis with localized/standardized analytical tools can be suggested for future studies.

#### *A Comparative Approach on Migration in Post-Communist Societies; The Case of Albania in East-European Context*

The post-communist transformations in Central and Eastern Europe represent an interesting example for comparative studies: a number of countries began this transformation from the same starting point (1989), following more or less the same common goal of moving towards democracy and liberal market economy, and EU. Based on the comparative method Brzezinski predicted twenty years ago (as it was later confirmed with surprising accuracy), the historical calendar of those countries (the article "The Great Transformation" 1993), given an example of 'thinking comparatively' and foreseeing the future.

This paper is regarded with the hypothesis: Albania is an excellent laboratory for studying comparatively the new migratory process. The collapse of the socialist system was viewed with concern by many policy-makers in Western Europe who expected their affluent countries to be flooded by immigrants. Yet, this fear did not materialize and post-communist East-West migration was rather moderate. The only exception is Albania, whose emigration displayed features of an exodus. No other country has been so affected by migration, in such a short period of time like Albania has. It is confirmed that 34.2 percent of the Albanians have immigrated in more than 30 other countries, while the world migrant average is about 2.7 percent. And including the migrants that have spent a considerable lengths of time abroad, and have made their return back to the country, than we have a country in which more than half the population has experienced migration in the last two decades. This paper is an attempt to give a comparative answer to the question: "Why so many Albanians have migrated in such a short time, quite different from the other ex-communist countries, i.e. the countries with the same historical fortune?" In Albania, quite different from other countries, migration is shaping the society...

#### *The Strange Case of Soviet Sociology: A Goffmanian Analysis of a Failed Discipline*

History of the Soviet sociological movement is an intellectual puzzle. Sociology of science routinely identifies success in academic world with gaining intellectual recognition (Mertonian version) or boosting credit through manufacture of "facts" (constructivist version). Soviet sociology enjoyed enormous popularity at the time of its emergence (1960s), survived political prosecutions, and continued its expansion after Perestroika with its leaders attaining status of disciplinary cult figures. A commemorative tradition developed with most prominent figures leaving autobiographies. A whole industry of hagiographic literature emerged. All evidence of success was present; at the same time, Soviet sociology left no intellectual legacy: neither theories nor empirical findings from the Soviet times are circulating today, the only book from this period still in press and widely cited is a methods textbook (by Yadov), and authority of its leaders has been never translated in international space. This talk will try to explain political hardships of Soviet sociology, the past and present admiration for its leaders, and oblivion of substantive results of their work by applying a concept of "dramaturgical formation" inspired by Goffman's work. Any research deals with secrets, but these secrets can belong to different types: some of them are natural, while others are social, involving reflexive attempts to conceal. In contrast to Western sociology, Soviet sociologists dealt with the second type of secrets, unpleasant facts about Soviet reality revealing of which the Party attempted to suppress or at least force away from the public space. Disclosure of such secrets required moral, rather than intellectual virtue. Social science were in an especially favorable position for doing this job as the Marxist regime legitimated itself as based on "scientific understanding of society". That made it especially vulnerable for criticisms from the Academia, which explains both sociology's success in institutionalization, repressions, and recognition in absence of intellectual achievement.

### *The (Im)Possibilities Of The Politics Of Solidarity: Human Rights Defenders Discourse, Humanitarian Aid Dynamics and Transmigrants Experiences In Mexico's Transit Assistance-Based Places*

Mexico has the most transited migratory corridor in the world. The complex migratory flows transiting the country—mainly Mexican, Central and South American—have historically been perceived as economic and male. Scholars have noted as problematic the categorisation of the 'labour migrant' as being exclusively voluntary. It has been demonstrated that framing agency through simplified understandings of 'voluntary' and 'involuntary' movement cannot easily capture the realities of movements along the Mexican corridor. Identification using legal categories such as "illegal" migrant end up demarcating and 'invisibilising' individuals eligible for protection. The securitisation of borders and criminalisation of migration throughout the 20<sup>th</sup> century, led by the global north, has intensified and has added further fuel to the fire. Protection has still not been clearly delineated for the undocumented and seems to be eclipsed through the criminalisation of migration. Incidents such as death, rape, kidnappings and other types of abuse faced by transit migrants have opened up the debate among key human rights stakeholders on solidarity and protection. *Human rights defenders* have established shelters, humanitarian aid, led manifestations, caravans and campaigns 'in solidarity' with the migrant among other activities and services. These forms of solidarity have been predominately presented by human rights actors to the Mexican government through human rights and humanitarian visa appeals for migrants to transit the country. These appeals and other forms of emerging humanitarian aid dynamics are occurring outside the refugee protection regime. Also the majority of *human rights defenders* are non-state actors—albeit there is reliance on states for the implementation of human rights. The purpose of this paper—based on extensive qualitative research in transit-assistance based places—is to explore what kind of contribution the politics of solidarity has in (re)shaping the *transmigrant* subject; focusing on key *human rights defenders* discourse, humanitarian aid dynamics and *transmigrants* experiences.

### *Complexity Art: A Pattern of Transdisciplinary Emergent Properties*

Transdisciplinary intersection has been defining new fields of research and practice in humanities and arts, in particular in contemporary art, to incorporate nature as the object of its aesthetics, scientific and technological search. We should know that the emergence of an object far from equilibrium confronts us with a domain that needs to be explained in terms of the complexity of its nature in relation to other domains with which it interacts. This is the origin of this proposal to consider the art of complexity as a pattern of emergent properties with the potential to offer a space for sharing research corpus with other fields. This allows to systematize its object and find a common space for collaboration with science and technology. Faced with this challenge, and the call from SEAD, the Author describes her experimental and empirical creative practice in the art of complexity. This kind of art is characterized by the use of scientific research method, observation and experimentation through trial and error and the formulation and analysis of findings that lead to a body of systematized hypothesis. Dynamic experiments based on direct sources link the art of complexity to natural sciences and to emerging fields of image and data records. Based on this new way of thinking about disciplines the research opens new opportunities in various scenarios that lead to reconceptualize art, creating a theoretical body that binds science and technology. These findings can rebuild art, giving it a new aesthetic epistemological conception with emerging applications in areas around water sciences, mathematics, chemistry, physics, artificial intelligence and new fields to be defined. Finally, the paper identifies problems, supporting mechanisms and actions for a global strategy that encourages transdisciplinary collaboration work between arts and sciences. This work was supported by the National Science Foundation under Grant No.1142510.

### *Beyond Bourdieu: Dialogic Modernity and Social Change*

#### **Beyond Bourdieu: Dialogic modernity and social change**

When Wright met working class people who read Joyce, Dostoyevsky and Wolf he said "this confirms that Bourdieu was wrong with his concept of habitus"; ten years before Habermas had engaged with one of these persons in a debate on human rights, while most of the audience had laughed at a non-academic linguistic register. The radicalization of modernity recovers the foundations of the first modernity and transforms the frame of reference on the basis of dialogue. Dialogic modernity includes the social actors in the development of critique by redefining, in dialogue with sociologists, the moral grounds of a plural society in

which we can today live together. Habermas stresses the potential of communicative action through the intersubjective recognition of criticizable validity claims; Wright envisions social change through the analysis of real utopias. The structured and structuring structure that defines "habitus" cannot explain the cultural practices and taste developed by the working class people who attend the dialogic literary gatherings. They transform and create new cultural capital that challenge structuralist determinism and demonstrate possibility in the transformative dialogues of dialogic modernity.

### *Involvement in Physical Leisure Activities in Low Income Households*

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

The paper will focus on: (1) how parents in low income households conceive, experience and handle their possibilities to participate in physical leisure activities and sports in their local communities, and further 2) what impacts these conditions may have on children's participation in physical leisure activities.

The data material consists of qualitative interview from a strategic sample of parents belonging to low income households. Both Norwegian and non western immigrant households are represented in the sample.

The overall findings showed that the involvement in physical leisure activities was strongly restricted by lack of economic capital both for the parents and the children. Most of the informants were single mothers and they had no resources to give priority to their own wishes for participation in fitness- and leisure activities. The children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

### *Women's Work and Reasons for Absence from Work*

The equal opportunities for women in the Scandinavian labour market have been improved the last decades. But in terms of caring tasks in domestic life there is still a way to go, and therefore it is a challenge especially for women to combine the two spheres. During the period 1980 to 2009 the sickness absence among men in Norway has been relatively stable while the sickness absence among women has increased 70%. Women's higher sickness absence rate is not exceptional. Comparative studies show that women had a higher rate of sickness absence than men in most countries. But they also conclude that there is lacking knowledge about the reasons for women's higher sickness absence.

This paper will focus on a) women's self-reported reasons for their sickness absence, and b) the importance of social capital at the work place and in their domestic life.

The data material is responses from a postal questionnaire sent to Norwegian long term sick listed women with mental illness or musculoskeletal diagnoses, and in-depth interviews with a sample of long term sick listed women with the same diagnosis.

The overall findings showed that women's sickness absence has to be understood as a combination of demand, control and social capital both at their work place and in their private lives. Persons with high social capital both at the work place and in their domestic lives have the best prospects to return to work. Single mothers often have low social capital in both spheres, and they are the most vulnerable group. The political consequences for reducing women's sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women's burdens in the private sphere.

**SOLIS, PATRICIO\*** (El Colegio de México, [psolis@colmex.mx](mailto:psolis@colmex.mx))

BLANCO, EMILIO (El Colegio de México)

*Socioeconomic Background, Education, and Youth Work Transitions in Mexico City*

Recent research in Mexico shows that the risk of suffering precarious work conditions is significantly higher among the youth. This situation has aggravated after the economic recession of 2008-2009. On the other hand, educational research indicates that the returns of education have decreased, thus rising labor market vulnerability even among those highly educated, who used to have a secured access to top-level occupations. These trends might suggest that labor market hardship has emerged as a widespread phenomenon among the Mexican youth, irrespectively of socioeconomic background and educational attainment.

But is this actually the case?

In the paper we explore this question by analyzing the early occupational transitions of a representative sample of 2,900 men and women between ages 18-19 who responded a retrospective survey on educational and occupational trajectories in Mexico City. We focus on the effects of socioeconomic background, educational attainment, and family events on four occupational transitions: the entry into the labor force, job shifts between jobs, exits from the labor force, and reentries into the labor force. Using event history analysis models, we devote special attention to the competing risks of entering into service class positions, intermediary occupations, and what we define as "low quality" occupations.

Results confirm, as earlier research has suggested, that a significant number of young individuals initiate their occupational lives in "low quality" occupations, and many stay there in subsequent job shifts/reentries. Also, risks of labor disqualification are significantly high among those with higher education. However, these risks remain closely associated to socioeconomic background and educational attainment. In this sense, far from replacing or blurring traditional inequalities by socioeconomic background and educational attainment, the rising labor market vulnerability of the youth in Mexico mounts onto these inequalities, reinforcing their negative effects.

RC34-602.9

SOLIS, PATRICIO\* (El Colegio de México, [psolis@colmex.mx](mailto:psolis@colmex.mx))

*Youth Parental Emancipation in an Unequal Society: The Case of Mexico*

The paper analyzes the housing transitions of young Mexicans from a social inequality perspective. Mexico is the most unequal society among OECD countries. The calendars of marriage and childbearing are significantly different across socioeconomic strata, with surprisingly low ages at marriage and first child among those coming from disadvantaged families. Migration (both internal and to the United States) has become a frequent event in the lives of young Mexicans seeking job opportunities. In this context, residential emancipation may follow very different patterns among youngsters coming from different social backgrounds.

The paper will look at these differences by characterizing emancipation in association with marriage and childbearing. Although these transitions are obviously related to emancipation, the association is not universal: many newly-wed sons and daughters remain living with their parents. Others move out before entering into marriage. Thus, a proper characterization of emancipation must take into consideration the different life course pathways that emerge from taking into consideration the occurrence, timing, and sequence of this transition in combination with other family events.

Once these patterns of emancipation are identified, I will analyze their incidence and determinants among socioeconomic strata, taking into consideration the association with trajectories in other domains, and specifically with occupational events/trajectories. The aim is to explore whether early occupational uncertainty relates to different emancipation pathways.

The analysis will be based on data from the EDER 2011, a recently released retrospective biographical survey that covers the educational, occupational, residential, and migration histories of 2,900 Mexicans of three birth cohorts. The survey reports the ages of occurrence of all the events considered in the analysis. It also includes a very complete module on family background, thus allowing a thorough exploration of the association between socioeconomic origins and emancipation.

*Modernidades Múltiples: La Experiencia Tapatía De La Modernidad Del Fin De Siglo*

**Modernidades múltiples: la experiencia tapatía de la modernidad del fin de siglo.**

Responsable: Héctor Raúl Solís Gadea y Karla A. Planter Pérez

De carácter diacrónico intentará captar, a través del análisis de la memoria, la forma en que se ha modelado la experiencia de la modernidad en Guadalajara.

Objetivo general del proyecto: llevar a cabo un análisis, entre distintos grupos y sectores sociales, de la forma en que los tapatíos asumen las transformaciones de la vida moderna, se adaptan a ella, o las asimilan, entablando procesos de negociación del orden social. La perspectiva de trabajo parte de la noción de que no existe una ruta única, ni una forma única, de entender la modernidad, sino múltiples posibilidades para definirla y dotarla de sentido. Cada grupo social tiene distintas opciones a mano y las aprovecha o construye dependiendo de una serie de condiciones de orden material, cultural y político. Aspectos como la religión, la educación, los valores heredados, la clase social, el grupo de edad, la situación de género, etcétera, son clave para determinar el tipo de adaptación/negociación con respecto al proceso de modernización que se vive.

Método, el proyecto pretende utilizar diferentes técnicas analíticas, entre las que se encuentran la encuesta, la entrevista a profundidad, los grupos de enfoque, el análisis de los lenguajes, la observación, el análisis documental y la exploración fotográfica.

Normalmente, los estudios de valores no logran captar aspectos más profundos de la vida social, como los comportamientos reales y los sentimientos, los cuales son elementos cruciales para una adecuada interpretación de los valores y su significado. Un abordaje como el nuestro es más útil para lograr una comprensión más cabal de este tipo de fenómenos sociales.

*Gender Bias in Higher Education- Study on Indian Universities*

Owing to higher priority assigned in successive Five Year Plans, Higher education in India has witnessed phenomenal expansion, with establishment of number of State and Central universities, Institutes of advanced studies, and numerous private and deemed universities. Pay scales revised to bring them on par with other prestigious services in public and private sectors, rendering it highly sought after sectors of employment. It encompasses graded disciplines and positions with differential status, recognition and rewards. It is hypothesised that, distribution of academic positions and allocation of disciplines could be determined by the social forces and extraneous considerations among which gender is an important variable. The paper addresses this issue in the context of Indian universities in which the number of women faculty is on the steady rise in the last two decades. Data collected through interview of 362 women faculty members from 23 South Indian Universities reveals that, gender segregation of academic disciplines and positions are discernible with concentration of women academicians in soft disciplines as well as at lower academic positions. The hard core applied disciplines, being where the faculty could be more visible, receive more research grants, claim consultancy and patents have predominantly male faculty. Even in terms of cadre composition, the proportion of women faculty decreases with successive higher academic position. Study further reveals that, even among women academicians religion, caste and rural urban background are pertinent in determining the patterns of segregation subjecting women faculty to double discrimination.

*Limitations of ICT in Inducing Inclusive Growth*

India has been viewed as a leading player in the field of Information and Communication Technology (ICT) and as an emerging economy wedded to the policy of Welfare State has been adopting and harnessing ICT for inclusive growth through diverse policies and programmes. Education, health, agriculture, transportation, production, government and such other sectors that facilitate empowerment of masses have come to employ ICT for enhancing their efficiency and performance. However, the inherent socio-cultural milieu and demographic constraints that have been the bane of development process in India is assumed to have come in the way of successful implementation of these ameliorative schemes. The so called "digital divide" that gets accentuated by the preponderance of rural masses, the information "haves" and "have nots", lack of ICT infrastructure in far flung and remote rural areas, hesitation among the masses in adoption of new technology coupled with aspiration deficit, have rendered these schemes exclusive, rather than inclusive in impact and as such its vision of emerging as a vibrant knowledge society appears to be a distant reality. Emphasis on application and adoption of ICT in the process of development appears to have divisive and polarizing implications, leaving the people for whom the process is meant even more excluded. The paper seeks to analyse these developmental efforts in India based on the analysis of evaluation reports on various welfare and amelioration schemes submitted by evaluation and monitoring agencies.

**SOMASHEKHER, PROF. C\*** (Bangalore University, [somashekher.c@rediffmail.com](mailto:somashekher.c@rediffmail.com))

*Correlates of Prestige Grading in Medical Profession*

Professions come to be arranged in a hierarchy based on their functional importance for the Society, which in turn determines their prestige, authority, rewards and sometimes even their autonomy. Traditionally, professions represented homogenous groups of people sharing common traits in terms of knowledge, skills, values, status and rewards. But of late, owing to growing complexity of professional knowledge systems, increasing specialization, adoption of advanced technology in their practice and ever increasing diversity of services expected to be delivered by these professions, intra-professional heterogeneities and as such distinctions appear to be on rise with professionals coming to be graded within professions on professional and non-professional considerations. The paper explores these developments in medical profession in India, wherein medicine as a profession has made significant advances. A survey of 550 medical professionals in South India reveals that medical profession is a highly stratified entity with practitioners being segregated and graded on the lines of specialization, level of specialization, branch of medical practice, sector of employment, size and technical sophistication of hospital, institution from where professional credentials are obtained, length of practice and the like with rewards and recognition in commensuration, giving rise to inequities and exclusions within medical profession. Further, non-professional variables such as class, caste, religion and gender, by themselves, are not as much responsible as the professional variables stated above for observed exclusions and inequities in medical profession although they appear to be associated with opportunities for entering into high prestige sections within medical profession.

**SOMASHEKHER, PROF. C\*** (Bangalore University, [somashekher.c@rediffmail.com](mailto:somashekher.c@rediffmail.com))

*Technology Driven Inequities at Work Place in India*

Indian work organizations, both in service and manufacturing sectors, have brought about significant restructuring and refinement of operations through adoption of new technologies that has become imperative and indispensable for survival in the highly competitive globalizing world. These developments are assumed to be having significant long term implications for the work organisations reaching in terms of skill up gradation, composition of workforce, restructuring of organisations and work process involving huge capital expenditure. This rationalisation process has also implications for workforce in terms of increased wage differentials owing to emphasis on skill, absorption or replacement of workers with skills no longer required as well as adjustment with changed work culture. The findings based on a study of 41 service and 36 manufacturing establishments across three States in India indicate that higher skill requirements have rendered significant proportion of workforce obsolete and their tools redundant. The adoption of the so called "skill biased" technology is found to be having significant implications for variations in wage inequality both within and between industries. While workers with higher skills obtained through formal courses are being inducted, the older obsolete workers are on the verge of being expelled through diverse schemes of compensation or are being absorbed in the barely required unskilled cadres at considerably lower wages. This phenomenon is more marked in private sector service industries compared to public sector manufacturing establishments. As a result of disappearance of moderately skilled workforce, these organisations are found with skill polarisation and heightened wage inequalities.

**SÖMER, MARKO\*** (Tallinn University, [markos098@hotmail.com](mailto:markos098@hotmail.com))

*Social Context As Mediator Between Values and Well-Being*

Ed Diner (2009, p. 66) claims that individuals attain subjective well-being (at least partly) while moving toward an ideal state or accomplish a valued aim. Shalom Schwartz (1994, p. 20) defines values as „desirable transsituational goals, varying in importance, that serve as guiding principles in the life of a person or other social entity“. Consequently happiness occurs after needs are met and goals are fulfilled. Therefore people are happy when their values are "right"; that is, attainable in given social, cultural and economic context. Sagiv & Schwartz (2000) have also argued that people are likely to experience a positive sense of well-being when they emphasize the same values that prevail in their environment, when they inhabit an environment that allows them to attain the goals to which their values are directed.

The purpose of this paper is to evaluate relations between basic human values (or desirable subjective goals), socially differentiable environments undermining or supporting the value priorities in question and subjective well-being.

Multi-group and multilevel structural equation models are used to accomplish this task. Data from the fifth round (year 2010) of European Social Survey is used.

**RC20-353.1**

**SÖMER, MARKO\*** (Tallinn University, [markos098@hotmail.com](mailto:markos098@hotmail.com))

*Value Systems in Transformation: Changing Values in Relation to Changing Societies*

Changes in the value systems are usually studied by comparing some values, value types or value orientations and their estimates over time or between generations. With few rare exceptions, there are practically no studies concentrating on the transformation of the value structures or on the changing relations between different values. Associations between values are being seen as stable and universal both between countries/societies and over time. This is an assumption that cannot be taken for granted in a world that is more and more characterized by cultural and social pluralism as well as alteration of traditional cultural templates, communication technologies, economic systems, political ideologies etc. All this necessitates the usage of methodological and theoretical approaches that are enabling to recognize the heterogeneity in the value structures within societies and between different time points. In order to compare value systems, they must be equivalent in their structural formation. If this is not the case, then diverse value structures must be distinguished and structural differences (between societies and over time) that arise, must be explained by the variations in the socio-economic or other settings and by the developmental trajectories of those settings.

Current paper intends to fill this gap. Using value questionnaire developed by Shalom Schwartz (PVQ21) and data from European Social Survey, present study argues that the assumption of homogeneity of value structure does not hold. Using latent class modeling framework, diverse value structures are being distinguished within European societies and in different time points. Those value systems are being compared between societies and over time. Culture-specific aspects of them are being allocated and related to wider socio-economic contexts. Finally, the temporal dynamics of those cultural specificities are explored and further related to the historical settings of their development.

*Current Attitudes of Supporting Older Parents in Asia: Korea, Malaysia, Hong Kong, Singapore, and Japan*

(This paper presents the attitudes change for supporting older parents according to social changes. In Asian countries, it has been said that elderly people are taken care by their families and it is the Asian-cultural tradition. Therefore, this research investigates attitudes change in accordance with social changes such as pensions, social services, guaranteed incomes, etc.)

## (Methods)

Since caregiving has been heavily considered as women' role, surveys were conducted on female university students in Seoul, Kuala Lumpur, Hong Kong, Singapore, and Tokyo from 2011 to 2013. Around 200 questionnaires were gathered in each area.

## (Questions)

1. To investigate changing attitudes toward supporting older parents in each countries.
2. To find out female caregiving roles by generations and countries.
3. To find out interrelations between social changes and attitude changes.

## (Findings)

Similarities 1. As for Korean and Japanese students, both female students wish to live with their own parents but not husband's parents. 2. They are willing to live nearby their own parent's houses but not those of husband's. 3. Mothers wish to live with and have supports by daughters in later years.

Differences 1. The majority of Korean mothers wishes to have financial support and the majority of Japanese mothers wishes nothing. 2. Both mothers expect supports by daughters more than sons. 3. Employing caregivers at home are not an option in Japan but in Korea, Malaysia, Hong Kong, and Singapore. 4. The majority of grandparents are likely to live with children in Malaysia, Singapore even in Hong Kong but not in Japan and Korea. 5. Attitudes of supporting older parents are highly related to social policies and the financial independency of elderly people.

*Transmedial Discourses. New Forms of Public Spheres?*

Public discourses in general are determined by media, since they are not only distributed through media, but also constituted by them. Public discourses are typically conceptualized as part of mass media. With the so called *social web*, new discursive practices are constituted, which make it possible for different groups of users to participate in public discourses. Debates that are discussed in the mass

media can cause responses in segmented public spheres of the World Wide Web. Vice versa, content that is produced in blogs, wikis or social networks can become part of news coverage in the mass media. In addition to the public of mass media, some authors argue for the existence of a 'personal public' constituted by the World Wide Web. In the personal public sphere, actors use different rules of production and distribution compared to the public sphere of analog offline media. Both forms of public sphere, however, are connected with one another. It is therefore reasonable to describe today's public discourses as transmedial discourses. The concept of transmedia requires a change of perspective from single media and their meanings for social processes, to communicative networks consisting in different media in convergent, networked arrangements. It would be unreasonable to assume that discourses are only constituted through the web; this would not correspond to media practices in everyday life and would give the impression that there is a gap between online and offline media practices. I narrow my focus to online discourse as a way to investigate more thoroughly a highly important part of media practices. In my paper I place my focus on digital network media, first and foremost on the Internet, which can be characterized as a central point of reference for media convergence. I would discuss if and how public spheres are changing through the Internet.

#### *Decline, Crisis or Change? Professional Status and Knowledge Authority Among Danish Doctors and Teachers*

A common way to address the poor outcomes of public policy, for instance in areas like health care and education, is to blame policy failures on the loss of respect for professional authorities. No one today respects a primary school teacher as they used to do fifty or sixty years ago, and patients now focus on their own rights and google searches rather than the doctor's orders. If not more, these are at least common narratives in public debates about professionals and why the decline – or even crisis – of professional authority is at the root of present problems.

This paper aims to go beyond the narratives and investigate decline, change and restructuring of professional status and knowledge authority since 1950. Taking the Danish primary school teachers and medical doctors as cases, we explore how the status of professional groups are changing (or not) over a sixty year time span. More precisely, we explore both the development of professional status in a general sense of a societal status hierarchy, and in a more narrow sense, understood as the professional authority vis-à-vis other professional groups, clients and the state.

While notoriously difficult to measure, not least going back in time, we hope to be able to assess possible changes through a combination of various data sources. Besides socioeconomic data about salaries and education, we mainly analyze status and authority through a comparison of professional self-perceptions and narratives as presented in magazines distributed within the professions.

#### *Explaining the World of 'Big Data': Global IT Consultancy and Reshaping of Policy Knowledge in South Korea*

This analysis of the process through which South Korean government produced policy knowledge for 'Big Data' policy demonstrates a certain actor's - global IT consultancy - intervention upon it. The gap between an actor's cognitive capacity and the complex, thus unobservable world gives birth to a number of institutions producing knowledge, especially which not only describes the world, but 'performs' as the inter-subjectivity among actors for their reflexive adjustments, thus have 'performativity.' Given this, the article explores how the knowledge offered by global IT consultancy converted the Korean government's attempt to describing the sociotechnical world of 'Big Data,' and examines how the intervention persisted. The precedent STS scholars' arguments on performativity starting from Callon's analysis of economics have demonstrated how a certain way of explaining the world forms the frame among actors while overflowing from the outside of the frame is pervasive. The performativity scholars emphasized continuous maintenance and re-arrangement of the explanatory devices, and successively showed those are essential to suppress overflowing.

Nevertheless, this article suggests that the knowledge from global IT consultancy can still be performative even when the devices and their arrangement are increasingly deemed questionable and replaced by other ways of explanation; overflowing does not necessarily mean the weakened frame. At first, as Korean government introduced the conceptual scheme, statistics, and survey results of global IT consultancy to explain the changing sociotechnical environment, the concept of market transactions gradually substituted in the policy knowledge the past concept of cooperative relationship for contriving creative usage in which citizen take the lead. Even though such explanatory devices were questioned for their naive worldviews and once having excluded concept of 'citizen' overflowed,

market model still persisted and 'citizen' was only taken as potential sources of lucrative data. The finding suggests our understanding of performativity of knowledge can be extended.

#### *Social Conditions for Japanese Immigrant Attitudes Toward Institutional Elder Care*

Although elder care remains within the family sphere in Japan Japanese immigrants in the U.S. are bound to have distinctive pathways to determining whether to utilize formal care services from the native-born. Japanese immigrant women who are interracially married to American husbands experience complex adaptation processes throughout their lives as they encounter social conditions that differ from Japan. This research investigates of their attitudes concerning institutional elder care utilization as they relate to social conditions.

We conducted and analyzed in-depth interviews with 31 immigrant Japanese women between the ages of 40 and 84. We found that these women had acquired the norms of independent living through cultural acculturation, ultimately leading to their preference for non-family-based care. This paper focuses on the social structural conditions that facilitated this choice. We found four factors influenced the women's attitudes toward the utilization of institutional elder care: 1) family living arrangement discouraging family care for elderly, 2) potential family conflicts between the caretaker and the elderly relative, 3) economic class, and 4) supportive cultural attitudes towards formal elder care and institutional availability. These factors tend to influence immigrant Japanese women's preference for institutional elder care over familial care.

#### *"Rubber Rice Bowls": Work and Family for Women Entrepreneurs in Post-Socialist Rural China*

The three decades of China's market-oriented reform since 1978 have brought about an increasingly deregulated and privatized rural economy, which posed new opportunities and challenges for women to balance work and family. This study focuses on a unique group—women entrepreneurs—who were neither the Maoist "iron girls" nor the cheap laborers in capitalist workshops. Drawing on interviews from two coastal villages in Jiangsu and Zhejiang provinces collected during 2004-2010, where rural industries and petty entrepreneurship had become an important economic engine, this study finds that women, although underrepresented compared with men, had played an active role as entrepreneurs. Based on life histories of 8 women entrepreneurs, this study finds different ways to balance work and family, whose strategies changed as the reform unfolded. In particular, women entrepreneurs described their employment as "rubber rice bowls", in contrast with "iron rice bowls" of urban workers and "mud rice bowls" of peasants. Contextualized in the reshuffling of job hierarchies and the restructuring of welfare institutions, women entrepreneurs found their "rubber rice bowls" satisfying due to its flexibility and potential rewards, but also challenging because of the increasing risks and competition. Such entrepreneurial dynamics led to various patterns of work-family balance among women entrepreneurs, which could not be summarized under the traditional gender norms or the socialist egalitarian ideology.

#### *The Korean Webtoon As a Reflection of Society*

Since 1990, the technology of digital media has been constantly developed in Korea, and the digital media became popular among the general public. With the emergence of the social network service (SNS), people increasingly expressed themselves with visual images, such as photos, icons, animated characters, etc. The new digital media expanded the scope of communication between people and visual images. Webtoon is the new genre of cartoon as the result of digitalization. Webtoon enables readers to easily access and to even participate in the process of webtoon making. The stories of webtoons show social experience in ordinary people's daily lives. Webtoon readers become participants who share their own thoughts with webtoon artists and also create amateur works. Thus, the familiarity of webtoon increases. It is a remarkable big change in the history of Korean cartoon; thus, this research will discuss how webtoon influences people's experience of seeing and interpretation. To do so, this research will study the development process of webtoons by the artist, Pul Kang who is the leading webtoon artist in Korea, and analyze how the artist communicates with readers. Also, this research will show the different responses caused by media switching

from webtoon to film. Today, webtoon makes changes on the ways of storytelling and positioning visual images and of interacting with readers. Also, the Korean webtoons are more broadly spreading overseas, such as France. With its increasing popularity and easiness to reach the public, webtoon is regarded as a driving force to boost the field of Korean cartoon industry.

#### *The Impact of Adult Children's out-Migration on the Elders' Psychological Well-Being in Rural China: Does Gender Matter?*

This study examined the impact of adult children's out-migration on the psychological well-being of older Chinese parents left behind in their rural villages. Using data from two waves of the Longitudinal Study of Older Adults in Anhui Province, China, analyses showed that, controlling for personal characteristics and resources, the out-migration of children reduced the psychological well-being of their parents, particularly among older fathers. However, the transition to coresidence with an adult child buffered the negative impact of daughters' out-migration on the psychological well-being of older mothers. These results suggest ambivalent feelings on the part of older parents when their adult children migrate out of their home villages for work or marriage. However, there is an important gender division in the adaptation to the out-migration of children. Mothers benefited from entering into a traditional multi-generational living arrangement when their daughters migrated; comparable fathers suffered from worse psychological well-being following entry into such an arrangement, presumably because living with children increased their dependence. It is concluded that a complex gender interaction needs to be considered when examining the consequences of dynamic intergenerational family processes in China.

#### *Use It or Lose It? the Impact of Grandchild-Caring on Grandparents' Cognitive Functioning in Rural China*

Using the data from the waves of the survey "Well-being of Elderly in Anhui Province, China" conducted in 2001, 2003, 2006, 2009 and 2012 respectively, this study examines the impact of grandchild-caring on Chinese rural grandparents' cognitive functioning through constructing multi-level growth curve model. The results show that, comparing to the low intensity care for grandchildren, high intensity care has protective effect for the grandparents' cognitive aging, however, the effects of high intensity care depend on the age and gender of grandparents. The grandfathers' cognitive aging are protected by the high intensity care for grandchildren, while the cognitive functioning of grandmothers are suffered from intensive care; and this gender difference tends to be widened as aging. These results support the hypothesis of "use-it-or-lose-it", and imply the significance of gender roles and norms in the Chinese rural families.

**SONG, MIRI\*** (University of Kent, England, [ams@kent.ac.uk](mailto:ams@kent.ac.uk))

#### *Multiracial Parents and the Intergenerational Transmission of 'Race' and Belonging*

In both popular culture and academic discourses, being 'mixed' is becoming increasingly ordinary in Britain. While there has been growing research on mixed race children and young people, very little is known about how mixed race people racially identify and socialize their own children. Many adult mixed individuals have now become parents - prompting the fascinating question of how they, as parents, think about the racial identification of their own children. Parenthood engenders questions about one's ancestry and the 'right' socialization of children: What may such socialization bode for the future and significance of racial categories and boundaries in Britain? Are mixed race parents adopting post-racial attitudes and practices, or is there evidence of intergenerational transmission of racial thinking and identification in these households? How do parents think about the relationships between 'race' and racial difference, national and regional forms of belonging, and family lineage/ancestry? These questions are pressing, especially in light of recent research which does not necessarily privilege 'race', or which examines the meanings and experiences of 'race' in connection with other axes of identification and experience.

Based on a Leverhulme research grant, this exploratory study investigates the ways in which mixed race parents think about and communicate ideas and practices concerning racial identities and racial difference, and is suggestive of how they foster their children's (and their own) sense of belonging in the wider society. This research draws on interviews with 60 multiracial individuals (parents) in both urban and suburban regions in England. A qualitative approach is crucial in criti-

cally examining not only racial categories/terms, but also trends reported about multiracial people in large scale data sets, especially those in the US.

#### *Educational Mobility in Three Generations: Single-Parent and Grandparent Effect*

This study examines the educational reproduction of American families in multiple generations. The key question is how grandparents' education contributes to the educational success of grandchildren, and how the grandparent effect works through both demographic and mobility processes, because grandparents' education first affects whether parents have any children and how many children they have, before grandparents proceed to influence the educational mobility of their grandchildren. Analyses build upon the mobility and demography model used in Mare and Song (2012), and draw on empirical evidence from the Panel Study of Income Dynamics. Recent researchers and policymakers alike have expressed a growing concern that single-parent family is responsible for the growth of an "undereducated class" in America. This study investigates whether or not grandparent effect contributes to the growth of the undereducated class from single-parent families in the grandchild generation.

#### *Through Thick and Thin: Ecological Modernization in Thailand's Electronics Industry*

Electronics manufacturing in Thailand has undergone substantial transformations over the last two decades, including with respect to technological environmental innovation. Business conditions in Thailand have been mightily challenged during this period, as the country has weathered multiple changes of government, mass mobilizations, torrential floods, and uncertain institutions. Situated at the lower end of global supply chains, electronics manufacturing in Thailand has persisted through this period, even if not entirely thriving. Driven by growing international regulation of hazardous materials and waste electronics and the greening of global supply chains early in the new millennium, technological environmental innovation in the industry has proceeded. Drawing on field research conducted over two decades in Thailand, as well as on available data, this paper addresses the causes and consequences of those transformations, including such questions as: How have these changes come about? What roles have domestic and international exogenous (market, regulatory, environmental) and endogenous (industry, firm, labor) forces and dynamics played in technological environmental innovation during these two decades? What has changed and not changed in electronics manufacturing in Thailand as a result? In what ways has electronics manufacturing in Thailand become more environmentally friendly since the beginning of the new millennium? The paper concludes with a discussion of the implications of the experience of Thailand's electronics industry for social theories of technological and environmental change, including Ecological Modernization Theory.

#### *Is Improvisational Theatre Really Improvised? : The Inherent Structure in Improvised Performances*

The purpose of this presentation is to clarify the meaning of "improvisation" in modern society and the function of "formats" in improvised performances, and also to discuss the significance of improvisational theatre in modern society.

Improvisational theatre, often called impro, is a form of theatre that has no scripts or pre-planning. It was systematized in Britain and the United States in the 1950s and used to train actors, and also developed as a performance genre in its own right. Gradually, it spread to various countries and is now used in various other fields, such as school education, business, and community development. Today, the concept of "improvisation" in itself attracts considerable attention, and there is a tendency for people to regard it as a panacea for various problems. For example, it is viewed as a way of heightening our ability to live through unpredictable times and of changing rigid social structures.

In our research, we first investigated discourses about "improvisation" in books and websites to clarify the meaning of "improvisation" in modern society. This revealed that "improvisation" is explained using highly positive concepts such

as "freedom", "flexibility", and "resilience", which are contrasted with the concept of the "structure" of society.

Secondly, we did fieldwork in The Laboratory School of Improvisation, which is an impro group that carries out impro performances and workshops in Japan, and interviewed its members. We found that when improvising on stage, the performers don't express ideas freely in their own separate ways. They embody and share "formats" which constitute the explicit/implicit manners and rules of impro.

In short, "improvisation" has paradoxical properties. Though "improvisation" is represented as a concept that frees us from social "structures" and enables us to create stories with others flexibly, performers in fact acquire freedom by means of "formats" when practicing impro.

### *Is Rise of China a Threat or a Chance? a Comparative Analysis of Determinant of Perception on China in Korea, Japan, and Taiwan*

The rise of China has been discussed in different area of social sciences, but it is still rare for sociologists in East Asia to address this issue. International dimension of social development in East Asia is, however, necessary and indispensable part in sociological argument and the recent rise of China is one of the core parts of such international dimension.

Comparison of Korea, Japan, and Taiwan in terms of their attitudes toward China provides us with a lot of sociological insights. Comparative analysis of expatriates' *guanxi*-building in China tells us that Korean expatriates are more aggressively establishing *guanxi* network than Japanese and Taiwanese counterparts. Our recent international collaborative research suggests that perception of "political risk of China" is different from Korean businessmen and Japanese/Taiwanese businessmen.

This paper tries to conduct exploratory analysis of Korean, Japanese, and Taiwanese perception of the rise of China in comparative perspectives. More concretely, two research questions will be approached in this paper; namely (1) How people in three societies evaluate influence of China, and (2) Who are most concerned about the influence of China on their society, by using AsiaBarometer 2006, which is the only one dataset that enables us to compare Korean, Japanese and Taiwanese views on China in connection with other important socio-economic variables.

Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that "perceived" relation is important in discussing the issue of the rise of China.

### *Cultural Capital In Movement: On The Dissolution Of Traditional Educational Codes By Educational Policy and Social Movements Among First Generation Academics In Germany*

Barriers to educational advancement are often described in the literature. In this connection, authors mainly refer to Bourdieu's concept in which a lack of suitable cultural capital is often a barrier to the educational advancement of children from non-academic families. Acquiring such capital, in accordance with this theory, is an essential prerequisite for success in an advanced educational career. Bourdieu paints a rather pessimistic picture of the chances of acquiring such capital. Codes of the milieu of origin survive, mediated through habitus, and continue to hinder educational advancement.

In a research project comparing educational advancement in three generations in Eastern and Western Germany — that is, first-generation academics in the 1950s, the 1960s and the 1970s — a total of 89 biographical narrative interviews were conducted. Many cases were found to corroborate the Bourdieusian concept. At the same time, however, it was also apparent that there are also many kinds of mechanisms that contribute to the dissolution of culturally transmitted codes, and thus modify the "value" of the hereditary cultural capital in a given social stratum. To illustrate this, we will present a hermeneutic case reconstruction after Rosenthal that can be attributed to the type "social movements". This case study will serve to illustrate the extent to which reforms in society and educational policy have led to a shift in cultural codes, and how such reforms can favor educational advancement.

### *The Growing Women's Labor Market Participation and the Persistence of Inequality Between and Among Gender in Brazil*

The last decades of development in Brazil have fostered a significant increase in women's participation in paid work in both the formal and informal sectors. Looking into the significance of women's growing labor force presence, this paper raises a number of questions to investigate to what extent women's paid labor impacts inequality *between* gender (men and women) and *among* gender (among women on the basis of class). We address that main issue by looking into the connections between women's paid labor and unpaid labor and two main factors - the sexual division of labor in the family, and the labor legislation and social policies concerning maternity leave and child care. Analyzing data from the 2012 national survey data (PNAD) from the Brazilian Census Bureau, we show that women's transition to paid labor in Brazil has been taking place *without* a) significant changes in unpaid labor related to the persistence of the traditional sexual division of work in the family, and b) adequate policies geared to socializing responsibility for child care. We argue that a more equitable division of domestic work and children rearing in the family, as well as more inclusive social policies on parental leave and child care provisions are crucial to improve the balance between work and family (benefitting not women only, but men and children as well), and to foster equality between and among gender in the labor market and in the public sphere.

**SOSA, ANA PATRICIA\*** (Universidad Nacional Autónoma de México, [midris@unam.mx](mailto:midris@unam.mx))

### *The Income Inequality In Mexico: Dynamics At The End Of XX Century*

#### **The Income Inequality in Mexico: Dynamics at the end of XX Century**

The purpose of this study is to analyze the evolution of the income inequality in Mexico considering two elements: the dynamic of labor income and wage and the general productivity in the economy. I consider that is important to contrast the level of income inequality and the structural conditions which produce macroeconomic instability, the slumps of economics and the inflation. The income inequality in Mexico is part of the socioeconomic historic unequal.

After the reduction in inequality during the 1960's and 1970's, the exhaustion of the regime of accumulation by substitution of imports, and the crisis of the bureaucratic-corporative regulation, were reflected in a greater concentration of income, accompanied by structural heterogeneity, technological inequality and

difference in the degree of economic and social development in the diverse territories of the country. The market reforms of the 1980's and early 1990's worsened inequality. Start to change the unequal in recent years but the poverty has not decreased.

#### *The Right of Women to a Free Violence City. a Case Study about Public Transportation in Mexico City*

According to Women Human Rights, the government of the Federal District has made significant efforts, particularly recognizing that gender violence hurts the principle of respect to human dignity, makes difficult the participation of women in similar conditions and slows down the whole development of countries in political, social, economical and cultural life, on January 29<sup>th</sup> 2008 the "Law Access of Women to a Violence Free Life" is approved for the Federal District, through which it is agreed that women have the right to live a life free from any kind of violence. In the framework of this law, the Institute for Women designed a program to prevent, support and punish sexual violence against women traveling on public transport in the city through actions aimed at promoting the rights of women, law enforcement and citizen oversight. This program includes various activities such as: Modules Care and Reporting Sexual Abuse cases in the Subway Public Transport System, Program "Athena" which is an exclusive service for women and separation of men and women in the Metrobus, Light Rail and Subway Public Transport System.

In this way **The purpose** of this paper is to analyze the effects of actions to prevent sexual violence that have been in public means of transportation: in the practice of daily mobility, in the perception of transport security, and feminine representations are built from this policy of gender equality.

The main **hypothesis** suggests that government actions in public transportation contribute to the generation of spatial justice, and with it in the exercise of the right to the city as a human right for women. Nevertheless, on the other side we hypothesize that the program intervention has generated paradoxical effects because they help to reproduce traditional representations of feminine and masculine in the city.

#### *Le Travail Migrant Temporaire: Une Nouvelle Figure Du Paternalisme Gestionnaire Dans La Division Internationale Du Travail? Le Cas Du Canada*

Les flux migratoires ont historiquement accompagné les mutations du travail. Depuis quelques années, la transformation qualitative et l'expansion de ces flux tendent à réorienter les politiques publiques en matière d'immigration et d'emploi. À l'échelle internationale, le phénomène migratoire a laissé progressivement place à celui de la mobilité professionnelle temporaire, notamment à la faveur de la financiarisation de l'économie et de l'externalisation croissante des activités des entreprises. Au Canada, cette transition, se traduit par la mise en place et le développement de *programmes de travailleurs étrangers temporaires* qui drainent une main-d'œuvre présente dans plusieurs secteurs, de la transformation industrielle aux services comme l'hôtellerie/restauration et les télécommunications. Elle provient de divers pays du Sud, dans le cadre d'accords commerciaux *ad hoc* ou d'État à État. Ce phénomène soulève plusieurs interrogations. Qu'en est-il des impacts de ces programmes sur la structure de l'emploi, le rapport salarial et la régulation du travail? Dans quelle mesure ces programmes, conçus pour gérer localement les flux du travail migrant temporaire, mais qui s'inscrivent dans une dynamique transnationale, redéfinissent-ils certaines figures de la division internationale du travail? Dans cette étude, l'examen des discours et des pratiques des entreprises engagées dans ces programmes montre à quel point leurs stratégies de gestion sont imprégnées par un paternalisme managérial omniprésent dans l'ensemble des chaînes de valeur des secteurs affectés par ces flux (hôtellerie, télécom, agro-industrie notamment). Ce paternalisme se distingue de celui qui a caractérisé l'histoire de la relation salariale en ce qu'il semble relever d'une figure nouvelle de la division internationale du travail. Cette communication dresse un bilan critique de ces programmes en s'interrogeant sur la logique de leur gestion « publique » réalisée en étroite collaboration avec ces entreprises et en examinant leurs retombées en termes de structure de l'emploi, de rapport salarial et de droits sociaux du travail

#### *Digital Citizenship and Equal Access to Democracy*

Democracy, as says the German philosopher Stephan Kirste, is a fundamental human right. Every person needs to have space to public manifestation, to get respect even this person belongs a minority group, to participate in political decisions that regulate and define its own life. Without these guarantees it will be unviable develop citizenship in front of majority groups and also State. Albeit this concern there isn't new, it became urgent when digital technologies expanded themselves in the world. Safety, recognition, privacy, information, all this subjects, and rights too, turn into the center of debates about social inclusion in a digital world. And to promote people inclusion one must to guarantee individuals equality, what it will be facilitated by legitimate democratic regimes. Two issues have to stay in the spotlight nowadays: how to organize popular participation in Digital Societies and, also, how to empower citizens to ensure their regular and equal participation in the political decisions. Without inclusion policies by governments it will be very difficult do get it. Citizens must to have "access passwords", as Brazilian social scientist Eugênio Trivinnho, to use digital systems, like specific hardwares, updated softwares, domain specific language of digital media, adapted themselves to speed web interaction that he calls "dromocracy"; and others abilities needed in digital times and not ever available to everyone. This type of exclusion, and also discrimination, concentrate power in some hands, what causing democracy imbalance. Solve these issues presented is the only way to people inclusion and it's a democracy essential condition too.

**SOUZA, LUIZ\*** (unicamp, [lenriquesol@yahoo.com.br](mailto:lenriquesol@yahoo.com.br))

#### *Clean Energy and Political Stability: Challenges for International Cooperation within the Union for the Mediterranean*

The challenges represented by "global warming" and "energy demand" have contributed to insert the environmental debate among the main topics of international cooperation agreements. The *Union for the Mediterranean* (UfM) – an institution which comprehends forty-three countries in Europe, North Africa and Middle East – has developed ecological projects which were also designed as a strategy for strengthening the political and economical ties between its members. Within the six concrete targets defined at the Conference of Marseille (2008) aimed to enhance the visibility of the UfM, two were clearly based on ecological criteria: the de-pollution of the Mediterranean Sea and the installation of solar power plants in desert regions. Precisely the discussion on the political conditions for

the implementation of the *Concentrated Solar Power* (CSP) in the Sahara Desert is intended to support our reflection about the potentialities and contradictions of such initiative. Once these solar plant projects are destined to provide not only Middle East and North Africa (MENA) with "clean energy", but also approximately 16% of the European energy demand by 2050, it seems urging to consider the geopolitical transformations that the "desertec project" could unleash. We are inclined to think that such enterprise would indeed change the geopolitical meaning of the Sahara Desert and thus contribute to balance the political relationship between European and MENA countries. Although it is not likely that the marginalised countries of the UfM are going to become "equal partners" of its European counterparts, it is probable that the export of solar energy can diminish the political asymmetries between North and South. It is also crucial to reflect whether the "political instability" of the MENA countries can impose barriers to the accomplishment of the idea, especially because "Desertec" was conceived before the so-called "Arab Spring".

#### *Global Environmental Change: Environmental Policies in China with Reference to Brazil*

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proved to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century. Both Brazil and China still have many challenges to be addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investigate the trajectory by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two social spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research project. Regarding methodological aspects, different methods of investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

**Key words:** global environmental change, climate change, environmental policy, Brazil, China.

ADAAWEN, STEPHEN (University of Bonn)

#### *Alliances, Cooperation and Conflicts Between Ecostate-Men and Fishermen In The Pendjari River Area, Northwest Of Benin*

Northern Benin (Dassari area) is crossed from either side by numerous little rivers and catchments that dry up very quickly because of the pronounced shoreline deforestation among other things. The area is severely threatened by environmental strains. The causes are multifaceted: lack of rain (only 70 to 110 rainy days on average from May to October), technical and human resource to manage adequately the water, land degradation. Migrations of African fishermen from neighbouring countries (Niger, Burkina Faso, Nigeria, and Ghana) towards the protected Pendjari River in the Dassari area remain locally important drivers for environmental changes into new spaces configurations. This paper will open with a brief description of methodologies and methods used to gather information and findings. To this end, it will compile a series of statistical data combining qualitative methods and based on original research. Then, the main empirical idea of the paper will be centred in selected main villages of the studied area located near the river and will look at adaptive capacity used by the postcolonial Beninese *ecostate* (a kind of governance for sustainability) and the prevalent *environmental governance regime*. The River, located in a protected forest area, physically and politically imagined to be more environmentally secure, is ironically creating new demographic dynamics and trends (migration of fishermen, demands of new natural resources, etc.) that are not often reducing vulnerability and risk. How little scope forest officials have to take measures that might actually help to protect the local environment, compared to the options that fishermen might have, to take preventive measures (in some way) to protect the area, if necessary. Afterwards, the paper will analyse the mobility of those African fishermen along the Pendjari

River and will focus on the fact that the ironic environmental "risks" that the politically correct environmental "conservation" efforts themselves may create.

#### *Labour Market Experts and Their Professional Practices: Technologies of Self-Control of Job Placement Professionals*

In the past 20 years the trend towards New Public Management became prominent in labour market reforms all around Europe and had a deep impact on the transformation of welfare states. In Germany the Public Employment Service (PES) as the central actor was transformed from a traditional bureaucratic institution to a managerial service provider which had an enduring effect on job-oriented placement activities and the placement professionals. The introduction of controlling, management by objectives, computer-supported placement activities, service orientation, customer segmentation, and action programs are typical features of an administrative managerial organization that follows business routines to increase efficiency and formal rationalization in the era of neo-liberalism. Under the New Public Management regime the work of the placement personnel is structured differently: On the one hand the job placement professionals are labour market experts with an extended scope of action. In counselling interviews the job placement officers interact with job seekers and provide advice and monitor the individual behaviour of job seekers. On the other hand all decisions of the placement professionals are checked by a close meshed accounting system and revised if they contradict the organizational business logic. Today, these professionals emerge as „transparent job placement officers“, and their authority and expert status is called into question because of conflicting relations between professional and managerial interests. The placement professionals are exposed to a systematic self-control which assesses the counselling and the placement of job seekers not only by technical and professional criteria, but always by the success of specific strategies along the internal organizational accounting system. The contradictory effects of extensive accounting practices on job-placement officers and the organisation we will show in our paper.

#### *The Articulation of Japanese Culture in the Global Era: The Case of Japanese Small-Type Coastal Whaling*

After the whaling moratorium had come into force in 1986, the Japanese government as well as anthropologists and social scientists tried to establish "small-type coastal whaling" (STCW) as a new category within the International Whaling Commission (IWC). Japanese coastal whaling has a long tradition dating back to the 16<sup>th</sup> century. Even today whaling is socially, culturally and economically important in the whaling towns as Taiji. However, the articulation of whaling as Japanese culture was not successful. A comparison of the Japanese and the Greenlandic articulation strategies show: Despite of many similarities of the coastal whaling, the Greenlandic whaling is still categorized as *aboriginal subsistence whaling*. Thus, it is considered a legitimate cultural activity within a subsistence economy of the Greenlandic Inuit. However, all attempts to get Japanese whaling recognized as a cultural activity failed. In this way Japanese coastal whaling is continued as "scientific whaling," while internationally criticized as being an illegitimate practice with suspected background of commercial interests. The consideration of the regulation of the international whaling as a form of global environmental regimes shows that the decisions within the International Whaling Commission will be determined by global models and categories of the *world polity*. Japan as an industrial country left the stage of indigeneity behind which is reserved for indigenous peoples as the Greenlandic Inuit and is perceived by the world community as being too modern, too enlightened and too developed.

#### *Policing and Crime Control in Contemporary Nigeria: An Agenda for Reform*

Crime and insecurity are major challenges of contemporary Nigerian society, with the barrage of various forms of criminal behaviours, including: terrorism, political violence, ethno-religious and communal violence, unbridled corruption, politically-motivated assassinations, murder, violent crimes, kidnapping for money, and robbery. Efforts by security agents to solve the problems have not yielded the desired results. The inability of the Nigeria Police to effectively tackle the

problem has made people to question the capacity/competence of the police, and also casting aspersions on the quality of governance. Recently, the military was drafted to support the fight against terrorism. In response to the problem, some ethnic militia have sprung up, with some serving as "local police" in communities. Nigeria currently operates a unitary/centralized policing system, but there have been calls for the establishment of state police – separate from the federal police. Increasingly, communities and individuals do not wholly entrust their security to the police, and there have been local community actions against crime, including street barricades and the restriction of vehicular and pedestrian access at certain times. While the informal policing outfits have been playing positive roles with security control, the relationships between them and the police have not been entirely cordial.

Drawing from recent challenges, issues and experiences with the war against crime and insecurity (including terrorism), this paper discusses the policing and security structures in Nigeria, as well as the relationship/collaboration between the various security units. Suggestions are made for more effective policing in Nigeria, including greater collaboration/partnership between the formal policing system and the informal policing structures. The paper also advocates greater collaboration between the police and the public for a more successful campaign against crime in Nigeria.

#### *Transnational Trajectories? Studying Nation and Citizenship in East Asia*

Despite sociology's increasing engagement with global processes, the relationship between global/transnational studies and cross-national, comparative studies remains a question, both conceptually and methodologically. This paper inquires into this relationship through an empirical focus on the transnationalization of nation and citizenship in East Asia. Unlike the common practice, by transnationalization, I do not simply refer to the advance of explicit transborder regimes (e.g. the World Trade Organization and the European Convention on Human Rights), or social formations "spanning borders" (e.g., migrant networks). Rather I offer transnationalization as an analytical node to capture the diffusion of non-nation-specific, universalistic frameworks, models, and standards, and the engagement of nationally located actors' (states, social movements, professional organizations, and individuals) with such frameworks to orient their actions and strategies. This view locates the nation-state and a variety of national actors within their broader transnational environment—in an analytical sense these two levels are inseparable.

Densely organized at the national level and beyond, education policy is highly susceptible to transnational isomorphism. The analysis of the post-World War II school curricular reforms and content (particular focus on Japan and China, in comparison with European developments) shows that national educational systems in East Asia increasingly assume a globalized society, and the role of active and able citizens and nations in making this society. In so doing, they systematically insist upon the "distinct" contributions of the nation and its citizens to the good of the wider world. Yet, as the nation (and its uniqueness) is expressed fiercely, the policy reforms themselves affirm transnationally diffused, common models of social order. Nations as "imagined communities" and individuals as citizen acquire commonalities across societies. The assertiveness of the nation (divergence), as well as its progressively common imaginary (convergence), is linked to its transnationalization.

**SPAARGAREN, GERT\*** (Wageningen University, [spaargaren@wur.nl](mailto:spaargaren@wur.nl))

#### *Environmental Agency and Power in the Global Network Society*

Over the past two decades, practice theories as developed by Anthony Giddens, Theodore Schatzki and Elizabeth Shove amongst others, moved center stage in the sociology of sustainable consumption and everyday life. Practice theories offer an attractive third way in between individualist (value driven) and determinist (technology driven) models of environmental social change. In this paper, we explore in more detail the two modalities for analyzing the reproduction of social practices as put forward by Giddens (1984) and Shove (2012) in particular. First, when discussing *practices as performances* or as strategic action, we explore how specific lifestyle groups with particular 'green' portfolios or competences participate in the practice in order to make the practice and their lifestyles more sustainable. We show that the environmental dimension of (consumption) practices can be crucial for attracting new practitioners to the practice since they expect gaining emotional energy (Randall Collins, 2004) from participating in the process of simultaneously greening the practice and their lifestyles. Second, when discussing *practices as entity* and as part of an institutionalized set or nexus of practices, we focus on the process of strengthening or weakening the connections between different practices. We argue that the concepts of power as put forward by Manuel Castells (2009) can be used to illustrate the interrelationships between practices and thereby some of the key dynamics of environmental changes in the global network society.

#### *Sorting Snorers: Straight Path to Treatment?*

The medical model can perpetuate and itself be perpetuated --or be challenged and subverted --by stereotypical conceptions encountered on the Internet. In this rich case study of snoring and obstructive sleep apnoea (OSA), we examine internet searching as a complex actor-network comprised of actors and actants such as the searchers themselves, search engines, web-pages, and the organisations behind the pages, all contributing to lay pre-diagnosis of OSA.

Social preconceptions regarding typical OSA sufferers include age, gender, and weight. Overweight middle-aged men are expected to have sleep apnoea, whereas skinny young women are often not. Through situational analysis of the conceptual interactions between participants recruited on the basis of either being snorers, or being the partner of a snorer and website pages, websites, and website providers, the study closely examines the generative forces arising from engagement or ill-fit with the disease-based model as encountered during an internet search. Situational Analysis is used to model the actor-network on both individual and aggregated levels to gain insight into the complexity of the medicalisation of snoring and OSA and the role of the internet in this actor-network.

This paper examines the internet search as an emergent yet increasingly powerful and pervasive source of influence, shaping conceptions regarding who can snore, who can have OSA, and who and how therapies for snoring can be accessed. Using Situational Analysis as a starting point, we have developed a novel data visualisation technique particularly suited to representation of both human and non-human actors and actants involved in the internet search and pre-diagnostic endeavour, and to visually represent conceptual tensions (medicalisation and non-medicalisation; snoring and obstructive sleep apnoea; male and female; old and young and so forth) within the overall actor-network.

**SPEL, CHRISTAL OGHOGHO\*** (University of Helsinki, [christal.mudi-okorodudu@helsinki.fi](mailto:christal.mudi-okorodudu@helsinki.fi))

#### *Scums Of The EARTH: A Critical Analysis Of 'Humanness' In Host Society from 10 Life Stories Of Poor Immigrants In Johannesburg, South Africa*

This paper critically examines the question "at what cost do we establish national borders as the criterion for valuing others? What are the consequences to ourselves; the selves that ultimately places humans above their animal counterparts? It thematically but critically examines the 'we' that have ascribed an identity to 'migrants', labelling them as not fit for support and care. Adorno T, argued that identification limits the scope and facets of the subject to the desired level only. However, the reverse is also the case, whereas identification limits the scope and facets of the identifier within a box, from which he cannot break free to explore his unlimited ability to create the world he desires. In this sense, by identifying migrants and in particular poor and unskilled migrants as 'undesired' and 'disastrous' to a fully functional and successful society, we have by extension confined ourselves to a box from which we cannot break through, to dream and create a functional and successful society that includes the unwanted poor and unskilled migrants.

Using narratives from 10 life story interviews with poor African immigrants in Johannesburg, South Africa, the article examines the host society via the harsh experiences of the immigrants. The article argues that there is a new form of societal enslavement and poverty; it is the poverty of our humanity. I believe that the lived experiences of unwanted immigrants will be an important platform from which to examine the inherent contradictions of contemporary humanism as exhibited by host society. Also, it is of practical relevance to apply Habermas's critical theory of society to a location in Africa; A continent that is in the throes of awakening self-emancipation from colonial dominance in order to create its own history in a more self-directed manner.

#### *Between Institutional Oppression and Spiritual Liberation: The Female Ordination Movement in the Catholic Church and its Utilisation of Social Media*

The female ordination movement within the Catholic Church is a dynamic and forceful example of the paradoxical binary of institutional oppression and individual liberation operating within the contemporary religious sphere. Proponents of this movement are seeking justice and gender equality in the face of the system-

atic patriarchal oppression of women within the Catholic Church. This radical and pioneering international movement is struggling for recognition as a legitimate religious formation as it campaigns for a more inclusive and accountable Catholic Church. The female ordination movement thereby provides a fertile conduit for examining how religion can both oppress individual freedoms and also be used to mobilise political, social and spiritual liberation from institutional disempowerment.

This paper will utilise critical discourse analysis of various social media outlets and webpages to elaborate on the institutional oppression and spiritual liberation which lies at the heart of this religious group. Drawing on feminist theology and a feminist epistemology, this paper will explore the effectiveness of social media in connecting women across the world who are facing institutional religious repression and who are seeking support from likeminded faith believers. Through critical discourse analysis, this paper will find that social media is used by groups involved in the female ordination movement such as The Catholic Network for Women's Equality, Women's Ordination Worldwide and The Women's Alliance for Theology, Ethics and Ritual, to subvert the dominant attitudes towards women within the Catholic Church and to provide an alternative form of religious expression for disaffected Catholic women. These groups are thereby able to mobilise women into a solidary international religious formation which empowers women who have experienced suppression or subjugation from the Roman Catholic Church.

*UK Maternity Services 'Risk Culture': Is the Professional Status of Midwives 'At Risk'?*

UK maternity services, accounting for a significant proportion of National Health Service litigation claims, are increasingly regulated by 'risk management' standards. Such standards, aimed at improving the safety of maternity care and reducing litigation, inevitably associate childbirth with risk, and the control of professional behaviour in managing such risk. The growth of this 'risk culture' within maternity services poses significant threat to professional status claims.

This paper presents findings of a Doctoral ethnographic study observing the real time impact of the 'risk culture' within an English National Health Service maternity department. Litigation and subsequent increasing regulation has fuelled the social construction of a 'risk discourse' surrounding maternity care. Aligned with the assertion that modern society has become increasingly risk averse (Beck, 1992), professional anxiety regarding risk has provoked socialisation amongst doctors and midwives that control over the childbirth process promotes risk minimisation. The stereotypical medical interpretation of risk, based upon fear of uncertainty and pathophysiology, has consequently permeated all aspects of pregnancy and childbirth. This in turn has led to the subscription of the 'biomedical model' as the prominent paradigm in managing maternity care, fuelling control, intervention and the 'medicalisation' of childbirth. Such 'medicalisation' has cemented doctor-led, intervention-laden management firmly within modern childbirth, with midwifery-led, naturalistic childbirth becoming an ever-decreasing occurrence. A professional identity crisis has ensued amongst midwives in that the role of the midwife in the 21<sup>st</sup> century is in a state of flux, raising concerns for the professional status of midwives within future childbirth provision.

The 'risk culture' in the UK has provoked significant inequalities between the professional status of doctors and midwives within modern maternity care. The role of midwives as autonomous practitioners in normal childbirth is eroding, therefore is the 'risk culture' in the UK placing the midwifery profession 'at risk' of deprofessionalisation?

*Doctors' Narratives*

Doctors' Narratives

My answer to the question outlined in the title of this session would be: "Doctors' Narratives". As illness narration is a means to gain direct access to the subjective aspects of illness, so utilization of doctors narratives in which they portrait themselves is important in order to understand who physicians really are. Making a distinction between the motivations behind their *choice* and the manner in which physicians *perform* their profession, the author tries to decipher the "black box" of medical identity. He does so using 40 qualitative, in depth interviews with doctors working in Italy in various branches of different ages and professional placements. The narratives so collected appear strikingly similar to those of doctors in flesh and blood from other parts of the world or to "imaginary" doctors created by the fantasy of great writer - doctors (Bulgakov, Čechov, Celine, Conan Doyle, Cronin, Munthe, etc.). Perhaps even the sociological choice of trying to understand the profession through biographical tales reveals more than a point of intersection with the "narrative" approach in medicine: to make a proper anam-

nesis, both clinically and sociologically, it is necessary to collect a good story, as only this can tell us not only the what, where and when, but also the how and why.

**SPILLMAN, LYN\*** (University of Notre Dame, [spillman.1@nd.edu](mailto:spillman.1@nd.edu))

*Symbolic Violence and the Limits of Domination*

Theories of power highlighting the complicity of subordinates in relations of domination typically assume their prior engagement in agonistic fields structured by that domination. Building on recent arguments for a cultural theory of interests (Spillman and Strand 2013) this paper examines the limits of the complicity assumption, and the implications of those limits for the concept of symbolic violence. I argue that cultural processes inherent in field formation as "autocatalysis" (Padgett and Powell 2012), as well as in dynamics of center/periphery relations within fields (Shils 1975), and in Hirschman's (1990) theorization of actors' exit options, all set limiting conditions on subordinates' meaningful participation in agonistic fields, and thus help specify the conditions for symbolic violence.

**WAGNER, BROOKE** (Wittenberg University)

*Portraits of Juvenile Prostitutes: Reconsidering the Mainstream Trafficking Victim Narrative*

The dominant narrative of prostitution in public media and even much scholarship equates sex work with trafficking – giving rise to the ubiquitous expression "sex trafficking" – and portrays sex workers as women and girls who are kidnapped, sold, and violently coerced into a life of slavery from which they need to be rescued. This narrative has been much sensationalized and set as the basis for rigorous criminal legislation against alleged traffickers (i.e., pimps) and clients, as well as reflecting the hegemonic media attention and policy influence of "new abolitionist" feminist scholars and activists who oppose pornography and prostitution as exploitative degradations of women. A bitter divide exists between these abolitionists and "sex worker advocate" feminists, who maintain that sexual commerce is not simply a story of victimization, that sex work can be, and often is, consensual and empowering, and that sweeping anti-trafficking policies are misinformed by exaggerated, sensationalized statistics. The ensuing "Sex Wars" have suffered from a lack of empirical evidence about the nature of sex work among those who engage in it, and the paucity of data is especially prevalent among juveniles, presumably the most vulnerable (and likely victimized) population. This study examines the experiences of 19 juvenile street prostitutes – twelve girls and seven boys – working in Las Vegas, Nevada, using in-depth interviews conducted between February and March 2012. We investigate the circumstances of these adolescents' sex work, including age, gender, race, pathways to prostitution, involvement with pimps, and abuse. In addition to using entry narratives to explore the pathways to sex work, we go beyond simply describing why juveniles become prostitutes and examine the ways that their lives contrast with other traditional narratives about gender and sexuality, race, social arrangements, and economic consumption, all of which speak to harm reduction needs for all street prostitutes.

*Ethnic Differences in Premature Mortality over Three Decades – the Intersection Between Indigeneity, Social Class and Preventability*

This study uses national-level mortality data to investigate the changing social class and ethnic patterns in premature mortality in New Zealand men from 1975 to 2006. During this period there was a political struggle for recognition of indigenous rights, a social policy focus on inequality, and major macro-economic reform. We used information from national death registrations and national census data from the five yearly national population censuses from 1976 to 2006 to examine changing patterns in social class differences in all cause, preventable, and non-preventable mortality for Maori and non-Maori men under the age of 65. Our results show that social class differences in male mortality have increased since 1975. Maori male mortality was significantly higher than non-Maori mortality in each social class for preventable, non-preventable and all causes of mortality. The social class mortality differences within Maori were markedly greater than those within non-Maori.

Despite focussed efforts to improve Maori health, the inequality between Maori and non-Maori in premature mortality appears to be increasing, even when social class differences are taken into account. The persistently higher Maori rate of potentially preventable deaths indicates that the health sector is still not meeting the serious health needs of many Maori. It also appears that there is increasing social stratification developing within the Maori population such that the social class differences in mortality within Maori are now larger than the inter-ethnic differences between Maori and non-Maori. We present several reasons why decades of indigenous development have not overcome ethnic differences in a fundamental marker of population health such as premature mortality but have resulted in increased inequality within the indigenous population.

*The Internet Is Not The Answer To The Problem Of Leisure Identities, But The Internet Is Interesting For Leisure Studies: Against Postructuralist Theory and For Empirical Leisure Research*

As people's leisure lives have become mediated through the global networks of the internet, leisure scholars such as Tony Blackshaw (2010) see a digital world of liquid leisure. Drawing on the work of Castells, Beck and Bauman, Blackshaw and others such as Rojek (2010) who have advocated the 'post-structural' turn in leisure studies welcome the dissolution of boundaries, the reduction of inequalities of power, and the individualization of leisure choices and leisure identities that the internet supposedly brings. In this paper, I provide a strong critique of the post-structural turn in leisure studies by showing that the theoretical foundations of such claims are weak, and the evidence base for such claims demonstrates only that some people in some countries have some freedoms to play at leisure identities. I will show that the internet in the work of post-structuralist leisure scholars has become a chimera that has little resemblance to the internet that actually exists. I will end by using some of my own research to demonstrate the limits of leisure on the internet and the structures that still shape human interactions, human leisure and human culture.

*Party on the Ground and Candidate Selection in France (1969-2013): The Story of a Difficult Inclusion*

Political parties are still today the main actors in the political recruitment in France. Most of the French parties use a mixed system, which involves the local members and the national organization. In general, the final decision is taken at the national level by a national selection committee, an organization that is not known for its transparency. The selection procedures have thus always been considered as the « black box » of the political parties. But, today, the political parties are confronted with the challenge of democratization for these procedures.

The expansion of democracy goes mainly through direct participation from the party members. So, an increase of the party member's power within the party is a typical response for democratization. But, if the party members are more and more included in the decision-making of the selection, the problem is that the decision of the party leaders does not always match with their choice.

This paper looks at how political parties have responded to the demands of more democracy, using France as a case study, with an empirical study of the evolution of intra-party democracy in the candidate selection. The aim is to identify the impact of the introduction of more intra-party democracy and the difficulties for the different party strata to deal with it. Therefore, we have systematically reviewed contemporary and historic party statutes and internal rules document from the PS (left-wing party) and the RPR/UMP (right-wing party) since their creation from 1969 to 2013. The analysis from political parties through their internal formal rules allows to understand how the party on the ground is, at least formally, included in the selection procedure. This will be illustrated by semi-structured interviews. Current party leaders, members of parliament, party secretaries were among those interviewed.

*Motherhood Fatal Illness Narratives: Death Awareness and Biographical Reinforcement to Restore Continuity*

Within a broader context of medicalisation, dying and death in Thailand remains a distressing and taboo topic, let alone being studied sociologically outside the medical realm. However, there seems to have an increasing demand to comprehensively understand various dimensions of dying and death as the institution of medicine is moving towards excellence. Illness narratives, reflecting patients' experiences, could plausibly open new approaches in medical education, practices, and management.

This study illicit **illness narratives** from mothers of dependent (very young age) children who have recently been diagnosed with cancer. The social identity of "motherhood," widely perceived to be self-sacrifice and a sole responsibility of the women themselves, makes the situation of sick mothers even extraordinary. **Illness narratives** of these dying mothers should be capable of revealing processes and mechanisms in which motherhood as a **personal and social identity** interacts with the fatal illness in a personalised context and hence produces (1) experiences and conceptualisation of illness in terms of causes, treatment, prognosis, and especially awareness of their death based on gender and moral discourses of being a mother in Thai society and (2) accounts of embodiment and suffering and its implications on daily management of this disruptive event.

An initial round of talks regarding life history with 5 participants (aiming at least 10) tends to suggest that motherhood is an ultimate source of inspiration which helps reconstructing meanings of fatal illness through an unconventional pattern of death awareness rather than *vice versa*. Death awareness of these mothers is unfolding through a complex relationship between information and knowledge of cancer as a fatal but *common illness* disclosed formally through their interactions with physicians and informally through lay perspectives and the emotions of being ill and feeling ill. This kind of awareness stimulates their determination to survive and thereafter an adherence to treatment.

## RC15-276.2

**SS, SUMESH\*** (Tezpur University, [sumeshss@gmail.com](mailto:sumeshss@gmail.com))

*Disentangling Disease Stigma: Conceptual Counters and Methodological Challenges*

This paper briefly examines the core social science literature surrounding stigma in general and disease stigma in particular to explore the social matrix that stigmatise and exclude the People Living with HIV/AIDS. The multiplicity of social science approaches for understanding the correlation between social stigma and exclusion, either resort to the trap of functionalism or in the individualization of

the problem or argue for a unidirectional cause and effect relation. The conceptual inflation in the field of stigma research also confined the strategies to counter the stigma within the *vicious circle of exclusion* limiting the scope for *out of the box social engineering*. This paper argues for a multidimensional understanding of the stigmatisation process that addresses the functionality without functionalism and without resorting to excessive individualization. It is vital to distinguish between what we can call HIV/AIDS stigma, and what we should call HIV/AIDS related social exclusion. How the linkages operate; uni/multi- dimensional? It is also important to unravel the social process operating at different levels of reality and how the old inequalities play a significant role in producing and reproducing the new forms of social exclusion where the *Right to Live* is under threat. The paper calls for an integrated paradigm for understanding the social process of stigma and exclusion and try to explain the dynamics of stigma within and outside the matrix of micro-macro versus subjective-objective axes of social reality. The empirical exploration with this framework requires a re-examination of the existing methodological practices in stigma research.

**SS, SUMESH\*** (Tezpur University, [sumeshss@gmail.com](mailto:sumeshss@gmail.com))

### *Inequality and Inclusion in Primary Health Care System in India: An Interstate Analysis*

The trajectory of primary health care system in India is at crossroad with the gradual withdrawal of state from health sector. However, there are efforts to re-vamp the organisation and delivery of health care in rural areas with the introduction of National Rural Health Mission (NRHM) in 2005. Within this context the present study tries to analyse the internal differences in health care outcome in India and its relation to the social determinants of health. Secondary data analysis showed that there are wide inequalities existing between different states in terms of various indicators of health development. The state of Kerala stands out in terms of its achievements on major indicators and often hailed as *kerala model of health development*, whereas the state of Assam performs lowest in most of these indicators. However the state of Assam is the only state in India, which included health as one of the basic right to its citizen. A secondary analysis combined with an ethnographic field work in these two states revealed that the inequalities between these states and within the states are complex and a unitary model of inequity determinants fails to answer the complexity. Thus the social health determinants models needs to be re-looked from the vantage points of the local context. The study also highlights the pitfalls of government policy of inclusive health development, which still struck with the *centralized decentralization* of primary health care. Thus the policy of including the excluded in the delivery of health care in India needs to be informed by the local complexity of inequity structures and processes.

### *A Multilevel Model of Organization and Network Change*

According to one vision organizations are more likely to establish network ties with partners having similar operational experiences (homophily). A second vision suggests that interdependent organizations connected by network ties are more likely to assimilate each other's knowledge and develop progressively more similar portfolios of internal activities (assimilation). The internal structures of organizations can be represented as networks of interdependent portfolio items. These intra-organizational networks are nested in networks of organizations and influence the homophily and assimilation processes described.

In this paper we try to establish which of these two visions best describes the dynamics of collaboration (measured as patient transfers) and organizational change (measured as change in specializations) in a community of hospitals. We estimate newly developed stochastic actor-oriented models (SAOMs) for multilevel networks which specify how inter-organizational relations affect organizational decisions to change the portfolio network of internal organizational activities by adding or abandoning activities. At the same time, the model allows joint examination of how the common affiliation to internal activities affects decisions to change network ties defined in terms of patient sharing relations between partner hospitals. We innovate over existing studies of network dynamics in that we represent processes of change in internal organizational structure, and change in the structure of inter-organizational networks as coupled sub-components of a more general process of co-evolutionary development. The objective of this paper is to represent and examine this multilevel process of change empirically using data observed between 2003 and 2007 among all the hospitals in a regional community. In the discussion of the results we emphasize the connection between recent advances in the specification and estimation of SAOMs for multilevel networks, the current theoretical debates about the emergence of organizations and markets and the interpretation of our findings in the light of rational choice assumptions of the statistical framework.

### *The Emerging Social Structure of the New Sociology*

Prof. Dr Vladimir Štambuk

Faculty of Political Sciences,  
Belgrade,  
Serbia

The emerging social structure of the new sociology

That contemporary society is changing is so obvious that it does not need special elaboration.

The social structure of the industrial society, express in its rigidity and hierarchical order (from top to bottom) dealt with social classes, social mobility, superior and inferior social strata etc. Daily life was divided in three segments. One third was allocated to sleep, one third to work and the last third to leisure.

Today things are different. Social structures are more flexible, in some occurrence even nonexistent. Relations between social facts and specifics are not anymore dominantly linear. There are multidimensional. Prigogine states:

"What correlations are to nature, communication is to society"

More and more we are ensured that all we can know are relations, mostly information. The changing structure of society denotes that sociology should deal with trajectories and correlations when researching what social "facts" might be, and what society is composed of. For some, leisure is covering two third of their day by day life, for other it is part of their daily labor. Sociological research are studies of uncertainty. Social structure is centered on probability.

"The goals of science are not things in themselves as the dogmatists in their simplicity imagined, but it refers to relations between things. Outside of these relations one cannot comprehends the reality." (Von Baeyer, 2003, page 24)

The study of relations, information flows correlations, as multiple as there are (always in plural), as complicated as they may be, are the fundamentals of the new emerging sociology.

### *Ideology of Courtroom*

After 90s, when Francis Fukuyama announced the end of history and the neo-liberal democracy was the only solution for eastern-european countries liberated from the domination of the Soviet Union, it appeared that the problem of ideology was gone forever. It soon turned out, thanks to the growing consumerism, postmodern terrorism and unpredictable economy, that we can't interpret the modern world without reference to some concept of ideology. At the same time the theory of the law is still running away from this concept. Perhaps legal discourse is afraid that any critical theory ultimately reduces law to the economic base (inspired by Marx) or the flow of libido (inspired by Freud). But according to Slavoj Žižek ideology is the specter that lurks everywhere. Even in the toilet. Even in the courtroom.

This paper is a attempt to show the structural elements of this courtroom-specter. Using lacanian-zizkenian tools I will try to examine the Imaginary, Symbolic and Real levels of courtroom, that escapes everyday consciousness and at the same time are the conditions of possibility of that consciousness. This approach raises some important questions. If trial is a theater, who is the spectator – the Great Other? What is its object of desire – the object small a? Finally, psychoanalysis in the courtroom is only a therapy or it immediately becomes a politic?

### *Social Dining As a New Urban Food Community*

A new form of communal meal where total strangers eat together, often in intimate or homely settings, has become increasingly popular in urban environments. This phenomenon has been dubbed 'social dining' and encompasses meal-events where the social aspect of dining is paramount. In a time where the communal meal par excellence – the family meal – is under threat social dining might be a new way of creating commensality. This paper seeks to develop an understanding of social dining and examine its cultural and economic implications and discusses reasons for its apparent popularity. Examples of social dining include weekly communal meals at regular restaurants; arrangements where unfamiliar people cook and eat together; or the now global 'Restaurant Day' where people set up 1-day restaurants in their own home. To understand the phenomenon of social dining we outline different cultural and economic characteristics of the meal-events, such as whether it is arranged by professional or amateurs, whether money is transacted, whether it is a shared everyday meal or a special event. We argue that its popularity relies on four different factors: 1) The dining events are arranged through new social media or the internet that easily facili-

tates the meeting of strangers. 2) Social dining can help overcome financial problems in a time of economic crisis, through sharing the costs of meals or events as an income source for the host. 3) Social dining caters to a search for 'authenticity' in cultural consumption as the social experience can never be copied or repeated. 4) Social dining fits in a society where food has become both individualised and informalised, where 'neo-tribal' groups based on momentary, aesthetic experiences increasingly substitute more static social groups, e.g. based on family, class and geography.

### *The Precariat: From New Dangerous Class to Class-for-Itself*

Neoliberalism, stemming from the musings of the Mont Pelerin Society after the Second World War, meant a model of liberalization, commodification, individualism, the privatization of social policy as well as production, and – least appreciated – the systematic dismantling of institutions and mechanisms of social solidarity. From the late 1970s onwards, it meant the painful construction of a global market system, in which the globalization era was the disembedded phase of the Global Transformation, analogous to a similar phase in Karl Polanyi's *Great Transformation*. In both cases, the disembedded phase was dominated by financial capital, generating chronic insecurities and inequalities. But whereas Polanyi was analysing the construction of national markets, the Global Transformation is about the painful construction of a global market system.

One consequence has been the emergence of a global class structure superimposed on national structures. In order to move towards a re-embedded phase, it is essential to understand the character of the class fragmentation, and to conceptualize the emerging mass class-in-the-making, the precariat. This is a controversial concept, largely because traditional Marxists dispute its class character. However, it is analytically valuable to differentiate it, since it has distinctive relations of production, relations of distribution and relations to the state. It is still a class-in-the-making rather than a class-for-itself. But it is the new dangerous class because it is a force for transformation, rejecting both labourist social democracy and neoliberalism. It has a distinctive consciousness, although it is this that holds it back from being sufficiently a class-for-itself. It is still divided, being at war with itself. However, it has moved out of its primitive rebel phase, and in the city squares around the world is setting a new progressive agenda based on its insecurities and aspirations.

### *A Precariat Charter: From Denizens to Citizens*

This paper discusses my new book, *A Precariat Charter: From Denizens to Citizens* (2014), which builds on key arguments from my 2011 book which introduced the Precariat as an emerging mass class, characterized by inequality and insecurity. *A Precariat Charter* discusses how rights – political, civil, social and economic – have been denied to the Precariat, and the importance of redefining our social contract around notions of associational freedom, agency and the commons. The ecological imperative is also discussed – something that was only hinted at in my 2011 book but has been widely discussed in relation to the Precariat by theorists and activists alike. By taking debates about the Precariat a step further, I further examine the kind of progressive politics that might form the vision of a Good Society in which such inequality, and the instability it produces is reduced.

**STARK, LAURA\*** (University of Jyväskylä, [laura.stark@jyu.fi](mailto:laura.stark@jyu.fi))

### *Public Access to the Unorthodox Sacred Via Portuguese Urban Spaces*

Drawing on numerous interviews carried out in 2010, this paper focuses on the popular cult surrounding a medical doctor famous for helping the poor, Dr. Sousa Martins, who died over a century ago in Lisbon. Because of contested rumors of Sousa Martins' having been Freemason and having committed suicide, he is unlikely to ever be canonized within the Catholic Church, and the cult of devotion surrounding him exists completely outside of the church's authority. The popular devotion toward Sousa Martins involves thousands of Portuguese of all ages whose numbers appear to be growing. Devotees believe that Dr. Sousa Martins can cure their illnesses, find jobs and homes for them, and even conduct 'spiritual surgery' on them to remove cancer. Despite the fact that the Church does not condone this devotion, the cult is enabled – and its ritual activities organized – by three public spaces within and near Lisbon (his statue, his tomb, and his home-turned-museum) in which devotees can openly 'communicate' with Sousa Martins to ask for his help (especially medical cures), bring him offerings, and leave gifts of thanks for miracles performed. The fact that this devotion has no organizing institution also means there is room for active individuals to guide it

in particular directions. Such individuals include a charismatic female medium, a seer-turned-writer who has written numerous popular books on Dr. Sousa Martins, and the owner of a kiosk selling cult objects, who has invented rituals for communicating with the doctor which she tells to her customers. This paper will explore the importance of the public spaces through which devotees 'communicate' with Dr. Sousa Martins, how this communication takes place, and how these public spaces connect to charismatic Christianity and other, more private spaces such as sessions with spiritual mediums who claim to be able to communicate with Dr. Sousa Martins.

*Development and Inequalities in Post-Socialist Countries: Comparative Perspectives*

The main purpose of the paper is to explain some differentiations in the levels of social capital and socio-economic status between the inhabitants of post-industrial cities in Central and Eastern Europe.

In accordance with the sociological literature, two components of social capital will be considered: trust and social networks. Socio-economic status will be analyzed by level of education, monthly income, and job situation.

The main thesis of the paper is the assumption that in the post-industrial cities of Central and Eastern Europe access to social capital is not highly associated with the socio-economic status of inhabitants.

The empirical basis for the paper is a database from surveys carried out in selected post-industrial cities of Poland, Russia, Hungary and Lithuania. In each of the above countries one city was selected in order to conduct a survey of representative samples of inhabitants between the ages of eighteen and seventy.

The empirical investigation was carried out in the year 2012 with the financial support of National Centre of Science in Poland.

**STASZYŃSKA, KATARZYNA\*** (Kozminski University, [kstaszynska@kozminski.edu.pl](mailto:kstaszynska@kozminski.edu.pl))

### *New Cognitive Perspective in Survey Research Methodology. Comparative Results from Georgia, Russia and Poland*

Applications of the cognitive psychology theories analyze the bias in survey research limiting the meaning of the term "cognitive" to cognitive functioning of peoples' minds. Cognition should be understood in a broader sense because it is determined not only by intellectual capabilities of people but also by their social background as well as by their values and attitudes. Although it is obvious that achieved education is an inferential indicator of intellectual capabilities of a person, thus his or her cognitive abilities, it is not that obvious that intellectual capabilities are determined by social background and social experience of the people and that their perception of survey situation depends not only on the abilities but also on the attitudes. If respondent has never experienced democratic form of government and, in addition, does not have a theoretical knowledge about what democracy is, he/she cannot really express his/her attitudes to democracy. And, of course, his/her intellectual capabilities have something to do with the ability to express attitudes toward democracy but their effect on quality of response cannot be limited to strictly cognitive processes that are involved in answering the survey questions because this depends on the attitudes as well.

Our approach assumes that social background, political knowledge and experience as well as political attitudes of people affect how they understand public opinion polling and, finally, affect the quality of answers. The comparative data were gathered in Poland (2010), Georgia (2013) and Russia (2012). The aim of analysis was to find to what extent political attitudes and experience determine the perception of public opinion polls and quality of answers. Significant differences have been found between attitudes and survey behaviors of Georgians, Poles and Russians.

**STASZYŃSKA, KATARZYNA\*** (Kozminski University, [kstaszynska@kozminski.edu.pl](mailto:kstaszynska@kozminski.edu.pl))

### *Trust and Democracy in Different Post-Communist Societies: Poland, Russia and Georgia Comparison*

The subject matter of the paper is a comparison of political trust (that consist the fundament of political stability) and democratic attitudes in three very different post-communist countries: Poland, Georgia and Russia. Poland is exceptionally different from the two others because of a very strong democratic tradition while neither Russia nor Georgia have such a tradition and experience but they differ in terms of their political culture and present political aspirations. Differences of political trust are analyzed in their relations to attitudes towards democracy.

We are particularly interested in analyzing social differentiation of trust in political system and in particular political institutions in the three countries. We would like to answer the question what are the segments of their societies that might be considered fundaments of social stability and development towards legitimized democratic system. We would like to find out what are the determinants of democratic attitudes, especially their's relation to political trust in the system as a whole and theirs' institutions in countries with different traditions and different pace as well as direction of transformation. The main question is, what are the differences between those three countries in terms of the level of political trust and democratic attitudes, what are the differences in relations between the two, and what are the differences in social composition of those who trust the political system and support the democracy and those who do not. That is especially important because of the differences in existing systems. The attempt to answer these questions is made by analyzing the results of survey research conducted on nationwide random representative samples in Poland in September 2010, in Russia in March 2012, in Georgia in August 2013.

### *Intergenerational Dependences and the Financialisation of Retirement: Lessons from Australia*

Across the developed world, population ageing has coincided with rising living standards and expectations in retirement. Since the 1980s this has led to growing concern about the sustainability of public pension systems. Australia has been held up as an example of prudent fiscal management, as it looked to fund retirement incomes through compulsory private savings. This supplemented Australia's flat-rate and means-tested public pension system, also supported by widespread home ownership. The shift to private pensions has made individual workers more reliant on lifetime savings and on benefits accrued through the tax system rather than direct benefits. We examine the intergenerational implications of this trend towards greater financialisation of retirement incomes by analysing cross sectional data from the Australian Bureau of Statistics. Given the significance of the Australian model to international debates, we discuss the potential long run international implications for inequality in retirement of this experience.

**STEBBINS, ROBERT\*** (University of Calgary, [stebbins@ucalgary.ca](mailto:stebbins@ucalgary.ca))

### *Leisure in the Middle East: Tradition, Taste, and Equal Access*

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across the centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation for scores of leisure activities, which are preferred by one sex or the other, are coordinated with the Islamic calendar, appeal to particular age groups, among other differentiating principles. This paper, using a variety of library resources, examines the traditional and contemporary leisure activities in the Middle East, pointing out where equal access to them is an issue. Most Arabs and Iranians with deep family roots in this culture seem satisfied with their traditional leisure tastes. Differentiation according to the aforementioned principles is not generally problematic, not considered "unequal" in the social scientific sense of the word. What are considered unequal by some participants in the region, however, are certain "new" leisure activities, this new leisure being adopted (and often adapted) from outside the region, usually the West. These new activities range from imported European fine arts (e.g., classical music, ballet) to imported popular culture (e.g., rock music, stand-up comedy). Here, inequality is evident, for example, in differential monetary and geographic access to the fine arts. Adherence to Islamic values and traditional gender roles number among the factors generating inequality in popular culture.

### *The (In)Stability of Disorder Across Time and Space? a Spatio-Temporal Analysis of Physical and Social Disorder and Fear of Crime in the Netherlands*

Whereas the occurrence of physical and social disorder across the urban landscape and the explanation of the observed spatial patterns have long preoccupied criminologists and urban sociologists, relatively few studies have looked at the stability of disorder patterns and their interplay with fear of crime from a spatio-temporal perspective. Elucidating the (in)stability of spatial patterns of disorder and fear of crime is especially important for the model of urban development known as the Broken Windows Thesis, which posits that physical and social disorder, if unabated, lead to heightened fear of crime, reduced informal social control, and eventually a rise in more serious crime.

The present contribution is a spatio-temporal cluster analysis of physical disorder, social disorder, and fear of crime in the Netherlands based on the Dutch 'Police Population Monitor' survey between 1993 and 2005, a large-scale biannual household victimization survey covering every municipality in the Netherlands. By aggregating the individual survey respondents of each commune, we constructed a municipality-level longitudinal dataset spanning twelve years. We perform geovisualization and spatio-temporal clustering analyses of Dutch municipalities in order to determine whether there are significant local differences in physical disorder, social disorder, and fear of crime and whether these spatial patterns persist over time. In addition, self-organizing maps serve to classify individual municipalities into clusters of similar spatio-temporal type across the Netherlands. Finally, we test to what extent this "data-driven" typology of municipalities accounts for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized "developmental sequence" linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

### *It's Hard out There for a Girl: Online Surveillance of the Female Body on Social Media*

In 2013, we interviewed 50 Canadian girls and young women between the ages of 15 and 22 about their experiences as girls on social media. They described a complicated, often playful but often difficult relationship, with online surveillance that magnified the need for them to comply with mainstream expectations of beauty and the bodily performance of girlhood. Although they relied on social media to keep in touch with friends and family, many of them experienced a high level of discipline from these groups when they stepped outside the narrow bounds of stereotypical performances of femininity, reducing their opportunities to experience a lived equality in online spaces. Most of them also internalized and then acted out a narrow, stereotypical performance of the female body online in order to protect themselves from criticism. Girls who were unsuccessful in doing so suffered from harassment and self-criticism; girls who were successful articulated ongoing concerns about the precariousness of this success. Rather than enjoying their social relationships with peers through increased online interaction and connection, many of them relied on a series of mutual agreements to mobilize online when the reputation of a member of the group was attacked. Perhaps most disturbingly, the online surveillant gaze encouraged many of them to rely on external validation of their physical appearance to manifest a performance of "confidence", both deepening the effect on mainstream stereotypes and discouraging them from developing an internal sense of validation and worth. Our findings underline the need for policy and educational initiatives to support girls online and open up spaces for them to confront online stereotypes, push back against the gendered constraints they encounter online and participate equally in online society.

### *Shaping the Romanian Identity. the Nationalist Discourse of the Orthodox Romanian Church*

In a Europe increasingly secularized, Romanians trust the church is high and growing. According to the World Values Survey 1999-2000, 47.9% of the Romanian has high trust in this institution while only 2.7% is the opposite. Also, except Malta, the highest percentage of Europeans who believe that religion is very important in life is recorded in Romania (51.3%). We can say that we are witnessing, in the XXI century's Romania, a true revenge of God (*La revanche de Dieu*, Gilles Kepel *apud* Samuel Huntington).

Analyzing the academic literature (Bryan Wilson, 1998, Steve Bruce, 2002, Rob Warner, 2010, Pippa Norris and Ronald Inglehart 2011, etc.) one can note the following explanatory factors of this phenomenon: the degree of modernization and economic development, human security and the feeling of vulnerability to risks, political repression during the communist and nationalist discourse of the Orthodox Church.

The purpose of this paper is to identify –in a longitudinal and transversal discourse analysis – the proximity between Orthodox Church and national ideas. We will try to prove that in Romania, as well as in other Eastern European countries, religious nationalism was a constant, regardless of the political regime. We illustrate the previous statement with a quote from Dumitru Stăniloae, one of the most respected theologians in Romania: *Romanian nation is biological-spiritual synthesis Dacian elements, Latin and Orthodox Christian (...) Orthodoxy is an essential and vital function Romanian spirit. Our national ideal can be conceived only in relation to orthodoxy.*

### *When the Stranger Become the Enemy. the Imagine of the Est-Europeans in Western-Europe Political Discourse*

Europe nowadays is under rupture more than ever between *normativity* and *reality*, between the rich North and the poor South, between the democratic West and the (ex) communist East. Attracted by the temptation of the West (liberty and welfare) and driven out of poverty and the lack of perspective inside the ex-COM-ECON space, the latest European citizens choose to inhabit –more or less legally – the western side of Europe. It is indeed apparent that every new wave of EU integration has recently lead to a new wave of immigration.

These citizens bring with them not only cheap labor force, but also different principles, behaviors and attitudes towards the "adoptive" state, the institutions, etc. In fact, the readiness of migrant workers from the new EU states to accept the hardships of their new existence in the host state, leads not only to a desirable multiplication of diversity, but also to interethnic tensions. The Polish plumbers or the Romanian maids have become characters with well-known and recognizable traits all over Europe. However, along with these characters came also the Romanian beggar, the Bulgarian burglar etc. ; as Umberto Eco argues, by extending the characteristics of its marginalized members to a whole ethnic culture, one can provide an ideal scapegoat for a society caught up in ethnic change which is not able to recognize itself.

The purpose of our study is to identify and explain the imagine of the Este-Europeans in Western-Europe political discourse and to find out if, under the displayed tolerance one can find the premises for a stereotypical transformation of the Stranger into the Enemy.

In order to rich our epistemic goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We base our research on Serge Moscovici's social representation theory (1961).

### *Unfolding Inequalities of High-Risks Unevenness Across Some Foreign Service Organization: Comparing Contrasting Conception Couples of Diplomat's Body and Health*

Diplomacies embody risk-taking. Since time immemorial at home and abroad dangers, abrasive conduct, threats, and violent deaths of practitioners, named and ranked differently at different culture sites, have been around. Therefore safety metaphors for diplomatic agency, that of sublime being or of public minister, inviolable in body and protected in person if acting with host prudently and respectfully, and later supplanted by fictions of transmutation or an enminded body were employed to enclose devoted lives of diplomacies' professionals with privileges and immunities. Conceptions of diplomat's body and diplomatic body, ennobled, properly signaled, adorned, scripted and constituted, were immersed in habituated privileges and immunities as trust enhancers. If not eradicating, they are circumscribing the risks of harming and abusing serving diplomats of unequally resourceful, inclined and powerful sovereigns. During recent decades widening Inequality in governance of stability and change globally and locally, deepening proclivities for exclusionary management of intermestic affairs and rising dissatisfaction, sometimes humiliation of contestational affiliations thereof, slowly eroded risk reducing effects of privileges and immunities at certain sites. Particularly exposed to heightened risk are diplomats of several countries, more in some regions less in others. Out of such concerns, the US Foreign Service, most affected by high-risk unevenness, has venture into reconceptualizing diplomat's body and health. Coupled conceptions of diplomat representational body forestressed in posts, armored and motorcade and transformational body at difficult career wise outposts, with hardship bonus pay, got an addition. Foreign Service, prompted by violence, terrorism, hosts inability or unwillingness to provide security and the missions' physical security platform beyond the State's established

standards conceptualized the high risk and the high threat resilient diplomat body. Conceptualizations are legally enacted with relative budget appropriation for the fiscal year 2014.

**STEIGEMANN, ANNA\*** (Center for Metropolitan Studies Berlin, [anna.steigemann@metropolitanstudies.de](mailto:anna.steigemann@metropolitanstudies.de))

### *Shopping For Community - Local Businesses As Features Of Social Inclusion?!*

Increased ethnic diversity, a high degree of differentiation in income and education levels as well as lifestyles and related the socio-spatial changes have changed not only residential and commercial neighborhood structures, but also the range and level of local interactions and leisure time activities - with wide implications for neighborly coexistence.

As one result the social cohesion of inner-city neighborhoods and their residents is often seen as vulnerable. Whereas some of these problems are addressed by numerous neighborhood management programs, sociology still needs to pay more attention to how what shapes local interactions, i.e. everyday social contacts and connections between and among various groups of residents, how these affect local social capital.

So far, the great majority of research on this topic has focused on narrow and well-integrated primary relationships among neighbors in residential settings and ascertains a loss of local social networks.

But these studies have mainly neglected the comparatively loose and unpretentious everyday interactions, particularly during leisure time activities as well as interactions in (semi-) public spaces and how both contribute to community building and social inclusion among residents.

Likewise, researchers have not given sufficient attention to the wide range of functions local small businesses and their employees play, including those which yield aspects of supply, sociability, local service and employment.

Claiming that shopping streets are significant places for forming proximity relations, the impact and meaning of shopping as both, leisure time and supply activities, for fostering local networks, mutual assistance, trust and local participation will be empirically assessed with the case of an exemplary shopping street in Berlin.

On the basis of on-spot observations and interviews with store owners, employees and customers, the paper presents empirical findings on the ways in which local shopping represents an important socially in- or excluding social practice that affect wider urban structures of inequality.

**STEIN, ARLENE\*** (Rutgers University, [arlenes@rci.rutgers.edu](mailto:arlenes@rci.rutgers.edu))

### *Performing Transgender Authenticity Through Video Diaries*

Growing numbers of young transmen (female-to-male transgender persons) in North America are choosing to publicly narrate their body modifications and post these videos on YouTube. This paper considers two genres of such videos: (1) videos that document breast binding (minimization) and (2) videos that narrate the process of top surgery (breast removal). It examines recurring themes in such videos, as well as the public comments they elicit. The paper speculates as to why individuals would choose to narrate such seemingly private acts in such a public fashion. Toward that end, I draw upon feminist theories of embodiment, media analyses of self-branding and authenticity, and analyses of female masculinity and sexual boundary-making.

I consider the relationship between such videos and other forms of "self-branding," such as reality television programs, and a genre of YouTube videos in which

teenage girls narrate their consumer practices. I argue that transgender videos play a double role as personal and collective identity work, affording individuals the possibility of enacting a transgender self, and also participating in the act of community-building via new media, in the context of post-feminism, the medicalization of gender, blurred public/private boundaries, and late capitalism. Turner (1996) suggests that economic transformations characteristic of postindustrial capitalism have changed the meanings of the body for individual social actors. Once the site of ascetic control and discipline, the body is now the locus of pleasure, leisure, and consumption. Not a fixed biological given, "the body can indeed be restructured and refashioned to bring about profound changes of identity, including changes of gender" (21). While these transgender video autobiographies do in fact exemplify the malleability of the body, I suggest that they also display the enduring importance of ascetic control and discipline.

**STEINER, PHILIPPE\*** (Institut universitaire de France, [philippe.steiner@paris-sorbonne.fr](mailto:philippe.steiner@paris-sorbonne.fr))

#### *Auguste Comte, Altruism and the Critique to Political Economy*

Altruism is now a current concept among economists and sociologists. When Comte coined that word in he wished to oppose a new spring of action to the selfish one that was, according to him and many other social observers, flourishing in the industrial society. While focusing his attention on the opposition between egoism and altruism, an opposition deemed to be the "great human issue", Comte was not merely pursuing the elaboration of his own system of thought with the so-called "subjective approach" and the development of the religion of humanity at the heart of his *Catéchisme positiviste* (1852) and his *Système de politique positive* (1851-54). He was also pushing further the critique to political economy that he had exposed in the 47<sup>th</sup> lecture of his *Cours de philosophie positive* (1830-42).

Comte's theory of altruism is a central point of his religious credo but it is also a critique to the political consequences of the spreading of political economy altruism that gave birth to a large debate. The topic is thus perfectly fitted to a history of the relations between sociology and economics.

The first considers how selfish behavior or egoism came to be considered as a major threat endangering the functioning of the industrial society, by Comte and those who were worried by the diffusion of egoism. Then, the second part summarizes the methodological critiques set forth in the *Cours* before connecting this critique to the economic content of the *Système* and the concept of altruism. The last part contrasts Spencer's view of altruism to the one held by Comte and, how French political economists reacted, defending the moral value of their science.

**STEINER, PHILIPPE\*** (Institut universitaire de France, [philippe.steiner@paris-sorbonne.fr](mailto:philippe.steiner@paris-sorbonne.fr))

#### *The Great Performance: Economic Design Versus Social Design*

There are now a significant number of studies done on the performativity of economics — to use Michel Callon's words — according to which economics as a science is actually not describing the state of economic affairs, but performing its own principles about the functioning of the economy.

The topic of this communication is to suggest a larger view of the performativity thesis in combining Callon's and Polanyi's approaches. In his *Great Transformation* (1944), Polanyi explained how much political economy contributed to the creation of the market system; however, he added that there existed as well counterforces protecting the society from such market system. Accordingly, the communication claims that there is a "Great Performance" at work. With the development of design economics, matching markets, economists are able to create market institutions that perform economics; but, on the other, alternative principles of exchange are as well designed in order to perform gift-giving behaviors. This side of the performance of social sciences through the creation of institutions of exchange should be taken into account.

The communication will first explain how Callon's and Polanyi's views can be combined to understand the role of played by social sciences, whether economics or sociology, in the functioning of this "Great performance". Then, the communication will explain how the two different forces are actually at work, first in the domain of financial markets and auctions, second in the domain of transplantation of human body parts. This part of the communication will be based on the current studies done on financial markets (notably by Donald McKenzie) and on my own work on organ transplantation.

**STEINHOFF, PATRICIA\*** (University of Hawaii, [steinhof@hawaii.edu](mailto:steinhof@hawaii.edu))

#### *Whatever Happened to Japan's Radical Left?*

In the early postwar period Japan developed two major parliamentary left political parties, the Japan Communist Party (JCP) and the Japan Socialist Party (JSP). Each was supported by labor union federations and other affiliated organizations,

which mobilized for social movement activities on many issues. By the late 1950s, an extra-parliamentary New Left emerged among university students. The first group broke from the JCP-dominated national student federation to form an independent Communist League, and a second independent student group developed out of Trotsky study groups on various campuses. For over a decade, the student-based New Left played a major role in social protests alongside Old Left parties, labor unions, and other civil society organizations.

During the late 1960s and early 1970s, Japan experienced a New Left protest cycle that paralleled those in Europe and the United States. It concerned very similar issues and had a similar trajectory of escalation of violence followed by strong state repression, which ended the protest cycle and drove the most radical elements underground or into exile. However, unlike the radical left in many European countries and the United States, the radical left in Japan has been largely invisible since the 1970s and is only now becoming somewhat more visible.

Based on long-term fieldwork, this paper will trace the Japanese radical left's evolution into an "invisible civil society" that continues to engage in social movement activity, but has had little impact on mainstream Japanese political agendas and action repertoires. The analysis will examine internal conditions within the movement and its interaction with the larger Japanese social and political context, including public fear engendered by the escalation of violence, the rigid employment structure that permanently marginalized radical activists, continuing state counter-measures against the radical left, and the gradual dismantling of the support base for left political parties.

**STENBERG, HENRIK\*** (Halmstad University, [henrik.stenberg@hh.se](mailto:henrik.stenberg@hh.se))

#### *Relational Art and Managing Emotions*

One of many intentions in art is to examine and portray emotional processes and the status of the artist and other peoples' emotions in different situations. The "traditional" artist carried a need to explore personal relationships or to portray emotions in social interaction at a distance. The relational aesthetics that has been of great significance since mid 1990 is oriented towards peoples' social and emotional experiences in different contexts (Bourriaud). The relational artists' ambition is to intervene in social situations and to find ways to visualize, communicate and reflect on the social exchanges that occur in these situations. The artist wants to problematize the existing emotional rules that occurs (Hochschild) and explore and process emotions such as hidden shame in Thomas Sheffs sence and thus to contribute to the reshaping of social relations.

The purpose of this paper is to examine how the relational artist uses his/her artistic skills to intervene in and influence social communities and to understand what happens to the emotions expressed in these coherences. The aim is also to investigate what happens to the artists' creativity and artistry in an outward relational artistic work. How can the artist establish a constructive relation between his/her artistic identity and the social and emotional involvement in others doing emotional work? The paper also aims to explore how theories of emotion can contribute to an understanding of creativity as a dialectical relationship between individual and collective motivations for art based on symbolic interactionism and micro sociology. The empirical material for the study is interviews with artists involved in artistic projects in workplaces in Sweden but also the study of non-institutionalized forms of relational aesthetics.

**STENGEL, NATALIA\*** (MAYAMA/Universidad Anáhuac Querétaro, [natalia\\_stengel@hotmail.com](mailto:natalia_stengel@hotmail.com))

#### *Dignity and Capabilities: An Approach to Human Development CANCELLED*

To promote the full exercise of Human Rights it is necessary to have a complete definition of dignity which includes, amongst other things, the relevance of human development without losing sight of the notion of respect to personal identity, local context and cultural identity, all of these contemplating the importance of allowing social actors to become, by themselves, the ones who develop a capacity to construct quality of life, sustainable development and the overcoming of their own social problems. By explaining the situation in this way, it seems that the Theory of Capabilities gives the best solution, specifically the contribution made by philosopher Martha Nussbaum in which a capabilities list proposes that individuals with a full flourishing of capabilities would be able to become key factors in guaranteeing the fulfillment of Human Rights focusing on human development. Recalling what has been described above, it is not surprising that the UN (United Nations) has given such attention to the Theory of Capabilities as a promising strategy to achieve the Millennium Development Goals (eradicating extreme poverty, achieving universal primary education, promoting gender equality and empowerment of women, reducing child and maternal mortality, ensuring environmental sustainability, etc.) However, and this is the main goal of this paper's analysis, it seems like the implementation of Nussbaum's Theory of Capabilities would make the UN's action for social assistance, promoting Human Rights and

propulsive human development shortsighted in time and duration; meaning that once the conditions are set for full development and enjoyment of capabilities, the interventional work of the UN would be over, although, apparently, the way they are working with the Theory of Capabilities suggests the contrary.

### RC39-660.2

**STERETT, SUSAN\*** (University of Denver, [ssterett@nsf.gov](mailto:ssterett@nsf.gov))

#### *Care, Surveillance and Legal Mobilization*

Legal institutions must be mobilized by people and institutions in response to disaster. Disaster has brought payments to people in two different ways: as victim and as people who have been rescuers. In studying assistance after disaster, we often treat programs as though they are distinct and experienced separately. Yet people encounter the law in disaster after having encountered other law in their lives, and interpret how to make legal claims through what they know about other programs. Similarly, state responses to disaster or efforts to mitigate or respond often work in ways that are characteristic across social programs. Although care might well be the goal of disaster assistance, for example, in the United States it is one program in a welfare state with goal of getting people off assistance and ensuring that poor people take responsibility for themselves. The people who need assistance the most can experience it as hard, confusing and frightening when it ends before anyone can find a job or get resettled, whatever the goal. This project draws on assistance for people who fled the Gulf Coast after Hurricane Katrina.

#### *A Spitting Image of Reality? Analyzing Stories of Meaningful in-out Group Incidents As a Tool for Understanding Students' in-out Group Relationships in a Divided Community*

This article explores the usefulness of analyzing narratives of particular incidents that are meaningful to and involve members of different ethnic groups in a situation of conflict. Narrative analysis of the content and structure of stories told by 15 Greek and 15 Turkish Cypriot students about a particular 'spitting incident' and the micro- and macro context in which these students, selected from two secondary schools in the Republic of Cyprus develop their narratives, shows that the analysis of such stories can enhance our understanding of: a) the different ways in which actors represent this incident and the factors and processes that inform these representations and b) the more general representations actors make of their own in-group and perceived out-group. More specifically, TCs portrayal of the TC protagonist as a vulnerable but likable and brave hero who is the victim of deliberate and hostile actions of a powerful and untrustworthy villain (the GC protagonist and particularly the GC community), who uses his power to punish the hero unfairly and excessively corresponds to their views of how GCs treat TCs in the Republic of Cyprus more generally and TCs passive, more defensive response to such treatment. Similarly, GCs portrayal of the GC protagonist as a pious hero and the TC protagonist as the disrespectful anti-Orthodox villain corresponds with their views of TCs as dominant, aggressive religious (Muslim) extremists who cannot be trusted. In addition, while TCs narrate this story primarily as an isolated incident, and seek to excuse, deny and/or downplay the accusations directed to the TC student, GCs often tell this story in relationship to a more general, critical discussion of existing school policies which they define as biased against them. The conclusions discuss the implications of this study for future research and social policy on in-out group relationships.

**STEWART, FRED\*** (University of Westminster, [f.stewart@psi.org.uk](mailto:f.stewart@psi.org.uk))

#### *Transition Cities – a Sociotechnical Approach for Transformative Innovation*

The paper draws on the sociotechnical transitions and system innovation framework of Geels and others to develop a new approach at city level to govern and manage the transition to a low carbon society

It reports on the European Institute of Innovation & Technology (EIT) Climate-KIC Transition Cities project. This involves a partnership of 6 cities – Birmingham, Frankfurt, Castellón/Valencia, Bologna/Modena, Wrocław & Budapest. The aim was to develop a transition policy capability to facilitate transformative low carbon innovation in three major end use sectors – buildings, transport, and energy networks.

An inventory was made of all low carbon innovation projects underway in the partner cities. This used a broad sociotechnical definition of innovation and included a diversity in terms of scale, knowledge and types of innovation. 107 projects were identified with a value of €2 billion in the 3 areas identified. The distribution was similar to earlier studies on city climate innovation but was at a significantly higher scale, suggesting that the national focus of innovation policy is underestimating the extent of activity at the city level. However despite the extent

of activity they tended to be treated as separate, disconnected projects and there was little evidence of strategies to link and enable wider system innovation.

An analytical and practical framework was developed in order to facilitate the clustering of projects around clearer arenas of system innovation. Social network analysis involving stakeholder participation was carried out to assess the prospects for system innovation and plausible transition pathways up to 2020 in each partner city. The results showed major differences in the prospects for transition in different arenas. It also showed the emergence of key integrating non-technological innovations in different cities with the capacity to play a key role in making transition happen.

#### *Beyond Piracy: The Materiality of Digital Objects and the Consumption of Copyright*

With the growing use of digital technologies in media consumption, companies around the world have experienced a new frontier in providing goods and services to a wider range of consumers. Despite the elevated success of digital distribution of cultural objects like music, film, video games, and books, the issue of illegal access and distribution of copyrighted materials has become a widely identified social problem. Economical, legal and criminological perspectives have largely dominated research on the topic of digital piracy, identifying and analyzing it in legal terms. Issues with these approaches arise as assumptions are carried forward in exploring and explaining these practices, resulting in their failure to identify this activity as the development of online consumption practices. In identifying this limitation in the literature, this paper sets out to create a conceptual model in approaching the study of digital piracy. Bridging the perspectives of cultural sociology with science and technology studies, my approach identifies the root of consumption practices in the properties of digital objects. Integrating the theoretical approach of cultural materiality, I explore how the conceptualization of digital objects as "dematerialized" dismisses important sociocultural dynamics of both the attributes of digital objects and the architecture of online services. In identifying the importance for a 'digital materiality' perspective in research on digital piracy, I explain how the form and structure of services and goods results in the development of expectations and desires leading to the consumption of copyrighted material. The resulting conceptual approach speaks to a number of possible consequences regarding how we define and understand Internet technologies. The inclusion of cultural materiality to digital content also provides a new perspective on how previous sociological definitions of materiality have been limited to a particular conceptualization of physicality.

#### *Sociologists and the Labour Movement: Between East and West*

##### **Sociologists and the labour movement: Between east and west**

While a tradition of creative engagement between worker intellectuals and academic researchers in Western Europe has been documented recently (cf Stewart and Martinez Lucio, 2011) a similar trajectory in Central and Eastern Europe remains largely unexplored. The contrasts and continuities between both regions forms the core of this paper. We examine and compare the different historical experiences of worker intellectuals and the academy in Poland and the UK, identifying the re-emergence of a pattern of engagement not only within traditional sectors of the working class but also among the new, precarious workforce, including migrant workers (UK) and agency workers (Poland). We argue that this engagement can be characterised on the basis of different and historically dependent patterns of institutionalisation of the sociology of labour in these countries. Moreover, this in turn can be derived from the fate of the historical relationship between labour (in its different forms) and organic intellectuals. We draw examples from the experience of union organising and workers in the UK and Poland amongst new and emerging workforces where the tradition of labour movement activity has been historically weak (or nonexistent).

The authors are either directly or indirectly participating in FP7 Marie Curie Initial Training Network Programme "Changing Employment". This is providing a novel opportunity to link international funding opportunities in such a way as to foster cooperation between labour and academia.

*Breaking the Ignorance Contract: White South Africans' Recollections of Complicity and Collusion with Apartheid*

It has become a commonplace joke in South Africa that one cannot find any white South African who admits to have voted for the Apartheid government. White South Africans tend to produce accounts of their past that present innocence, or at the least, ignorance of how their privilege was premised upon the disadvantaging and oppression of black South Africans. Focus groups were conducted with white South Africans who lived in South Africa during the apartheid years, and who stated their willingness to engage in conversation about their racialisation into whiteness. They were invited to reflect on a) what they in fact did know, b) what they chose/preferred not to know, and c) what they now feel they legitimately can claim they did not know about the system and how it impacted the lives of black South Africans while holding their racial privilege in place. Drawing on the emergent field of epistemologies of ignorance, the paper investigates the costs and rewards of breaking faith with "the ignorance contract" that holds white collusion with racial privilege in place. I explore some of the complexities of dealing with the shame and continued self-interest that inhibits the admission of complicity.

*Bringing Family Demography in: Class Variation in Family Behaviors and the Implications for Inequality Patterns*

Stratification research focuses, traditionally, on the role of families as providing the life conditions for future achievements and opportunities. Studies have highlighted the importance of family structure and family behaviors (e.g., assortative mating) in producing and reproducing inequalities, class position and life chances. Recent changes in family patterns point attention to the interplay between social class and family demography, which is not yet fully incorporated in stratification research. Changes in family behaviors, including family formation and dissolution, fertility patterns and parenting practices, and the economic behavior of women are not uniform across social classes. Studies emphasize the importance of family structure (e.g., the vulnerable position of single-headed families); the economic consequences of divorce or the effect of homogeneity on inequality among families. Recently, more attention is given to the contribution of family behaviors (e.g., assortative mating; differential fertility) to the general level of inequality.

In this paper I highlight the importance of class disparities in family behaviors and their consequences to the life chances of individuals. I emphasize in particular the important role of women's educational attainment plays in determining family behaviors, and the various consequences of class and family interaction to the economic disparities between families and gender inequality within families in particular the gendered division of paid and unpaid work. Recent studies, for example, documented a higher risk of divorce for the lower classes. Similarly, women's education is related to their work activity and the formation of dual-earner families. These differences further deepen disparities between families and individuals that grew up in different types of families located in different class positions. Taking class variation in family behaviors into account is necessary in order to understand the direction of inequalities and how different policies and institutional arrangements may alleviate them.

*Cheating Among American University Students: A 30-Year Follow-up Study and a Comparative Study with Chinese University Students*

Cheating is an increasing problem on college campuses, made even easier by the advancement in technology which has increased access to information. Furthermore, we are seeing a shift in attitudes toward cheating as well as a change in the definition. Faculty are reporting changes in cheating behavior. This current study reports the results of a 30-year follow-up study on cheating at an American university (Vandehey, Diekhoff, and LaBeff, 2007), as well as comparisons with a comparable sample of Chinese university students. Our findings indicate both cross-cultural differences but also similarities in cheating behavior and attitudes. Chinese students reported a higher incidence rate of cheating on exams, and a greater tendency to neutralize (i.e. justify) cheating. A factor positively correlated with American students cheating is a characteristic related to a cohort effect currently labeled the Millennial Generation or Generation Y students. Our results also point to factors that may be effective in preventing cheating.

*How Media Cultivates Body Perception and Sexual Attitudes: The Effect of Television, Magazines, Video Games, and Internet*

In the late 1960s, George Gerbner developed cultivation theory to understand how exposure to television shapes individuals' perceptions, particularly violence in the real world. Research using cultivation theory consistently showed that heavy television viewers were more likely to perceive the world as more violent, even after controlling for negative experiences involving violent situations. Gerbner later extended cultivation research to sex-role stereotypes and sexuality (Morgan and Shanahan, 2010).

Using cultivation theory, the current study explores how different types of media influence individuals' body perception and sexual attitudes. The media studied are television, magazines, video games, and internet. The sexual attitudes studies are acceptance to hooking-up (casual sexual encounter) and rape myths. For the current study, we collected data from undergraduate students at an American university, using an online survey. The data indicate that body perception and sexual attitudes differ by media type consumed. More specifically, we find that (1) controlling for gender and self-esteem, exposure to television, magazines, video games, and internet is negatively associated with individuals' evaluation of self body image, and that (2) high exposure to television, magazines, video games, and internet correlates to more mythical sexual attitudes and sex-role stereotypes. We will discuss the implications of the results and provide suggestions for improving self body perception and eliminating sexual myths.

*Children's School Achievement and Educational Aspirations: The Role of Parents' Peer Group As Social Capital*

Parental educational aspirations for their children's educational careers have been found to be affected by the students' school performance. Some available evidence suggests that parents with lower status background are more susceptible to these detrimental effects of poor school achievement. However, explanations for this phenomenon have not been empirically tested yet. We hypothesize that the aspirations of parents with lower social status are more reactive to constraints because of being embedded in less ambitious social contexts and are, thus, less endowed with social capital. These hypotheses are tested with data from the Mannheim Educational Panel Study (MEPS), where participants are primary-school parents in Germany. *Firstly* we found strong net-effects of the level and temporal development of the children's grade-point average on the parents' educational aspirations, which strongly decreases with increasing parental education. *Secondly*, aside from the children's academic achievement, the average aspiration level in the parents' egocentric network is found to exert significant net-effects on the parents' educational aspirations. *Thirdly*, the aspirations in the peer group moderate both the effect of the level and temporal development of the children's grades on the parental aspirations: Parents with high aspiration contexts are less willing to adapt their aspirations in view of their children's poor educational performance. *Fourthly*, the compositional difference in the peer group's aspiration level between families with different educational status explains their different willingness to adapt their ambitions to their children's achievement reality completely. Thus, a positive attitude toward education in the parental social network serves as a protection against detrimental effects of poor school achievement and as intergenerational social capital for their children. These results are not consistent with a simple version of a rational-choice explanation of social capital utilization.

*Debating Canadian Climate Change Policy: Policy Networks and Discourse Coalitions in National News Media*

The news media serve as an important forum for public debate among key actors and organizations involved in climate change policy networks. We examine national news coverage of climate change policy debate in Canada during 2007-2008, which is a peak period in national climate change news coverage. We use a discourse analysis approach to answer four questions: Who are the central organizational actors who appear in national news coverage? What are the central discourses about climate change in national news coverage? How do these central organizations cluster around shared agreement over key climate change discourses? How do these central organizations cluster around shared opposition to key climate change discourses? By answering these research questions, we see how the national media and key news sources attribute responsibility for addressing climate, and define the political responses that should be implemented to mitigate or adapt to climate change. We also gain insight into the ways that organizations align around particular policies and ways of understanding climate change, resulting in discourse coalitions, as well as rifts in climate change policy debate.

GRAHAM, PAULA (Memorial University of Newfoundland)

*Old Harry and New Media: Environmental Movements and the Oil-Tourism Interface in the Gulf of St. Lawrence*

Over the past two decades, offshore oil development and tourism have gained importance within the political economy of Atlantic Canada. In the province of Newfoundland, these sectors represent alternative models for living with and making use of coastal environments. While environmental movements routinely mobilize against oil projects like the Alberta oil sands, Enbridge pipeline, or Keystone XL pipeline, there has been an absence of critical engagement by environmental movements in relation to offshore oil development in Newfoundland. However, recent proposals to open up oil exploration in the Gulf of St. Lawrence, which borders five Canadian provinces, as well as Gros Morne National Park, has sparked resistance from environmental movements and has brought the tourism-oil interface into sharper focus. We draw on internet ethnography of key websites and web 2.0 content, as well as interviews with core members of environmental organizations, in order to better understand how environmental movements are for intervening in environmental governance and shaping the oil-tourism interface in the region. Our analysis shows that environmental organizations use websites and web 2.0 applications to make productive use of the tensions between different political and ecological scales. These new media technologies offer environmental movements important tools for inserting themselves into the oil-tourism interface and defining offshore oil development as both environmentally and socially problematic.

*Nationalism and Antisemitism in Postnational Europe: A Comparative Analysis of Austrian and English Print Media Debates on the Economic Crisis*

Karin Stoegner (Vienna/Lancaster)

**Nationalism and antisemitism in postnational Europe: a comparative analysis of Austrian and English print media debates on the economic crisis**

The problem of nationalism and antisemitism as interrelated ideological patterns is of high relevance in contemporary Europe, particularly against the background of a "postnational constellation" (Habermas) characterised by pluralism and cultural mobility, globalised economy and the nation-state's change of function. Especially in the current period of global economic crisis a particular vulnerability to producing nationalist and antisemitic reaction, whereby moments of both tend to intertwine, becomes evident.

This presentation sheds light on the intermediation of nationalism and antisemitism in a cross-country comparative perspective, including Austria and England. By applying Critical Discourse Analysis, print media debates on the current economic crisis are analysed as to how they operate with nationalist and antisemitic discourse fragments.

In mainstream print media, nationalism as well as antisemitism do not generally occur in a brutally exclusivist manner, as openly articulated racist forms of expression, but rather in latent forms, encoded in everyday linguistic practices and routines. Therefore, a broad concept of nationalism and antisemitism is de-

liberately chosen and the analysis gives priority to everyday modes of inclusion and exclusion. By focusing on discourses around the Self and the Other in the context of the global economic crisis, everyday social communicative practices are problematized in order to trace the role of nationalism and antisemitism within them. This approach draws on the working hypothesis that in contemporary Western societies, extreme and open nationalism and antisemitism are not the only force that stands in the way of a society of world citizens, but also unnoticed but well-practiced routines of exclusionary identification in everyday life. These routines subtly refer to a horizon of understanding, an archive of ideological habits, which by tradition includes nationalism and antisemitism.

*How to Avoid "Normal" Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process*

This communication aims to describe how two high-risk organizations are operated, i.e. nuclear power plants and railway operation system. These technologies are so complex that ambiguous situations often arise. Organizations' response to uncertainty usually relies on procedures. Despite a huge amount of technical documents, applying a procedure is not such an easy task to perform. The chosen one must fit the situation and help to make sense (Weick, 1995) of it. As they appear, "normally disturbed situations" (Journé, 1999) seem to be quite unique. Due to systems' complexity, the process may be in different phases, workers teams may be available or not... Thus coping with technological complexity and uncertainty implies operators to make "difficult tradeoffs and decisions about how much risk is acceptable and even how to measure the risk" (Leveson *et al*, 2009, 240). Rather than focusing on major failures, the communication zooms on day-to-day activities, on how operators make technical decisions that try to encompass all the demanding issues of high-risk systems (safety, system availability, workers' safety, environmental protection, etc.).

Both organizations studied are characterized by a strong technical and social division of work: high-risk systems operators turn to be specialists in their field (production, safety, maintenance, etc.). Yet, these specialists are interdependent regarding the organizations' functioning: organizational reliability thus relies on articulation between humans, and between humans and techniques (Perrow, 1984). Our empirical results describe in depth the nature of arrangements and negotiations made within and between occupational groups to articulate the work. To increase decision-making rationality, professionals communicate with each other. They develop argumentation and explication practices to make their point visible and to contribute to the collective bargain about technical decisions that have to be made. In sum, a major way to cope with complexity relies on communications performed in situation, especially during technical points-of-view confrontations.

*Future Visions in Social Milieus Among the Middle-Class of Nairobi and Mombasa – Empirical Results and Theoretization of Future Concepts*

In this paper I will focus on own research on future visions in the middle classes of Nairobi and Mombasa. These results will be the basis for a theoretical interpretation of these views on future. The various future visions among the different social groups (=milieus) in the middle classes of these two Kenyan cities point at certain social developments and can thus be interpreted as paradigmatic tendencies in the present society. While the social context of the milieu and their future visions might reflect global tendencies like forms of urbanisation they are at the same time highly local as they are adaptations to specific conditions - as the term 'globalization' (Robertson) suggests.

Different social milieus in the middle classes of Nairobi and Mombasa have certain lifestyles and related future visions which reflect different tendencies of the contemporary social world. Kenya is a very interesting case study as the country has undergone considerable change and an increased integration into global structures in the last 20 years while it is still a developing country. Especially the differences in future orientations of East Africa's dynamic economic center Nairobi and the old multicultural coastal town Mombasa can reveal a variety of future references. Thus I will demonstrate by paradigmatic examples how future orientations of milieus in urban Kenya reflect specific social developments and how they can contribute to the theoretical interpretation of sociological future concepts. This way the paper even tries to (re)construct social theory from a specific perspective of the Global South.

**STOLL, FLORIAN\*** (University of Bayreuth, Germany, [stollflorian@gmail.com](mailto:stollflorian@gmail.com))

*Social Milieus in the Middle-Class of Nairobi – Lifestyles, Attitudes and Future Visions Beyond Homogeneity*

One of the key questions in the debate on (political) orientations of middle-classes is how these groups develop their attitudes. To answer this it helps to consider political positions in their heterogeneous sociocultural contexts among the different groups of the middle classes. As an example I will take a look at some social milieus, their lifestyles and their future visions in the middle-class of Nairobi – with a look at milieus in Mombasa as a contrast.

The reconstruction of milieus in the specific context of Kenya's capital aims to demonstrate how a variety of factors influences the lifestyles of Nairobians and that there are heterogeneous groups with different lifestyles in the middle income strata.

Future visions are an excellent indicator for lifestyles and corresponding orientations of milieus to see how they integrate these visions into their daily practices. E.g. in Nairobi developed over the last decade a milieu of Young Urban Professionals between 20 and 35 years who have a consume oriented lifestyle and who are bound to the city. They are usually not driven by religious or traditional values. Their orientations and future visions differ a lot from groups who are strongly led by religious affiliations, (neo-)tribal values or by connections to the country side.

So this paper will provide a sketch of exemplary milieus, their life styles, their living conditions and their future visions. Another relevant question might be how different milieus look for solutions or demand different actions concerning the threat of Islamist terror group Al Shabaab whose last attack shook Nairobi in September 2013. All aspects mentioned will contribute to draw a complex picture of the different social milieus in the Nairobi middle class and their divergent lifestyles.

*Morality in Context: A Multilevel Analysis of the Relationship Between Religion, Governance and Values in Europe*

The exact relationship between religiosity and moral values is understudied, and it is so far unclear what the process of secularisation means for the morality of Europeans. Attitudes to religiosity and the visibility of religion, must be seen in light of whether religion's presence in the public sphere strengthen moral communities and identities, or merely highlight moral differences.

From Haidt's (2012) moral foundations theory and Norris and Inglehart's (2004) existential insecurity theory, we know that religion is associated with traditional and conservative values as well as low levels of political and economic development. One question is whether religion can act as a substitute for well-functioning secular authorities where these are absent, or if it simply has an additional effect on morality that is independent of the quality of governance. Another question is whether the relationship between religiosity and morality changes as the average citizen becomes less religious, and as religious diversity increases.

Using data from four waves of the European Values Study (EVS) 1981-2008, we analyze attitudes to personal autonomy and self interest in a multilevel model of 48 European countries. Results show that religiosity is most associated with moral values that concern personal and sexual autonomy, that individual religiosity is more associated with morality in countries with high levels of religiosity and that religious context is only negatively associated with self-interest in countries with low quality of governance.

*Included But Still Not Equal? Board Interaction and Gender Segregation*

**Abstract**

Included but still not equal? Board interaction and gender segregation

Norway was the first country in the world to pass legislation specifying gender representation on company boards of directors. The Norwegian Parliament passed a new regulation in December 2003 that required at least 40 per cent of each gender on company boards. Before the reform, law opponents claimed that the new women directors would not be able to, or allowed to, participate fully in board decision-making; instead their role would only be window dressing. Based on a questionnaire sent to all directors in public limited companies in 2009, the article studies this allegation.

Results show that women directors report less ability to influence board decision-making than men directors. Moreover, women to a lesser extent feel they are part of the inner circle on boards, where such phenomena are perceived to

exist. These tendencies also hold when we control for a lot of other independent variables such as board role, ownership interest, number of directorships and occupation. Hence, the quota regulated boards show tendencies of hierarchical gender re-segregation.

*Wearing the Veil: Hijab, Islam and Job Qualifications As Determinants of Social Attitudes Toward Immigrant Women in Norway*

Immigrant women are a particularly vulnerable part of immigrant population. In this paper we analyse negative attitudes toward immigrant women in Norway. We focus on immigrant women's formal job qualifications, their religious background and wearing of Hijab—the headscarf that is sometimes used by Muslim women. Using survey-embedded experiments (N=1250) we are able to analyse the net-effects on attitudes of job qualifications, Islamic religious background and Hijab. The results show that natives have more negative views of Muslim women that wear a Hijab, but that the negative effects of Hijab are reduced when a woman wearing it has higher education. With a single exception, the results also show that Muslim background *in itself* (i.e., without Hijab) does not have any strong effects on attitudes of natives toward immigrant women. The results are discussed with a point of departure in cultural threat theories and current socio-economic situation in Norway.

*Provincializing Postsecularism: Critical Reflections On New Western Civil Religion*

This paper aims to denounce the provincialism of the European postsecularism, considering that an insufficient pluralism was often invoked by European Union in order to justify the cultural failure of her integration's process. The Post-secularist orientation risks, if applied without an adequate sociological and intercultural reflection, to become a new civil religion. In the first part I will bring up the consequences of this critical reflection on the actual relation between State and religion in the specific context of Italian society, lacerated between a public secularism and a private Christianity. **In the second part**, I will try to apply to the European postsecularism, as discursive regime of the European identity, two critical hypotheses emerged from the Post-colonial Studies: the suggestion to "Provincialize Europe" and the critic to her "Cultural Hegemony". Provincializing Postsecularism does not mean, of course, repudiate or abandon secularism, but thinking about how to renew it. In Italy the transition to post-secularism can not be seen as a simple historical transition, but also as a case of translation: translation of plural memories, religious tradition, desires of believers. **In the third part**, I appeal to the hermeneutic tradition of Paul Ricoeur, trying to connect a new translation of postsecularism to a new phenomenology of the Italian believer, hoping that the recognition of the religious pluralism can contribute to the constitution of a lay European political community.

*How Market Economy Did Away with Violence: A Liberal Story and the Ugly Truth of Contemporary Slavery*

The history of power and violence in modernity has traditionally been conceptualized within a nation state-framework and along notions of centralization: While socially dispersed in pre-modern times, power and violence had later be-

come increasingly concentrated in the political realm. In the course of functional differentiation, the core feature of modern societies, a state apparatus developed which organized positions of power and ultimately monopolized the legitimate use of violence. Violence, thereby, more or less disappeared from all other social spheres which turned into arenas of predominantly peaceful cooperation. With regard to labour relations, this process was facilitated by the alleged irenic functions of market transactions: Contractual relations and trade are premised on trust and, thus, do not allow for manifest violence in the economic realm. Accordingly, it has been claimed that capitalism was the driving force behind the abolition of slavery. However, violent labour relations have not ceded to exist. In fact, contemporary slavery is a pervasive phenomenon subjecting millions of people to privatized violence. This paper aims at making sense of this situation by discussing the relative merits of the claim about capitalism's civilizing effects on labour and relating it to contemporary slavery from the perspective of a world society shaped by economic globalization and the transformation of state authority.

#### *The Transition from School to University: Pressure and Coping in Catalonia (Spain)*

In this paper I present results from a study about university transitions in Spain. Young people face uncertainty, precariousness and discourses that individualize structural problems currently in most Western societies. Spain suffers, moreover, from the severe effects of economic crisis and high unemployment, accompanied by severe cutbacks in the education system and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplifying the sample with first-year students from underrepresented groups. I selected and analyzed several of the focus groups and interviews with the documentary method including elements of intersectional analysis.

The end of school is characterized by uncertainties and pressures, especially related to being admitted to the chosen studies, the study choice itself and fears not to be successful in university – both, academically and socially. Students experience these pressures differently and show varying strategies to handle them, whereat their personal characteristics, structural dimensions and representations interact. I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

**STREINZER, ANDREAS\*** (University of Vienna, [andreas.streinzer@univie.ac.at](mailto:andreas.streinzer@univie.ac.at))

#### *Creating a Gift-Based Sphere of Exchange in Greece*

##### **Background:**

A large number of groups all over the world are creating alternative, utopian visions of a world governed by non-monetary economies based on bartering and gift-exchange. Both the perceived lack of solidarity in market economies as well as the daunting existential situations people are facing in terms of poverty provide the ground on which such visions of solidarity economies are exploding today.

##### **The TEM scheme in Volos:**

The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war; cutting the trade relations between Greece and the Middle East) and the effects of the austerity policies (creating a lack of disposable income in the official currency).

In Volos, an alternative distributive system came into being in 2010 with the installation of the TEM scheme. Connecting time-banking, a complementary currency model and free bazaars, citizens of Volos are trying to realize an alternative economical system.

##### **Contradictions and Challenges:**

However, the contradictions of this real world application of a solidarity economy are not to be neglected. Ethnographic accounts of gift-based economies suggest a high degree of social control and mutual distrust in gift-economies. National states as well as the mainstream market economy are fearing the potential bypassing of commercial law and tax obligations. Social groups that are able to produce economic value (think children, disabled, non-skilled) are at risk of being even more marginalised. Furthermore, it is likely that the TEM scheme only

provides an alternative sphere of exchange rather than replacing the mainstream economical and societal model.

The case study that will be presented shows how citizens enact a social utopia and the contradictions and pitfalls they are facing while doing so.

**JÓNASDÓTTIR, ANNA G.** (Örebro University)

#### *Feminist Theorizing of Intersectionality*

This paper arises from collective work within the 5-year Swedish Research Council project, "Feminist Theorizings of Intersectionality", organised within the GEXcel Collegium for Advanced Transdisciplinary Gender Studies (Örebro-Karlstad-Linköping Universities), with a specific focus on the equality architecture, and in part from the EU FP6 project QUING.

The whole larger project examines intersectionality as a central concept in contemporary gender studies, in relation and dialogue with the diverse, and sometimes conflictual, theoretical and political stances in feminist debates. The project is designed against the background of the rich and diverse feminist traditions for theorizing of intersectionality, but it is also informed by the tensions between these traditions.

This paper analyses and compares how equality architectures (Walby, Armstrong, Strid, 2012, *Social Politics*) in Europe are restructured and challenged by the developments related to intersectionality and diversity, and the implications of the restructuring for theories of intersectionality. It links concepts of equality and intersectionality to policy frames and frameworks. It examines how the challenges of intersectionality are reflected and dealt with "on the ground", in practical equality architectures on national and institutional level, e.g. in governments and universities, and the implications for gender equality and for the quality of the gender equality architecture. It takes the merger of equality institutions in European countries as case studies and analyses the implications of the mergers for theory and practice.

Preliminary conclusions based on previous research (Walby, Armstrong, Strid, 2012, *Social Politics*, QUING) suggest that even though the quality of the architecture may have improved by the inclusion of multiple inequalities, there may be a reduction of quality in terms of resources. For theory, preliminary conclusions suggest that intersectionality as mutual shaping (Walby, Armstrong, Strid, 2012, *Sociology*) may be a more successful approach to theory and practice than the often-prioritised mutual constitution.

#### *Competing Narratives of Modernity and Muslim Middle Class in India*

##### **Competing Narratives of Modernity and Muslim Middle Class in India**

The last decade has seen an increased interest the "phenomenal rise of the Indian middle class". With economic liberalization since the 1990s, the entering of multinationals into the Indian market and the simultaneous process of a rapidly growing transnational media and consumption culture "new economies of desire" have developed. Boundaries between 'traditional India' and the 'modern West' have been broken down and a new national self-image as a modern global player has emerged. Public Indian discourses typically make a correlation between the growing middle class and the national pride of modern India. While increasing consumer choices, and western connoted values are important symbolic markers of middle class membership, the latter is linked to an expressive and confident af-

firmation of "Indianness" which is primarily oriented around a Hindu India. Taking the hype over the growing Indian middle class as a point of departure, the paper will question this tacit equation of the middle class and Hindu Indian modernity and draws attention to the Muslim middle class. It delineates how narrative and performative aspects of middleclassness are tied to a new economic nationalism and discourses on Indian modernity. A focus on the multipolar transnational references in knowledge production offers the possibility of acknowledging the entangledness of competing narratives of modernity and middleclassness in India and within Muslim middle class in Lucknow (the capital of the North Indian State Uttar Pradesh) in particular. Apart from discussing the perspective on middle class as agent of change, the paper thus addresses the fragmented character of the Indian middle class and questions the equation of Modern India = Hindu India, i.e. questions the homogeneous character of the Indian middle class.

#### *Contesting Hegemonic Language through Films: A Study of the Vicissitudes of Taiwanese-Dialect Cinema*

This paper examines the cultural warfare over national languages through investigating the rise and fall of Taiwanese-dialect cinema, which was identified as a counter-hegemonic project against the monolingual ideology in Taiwan. How did Taiwanese-dialect cinema manage to rise in the 1950s while the émigré regime KMT officially banned the use of Taiwanese-dialect? Even more curious, why did the dialect cinema suddenly die out ten years later? In this paper, I will argue the Taiwanese filmmakers intentionally resisted KMT's language policy through skillfully acquiring overseas capital to produce dialect films, which were highly popular among overseas Chinese in Southeast Asia. In the climate of Cold War, the KMT on one hand had to maintain legitimacy domestically, and fought against the Communist Party of China (CPC) to win over overseas Chinese on the other. The unexpected success of Taiwanese-dialect cinema was turned into KMT's asset to secure overseas Chinese support, and hence the dialect filmmaking was tolerated. After discovering other ways to win over overseas Chinese, the KMT manipulated regulations on filmmaking and initiated a national language campaign to stigmatize the usage of Taiwanese dialect, all of which led to the demise of Taiwanese-dialect cinema.

#### *The Representations of Disabled People in Elementary School Textbooks in Post-War Taiwan*

Existing literature has primarily investigated the representations of class, gender, ethnicity, and sexuality in textbooks. However, few studies focus on the representation of disability in the education system. This paper uses content analysis to explore the frequencies, categories, naming and portrayal of disabled people in elementary school textbooks in Taiwan, from 1952 to 2003. From a disability studies' viewpoint, we explore the ableism ideology in the textbooks. First, disabled people are underrepresented in the textbook. The disabled people represented in the textbooks were mostly people with physical disabilities; people with mental illnesses were ignored. Second, the naming of people with disabilities change from "the handicapped" (cán fèi) to "the disabled people" (zhàng ài zhì). Third, people with disabilities were usually viewed as "the other," who needed to be helped or who inspired "normal" people. Fourth, disability was defined as an individual problem instead of a social problem. Finally, disabled people represented in textbooks were mostly voiceless. There was no discussion on the world view of disabled people or disability, and there were very few discussions addressing the diversity and multiculturalism of disabled people.

#### *Emergence of the Interns' Collective Actions*

This paper looks at the protests at both collective and individual levels taken by student interns in Chongqing in the summer of 2013. Drawing on a 5-month participant observation of the protesters' school life and their internships in the electronic manufacturer IYD, this article examines the favourable factors, features and outcomes of the interns' collective actions. The author first argues that the emergence of collective action by these student interns could be attributed to the injured self-esteem during their placement and the culture of solidarity emerged from their lives in school. Regarding the first reason, those student interns from the occupational school had higher self-respect and expectations for the future than their counterparts of previous generations. Meanwhile, the student interns have encountered "coercive discipline" which aimed at eliminating students' humanity during their internship. These two factors contributed to the injury of students' self-esteem in their internship and their resentment towards the factory managers. Second, it is found that the students' collective actions tended to take

the form of violent fighting rather than strike due to their previous school experiences. The students usually resorted to violence such as fighting to resolve individual or collective disputes in their school. Third, the author suggests that school violence not only determined their action repertoire, but also help to nurture a sense of solidarity and brotherhood, which in turn provided a supporting network to students, particularly to those who lacked support from their family and teachers, flavouring their workplace resistance. Fourth, the student interns' collective actions tend to be generally scattered and transient. Last but not least, most students who participated in the collective actions were later expelled from factories and schools, negatively affecting their prospects after the internships. This paradoxically consolidated their sense of solidarity, sowing the seeds of future resistance against capitalist exploitation.

#### *Norbert Elias: Figuration As a Solution of Problem of Society of Individuals*

One of the questions that Norbert Elias tries to resolve in his work - either explicitly or implicitly - is the issue of the relationship between the individual and society. Elias critically assesses two resolutions to this issue that sociology offered in his time, namely the Weberian conception of individualism that postulates the human individual as the starting point of sociological thought, and the Durkheimian concept of holism, which considered society as a whole as the starting point, giving regard to holistic, supra-individual social facts. Elias considers both of these solutions one-sided and unsatisfactory, and in his conception tries to supercede them. His strategy is close to that of Georg Simmel before him. It consists in highlighting the "third" that lies between the individual and society, which connects them. Simmel calls this "third" "Wechselwirkung". Elias speaks about "figuration". In this paper, we consider how successful Elias' strategy is, its positives and its shortcomings.

#### *Politics and Policy Making Approaches to Development Practices: Towards a Sustainable Citizenship*

Thinking around the politics of development we are able to identify a growing body of research into the actual politics of development that threatens to turn mainstream governance thinking 'upside down'. Politics stands at a crossroads caught between discrediting the 'good governance', and repoliticizing tools and discourses that attempt to reposition politics, creating space for alternative thinking.

Social theorists situate 'Rights Talks' as politics [as social movements] and institutional arrangement that links specific rights to developmental practices, lends support to marginalized sections, making it possible for them, as well to policy planners to re-politicise areas of development work.

Ever since participation entered mainstream development discourse, critics have attacked it as form of political control. If development is indeed an 'anti-political

tics machine' the claim is that participation provides a remarkably efficient means of greasing its wheels.

Engagement into an idea of technological citizenship or (sustainable politics) is to re-politicize technology for placing politics at the centre --[not by displacing it. The paper draws on several mechanisms that may underlie this membership: - that is sustainable technological citizenship as a form of membership. Applying this notion to current technological culture, sustainability is taken as a generalized form of justice.

### *Mosque Associations and the Expansion of Socio-Religious Infrastructure*

Mosque associations represent the social and organisational core of Muslim religious life in Germany. Their primary goal is both the practice of religion and the transfer of religious knowledge to its members, irrespective of their specific shape (e.g. organisation affiliation, ethnic composition, etc.). More recently, sociologists draw attention to the increasing multifunctionality of the mosque associations, which also offer leisure activities and courses with an orientation towards the German society, like e.g. German language courses. Previous studies and my own research suggest that this development is a result from both internal changes (demographic change, unemployment among members) and changing expectations of their environment, which are closely linked to the widespread integration debate.

However, a closer look on the expectations of the environment reveals a paradoxical situation. On the one hand Muslims are expected to open up for the German society by offering services which go beyond religious activities and support the socio-economic advancement of their members. On the other hand authorities and other urban actors are sceptical about additional services within the mosques as they fear that the infrastructure might increase segregation of the Muslim population and thereby endanger integration.

The present paper examines how mosque associations deal with the conflict between their own plans and the contradictory expectations of their urban environment. I have conducted case studies about mosque building conflicts in several cities of North-Rhine-Westphalia. The empirical findings are based on expert-interviews with representatives of Muslim communities and churches, neighbourhood associations, administrations and politicians. Furthermore, I have analysed newspapers and different documents (statutes, city council records, declarations) and I did participant observation in council meetings and neighbourhood assemblies. A case comparison shows, from the bottom-up-perspective, how different actor-constellations and local systems of relevance affect the development of the local Muslim organisations.

### *The Complicated Relationship Between Generalized Trust and Democracy*

R. Putnam (2001) insists that social capital is made up out of generalized trust, reciprocal norms, and social activities. Social capital, he points out, has a strong and positive influence on democracy. An analysis of the 2005 World Values Survey Data, however, does not show us such a relationship between generalized trust and democracy. This fact seems to imply that Putnam's thesis can be applied to only advanced democracies. In this presentation, I will discuss the reason such a phenomenon emerges against the prediction of Putnam's social capital theory, and show that the social capital theory does not need to be rejected, but needs to be complemented by new theoretical assumptions. In order to explain the weak correlation between generalized trust and democracy, I distinguish between trust based on democratic values and trust based on authoritarian values. I then demonstrate a simple mathematical model assuming individual's rational choice and different network effects of the two types of generalized trust. This model enables us to explain a non-linear relationship between generalized trust and democracy, as it allows us to see that generalized trust has both positive and negative influences on democratic values because it intermediates with educational achievement. Thus, we can say that Putnam focused on only the positive influence of generalized trust on democracy in advanced democratic societies, and ignored the negative influence of generalized trust on developing democracies. In order to test this theoretical explanation of the relationship between generalized trust and democracy, I analyze the 2005 SSM (Social Stratification and Social Mobility Survey in Japan) Data and 2005 World Values Survey Data. An analysis using multilevel SEM shows that predictions of non-linear correlation between generalized trust and democracy at both individual and nation levels are accurate.

### *"Lifestyle Migration" and Quality of Life in Japan*

938

In Japan, the number of people who moving to rural areas (or the countryside) from urban areas (or metropolitan area) is currently increasing. In this presentation, I will examine this phenomenon by using the idea of "lifestyle migration", and then discuss the relationship between the decision to migrate and enhanced quality of life.

In foreign countries, "lifestyle migration" means moving to elsewhere in search for a better way of life (Benson & O'Reilly 2009). This idea is associated with a new form of international migration, unlike the case of internal migration in Japan. However, "lifestyle migration" occurs as result of self-reflection among these migrants, and consequently, this idea can be adopted to describe Japanese who move to rural areas from urban areas in Japan.

Searching for a better way of life by moving to the countryside relates to quality of life. For example, in my research at Chichibu area in Saitama Prefecture, I found that some migrants engaged in farming, but they often visited the nearby urban area where they engaged in consumption activities. Meanwhile, some people chose to keep working in Tokyo. That is, a sense of "the better way of life" differs according to each migrant. However, moving to rural areas had a positive impact on the health and mindset of migrants; in the countryside, they could achieve balance between work and leisure. Notably, they do not move for the sake of work or leisure alone, but aim to control both. In my presentation, I will attempt to consider the relationship between "lifestyle migration" and quality of life through a case study of migrants who moved to the countryside in Japan.

### *Changes in Urban Brazilian Family Arrangements*

**Brazil has experienced great and complex changes with contradictory aspects. The country has experienced a modernization based on a development model with an excluding character.**

**Changes in the family relations were also notorious. The family model characteristic of the 1950 decade lost importance, substituted by a new model, whose members are not only defined by sex and age criteria. This change was not, however, linear. It summed up the coexistence of traditional patriarchal values with nowadays-individual values. Some of these changes can be seen in the declining marriage and fertility rates and increases in co-habitation and non-marital unions. Parallel to this, there was an increase in the number of divorces and a decrease in the only male breadwinner family. There was also an increase in the number of families with a female head, not restricted to low income groups. It is important to mention the impact of the new female role in the society in these family changes. Increase in the women's schooling, decrease in fertility rates and the female participation in the labor market influenced in a significant way the family relations.**

**The main objective of this study is to analyze urban families in the last 50 years, using data from the Brazilian Demographic Census. The analysis consider different dimensions: the impact of changes in gender relations with respect to familiar responsibility, effects of family income, status of marriage/union, the age and schooling of the head of the family and regional inequalities.**

**In spite of the changes in the family arrangements, it is worth mentioning the maintenance of the family ties in the Brazilian society. These changes in the Brazilian families are though more complex than the changes in the developed countries due to the strength of patriarchal values that might be a deep-seated characteristic of the Brazilian culture.**

### *Consequences of Delayed Evacuation in Iitate-Mura Village*

Residents of Iitate-mura in Fukushima prefecture, located within 30 to 50 km radius of TEPCO's Fukushima Daiichi nuclear power plant, got their first instruction to evacuate 42 days after the earthquake, and they began to evacuate in mid May. In the evening of March 15, just 4 days after the accident, the radiation level measured in front of the town hall of the village showed 44.7µSv/h. So the majority of villagers stayed in the village where the radiation was level was high, for over 2 months. Why was their evacuation delayed? There are two reasons behind this delay. First, although the Japanese government enlarged the evacuation zone from 10 km radius to 30 km radius shortly after the accident, most of Iitate village is outside the 30km radius. Second, village authorities set priority on protecting and sustaining the major industries and jobs in the village. Whether this decision was appropriate should be put to review. Now the villagers are in an even more difficult situation, being unable to draw a plan to rebuild their lives while the government is undertaking decontamination project and promoting them to go back to the village. Focusing on Iitate-mura, this paper addresses the issues regarding the political measures to cope with the nuclear disaster, with comparison with municipalities in the neighboring region. (220words)

*The Role of Family Caregivers and Their Working Lives:  
 Convergences and Divergences Between France and Japan*

This paper presents the method and results of a comparative research on family caregivers and their professional trajectories in France (Ile de France) and Japan (Osaka).

The aim of the research is to chart two kinds of trajectories in a person's life: professional and of caregiving, and to examine their interdependence. In the current context of the prolongation of life expectancy, a person can provide care several times in different periods of life, or care for more than one person in parallel at the same time. The care provided may be for different causes of frailty. We should therefore look into the temporality and the global view of the caregiver's life without limiting the study to a certain type of frailty.

We rely upon a sequential analysis of data on caregiver's trajectories. We also collected data on care networks developed around the caregiver by individuals participating in the care, including care for the caregiver. The typologies of professional trajectories are analyzed in relation with variables such as socio-demographic characteristics of the caregiver and care-receiver, types of care networks, etc.

We try to study the different configurations that come out for Ile de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

*The Islamization of Leisure in Indonesia (A Comparative Analysis of Aceh and West Java)*

In this culturally unequal world, Islam is perceived as a minority civilization which is acted upon by the dominant "western" civilization. The influence is allegedly reflected in various spheres such as leisure in which a "division of labor" between leisure and work come forth. The recent revitalization of Islam portrays a more assertive Islam in society with the development of Islamic leisure in addition to Islamic economy. The case of Indonesia indicates that there is a process of Islamization of leisure with the application of Islamic values such as the prohibition of "haram" or non-"halal" food and liquor, "khalwat" (close proximity between men and women), gambling as well as the obligation to comply with Islamic dress code. The implementation of this process can be seen as a colonization of life-world along with economy and state in which society emerges as a new arena and theater. A comparative analysis between Aceh (a Shariah province) and West Java (a non-Shariah province) will shed lights on various social movements that support or reject the Islamization of leisure. The roles of CSOs, political parties, state and intellectuals and their efforts to achieve compromise will broaden our understanding on the multiple meanings of leisure—and social life.

*Housing Estates As Experimental Fields of Social Research*

In this presentation, I discuss researchers' relationships with the research object and its transformation in empirical sociology by examining "danchi" (housing estates) studies conducted by Japanese sociologists.

The Japanese housing policy system was quickly established in the early 1950s, and the reinforced concrete housing complexes stimulated journalistic interest. Most influential researchers in postwar Japanese sociology began studying these housing estates during the mid- 1950s and 1960s. One reason was that social surveys involving random distribution of standardized questionnaires to individual respondents were compatible with the new housing form. Housing estates became experimental fields of social policy and social research.

Urban sociologists attempted to comprehensively grasp the lifestyles and social consciousness of housing estate residents. Social psychologists introduced sociometry to describe social relations evident in these housing estates. Researchers often referred to the seminal text "Organization Man" by William Whyte (1956), with a Japanese translation published in 1959. According to Whyte, white-collar residents in the newly developed suburban residential areas formed active neighbor relationships. Kokichi Masuda, a family sociologist, emphasized the contrast

of the rarity of neighbor relationships in Japanese housing estates with what was the norm in the United States.

The image of housing estates as pictured by social researchers transformed around 1960. Studies of residents' associations showed that housing estate communities were being formed through cooperative solutions found for residents' common problems. Whether or not a housing estate was formed as a "community" depended on how the residents related to the space. This change was also reflected in the relationships between the researchers and the respondents in that the distance between them when using the standardized attitude and opinion survey was lost. The change in the image of housing estates in the 1960s can be said to overlap with a turning point in social research.

**SULEK, ANTONI\*** (University of Warsaw, [sulek@marymont.pl](mailto:sulek@marymont.pl))

*Between the War and Consolidation of Communist Power: The Forgotten Social Research in Poland in the Second Half of the 1940s*

Opinion commonly held has it that empirical social research in Communist Europe resurfaced only as late as in the second half of the 1950s, during the post-Stalinism 'thaw'. However, in some countries like Poland, Czechoslovakia and Hungary, social research was possible immediately following the WWII. It did not last long though. Consolidation of Communist power delivered blow to this research in the late 1940s.

In this paper I discuss how in the years 1946 – ca. 1950 sociologists in Poland took an advantage of opportunity to study the society in which they lived. Polish society has just came out from the war and was about to enter a process of political 'reconstruction' under the leadership of the Soviet-style Communist party. Following the war sociologists immediately started to investigate social and psychological effects of the war, post-war migrations, new communities in the former German territories, ethnic relations (especially Polish-Jewish), and social mobility as a result of the war and the political changes. Fieldwork and questionnaire were methods of these studies. However, politically sensitive issues, e.g. mechanisms of political power and public opinion were banned by the authorities as topics of sociological inquiry. Later in the 20<sup>th</sup> century the post-war social research was almost forgotten and only now is being rediscovered by social historians.

*Housing's Contribution to Poor Health Among Aging Residents in Informal Peri-Urban Communities in Texas: A Mixed-Method Geospatial and Case Study Approach*

The data analyzed in this paper were collected through a two-part mail and in-person survey of 630 households in two peri-urban, low-income, informal settlements in central Texas. The survey documents housing conditions and needs in these communities where a significant portion of the population is Hispanic, elderly, and low-income. Analysis of the survey data interrogates the links between chronic illness and poor dwelling conditions in an aging population. To better understand the intersections between aging, health and low-income, self-built housing we analyze detailed data on reported problems with the dwellings and incidences of illness and disability. We present descriptive findings in the following three topic areas: 1) specifics of dwelling structure; 2) perceived problems with the house design and structure; and 3) resident morbidity problems, physical disabilities, and how these intersect with the fabric and design of the dwelling unit. In addition, we use Geographic Information Systems (GIS) analysis of the location and geospatial characteristics of the communities to map how residents' access to health and social services varies relative to those residents not living in the urban periphery. This analysis allows us to identify appropriate rehabilitation initiatives that will lead to home and health improvements in informal, peri-urban communities.

*The Power of Women's Representation in Local Government in Combating Women's Underrepresentation at Local Politics*

The importance of local politics is on the rise particularly concerning the discussions of gender inequality in and relations with power, democracy, economy, society and social life. This is due to the fact that the central authority is no longer the locus of power in politics in combating global problems. Particularly women's involvement in local politics had been invisible in the discussions of women's underrepresentation for a long time both in academic literature and political life. In

the last two decades, the academic interests about the relation of local politics and gender have been on rise and policy-makers who are aware of this fact have been paying serious efforts to bring local actors to the front to increase women's political involvement. Since the 2000s, Turkish government has charged the various branches of politics, including the municipalities and mayors in the scope of this research, in enhancing women's participation particularly in local politics. However, recent studies and statistics reveal that neither the number of women at local level politics have been increased either these responsibilities have been fully acknowledged by the local actors in Turkey.

It is assumed that, as women representatives, female mayors would contribute to increase women's political participation in local politics and be more assertive to fulfill the related responsibilities to support women's involvement into local political relations. Thus, in the case of 2009 local elections in Turkey, this study aims to find out to what extent female mayors can contribute in enhancing women's political involvement at local level. In that regard, this research will try to analyze the related discourse and activities of female mayors who were selected in 2009 local elections in Turkey by in-depth interviews.

#### *The Controversy: Family Separation and the Immigration Law in the U.S.a*

This study examines whether the Courts in the United States are recognizing the provisions of the UN Convention on the Rights of the Child as an international customary law even though it is not ratified by the U.S.A. Drawing on multidisciplinary sources, including the work of scholars and legal professionals the article explains the deportation of parents and discusses the family separation through immigration procedures and human rights approaches. The article then presents the results of recent court opinions, and compares court decisions. It concludes that some courts have made significant progress toward family integrity and for the best interest of the child, however some court decisions rejected to recognize the Convention and gave priority to the State interest and deported numerous parents even though their children are citizen of the U.S.A. On the other hand, this article also identifies a need for further improvement, which can be accomplished through the contributions of national and international organizations.

#### *Care Migration in Asia: A Comparative Study*

As some countries in Asia develop economically and experience major demographic challenges such as persistent below-replacement fertility, the issue of immigration and care provisions emerges. It is particularly important in the Asian context where people have to rely on the market in the absence of effective welfare state. This Asian situation is called "liberal familism." In this paper, we try to answer the following questions relating to care migration by drawing on data from China, Japan, South Korea, Taiwan, Singapore, Thailand, and Vietnam: Whether and how care provision is mediated by international migration or internal migration? What are the working conditions – are the migrant care workers documented or undocumented? Are they protected or covered under the local employment laws? To what extent are they allowed to immigrate to the host countries? What are their ethnicities and nationalities? What is the history of employing care workers in different countries – for childcare and/or for elderly care? What are the primary sites at which care is provided (for example, in the households via marriage migration or in institutional spaces via healthcare migration)? What are the challenges faced by sending countries and receiving countries? Finally, what are the ways in which care migration relates to various forms of social stratifications in Asia – in particular, gender, class, ethnicity, and urban-rural inequalities?

#### *Lateral Networks of Homeowner Associations and Civil Society Building in Urban China*

Civil society organizations are crucial for the development of civil society, because these organizations teach citizens democratic practices on the one hand, and constrain the power of the state on the other. Recently, lateral networks of homeowner associations are being formed in many Chinese cities. While not be-

ing recognized by the authoritarian state or even faced with potential political risks, these networks are playing an ever more important role in facilitating homeowners' collective actions to defend their private property rights. Existing literature tends to understand homeowners' collective action as a reactive response to counteract the powerful real estate developers and their management agencies in a yet mature housing market. But based on interviews, participant observations, and online discussions of the lateral networks of homeowner associations in Beijing, Shanghai, and Guangzhou, this study argues that these networks are proactively adopted as important infrastructures for the development of civil society organizations in urban China. Driven by the ambitions of promoting the development of civic organizations in China, the activists use homeowner associations as the most practical way to make such attempts. They not only deal with immediate material interests concerning housing and neighborhood management, but also strive for the participation of member associations on a regular basis and for the engagement in city decision making processes. This study attempts to explore homeowner activists' motivations as well as their strategies and tactics to establish and run such lateral networks. It has profound implications for state-society interactions and civil society building in contemporary urban China.

#### *Pro-Growth Coalitions and Homeowner Activism – a Comparative Study in Shanghai and Taipei*

Middle-class homeowners, whom one would expect to be the gainers of China's urbanization, have formed one of the discontented groups as other social groups such as relocated households or migrant workers. They adopted a variety of collective actions – petition, litigation, sit-in demonstration – to uphold their private property rights. Existing literature tends to understand homeowners' discontent as a result of the immature housing market, the deceitful real estate developers and their management agencies, and the non-independent legal system. While focusing on immediate causes, existing studies neglect more important structural factors that contribute to homeowner activism. By adopting a comparative study – based on documents and interviews – in Shanghai and Taipei, the author argues that different levels of state intervention in housing-related disputes lead to different dynamics of homeowner activism. In Shanghai, the local states are *de facto* land-owners and play a dominant role in planning, relocating, and leasing the land to the developers. They build close relationships with the developers. When housing disputes emerge, the local states are motivated to intervene and ally with the developers considering the fact that they have substantial interests involved. This explains why more often than not homeowner activism in Shanghai directly targets the government and proceeds in a non-institutional manner. But in Taipei, the local states are mere regulators in land development processes. Individual land-owners initiate the redevelopment projects and negotiate with the developers. Housing disputes in Taipei are usually dealt with through negotiation or courts. This study offers a new perspective to understand increasing homeowner activism in Chinese cities. It also has profound implications for state-society interactions and urban governance in contemporary China.

#### *International Migration of Nurses from India: A Case Study of Delhi Nursing Colleges*

This paper examines the extent of potential nurse migration from India and their causes, types and nature. **Methods:** Apart from empirical study, the research also relies on secondary sources. The study is based on the response of 48 potential migrant nurses from Delhi.

**Discussion:** India has been and will continue to be an important source country of nurses for the developed countries in the light of emerging shortfall of nurses in the major destination countries in the future. Under the current scenario, it may be presumed an annual out-flow of 8-10 thousand nurses from India. However, in spite of the fact that the country has a stock of 1.6 million registered nurses, there is an additional requirement of 10 lakh nurses to fulfill nurse-population ratio of 1:500. The current nurse-population ratio stand at 1:1100 compared to the developed country averages of 1:150. Therefore, India needs to make double effort to produce nurses for meeting both domestic and international demand by creating a vast and sustainable infrastructure for the production and training of nurses.

**Policy suggestions:** First, improving the availability of data on migratory flows of nurses from the country. Second, a detailed analysis of alternatives available for procuring and filling up the vacant posts in the shortage areas on the one hand, and identifying and targeting the surplus areas for international recruitment of nurses on the other. Third, twinning programmes between organizations of both source and destination countries to undertake programmes of research, staff exchange, staff training and support, and flow of resources to source countries. Fourth, preferential treatment for migrant nurses for immigration in the destination

country and facilitate return as per the willingness of migrant nurses, and *finally*, signing of nurse-mobility partnership agreements with the important destination countries, such as, UK, USA, Middle Eastern countries, Ireland and Australia.

**SUNA, BIRENDRA\*** (Indian Council Social Science Research, [sona.birendra@gmail.com](mailto:sona.birendra@gmail.com))

#### *Public-Private Partnerships and Micro Health Insurance Schemes in India: A Sociological Perspective*

This paper is an attempt to look at the socio-economic features, and health seeking behaviours of the lower income group and their involvement in the functioning of the micro health insurance schemes. The model micro health insurance as a mechanism of social capital is examined its strength to create a good "health for all". In other words, it focuses on the importance of public (government) intervention to create a feasible health care systems with the partnership of private both for-profit and non-for-profit sector, so that, the micro health insurance schemes profitable for the vulnerable sections of society. More precisely, practicable schemes for better health can be created by the intensive involvement of public and private, by which willingness-to-pay for health can be possible by the lower income groups.

Despite increasing acknowledgement that social capital is an important determinant of health and overall well-being, empirical evidence regarding the direction and strength of public-private linkages in the developing world is limited and inconclusive. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of experiences with different health financing methods.

Currently, the health sector is unable to meet the growing needs of the population and is severely financially constrained. The study estimates the impact of the program on trust and cooperation in rural communities. Rashtriya Swasthya Bima Yojana (National Health Insurance Programme) is the government initiative to provide quality health facility to the lower income groups. It is important to emphasize that the study does not separate the direction of causality between trust and cooperation. The analysis treats both aspects of social capital equally in the impact study public and private inter-linkages for better health facilities of the Indian society.

**SUNARTO, KAMANTO\*** (University of Indonesia, [kamantos@yahoo.com](mailto:kamantos@yahoo.com))

#### *Ordinary Sociologists*

Until the 1990s the sociology department of a public university in Indonesia strengthened their college teaching staff by recruiting college seniors with good academic achievements as part-time teaching assistants. After obtaining their bachelor's degrees in sociology some of these sociologists would continue to teach on a part-time basis while waiting for an opportunity to be recruited as a full-time faculty member. For most of them, however, the wait was in vain, among other things because there were very few vacancies available, and also because the eligibility standards for becoming a full-time faculty members were gradually raised. After teaching part-time for a number of years – while, in some cases, working towards a masters' degree -- most of them finally sought and obtained full-time employment at other public or private higher education institutions, where they continue to teach sociology.

The practice of recruiting college students as teaching assistants was eventually discontinued. Factors such as centralization and bureaucratization within the university, the tightening of recruitment criteria for teaching staff at colleges in compliance with national standards, and the application of efficiency criteria forced the department to abandon its policy.

This paper, a case study of sociology teaching, describes the biographies of a selected sample of former teaching assistants in sociology – their social backgrounds, present social statuses, academic performances and careers. The life history data are based on depth interviews with informants who were part-time teaching assistants recruited in the 1990s, are still working as academics at institutions of higher education outside their alma mater, and are still teaching sociology. Data for this study are also based on interviews with on-campus resource persons, and on the examination of relevant documents.

#### *The Indonesian System of Higher Education, Global Challenges and Domestic Contestation*

**The Indonesian System of Higher Education, Globalization Challenges, and Domestic Contestation**

Author: Kamanto Sunarto (University of Indonesia)

In the wake of the 1998 reform movement in Indonesia which put an end to 32 years of authoritarian rule, the subsequent governments introduced a number of higher education reforms in response to globalization challenges. As part of these reforms the new governments ratified international and regional agreements, and introduced new acts, regulations and policies.

A significant break with the past was the policy of allowing public higher education institutions to become legal entities with more autonomy. Another development was the increased emphasis on quality assurance: the accreditation of study programs and higher education institutions became mandatory, unaccredited study programs were no longer allowed to issue higher education diplomas and certificates, the authority to accredit study programs will gradually be handed over by the government to independent accreditation agencies established by related civil society organizations while the government will only accredit higher education institutions. The government also requires higher education institutions to establish an internal quality assurance system.

As part of its concern with quality the government issued national higher education standards to which all higher education institutions and study program will eventually be required to comply. A national qualification framework has been decreed, which will become the basis for the formulation of learning outcomes of all study programs.

These developments take place in the context of dynamic social and political reforms. While in the past government policies tended to proceed unopposed, government policies in the reform era became more prone to challenges from society. This presentation will discuss the various contestations between the State and Society concerning the adoption of global trends in higher education, and the outcome of these processes.

#### *Undue Process and the Paradox of Increasing Juridification*

Since the publication of Malcolm Feeley's 1979 classic, *The Process is the Punishment*, the idea that improved adjudicative processes necessarily lead to an increase in substantive justice has been questioned. In more recent work, Nasser Hussain, *The Jurisprudence of Emergency* (2003) has argued that colonial legality in particular, relied on rules and laws as a form of rule. Post colonial legal systems, like that of India, are notorious for the costs they impose on those participating in the system, primarily but not only litigants, in terms of fees, delays, the alien nature of legal norms, or the unwillingness of the executive to implement court orders which go against them. This burden falls disproportionately on the poor.

Paradoxically, however, there is an increasing juridification of social and political issues, with a range of disadvantaged groups resorting to the courts, asking for some right or protesting against some violation. This paper explores this paradox of increasing juridification coupled with ongoing and perhaps increasing procedural injustice in the name of due process. Scholars of Indian law have argued that litigation is often conducted to aggravate rather than resolve issues, a transfer of a dispute to another sphere. But in the case of indigenous groups and others attempting to access the courts, knowing they will be harassed themselves, what ideas and expectations are at play? What does justice mean in this context, and is that even the objective?

#### *Heterogeneity of Childlessness in South Korea*

Childless families constitute an emerging family form in contemporary Korea. According to 2010 Census, approximately 15% of households consisted of child-

less couples, indicating that the meaning of parenthood and the norm of child-birth have changed in the post-Confucian agrarian era. The burden of child care and education has exacerbated couples' motivations to become parents, particularly among dual-income families. However, childless Koreans may not be a homogenous group. Some couples remain involuntarily childless due to infertility, and others simply delay having children. In this study, we categorized childless married Koreans into three groups, voluntary, involuntary, and delayed, and examined the factors associated with each group.

Data came from 553 childless married Koreans who had been married at least for three years using quota sampling in metropolitan Seoul. We conducted multinomial logistic regression to identify the individual, attitudinal, and marital factors associated with participants' membership in each of the three childless groups using involuntary childlessness as a reference group. Both the voluntary and delayed groups were more likely to perceive advantages of childlessness, to put less importance on religion, and to have less intention to adopt a child. However, other factors were differently related to the voluntary and the delayed groups. Specifically, attitudinal characteristics were significant among the voluntary group while marital characteristics were significant among the delayed group. The voluntary group was more likely to have negative attitudes toward parenthood and to report a lower ideal number of children compared to the involuntary group. The delayed group was more likely to be dual-income and to report a shorter length of marriage compared to the involuntary group. Our findings suggest that childless couples may not be a homogenous group in Korea. It is worth noting that there are differences in attitudes towards parenthood and marital characteristics depending upon the childless group.

ROJAS, VIVIANA (University of Texas at San Antonio)

#### *US Retirement Migration to the Philippines: Reasons and Explanations for Later-Life Migration*

Studies of retirement migration in the United States often focus at the national level, and there is comparatively little information about the retirees who cross international borders in their search for new homes. Retirement migration flows are unusual in that the late-life migrants select destinations in less-developed countries, contrary to the general pattern of migration from poor to rich countries in search of jobs, higher incomes and a better standard of life. This study has examined the reasons for retirement migration from the United States (US) to The Philippines using data collected from different locations in The Philippines. A non-random sample of 141 US retirees was surveyed. The findings identify four major reasons for migrating to Mexico: financial circumstances, the natural environment, a sense of community and friendship, and finding life/sexual partners. While these relocations contradict much taken-for-granted and popular knowledge about migration patterns around the world, they have important implications for the ways of life, social relationships and welfare of the migrants. More in-depth multidisciplinary studies are needed to increase understanding of this evolving phenomenon.

#### *Becoming Father, Doing Fathering: How Gay Men's Practising of Relatedness, Intimacy and Care Disrupts Normative Constructions of Families*

Fatherhood is frequently conflated with parenthood for any man who begets children. Fathers are typically assumed to be involved parents as 'natural' outcomes of biogenetic relationships with children. Drawing from the findings of a qualitative study, this paper examines the ways in which the gay men concerned distinguished between biogenetic relationships and the doing of fathering and parenting through reflexive negotiation of expected or actual roles and involvement with the lesbian mothers of their planned or current donor-conceived children. The paper highlights three ways in which multiple parenting models based on cooperative nonsexual reproductive relationships between men and women, and intimate same-gender relationships, disrupt normative constructions of family. Firstly, such disruption occurred through the men's deliberate separation of biogenetic fatherhood, motherhood and parenthood from the doing of parenting in ways that suggest relationships with children can be flexible, negotiable and centred on practices of involvement rather than biogenetic relatedness. Secondly, disruption occurred through the men's separation of the doing of father and mother from gendered assumptions about parenting roles; they performed both fathering and mothering. Thirdly, the men disrupted the assumption connecting fathering, mothering and parenting with joint residence through the de-centring of 'home'; neither fixed nor static, 'home' was attached to relationships, not places. Troubling the taken-for-granted primacy of heterosexual two-parent family forms, legal relationships between parents, legal and biogenetic relationships between parents and children and co-residence as benchmarks operating to reg-

ulate families, the men's stories open (discursive) spaces for reconceptualising possibilities for queer fathering, mothering and parenting beyond heteronormative understandings of 'proper' families. Within a context of escalating family transformations in an increasingly complex society, thinking and talking about new forms of practising relatedness, intimacy and care in ways that are expansive and generative will open up rather than shut down possibilities for all families.

#### *A Longitudinal Perspective on Quality of Life in Times of Crisis: Switzerland from the 1990s to Nowadays*

During the past twenty years Switzerland experienced three major recessions and periods of economic slowdown: the prolonged and deep economic stagnation of 1992-95 – the country's most pronounced recession of the post-war period – and the comparatively mild two recessions of 2002-03 and in the wake of the global financial economic crisis of 2008-09. During these periods of economic crisis, unemployment and poverty increased, particularly during the crisis of the 1990s, when unemployment soared from its previously extremely low level. The proposed paper aims to explore the consequences of recessions and economic downturns on various dimensions of quality of life by comparing the three historical periods of economic stagnations.

In order to analyse how quality of life has evolved since the early 1990s, we use various longitudinal databases, notably the Swiss Labour Force Survey (SLFS, available from 1991 onwards), the Swiss Household Panel (SHP, available from 1999 onwards), and the Swiss Statistics on Income and Living Conditions (CH-SILC, available from 2008 onwards). Various indicators of quality of life, poverty, deprivation and inequality, as well as of subjective well-being will be calculated in order to measure and compare quality of life during different recession periods. Our empirical analysis will explore the impact of economic crises for different population groups as well as for various quality of life domains (objective and subjective indicators). First results suggest negative crisis impacts on quality of life and subjective well-being particularly for specific vulnerable population groups.

#### *Being Dad or Mum? about Traditional Parental Roles from the Perspective of Polish and Swedish Fathers*

Parenthood must be concerned as one of areas within which reproduction of gendered practices occurs. In my paper I will try to show how Polish and Swedish fathers understand traditional parental roles, how they perceive biological and cultural differences between motherhood and fatherhood and what they think about gender equality within the household. My paper is based on 52 in-depth interviews conducted with Polish and Swedish fathers in 2012 and at the beginning of 2013. It is a part of broader research project on fatherhood in Poland and Sweden. Interviews concerned men's experience of parenting and are analysed in the institutional and social contexts of both societies. In my opinion these contexts are extremely important here. Stereotypical roles of fathers and mothers are strongly connected to cultural patterns of masculinity and femininity. Beside that Polish and Swedish societies provide, through family policies, completely different conditions for having children and differently approach the problem of work-home balance. Unsurprisingly, these have an impact on how men define father's and mother's roles. Among Polish fathers there is a tendency to look at it with more conservative and traditional approach. They are convinced that it is impossible to cross biological differences between motherhood and fatherhood and therefore father is rather regarded as mother's helper or additional carer. Whereas Swedish fathers are more eager to question imposed by society patterns of behaviour. Sometimes they really struggle with stereotypical gender roles to be more involved in family sphere and try to redefine traditional fatherhood. Obviously these attitudes have an impact on everyday fathering and the way family life is organised. Fathers' perspective is important here, since without their bigger involvement in family life, gender equality cannot be achieved in other areas of social life.

#### *Prosper Or Deteriorate : Modern Millennium's Path To Happiness*

The objective of this academic paper is to present students' perspective on methods of attaining happiness. After realizing that this age group is leaders and possesses the potential to lead, it is helpful to bring their perspective and expand it into a philosophical study to analyze and adapt to the livelihood of the general society as a whole.

The results revealed 4 methods of attaining happiness in the perspective of students. They include 1) Living under moral and ethical conduct and live with the intent of eradicating defilements 2) Setting a constructive intelligence and mindset; human beings have the ability to comprehend logic and causes of phenomenon as well as resolve issues 3) Human beings should place importance on spiritual and interpersonal relation aspects over materialistic aspects 4) Body of knowledge passed on or accumulated by ancestors or knowledgeable people

If ultimate happiness and collective social happiness are the goals of human beings, it is reasonable to follow the path that leads to a good management of life and society by understanding the principles or the valuable rules and apply them in all levels and forms of society.

#### *The Rise of Community in Asian Care Provision*

Theories of civil society sometimes assume or praise a civil society as being independent from the state, in which citizens, by communicating their opinions freely, cultivate their power to claim oppositions and/or propose alternatives to government's decision-making. However, in Asian countries, governments themselves have intervened in cultivating civil societies in the modernization processes. For example, in Japan, the Meiji, Taisho and Showa governments tried to bring up a civil society in order to catch up with western modern nation-states (Garon 1998). The neighborhood association, *chōnaikai*, originates in such a government's effort to organize a cooperative civil society.

Recently, even in many countries including advanced welfare states in the west, the governments have become more relied on the voluntary/community sector to deliver care to the elderly and/or children. Partly because of the financial constraints combined with changes of demographic structures, the role of volunteer/community sector has become more important to sustain lives of vulnerable people. The introduction of the social model of care (as opposed to the medical model) seems to have legitimized this trend.

This paper tries to grasp the weight of voluntary/community sector in care diamonds in Asian societies. It outlines common features as well as differences among Asian societies in the structures of community care provision, and it also investigates how governments promote community care through regulations and incentives. Through these inquiries, it tries to explore whether and to what extent the community sectors contribute to de-familiarization of care in Asian societies.

#### *Why Did the "Blue-Green Coalition" Develop in the Case of Minamata? an Analysis of the Struggles of the Union and Social Movements Against Chisso*

From the late 1960s to the mid-1970s, there was an upsurge of social movements against industrial pollution. Victims of pollution diseases as well as local residents organized anti-pollution movements and opposed the construction of pollution-prone plants in their neighborhoods. Reactions of labor unions to these social movements were indifferent or even hostile. Some enterprise unions supported activities of residents against pollution in principle but withdrew their support when the latter's actions, such as filing lawsuits against polluters, came in direct conflict with the interests of unions and their firms. Other unions at firms that caused industrial pollution stood on the management side and took confrontational attitudes toward local resident social movements.

The paper examines an outlier case of this general tendency (the absence of "blue-green coalitions"), by focusing on the relationship between the enterprise union of Chisso (the SNU) and social movements of pollution victims and their supporters. When it became clear in 1968 that organic mercury discharges from Chisso's Minamata plant caused Minamata disease, the SNU became actively involved in supporting Minamata disease patients and formed cooperative relations with social movement groups concerned with Minamata disease. The paper explores the factors contributing to the formation and development of this "blue-green coalition" and what concrete results the coalition achieved from the perspective of "strategic capacity" of union leaders. The paper argues that the SNU developed its strategic capacity as it coped with challenges posed by hard-line management policy toward the union and management plans to drastically downsize Minamata plant. Union leaders developed the strategic capacity to frame the mutual interests of union members and Minamata disease victims by identifying the management of Chisso as their common opponent in their respective struggles and to mobilize the union's resources effectively in cooperation with social movement organizations in the struggles against the company.

#### *Do Older Women without Work Experience Participate Less? Life Course Analysis Using the Jages Data*

**Background** Social participation, such as being a part of community groups, is key to healthy, active aging. Although social participation in older age may be defined by cumulative experience throughout one's life course, many older Japanese women today have never worked outside the home. As work experience can help expand social interaction and social networks, it is possible that women who have never worked do not participate in social groups as actively as those who have.

**Methods** The Japan Gerontological Evaluation Study (JAGES) is a social epidemiological survey of a community-representative sample of functionally-independent individuals aged 65 and older. In 2010-11, responses were received by post from 112,123 people in 31 municipalities across Japan (66.3% response rate). Social participation was measured by monthly or more frequent participation in any one of six types of social groups (business, volunteer, senior, sport, community, and hobby). Using logistic regression, four models were tested on 41,966 to 44,272 women with a valid response for each outcome variable: whether lack of work experience in older Japanese women is associated with (1) less social participation, (2) less social interaction, (3) less frequent interaction with friends, and (4) fewer friends.

**Results** Controlling for age, equivalent income, family structure, years of education, and health conditions, lack of work experience throughout life was associated with a 21 percent lower likelihood of participating in groups, 25 percent higher likelihood of having less social interaction, and 12 percent higher likelihood of having few friends. The association between lack of work experience and lack of group participation held for all income levels and age groups.

**Conclusion** Lacking work experience appeared to lead to less social participation later in life. Work experience can develop better social skills and more extensive social networks, contributing to more active social participation in older age.

#### *Beyond Duality and Heteronormativity: Gender Display and Manipulation in Japanese Yaoi/BL Narratives*

Boys Love (BL) in Japan refers to commercial fiction and fictional media by and for heterosexual women that focuses on male-male erotic/romantic relationships. These works are more popularly known in other countries as *Yaoi*, a Japanese term often used as an umbrella category that can encompass various Japanese subgenres of male-male erotic/romantic fiction by and for women. The past decade has seen the emergence of studies of *Yaoi*/BL that have focused on gender and sex as analytical categories. Such scholarship is important in understanding fan-based cultures, production and consumption. However, a conflation of gender, sex, and sexuality at the analytical level in *Yaoi*/BL impedes further theoretical development. By making a clear conceptual distinction between these intertwined notions as distinctive analytical categories, this paper attempts to clarify *Yaoi*'s achievement in the (un)conscious feminist agenda among Japanese women. The study examines nearly 800 commercial *Yaoi*/BL novels written in Japanese, which were chosen based on a certain sampling method. Through descriptive statistics based on and textual analysis of the samples, as well as interviews

with professional Japanese female writers, the paper first identifies some important features in the contemporary *Yaoi*/BL texts such as transgression of sexual norms, subversion of gender fixity, renewed definitions of masculinity and femininity, and highly context-dependent sexual orientation of protagonists. By doing so, I argue that *Yaoi*/BL has made it possible for Japanese heterosexual women 1) to transgress normative gender dualism, sexual acts and sexuality at least at the level of discourse; 2) to use men's images not only for their empowerment but also for their own gratification as agent of desire. This is a significant step forward from early *Yaoi* works that focused upon getting affirmation from others and fleeing from patriarchy.

#### *To be or Not to be, That Is the Question: The Bifurcation Approach of the Japanese State and Identity Formation of Koreans in Japan*

Koreans in Japan present an important case for understanding the nature of the interconnections between race, nationalism, and ethnic relations. All too often, studies of these phenomena center on Western cases or on cases where non-Western racial minorities move to Western states. In this paper, however, I examine these inter-relations within Northeast Asia. The Zainichi Koreans or old-timer migrants in Japan (who are already in the fourth generation) must face what I call a 'bifurcation approach,' which makes a strict distinction between the Japanese and the non-Japanese based on nationality in the management of ethnic/racial diversity instituted by the Japanese state and society. In Japanese, the concepts of 'race,' 'ethnicity,' and 'nation' are virtually indistinguishable. The formulation  $\text{race} = \text{ethnicity} = \text{nationality} = \text{culture}$  is essential to the Japanese conceptualization of what makes one Japanese. Moreover, under the Japanese sense of nationhood defined along exclusively ethno-genealogical lines and nationalistic multiculturalism, minority cultures have become fossilized owing to state sponsorship of the dominant Japanese culture. As a result, Zainichi Koreans—who have significantly become acculturated to and share a similar phenotype to the mainstream Japanese—have been racialized and constrained in their formation of hyphenated identities such as 'Korean-Japanese.' Based on interviews with Zainichi Koreans, this paper demonstrates how they negotiate the shoals of race, nationality, and ethnicity in order to survive in a deeply racialized state and examines their collective identity-formation under circumstances in which they have to live by hiding their ethnic origin with a constant pressure to 'impersonate' being Japanese.

#### *Challenging Law and Justice from below: The Public Interest Litigation (PIL) Movement in the Dalit Community*

In this paper, I examine protest movements of the marginalized Dalit community (formerly known as Untouchables) in contemporary India from a case study of Balmiki (a sweeper caste). In particular, I explore the political aspects of caste by focusing on the caste-based quota system, known as "reservation," which is a part of India's affirmative actions.

This paper is organized around two significant issues. The first is the formation of a "new" identity among the Dalits through saint worship, which poses the following question. Why has the community embraced saint worship? The answer to the question lies in their religious choice to worship a saint, which gives them a sense of dignity and empowerment, and helps in the construction of a collective identity among members.

The second issue is the implications of caste-based identity politics. Since the late 1980s, an important factor Indian politics is the shift to a multiparty system and the rise of identity politics. With an increase in equality and social justice, marginalized castes have risen to challenge existing policies and demand an equal share in state resources.

I found that the success rate for the implementation of the reservation policy for the benefit of the lowest castes was significantly low. The distribution has been uneven among the targeted groups. Moreover, the results of my fieldwork revealed that most people tried to hide their caste. However, a number of them also affirmed their caste in order to obtain the benefits of welfare schemes and protect their rights by challenging the judicial system through Public Interest Litigations (PIL). This paradoxical response explains why caste identity has become more positive and assertive, which has led to the politics of difference in contemporary India.

#### *The State of Neoliberalism Criticisms in Japan: Why the Discussion on Cosmopolitanism Does Not Gain Steam in Japan*

As economic globalisation progresses, a wave of neoliberalism is sweeping across the world, demanding states and societies to render a variety of modifications. Such a phenomenon has been analysed, described, and criticised extensively worldwide. Japan is no exception; criticisms toward neoliberalism are said to be forming a major trend in Japan.

However, such critiques are slightly different from those toward neoliberalism in other parts of the world. Worldwide criticisms toward neoliberalism often lead to discussions on global transformation and cosmopolitanism, whereas such a connection is almost never made in Japan. For example, David Harvey, the author who dissects neoliberalism in his worldwide bestseller *A Brief History of Neoliberalism*, expresses in *Cosmopolitanism and the Geographies of Freedom* published in 2005 his empathy with De Sousa Santos' (2005) idea of 'subaltern cosmopolitanism' – Harvey finds hope in the movement to form a cosmopolitan solidarity by amplifying the voices of the victims of neoliberalistic globalisation that exists worldwide. Ulrich Beck (2008) also criticises the trend, stating that state politics are reduced when the state neoliberalistically prioritises adaptation to global market competitions; he argues that becoming cosmopolitan is the realistic future for states.

As seen from the above, a global trend is seen in the inclination to progress from criticising neoliberalism to promoting a cosmopolitan transformation. However, neoliberalism criticisms in Japan rarely lead to the discussion of cosmopolitan transformation. One of the reasons for such a difference is that neoliberalism criticisms in Japan are rarely discussed solely in a global context because they have historically evolved as arguments of inequality which often focus on changes in the socioeconomic structure in Japan. Therefore, this report will provide an overview of neoliberalism criticisms in Japan, describe their characteristics, and explain why the criticisms have strong national characteristics without having been placed in the context of cosmopolitanism.

#### *The Formation Process for Civil Society in Northeast Thailand: From the Social Research of Two Villages*

This paper on village civil society (prachakhom) as the basis for the emergence of civil society and development in Thailand's northeastern region is the result of the social research supported by Grant-in-Aid for Scientific Research by the Ministry of Education, Culture, Sports, Science and Technology (MEXT) of Japan from 2005 - 2007 and 2008 - 2010.

In the twenty-first century, the discussion of the idea of civil society (prachasangkhom) and people's participation began to develop in Thailand. In many forums, Thai scholars proposed a range of ideas and opinions that directly link development with civil society. Furthermore, there has been various research on the development and possibilities for shaping the civil society movement.

In our previous social research, we concluded that prachakhom was the foundation of the formation process for Civil Society. Prachakhom as a gathering of people has been an integral part of Thai society, while the civil society movement was a new idea derived from the West. In this paper, I intend to analyze the two types of prachakhom, both a grassroots type and a top-down type in response to government policies, using quantitative and qualitative data from the case study of two villages in Northeast Thailand.

#### *The Effects on Self-Consciousness of Junior High School Students in Japan Depending on the Fact That They Have Boyfriend/Girlfriend or Not*

The purpose of this study is to make clear the significance of a boyfriend or girlfriend for junior high school students in Japan. For this purpose, I firstly investigated the determining factors of having a boyfriend/girlfriend, and then clarified the effects of the fact that one has a boyfriend/girlfriend on their self-consciousness. As a result of this analyses, I got following two findings. First, there are various factors which determine whether junior high school students have a boyfriend/girlfriend or not, and the factors differ according to each student's gender. Furthermore, the levels of academic accomplishment of the school also make a difference. Second, when I analyze the effects of that fact on their self-consciousness, it is necessary to consider not only the very thing that one has a boyfriend/girlfriend or not, but also if she or he is likely to have a boyfriend/girlfriend. This analysis suggests that a success in love for girls in junior high has a more complex meaning compared with that for boys.

### Divorce Studies in America and Japan

This paper aims to suggest 'Good Divorce' comparing divorce studies in America with divorce studies in Japan. The divorce rate in the United States has continued rising after the World War II, and one of two sets came to be divorced among the couples who married. At the same time, as remarriages have also increased, 'step family' is not rare in America. A new sociological concept, 'binuclear family' advocated in "The Good Divorce (1994)" by Constance Ahrons has become generalized. On the other hand, the divorce rate in Japan has continued rising as well as the United States and has almost caught up with it.

In this paper, we will introduce divorce studies and works developed in America since 1980s and in Japan since 1990s. First, we will discuss the history of divorce studies in America and Japan. 'Nuclear family' advocated by Talcott Parsons is certainly universal, but not absolute at all. Second, introducing the discussions in "The Good Divorce" and "We're Still Family" by Constance Ahrons, we will describe divorces in America. On behalf of 'nuclear family', it is found how the concept called 'binuclear family' became to come up. Third, introducing Atsuko Okano's various discussions on divorces, we will describe divorces in Japan. About divorce circumstances of America and Japan, some common points and differences will become clear. Finally, through both divorce studies, we will suggest what should be done to be 'good divorce'. 'Good divorce' means to "keep your family together when your marriage comes apart." We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

**SUZUKI, TAKESHI\*** (Mejiro University, [kem86871@hotmail.com](mailto:kem86871@hotmail.com))

#### *Sociological Theory after September 11, 2001 and March 11, 2011*

This paper aims to rethink theoretical foundations in sociology comparing American sociology after September 11, 2001 with Japanese sociology after March 11, 2011. Although some 'empirical' sociologists in America described and analyzed attacks by terrorists on September 11, 2001 and American society after 9/11, almost 'theoretical' sociologists kept silence. However, Jeffrey Alexander, a leading American theoretical and cultural sociologist, has interpreted sociological theory and American society of and after '9/11' from a post-Parsonian point of view. On the other hand, although some 'empirical' sociologists in Japan have described Japan Now after the Japan earthquake and Tsunami on March 11, 2011, almost 'theoretical' sociologists within the Parsonian and Post-Parsonian tradition in Japan have kept silence.

In this paper, I will suggest that theoretical foundations for the sociology after 9/11 and 3/11 would be established on Jeffrey Alexander's theoretical logic, cultural sociology, and civil society. First, I will discuss that new sociological theorizing including the sociology of 9/11 and 3/11 should be multidimensionally reconstructed on the metatheorizing by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Münch. Second, I will argue that new solidarities could be founded on cultural sociology and civil society advocated by Jeffrey Alexander keeping a philosophical foundation of multidimensional sociological theorizing. Finally, it will present what should be done to reconstruct Japanese sociology multidimensionally after March 11, 2011.

#### *Constructing Identities Across Borders: Case of the Istrian-Italian Diaspora in Trieste*

In the last two decades, the accelerating speed of globalization has challenged the modern notion of state borders. Rather than the fixed line of a sovereign state, state borders are viewed as a dynamic interplay between territorial organizations and local societies. This trend is evident in the border regions of Europe wherein extensive cross-border cooperation and interaction transform a border from a geopolitical "territorial line" to a socio-cultural "contact area" of neighboring societies. On this basis, people living in borderlands have new resources and opportunities to construct or safeguard their identities.

This study examines the construction of a "We" consciousness by the Istrian-Italian diaspora, who suffered from national conflicts and mass exile after World War II, and emigrated from their native homeland Istria (formally Yugoslavia) to settle in Trieste, a border city in Italy close to the Slovene and Croatian borders. We analyze the identity construction of this diaspora by specifically using the case of national celebrations when cross-border interaction collides with national manifestation. Our data is based on fieldwork conducted in Trieste on the procedure of how commemorative events are organized by local authorities and these exile groups, focusing on the practices and discourses on the ways to selectively utilize certain historical pasts, "We" and "the Other" relations, and forms of recognition.

The results indicate that two opposed identities have emerged within Italian diaspora communities: pro-Italian national identities and multiethnic regional identities. Whereas the former tried to produce a national image through patriotic ritual performance and victimization of exiles, the latter tried to reconstruct

regional identity in relations with Italian minorities and local authorities in Croatia across nations and borders. In the following discussion, different forms of identities are associated with not only the capacities of the diaspora but also the local and transnational opportunities available to it.

#### *"Intellectuals" in Gramsci's Prison Notebooks: An Active Relationship As a Key Concept*

In *Prison Notebooks* (written between 1929-35), Antonio Gramsci (1891-1937) – an Italian Marxist theorist – reconstructed the notion of intellectuals in the process of reconstituting the Marxist "class" concept. What are "intellectuals" in the theoretical world of Gramsci? And how did Gramsci theorize intellectuals and their roles in modern society? My presentation first introduces how Gramsci and his work have been studied and contributed to sociological theoretical research in Japan and then illustrates how his writings in his *Prison Notebooks* located intellectuals and active relationship constructions. Content analyses of *Prison Notebooks* reveal that the logical foundation for his understanding intellectuals was the reconstructed concept of "man" or human being which was formed by active relationships. This study shows Gramsci's belief that there was no "man" who was not intellectual; therefore, all the human beings are indeed the intellectual. Yet, not everybody plays the socially organizing functional role of an intellectual. The active relationships of the ordinary people most of the time have individual characteristics; on the contrary, intellectuals create and engage in socially active relationships which are in any of the economic, social, cultural, and political field. Therefore, I argue that Gramsci advanced Marx's social class theory by focusing on intellectuals and their hegemonic social engagements in which the socially active relationship plays a crucial role in society. This paper contributes to our sociological understanding of Gramsci, his theoretical roots, and commonalities with the Marxist and other theoretical traditions.

#### *Visualization of SNS Communications Concerning Radiation Risk from the Fukushima Daiichi Power Plant*

In this presentation, I visualize people's communications on a Social Networking Service (SNS) concerning the risks of radioactive pollution stemming from the Fukushima Daiichi power plant accident. The data consists of the communication log from a regional SNS that was launched by the residents of Iwaki City, Fukushima Prefecture, after the accident. It contains text from diaries and comments written by the SNS members and information about who made comments to whom. The co-occurrence network of words derived from the text data reveals the members' concerns about radiation risks. Comment relations are expressed as a form of social network that shows the structure of the human relationships on the SNS. The co-occurrence network of words and the comment network can be integrated and analyzed concurrently to show the development and interaction of the members' shared concerns and the social networks in the SNS.

The SNS members expressed various concerns, including radiation measurement, influence on health, food safety, and so on. Based on their concerns, they created clusters in the comment network. Though the founder of the SNS had the highest degree centrality, the mediator of the clusters was a different member who sometimes mediated members with opposing opinions. A member who had a scientific background occupied a leadership position in a particular cluster but did not play a role in mediation. This suggests that a sympathetic attitude is more important than scientific knowledge for risk communication among ordinary citizens.

#### *Honor or Fear? Relationships Between Scientists and Experimental Animals in a Japanese Laboratory*

Attachment and detachment, and honor and fear with which scientists and technicians treat their experimental animals are a paradoxical aspect of everyday practices of Animal Experimental Room in a medical Lab in Japan. The scientists kill, or tweak the genes of these animals for their research with the very same hands they used to caress and feed these animals under their custody. In Japan, some scientists even fear that the spirits of the sacrificed animals may come back to haunt them. Holding rituals to appease their spirits is a common practice.

Gesa Lindemann has argued that neurobiologists' attitude of experimental animals move from seeing them as "conscious organisms" to "technical artifacts", or even to "organisms being merely alive" as their experiment progresses (Linde-

mann 2009). In addition to various kinds of attitude, this paper demonstrates how scientific practice and Shinto's affective dimensions are entangled.

Japanese way of honoring the animals killed for scientific research has been known for "offering a ceremony" for dead animals (*Kuyoo*). This paper pays attention to not only to the ceremony but also everyday caring practice in the laboratory.

Thus, I discuss how scientists and technicians affectively commit to experimental animals. Inspired by Science Studies scholar Casper Bruun Jensen and the sociologist Anders Blok (Jensen and Blok 2013), who developed Actor Network Theory through Japanese techno-animism, I explore new dimensions of contemporary Japanese techno science.

#### *Does Men's Involvement in Family Planning Threaten Women's Reproductive Rights?: A Case of Kurdish Rural-Urban Migrant Women in Turkey*

This study discusses the issue of men's involvement in birth control in Turkey. An argument is based on our research of Kurdish women's experiences of contraceptive practices. Data were collected by in-depth interviews with forty women in a low-income rural-urban migrant neighbourhood in an East Anatolian city Van between February and July in 2008. In Turkey, fertility rate has declined to near-replacement levels in recent years yet the use of traditional method, that is, withdrawal continues to be among the highest in the world. Recent studies suggest men's direct (practicing withdrawal or using condoms) and indirect (influencing women's use and choice of contraceptive method) involvement in birth control. However, we do not know whether men's involvement has positive or negative impacts on women's empowerment. In the neighbourhood we studied, contraception was generally women's responsibility yet they experienced difficulties in accessing and effectively using contraceptives because of their gender disadvantages. Nonetheless, there were a few women who were successful in birth control. They were not very different from the other women in terms of economic, educational and familial statuses yet their husbands were actively involved in birth control directly or indirectly. One of them, however, wanted more children but were using an intrauterine device because of the husband's request. Meanwhile, many women considered that their husbands should take more responsibility in family planning because of their experiences of failing contraception and seeing those women who successfully limit their births with the help of their husbands. Based on our case study, this presentation discusses a paradox of men's involvement in birth control and asks explorative questions that whether men's involvement risks women's reproductive rights or whether feminist politics should support men's involvement for the sake of women's health if women can practice birth control more effectively by men's involvement.

#### *Globalisation and Rural Women's Paid Work in Turkey: A Case Study of the Production Chain of *Rapana Venosa**

This study examines the production chain of *Rapana Venosa* (veined rapa whelk) and the socioeconomic statuses of women factory workers in this process. In rural areas of the Black Sea region in Turkey, women often participate in non-agricultural production. The production of veined rapa whelks is one of the sectors which rural women are especially employed. Veined rapa whelks are "marine invaders" which migrated from Far East Asian seas to the Black Sea by ballast water in the 1940s. Today, they are considered to be threatening the Black Sea's ecological balance by consuming large numbers of bivalves. In the context of globalising marine ecosystem and multinationalising agri-food production, rapa whelks began to be exported from Turkey to Japan in the 1990s. While the prevalent catch method, *algarna* dredging, is known to be harmful for the reproduction of many native species, the exportation of rapa whelks is hoped to reduce their ecological pressure in the Black Sea and create employment opportunities for rural women. This study explores the use of rural women's labour in the global production chain of rapa whelks between Japan and Turkey. The research was conducted in two phases. In the first phase, women workers' socio-economic statuses were investigated through in-depth interviews with owners, managers and women workers of whelk-processing factories in two Middle Black Sea villages. A research in the second phase was conducted in summer 2012 in Tokyo and data regarding the production chain were collected mainly by interviews with an importer, a manufacturer and a retailer. Research findings suggest that the global *Rapana Venosa* production bears many characteristics of informal economy. The flexible production chain depends on rural women's flexible, invisible and hence

cheap labour while women develop new strategies to create a space of autonomy through paid work.

#### *To Serve and Survey: Lawyers and Auditors' Efforts To Reconcile Professional Commitments, Client Demands and Regulatory Requirements For Anti-Money Laundering*

This paper studies how professionals serve as agents of public regulation. Following the trend for risk governance in various policy areas (e.g. Hood et al 2001), a distinguishing feature of anti-money laundering regulation is that risk management is a primary tool to combat crime. Transnational agreements and national law require various professional services providers to monitor client behavior and report indications of money laundering without informing the client(s) about these suspicions. In short, businesses must survey clients, even as they serve client needs.

Law and accounting are both professions with a history of explicit commercial engagement. However, auditors differ in that they constitute part of a legally-sanctioned compliance industry. Using an interview-based study, we probe 1) how lawyers and auditors articulate principle tensions between commercial demands, professional commitments and regulatory requirements, and 2) how these tensions are practically reconciled in everyday work.

We observe varying degrees of tension between professional autonomy, the role of client advisor/advocate and regulatory compliance. We also observe similarities in the formalization of client handling process as a structural means of making visible and actionable the balance between competing demands.

Theoretically, the paper draws on the emergent literature on multiple values in organizational work (e.g. Stark 2009). It contributes to a discussion of expectation gaps in the role of professionals and highlights wider practical implications for businesses of the dual discourses on transparency and risk (Bergström et al. 2011).

#### *The Importance of Class for Understanding Racist Discourses: A Comparative Study of People with Different Positions in the Swedish Class Structure*

In research, and especially quantitative research, the working class is often singled out as more xenophobic than other classes. However, it appears that the working class has actual relationships with "immigrants" to a larger extent. Rather than determining which class is the most xenophobic, the aim of this paper is to discuss the relevance of dominant theories about class and racism in relation to empirical findings, and more specifically to interrogate *why* and *how* class may be important for understanding people's use of racist discourses in different social contexts. This paper is based on an ongoing research project that focuses on the relationship between people's class positions and their practices towards people that they construct as "the other", as "immigrant" or "ethnically different". The empirical findings consist of qualitative interviews with (1) people with working class positions (based on their work, employment relations and income) living in a working class area, and (2) people with higher class positions living in an more socioeconomically favorable area. Both areas are located in one of Sweden's largest cities.

In the paper, I discuss both social psychological theories that focus on people's desire for a positive social identity and other theories, mainly Marxist, that are based on people's position in the relations of production. The paper argues that which discourses, that are available or are seen as reasonable, are conditioned by people's different class positions. This also means that the reasons behind people's use of racist discourses and the meanings these are filled with need to be understood in relation to the diverse – class conditioned – social contexts in which people live.

## *Interconnected 21st Century and the Decline of Traditional National Security System*

Traditional national security system has been definitely one of the crucial pillars for Western statecraft paradigm since Westphalia Peace agreement in 1648. Especially in last two centuries the main task of sovereign state was how to protect own citizens and territory from foreign (military) threats with strategic concepts like deterrence and retaliation are. It was very clear the national power was based on physical and natural resources, industrial production as well military capabilities. The national state was practically the only reputable actor in international relations. Although for many scholars like Fukuyama this historic development was ended with the end of Cold War, I think the crucial revolution began with modern information and communication technology already mid of former century. Consequently till the end of millennium we got interconnected society with borderless, lightly regulated and largely anonymous online environment which has been rising to new strategic domain. At the same time security as a concept was changed by possible interconnection and new non-state actors like individuals, corporations, (cyber) terrorists, organized crime and autonomous actors appeared as important international players. That makes traditional national-based security system incapable to prevent all security incidents occurring in cyber as well physical space. In spite of the merits of measures to protect society against new kinds of security threats, national security policy makers therefore have to accept a certain level of vulnerability and redirect their focus to recovery and resilience, the ability to restore a state of normalcy after disruption. The primary security objective is effectively mitigating the impact and quickly restoring the original situation. For that purpose traditional very rigid national security should be redesigned into more flexible crisis management and knowledge integrating system with capability to collect all societal skills and potential convenient for ensuring security in interconnected semi-transparent world

### *Contractual Gift-Giving As a Functional Hybrid: The Case of Gift-for-Sex Exchanges in Russia*

Ideal-typical forms of capitalism ('cold' profit orientations) and gift-giving (the „pure gift“) can be found to illustrate the crucial aspects we assign to these concepts. Yet these two concepts blend together extensively, especially in practices of instrumental gift-giving. In particular, „contractual gift-giving“ is a particularly 'pure' hybrid form of exchange, as it is more formalized, and thus more rationalized and calculated, than other types of reciprocal gift exchange. Strong everyday evidence of this hybrid practice can be found within compensated dating practices.

Using the case of contractual gift-for-sex exchanges in Russia, the empirical basis of this paper is a rich body of recently collected (2010-12) data, including online content analysis of dating websites and discussion fora, face to face interviews, and a quantitative survey. Multi-method results demonstrate that the two sides of the contractual gift 'hybrid' exchange form interact so that that both maintain key aspects of their conceptual purity, yet in a way that allows translation between them. In particular, the gift form is unique in its ability to bring symbolic relations (such as love and romance) into market exchange as commodities through involving them in contracts. While the 'purity' (altruism) of such gifts is indeed removed/unveiled through their availability on the marketplace of 'sponsorship' and compensated dating, the gift nonetheless maintains its valence of care, generosity, and even love for practitioners. The features of this contractual gift form are analyzed in the context of the post-socialist economic transformation in Russia, focusing especially on the subjective incorporation of market logics and language into everyday life and the recent materialistic and partial sexual revolution in Russia.

### *The Loneliness of Many? Investigating the Roots of Urban Russian Loneliness*

Much early sociological work on cities has focused on the connection between city life and urban estrangement. A host of modern maladies are proposed to have higher concentrations within cities: to include alienation, anomie, and the 'blasé' attitude. As a result of these and shifting forms of social cohesion in urban spaces, we should also expect to find a higher prevalence of loneliness within urban environments. Cross-country data (the ESS) show loneliness rates to be much higher in Eastern than in Western Europe. Russia is therefore an ideal place to investigate loneliness.

Using Russian WVS data from 2012 on the question of loneliness, I attempt to find the mechanisms through which the urban loneliness effect occurs by also controlling for other relevant factors, such as social engagement, alienation, and values such as individualism/collectivism. In particular, I am interested in the way

that individualist values mediate loneliness, either by catalyzing or mitigating its effect, and I expect that this mediation effect is different in cities, with 'urban values,' compared to rural areas. I compare four samples: one metropolis (Moscow), one city (Tambov), a non-urban sample (Russians living in settlements of 100,000 or less), and Tatarstan (city and non-city). Results confirm several important hypotheses. Notably, nearly all loneliness effects in cities are mediated by individualism, collectivism, in stark contrast to loneliness in non-urban areas. In particular, I find that individualists in Moscow are *more* lonely if they have children, likely because family isolates them from the types of ties they would prefer (with friends, associations, and wider networks). For collectivists, this effect is reversed. Likewise, collectivists in a smaller city (Tambov) are *more* lonely if they are involved in more civic organizations, likely because this involvement is compensating for a lack of the ties they idealize (family).

### *Locating the Media Discourse of Climate Change Policy Network in India 2007-2010*

This paper explains the framing of climate change in Indian newspapers. With its economic growth, India has become a major contributor of greenhouse gas emissions and has a major role to play in any global cooperation to reduce emissions. Yet India's rhetoric and concerns about climate change differ from other developing and developed countries. India is the world's largest democracy, but it has a weak state that lacks levers of control over its society and economy. Consequently, the distinct framing that India's newspapers give to climate change concerns, not the need for new government policies, but the need to convince and mobilize civil society.

### *Trust Me If You Can: Trust As Strategic Tool for Decision Making to Deal with Ignorance and Uncertainty in Contaminated Sites of Germany and India*

In this paper we will investigate the role of trust in decision making process under ignorance and uncertainty. Classical approaches to risk analysis are based on statistical calculations dependent on hitherto known variables. This research suggests that if knowledge for risk calculation is limited then the decision making of experts as well as 'lay' persons are dependent on their individual and intuition-trust. Based on newly emerging sociological theories of ignorance, this paper involves two field studies: redevelopment of contaminated sites in Germany and mitigation of groundwater arsenic contamination in India. Interestingly, in both the cases knowledge on underground processes is limited. Processes of cleaning-up in Germany usually are confronted with contaminations that had not been identified in investigation activities. Unexpected surprises by the actors often are taken as normalcy. In the Eastern Indian region, concentration of arsenic in groundwater increases due to geological processes in succession of a decreasing groundwater level, caused by human activities. So, today's clean water may be poisonous by arsenic tomorrow. This creates a situation of ambiguity and confusion. Stakeholders (from policy makers to local inhabitants) have to take various pertinent decisions based on trust in individual, group or system. From the existing sociological literature the paper explores various dimensions of trust involved in decision making for both experts and non-experts.

### *Physical Activity and Quality of Life Among Chinese Cancer Survivors*

Cancer is the leading cause of death among Asian American populations in the United States (CDC, 2013). Asian Americans are actually reported to have lower cancer deaths compared to non-Hispanic Whites. Consequently, more Asian Americans will survive cancer diagnosis and live a longer life after treatment. It has been shown that physical activity at modest intensity can significantly im-

prove the side effects of cancer treatment, quality of life among cancer patients, and breast cancer mortality. Although research on exercise has grown in quantity and quality (i.e., more RCTs) during last decade, most available studies recruited primarily Caucasian samples and were based on smaller sample sizes (Pekmezi & Demark-Wahnefried, 2011). Thus, these findings are not able to be generalized to non-Caucasian subgroups, such as AAs. Furthermore, exercise patterns vary with different cultural traditions. Intervention strategies such as aerobic exercises, resistance training, and Yoga which have demonstrated positive impacts might not be applicable to AA cancer survivors because most Asians will be more inclined to use Tai Chi over Yoga for daily exercise routine. Thus, more research is needed to study the unique cancer experience of various racial/ethnic groups.

This paper examines the linkage between physical activity and quality of life among Chinese American cancer patients and survivors. It is hypothesized that more physically active cancer patients and survivors are reported to have higher quality of life. Data were collected from self-report surveys of 55 Chinese cancer patients and survivors. In addition to basic demographic characteristics, weight status, medical history, two standardized scales are used to measure quality of life (SF-36) and physical activity (CHAMPS). Currently, we are conducting the data analysis and a manuscript based on the results of the data analysis that will be completed in the spring of 2014.

#### *Navigational Capacities For Youth Success In Adversity: A Sociology Of Southern Youth*

The global South has for too long relied on global North contexts and theories in the sociological study of youth and youth development. These Northern approaches have centred on US-driven positive youth development focused on dynamic systems, risks and protective factors, and the UK-led socio-cultural approach addressing youth agency, resistance and cultural reproduction. This paper asks two key questions towards a comparative consideration of the sociology of youth: Who are Southern Youth, and in what ways are their lives the same as, or different to their Global North counterparts? and What new tools and language are required in order to make visible these similarities and differences and so bring Southern Youth out of the invisibility of current hegemonic youth studies? Substantially, it offers an alternative nascent framework, that of 'navigational capacities' to research and frame a sociology of Southern Youth. Navigational capacities are suggested as specific **socio-emotional and material capabilities** required for youth living in contexts of adversity to succeed. These capacities, rather than skills, are learnable and are available to young people in the pursuit of success, where success is postulated as the capacity to (1) exert **individual agency**; (2) obtain, create and invest **capitals** in their primary proximal contexts of engagement; (3) recognize and analyse the ways in which interconnecting distal **contexts** such as institutions, practices and policies exert influence to oppose and enable agency; (4) see the way in which **power** operates through identity markers to restrict participation, and perpetuate domination and poverty; and (5) practice **collective agency** for civic participation and life cycle transitions. In this regard, the notion of navigational capacities draws together the best emancipatory and context-sensitive elements of both the dynamics systems and socio-cultural approaches to youth studies, and has the potential to make visible ('deinvisible') the lives of Southern Youth.

**SWENSON, DONALD\*** (Mount Royal University, [dswenson@mtroyal.ca](mailto:dswenson@mtroyal.ca))

#### *Gender Marital Roles in an Ecumenical, Covenant, and Charismatic Christian Community*

Marital gender roles and religion continue to capture the landscape of much sociological research in families. A significant amount of research has emerged in investigating the Promise Keepers movement whose primary locus is in Evangelical-American Christianity. Much of the critique of the movement focuses on language such as: "the last gap of patriarchy," the "first backlash of patriarchy," "soft-boiled masculinity," "sphere of anti-feminist backlash," "hegemonic masculinity," "an essentialist retreat from progressive gender relationships," and the Promise Keepers representing the centrality of the political within the family.

Against this backdrop, this paper presents empirical evidence from a 350 member Ecumenical<sup>[1]</sup>, Covenant<sup>[2]</sup>, Charismatic<sup>[3]</sup> community named "Alleluia" in Augusta, Georgia, USA. Husbands are expected to lead, protect and provide for their wives and children. They are called to be leaders in their marriages and could be seen to reflect the images portrayed above in regard to the Promise Keepers. However, with data based on interviews from randomly selected cases (36) and 300 members of 350 who provided quantitative information, a very different story of leadership is presented.

The husbands model their leadership on a *kenotic* style of headship. This consists of leadership which is humble, empty of self-interest, sacrificial love (agape),

a detachment from status privilege, gentle, meek, kind and self-effacing. They are to love their wives as "Jesus loves the Church," and wives are to respect their husbands.

From the interviews, both of men and women, this was the common story. Regression analysis of measures of gender roles shows significant correlations with a wide variety of measures of religion.

[1] A Community of various Christian denominations.

[2] This refers to the kind of community wherein members make a life-time vow to live the Christian life in close and intimate relationships with one another.

[3] A Community which uses the charismatic gifts

**SWIDER, SARAH\*** (Wayne State University, [sswider@gmail.com](mailto:sswider@gmail.com))

#### *Constructing Asia: An Emerging Model of Migrant Labor Exportation*

This article explores how global forces are reshaping the form of labor migration in the region. China has become an important influence reshaping the Asian region through increased foreign direct investment (FDI) in public construction projects such as roads, railways, and ports. As Chinese companies expand operations overseas they often bring their own workforce, exporting hundreds of thousands of Chinese migrant workers. These workers migrate under the umbrella of Chinese multinational companies and represent a fast-growing form of labor export migration called, "project contract migration." This expansion of project contract migration represents an important form of temporary migrant worker programs which are generally governed by either labor brokers and/or bi-lateral agreements among states, and are characterized by receiving countries only accepting immigrants under "strict functional and temporal limits" (Castles, 2004: 23). In contrast, China's emerging labor export model is an example of multinational corporation-led migration with a new twist. Historically, multinational corporation-led migration has taken the form of high-skilled professionals being relocated from developed nations into developing countries (Findlay, 1990; Stahl, 1991) while China's multinational companies are exporting both high and low skilled workers.

According to China's Ministry of Commerce the number of Chinese workers sent abroad has risen from about 2,000 in 1979 to around 6.5 million in 2013. Roughly 812,000 of these overseas Chinese workers are now employed by Chinese companies in the form of project contract workers, and if we include illegal or undocumented migrants, these numbers would double. This article focuses understanding why Chinese multinationals are importing their own laborers instead of using local labor. I argue that this emerging model of labor exportation creates a kind of extraterritoriality that allows Chinese multinationals to evade national and international regulations designed to protect worker and migrant rights and increasing worker control.

**SWIDER, SARAH\*** (Wayne State University, [sswider@gmail.com](mailto:sswider@gmail.com))

#### *Engaging the State: Informal Worker Protests in China*

In China, the rise of precarious and informal work is closely linked to the processes of migration and urbanization. There are roughly 150-200 million migrant workers, representing between 15-17 percent of the total Chinese population (Chan 2010). By 2009, sixty percent of all urban employment in China was informal (Huang 2009); most of this is precarious work and a majority of these jobs are filled by migrants. Informal work is performed outside the purview of the state, and it is labeled precarious because these jobs do not provide employment stability, are low-waged and lack social protection.

This paper explores informal worker protests in China. I look at two different groups of informal workers; construction workers and street vendors and find that the salient issues for each group are different. The most salient issue for informal construction workers is non-payment of wages and among street vendors it is the unfair treatment by local urban para-police called *chengguan*. I explore these two issues and the resulting protests by analyzing the ways that their relationships with the state, the organization of their work, and different integration into urban spaces shape their organizing and protests efforts. I detail the major characteristics of these protests and argue that that these informal workers (and their protests) represent more of a threat to the government and the Communist Party's goals of stability and harmony than do protests by formal workers.

**SWINDLE, JEFFREY\*** (University of Michigan, [jswindle@umich.edu](mailto:jswindle@umich.edu))

## The Developmental Hierarchy Cultural Schema

In everyday conversation, popular media, and scholarly work, terms like the "Third World" or "developing countries" are often contrasted with the "First World" and "developed countries." These common terms imply that most people share a cultural schema of a developmental hierarchy of societies. How prevalent has this schema been throughout history? Drawing from cognitive anthropology, I argue that in general the terms people use are indicative of specific cultural schemas. This is the especially the case with terms that refer to societies' position on a developmental hierarchy (e.g. "developed" versus "developing countries," or "advanced" versus "primitive societies," etc.). Using the *Google Books N-gram Database*, I analyze the usage of over 80 such terms by year, measuring their relative frequencies in all books written in English from 1700-2008. I then combine this quantitative data with archival data and other scholars' historical work, constructing a historical narrative of the developmental hierarchy cultural schema over the last three hundred years. The terminology of the developmental hierarchy has been prominent throughout the time period examined, though it has experienced significant changes. During the eighteenth century, developmental hierarchy terms gained popularity as the ideas of social evolutionism expanded. Notions of sovereignty and capability eventually challenged social evolutionary ideas in the beginning of the twentieth century, leading to their demise. In their wake, modernization theory quickly became prominent, bringing a new set of developmental hierarchy terms. Institutionalized by the founding of various international organizations in the mid-twentieth century, modernization theory renovated the developmental hierarchy cultural schema by shifting the object of development from societies and peoples to that of the nation-state. The developmental hierarchy cultural schema has exercised considerable power in organizing the way people classify societies.

### *From Chicago to Los Angeles: Western Concepts and the Study of Post-Socialist Cities*

Post-socialist cities have been omitted from disputes on global urbanism. However, the insights gained from the study of their dramatic transformations can provide important suggestions for the international urban studies. The paper first introduces the key features of post-socialist urban transformations placing them within the context of contemporary global urbanism. The paper specifically discusses the urban development in cities, which developed during periods with different political regimes and socio-economic conditions. Their urban landscapes reflect multiplicity of socioeconomic logics and are characterized with a high level of socio-spatial hybridity. The western models that assume relatively stable relations between the principles of urban development and resulting socio-spatial patterns are not capable to capture the nature of cities in radical transformations. The paper then discusses the relevance of "western" concepts for the study of post-socialist cities. It is framed within the paradigmatic evolution from Chicago to Los Angeles schools of urban studies. The paper argues for the recognition of a multiplicity of urban logics and urban structures interrelated within urban landscapes of transforming cities. Relating long term development paths and contemporary path-shaping practices, paper documents that concepts from both schools are relevant for the understanding of post-socialist cities. Finally, despite the present urban landscapes of post-socialist cities can be seen as different from cities in other world regions, there are striking similarities. The paper argues that despite historic and cultural specificities in local contexts, contemporary urban development is conditioned by the universalistic driving forces of urbanization embedded in a globally spreading capitalism. The hybrid coexistence of different socio-spatial landscapes can thus be only temporary as the most dynamically developing urban areas related to global capitalism gradually displace the original urban patterns. The theories and concepts developed in the social context of capitalism thus have high relevance for contemporary global urbanism.

### *Gambatte Ikô : Negotiating Identity and Belonging at a Japanese University Women's Kendo Club*

This paper draws on an 18-month ethnography at a Japanese university women's kendo club and examines the concept of *seishin* (spirit), and how it is embodied through training and the process of doing one's best for the group. *Gambatte ikô* (Let's do our best together) expresses the personal commitment to endure hardship in order to achieve a group goal. The strengthening of *seishin* can be attained through enduring physical, mental and emotional hardship alongside others, where the hardships are embedded in the club's demanding training, work obligations and hierarchical relationships. As such, *seishin* training takes place on all levels, in a variety of situations, encouraging the holistic development of club members. *Seishin* development can be goal of membership and its embodiment can be advantageous as it promises to equip members with the resilience neces-

sary to fulfill their gendered roles as capable, exemplar models of society. Arguably, for female club members developing significant relationships takes precedence over the development of *seishin*. In time significant relationships with other members became my reason for being and the primary source of motivation to engage in *seishin* training.

### *Safety in the 'House of Certainty': The Question of Violence in a Ukrainian Prison*

Prisons are potentially volatile places. This paper draws on ethnographic research in a medium-security men's training prison to discuss the nature of a relatively low level of physical violence in a Ukrainian prison despite the low staff-to-prisoner ratio. It attributes this phenomenon primarily to the informal structure of prisoner society, and the central role of its illicit normative code of prison life. I explore how the legitimacy deficit of the Ukrainian State and its legal system, together with often anachronistic and unreal official prison rules and limited staff presence render the unofficial prisoners' behavioural code the guarantor of the peaceful co-habitation. I demonstrate that despite discriminating against certain prisoners and instigating mutual and self-surveillance, these informal arrangements were deemed by most prisoners more just and legitimate than the official ones. Whilst this informal structure was inescapable and entailed harsh punishments for violations, it, to some degree, controlled and limited arbitrary violence and established a 'house of certainty' (Foucault, 1975). Furthermore, I argue that despite the official antagonistic stance towards the 'inmate code', prison authorities heavily depended on the prisoner-controlled informal structure to both keep the prison orderly and safe and maintain uninterrupted industrial production. I then discuss the implications of the recent and current changes in Ukrainian society and prisoner profile to the maintenance of safety and order in national prisons. I posit that the intricate power-balance present in the prison has relevance beyond Ukraine because it represents a microcosm of the interaction between powerful legitimate and illegitimate interests, where the vested interest of both is profit (industry) and order (status quo).

### *HIV Stigma in U.S. Faith Communities*

Stigma remains a significant barrier to HIV prevention/treatment in African American communities. Religious congregations, especially black churches, have been called to address HIV stigma. Social forces such as religion may create reinforcing stigmatized conditions that predispose individuals to HIV infection and limit their ability to access HIV testing and treatment. However, scientific evidence examining the concept of HIV stigma and its effects in religious communities is limited. Our work is guided by the concept of stigma as "a social and cultural phenomenon linked to actions of whole groups of people." This approach emphasizes the need to examine social structures and processes and enable communities to move from individual-level perceptions to collectively identify and act upon negative stereotypes and discrimination against the stigmatized. Our multi-method study examines HIV-stigma in faith communities from the perspectives of congregations, community members, and people living with HIV. We collected and analyzed data from interviews with faith leaders representing a theologically diverse sample of congregations; interviews with HIV-infected individuals; and, town-hall meeting-generated ideas about faith-based strategies to address HIV. We used predictive modeling of factors linked to welcoming/alienating attitudes on the part of congregations, as well as content analysis and concept mapping to qualitatively assess the concept and extent of HIV stigma present in faith communities. In congregations, stigma was often attached to the perception of individual mode of infection: homosexual relations as most stigmatized, followed by injection drug use, heterosexual relations, and mother-to-child/healthcare-related situation. Some HIV-infected individuals reported feeling alienated in congregations because of stigma/discrimination. Finally, community stakeholders identified reducing stigma as the most important strategy to address HIV in their faith community; however, the feasibility of this strategy was questioned. In the analysis, we triangulate/discuss the findings to explore the concept of stigma, its consequences, and potential stigma-reduction strategies in faith-based settings.

### *Nativity, Religiosity, and Mental Health in the United States*

Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using acculturative stress and religious coping perspectives. We hypothesized that dysthymia would be more prevalent among foreign-born than US-natives because of acculturative stress. We further expected that religiosity would help to explain this difference as a protective factor. We tested our hypotheses using a representative, longitudinal sample of U.S. adults. Dysthymia was assessed per DSM-IV criteria. Religious activity was a scale based on how often respondents attended religious services, how important were religious or spiritual beliefs to respondents, and how many members of their religious group they saw socially at least every two weeks. Acculturation, stress, sociodemographic and other factors were also assessed. Prevalence and 3-year incidence of dysthymia were modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments: higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood) of developing dysthymia over time in the total sample. Further analyses will examine the differences in the effect of religiosity between the foreign-born and the US-native populations and discuss the findings in the light of acculturative stress and religious coping perspectives. Public health implications will also be addressed.

DJUNDEVA, MAJA (University of Groningen)

*What Shapes Attitudes Towards Fertility Treatments in Present Day Europe?*

The issue of medical treatment of fertility has special social relevance today for most of the European societies which are characterized by very low levels of fertility, and an increasing number of people not having children at all. Biotechnology makes parenthood available for those who used to be excluded from that earlier (medical problems, single women and same sex couples).

The aim of this research is to examine the attitudes of European society on in-vitro fertilization: Do they think that it is a stigma to become a parent without sexual intercourse or do they consider it as a possibility to help people to experience parenthood. The previous studies have already indicated that respondents' gender, age, educational level and religious background determined whether they supported "fertility treatments": women, younger people, those with higher educational level and non-religious background tended to be more supportive than others (Kailasam 2001, Scheneker 2005). This research would exceed that by focusing on how traditional gender roles, family beliefs and attitudes towards homosexuality can influence the acceptance of fertility treatments. The paper also seeks to answer the practical question whether the institutionalisation level of assisted reproductive technologies can affect the social acceptance of fertility treatments in Europe.

Our data come from the last wave (2008) of the European Value Study (EVS). The EVS provides insights into the ideas, beliefs, preferences, attitudes, values and opinions of citizens all over Europe by applying standardized questionnaires. In the fourth wave of EVS an artificial reproduction-related variable was introduced, which we chose as our dependent variable, measuring the acceptance level of the artificial insemination or in-vitro fertilization. As both individual and country level factors are taken into account the most appropriate statistical technique to be used are multilevel techniques.

*Far-Right Voter: The Efficiency of Social Bases As a Discriminating Factor in Voting for Far-Right Parties*

The paper will address two problems: the social characteristics of voters who identify themselves as „far-right“, and secondly what are the additional factors which are conducive to identifying with, and voting for either radical (far-) right parties or mainstream right (or conservative) parties. Beginning with H. Kitschelt's (1997) and P. Norris' (2003) seminal works we know that social bases, i.e. changes in social structure and economy are not sufficient conditions for the appearance and stability of radical right parties. Kitschelt and Norris identified the party system and the electoral rules as two decisive factors for far right parties' electoral successes. Kitschelt argues that the conducive factor is „convergence of moderately left and right parties toward a median voter“ and Norris emphasizes the role of institutional context (e.g. electoral rules). It will be shown, using the left-right

self-placement scale as a measure of far-right identities, how far-right voters distribute their votes among political parties and what are the social and ideological factors which discriminate against mainstream right parties, apart from the type of party system and broader institutional context. The analysis will be based on recent ESS surveys and a more detailed analysis of the Polish case based on general election studies.

*Young Chechen Refugees in Europe: The Role of Gender and Religion*

The presentation focuses on two intertwined factors that shape immigrant incorporation in today's Europe: religion and gender. It draws on an empirical study of young refugee women from Chechnya (Russian Federation) residing in Germany, Austria, Poland and Belgium. It aims to explain the relationship between women's religious identities and gender practices while considering the significance of their pre-migration childhood experiences of life in a war-torn society and refugees' living conditions in the receiving societies. The study examines two topics, which have dominated debates about incorporation of Muslim immigrants and their children in European societies: 1) new forms of religiosity among Muslim immigrant youth and 2) transformations of women's roles in immigrant families and communities. It focuses on Muslim immigrants from Eastern Europe who have received little scholarly attention as opposed to communities originating from Maghreb or Turkey. That is despite having gained a considerable presence in Europe since the early 2000s. Russian citizens, most of them from Chechnya, have been among the most numerous groups of asylum seekers in Poland, Austria and Belgium for almost a decade now. The numbers of Chechens applying for asylum in Germany in 2012 and 2013 have also risen sharply. The data collected in Germany, Austria and Poland reveal remarkable intergenerational differences in adaptation strategies of Chechen women. A significant number of young women in these countries are adopting more conservative gender practices and embracing new religious identities that are perceived as alien by the women of the older generation. The study in Belgium examines the validity of these findings in a different institutional environment. Compared to the other three countries, Belgium offers recognized refugees an easier access to citizenship and provides more inclusive educational environment for young immigrants.

*Satisfaction of Former Employees of the Swiss Armed Forces with Their New Work Situation*

Two years after the latest reform of 2004 in the Swiss Armed Forces (SAF) a higher number of resignations by the professional members was registered. A qualitative and a quantitative study were conducted to analyze the current turnover situation. The present contribution focuses on the quantitative data of 77 former employees and describes the present work situation of them. The majority of former employees of the armed forces works in the federal or cantonal administration, one third is employed in the private sector. Most of them are successful in their jobs, have managerial positions with more than two subordinates and they did not need further education for their present jobs. The former employees are significantly more satisfied in their new positions, have lower levels of resignation, have more autonomy, are more satisfied with their compensation and perceive more job alternatives available to them than the currently employed military professionals of the SAF. Their attitude towards work is more oriented towards work-life-balance as most of them believe that every employee should have an opportunity to work part-time. In all, the data suggests that a military education is attractive on the civil labor market, but that it could be difficult for the SAF to win back former employees.

#### *Art Against Racism. Works By Santiago Sierra As a Voice Against Racism*

In my paper I would like to present an artist who is socially engaged and whose works refers to very important social issue – exploitation of workers and cheap work force. Santiago Sierra, born in 1966 in Madrid, is the best known contemporary Spanish artist, who lives and works in Mexico City. Main topics of his works are: critic of capitalism, underpaid labourer completing menial tasks and immigration. It is said that he got involved in social engaged art when he realised how little money get Mexican workers for performing gruelling work. His social background also has a big influence on his work, because he comes from a working-class family.

In my presentation I will discuss some of Santiago Sierra works, which can be understood as statement about (or rather against) racism. As we consider racism as invention of modernism we can also see some direct link between racism and capitalism, cheap labour force and illegal immigrants. We can also easily match those factors: being subjected by racism is often connected with being illegal immigrant who delivers low paid menial work. Furthermore, as we can learn from Loic Wacquant that racism has always been a convenient excuse to justify exploitation of some groups of people. Almost every economic system needs some resources to exploit to exist. Especially capitalism. In capitalism racism has its economic function: it lowers cost of production and stabilizes hierarchy. Similar functions also have illegal immigrants, who are necessary in the system, because capitalism still needs people to complete menial tasks for small salaries. Employing illegal immigrant for lower wages may be justified by racism – they are not us, they are foreigners, they not equal to us.

#### *Concept of Artistic Brand As a Tool for Analysing Art World*

Social construction of artistic reputation and artistic success have been an important issues in sociological research from many years now. In my paper I am going to present the idea of artistic brand as a tool for analysing art world and construction of artistic career – mainly the careers of contemporary visual artists.

Artistic brand can be a person (artist, gallery owner, collector, curator, critic) or an institution (gallery, museum, art fair). The most important criterion for distinguishing the artistic brand from *non-branded* artist or institution is its recognition by the representatives of the various spheres of social life. I separate three spheres of social life in which artistic brands can be present: art world, media and ordinary social life. In every of those three spheres could exist different artistic brands, which are also constructed and sustained in different ways.

Phenomena that have recently occurred in the art world (development of conceptual art, separating the artist from the art work, the lack of clear criteria for evaluation works of art, professionalization of the art market) made that artistic brand have gain an importance in the art world. Artistic brand simplify the complexity of the art world, improve the decision making process, add value to the art world *product*. Artistic brand is a guarantee of quality, a mean of communication with customers and agents. Brand is also a tool of negotiating rules in the artistic field, a tool for building hierarchy in the art world and a tool for building artistic field autonomy towards other fields.

As the exemplification of my conception of artistic brand I am going to present the outline of my research project concerning the in-depth analysis of the presence of artistic brand (contemporary visual artists and institutions dealing with contemporary art) in Poland.

**TABARA, J. DAVID\*** (Global Climate Forum & ICTA-UAB, [jdt@sustainability.eu](mailto:jdt@sustainability.eu))

*The Conditions for Sustainability. Complexity, Social Learning and Integrated Climate Governance in a Warming World*

This paper introduces the concept of the 'Conditions for Sustainability' and reviews some of the main conceptual approaches dealing with the relationships between complexity, social learning and global environmental change. The aim is to produce fresh theoretical insights and to outline an operational synthesis to better understand the types of interactions, ways of knowing, and required feedbacks that influence the production of social-ecological complexity and affect our structural conditions and learning capacities to cope with accelerating global change. Social learning is understood as the only possible means to overcome current cultural constraints for a rapid societal transformation, and to provide the kinds of fair and quality of life development pathways that may allow humanity a dignified way out of the present unsustainability predicament.

In particular, my approach uses an *ecological sociology* perspective based on a further operationalisation of the SEIC conceptual model (Tabara & Pahl-Wostl, 2008) and focuses on the case of the integrated governance of climate change. From a non-dualistic standpoint, I look at the agents' interactions and social-ecological systems dynamics in complexity production and their implications for social learning and transformation. Such analysis is carried out in a relational mode *within and between* the following social-ecological components and systems: 1. Structures, rules and institutions (S) 2. Energy and resources (E) 3. Information and knowledge (I) and 4. Cumulated socio-ecological change (C). It is argued that such a framework can provide a more robust theoretical understanding of the required conditions for a global sustainability transformation and support Integrated Climate Governance (ICG) policies and options.

**TABIB-CALIF, YOSEPHA\*** (Hebrew University of Jerusalem, [yosepha.tabib@mail.huji.ac.il](mailto:yosepha.tabib@mail.huji.ac.il))

*Ethnographic Biography*

In this paper I present a new methodology that I call "ethnographic biography". I have used this methodology to examine changes and developments in ethno-class identity among young adults from different social classes who are graduates of an integrated school and who are now finding their way in adult society in Israel.

Ethnographic biography involves repeated in-depth interviews with all of the subjects over time, and from different perspectives, alongside the ongoing ethnographic study of events in their lives through various communications media, such as telephone conversations, email correspondence, and the subjects' activities in social network sites (e.g. Facebook). It also entails attending life events in the subjects' lives (going to a football match together, visiting a subject in mourning, joining a family meal, visiting subjects at their place of work, attending weddings, and so on).

The method of ethnographic biography has a number of important advantages. First, it offers a framework that is tightly linked to the subjects' everyday lives while at the same time reinforcing both their interpretive and reflexive capabilities and the ethnographic dimension. Second, it enables us to follow various biographical events in the subjects' lives in real time, and not retrospectively. Finally, ethnographic biography allows us to study the development and dynamics of ethno-class identity at varying, complex and nuanced resolutions, and thus to draw out its various pathways and instantiations.

*A Critique of the Use of the 'Neet' Category*

In OECD countries, the problem of young people not being in education, employment or training (the so-called "NEET") has been frequently raised in the political and social fields since the beginning of the last crisis.

On the basis of empirical data collected in Switzerland within the framework of the NCCR Lives project (<http://www.lives-nccr.ch/en>), we shall first attempt to understand what the use of the NEET category is founded upon: we shall show that it is based on two tenets. One is of a *social* nature, founded upon the fact this age group is the most affected by unemployment; the other is of a *moral* nature, resting on the idea that any unemployment at all in this age group is a problem. We will show that the field of political controversy around these tenets has clear

borders (Bourdieu, 2012) and that it mostly centres on whether various measures should be imposed or not, whilst there is complete agreement on the category itself.

We will then show that street-level bureaucrats dealing with youth unemployment endorse the official normativity about NEET. 44 of them have been asked to identify and precisely describe three situations that they consider as emblematic of their interventions toward unemployed youth people; hence, more than 150 such situations have been collected and allow investigating how the past, present and future stages of the beneficiaries' life course interact within them. The data show that their normative figure is the employed adult and that they see NEET as people in need of socialization.

In conclusion, we will show that the NEET category is founded upon a linear and androcentric representation of the life course (education-training-employment-retirement) (Levy, Gauthier, & Widmer, 2006) which not only subsumes very different social universes into chronological categories (Bourdieu, 1984, Yates & Payne, 2006), but tends to deny the importance of power relationships founded upon age.

## RC54-862.3

**TABTI, SAMIRA\*** (TU Dortmund, [samira.tabti@tu-dortmund.de](mailto:samira.tabti@tu-dortmund.de))

*Hijab Blogs As Explorative Media-Based Spaces of Social Recognition*

Hijab blogs as explorative media-based spaces of social recognition

As studies have shown, women with headscarves are faced with discrimination and prejudice in their everyday lives. This becomes clear in professional settings and when job hunting in particular, as the Senate Administration for Integration and the Anti-Discrimination Office in Berlin have demonstrated. (Senatsverwaltung für Integration, Arbeit und Soziales (Hrsg.), Mit Kopftuch außen vor? Berlin, 2008). Some explanatory approaches in the literature trace this back to a strong stereotyping in the media. Veiled women are thus perceived as less attractive, less intelligent and less educated, as suggested in the study by Yusr Mahmud and Viren Swami. (Mahmud Yusr/Swami, Viren (2010), The influence of the hijab (Islamic head-cover) on perceptions of women's attractiveness and intelligence, in: Body Image, p. 90-93).

In Western culture in particular, the hijab is seen as a symbol of traditionalism, a lack of individuality (uniformity) and religious fundamentalism. On this basis, my study deals with "hijab-style" blogs as areas of recognition/ areas of exploration. In these platforms, recognition is realised strongly via technical-media and aesthetic exploration. Using selected examples of "Islamic blogs", which young Muslim women use as a platform to present and document "Islam stylings", the meaning of such media platforms for aesthetic and social recognition is examined. As part of this, the presentation focuses in particular on the role of body/ dress/image for the constituting of "the self" as aesthetic configurations of social visibility.

**TACHIKAWA, MASASHI\*** (Ibaraki University, [mtachi@mx.ibaraki.ac.jp](mailto:mtachi@mx.ibaraki.ac.jp))

*Renegotiating the Definition of GMOs: Stakeholders' Viewpoints on "New Breeding Techniques"*

We are witnessing development of various new breeding techniques which cannot be regarded simply as genetically modified. For example, genome editing techniques, such as ZFN and TALEN, are techniques which delete some sequences of DNA without leaving any trace of the gene modification. In this case it is very difficult to identify whether this modification is made in an artificial way or just naturally occurred. As of the techniques called as reverse breeding, novel genes are inserted to induce certain genomic transformation at an initial stage, but the novel genes are removed from the final product (null segregant). Here it is open question whether the final product should be regarded as GM or non-GM.

These techniques are actively being developed by venture business companies and universities. If the products created using these techniques are regarded as non-GM by regulatory agencies, seed companies, such as in the area of vegetable and flower, would willingly adopt these techniques to develop new varieties. In contrast, once their products is categorized as transgenic, regulatory cost are huge, and give a large disincentive for small and medium scale seed companies. Many countries now start to think over this question and re-negotiation has started regarding what should be regarded as GM, and therefore should be under regulatory oversight.

In this paper I would like to analyze how various actors, such as government, industry, producer organization, are proposing the way in which these NBTs need to be managed based on their own reasoning. Semi-structured interviews to various stakeholders are analyzed to find what is determining factors behind their views on these NBTs. In short, I would like to show how boundary work on the definition of GMOs is being done again through negotiation among various stakeholders.

**TADA, MITSUHIRO\*** (Kumamoto University,  
[tada.mitsuihiro@gmail.com](mailto:tada.mitsuihiro@gmail.com))

*Language As a Zombie Category of Sociological Theory*

The aim of this presentation is to discuss how sociological theories have dealt with language.

Many theories in sociology regard language as the most fundamental institution of social life. These theories suggest that the same language is shared intersubjectively by people, which in turn enables them to understand subjective meanings. This idea has become a marked trend since the 1960s in relation to Max Weber's interpretative sociology, and is found, for instance, in Peter Berger and Thomas Luckmann's phenomenological sociology, Harold Garfinkel's ethnomethodology, and Jürgen Habermas's theory of communicative action.

However, Weber himself, who lived during the formative period of the German nation-state, had consciously avoided the hypostatization of speech community linked to social organicism and collectivism. He embraced the universalism of the Western civil-society, and shaped his theory on the principle of individualism. For him, a speech community prior to individuals was only superficial. The method of understanding that he proposed was based on the rational calculability.

The idea of an intersubjectively shared language cannot be axiomatic, because intersubjectivity, as pointed out by Niklas Luhmann, is incompatible with subjectivity. Even when the same language is shared by people, the language of the majority that creates a macro-association amongst people is based on its standardization by a nation-state. A linguistic sociology that presupposes the sharing of language is possible only in the assumption of a "nation-society" by methodological nationalism. Hence, it is debatable whether a nationally constructed language can be given the status of a natural language of the life-world. Historically, the theoretical idea of sharing a language was in prevalence during the cold war period, when nation-states were relatively stable. In sociological theories, language is one of the zombie categories that carry the residue of such "nation-societies."

**TAG, MIRIAM\*** (Bielefeld University, [miriam.tag@gmail.com](mailto:miriam.tag@gmail.com))

*Complexity and Simplification. a Framework for the Analysis of the Visual Representation and Constitution of Suffering*

Since the evolving global interest in them, children are constituted as a especially vulnerable group. Based on an analysis of visual representations of children in flagship reports of International Organisations, I propose a framework for theorising and analysing the visual constitution and representation of suffering in two forms.

The first form of images of suffering is based on visual media such as photography and paintings, which represent specific individual and collective cases in aesthetic and documentary logics. A second form of representing suffering is based on numerical data and indicators and takes the form of lists (e.g. statistical tables with country-specific data in alphabetical order), rank-ordered lists (e.g. the Under-5-Mortality-Ranking), and graphical forms (e.g. world maps). Especially this second form deserves closer attention and theorisation, as it not only integrates numerical and graphical elements but moreover two distinct logics: simplification and complexity in transforming social phenomena into data and data into images representing social phenomena. I will discuss firstly the line of complexity running from simple listings to positioning to visually transforming data; and secondly, the line of simplification by which all three forms transform the complexity of social phenomena into visual clarity; a process in which diverging interpretations are hidden behind the visual representation, and ambiguity and interpretative openness is transformed into graphical decidedness.

I will conclude by linking the visual analysis back to semantic representations, as images of suffering are embedded in discursive frames through which their meaning is shaped, enacted, and specified. I will present the change of discursive frames with regard to the constitution of children from objects of humanitarian action to bearers of human rights, to human capital, and human potential; and the consequences of these shifts in meaning for the representation of suffering in visual forms.

*Westernization or Hybridization?: Restructuring Japanese Hegemonic Masculinity in Globalization*

During the economic growth period, a form of masculinity attained a hegemonic position in Japanese society, that is, *salaryman*. The Japanese can easily build up a mental image of a typical salaryman as, a man who works for the same company for life, being protected by career-long employment and a seniority system, and throws himself into the role of the breadwinner leaving domestic duties to his wife. Until the 1990s, majority of Japanese people approved the idea of gender division of household labor and Japan's economic conditions at the time could afford to provide a large part of people with such lifestyles. Hence, male-domi-

nated regime in Japanese society in the second half of the 20th century has been legitimized through a masculine ideal characterized by preoccupation with work to provide for a family rather than violence or physical prowess.

In the age of globalization, however, any local gender orders cannot be isolated from the world and the hegemony of a locally-dominant form of masculinity is always threatened not only by local conditions but also by economic, political and cultural struggles in a global scale. Based on in-depth interviews with Japanese men in two different social contexts, the paper explores the conditions of restructuring salaryman masculinity in terms of the world gender order. First, the encounter between different local hegemonic masculinities in a transnational arena is examined, showing the cases of businessmen working at subsidiaries of Japanese-affiliated companies in Australia. Then, the impact of contemporary globalization on a local gender order is considered by looking at the gender practices among middle-class men to keep up their hegemonic positions, being confronted with globally-expanding feminist agendas and neoliberal economy which undermine the basis of male-dominated Japanese society. Finally, we will discuss how ongoing reconstruction of hegemonic masculinity is associated with multiple social (in)equalities.

*Recovery or Redevelopment: An Examination of the Long-Term Socio-Spatial Transformation of Earthquake-Affected Neighbourhoods in Bhuj*

This paper examines long-term socio-spatial transformation of historical urban neighbourhoods in the earthquake-affected city of Bhuj. The research draws upon archival review and field data collection in this city ten years after the massive earthquake of 2001. The paper first examines the recovery programme and plans for reconstruction at different scales of city, neighbourhood and individual buildings, with a particular attention to housing reconstruction policies. It then maps out changes in the built environment of two neighbourhoods in the old fabric of the city across time; from the pre-earthquake condition, to the disaster time and ten years after it. Changes in the social environment of these neighbourhoods are investigated through the examination of interviews with the pre-earthquake residents of the two neighbourhoods. The juxtaposition of the narratives of those who stayed in the neighbourhood and those who opted or had to leave it demonstrates the contested meanings of recovery. The paper discusses how socio-economic trends, the disaster and its impacts, as well as post-disaster interventions of different actors played a role in such transformation. It is discussed how these influences are manifested in the still changing built environment and how these manifestations are in turn perceived by the residents of the two neighbourhoods. The paper concludes by drawing lessons from this case study to inform future urban planning efforts following major urban disasters.

**TAIT, VICTORIA\*** (Carleton University,  
[Victoria.e.tait@gmail.com](mailto:Victoria.e.tait@gmail.com))

*Negotiating Identity Performance in the Canadian Forces; Soldiers and Stereotypes*

A new security paradigm has driven an expansion in the roles of women in warfare; female soldiers are becoming an increasingly valuable asset in counter insurgency tactics. Female soldiers are uniquely suited to penetrating the private spheres of traditional authoritarian societies, and remain the only means by which females-of-interest can be apprehended while still respecting the cultural mores of the host state. However, this line of reasoning begs the question: If the military is relying on a social construction, in what ways is military subculture influencing it? I explore this question using theories of gender politics advanced by Judith Butler to frame interviews I conducted in 2011 with Canadian combat arms soldiers recently deployed to Afghanistan. The excerpts from these interviews focus on the soldiers' recollections of female soldiers in active duty from the perspectives of their male and female colleagues. The interviews illustrate that the space permitted for female soldiers to express their identity remains artificially bound by stereotypes concerning their physiological and psychological aptitude. More broadly, this adaptation of Butler's classic framework suggests that an ideal female gender performance is discursively incompatible with the ideal soldier identity performance.

*The Dubious Benefits of Technology in the Military: Applications and Abuses*

Perhaps the most undetermined influence on the latest generation of Canadians is the impact of technology on Millennials' intellect and interaction. While some scholars advocate for increased integration of technology into personnel training and communication, others warn against the potential for the dissemination of privileged CF information. This tension is not easily allayed by statistical evidence on Millennials' use of technology either; studies reveal that Millennials are nearly as likely to abuse technology as they are to use it effectively. Like other epochal transformations, the advance of technology is ineluctable. The Canadian Forces must prepare for the integration of a generation who has fully integrated modern technology into their day-to-day operations. Not only has technology reshaped the methods that Millennials use to execute tasks and communicate, but it has profoundly reshaped their cognitive abilities, their expectations of expedience and their access to information. The trouble arises when the ambitions of the programs exceed the awareness of the users; prompting crises in privacy and security. This review examines available literature on Millennials to disaggregate the implications of integrating the so-called digital natives into the Canadian Forces. It looks to highlight promising areas where technology can alleviate challenges in organization and communication, and suggests areas where technology poses a threat to privacy and security.

*The Meaning of Urban River Pollution and Sense of Place: An Ethnographic Study of the Klang River, Malaysia*

This paper is based on a PhD research, which investigates values, beliefs and practices associated with two polluted rivers in urban settings – the Klang River in Kuala Lumpur, Malaysia, and the Torrens River, South Australia. However, this paper focuses on the findings from the Klang River ethnographic data. Theoretically, the concept of place is central to this paper. Findings suggest that in the urban setting where rivers have increasingly been polluted and modified, and as a consequence whose water is not suitable for direct contact, the visual faculty plays a prominent role in determining the state of the river. From the perspective of everyday users, what constitutes pollution depends significantly on what can and what cannot be seen with naked eyes. In particular, objects (such as rubbish) intermingling with river water, the colour and texture of water, the decline or abundance of aquatic species in the river are some of the common visual experiences described by the locals as indicative of pollution. What emerges is that local people have a broad conceptualization of river pollution. The values of a healthy river for the locals include also the physical environment surrounding it. Specifically, the concrete grey walls and straightening of the Klang River for flood mitigation schemes and transportation routes were viewed by the local people as a form of pollution. They expressed a deep concern regarding the physical transformation and modifications of the surrounding riverscape from 'natural' to 'unnatural', which consequently affect their visual experiences and overall sense of place. In conclusion, the concept of place is central to this paper. It is a useful means to understand and analyse the manner in which people comprehend environmental degradation and more specifically river pollution.

*Betting with the Enemy: Changes in Sports' Attitude Towards Sports Betting*

Match-fixing in sport has emerged as a serious and widespread global problem. However, international sports organisations have tended to adopt an ambivalent attitude towards the issue. One the one hand, they deal sternly with match-fixing itself as seen in their common 'zero-tolerance' policy. On the other hand, the sports betting industry that brings about match-fixing has now been accepted as a reliable business partner. These conflicting approaches to match-fixing and the sports betting industry frame match-fixing as a matter of individuals' morality and ethics, instead of structural aspects that drive individual players to becoming involved in match-fixing. Interestingly, this dramatic shift in sports organisations' attitude from vigilance to trust towards the sports betting industry appears to have been driven by monetary motivations. As FIFA President Sepp Blatter said, "we can't ban betting" because "we needed Toto and football to raise money for the sport". This presentation briefly discusses various measures that international sports organisations are currently adopting to tackle sports betting along with the limitations of these measures. While in the early 19th century the football association in England struggled to protect their sport and players from dangers of the betting industry, this presentation raises a question whether today international sports organisations try to protect their business partners including licensed bookmakers from non-partners such as players in danger.

*On the Function of "Symbolic Media" in the Process of Functional Differentiation*

It is one of the most important contributions which Niklas Luhmann has made toward the thesis of functionally differentiated society to indicate the roles of "symbolic media" in concrete temporal events of communication. Medium/Form-distinction is the theoretical device introduced by Luhmann for the purpose of analysis of Form-functioning in autopoietic and information processing systems (including meaning-processing communicative ones). In short, it is necessary for meaning-processing systems in general, communication systems in particular that they constitute any appropriate distinction between Medium and Form and symbolize objects in the environment as Forms through Medium to operate and observe them.

We focus on this distinction of Medium/Form. This presentation shows how Forms in Luhmann's terms, which mean distinctions with asymmetry between the inside and the outside, function as symbols in order to enable the self-reproduction of the communication in which they are adopted. And we deal with "health as symbolic media" for an instance so as to elucidate the significance of this theoretical device for empirical researches. In concrete terms, we will take up a case study about care work for people with physical disabilities in Japan in order to scrutinize the validity and the applicability of the thesis of functional differentiation in Luhmann's theory. It shall be confirmed that various kinds of Forms employed as symbols are so connected with "health as symbolic media" as to allow the emergence and the self-reproduction of the functionally specific communication of care work.

*Integration and Segregation - Teachers' Attitudes Toward Ethnic Culture and Identity of Immigrant Children in Japan -*

This paper investigates how the Japanese schoolteachers think about immigrant children's ethnic culture and identities by conducting interviews with the twenty-five schoolteachers for immigrant children in Tokyo.

For the immigrant children, school is the first-entrance to Japanese society. It plays a significantly important role to determine how they participate in Japanese society both in cultural aspect and socio-economic aspect. In light of cultural aspect, the interaction with teachers is an important process for children to negotiate and develop his/her ethnic identity. For Japanese society, school is a window to look at Japan in the future in terms of how they can integrate the increasing immigrant children and develop ethnic relations.

It finds out that (i) most of the teachers expect both adaptation and maintenance of the immigrant children; following the Japanese social rules and norms in public, while maintaining their traditional culture at home, by knowing that those social rules are not culturally neutral, and (ii) they separate the immigrant children by expecting them to maintain their ethnic identity and culture, for example "Chinese in Japan" or "Filipino in Japan", rather than "Chinese-Japanese" or "Filipino-Japanese" based on their ethnic and cultural national identity, while they also integrate the immigrant children by treating the immigrant children equally under the name of "the students in my class" or "residents in the city".

This case study provides a valuable insight into the discussion of immigrant integration and multiculturalism. I discuss how the theory of multiculturalism is interpreted by the ethnic majority in a society where they recognize the different dimensions of culture and national identity is strongly ethnic and cultural, but not civic.

*A Shortage of Medical Doctors Due to Uneven-Distribution in Location and Specialty Needs Interprofessional Collaborative Practice in Health and Social Care in Japan*

A shortage of medical doctors has been pointed out in last 20 years in Japan, but it has been more apparent after 2009, when two more years of a new compulsory clinical training added, after six years of medical education and successfully passed the medical licensure examination in Japan. A number of practising doctors per 1,000 population in 2009 was as follows: Norway 4.0, Germany 3.6, OECD 3.1, UK 2.7, USA 2.4, Japan 2.2, Turkey 1.6 and Chile 1.0. The highest number per 100,000 was 286.2 in Kyoto and the lowest 142.6 in Saitama, in 2009.

Causes of the shortage in Japan were as follows: advancement of medical science, specialization of health and social care professionals, increase to participate in private practice, increase of woman doctors, longer time to talk with patients, change of patients' consciousness to right, concentration of doctors to cities, decrease of practicing doctors in pediatrics, and obstetrics.

Meanwhile, average life expectancy has extended as follows: 1921-1925: m 42.06, f 43.20; 1947: m 50.06, f 53.96; 1960: m 65.32, f 70.16 and 2012: m 79.94, f 86.41 (years).

Various needs of elderly people in health and social care could not be solved by a single profession, such as medical doctors. Many symptoms in health care occurred in the elderly, such as senile dementia, metabolic syndrome, hemiplegia, dysphagia, fragility fracture and dysuria, could be better treated by a team of multiprofessions. Health care outcome such as average and/or healthy life expectancy may not be always correlated with a number of doctors.

In order to improve QOL of service users, a paradigm shift is needed in strengthening competencies of health and social care professionals for interprofessional collaborative practice, to develop a comprehensive health care network in a community, consisting of three community-based powers on health care, welfare and education.

### *Women's Reversion-to-Japan Movement in Okinawa*

This paper considers women's reversion-to-Japan Movement in Okinawa in the era of U.S. military occupation from 1945 to 1972.

The fact that women supported that "all Okinawa movement" with the number of mobilization is seldom known.

In Okinawa, how did women experience the war and after the battlefield, how tackled the movement, and how lived after the reversion?

Are there experiences, the feature, and a meaning unique to women?

I think the viewpoint of gender is indispensable to consider overall structures of the movement and the community in Okinawa, although it has not been paid enough attention.

For that purpose, I have conducted document analyses and interviews about female teachers. I paid attention to relations between the United States, Japan, and Okinawa, and also to those between men and women.

### *Rise of Renewed Mobilization Strategies Beyond Imperialism in the NGO World*

Conventional paradigm in the arena of international development has been challenged along with the growth of civil society in the third world. In the predominant model, the balance of power among non-governmental organizations (NGOs) is typically prescribed by traditional North-South relations. Northern entities, which possess an abundant supply of resources, hold hegemony over their southern counterparts in the decision-making processes. Even in the NGO world where people strive to ensure social equity and political equality across borders, the formation of hierarchy has been justified under the name of aid assistance. In other words, the legacy of colonial imperialism still persists due to continuing influences of international NGOs in the Global North. However, a recent phenomenon has substantially proved that southern NGOs attempt to overcome such a subordinate socio-political positioning, becoming an alternative node of mobilizing financial as well as human resources. In addition, those emerging organizations are getting further eager to develop their global operations, which contribute to opening up a renewed horizon of south-south cooperation at the grass-roots level. This tendency indicates that what is called as international NGOs is no longer defined simply by geopolitical conditions in the history. In order to strengthen fiscal foundations toward global expansion, NGOs in developing countries are required to seek methods different from traditional ones: raising the amounts of donations/grants. To name, innovative schemes pursued by these NGOs are fostering and utilizing social entrepreneurs to increase operation profits through program implementation. Based on an empirical research of NGOs in the Asia-Pacific region, this study investigates resource mobilization strategies of southern NGOs aiming for transnationalization and identify ongoing structural shifts that would undermine the assumption of North-South relations.

### *What Factors Affect the Intention to Participate in the Household Work of Married Men in Japan? : A Qualitative Study*

**Background & Objective:** Many researchers have conducted various investigations on the determinants of housework participation of men up to today, but few researchers have carried out studies to find out the factors of promoting the participation in housework. This study aims to identify the factors which affect the intention of doing the household work among married men in Japan by adopting the Theory of Reasoned Action, which is one of the influential behavior change theories.

**Method:** We conducted a semi-structured qualitative study in 2013. The interviewees were 23 married men, who were volunteers, and 28-58 years old. Twelve men lived in Niigata, 5 in Hyogo and 6 in Kagoshima. The majority of them were members of the Japanese Trade Union Confederation and participated in our questionnaire survey in 2012. The rest interviewees were recruited through the personal relationships of the first author.

**Results:** We have identified a few of new factors to promote the household work participation of married men in Japan. A married man would have positive intention to participate in the household work, if he thinks as follows: he could take the power to decide the principles of his family life (modern patriarchal hypothesis); he could manage the household economy (family economy management hypothesis); and he has clear memories of the experiences in home economics education classes (home economics education hypothesis). In the near future, we will look into these hypotheses by analyzing the data of questionnaire survey in 2012.

\* This study was partly supported by Health Labour Sciences Research Grant of Japan in 2012 and 2013. Dr. Ayako Kuramoto, Kagoshima Prefectural College, is a member of this study.

### *Work Family Balance of Japanese Men in the Era of Globalization: Do Their Attitudes and Practices Change By Working in EU Countries?*

Despite that work family balance (WFB) has been addressed as an important policy issue in Japan for over a decade, Japanese employees, especially those with children, appear to have more difficulty in reconciling work and family life compared to their counterparts in advanced European welfare states. In fact, there seems to be in Japan a wide agency and capabilities gap between policies and practices, and between entitlements and a sense of entitlement to make claims for WFB. From our empirical study of working parents in Japan, we have witnessed that barriers in workplace organization and the socially endorsed working time regimes have made it difficult for the vast majority of workers, especially men with small children, to exercise their rights for WFB (Takahashi *et al.* Forthcoming).

Based upon the above finding, we turn to Japanese employees working in EU countries where WFB is considered to have been better achieved. The main aim of this study is to explore whether these men's perceptions and attitudes towards WFB have been transformed by living and working in a different country, viz. a context constituted by a different social system, work environment, organizational culture, and the like.

Face-to-face interviews with Japanese men with children under 13 years old, mainly working for Japanese enterprises in Netherlands (13 persons), Germany (13 persons) and Sweden (10 persons) were held in August-September 2013. The preliminary analysis shows that the different social institutional settings seem to have enhanced their WFB; the majority of the interviewees report that they have more time to spend with their family and with themselves than they did in Japan.

### *Re-Discovering Children As Social Actor in Conflicting Close Relationships in Contemporary Japan*

This research aims to explore possibilities of children to be re-discovered as social actor particularly in advert circumstances caused by conflicting family relationships. The Japanese family law as part of Civil Code has recently been modified, and since April 2012 post-divorce life of children has also been influenced by this family law reform. Even though contact to child by non-resident parent is regarded as one of the children's rights, children's wishes and will are not always sufficiently considered when the question is a high conflict case so that family court is asked to make a decision either by judge's decision or court mediation. Bearing in mind such court practice in Japan, it will be studied how children have been recognized in Japanese legal debate by analyzing relevant research literature. This legal aspect on child will further be analyzed through contrast to discourse on childhood among Japanese sociologists of childhood. The second part of this paper will address the discrepancy between normative views and realities of gender equality concerning parental responsibilities for child rearing in contemporary Japan. In a sense, family policy in Japan holds strong tension between promotion of gender equality and recognition of children as social actor - rather than passive object under parental authority. It would be argued that children as social actor need urgently be re-discovered in order to improve safety of children's life and development regardless of their relationship with parents.

*Social Quality in Cross-Cultural Media and Public Debates:  
 Implications for Public Policy for Social Empowerment*

This research begins a discussion by examining distinctive features with Japanese discourse on quality of life addressed by decision-makers of public policy. It will be questioned how the media and public debates have addressed the safety and quality of life in post-3.11 Japan. The main focus of this research is on various ways of manifesting citizens' well-being, including freedom from violence in private life, as a point of start of social empowerment. In the post 3.11 world it seems most important to take into consideration the intersectionality of various factors concerning social quality, whenever we attempt to seek proper public policy response for nurturing social empowerment. It will be studied which social indicators have been referred to and/or ignored by Japanese media, and in which manners non-Japanese media has been approaching the issues on well-being. In domestic debates Japanese media and governments tend to be selective with data sources and indicators, excluding substantial amount of information on those risks and issues such as radiation risks, well-being of vulnerable citizens as well as transparency in decision-making, i.e. governance risk. In brief, this research will ultimately attempt to enhance our understanding on scientific relevance of comparative studies of social quality and empowerment.

[soramotoberukamo@gmail.com](mailto:soramotoberukamo@gmail.com))

*Peter Singer and the "Why be Moral" Problem*

The aim of this presentation is to point out the fatal flaw in Peter Singer's thinking by analyzing his discussion about the "Why be moral" problem.

Peter Singer is one of the most influential ethicists today. He studies theoretical ethics and also engages in social practices in order to address moral issues like animal rights, bioethics, environmental problems, etc. The "Why be moral" problem has been one of the topics he is passionate about since his master's thesis.

"Why be moral?" has two meanings: "Why should we be moral?" and "Why should I be moral?" The former means, "Why do societies need moralities?" The latter means, "If societies need moralities, why should I accept them?" This problem is connected with the discussions about civil societies because it also asks us whether civil societies are necessary.

Ethicists submit some valid answers to the former question but no ethicists have submitted answers to the latter. Peter Singer tries to answer the latter. In his opinion, the ethical life is better than the unethical life because ethical people can realize the consistent meaning of their life but unethical people can't. In other words, ethical people are happier than unethical people. So we, individuals, should be moral. This answer is invalid. For example, there are people who are satisfied with being egoistic. Therefore he fails to solve the problem. This is the fatal flaw in his argument.

Some say trying to solve the "Why be moral" problem is nonsense, worthless or useless. In fact, even though we don't solve the problem, we can do many social practices. Nevertheless, solving it is important for Singer because his opinion is too radical to accept for ordinary people. That Singer doesn't solve the problem becomes an excuse for people not to act morally.

**TAKAHASHI, RYOKO\*** (Kanazawa University,  
[takahasi@staff.kanazawa-u.ac.jp](mailto:takahasi@staff.kanazawa-u.ac.jp))

*Increased Involvement of the Disabled in Welfare Policymaking*

There is increasing emphasis on participation by disabled people themselves in the process of formulating policies for the disabled, both in Japan and abroad. One of the most recent examples of this trend took place in Japan; in 2010 the government set up the "Committee for Disability Policy Reform", forming it in such a way that more than half of the members were directly concerned with the issue (people with disabilities and/or their family members), to discuss reformation of policies for the disabled, and to develop dialogue and cooperation with them.

The aim of this report is to identify the conditions for successful advocacy that promotes the participation of disabled people in the field of welfare policymaking. I will review and compare the advocacy of organizations consisting of disabled people in reference to Esping-Andersen's welfare regime typology. The discussion covers the organizations' history, fundraising strategies, ways of participating in the policymaking process, relationship to the government, as well as their role and influence.

My research results are as follows; disability organizations are actively participating in policymaking both in the Scandinavian countries, classified into the social-democratic regime, and in the United States, the liberal regime. However, there is a difference between the two cooperative relationships with the government: in Scandinavia, welfare policymaking is carried out with strong support

from the government, and thus always runs smoothly. In the United States, on the other hand, it is often carried out amid a tense relationship with the federal or state government, and because of this, there are cases in which it is not smooth. I will add analyses of Japanese cases classified into the conservative regime, and examine the universal conditions and problems requiring distinctive solutions that can be found through the participation of the disabled in every country.

*Japan's Making of 'Western Society' without Democratic Social  
 Foundations: A Historical Analysis of the Meiji Era and Beyond,  
 1850s-1900s*

This paper provides a sociology-of-knowledge style inquiry into the process and consequence of prewar Japan's major national project: the making of 'western society' in Japan. My claim is that intellectuals and policy-makers, in order to actualize the idealized 'western society' in Japan, heightened hostility toward people's native, traditional forms and notions of society, and denied a possibility that Japan's 'westernization' was accommodated by people's traditionally democratic awareness. For this reason, prewar Japan's promotion of 'western society' necessarily lacked social foundations of democracy. This problem, I conclude, ironically supported the prewar reactionary movement, and even led to a negation of the promoted 'west' by the totalitarian regime.

For one thing, eminent intellectuals existed who advocated the modernization of Japan in the Meiji era, and introduced the western conceptualization of 'society' by referring, most importantly, to J. S. Mill. It was an attempt to deny Japanese native forms of society and replace them with western types, on the ground that Japanese society had no internal capacity to nurture democracy and the 'individual,' which were thought to be the key for modernization. Based on such understandings, harsh policies were imposed to ban people's participation into indigenous forms of socialization.

For another, undoubtedly, some patterns of Japanese society were far more progressive than what modernists assumed. One type of such traditional social formations was what was called 'kou.' Being originated in the Buddhist beliefs, 'kou' gathered small merchants and peasants in city and countryside, providing them with means of daily-association and mutual-financing. In many ways, 'kou' had non-feudalistic, non-patriarchal, and democratic bases, on which people voluntarily socialized outside of narrower social-determination by birth, kinship, and territorial bonds, even free from the feudal status system. Had modernists stopped banning it, 'kou' might have democratized Japanese 'western society' of Japan from below.

**TAKAHASHI, TORU\*** (Chuo University, [takahashi0@gmail.com](mailto:takahashi0@gmail.com))

*Vulnerability of Functional Systems in Societal Transformation: On  
 the Case of Political System*

Populist political movements indicate the weakening of formal political processes. Today's advanced information society provides influential channels to get popularity and political momentum. The theory of functional differentiation predicates the autonomy and unity of each functional system. But, through mass media and the internet, populists can stimulate a societal emotion and mobilize it. We can observe, at least in Japan, a bifurcation of two political processes. On the one hand, there are formal and traditional political processes. Various interest groups support political parties as their represents (or agents) in the political arena which adjust their interests. On the other hand, there is an arena of political communication in which various political groups are contesting to get societal resonances. Now, political system becomes increasingly vulnerable (or sensitive) to opinions in this second arena. This arena of political communication could bring a risk (e.g. of political extremism). But, it could also bring a chance (e.g. to achieve an ambitious consensus on social reform for sustainable society). One way or another, we can describe this situation from the point of view of social systems theory. Niklas Luhmann defined a resonance of social system as a reaction of social system to its environment in accordance with its structure. I will slightly redefine the concept of resonance to describe a societal resonance. That is, a resonance of social system is a reactive reproduction of communication in accordance with its structure (e.g. schema). So, we can regard agendas in the second arena as societal structures which canalize societal resonances (communications). And, the problem is how societal communications affect trajectories of functional systems. The case of politics will be suggestive for this problem.

**RC55-877.6**

**TAKAHASHI, YOSHIKI\*** (University of Tsukuba,  
[ytaka2001@hotmail.co.jp](mailto:ytaka2001@hotmail.co.jp))

*Happiness, Ideal Happiness, and Reference Point*

Policy makers such as European Commission, UK, and Japan are now interested in happiness as a policy tool. Happiness is normally measured by a likert scale. The comparison of happiness scale needs common understanding of happiness. However, happiness distribution can be classified into three types: normal, skewed and twin-peak. For example, the distributions in Japan and Hungary are twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply question about ideal happiness. Some may refer to 100% happiness, but the other may refer to 50% happiness and 50% unhappiness.

Quantitative survey was conducted in Japan, Thailand and Philippines. It included questions about their current happiness on a 0-10 scale and ideal happiness. Adjusted by ideal happiness, the distribution was skewed distribution similar to Nordic countries. The survey's result confirmed that distribution of happiness embodied the difference of ideal happiness.

### *Others' Happiness: New Evidence from Four Asian Countries*

If individual pursuit of happiness forced others' happiness to lower, happiness would not be a good concept to evaluate the progress of a society. We can call the society a "selfish happiness society". However, if happiness is more interpersonal, the balance between pursuit of individual happiness and other person's happiness may make society lead good direction. In particular, we now face many issues related to sustainability. Balance between economy, society, and environment and balance between current generation and future generations are keys for our survival. We can call the society a "social happiness society". Thus, the concept of "social happiness" is much more important in our society. However, effect of a person's perception about her own happiness and others' happiness on her happiness is not clear. Therefore, it is worthwhile for us to explore if a person who takes care of or pays attention to others' happiness is happier. I analyzed the relationship by using a survey in Japan and confirmed that other person's happiness makes us happy (Takahashi, 2012).

Similar to the survey in Japan, surveys conducted in Thailand and Philippines in 2013 included questions about general happiness and interpersonal happiness. Using these dataset, the author can test this interrelationship between individual happiness and other person's happiness.

Even after controlling other important factors such as age, income, job and marital status, persons who reported that those around her were happy and she made those who were most important to her happy are happier than others. From the result, the author can conclude that other person's happiness makes us happy at least in Asian countries.

### *Identifying and Reducing The Anti-Japanese Prejudice By Koreans In Job Hiring Decisions*

We investigated the level of prejudice that contemporary Koreans hold toward contemporary Japanese because of the Japanese military's victimization of Koreans during WWII and social psychological mechanisms that might alleviate the negative feelings and attitudes held by the contemporary Koreans toward the contemporary Japanese. The Korean participants were asked to evaluate a pseudo-job candidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of the candidate were manipulated to see if these manipulations would affect the participants' responses. Based on theories of intergroup conflict, social identity, and the collective guilt assignment, we hypothesized that: 1) the Korean participants would endorse the Japanese candidate more when he is portrayed as a trilingual (speak Japanese, English, and Korean) than when he is portrayed as a bilingual (speak only Japanese and English) and 2) the more collective guilt the Korean participants assigns to the Japanese candidate, the more negatively the candidate would be perceived in terms of his personality, which would result in less endorsement to hire the candidate. The results confirmed the hypotheses. Possible implications and suggestions for future studies are discussed.

**TAKALA, MERVI\*** (Finnish Centre for Pensions, [mervi.takala@etk.fi](mailto:mervi.takala@etk.fi))

### *Loss of a Spouse As a Poverty Risk*

The death of a spouse is one of the most stressful changes in one's life. Spouse's death increases the morbidity as well as mortality of widows and widowers. The explanation is the lack of social support because the family is generally regarded as a primary source of support. One important aspect is also what happens to the income after the death of a family breadwinner. All these three factors -physical,

psycho-social and financial - have a substantial impact in widows and widowers wellbeing.

In Finland after the death of a family breadwinner the income of the surviving family members consists of widow's and orphan's pension. The initial pension and the basic amount of the orphan's pension paid from the national pension scheme are paid regardless of income. The survivors' pension paid from the earnings-related pension scheme comprises the surviving spouse's pension and the orphan's pension. A child of the deceased will receive an orphan's pension until the age of 18. The survivor's pension act came into force in 1967 in earnings related pension system and in national pension in 1969. Both were reformed last in 1990.

In this study we use register data of statutory pensions. Roughly 282,000 people were paid survivors' pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men's share of the pensions is 17 percent. Most of the surviving spouse's pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 per cent live under poverty line whereas of all pensioners under poverty line live 22 per cent. Right after spousal loss the income in family decreases about 20 per cent compared to pre-loss income.

### *Social Networks and Conjugal Interaction in Japanese Expatriate Families*

International assignment of Japanese businessmen has been expanding in corporate career management system most during the 1980s by reason of the rapidly-expanding economy in Japan. That career management system was only for men's status position until the Equal Employment Opportunity Law in 1999. Therefore from back then there are the norms of the expatriate housewife as caretaker of the family; not only she provides a comfortable home environment so that husband can concentrate on his job, but also entertains the corporate clients at Japanese style party.

The characteristic of Expatriate Family is the family who transferred abroad by assignment of the company, that is their social networks change radically every few years. Thus in the new and cross-culture land, the foreign conjugal have no choice but to rely on spouse each other.

In Japanese Expatriate Family research, much attention has paid on gender perspective and wives' career development, even though there are few studies focusing on conjugal interaction. This research investigates how expatriate conjugal forms social networks in overseas focusing their relationship, cognition of belonging to the corporation and family resource effects.

A questionnaire survey was conducted in advance to expatriate housewives, based on which semi-structured interviews were conducted. The data used to a case-code matrix through constant comparison.

This study found that Japanese Expatriate Housewives experience three phases as the process of the friendship network formation. At the first phase, wives need husband's company tie to adjust new-life, and from the second phase to third phase, wives share their partner with the association which creates themselves networks.

In presentation, I will report the interviews data which carry out the expatriate couples every 3 to 4 months.

### *A Comparative Study of the Effects of English Language Proficiency on Wages in Japan and France*

The purpose of this study is to compare the effects of English language proficiency on wages in Japan and France.

Many Japanese women have been learning English in the hope of finding jobs which require communicating in English. Such women have abandoned the idea of careers with Japanese firms, where women are entrusted only with jobs that carry little esteem. These women also have strong affinity for Western culture. However, to date, there have been few jobs requiring the use of English in Japanese society and their dreams have remained unfulfilled.

However, given the strong impact of globalization, the value of English proficiency in the market place is changing. English has now become an important common language for global communication. Does this mean that these women are now prized in the market place?

I examined data from Japan and contrasted it with data from France, a Western nation where women are employed in highly esteemed jobs, using a 2010 Internet survey conducted by Doshisha University, Japan, and a 2012 French survey.

The results show that English proficiency of women was not related to wages in France but positively affected wages in Japan. The high value placed on English language proficiency has been helpful in raising women's wages in Japan; however, the results also suggest that women have been unable to take full advantage of the English language proficiency that they possess.

*Association As a Tool or As a Principle?: The Reception and Usage of the Concept of the Association in Postwar Japanese Modernization Theory*

How the association could be legitimized was a key question for French Sociology, because the French Revolution prohibited not only old corporations but also new voluntary associations in order to establish a Modern Society.

For some sociologists, "Association" was theorized as an alternative to market society, for some legal scholars, the state was defined as a contract of association, in order to submit State Power to Civil Society's control. In either case, the basic principle of association was the union of different peoples to accomplish their common purpose.

Comparing the French case, this paper focuses on the place of the association in Japanese Modernization Theory. This theory stressed the liberation of individuals from traditional ties, rather than Civil Society's independence from the State.

As a result, first, the association was understood as one type of secondary group, which is contrasted with the local bonding community, and not as a principle for the society as a whole.

Second, the association was not considered to contribute to the Modernization Process. In Japan, Modernization took the form of individualization in the free Market Society.

Today, Japanese society has been thoroughly modernized in that sense; individuals are free from tradition and customs. Paradoxically, engagement with local community activities has been revalorized and is considered to be an individual choice. Tradition became one of the resources that create the voluntary associative relationship.

These situations seem similar to Giddens' "Reflexive Modernity" in appearance. However, today the Japanese regard the association as a tool for solving problems, not as a principle of society that unifies different peoples for the good of the commonwealth.

Retracing this history, we would like to critically examine why we have understood the association as a tool, rather than a principle, and how this understanding affects today's policy.

*Transitional Pathway from a Temporary Migrant Worker to a Permanent Resident: Narratives of Filipina Live-in Caregivers in Canada*

With the rapid growth of the Tagalog (Filipino) speaking population, recent demographic change in Canada has been directly affected by the pattern of global female migration and the subsequent arrival of these women's family members. In particular, a specific foreign temporary worker program, known as the Live-In Caregiver Program or LCP, explains the current population growth of this visible minority. More than 80 percent of the migrant workers registered under the LCP are females from the Philippines. Furthermore, the LCP grants these female migrant workers the opportunity to apply for permanent residency and to bring their families to Canada after fulfilling a 24 months live-in working requirement. The LCP is the only temporary foreign worker program that has this legal pathway toward permanent residency in Canada.

This study aims to understand the social constraints on female migrant workers through examining everyday experience of Filipina live-in caregivers in Canada. The paper particularly focuses on the transitional legal pathway from temporary to permanent residency. The study of the transitional pathway of migrant workers uncovers the social process of inclusion and exclusion of migrant workers and their family members by states. Furthermore, this social process is highly gendered and racialized experience because vast majority of the applicants under the LCP are females from the Philippines.

*The Nagano Olympics: Impacts on Local Community*

This study aims at demonstrating the impacts of Sport Mega-Events (SMEs). In Japan, some studies on environmental or fiscal impacts caused by SMEs have been studied. However, few studies address the concrete impacts in a specific area and local community, nor try to investigate the long-lasting effects.

In recent years, the International Olympic Committee (IOC) has attached a high value to 'Olympic legacies.' However, there are two main concerns regarding the IOC 'Olympic legacies'. First, these legacies are mostly based on positive effects for the host city/nation, the National Olympic Committee (NOC), other sport-re-

lated organizations, and for the IOC itself. Secondly, the 'Olympic Games Global Impact' project, launched by the IOC in order to improve the evaluation of the overall impacts is completed within 2 years of the event, and is much too soon to measure the legacy. This study argues that it is important to conduct research for a prolonged period of time in order to capture not only the positive aftermaths of SME, but also to address negative aspects thereby ensuring a more complete understanding.

This study evaluates different aspects of SME impacts through a case study of Hakuba village (Japan) which hosted the Nagano Olympic Games in 1998, and is examined from three angles; the tangible/intangible, positive/negative and planned/unplanned impacts. Especially, the impacts on the tourism industry of Hakuba are discussed in detail. The analysis in this study is based on the questionnaires and interviews conducted with people from the community itself and on a variety of statistical data.

*Hegemony of American Banks and Corporations in the Making of Japan-United States Relations*

This study investigates hegemony of American banks and corporations in the making of Japan-U.S. relations in the period between 1920 and 2008, using the framework of Neo-Gramscian approach and sociological state theorists and referring to primary and secondary sources. In the period, three specific forms of hegemony have crystallized with 'internationalization of capital', accompanying cooperation and conflict with Japanese counterparts. The three forms of hegemony are liberal internationalism around high finance, corporate liberalism (embedded liberalism) undergirded by Fordism, state intervention and Bretton Woods, and neoliberal globalization. According to the form of hegemony, the period is divided into five terms. The first is the post-First World War. Wall Street bankers formed the alliance with Japanese bankers through the investment in Japan and Versailles-Washington system. The second is the term between mid-1930's and 1945. Great Depression destroyed liberal internationalism, and the conflict between Japan and the U.S. finally led to the war. In Japan, national industries like steel supported expansion of sphere of interest, which clashed against American 'grand area' design. In the U.S. New Deal and war mobilization formed the coalition that supported corporate liberalism. The third is the term between 1945 and 1971. American corporations and banks formed cooperation with Japanese counterparts through the investment in Japan and Japan-U.S. alliance in the cold war. Japanese leaders supported corporate liberalism, but the catch-up broke Bretton Woods. The fourth is the term between 1970's and early 1990's with trade conflicts, during which American international banks rose, formed neoliberal globalization, and increased the investment in Japan. In Japan, multinational corporations rose through FDI in the U.S. after Plaza Accord. The fifth is the term between mid-1990's and 2008. American banks and Japanese corporations shared neoliberal globalization, increasing mutual investment in Japan and the U.S. Neoliberal globalization finally, however, faced the crisis.

**TAKAYA, SACHI\*** (Okayama University, [tkysachi@gmail.com](mailto:tkysachi@gmail.com))

*Citizenship of Long-Term Migrant Filipino Women in Japan: Impacts of Positions in Japanese Families*

This paper will argue how the citizenship of long-term migrant Filipino women in Japan is defined and negotiated in the dominant social structure. Regardless of the status of "sexual citizens," or long-term legal membership based on sexual relations with Japanese citizens as Parreñas (2011) argues, sociostructural locations for these women have been stratifying, particularly between married women and mothers of Filipino-Japanese children. Based on census and qualitative data, stratification is primarily due to the process through which these women are or are not included into Japanese families, which embody the dominant racial and gender structure of Japanese society.

On the one hand, married women increasingly exercise their agency in not only the family and workplace in Japan but also in a transnational civil society. Despite their exclusion from formal political citizenship, some substantially exercise transnational citizenship by being involved in transnational activities across Japan and the Philippines, which lead to their positive recognition. On the other hand, solo mothers of Filipino-Japanese children tend to face difficulties accompanying marginalization and poverty. The number of Filipino solo mother households has been increasing along with the rise in the number of international divorce. Many of them cannot help but depend on social welfare because of limited access to the workforce. In addition, the increase in the number of divorcees suggests that the status of married women and that of mothers are in a continuum, although they seem to be at opposite ends of the spectrum.

This study argues that the stratification among women shows how inclusion into a Japanese family provides the most available means to ensure security among these women living in a dominant racial and gender structure.

**JS-80.5****TAKAYA, SACHI\*** (Okayama University, [tkysachi@gmail.com](mailto:tkysachi@gmail.com))***Making Irregular Migrants Vulnerable: A Tangle of Biopolitics and Morals in Japan***

This paper examines the changes in the irregular migrants' situation in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

Giorgio Agamben (1998) theorized that *biopolitics*, as a function of sovereignty, operates to define the included and the excluded, the latter of which is called "bare life." Some studies regard irregular migrants who are legally excluded as living a contemporary "bare life." However, other studies have criticized Agamben's argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract broad public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms behind the labor shortage and Japan's self-recognition as a major power at the time.

However, since around the turn of the century, reactions to irregular migrants have dramatically changed. Their presence has been linked to security issues, and they have come to be regarded as "criminals." Immigration authorities collaborated with the police in launching a large-scale crackdown, which endangered the daily lives of irregular migrants. At the same time, however, the legalization of irregular migrants was promoted based on moral values. At present, sovereignty, connected with moral values, mainly defines the included and the excluded among irregular migrants.

Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

Niseko, Hokkaido, a famous ski resort, has become a popular ski destination for Australians since 2001. It is located in the northern part of Japan serving both domestic as well as international ski tourists. Among foreign travellers to Niseko, Australians are one of predominant groups of visitors. With the large number of Australian visitors, the area has been transformed into "Little Australia" where Australian pubs, shops and English signs are becoming elements of the city landscapes. This paper will consider this flow of Australians to Niseko and its impacts in the local community through different theoretical concepts and shed light on nature as well as significance of such community under nexus of Australia and Japan.

**RC31-528.2****TAKEDA, AYUMI\*** (Hitotsubashi University, [ayum.takeda@gmail.com](mailto:ayum.takeda@gmail.com))***A Moment of Recognition and Unity in Diaspora: Multi-Spatial Formations of Kurdish Music in Germany***

Immigration from developing countries to Europe is often experienced not only as a social downward mobility but also as a cultural deprivation. In the context of Turkish migrant in European countries, their musical activities have drawn attention as struggles in discrimination: effort for transmitting cultures to the next generation in informal spheres, where indigenous European people are rarely to be found (Klebe 2009, Saglam 2009); 2nd Generation as a main agent who generates Hip-Hop/Rap music allowing to express their emotions as secondary citizens in the host societies (Klebe 2004).

For migrant groups with minority status in the countries of origin, however, the new host society could offer possible spaces to practice, and even develop their disadvantaged or prohibited cultures at the same time. That would lead to intensive transnational connections between people in diaspora and in homelands. This setting can be seen in the case of Kurdish migrants from Turkey. As some scholars sited, the Kurdish music production has been done mainly outside of Turkey, where Kurdish languages were forbidden until 90s, such as in the space offered by the European based Kurdish satellite broadcasting, "ROJ-TV" (Christensen 2007, Van Bruinessen 2000, Hassanpour 1997).

This paper examines how Kurdish musicians have utilized the opportunities in German host societies for their cultural production in the form of music. Based on interviews with musicians and one-year participant observations in regular music activities and events, I will show that such practices not only promote musical circulations among Kurds, but also could contribute to recognition as distinguished group from "Turkish migrants" in the host society, and eventually present symbol-

ical unity as Kurds, provided that musicians succeed in managing contact German institutions, and "proper" distance from Kurdish political parties.

**RC02-55.4****TAKEDA, HIROKO\*** (University of Tokyo, [takeda@global.c.u-tokyo.ac.jp](mailto:takeda@global.c.u-tokyo.ac.jp))***The Governance of Reproduction in Japan: How Can Reproduction be Located within the Capitalist Economic System?***

As Karl Polanyi pointed out, the reproduction of human-beings and society is external to the liberal capitalist economic system. At the same time, the multi-dimensional reproductive activities (biological reproduction, economic reproduction and socio-political reproduction) are vital to the maintenance and development of the capitalist economy. The dilemma posed by the contradictory relationship between reproduction and capitalist economy had long been dealt with by mobilizing families and local communities, officially or unofficially, within each national economy. States have often played a vital role in the institutionalization of the link between reproduction and capitalist economy by locating families/communities within the national economy, in other words, governing reproductive activities, as exemplified by the setting-up of the welfare state system. Economic restructuring influenced by neoliberal principles in recent years, however, has eroded the foundation on which families and local communities can function as a unit of reproduction. This presents particularly acute problems to the Japanese state where a high degree of the welfare state system's dependence on the family is observable and rapid demographic changes, typically ageing and birth-rate decline, are ongoing.

This paper examines the ways in which the Japanese state has engaged in the governance of reproduction from the mid-19<sup>th</sup> century to the present time by arranging/re-calibrating the governing system in order to respond to changes in national/international political economy. In so doing, the paper explores a theoretical question regarding the contradictory relationship between reproduction and capitalist economy, that is, how the governance of reproduction functions in the process of developing and maintaining capitalist economies, with reference to the works of Polanyi and the 'governmentality' school. The analysis of the Japanese case offers some insights that illuminate inherent problems existing in the governance of reproduction embedded in governmentality.

**RC21-360.5****TAKEDA, NAKO\*** (Waseda University, [bxp05011@nifty.com](mailto:bxp05011@nifty.com))***How to Tackle the Vacant-House Problem in Shrinking Cities: The Cases of Japanese Local Governments***

Japanese society, with the progress of depopulation and rapid aging, is faced with the vacant-house problem in both urban and rural areas. It is being recognized that vacant houses are an urgent issue to be tackled by Japanese local governments. How to reduce risks associated with vacant houses (accidents caused by building collapse and risks in fire and crime) to promote residential population and local resilience. The purpose of this research is to clarify the characteristics of local governments' actions against the vacant-house problem in urban areas into the following two types:

(1) Enforcement of "municipal regulations for controlling vacant houses"

In 2010, Japan's first municipal regulation against vacant houses was enforced in a city of suburban area of Metropolitan Tokyo. This action was a response to an increase in the number of destroyed houses. More than 40 cities have enforced similar regulations since then, and the number is further increasing. This tendency is especially prominent in local governments facing severe economic conditions, suggesting that how to control vacant houses has been a potential and serious problem. Main actors are local governments and the house owners. More specifically, who bears the demolition costs of aging houses is the point.

(2) Management of "vacant-house banks"

It is a challenge to local governments to introduce vacant houses, which have not been valued in private housing markets, to public information networks to promote their effective use. There are various types in the management of "vacant-house banks" by local authorities. Diverse actors including NPO are involved in this type. Because renovation of vacant houses costs a large amount of money, those actors are seeking to form a partnership with each other and to explore effective methods. Generally, not only reducing vacant house-associated risks but increasing values of local resources is aimed.

**TG07-972.2****TAKEDA, NAKO\*** (Waseda University, [bxp05011@nifty.com](mailto:bxp05011@nifty.com))***Re-Urbanization and the Local Food Culture : The Case Study of Central Tokyo***

This research focuses on the developing process of the local food culture in central Tokyo. Regeneration of the central district promoted to develop the local food street and a local food identity. The purpose of this research is to analyze how the urban regeneration deepened the local food culture.

This research area called 'Tukushima' is located in the water-front area adjacent to the urban center. The Water-front mega-projects in the 1990's opened large business/commercial district on the reclaimed island which attracts international and domestic tourists. The new subway lines were constructed through Fukushima, the number of tourists come to Fukushima increased.

The traditional local shop owners in Fukushima changed their business, they opened special local food restaurants. This special local food called 'Monja' used to be a common afternoon snack for working-class children here. About 60 Monja restaurants made the distinctive street of local food. Many tourists come to eat it at lunch time. After lunch they go sightseeing and shopping at the water-front. Fukushima became a popular tourist spot. This is the first impact of urban regeneration on Fukushima.

The second impact of regeneration is the boom of building super high-rise condominium towers. Fukushima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Fukushima is gentrified, and new residents enjoy to eat Monja as a traditional local taste.

The third stage of regeneration is about to begin. Tokyo has been chosen to be the host of the 2020 Summer Olympic Games. The venue is very close to Fukushima, high-rise tower residents can see games from their window. The price of condominiums goes up. Local food will be popular to visitors. The new era of Monja is about to start.

#### *Challenges for Healthy Eating: A Cross-Cultural Study of Conceptions of Eating Among Young Adults in Urban Australia and Japan*

In the early 21st century when bio-medical view on health and medicine dominates global discussion on "healthy eating", most guidelines and recommendations are primarily concerned with fulfilling nutritional requirements and avoiding or limiting the intake of undesirable substances. They are motivated by the prevalence of chronic diseases such as cancer, cardiovascular diseases and obesity in modern society. Consequently, cultural ideologies around "healthy eating" are being constructed around these rationales. Beyond food intake, some studies and public health policies assert further that commensal eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

I argue that the bio-medical approach mentioned above is often individualistic and overlooks unique socio-cultural aspects of eating and living in a local community such as commensal eating, culinary culture, history, lifestyle, and food supply chain. I explore the construction of "healthy eating" among young adults in urban cities of Australia and Japan through 71 in-depth interviews conducted during 2012-2013. I examine holistic aspects of eating by including contextual aspects of commensal and solo eating (eating alone) in the interviews. In contrast to previous literature, I find that the majority of participants see commensal eating as a good cultural practice and may associate it with mental health benefits, but that this practice is not necessarily associated with the healthy intake of food (portion size, pace and food content). This is due to the fact that commensal eating is rather complex and sensitive to socio-cultural circumstances.

In conclusion, this study identifies dynamics of eating contexts in different culture as challenges for healthy eating promotion in the modern society.

#### *How Japanese Male Narratives Are Made up?*

We have recently researched Japanese university students' sexual lives for a few years and published as a book in Nov. 2011: "talking about sex with college students: contemporary sexuality through interviews". I was parted for gay students' sexual reality at the research and described how much they suffer from their lives. After the book published, I used that as a textbook in some universities. Then I happened to meet some gay students. The more I collected their narratives as a gay, the more I questioned why they so suffered from their sexuality are. I noticed a paradox of the narratives as a gay or that of 'gender identity disorder'; the more they talk, the more they are suffered. I wish I could suggest some case studies of their narratives what is to against 'male narratives' from their words and why they suffered from such unimportant miss much from their identities.

#### RC15-263.10

**TAKENAKA, KEN\*** (Hiroshima Kokusai Gakuin University, [dotlaundry@yahoo.co.jp](mailto:dotlaundry@yahoo.co.jp))

#### *Who Makes the Stories, Medical Professionals or Patients?*

I am really interested in the arguments which should save patients more 'narrative based medicine' or 'narratives in Medicine'? In my point of view, carers including medical professions should more focus on patients stories about their illness and life. When patients' narratives are controlled by medical professionals, even if it had been 'for medical treatments', patients are controlled by others. That might mean one's life is possibly controlled by medical stuffs which are strongly connected medical governance in their country. For instance, ones narratives about "How to die" or "how to give birth" should easily connected to economical point of view in one's country through the conversation with medical stuffs that should reflected by the systematic medical standards. I may contribute to your session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illness in Hokkaido, Japan. Patient's narratives are strongly controlled by medical stuff indeed in Japan. This should be the result of 'Narrative Medicine' had been done in Japan I guess. If people focus on patient's Narrative more, they might have another chance to live more successfully. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self-help group. I will supply a small material for the argument who is to draw patient's narratives.

#### *The Great Recession and Unemployment Among Brazilian Immigrants in Japan*

The economic recession which occurred during the period from 2007 to 2010 led to a massive growth in unemployment among workers in many countries. Conversely, it is important to note that the gap in unemployment between immigrants and native-born population differ markedly across nations. In particular, in Spain and Portugal, unemployment rates among the foreign-born increased much more than those among the native-born whereas in several other countries, there were few divergences between these two groups with respect to unemployment growth over time. This cross-national variation appears to depend on institutional arrangements of the labour market structure, industrial relations and employment policies.

Japanese labour market has been characterised by a higher level of employment security for regular workers. However, increasing global economic competition has forced the labour market to become more flexible and has thus led to rapid growth in the number of non-standard workers. During this period, immigrant workers who came from Asia and Latin America have been incorporated into the sector of non-standard employment. They can be easily dismissed during the time of economic slowdown because of their nature of employment contract. In fact, many immigrants became unemployed during the recent financial crisis.

This study focuses primarily on Brazilian immigrants in Japan because Brazilian workers represent typical cases of the precarity of employment status among immigrants in Japan. Approximately 80 per cent of Brazilian workers have been employed as temporary workers by temporary help agencies. Because of that, the growth of unemployment after economic crisis was considerably greater among Brazilian workers than among Japanese workers. This study addresses the question of what resulted in unemployment among Brazilian workers in Japan. I will investigate the effect of human capital and assimilation, employment status and industrial sector on their likelihood of unemployment during the economic crisis.

#### *Sociology of an Immigrant Between Borderlines: An Intellectual Biography of Hiroshi Saito*

This paper examines the intellectual biography of the Japanese-born sociologist Hiroshi Saito (1919-1983) by considering the dilemmas and impasses lived by him. Our goal is to explore the relationships between his personal trajectory and his academic work, mostly devoted to the subject of Japanese Immigration in Brazil. As well as the majority of Japanese people who emigrated to this country in the first half of the twentieth century, he worked as a farmer in the cotton fields at the State of São Paulo. In search of better opportunities, Saito moved to the capital city where, by the hands of the already well-known professor Donald Pierson, he became the first Japanese immigrant to build a successful academic career in Brazilian sociology. The analysis focuses on the strategies he developed and the political positions he defended between the 1940s and the 1950s in order to confront both the political repression of Brazilian State, on one hand, and the Japanese ultranationalist groups, on the other. Moreover, we seek to demonstrate that the author played a crucial role for the institutionalization of the studies on the Japanese immigrants in Brazilian social sciences, being himself one of the pioneer researchers on this subject.

*Do the Small Firms Give Advantages to Female Employees? : Firm Size Effects on Taiwanese Women's Career Choice*

This study examines whether the difference of firm size influences job career of female in Taiwan using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. Well-known explanation for this is that the industrial structure composed of large number of small-and-medium sized enterprises (SMEs) and family business provide women with flexible working conditions. However, existing studies testing firm size effects on a woman's career, have failed to reach a consistent result. To eliminate possible problems providing the inconsistencies, this study limit the objects of analysis to female employees with regular salary, excluding self-employed workers and workers of family business without payment. Also, previous studies usually treat job change and job turn over separately, but in this study those two actions are simultaneously analyzed in a discrete-time multinomial logit model.

This study tests mainly two hypotheses: female workers in small sized firm are able to (1) enjoy flexible working conditions by negotiating with their employees and (2) accumulate better skills which are useful for a labor market than their counterparts in large firms are. Dependent variable is employment choice, which have 4 categories: "continue the same job", "change job in SMEs firm", "change job in large firm" and "leave from working". Main independent variable is a dummy variable indicating working experience in SMEs and interaction terms SMEs dummy and two event dummies standing for marriage and childbirth. The result indicates that women who have working experiences in SMEs are more likely to have uninterrupted working careers than those who have experiences in large-sized firms.

*Jeunes, inégalités, Sens Du Changement Social*

De quoi parle-t-on à propos de "changement social" lorsqu'on prend en compte la problématique des jeunes confrontés aux longs effets des inégalités sociales, dans la société brésilienne, mais qui sont dans un processus collectif actuel de changements surtout au plan subjectif (de leur collectif et/ou collectifité)? Changement d'attitudes quotidiennes en face de leurs propres situations précaires de vie et vis-à-vis des rapports sociaux qui rétrécissent toujours leurs possibilités de participation (économique, sociale, culturelle ou politique). Les multiples transformations à l'intérieur d'une société ont des effets différenciés sur les sujets sociaux selon la place qu'ils y occupent, raison pour laquelle le sens du changement social ne peut être défini qu'à partir des perspectives sociales. Peut-on envisager une discussion sur le changement social et le *processus de subjectivation* (sens foucauldien) tout en considérant certains des effets inattendus liés au développement des réseaux sociaux appuyés sur les nouvelles technologies d'informations et de communications sociales? Peut-on réfléchir sur le changement social tout en s'affranchissant des concepts « classiques » de reproduction, déviance, antagonismes de classes... afin de permettre l'émergence dans le discours sociologique, et la conceptualisation d'autres modes d'existence sociale, d'autres espaces d'expérimentations, d'autres intensités de vie, d'autres modes de penser le monde ou d'autres modes de *plier les lignes de force* telle qu'une *multitude* en son essai d'une nouvelle *économie affective* où la subjectivité devient une puissance de vie (sens de Deleuze et Tarde) ? Des collectifs jeunes, au Brésil, en leur essai d'expérimentations culturelles, artistiques et micropolitiques qui se déploient dans les « périphéries » brésiennes, mais aussi certains « mouvements sociaux » où les principaux protagonistes sont des jeunes, depuis 2011 (*'indignados', 'occupy wall street', 'printemps arabes', 'révolte brésilienne-2013'* ...) sont les fondements empiriques de notre réflexion sur le sens du changement social à l'intérieur de l'imposante logique des inégalités sociales.

*A Mathematical Model of Status Hierarchy*

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years, Gould proposed a groundbreaking theory of status hierarchy. Using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould's model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players

must pay in executing their attachment strategies. Here we extend Gould's model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould's model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. Our main result is to show what is called "the relationality of social status". Specifically, we show that an individual's status is entirely determined by the individual's relative quality in the social system. This observation contrasts with that of Gould's model in which an individual's status is dyadically determined. Our model can be considered as a type of network formation model having broad applicability.

*Remembering and Resilience after Traumatic Social Loss: A Multicultural Perspective*

A challenging realm for Global Sociology is the cross-cultural thinking and processing of the experiences of collective remembering after mass social trauma and post-traumatic resilience across cultures and generations. In this presentation we will develop a theoretical and applied multi-cultural framework for working on the *intersubjectivity* of memory, with a focus on the unprocessed dimension of social experiences of traumatic loss, building on the latent, private, intimate individual and cultural aspects of experiences of collective memory and transmission. We will also work on the concept –building on Halbwachsian work of "undercurrents of memory," incorporating the more recent concept of "moral injury," a contemporary development out of the post-traumatic stress literature.

This line of grounded theoretical research, developed by collaborative efforts by the authors over the last decade, explores the underlying conflicts of the unresolved past as they are woven into the fabric of contemporary cultures, the effects of unprocessed experience lying in the undercurrents of collective memory, often excluded or absent from the public narratives of memory, but which paradoxically retain a profound intersubjective and cultural presence, until they finally push their way into the public realm. Social studies of collective memory need to include this realm of the unprocessed (latent but present) experiences and transmission.

The authors will develop a joint conceptual approach to look at individual/ community and cultural traumatic remembering, and the resilience of certain memories, over time. Applied research cases will include Southern Cone political authoritarianism, the Japanese American incarceration experience in the US as well as the Japanese memories of the 3.11. Great Tohoku Earthquake.

*Food Regimes and Food Import Dependency: An Analysis of Jamaica's Food Imports, 1950-2000*

This paper uses food regime theory to analyze the changes in Jamaica's food imports in order to explain how it became so heavily dependent on imported food. It argues that food regime theory has a bias toward production and food exports; it tends to focus on the drivers of the food regimes: First World states and transnational corporations, along with the New Agricultural Countries, the few developing countries that have become major players in the global food system (e.g., Brazil, South Africa, Thailand). To correct for this bias, we need to examine how small Third World countries are connected to the global food system through consumption and food imports. As food regimes evolve, their characteristic commodity complexes change. In turn, the types of foods imported by Third World countries also change. However, once a country becomes import dependent for a particular type of food commodity, it is very difficult to go back to self-sufficiency. Thus the evolution of food regimes creates a cumulative food import dependency for more and more kinds of food. One element of food regime theory which does focus on consumption and food imports into the Third World is the analysis of how the US PL480 "food aid" program changed Third World diets, undercut Third World agriculture, and created food import dependency. This paper expands on that analysis and uncovers additional mechanisms through which food regimes tend to create food import dependency in small Third World nations.

**TALBURT, SUSAN\*** (Georgia State University, [stalburt@gsu.edu](mailto:stalburt@gsu.edu))

*Chilean Universities, Crisis Ordinarity, and Respatializing Knowledge*

University competition for international excellence centers faculty research productivity (measured by indexed publications, research citations, etc.), global rankings, and international recognition. This presentation analyzes internationalization and research development in Chilean universities as a spatial reorientation of faculty work, knowledge, and subjectivity. Since Pinochet's dictatorship, Chile's neoliberalization has intensified everyday competition in a free market and declining welfare state. Following the regime's political repression, universities' knowledge alignment with popular subjects changed to creating practical, neutral knowledge through technocrats. More recently, Chilean university policy conforms to World Bank and OECD logics to increase research productivity and rankings.

I theorize globalization as a "spatial rationality" that attributes causal powers to space to create efficiency, utility, and normative ideas of "the good" that catalyze particular actions and subjectivities. Rhetorics of globalization's economic demands create "crisis ordinariness," naturalizing globally competitive preparedness for national, institutional, and individual well-being. Technologies of visualization (e.g., rankings) and cosmopolitanism incite faculty to compete as entrepreneurs, a spatial reorientation that secures theory, methods, and research networks of the Global North as norms for knowledge production for faculty from "peripheral nations."

I present themes from interviews with twenty faculty across fields at two top Chilean universities: (1) Faculty describe becoming self-managers, securing grants, publishing in ISI journals, and participating in international networks, creating new privileges and hierarchies; (2) As faculty "become productive," some describe losses: research regulation through funding agency and journal standards, abandoning local projects of social change, and diminishing space to participate in national debates; (3) These constraints produce alternative knowledge projects, such as using grant funds to create digital platforms for public exchange or indexing long-existing Chilean journals to legitimize "expressions that expand our social imaginary."

This is not a simple narrative of research homogenization, domination, or resistance, but of how crisis ordinariness creates new spaces, subjectivities, and knowledges.

#### *I Miss My Mum and Dad: Children's Well-Being and Parents' Job Migration In Estonia*

Estonia is fastly developing country, which has experienced many societal and economic changes after regaining independence in 1991. Although there has been many positive developments, the global crises has influenced the lives of many people in Estonia. One of the most recent developments is a growing job migration out from Estonia. According to Statistics Estonia since 2010 the number of people going to work and live abroad has been constantly increasing and in 2012 it has been doubled compared with previous years. Negative net migration together with negative reproduction rate has been the main indicator influencing drop in population of such a small country. Another tendency that is poorly studied is the well-being of children whose parents have gone abroad. In some cases they are taking their children with them, but in relatively same number of cases they are leaving children behind with one parent or if mother and father both leave, other relatives take care of the children. There have been also cases where children are left just by themselves without any proper care, in some cases just older children taking care of their younger siblings. Aim of the current study is to analyze social and psychological well-being (life satisfaction, personal well-being and relationships in school and at home) in group of children who are left behind by one or more parents and to compare the findings with control group – children who are living together with their parents in Estonia. For the analysis most recent data is used from the Jacob's Foundation survey Children's World (data collected in autumn 2013). Altogether 3000 children from Estonia are studied, covering the ages 8, 10 and 12, around which is the most vulnerable age in sense of psychological and social attachment and challenges of growing up.

#### *The Gender Gap in STEM Majors: Evidence on the Gender Belief Hypothesis from Taiwan*

Why are women underrepresented in science, technology, engineering, and math (STEM) fields in college and work? Drawing on an unprecedented range of survey datasets, Xie and Shauman (2003) rejected many common explanations (such as gender difference in math ability and the pipeline hypothesis) for the gender difference in college majors. Survey-based research has yet to explain much of the gender gap. Drawing on experimental studies, Ridgeway and Smith-Lovin (1999) develop a concept called cultural beliefs in gender (gender beliefs). Using

survey data to corroborate the experimental results, Correll (2001) argues that gender beliefs result in biased math self-assessment (MSA) and MSA explains why females are underrepresented in quantitative majors. Yet, upon close scrutiny, her results actually show that MSA is at best a minor source of the gender gap. Interestingly, Cech (2011) shows that professional role confidence, as a form of gender beliefs, can explain the gender gap in persistence through engineering majors in college. This seems to indicate the causal importance of some gendered cultural and psychological mechanisms may well be at play.

This study re-examines whether gender beliefs can explain why more men choose the science track in senior high school and STEM majors in college. We draw on the core panel of the Taiwan Education Panel Survey (TEPS), a large and representative sample of first year junior high school students in 2001. In general, students' gender beliefs early in high school explain a minor portion of the gender differences but parents' gender beliefs when children were early in high school explain substantially more—about a half of the gender gaps. Taken together, the two beliefs explain most of the gender differences and the residual gender gaps become insignificant. For the first time, then, survey-based results can provide a simple and direct confirmation of the gender belief hypothesis.

#### *Pregnancy: Supporting Networks and Families in Disaster*

The aim of this research is to analyze pregnancy in its social contexts: privatization and familism. In post-WWII Japan, pregnancy has become privatized as a family issue. The disaster in 1995 and 2011 revealed us that there was much limitation of supporting system in these social contexts. My research is based on data as follows: (1) statistics on pregnancy, (2) relevant laws, (3) articles in professional journals, and (4) 10 interviews of women who were pregnant in disaster. My presentation is as follows: (1) To review development of laws for pregnant women in disaster as well as in peacetime for these twenty years in Japan, (2) To show what happened to pregnant women and their families in disaster, (3) To figure out a chain of caring support and women's power to change disaster into opportunities, (4) To point out further issues left to us, especially in Fukushima. In more concrete terms, I show invisibility of pregnant women in 1995, and then development of networks to support pregnant women and their families by the third sector since 2011. We can find a great deal of change in Eastern Japan Disaster in 2011, in comparison with Hanshin-Awaji Earthquake in 1995. The voices of women who had babies in the disaster show us that the disaster became a turning point to support pregnancy beyond privatization and familism. On the other hand, Fukushima remains as a harsh reality for families and mothers especially with babies. The facts tell us the way we construct families and supportive networking as well as their limitations after disaster.

#### *When Are Interviews Good Enough? a Reflection on Threats to Retrospective Methods Posed By Automaticity and Performativity*

Research on respondent performance in the research setting and on automaticity in human cognition directly challenge the validity of interviews. Interviews, however, efficiently produce what looks like rich, relevant data and they are particularly appealing when studying complex work in difficult to research environments. This paper looks for evidence of the practical relevance of performativity and automaticity in transcripts of interviews with civilian and military staff just returned from their rotations in a reconstruction mission in a (post?)conflict environment. Re-analysis of these interviews suggests that the validity of retrospective methods may degrade rapidly as complexity increases.

#### *Symbols, Communicative Citizenship Actions and the Claiming of Human Rights from a Transnational Perspective: The Case of the Social Movement of Victims of Eastern Antioquia, Colombia*

In this paper I would like to present the experience of two social movements of victims of Eastern Antioquia (Colombia – South America) that have been developing different types of communicative citizenship actions and symbols in order to do political activism in regional public spheres and claim human rights from a transnational perspective in the midst of the Colombian armed conflict. Specifically, I will focus on the experience of the *Association of Victims of Granada Town (ASOVIDA)* and the *Provincial Association of Victims to Citizens (APROVIACI)*, and how these two association of victims have been implementing, transferring and adapting in their communicative citizenship actions different symbols and forms of political action having as a reference other victims' groups of the world such as Women in

Black (Serbia), Mothers of the Plaza de Mayo (Argentina) and May our Daughters Return Home, Civil Association (Mexico).

My two principal arguments in this paper are: first, these two Colombian experiences (ASOVIDA and APROVIACI) are successful examples of how it is possible to transfer, adapt and implement different types of political actions and symbols from other parts of the world in order to improve social and political activism in particular contexts. My second principal argument is that the concept of communicative citizenship represents the instrumentalization of a new dimension of citizenship where communicative action is at the centre of the social dynamic, and one of its primary purposes is to understand the different socio-communicative manifestations, actions, strategies, practices and tactics associated with the contemporary struggle for recognition, meaning and significance for different actors in public spheres. The analysis in this paper is based on results of a narrative analysis of 48 interviews that I conducted with different members of ASOVIDA and APROVIACI in October and November of 2012 as part of my doctoral research fieldwork.

#### RC47-771.5

**TAMBE, SHRUTI\*** (University of Pune, [shruti.tambe@gmail.com](mailto:shruti.tambe@gmail.com))

#### *In Search of a New Framework: Collective Actions in Non-Metropolitan Cities of the South*

Following Castells some scholars analysed urban conflicts in the framework of 'Urban Social movements'. Both urbanists and Social movements scholars in the South except a few, however completely neglected this framework, where the discussions were focused on different sets of issues.

In the last two decades cities in the South are experiencing explosion of collective action. Actors old and new are participating in the campaigns and movements around issues of access to livelihood, food and employment. Mostly these collective actions are woven around 'identity issues' and are therefore seen as 'aberrations' from the given theoretical frameworks.

Research on non-metropolitan cities shows that there is urgent need to go beyond binary understanding of collective action in terms of material and symbolic, old and new, urban and rural to capture the complex interplay of socio-economic and cultural factors and to encompass the scalar complexity that we have undermined so far. Race, gender, caste and religion are not just general categories underlying these collective actions, but these are historically and spatially intertwined to express new combinations, alliances and contradictions. Collective action arguing for citizenship rights is also articulated in very different ways. The novelty and the creativity of the actors from the South has to be seen not as 'pathological', but as an alternate way of engaging with modernity and neo-liberalism.

There is an urgent need to reformulate the theoretical tenets of urban studies to incorporate the dynamics of collective action in the urban arena and the frameworks in Sociology of Social movements warrant reformulation so as to address new forms of urban collective actions which redefine social movements.

#### *One Health Concept and the Uninsured in Japan*

**Objectives.** The purposes of this research are: to provide a general overview of Japan's universal health insurance coverage system, to examine the social factors that explain the rise in the number of uninsured individuals using Geographic Information System (GIS) mapping, and to discuss the future universal health insurance agenda.

**Background.** Due to its universal health insurance coverage system, Japan's health and medical services are among the world's highest quality. Japan's system requires that all residents belong to either the national insurance system or an employer-based insurance system. However, total population coverage is not the reality. In Japan, 18.8% of households with national insurance fail to pay their premiums, and those who fail to pay their premiums for 12 months become uninsured, including the children in these households. In fact, a Japanese government survey (2008) revealed that more than 30,000 children under the age of 16 are uninsured.

**Analysis and Discussion.** One key social factor that explains the rise in the number of uninsured individuals is the increase in labor mobility, which was expanded by the 1985 Worker Dispatch Law and its legal amendment. In addition, the 2008 economic crisis increased unemployment and the numbers of unstable and low-income workers. Currently, one in three workers is a non-regular, contractual employee, and the wage gap between regular and non-regular workers is growing.

GIS analysis indicates that the uninsured rate by prefecture is related to the unemployment and urbanization rates within those prefectures. Big cities, such as Tokyo, offer a range of job opportunities; however, the cost of living is high and upward economic mobility is difficult, so many low-wage workers forego paying their insurance premiums. The number of uninsured children is a crucial issue. Therefore, the United States' State Children's Health Insurance Program (CHIP) should be evaluated for its use in Japan.

#### *Coping With The Modern World and Re-Composing Ethnic Identity: Conversion To Christianity Among The Badeng Kenyah Of Long Geng, Sarawak, Malaysia*

There has been considerable works on the anthropology of Christianity relating conversion and its impacts to colonialism and consciousness (such as the important work of J. Comaroff) or simply to the success of missionary activities. Works on conversion of indigenous minorities generally relate to the religious politics of identity in relation to the majority people, as pointed out by most contributors in the volume edited by Charles Keyes on Christianity among the indigenous peoples of Southeast Asia. There is often the tendency to see conversion as a passive process on the part of the indigenous people. This paper will use the data from ethnographic research among the Badeng (a sub-group of Kenyah indigenous people) of Long Geng in Sarawak, Malaysia, to show how the "thinkers" and ordinary people have played major roles in actively engaged in conversion to Christianity in their negotiation with their encounter with modern changes that had reached their part of the world. In this respect religion and religious change are used as a kind of capital to negotiate with both traditions and modernity and to open up a way of adjusting to the changing world. Conversion provided the legitimacy to redefine traditions and even to remove some old practices, leading to the re-composing of ethnic identity.

#### *How Has Reformasi Affected Family Life? The Views Of Women In Jakarta, Indonesia*

When Suharto's New Order government fell in 1998, it ended more than 30 years of the highly intrusive *Pancasila* ideology that shaped the policies of the New Order. This conservative doctrine, in which conformity was a key element, had profound impact on everyday life including marriage and the family especially the participation of women in society. The end of the New Order was preceded and precipitated by the Asian economic crises. Indonesian GDP for 1998 shrank by 14.3% and the value of the currency plummeted from 2,909 rupiah per USD in 1997 to 10,014 in 1998. Since then there have been a number of political developments such as a decentralization of government, democratic elections, an anti-corruption drive. *Reformasi* also saw a rapid expansion of the media and reports on the visible Islamization of Indonesian society.

Based on qualitative interviews of 100 women in Jakarta that will be conducted in the latter half of 2013, we will examine how the changes brought about by the *Reformasi* movement have affected family life. We are interested in if and how radical social changes affect family life, or does family life remain stable in times of turmoil? We are focusing on Jakarta because it is a microcosm of Indonesia with people from the different ethnic and regional groups represented in the city. Also, the impact of the policies of the New Order and its subsequent demise would be strongest in the capital city. We are interested in the views of women because their social roles were previous constrained under the New Order. Women who are at least 30 years old will be selected to ensure that they have some memory of life before and during *Reformasi*.

#### *Negotiating the Knowledge: The Formation of Socio-Archaeological Discipline and Chinese Nation-State Building*

This paper intends to trace the early history of the formation of sociology and anthropology in China, and interpret how it had been defined and became a discipline.

pline under the nation-state building period. In order to illustrate the kaleidoscopic intellectual landscape, my paper divides into three parts:

Firstly, I will depict the general history of Chinese anthropology and the logic to facilitate the sociological and anthropological knowledge as a discipline "seeing like a state" before 1949. The Chinese anthropologists and state had to face up with two main intended or unintended social goals under the first round of nation-state building in China (1911-1949): the one is to construct a stable Chinese Nation (*Zhonghua Minzu*) community by which the modern state can identify itself and stand up to the external Others; the other is to mentally and physically develop and reform the country. Second, I will interpret how the academic circles and intellectuals of sociology and anthropology co-relate with the nation-state building projects from 1911 to 1949. Huang Xianfan (1899-1982), Wu Wenzao (1901-1985) and Lin Chunsheng (1902-1981)'s academic lives can vividly signify how and why different intellectual trajectories jointly push forward the Chinese sociological and anthropological knowledge. And I will close read their academic writings to show how the geopolitical facts impact their choice to produce the sociological and anthropological knowledge about understanding Chinese nation-state, and ask the questions how Huang's learning from Tokyo Imperial University combined with the understanding of Chinese social realities made him a scholar of sociology and anthropology different from the nationalists, how Wu and Lin went to different discipline-formation track and settled their knowledge in China and Taiwan. At last, I will give opening conclusion on dealing with the relationship between the geopolitical gain/production of the knowledge and the practice of the knowledge in modern China.

#### *An Intertemporal Comparative Analysis of Japanese Xenophobia Between 2009 and 2013*

Japan is one of the most ethnic homogeneous countries in the world; however, Japan is also in the midst of rapid globalization with increasing numbers of foreign nationals living in Japan. Therefore the grassroots right-wing movements have spread and radicalized in recent years. But the causes and mechanisms of rapid growth of xenophobia in Japan remain unclarified.

The aim of this presentation is to reveal factors of xenophobic attitudes in Japan, especially the effect of social events. I analyze two survey datasets which were collected in 2009 and 2013 all over Japan. Between 2009 and 2013, Japan has experienced terrible diplomatic problems like Senkaku/Diaoyutai Islands dispute against China and also economic recovery seems to be caused by "Abenomics".

The hypotheses on relationship between social events and xenophobia are as below. The first one is the influence of "East Asian geopolitics" (Higuchi 2012) on Japanese xenophobia especially toward Chinese and Koreans. Japan has territorial disputes against China and Korea. There are also political debates on the understanding of history in the period of Second World War. This hypothesis assumes that those conflicts have negative effect on Japanese attitudes toward China and Korea. The second hypothesis is the realistic conflict theory (Sherif 1966 etc.). From this perspective, in the time of economic depression, competition between immigrants and native citizens over limited resources are intensified, therefore negative feelings toward foreign residents are also escalated. If this theory is correct, the relations between respondents' socio-economic status and xenophobia can be weakened from 2009 to 2013. Because in 2009 Japanese economy suffered in economic downturn precipitated by the Lehman Brothers bankruptcy, but "Abenomics" seems to show signs of economic recovery in 2013. I will confirm those hypotheses by using Multi-group Structural Equation Modeling.

#### *Post-Colonial Immigration Memory: Social and Academic Resistance to Epistemic Violence*

Since the end of the 1980s, French Immigration Memory (*mémoire de l'immigration*) has gradually become visible in France. As a result of this process, the first immigration museum in France, *Cité Nationale de l'Histoire de l'Immigration* (CNHI), was inaugurated in late 2007. Immigration Memory, once an almost exclusive topic to the artists and activists born in a migrant family for more than a decade, then rapidly became one of the important objects of study and of public policies through the late 2000s. However, if certain dimensions of Immigration Memory have become visible, the other dimensions, that I would call post-colonial dimensions, have become invisible within the same process.

This paper, therefore, argues the exclusion of Post-colonial Immigration Memory in social and academic spheres as epistemic violence and aims to explore individual and collective resistance against it. The resistance against epistemic violence is practiced by activists and artists with post-colonial backgrounds through Memory Work. Memory Work is cultural and artistic practices of reconstructing certain past stories that they directly experienced or not and they find themselves inherited from. Their positionality and proximity to the past story, depending on

their gender, life-course and/or ethno-racial identity, gives a different signification to each Memory Work. Through the analysis of several exemplary Memory Works about "memory of struggles" based on my fieldwork in Lyon, Toulouse and Paris since 2009, I aim to empirically study epistemic violence in order to resist it as a researcher. Post-colonial Immigration Memory, in this sense, is not only an object of study but also a social and academic project to bring normative construction of knowledge and its violence into question.

#### *A Biographical Analysis of Women's Political Participation: The Importance of Politicization in Female Legislators' Biographies*

Politics as a social institution remains highly gendered in many societies both quantitatively (few politically active women such as legislators) and qualitatively (androcentric political culture). It has been a major area of concern in both theory and practice for feminists and others who want to promote gender equity to change this gendered world of politics. Despite their efforts women are still minorities among those who are in the decision-making positions. This paper applies a biographical approach to a study of women's political participation and explores what promotes their participation in decision-making. Data used were collected in 2010 through qualitative interviews with female legislators in the local Tokyo assemblies. An analysis of the data revealed that women who used to be politically inactive, even uninterested, could be 'politicized' in middle adulthood or at a later phase of life. It is argued that this process of politicization can play an important role in women's decision to run for office. In Japanese society such politicization rarely occurs in women's lives. Women are traditionally ascribed to the private sphere of domestic work, being excluded from – or discouraging women from being engaged in – public life. Scholars of women's political participation have stressed the androcentricity of institutional politics and identified institutional and psychological obstacles to women's political participation, ranging from a lack of money, party support, publicity in running an election to women's reluctance of engaging herself in institutional politics. Our study looks at opportunities rather than obstacles for women's political engagement and focuses on how female legislators experienced the process of politicization and transcended the private-public divide.

#### *First Land: Creating a Farm for the Future*

According to the 2007 US Census of Agriculture, less than two percent of labor force in the nation is in agriculture; the average age of principal farm operators was 57 years in 2007, and more than a quarter of all US farmers were 65 years or older. In order to support the emergence of the next generation of farmers, we, as agricultural researchers and educators, need to provide them with pathways to economic as well as environmental and social sustainability. Based on the data collected from our multi-state, multidisciplinary research project on beginning farmers, funded by the Southern Sustainable Agricultural Research and Education (SARE), this paper examines the critical role that "land" plays in paving these pathways. We will first present multiple narratives used by beginning farmers that illustrate their understanding of the dynamics of finance capital in agriculture. Using the "economic map" as both a methodological and theoretical tool, we will then discuss the key patterns of how these beginning farmers position diverse financial/economic actors as critical resources for, or hindrances in, shaping their farming practices. We will also explore in these narratives how the concepts of "sustainable farming" and "economic viability" are articulated to guide their practices.

#### *An International Comparative Study on the Sport Development for People with Mental Health Problems in 5 Nations*

**Aims:** The aim of this study is to explore how sports for people with mental health problems have been promoted in 5 nations, which are Italy, England, Denmark, Germany and Japan. Those countries have developed sport for people with mental health problems, according to Tanaka et al. (2013). This study attempts to identify each support system in order to contribute to international sport movement for people with mental health problems.

**Backgrounds:** People with physical and intellectual disabilities in many nations have come to enjoy sport not only for rehabilitation but also as a normal part of everyday life. On the other hand, sport of/for people with mental health prob-

lems is quite primitive. Although the values of sport for people with mental health problems have been recognized, the support systems for people with mental health problems in terms of sports activities have yet to be well explained. Nevertheless, Tanaka et al (2013) found that those 5 nations have developed sport for people with mental health problems over the last two decades.

**Methodology:** Meta-analysis, a questionnaire and semi-structure interview methods were employed. To deeply understand, this study utilises the policy frameworks such as advocacy coalition framework to describe characteristics, and similarities/differences of sport systems in those nations.

**Discussions:** This study has found a crucial point. That is, there are two types of sport development backgrounds, which are medical based (Italy and Japan) or sport based (England, Denmark and Germany). This point led to three important aspects. First, this point is relation to awareness of targeted illness by key actors. Second, it links to the types of national governing bodies. Third, nations whose ideas are based on the sport tend to organise sport games/championships, while nations whose ideas are based on the medical treatment organise sport promotion event.

#### *The Role of Tourism Companies in Forming Ethical Tourists: Case Studies of Tourists from China to Japan*

The increase in Chinese tourists overseas and its socio-cultural and economic influence are of interest worldwide as well as in Japan. While many agents in the tourism industry actively invite Chinese tourists, the conditions of tourism between China and Japan are unstable, especially under the influence of political the relationship between the two countries. Further, media outfits tend to create a negative image of Chinese tourists.

This article focuses on the social and cultural interaction of tourists from China to Japan, particularly, the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in recent years. This study will examine the daily everyday practices of tourism companies from the viewpoint of their role in forming ethical tourists, but not limited to their practices of producing alternative forms of tourism.

Two case studies are examined. First is the case in which tourism companies teach their clients tourist ethics. In China, the government has recognized the importance of "tourist civilization," and in relation to this, I present a practice of "moral education" in tourism companies. I point out how they teach social and cultural order effectively in accordance with appropriate practices in Japan. The second case involves visits for inspection or training, which is a dimension of social tourism. In China, mobility for tourism is relatively strictly restricted, and consequently, many people with experiences of touring abroad support the inspection or training of visits under business visas, which tends to include sightseeing. I point out a type of development of social tourism that is not an alternative form of mass tourism.

#### *Building a Global Domestic Workers' Movement: The History, Strategies and Activities of the International Domestic Workers Federation (IDWF)*

Formally launched in 2009, the International Domestic Workers Network aims to develop an effective global network of domestic workers. In the past campaign for the ILO Convention 189 for domestic workers, the IDWN coordinated and actively supported campaigns and activities of domestic workers at various levels, to enable them to speak for themselves and take leadership. Now that the ILO C189 has been achieved, we need to build a strong organization of domestic workers to ensure that countries around the world ratify the convention and national policies and laws are put in place to deliver real gains to domestic workers on the ground. In October 2013 the IDWF will hold its inaugural congress in Uruguay. In this paper we will discuss the history, strategies and activities aimed at building a strong democratic organization that can effectively protect domestic workers rights and change power relations in society to promote gender equality and human rights.

#### *Recovery and Social Inequalities: The Use of Capabilities Approach and Intersectionality Analysis in Exploring the Social Conditions for Recovery*

'Recovery' has become a dominant discursive feature in the UK mental health policies. Under the neo-liberal context, the mainstreamed recovery services tends to promote individualistic recovery strategies. Such policies and services fail to address the structural inequalities that give rise to distress and mental ill-health or place sufficient emphasis on the diversity of intersectional inequalities among service users that shape recovery journeys. This paper critically engages with the concepts of 'recovery', based on a case study of Chinese mental health service users in the UK which explores how structural factors, such as class, gender and ethnicity, contribute to their diverse recovery journeys.

To shed light on the complex interplay of structure and agency in shaping recovery journeys, a synthesis of the Capabilities Approach (Sen, 1999, Nussbaum, 2001 and Hopper, 2007) and Intersectionality Analysis (Walby, 2007 and Anthias, 2006) was developed as an alternative framework. Repeated in-depth life history interviews were carried out with twenty two Chinese people having received a psychiatric diagnosis, recruited from three cities in the England. Findings showed that participants strove, sometimes cautiously, to retain and exercise agency to move from patienthood to personhood. Their journeys were shaped by social inequalities demonstrating that targeting social inequalities is essential for facilitating and nurturing meaningful recovery.

Drawn on the findings in the case study, this paper will illustrate in what ways the medicalisation process enhances or hinders the (re) development of capabilities. It will also discuss about the use of the Capabilities Approach and Intersectionality Analysis in exploring the social conditions for meaningful recovery.

#### *Non-Normative Female Sexualities in Asia, and Singapore?*

In the literature concerned with the globalisation of gay identities, same-sex desiring women in Asia have come under increasing attention for two reasons. Firstly, as evidence countering universalising Western assumptions of what it means to be a global gay or lesbian. Secondly, as a response to the tendency to lump lesbians and gay men together under the generalised rubric 'queer', which is dominated by research on gay men both in Western and non-Western contexts. Ethnographic monographs on female non-normative sexualities have therefore appeared in many parts of Asia, including Japan, India, Thailand and Indonesia. But the case of Singapore has been significantly missing in the literature. Why has Singapore been left out of an important queer Asian critique? This paper discusses the missing case of Singaporean women who love women. First, I explore the ways in which a queer Asian scholarship runs the risk of being constructed and produced through an Orientalist area studies approach, which inevitably leads to the omission of 'modern' Singapore and Singaporean lesbians. Second, I suggest that taken-for-granted images of local middle-class lesbians can appear, in the eyes of an Orientalist, as 'just like' the hegemonic Western queer, a thoroughly globalised version alienated from her indigenous region. Are 'modern', middle-class Singaporean lesbians merely another instantiation of the homogenising global gay identity, and hence ineffective as material for an Asian queer critique? Finally, the paper gestures towards a 'postcolonial LGQ' approach to comprehend the complex, contradictory and contingent sexual subjectivities of lesbians in Singapore. Using empirical material on lesbians in Singapore, I demonstrate the ways in which Singaporean lesbians re-queer hegemonic concepts of homosexuality and argue that their sexual lives and practices are crucial moments of reconfiguration and transformation, and not mere reception, of what it means to be 'modern' global lesbians.

#### *Navigating Domestic Violence Protection Law By Immigrant Wives in Taiwan*

This paper seeks to explore the question: why do abused Vietnamese immigrant wives married to Taiwanese men find it difficult to escape from violence even though the Domestic Violence Prevention Law has been in place for more than 15 years and the government claims a supportive system has been established? By applying the institutional ethnography approach (Smith 2005) we contend that, even though there are laws, institutions (police, hospital, social workers, courts etc), and professional people that constitute a support system for abused immigrant wives, the structural forces of class, ethnicity and gender discrimination intersectionally influence them as they seek to find a way out of the abuse they face.

### *Intercultural Training Program as a Mechanism of Raising the Individual Level of Competition*

Seventy people representing five regions, and 32 countries were involved in the research. 25 expert interviews and 6 focus-groups were conducted by the researchers. Most contrast patterns of cultural clashes were observed in the interaction between the citizens of St. Petersburg and the representatives of western and eastern cultures. The strategies of acculturation of the people with diverse origin are very different. The representatives of Western Europe and the USA tend to believe that their difficulties in adaptation result from low standards of local people and Russian social environment. Newcomers from far eastern countries make enormous efforts to understand the motives guiding the local people's behavior, and try to adjust to the context of local culture. Africans tend to conceal their problems. The main problem of their adaptation is the lack of local people's tolerance resulting from physical and cultural differences. Weighing pros and cons of living in St. Petersburg they often try to focus on positive aspects and hush up negative sides. As for the citizens of the CIS and former Baltic republics (Estonia, Lithuania, Latvia), the process of their adaptation is the easiest one, because they speak fluent Russian, have been visiting St. Petersburg since childhood and do not feel enormous cultural differences. However, the lack of notable differences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants from the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

### *Sociological Study of the Cultural Differences in Korean-Russian Mixed Marriages*

According to Korean statistics in South Korea 90489 marriages between Koreans and foreigners were registered. The share of marriages with Russians was 835, among them 523 marriages between Russian women and Korean men. For the present study of the cultural differences in Korean-Russian mixed marriages the method of semi-structural interview was selected. This method gives a good opportunity to gather the necessary information and to interpret the object of research in details. The empirical research was conducted in Seoul, South Korea in 2010. Ten Russian women in the age from 19 to 31 years old, married the citizens of the Republic of Korea, participated in the study. Following the opinions of the respondents, the most difficult thing in family life in mixed Korean-Russian marriages - it is not even the difference in mentality with their husbands, but communication with husband's relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival "Chusok") when crowds of relatives gather in parent's home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenarios of children's socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participated in the research were in their so called "honeymoon" period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

### *Social Cleavages Caused By Radioactive Contamination of Food and the Environment: The Case of Fukushima*

The nuclear disaster in Fukushima has inflicted devastating damage to agriculture and food of Japan in many respects. I will give an overview of the social cleavages caused by the disaster. First, the social estimation of organic agriculture was tremendously damaged because the regional circulation of organic matters, one of the most important characteristics of organic farming, was broadly contaminated by radioactive substances. Many consumers particularly concerned about food safety have stopped buying organic foods not only grown in Fukushima but in surrounding areas. Despite the fact that radioactive substances remaining in soil were not transferred to agricultural products, most of the consumers have not yet come back to the farmers. The fall of the reputation of organic agriculture is the more serious because it is deeply connected with the growing distrust of Japanese food in general. Radioactive contamination of food has become a serious threat to the national food security. Second, a deep cleavage occurred between the farmers who are willing to live and farm in Fukushima at the risk of exposure of radiation and many anti nuclear activists who criticize these farmers insisting that they quickly leave the contaminated hometowns. The recognition gap concerning the risk of being exposed is so wide between them that it is difficult to establish the solidarity movement between farmers and anti nuclear movement.

Third, there appeared a great gap between Fukushima and the rest of Japan, or between Tohoku District, northeast part of Japan consisting 6 prefectures including Fukushima, and the rest of Japan. The nuclear disaster has reproduced the unequal development patterns that were often observed during the modernization history of Japan: taking the goods to the center and bringing the bads to the periphery.

### *"Strength through Joy" in Japan*

During the second half of the 1930s and into the 1940s, the National Socialist leisure organization "Strength through Joy" (Kraft durch Freude, shortly KdF) had a great influence on the development of Japanese leisure movement (Kōsei movement), and played a crucial role in the establishment of relations between the two countries. Since the World Recreation Congress in Hamburg 1936, the activities of the KdF, which should regenerate the "strength" of workers through "joy" in leisure, attracted public attention in Japan, where the general interest in the subject of leisure had been slight. The KdF gave the Japanese movement many suggestions and became its model. After the foundation of the Japanese Recreation Association (JRA, Nihon kōsei kyōkai) in 1938, the Japanese leisure movement made a rapid growth into the holding of the Recreation Congress for Asian Development (Kōa kōsei taikai) in Ōsaka 1940. At this congress, to which also representatives from Germany were invited, the slogan "Strength through Joy" was adopted and the Japanese-German cooperation in the field of social policy was proclaimed. However, the actual discussions between the two countries on issues relating to leisure were not deepened by the congress, and also the mutual perceptions of Germany and Japan contained contradictions in many respects. This report therefore examines the image of the KdF in Japan and that of the Kōsei movement in Germany, and also investigates the relationship between the two countries, in order to clarify the features of the mutual perception and its significance.

### *Mapping out the Educational and Future Trajectories of the Children of Internationally Mobile Families*

Children's education and future career trajectories are of paramount concern for many transnational families. Educational concerns impact upon whether and when families decide to move internationally together or stay apart. This paper focuses on teenage and young adult children of Asian and African backgrounds who experience a high degree of international mobility while they are growing up and are popularly referred to as "Third Culture Kids" (Useem & Downie 1976). It explores how they experience and articulate, in varying ways, their internationally mobile upbringing and the transnationality of their family lives in relation to their schooling and future. Some make multiple international moves with their families due to their parent(s)' job placement, while others are sent overseas by their parents to one or more countries on their own for educational purposes. Decisions about their schooling are tempered by their parents' and their own economic, social and cultural capital in the context of national and international economic and cultural inequalities (Bourdieu 1986). This paper highlights the way pragmatic considerations about education and economic futures intersect with the ambivalence that young people feel about their transnational upbringing and identity, as well as the way they imagine 'home'. Given that international mobility is the norm for the young cohort I studied, their experiences offer significant insight into the complexity of transnational family lives and its impact on children.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

### *HIV/ Aids Among Adolescents in Brazil and France: Similarities and Differences*

In order to analyze the Aids epidemic in France and Brazil, particularly among adolescents, a critical review of literature, official documents and on-site verification of services for sexual and reproductive health for adolescents was held. The concept of vulnerability and its categories were used as theoretical basics of analysis. In comparison to France, Brazil has three times the number of Aids cases in proportion to its population. In France there was a continuous decline in the incidence of this disease from 1998 onwards; in Brazil, the decline started in 2002,

but there was a rise in cases in 2008. Both countries offer universal access to ARV treatment and the epidemic shows a trend of impoverishment, feminization and heterosexualization. Among Brazilian adolescents, the number of cases is proportionally 3.5 times higher; they have an earlier sexual initiation, use condoms less frequently and schooling is shorter. In France schools are obliged by law to offer regular educational activities on sexuality, the notification of Aids and HIV are mandatory; the access of adolescents to health services with confidentiality is facilitated, there is availability of tests for STDs and of voluntary interruption of pregnancy, which offer conditions for prevention and treatment of sexual disorders.

### *Anti-Nuclear Movement Discourse in the Countries of so Called "Nuclear Renaissance"*

Since the first half of 2000s the world society has been observing the expansion of national nuclear energy programs in a number of countries, also called by nuclear power industry as "Nuclear Renaissance". This development has been accompanied by the contemporary trend in public opinion showing positive attitude towards nuclear energy. The striking is, however, that this situation occurs in the countries with the history of significant anti-nuclear movements, e.g. Sweden.

The revival of nuclear energy programs, public opinion favouring the expansion of nuclear energy and the experience of anti-nuclear movements in the past are the points of departure for this study. The constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, these national nuclear power strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Daiichi. This paper explores to what extent and how these turning points become part of the anti-nuclear movement discourse.

In terms of methodology this study is based on discourse analysis.

### *Multiple Discrimination: Personal and Institutional Perceptions, Impacts, and Actions*

This paper investigates the phenomenon of *Multiple Discrimination* in Hungary, with special attention paid to cases of intersectionality based on ethnic origin. The research unfolds those mechanisms that lead to multiple discrimination in the field of job seeking, hiring, and employment. The phenomenon of multiple discrimination is studied, on the one hand, from the perspective of decision-makers representing public and private employment agencies; on the other hand, from those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, in particular of multiple discrimination, among victims, and a high inertia and inaction on behalf of decision-makers lead to the reproduction of social mechanisms responsible for discrimination.

### *Education for Lifestyle (Leisure) Counselling in an Unequal World (Szeged, Hungary)*

Max Weber's lifestyle model emphasizes the role of *life opportunities, life chances and choices*. Life opportunities provide the conditions for choosing one's lifestyle. Life chances are the chances of actually realising the given values. For realisation it is the social environment that ensures the structural prerequisites. Opportunities, chances and choices in everyday life mean that people have a free choice within the wider or tighter boundaries provided by their social environment and related social pressure. At the same time, lifestyle is not only a dependent of one's social position, but it also plays a considerable role in designating one's position in the social structure.

To make healthy lifestyle choices from among a set of given possibilities is not always easy. One needs proper background knowledge ensured by education or provided by professionals trained for lifestyle counselling. The *Health Promoter qualification within the Recreation Organisation and Health Promotion Bachelor education* offered by the University of Szeged, Juhász Gyula Faculty of Education, Institute of Applied Health Sciences and Health Promotion (Institute) makes professionals competent in creating a "health map" for individuals – in the family, in the workplace – including physical and mental status and lifestyle elements (leisure, nutrition, time management, environment) and build personalized (individual and community level) counselling activity, health promoting actions, campaigns and projects on identified needs. With his/her knowledge in the socio-demographic determinants of unequal opportunities and the means and "language" of addressing and approaching different social groups this professional can bring the best out of life opportunities and life chances to promote healthy choices. The presentation will introduce the audience into the unique skills, knowledge and competencies the above professionals possess and the ways they can be the most effective promoters of lifestyle – with useful leisure highlighted – in an unequal world.

### *Does Local Level Policy Making Hinder Women to Participate in the Labour Market and Support the Gender Inequality?*

Eurostat projections reveal that over the next 50 years, population aging is likely to attain unprecedented levels in European Union. In many of the countries, the labour force will decrease. Therefore, maintaining the national social-protection systems, it is essential that the majority of the working age population stay gainfully employed. However, political frameworks ignoring the gender mainstreaming ideas may contrarily discourage women with informal care responsibilities by hindering their possibilities to participate in the labour market. The aim of this presentation is to discuss policy frameworks and local policy makers' mindsets supporting (or restraining?) the women with informal care load to participate in the labour market. The presentation will also make insights into women's own interpretations and examine, what restrains their (re)entrance to the labour market. Presentation is based on theoretical approach of gender mainstreaming that through the European Open Method of Coordination is affecting the national and local policy making. The methodological starting point of the presentation is multi-level governance theory focusing particularly on the local level policy-making. The findings indicate that informal care of older people is not seen as a gender specific problem. Therefore, ignoring the ideas of gender mainstreaming the policy frameworks may hinder women to participate in the labour market and promote social inequality. The presentation will base on findings from the research project FLOWS funded by the EU 7FP, by drawing data from policy documents, interviews with local level policy makers and women with informal care responsibilities.

### *Emergence and Handling of New Trends in Migration*

In the 21st century, international migration is becoming more active and more complicated than before. The state and other political agencies struggle to handle migration further. But how can they be successful in handling? This paper will pose the question to explore, with taking a comparative stance of Asia with other regions such as Europe, America and Oceania. As is well known, Asia is an highly active area in migration, following some new characteristics in recent years. Firstly, South Korea and Taiwan have set up the guestworker system to introduce unskilled migrant workers officially that Western European countries abandoned around the middle of 1970s. This seemingly anachronistic guestworker system is based on bi-governmental agreement, which created new flows: Now South Korea accepts migrants from Uzbekistan, and Taiwan introduces workers from Mongolia. Secondly, a points system has been introduced by Japan. Startegically, Japan planned and started the points system at the same period when it implemented policy to return Nikkeijin back to their own countries in the recession after Lehman shock. But the Japanese points system, imitated in Canadian and Australian systems, is a negative case: it is not successful in attracting highly skilled migrants. Thirdly, emigration policy of the Philippines is still active and is developing further, with establishing educational institutions to satisfy criteria of migrant workers in receiving countries. As one result, the number of candidates of nurses and care workers are exported to Japan. These new trends press us to reconsider an migration issue. It should be explored not only what trend of migration has been emerging but also how the state and other agencies can adopt new, effective ways to handle them through control, regulation, management and citizenship.

**TASCHEREAU MAMERS, DANIELLE\*** (University of Western Ontario, [dtascher@uwo.ca](mailto:dtascher@uwo.ca))

*Considering Looking: Political Spectatorship Distinct from Action*

From museums commemorating genocide to human rights organizations issuing fundraising pleas, photographs of violence are a frequent means of calls to political action. Representations of suffering as a result of political violence invoke a theoretical trajectory that connects looking at images of suffering to actions undertaken in response to what is seen, culminating in a broader political change. This trajectory is also taken up in the models of spectatorship developed by contemporary visual theory, such as that of Ariella Azoulay. Attending to the assumptions and fantasies embedded in this broader trajectory, this paper reveals difficulties with Azoulay's argument for the political uses of photography and brings the possibility of such a politics into question. Alternatively, Jacques Rancière's theory of spectatorship provides a starting point for conceptualizing looking as an activity distinct from direct involvement in the looked upon scene. This paper will argue for a modest approach to looking, as a space for political and ethical imagination, rather than as the first step in enacting a response or mounting a campaign for change. If spectatorship is unmoored from the trajectory to which Azoulay and others confine it, then the political potential of photography requires reconsideration. I ask: If spectatorship does not necessarily lead to action, what is left of looking as a political practice? If given space distinct from action, how might practices of looking open up possibilities for appreciating the political dimensions of suffering?

**TASCHEREAU MAMERS, DANIELLE\*** (University of Western Ontario, [dtascher@uwo.ca](mailto:dtascher@uwo.ca))

*Tools of Violence, Traces of Memory: Photographic Identity Cards and the Visual Narration of the Rwandan Genocide*

Photo identity cards played a crucial role in the politics leading to and the perpetration of the 1994 Rwandan genocide. The identity cards and their portraits now figure prominently in Rwanda's national memorial sites as both evidence of the racist politics that culminated in genocide and as commemorative images. Attending to the interpretive shift prompted by the material transformation of bureaucratic portraits into memorial images, this paper will examine the complexities of using portraiture to memorialize mass violence. To critically examine the politics of transforming bureaucratic portraits into commemorative images, this paper draws on Ariella Azoulay's ontology of photography, which presents photography as an ongoing event capable of continually deriving alternative interpretations from the unfixed meaning of the photograph. By approaching the identity cards and their portraits through this relationally-focused ontology, this paper provides an account of the ambiguity present in the different uses of the photographs, focusing on the portraits' repressive and honorific capacities and attempts to stabilize their political meaning in the development of Rwanda's post-genocide narratives. While the Kigali Genocide Memorial Centre exhibit works to re-appropriate identity cards and their portraits for memorial ends, I contend that the changes to the photograph's material conditions cannot produce a fixed or stable interpretation.

*Ciclo De Imágenes y Alteridad Migrante: Antropología De La Imagen 'brazuca' En La Cinematografía Contemporánea*

CICLO DE IMÁGENES Y ALTERIDAD TRANSFORMATICA: ANTROPOLOGÍA DE LA IMAGEN 'BRAZUCA' EN LA CINEMATOGRAFÍA CONTEMPORÁNEA

El presente trabajo intenta producir una interpretación sobre las estructuras de las focalizaciones discursivas en las imágenes utilizadas en el cine mundial contemporáneo, retratando el universo de las realidades brasileñas singularizadas en los juegos de escena entre Brasil y los brasileños *mass media* expuestos en las películas ibero-americanas. A partir de una serie de imágenes relacionadas con la producción cinematográfica sobre Brasil y los brasileños en el cine ibero-americano, se pretende observar los procesos de transmisión de imagen y la confección de la exofobia "brazuca", articulados en los contextos operativos de los sistemas de reconocimiento y adopción de las prácticas de interpretación contrastantes de los éxodos migratorios a los países europeos. Las imágenes relacionadas con Brasil y los brasileños, son vistas a la luz del debate sobre las construcciones del imaginario de los brasileños en el exterior, con el objetivo de observar las intensificaciones recientes y las dicotomías discursivas sobre los lugares de recepción de colectivos migratorios y los extranjerismos tópicos del país mediático. En este sentido, el trabajo explora el impacto de la exclusividad de imágenes de referencia que adornan y dan fuga a una serie absoluta de etnocentrismo y representaciones monosilábicas donde Brasil y los brasileños son

conducidos e intensificados de forma urgente dentro de la cinematografía ibero-americana reciente.

Palabras-claves: cinema, migración e identidades; estudios visuales y adaptabilidad;

*Mainstreaming Flood Risk Reduction By Enhancing Better Risk Governance in Japan*

Mainstreaming disaster risk reduction into the development process is a key focus area of disaster risk management after Hyogo Framework of Action (HFA), 2010. For a decade, central and local governments have tried to implement the concept of mainstreaming DRR into development but actually few achievements were attained. The paper focuses on the case of Shiga Prefecture in Japan, which successfully established the basic policy of integrated flood risk management including flood risk information provision, land use regulation and restriction of new construction in the flood prone areas. Over a decade efforts to communicate with key stakeholders, prefectural congress of Shiga finally approved the basic policy in March, 2013. The paper divides the entire process into four phases: starting phase with city government officers, public meeting to make directions of the basic policy and give the ownership of the policy to the public, professional workshop to establish the basic policies, and administration workshops to overcome the difficulties to implement the policy in the real world.

Since one of the authors was involved deeply in the process, the paper investigates the reasons for the success based on data taken through internal observation, documents and interviews. In the case of the Shiga prefecture, gradual inclusion of the stakeholders looks successful. Opinions and concerns related to flood risk management were widely discussed and the collected concerns and opinions were used to develop policies. If the river authority cannot handle them, stakeholders were expanded by including other stakeholders with a capability or authority to present solutions. Comparing with the risk governance framework of IRGC, the process in Shiga Prefecture is examined whilst the implications for mainstreaming disaster risk reduction will be presented.

*Gender and STEM: No Shift Required*

In the past thirty years, several waves of opportunity have come successively closer to realizing Papert's vision of a world in which children can self-actualize as owners and creators of technology. Each wave, starting with Logo, has had strengths and limitations and while some have had considerable reach (FIRST Lego League, for example), none have as of yet become fixtures of childhood. Now, part of the opportunity that comes with a switch from a STEM to a STEAM or SEAD perspective is the chance to build foundations for female--and more widespread male--participation in computing on a wide, humane platform in which the outside world is involving, inviting and discovering rather than persuading, cajoling and selling. In particular, recent tools associated with the Maker or DIY ("Do It Yourself") movement have the potential to increase embodied, craft-oriented performance-focused behavior. Girls (and a range of boys) can now create inexpensive personalized, crafted objects that cause them to rub elbows with technology and technological thinking without having to first (or ever) label themselves as one of "them," the kind of person that actually likes technology. They can tinker, both with creations and identity. They can develop skills which will help them no matter what they go on to do, and their relationship to those skills can change over time. The crucial opportunity, ironically, lies in the relative unimportance of the technology in defining the students' projects. Supported by the National Science Foundation under Grant No.1142510

*Scientific Criticism in the Dispute over the Risk of Radiation Exposure*

This study examines the role of scientific criticism in the dispute over health effects of exposure to low-level radiation, focusing on the situation in Japan after the Fukushima Daiichi nuclear disaster. In radiation-related fields, it has usually been difficult for environmental movements to establish and utilize a network of scientists who provide a scientific basis for the movement, because of the strong connection between government officials promoting nuclear energy and scientists in these fields. Considering these difficulties, I will examine what enables

scientists to maintain an objective distance and conduct academic research with possible critical implications for the existing policy.

On the basis of a document analysis of historical materials and in-depth interviews with the people involved, we found a remarkable difference between scientific fields regarding research resources available for outsider scientists. In the field of dosimetry, many citizen groups measured doses of radiation using their own dosimeter, which enabled them to urge the government to adjust their policy of decontamination. However, in epidemiology, it is difficult for critical scientists to conduct large-scale surveys; therefore, they have concentrated on assessing and criticizing Fukushima Prefecture's "Health Management Survey."

We also found a complex relationship between academic research diversity and political mechanisms for constructing a unified view. Occasionally, articles in international journals express different views; for example, one uncovers the possibility of health effects caused by very low-level radiation and another denies it. Even though the academic discussion has not yet been completed, the International Commission on Radiological Protection (ICRP) has taken the position of creating a systematic regulation; consequently, the diversity of academic research has diminished. To maintain diversity in the circulation of scientific knowledge, we need alternative ways to organize critical scientists and the results of their research.

##### *Television As a Global Kaleidoscope: Multiple Socio-Cultural Realities within a Paramount Political Reality*

In recent years, due to a number of factors like the severe global financial crisis, the citizens of countries like Greece search for information through foreign media. Thus, globally broadcasting corporate or state television channels, (i.e. BBC, CNN, France 24, Al Jazeera, Russia Today, CCTV News), became very popular. This paper attempts to discuss these channels' (re)presentations as alternate sources, focusing on three levels. First, the formative one: They all (a) use English for oral and written discourse; (b) follow standardized forms of Western broadcasting; (c) utilize the media cosmogony of our epoch. Second, the substantive one: (a) Operating within a 'global village' framework, they function in their 'public sphere' without barriers; (b) They manage to create 'media events', authenticated and explained by participating actors and professional experts; (c) Cultivating a sense of relevant immediacy, they connect individual 'life-worlds' with projected 'world views'. Third, the conclusive one: (a) While documenting issues from 'multiple (socio-cultural) realities' (i.e. economy and business), with a presumably undisputed factuality, they express a 'paramount (political) reality'. (b) This 'reality' is a 'noematic construction' which reflects core values from a channel's ethnocentric perspective with a long historical tradition. Any interpretative scheme they provide derives from this perspective. (c) Thus, foreign channels offer planned images, which hide the impact of political ideology in (un)official "translations", becoming improvisations with inauthentic color schemes on the screen canvas. The critical question remains: Are those media nothing but a kaleidoscope for the world audiences to (re)live with fictional innocence our modern epic, or do they provide unintentionally another "agora" for the democratic forum of "a global civil society" as its needed debating orators in the new "polis"?

##### *A Study of Women's Roles in Rural Livelihood Improvement: A Case Study of Yamaguchi Prefecture in Japan*

This study aims to identify links between internal and external factors, where women farmers developed an important role in rural life improvement. In a sparsely populated and aging society in Yamaguchi Prefecture, western Japan.

In Japan the rural livelihood improvement program was started in 1949 in response to the enactment of the Agricultural Improvement Promotion Law of 1948, by the Ministry of Agriculture and Forestry. The program was introduced in order to create self-reliant farmers, particularly women farmers. Livelihood extension workers (all women) were hired as prefectural government officers to encourage rural development.

They made up groups of women to encourage extension activities. The groups carried out intensive rural life improvement activities.

There were three phases of rural life improvement as follows. The first phase, from 1948 to 1965 aimed to alleviate poverty in rural areas. The second phase, from 1965 to 1988 focused on the betterment of daily life in times of rapid economic growth. The third phase, from 1989 to present day, created employment opportunities through grass root activities.

As a result, the women's self-confidence improved and they became self-reliant farmers. The prefecture employees were the driving force behind this progression.

The program was officially ended because of an amendment to the Agricultural Improvement Promotion Law in 2004. However rural life improvement has

continued at grass roots level by the women, who still work in the farming communities.

Now women in the older generations carry on creating employment opportunities through agriculture business and tourism so that younger generations can live in rural areas in the future. What's more, they maintain close relations with retired prefectural workers who helped them in the past.

This study focuses on this development model, as a positive strategy which could be implemented in other rural areas.

##### *Media Coverage and Stakeholders on Climate Change in Japan*

Climate change has become a serious problem facing from global society in the 1980s and the 1990s. It is wide range subjects domain over science, economy, and politics. Although numerous attempts focused on consequences of climate change or effectiveness of policies. However, there are few reports on social acceptance of climate change. In Japan, What kind of frames is used in climate change? Which political stakeholders are mainly joined and how connected?

For this purpose, as a part of international comparative study of Comparing Climate Change Policy Network (COMPO Network Project), this project media analysis for articles of Japanese newspapers by using common methods among society cases of the project. In this project, we created climate change article database by searching for keywords of "Climate Change" or "Global Warming". Then we counted articles and extracted issues and stakeholders on climate change from the database.

In conclusion, this data suggest that (1) Coverage amount is linked international agreements (like Kyoto Protocol) and political international events (G8 and COP). (2) Issues have shifted to "domestic - economy" policies in 2000's from international contributions or sciences in the 1990s. (3) The corporate sector and government come up a lot, but civil society actors were found to be less. (4) After the Great East Japan Earthquake of 2011, interest in climate change has fallen sharply.

##### *The Relationship Between "Global Meanings" and "Local Meanings": A Case Study of Protests Against the Construction of the "Kaminoseki Nuclear Plant" in Iwajima, Yamaguchi Prefecture*

How do global social movements relate to local social movements, and in what way does the former influence the latter? This presentation examines the relationship between "Global meanings" and "Local meanings" considering two analytic frameworks on social movements: cultural theories of social movements and the new social movement theories.

Cultural theories of social movements pursue the "construction process and the source of meanings" (Nomiya 2002). On the other hand, the new social movement theory pursues the construction process of "collective identities" (Melucci 1996), in other words, this perspective highlights the fact that movement groups and participants construct ideas through the various interactions between them.

In the present work, we provide a case study of a protest against construction of a "Kaminoseki nuclear plant" at Iwaishima located in Yamaguchi Prefecture. Attention is given to two groups. The first one is the "Iwaishima no shizen wo mamorukai", a group that specializes in the environmental aspects of biological diversity. The second one is "Kaminoseki genpatu wo tatesasenai Iwaishima tomin no kai", a group that specializes in the environmental aspects against construction of Kaminoseki nuclear plant. Using the investigation data of the voice of the participant in that two groups, we analyze the motive of participation, the resource of motive, and cultural factors (e.g. collective memories, local histories, and the scene), in order to find out the construction process of "global/local meanings" and "collective identities".

Lastly, we attempt to clarify that the "global meanings" was related to the significance of the "local meanings", and highlight the resource of the "global/local meanings" and construction process.

#### *Sociological Study of E-Dating and E-Prostitution in Iran*

Sociological Study of E-dating and E-prostitution in Iran

##### Abstract

Iran has provided the possibilities for virtual networks by facilitating internet access to the public. But the open nature and lack of "enough" control over the virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution.

As a result of strict rules imposed by the government, dating, "illegal" relationships, as well as prostitution, has been looking for new opportunities in virtual environment. In particular, online social networks such as Facebook have provided a new market for sex trade. There has been a surge in Facebook subscriptions in Iran with the purpose of advertising and seeking sexual services. This study attempts to examine this phenomenon from a sociological perspectives focusing on prostitution;

Data collected from Facebook pages of Iranian users concerned have indicated that the following key points have led to the growth and popularization of this phenomenon.

- evasion of law
- freedom from the restrictions of family,
- passing the limits of time and space,
- achieving social identity in digital social stratum of prostitution,
- anonymous identities,
- ease of socializing,
- desirably setting the conditions/price for services,
- avoiding loss of earnings to pimps,
- screening and vetting the persons of interest
- sociological (e.g. economic, cultural, religious) reasons, implications, and lowering the risk of embarrassment,
- possibility of freely expressing hidden sexual fantasies and leisure,
- combating social exclusion and finding the strength to oppose popular culture.

The trend of e-prostitution in Iran is on growth and our study attempts to discuss the consequences of this phenomenon.

Keywords: Iran, cyber-space, Facebook, prostitution, leisure

#### *Women Go Shopping: Discussing the Behaviour of Generation Y and "Green Consumption" in Rio De Janeiro*

This paper aims to discuss the buying behavior of the female segment with respect to the consumption of products with ecological appeals ("green products"), in the post-modernity, through the subject area of green consumption. The sample includes 100 surveyed women of Generation Y. For this study, we conducted a qualitative, exploratory research, with field survey using structured questionnaires. The interviews were held in January 2013, at the exit door of malls in Rio de Janeiro. The theoretical basis of this study are the concepts proposed by Bauman, Canclini and Lipovetsky. The data discussion reveals a women of Generation Y with a consumer behavior paradoxical, showing that the influence of fashion, media and academic information makes young people oscillate between following fashion trends and practices resulting of a deeper understanding of environmental issues, according glances of environmental responsibilities and conscious citizen seized through education and through the Internet. The results also reveal the idea of consumption as a process of a hybrid culture (through the influence of global culture produced and widespread by the socio-technical networks) and local culture, with traces of belonging, social recognition, especially from the perspective of the consumer-citizen relationship. This ambivalent condition of this

generation relies both from the perspective discussed by Bauman (dialogic relationship between the spectacle and the vacuum of consumption as a moral/social duty and the critical reflection of the consumption, through spaces as schools and universities), and by the vision of Canclini which emphasizes the logic of cultural hybridity and the idea that to be a citizen is required to carry a consumer identity. Complemented by Lipovetsky, both thoughts emphasize the consumption behavior of the social actor of female sex in the Generation Y as a reflection of a society that expresses the concept of a individualistic and consumerist ethic.

#### *Cultural Artifacts in the Mexican Social Movement Sector: The Artifactsualization of Performances and the Performativity of Artifacts in a Digital Age*

Where residues of a less democratic past persist, as is the case in Mexico and several other Latin American states, challenges to the state often take more subtle and creative forms, which means that cultural insights to mobilization processes can be especially instructive. Drawing on several mobilization sites and moments from contemporary Mexican social movement sector the paper aims at exploring whether the tools of cultural analysis—performances, ideations and especially cultural artifacts—are used in the production of oppositional meanings and whether the unfolding events and actions around them can become central to the identity and to the genesis of social movements. The social construction of these cultural artifacts, their social embeddedness, and the diverse ways that audiences respond to them, mean that artifacts themselves can play key roles in mobilization trajectories, as social actors encounter them, appropriate them, discuss them, modify them, and mobilize around them. By focusing on the artifactsualization of performances through digital technologies and vice versa on how artifacts can take on qualities of performances by being digitized and posted on a facebook page or blog, the paper also explores whether online social media have transformed the cultural analysis of performances and artifacts

#### *Collective Action Between the Street and the Court: Public Hearings in India*

Public hearings, in the contemporary Indian context, are public meetings organized around the implementation of a given public policy (for instance the right to education). These meetings take the form of a confrontation between the administration and the people, moderated by a panel of "experts". This peculiar form of collective action, characterized by a deeply ambiguous relationship to the judiciary, has become increasingly visible in India in the past decade.

This paper will attempt, firstly, to trace the genealogy of public hearings, back to the people's tribunals of the 1960s; it will show how the public hearing has since been reinvented and reinterpreted, and how it has met with a new popularity as it was used by very different types of actors and struggles. Secondly, the paper will describe and analyze the dynamics of public hearings in order to highlight their hybrid nature, in between the community meeting and the lawsuit. Finally it will try to understand the sources and the limitations of the efficiency of public hearings as a mode of mobilization.

#### *Punitive Pedagogy and the Political Economy of the Surveillance School*

Surveillance Schools are emerging around the globe characterised by new technologies and practices that identify, verify, categorise and track pupils in ways never before thought possible. The school gates have been opened to a variety of surveillance technologies including CCTV, metal detectors, fingerprinting, on-line monitoring, facial recognition and palm vein scanners, to name just a few. Of course, Surveillance Schools are not just comprised of technological apparatus, many have full time uniformed police officers, armed in some countries, patrolling the corridors and classrooms, they subscribe to random drug testing and use sniffer dogs to search students and their possessions stored in transparent lockers and bags. Taking schools as microcosms of society, they can provide us with a prophetic glimpse into an emerging penal vista characterised by surveillance, containment and control. Set against this backdrop, the paper examines the new penal pedagogies and corporate priorities that have increasingly flowed into schools as successive waves of neoliberalism have come to shape the political landscape. Corporate schemas increasingly pervade schools, reclassifying citizens as consumers and aligning education with the needs of the post-industrial market. As the Surveillance School assesses pupils according to their value

as 'human capital' (Apple, 1998) they are sorted into two ideal types; complacent 'worker-consumers' and 'market rejects'; those that are disposed to poverty, or in the most extreme cases face a direct and expedited channel from the school to prison. The paper debunks the meritocratic myth to argue that the school-to-workplace pipeline has bottle-necked as neoliberalism desiccates jobs. The school production line is no longer only routed to the industrial workplace, but rather prisons have become the relief valve, filtering off the already marginalised poor into carceral warehouses.

#### *Imagining Futures in Paper Homes. Ambivalence, the 'Politics of Becoming' and the Everyday Life of Temporary Immigrants*

This paper asks whether changes in the patterns of migrant mobility have been accompanied by, or indeed have generated, the affective register of ambivalence as a way of coping with life as temporary, nomadic and often unwanted peoples. Migration is increasingly temporary in nature, with an attendant loss of access to the channels of full incorporation to formal citizenship and belonging. As a result, immigrants experience insecurities in meeting the basic needs of life as well as in the long-term projects of imagining a new life in host societies. This paper proceeds with a focus on the fluid contexts of immigrants' everyday lives, negotiating the complex pathways of globalised labour markets, national migration regulations and the localised experiences that constitute *place* and *home* making. Ambivalence can be conceived as a rational response to the uncertainties faced by immigrants: temporary and precarious work; second-class citizenship; marginality and invisibility. At the same time, ambivalence can also be understood as a more widespread emotional response, observable under the conditions of late modernity in confluence with economic globalization; a response heightened through the immigrant experience, though perhaps not distinct only to the immigrant experience. Drawing on the concept of a 'politics of becoming' as a rejection of the zero sum game approach of mere inclusion or subsumption of rights claims and identity politics (Honig 2009), the paper argues for a more holistic conceptualization of social change *with*, rather than *through* migration. That is, the immigrant experience is one among many contemporary modes and experiences of change. The paper draws on original qualitative data from interviews with temporary migrants in the Asia Pacific region, focused on the fluidity everyday life and securing work, subsistence and on imagining futures. The interview material offers insights from temporary migrants to the possibilities of a 'politics of becoming'.

#### *'Rooted Cosmopolitanism' or 'Politics of Becoming': A Thick Convergence?*

This paper proceeds from a grounded understanding of cosmopolitan values as 'rooted' in particular experiences and ways of life, yet assumes those same values to be generalisable – as human rights. 'Rooted cosmopolitanism' speaks to an aspect of human rights, namely its relationship to the nation-state form. Though human rights are conceived as universal ideals, their fulfillment in tangible entitlements and claims occur predominantly at the level of the nation-state.

The possibility of human rights – and of our commitment to their primacy (as 'natural law') hinges on cultural understanding of rights and questions of what is it to be human. Rather than proceeding from the well understood logic of universal human rights as internationally held norms that ought to be realized and applied through the domestication of those norms in particular states, the paper proceeds with a view to the realm of affect; sympathy and love as well as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporary and unauthorized migrants? Through examining the perspectives of 'rooted cosmopolitanism' (or cosmopolitanism from below) and the 'politics of becoming', the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

#### *Inequalities and Similarities Between Dutch Families: Holiday Making By the End of the 20th Century*

In many studies on recreation and leisure as a social phenomenon, leisure is regarded as the opposite of work, or as compensation for work. Leisure is also seen as being complementary to an individual's line of work. However, a number of scholars question whether this is the most fruitful way of gaining insight into recreation and leisure. Philipsen (1963), Roberts (1981), Kelly (1983) and Te Kloetze (1985a) believe a family or household approach to be more productive, which means that the theory should be directed at the *social context* of leisure on a micro and a macro level. The social context of people refers to the primary life domains of leisure and family life – which are embedded in the wider context of society, both institutionally and socio-spatially. The question is how far the above is valid for tourist behaviour being an important part of (family) leisure life. The family tourism market is arguably more important now than it has ever been (Southall 2010).

An empirical study on family and leisure was conducted in the mid-nineteen nineties (Te Kloetze 1996).

Part of the data of that study haven't been analysed before. Those data were focused on tourism behaviour, the holiday(s) chosen, if any; the activities undertaken during the holiday; the organisation of the holiday; task sharing between husband and wife. Traditional and modern-individualistic families were distinguished.

The content of the problem statement is as follows: how do (partners from) families behave in time and space with regard to holiday making, and are there inequalities related to their origin? (urban – rural; low versus high status; caring role; and gender)? We used data from diaries and from extensive interviews with husbands and wives.

In this paper the main findings of that analysis will be presented.

**TE RIELE, KITTY\*** (Victoria University, [kitty.teriele@vu.edu.au](mailto:kitty.teriele@vu.edu.au))

#### *Conundrums for Policy and Practice Regarding Vulnerable Youth*

Many youth related policies and institutions are aimed at supporting vulnerable young people to prevent problems from arising, to catch problems early, and to assist young people who are experiencing problems. Identifying some young people as vulnerable (or 'troubled', or 'at risk' – the terminology varies) rather than providing such services for everyone enables limited resources to be targeted at those who need them most.

This poses several conundrums. First, selecting some young people for special attention creates the dual risk of stigmatising some and excluding others. However, not singling them out may lead to further disadvantage. This creates a dilemma for the provision of services for young people. Secondly, determining which young people warrant what kinds of support and when is a fraught issue. The criteria for such 'triage' are rarely clear-cut. At the policy level, this challenge focuses especially on which priorities to highlight in public announcements and through funding. At the practice level, enactment of policies may affect how and to whom programs are advertised, and who is considered eligible. How such decisions are made impacts on individual young people who are targeted (or not) and also impacts on their community and wider society. Getting this 'right' is important in terms of equity, social cohesion, cost-effectiveness and the quality of life of young Australians.

The presentation will engage with these conundrums by not only exploring how and why certain young people are identified as vulnerable in relevant policy, but also the policy-practice nexus and the potential impacts of such challenges.

**TE RIELE, KITTY\*** (Victoria University, [kitty.teriele@vu.edu.au](mailto:kitty.teriele@vu.edu.au))

#### *Professional Ethics for Social Justice: Codes, Principles and Resources*

It is likely to be widely accepted that ethical reflection by professional workers, such as teachers, is of benefit for improving equity and social justice in society. More controversial, however, is whether formalized codes and principles are helpful. In this presentation I begin by analysing critiques of formal frameworks for procedural ethics: both professional codes of ethics and guidelines for research ethics, especially within education and social science research. Specific concerns relate to the restrictiveness of codes, the impact of codes on undermining professional deliberation, and a lack of cultural relevance. I draw on Nancy Fraser's framework of social justice to relate these issues to considerations of inequality.

The second part of the presentation reflects on my experience teaching a module on 'professional ethics' in a pre-service teacher education course in Australia. Rather than pre-determining codes or principles for students to adopt, I started with a *Smörgåsbord* approach, offering various ethical theories and materials. These were resources for students in order to construct their own 'professional ethical toolkit'. I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics frameworks internationally (respect for persons / autonomy, beneficence / non-maleficence and justice) as well as ethical resources through Fraser's lenses of redistribution, recognition and representation. I conclude that in order to use ethics for equity, we need to carefully weigh up the potential impacts of formal, procedural approaches and more informal pedagogical approaches.

### *When Food Aid Supports Local Farming : Towards a Sustainable Solution ? Case Study in France*

In Europe an increasing number of people require the assistance of food aid organizations, while the EEC is revising food aid funding. Access to fresh quality foods gets difficult, impacting people health.

This contribution is an original on-going case study assessing the impact of an innovative food aid supplying mode supporting small local farmers. Besides developing links between urban consumers and local producers, it reveals the current conditions shaping the creation of fair and sustainable markets.

This case study is based on the pluridisciplinary intervention research ECOALES in partnership with the ANDES (national association for food aid) which has set up in 2012 an innovative short supply channel for fruit and vegetable for solidarity grocery recipients, in the Western regions of France. Objectives are to increase fresh fruit and vegetable consumption among food aid recipients and support local farmers by buying their products at sustainable price via a pre-order system. The intervention also includes cooking workshops and visits to farms. The network of local farmers is organised by a coordinator in charge of deliveries to food aid outlets.

We will focus on the diverse constraints: creating links between shops and farmers who are spread over a large territory; the articulation between support to farmers in a difficult situation and regular supply in quality fruit and vegetable; meeting consumers' expectations... We'll also assess necessary adaptations and the sustainability of the system.

Fieldwork (including participant observation) follows the lines of global approach, including the diverse protagonists involved: farmers, solidarity food outlet staff, recipients as well as financial and political partners, representing institutions involved. The original methodology, combining interdisciplinary perspectives (anthropology, epidemiology and economy), offers finer understanding of what is at stake. The analysis should highlight the favourable conditions for the viability of such a project.

### *Intergenerational Coresidence, Support Transfers, and Psychological Wellbeing Among Older Persons in Myanmar, Thailand, and Vietnam*

We analyze data from 2011-2012 nationally representative aging surveys from Myanmar, Thailand, and Vietnam to examine the associations between coresidence with adult child, intergenerational transfers, and psychological health among older persons in developing and rapidly aging Southeast Asia. Specifically, we ask: 1) How does coresidence with adult child and proximity of children influence the psychological wellbeing of older persons? 2) To what extent are support transfers from children associated with elderly mental health? 3) Do support transfers from children fully account for the relationships between parent-child coresidence and older persons' psychological health? 4) How do the associations

between intergenerational coresidence, support transfers, and elderly mental wellbeing vary across the three societies? The mixture of commonalities and differences in political systems, cultural underpinnings, kinship systems, levels of development and degrees of population aging that characterize Myanmar, Thailand, and Vietnam render the comparative analysis particularly interesting. While a growing body of literature suggests that living arrangements of older adults are related to their psychological outcomes, most research focuses on the effect of living alone versus living with others, which may or may not include an adult child. Less is known about the effects of coresidence with an adult child and how cultural factors such as son preference come to play. There have not been any studies that examine the extent to which parent-child coresidence affects older persons' psychological wellbeing in the developing Southeast Asian contexts. An absence of a coresidential child may adversely affect mental health of older persons. Clinical depression and depressive symptoms have been linked to greater healthcare utilization, higher spending on care, and higher mortality rates. Given the region's rapid population aging, decline in fertility rates, and unprecedented levels of young people's migration, a decline in parent-child coresidence may have significant implications for public health system, policies, and planning.

### *A Challenge for Fathers, a Challenge for Social Policy? Shifts and Continuities of Fatherhood in the Poland's Transition 1989-2013*

This paper discusses the relationships between social representations (Moscovici 1961) of fatherhood, social policies and social practices in the period 1989-2013 in Poland. It investigates how shifts and continuities of social policies affect configurations of fatherhood. The analysis considers cultural, institutional (laws, regulations, organizations) and societal dimensions of fatherhood. The main hypothesis states that the institutional order shapes the social representations of fatherhood and simultaneously the cultural images of fatherhood define the patterns of social policy reforms and block radical changes as well as create the realities of fatherhood.

The institutional context of the welfare regime in Poland is often characterized through the strong familism and maternalism. The poor access to institutional care (app. 2-4 % of children 0-3 y/o in institutional care) and the commodification of labor "strengthen" care function of families. This promotes male or dual breadwinner family model with a limited involvement of fathers in childcare and domestic work.

The 2013 leave entitlements' reform in Poland can be considered as a historical transition from familism *implicite* to familism *explicite* (Leitner 2003). An entitlement to 26 weeks of parental leave was introduced as a supplement to 26 weeks of maternity leave. However, the recent reform confirmed a strong link between the cultural images of fatherhood, the political agenda and the results of reforms. The rejection of father's quota also revealed durability of the regulations that reproduce gender inequalities in care-giving and domestic work. Basing on evidence from other countries with similar constructions of leave entitlements it can be assumed that in Poland parental leaves will be used almost entirely by women. This assumption is further confirmed by a limited take-up level of 2-week paternity leaves.

Legal acts, media and parliamentary debates, existing literature and qualitative data (IDI with fathers) serve as empirical material for this paper.

### *The Place of Art in Social Theory: A Possible Approach to Max Weber and Michel Foucault*

Max Weber dedicates his work to the delimitation of the historical specificity of the West taken in terms of culture. His study on the rational and social foundations of Western music is his only formulation of that cultural specificity within the aesthetic sphere. This unique trial presents a precious articulation between the formal analysis of an aesthetic language and the definition of the specificity of Western culture through a method of historical sociology that settles the singularity of its objects by comparing them with similar expressions located in different historical contexts. In turn, Michel Foucault takes the literature, understood as a specific happening that emerges in the eighteenth century, as a privileged *locus* for defining the knowledges and practices, double dimension of his conception of experience that takes place outside of a discourse systematically ordered. Therefore, it is up to investigate it in order to define the present as historical uniqueness. The purpose of this communication is to examine the possible similarities between methodological arrangements proposed by both authors to undertake the analysis of aesthetic expressions in order to formulate the historical specificity of the modern world.

*Religion, Migration, and Human Trafficking: Experimental Evidence From Grassroots Practitioners*

This study investigates whether faith-based organizations are making an impact in preventing or caring for the victims of human trafficking and prostituted women. This study assumes that human trafficking is closely linked with migration which often causes prostituted women to be trapped into sexual slavery. This study critically suspects that because human trafficking is closely linked with organized syndicate and criminal organizations, faith based organizations remain on the side-line of social engagements into the public sphere. This study executed an in-depth interview with particular faith-based organizations working among prostituted women to probe whether these organizations are actively engaged in combating human trafficking in their own respective area of ministry. This study utilizes critical questions to test whether there are indications of participatory engagement of these organizations in partnering with government agencies or the civil society. This study finds out that faith based organizations are driven by their passion to see victims and prostituted women transformed by the power of the gospel. This observation is based from the following evidences that faith-based organizations, despite the danger and risk involved, are actively engaged in providing various interventions and aftercare services for the victims fueled by their religious convictions and values. It was evident from the study however that migration, whether it is legal or not, is a mechanism of organized syndicates to deceive and betray victims of human trafficking. Also, it resonates to the study that combating human trafficking in local and international level requires corroborative network and engagement of faith-based organizations to non-government organizations and government agencies such as legal and justice experts. This study suggests a theological framework in which faith-based organizations adopt and suggests ways on how to mobilize Christian churches to combat human trafficking in the local and international context.

*Democratic Upset and the 15-M Movement. the Social Basis of the Political Crisis in Spain*

Recent years have witnessed a great diversity of mobilizations in authoritarian political regimes (Arab Spring, Colours Revolution) and consolidated democratic societies (Europe, North and South America). Driven by the consequences of the economic crisis, the implementation of liberal economic programs in different social sectors, and the persistence of significant democratic deficits, numerous citizens with a low level of previous political mobilization occupied the public space to show their discontent. The reasons are complex and, therefore, it is difficult to find a unique explanatory array that can be applied in all cases.

The Spanish case has served as an example to other subsequent mobilizations and although it displays obvious peculiarities, due to the depth of the economic crisis, it also presents similarities with other cases mentioned. The aim of the paper is twofold. Firstly, deepen in the reasons that activists and sympathizers of the movement 15-M consider as mobilization triggers: the immediate consequences of the economic crisis and people responsible for it, the politicians' behaviour and its role in the crisis, the functioning of democratic institutions, the elements that limit, condition and pollute democracy, and the crisis of the political link between representatives and citizens. Secondly, to analyse the contributions and proposals of 15-M claiming for a more democratic process, as well as the results and impact of the mobilization. The following data will be used: 1) the survey of the CIS (Center for Sociological Research) to the Spanish population on the 15-M movement; 2) eight focus group sessions and ten individual interviews with activists; and 3) the results of a survey carried out by the INJUVE (Spanish Youth Institute) on social and political attitudes on the 15-M based on the answers of 1,100 young people aged between 15 and 29 years old.

*Persistent Invisible Inequality in Education: Sociology of Education and Gender Studies in Japan*

Japanese sociology of education has a long history. Women and education and gender issues in education have become some of the main topics in the sociology of education since the 1980s. This presentation traces the transformation of feminist discourses in education in Japan, focusing especially on the hidden curriculum, gender classification through family socialization, and gender order penetrated in Japanese society deeply, while following the main issues of sociology of education since the 1980s to the present.

Gender is an important lens through which we can interpret the role of education in society and the ways in which it contributed to social change in late modernity. In this presentation, I will focus on the following three points; first, to understand gendered schooling and education in Japan, empirical data of Japanese education such as gender tracking, faculty components, the ratio of female teachers and principals, and female researchers in academic fields examined from a comparative perspective. Secondly, based on the analysis of the trends of articles related to gender issues in the Journal of JSES, the reality of persistent inequality in education will be discussed. Thirdly, I consider the issues of inequality of gender and other disparities in Japan, knowledge transmission, power relations and reproduction within the era of Neo-liberalism.

*Bersih and Street Protest: National Consciousness and Social-Political Change in Malaysia*

The starting point of Malaysia's legal-political history is based on the premise of a plural society and the presence of race-based political parties. By plural society we mean the coexistence of various ethnic communities that interact with one another but at the same time are segregated each according to their various spaces, ideas and expressions. This phenomenon is in turn mirrored in the political structure and representation of the National Front (BN) coalition comprising of the main political parties of UMNO, MCA and MIC that has ruled Malaysia for 56 years. This has significant implications. Because of this nation-building and nationalism is then internalised and expressed through the lenses of ethnic or separated nationalisms. Recent events however have shown new developments. On July 9, 2011, despite police presence, tear gas and chemically-laced water cannons, tens of thousands of Malaysians marched through Kuala Lumpur to demand for free and fair elections. Bersih 2.0, a coalition of non-government and civil society organisations, had called for the rally. Focus group discussions with Malaysian Chinese youth participants indicate that there is an emerging new discourse of national consciousness and political unity that is acquired from participating in the rally. This paper attempts to discuss what this new discourse is. It intends to explain how it arose and has been articulated, and why this alternative discourse has emerged. Finally it attempts to raise some implications of this revived and renewed consciousness, and the possibilities it offers for the reconceptualization of a different Malaysian society.

[youyenn@mac.com](mailto:youyenn@mac.com))

*Undermining Poor Women's Labor and Caregiving: State Welfare Policies, Social Workers and Differentiated Deservedness in Singapore*

"Work-life balance" as public problem has come to the fore in Singapore as in other developed countries. Women's capacities to balance wage-earning and caregiving have received a great deal of attention. In Singapore, research (including my own) has focused on the norms among middle-to-high income families that heavily involve foreign domestic workers and grandmothers. Less attention has been paid to the families and women for whom these are not viable options, and for whom "work-life balance" is a problem they lack access to. In this paper, I argue that the state's approach in public policy has produced uneven outcomes for women across class lines and thereby deepened the reproduction of inequalities across generations. I focus on how the state's welfare approach, with its principle of what I call "differentiated deservedness," constraints the lives of mothers who are poorly educated and in low-income households. I first outline the multiple ways in which they and their needs are negated in Singapore's pronatalist policies of the past three decades, before turning to a discussion of how the implementation of specific policies targeted at them, and the everyday practices of social workers who work with them, cast them as unimportant and undeserving both as workers and caregivers. I end the paper with a discussion of the importance of paying attention to this group of mothers: their invisibility in scholarship holds up the myth that "everyone has maids" and obscures the multiple ways in which public policy has failed to address the needs of care in contemporary Singapore.

## European and Latin American Higher Education Between Mirrors

Higher Education systems all over the world have gone through deep transformation and extraordinary expansion. In Europe, major transformations in higher education took place during the first decade of the 21<sup>st</sup> century and resulted mainly from the implementation of the so-called Bologna process. The main goal was to establish a European Higher Education Area which allowed an increase in international competitiveness, attractiveness and comparability between European higher education systems. Evaluation of results and consequences of the Bologna process has largely depended upon the evaluators' perspective. At the political level, it is easy to conclude that the Bologna process has been successful since it allowed greater integration and harmonization between the various education systems of the 46 participating countries. However, at the institutional and local level, the response is more cautious due to the great variety of contexts involved.

In Latin America, timing was different since this was the first region where neoliberal policies were put in place, after Pinochet's military coup in Chile in 1973. Several authors described the end of the 20<sup>th</sup> century in LA as the "lost decades". The beginning of the 21<sup>st</sup> century brought with it important changes to the scene. The election of progressive governments in some LA countries gave way to policies which favored redistribution of wealth. At the same time, in some countries, with robust indigenous communities, their cultures were granted political and social recognition and intercultural policies were developed. It is not meaningless that it is precisely in LA, where the first neoliberal experiment was carried out, that the search for alternative policies and the construction of other rationalities were undertaken. This paper presents the results of a research project developed by the Network RIAIPE, comprehending 31 universities from 21 countries of EU and LA, funded by the ALFA Programme through 2010-2013.

### *National Educational Systems and Academic Profession: Portuguese and Spanish Cases*

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale's calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the educational policies in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professional competences of professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the what is a professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

### *Peeling the Skins of the Embodied Subject*

The embodiment of the Subject relies on the discursivities of the prevailing hegemonic power-knowledge relations, the rhetoric of the foreign other and the deconstruction of identity wherein all of which pose as tension towards the coherence and integrity of the subject and serve as limits to its determinations of thought, action and judgment. The Subject is subjected to the materiality and ephemerality of its body necessitating the self to experience itself first through these skins, before it experiences itself as a Subject.

### *Housing Poverty in Urbanizing India: Emerging Trends and Concerns*

Urbanization and housing shortage in India seem to go together. Housing Poverty, viewed as homelessness and inadequate shelter is acquiring alarming dimension in the wake of rapid urbanization, commodification of land and housing,

distortion in land market and weakening of public sector housing provision in post liberalisation period. Housing shortage in urban areas is growing and situation is worsening for the poor (LIGs and EWSs). The segregated settlements emerging due to housing shortage may jeopardize the future economic and social development in urban India. The labour is shifting to urban areas with decline in employment in Primary Sector. Non-affordability of housing by economically weaker sections of society and low income families in urban areas is directly linked with the magnitude of poverty. Housing and urban development seem to be neglected in urban policy planning over successive planning eras and public sector investment in the same has declined drastically. It is also argued that JNNURM also did not adequately integrate housing and infrastructure delivery to the extent required. In particular, housing policies have failed to resolve the problems of displacement, affordability, cost-recovery and replicability. Housing affordability is a major issue and effective repayment capacity of the slum dwellers for better housing is very poor. The paper suggests that there is an urgent need to speed up social housing programmes to provide affordable housing to the houseless slum dwellers to tackle the growing problem of housing poverty and resultant inequality in urbanizing India. The paper relies on secondary data, Ph D synopsis, recently prepared two term papers on Housing Poverty in a Planned City and Slums in India: Socio-cultural Dynamics and also some recent studies by the author having housing one of the important focus areas.

### *Institutional and Peoples' Response to Cope with Growing Urban Challenges: A Case of Women's Participation and Leadership in Poverty Alleviation in Chandigarh*

Chandigarh has distinctly implemented urban poverty alleviation (UPA) scheme called SJSRY unlike other towns in the region. The women as 'change agents' are leading various UPA activities in the city. The self help groups have been formed 'by the women' and 'for the women' who not only catalyze other fellow members but other women in the poor clusters to join the skill formation training programmes for setting up self employment ventures to earn the livelihood and also to strengthen urban community development networks etc. Three major women based activities i.e., 'Learning on Wheels', 'Eco-friendly Handbags manufacturing by HIV+ poor women SHG' and 'Women As Change Agent in Building Leadership and bringing change in their Community' have recently won the prestigious 'HUDCO Best Practice Award to Improve The Living Environment'. The new pattern of community leadership is emerging among the poor women. There is a positive institutional response to the UPA activities in the city which seems to empower the poor women. The Municipal Corporation has formed a dedicated Cell with adequate staff to implement SJSRY and other UPA schemes. There seems to be democratic strengthening through enhanced participation and leadership of poor women in local decision making in implementing UPA program. They are able to raise and articulate the voice and choice of disadvantaged women in a better way. The local participatory initiatives have multiplier impact on socio-economic conditions of the poor women. There is negligible poverty and better service provisions. The emerging pattern of women participation and leadership in Chandigarh is a positive step towards UPA, inclusive urban society, women empowerment and also coping with growing urban challenges. There are many success stories of emerging trend of women participation and leadership in UPA in Chandigarh which have been documented by the author for the paper.

### *The Transformation of Youth Attitudes to Economic Success in Japan*

The purposes of this study are to reveal the transformation of youth attitudes to economic success in 2000s Japan, and to consider the youth under unequalizing in the society which has the legacy of equality. Though the Japanese society had been seen as an egalitarian society from Western societies, it has been transformed to an unstable society with liquidity and disparity since the end of the 20th century. Particularly the situation of youth employment was becoming worse and has not recovered after the bubble economy from mid-and-long term perspective. In this situation, the social challenge is how to recover people's motivation not just current economic gap.

In this study, we analyze the quantitative data which was collected in Sugunami (Tokyo) and Kobe in 2002 and 2012 by the Japan Youth Study Group. Respondents aged from 16 to 29 were randomly sampled.

Major findings of our first analysis are summarized as follows: First, the percentage of young people who think of "individual effort" as the most important factor of economic success is little different between 2002 and 2012. Second, in 2012 the percentage of young people who think of "individual talent" as the most important factor of economic success is about 10% less than that in 2002. In contrast, in 2012 the percentage of young people who think of "family environment"

as the most important factor of economic success is about 10% more than that in 2002.

This difference can be contemplated that economic success for the youth are transformed from the individual matter to the social matter. This may mean the penetration both of the sense of inequality and the awareness that this matter should be treated publicly, not personally. In the presentation, we will discuss the impact of this transformation on the Japanese society and youth.

**TERADA, MASAYA\*** (Tohoku University, [teradamasaya@gmail.com](mailto:teradamasaya@gmail.com))

### *The Pragmatic Social Theory of Sign in Shunsuke Tsurumi*

While most critics may agree in applauding Shunsuke Tsurumi (1922- ) as one of the most influential intellectuals of post-war Japan, no one has recognized him as an eminent sociologist. The aim of this presentation is to show some sociological implications of his thought and methodology. His works should be categorized as sociology of culture and cultural studies. Shunsuke Tsurumi's interest is in the life of ordinary people and in "pragmatism in Japan". He focused on a lot of cultural things, especially writing practices of elementary school children (TSUZURIKATA), comics and KARUTA (a Japanese alphabet card game). His notions on the so-called "disinterestedness of mass" aim not only to find the roots of the resistance to the government and bureaucrats, but also to criticize the conventional, scientific, or professional intellectuals and sociologists. Sociology can't read and find the potential hidden behind the unwritten words and thoughts of ordinary people, people who express themselves through work, games, talking, rhymes and poems, and art. He named such practices as "marginal art" (Tsurumi [1960]1991). The influence of these implications are widespread in contemporary Japan, but sociologists such as Keiichi Sakuta (1922- ) and Shun Inoue (1938- ) are the first to share and acknowledge the methodology and importance of Tsurumi's work.

In my presentation, I'll reconstruct Tsurumi's practices and works into "the Pragmatic Social Theory of Sign" through the reconsideration of his studies regarding the development of pragmatism in the US and Japan and his analysis of Japanese popular culture.

### *Toward Environmental Sociology of Risk Perception, Risk Literacy, and Risk Democracy in the Aftermath of the Fukushima Nuclear Disaster in 2011*

Research on Environmental risk perception has been accumulated focusing, for example, on "irrationally" or "emotionally" biased perception of lay citizens. These researches have been mostly based on the assumption that environmental and other risks can be calculated by the formula: Risk = Hazard x Probability (or Degree of Exposure).

Recently, however, risks from environmental hormone disruptors, genetically engineered organisms, and radioactive contaminants are those that the formula is not directly applicable to estimate the gravity of impact. The level of hazard or exact probability cannot be decided by the present level of scientific analyses. In addition, we experienced the catastrophic and irrecoverable impact from the Fukushima nuclear disaster. Thus, the new criteria to evaluate risks, other than risk/cost/benefit analyses, such as environmental justice, risk information disclosure, and participatory decision-making have become more significant.

After the Fukushima disaster, the public have become more skeptical about the scientists/experts-centered risk assessment and more citizens have demanded for "risk democracy" in which wider range of stake holders can participate in environmental decision-making based on the equal "risk literacy".

However, the degree to which respondents claim "risk democracy" or pay the cost for "risk literacy" varies according to their socio-economic status. Those in the upper-middle strata, in general, have more resources to access newer information on risks with scientific uncertainty and risks with catastrophic results such as GMOs and radioactive residues. Those in the lower strata, on the other hand, tend to be concerned about well-known risks such as air pollution and waste incineration. However, they are even more seriously concerned about "environmental justice" issues because they are more vulnerable to disproportionate risk burdens in general.

Thus, the effect of socio-economic variables is ambivalent. However, there is consistent interrelationship among "zero" nuclear option, serious risk perception, environmentalist consciousness, "environmental democracy", participatory and transparent decision-making orientation.

### *The Nation As Greek Gift? Marcel Mauss on the Ambiguities of the Nation Form*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

In 2013, Marcel Fournier and Jean Terrier published posthumously a book by Marcel Mauss, entitled *The Nation*. An article bearing the same name, collected in Mauss's *Œuvres* at Editions de Minuit, had long been known to scholars. That article, in fact, is only the *first part* of a much longer book covering three topics: 1) a historical sociology of the national phenomenon, 2) a presentation of what a sociology of international relations may look like, 3) a reflection on the relationship between socialism and nationhood. Mauss started working on this book project during the war. To it, he devoted most of his research time in the subsequent years, until approximately 1924. The book was never brought to completion, but its huge manuscript can still be consulted in Mauss's archive.

It is this manuscript that Fournier and Terrier, after many years of archival work, have entirely transcribed and made public. This book sheds a new light on Marcel Mauss. It gives us a much better sense of his political thinking. It provides a new background against which to re-read and re-interpret his celebrated *Essay on the Gift*. Depending on the reception this book will enjoy, Mauss may soon be seen as one of the most articulate exponents of a "civic" concept of nationhood and as the spiritual father of the sociology of international relations. In this paper, I will present and explain Mauss's position on the nation and provide an assessment of the historical significance of this work.

**TEWARI, BABITA\*** (CSJM University, [babita.tewari@yahoo.co.in](mailto:babita.tewari@yahoo.co.in))

### *Women, More Roles, Less Personal Leisure: A Case of Kanpur City*

A need exists to understand leisure in the context of everyday life along with obligations and social structures. As women often occupy more roles than men (e.g., Housekeeper, mother, caregiver etc.) they may have less time available for their own autonomous or personal leisure. For anyone who is in a caregiver's role, leisure as free time may be irrelevant. Within the role of being a mother, for example, women have many expectations that must be addressed for leisure to happen either personally for women or within the family (Hunter & Whitson, 1991).

The underlying hypotheses of this analysis is that the more roles undertaken by a woman, the more likely that the individual is to have less personal leisure. The present study takes the case of fifty household women of Kanpur City, through an interview questionnaire wherein leisure time vis-à-vis their roles were examined. A contradiction seems to exist between addressing the relationships and roles that are central to women's life and needing time for one. Establishing the findings of Wearing (1991), the present case finds leisure as a place where male power prevails and where traditional feminine identities and roles often are associated with putting men's wishes and serving men's leisure before most women claim their own personal leisure. The value of this research is in the theory that is leading to the broader understandings of how gender and roles affect the leisure possibilities of women.

### *Lessons From Uttar Pradesh and Bihar: Sport Development Initiatives and The Potential For India's Sociologies Of Sport*

Despite the potential of sport development to highlight broader social complexities, sociologists in India remain disinterested in the area (and sport generally) as avenues of legitimate study. Yet, sport development programs provide sociologists opportunities to know and engage with body politics, questions of structure & agency, and social transformation. Accordingly, in this paper I draw on Bourdieu (1992; 1993) & Giddens (1990; 2009) to understand the construction and consequences thereof, sport development projects and the broader processes to which they are a part. I discuss my research with youth in two Indian states, and, consider how sport development agendas are often confounded by tensions, negotiations, and resistances contours of the local context.

The factors influencing sports participation have emerged as a point of interest among many academics (Wheeler, Sharon; 2011). In order to detect determinants of sports participation, a constructive and exploratory research methodology has been adopted. The data drawn upon in this study has a sample size of 500 interviews, spread over two States of India.

The inclination of parents given their socio-economic background towards putting their children in sports shows a declining trend. Involvement and attainment in a 'field' are based on a combination of one's habitus and cultural capital. With rise of income level, inclination towards sports does increase. In many ways sport represents a social 'field' (Bourdieu, 1990), a structured space of positions that impose specific determinations on those who enter it and this has been tested positive.

Rather than simply enhancing individual freedom and opportunity, sport-based programs serve as social control and regulation. Basic education is important for gaining foothold in sports in order to think of social neoliberalism. Social environment, geographical conditions, educational arrangements and the regional economy determine to a large extent if personal development and ambition are able to flourish.

*Narrations of the Shooting Death of Trayvon Martin and the Trial of George Zimmerman As Intersectional Challenge to the School-to-Prison Pipeline in the United States*

Reactions to the shooting death of unarmed seventeen year-old Trayvon Martin in February 2012 and the not guilty verdict in the trial of George Zimmerman in July 2013 could be heard throughout the United States and around the world. In Al Jazeera, Susan Abulhawa, a Palestinian writer, wrote, "The contempt, the disregard, and the disrespect for the black body runs through this whole case. It runs through this country and transforms itself to adapt to the times."

On August 12, 2013, U.S. Attorney General Eric Holder announced that the Justice Department would work with the Department of Education, "to confront the 'school-to-prison pipeline' and those zero-tolerance school discipline policies that do not promote safety...."but instead lead to the criminal justice system. Reactions to the death of Martin and the announcement of a new approach to the disciplining of youth are acknowledgements of the systemic use of violence to control people of color in the United States.

While many accounts of the Martin/Zimmerman case have focused on race as a central theme, some have pointed to race as it intersects with gender and/or age. A narration is constructed so that it resonates with an audience, thereby providing a kind of truth. Intersectional analysis complicates a narrative, but it also provides a nuanced view of societal violence/power as well as a vantage point from which to exercise agency and bridge the research/practice gap.

Using content analysis of media from around the world, we identify multiple ways in which the Martin/ Zimmerman case has been narrated, focusing on intersectionally-framed accounts that along with race point to gender--masculinities deployed--and/or age--youth/adult to make sense of the violence. Statistical data on incarceration in the United States will be used to show the relevance of the narrations to the school-to-prison pipeline.

*"Just Like Everyone Else"? South Asians In U.S. Media and Society*

In the 21st century, representations of South Asians in U.S. popular media have grown exponentially. This is a particularly interesting phenomenon when considering the status that South Asians occupy in the American racial hierarchy. In my research, I examine audience perceptions of South Asian/Indian characters and actors in American popular media. Using data from 50 in-depth interviews, I argue that South Asian media representations today no longer embody the overt stereotypes associated with this group: savage foreigner, heavily accented new immigrant, and cheap small business owner. Rather, respondents describe and discuss contemporary representations to indicate that they are portrayed as assimilated and even "Americanized." However, from a critical race perspective, I argue that while media representations of South Asians can be characterized as conforming to mainstream, white, American norms, these characters actually do little to challenge the racial status quo in American society. Additionally, these characterizations through intentional writing and casting decisions present a particular representation of American society in which racial hierarchies are maintained and not challenged.

*Intersections of Race and Gender in U.S. STEM Careers*

In the United States there are still discrepancies in the number of women and non-whites who achieve top positions in STEM fields. Despite vast infusions of money by the federal government to address this issue, little has changed in the last 50 years. Additionally, while it is assumed that Asians are the one non-white group to dominate these positions, they are in fact still outnumbered by whites in comparison. In this paper, I examine a sample of 22 Asian students who are pursuing careers in STEM to better understand intersections of race and gender for this sample, and larger implications regarding the assumptions around racial and gender "equality" in these fields.

*The Politics of Indigenous Social Science: A View from Indian Sociology*

A deep sense of ambivalence towards the Western social scientific categories has been a characteristic feature of the growth and development of social sciences in post-colonial societies. Indian sociologists, in particular, have frequently turned their critical gaze on the ethnocentrism of the Western social sciences. They have demonstrated as to how the conceptual categories used by Indian social scientists are the precipitates of the Western social, intellectual and particularly academic history that rarely fit Indian definitions of reality. Their treatment of Indian cultural realities in Western framework and the attendant imposition of an alien epistemology on Indian reality have at times provoked extreme responses – from the impossibility of an Indian sociology to the calls for an Indian ethno-sociology. At the core of such responses is the contestation over one's approach and orientation to Western modernity. Against this backdrop, the present paper seeks to investigate if Radhakamal Mukerjee's conceptual and theoretical innovations should be treated as rejection of Western modernity lock, stock and barrel or only as refutations of the Western ethnocentrism. The paper does not purport to look at Mukerjee's contributions in their entirety, which, even otherwise, is a daunting task to undertake within the space of a single project. Nor is it intended to assess his role as a 'pioneer' in the context of the history of the growth and development of sociology in India. Its aim is to selectively present Mukerjee's axial concerns and analytical thematics from his enormous body of writings with a view to examine his critique of western modernity. Of necessity, the proposal intends to appraise Mukerjee's critique of Western social science approaches to the study of Indian society and culture. It attempts to discern the elements of an alternative indigenous (Indian?) vision through a critical reading of his oeuvre.

*Picture That! a Social Media Approach for Communicating Pro-Environmental Behaviour*

With a social media- and peer education-approach the European project „useITsmartly“ aims at building a community of young people to not only share knowledge about energy saving, but moreover change behaviour and adopt a sustainable lifestyle. For achieving this aim, the transdisciplinary project unites educators, researchers and young people developing together innovative and target group specific communication strategies on pro-environmental behaviour exemplified by green use of ICT.

Facebook and Twitter are social media which can be used classically to enhance a public understanding of science. But besides communicating ideas about energy saving behaviour and promoting a "green lifestyle" the unique possibility of social media is the connection to others. Other projects, initiatives, interest groups can be used as multipliers, like young people, who spread posts and pictures which are relevant to them. These two media channels can use videos and pictures, and have also the possibility of adding text and explain further details or include a link to another source of information.

However, knowledge is not everything. To know what is right, does not mean to act right. That is why beside Facebook and Twitter also an Instagram account has been set up for the project. This is a social media platform, where people only share, like and comment on pictures. With a hashtag (#) system like on Twitter metadata can be created on each and every photo very easily (like key words). By using hashtags the respective photo belongs to a sub-community of pictures from all over the world, which have one thing in common: the same topic (for instance #recycling).

In our presentation we will present findings from our on-going project evaluation, comprising statistics from the social media channels as well discussing possibilities and limits of social media in the scope of a project like useITsmartly.

**THAVER, LINGHAM LIONEL\*** (University of Western Cape  
South Africa, [lthaver@uwc.ac.za](mailto:lthaver@uwc.ac.za))

*The Ambivalence of Modern Technology and the 'Digital Divide': Gathering and Scattering of Sociality and Sociability in the Global Network Society*

This paper takes up Heidegger's (1977) concern that Modern Technology holds both a danger and a saving grace in light of the particular kind of relationship we may admit it to having with society. We are thus accordingly in the grip of a technological instrumentality deriving from our anthropological understanding of technology, with its attendant 'will to power' that paradoxically threatens to dis-

rupt our humanity and sociality. While, simultaneously, we are being presented with a modality of equipmentality (Heidegger, 1962; Dreyfus, 1991, 1992; Verbeek, 2005) from within the frenzy of technological activity, which paradoxically inures us in our sociality and sociability. This contention is carried through to its articulation in Castell's (2000, 2001) theoretical substantiation of the Network Society in the Information and Internet Age with a view to opening up and tracking into specific transformational dynamics of the new modalities of the social, economic, technological and the global. The aim behind which is to consider in which ways the Internet-based transformations offer themselves up as nodal points that gather our sociality and sociability in the 'virtual' world. And by contrast consider the ways in which the latter dimensions of social being as predicated upon individualism are scattered throughout the labyrinthine 'cyber world'. Taken together the paper seeks to think through how both moments of gathering and scattering are recast in the new global informational-intellectual division of labour as mirrored in the 'Digital Divide'. We close this line of thinking by reflecting on South Africa as engaged in this Internet-based New Global Network, with its ambivalences and consider the incorporation of Developing Countries into the new global order as a function of new social inequalities and subject positions that are emergent and made manifest in one of its forms as "Scatterlings" of the 'Digital Divide'.

[lionel.thelen@ec.europa.eu](mailto:lionel.thelen@ec.europa.eu))

### *The European Research Council... An Open Door For The Sociology Of 21st Century?*

The European Research Council is the most recent and most successful Funding Body created by the European Union. Why successful? Because it allows the funding of single research teams in all fields of Science (up to 2.5 million EUR for a 5 years project) and it is the sole EU funding body directed by a Council of top-notch Scientists.

The author is for now more than 5 years the Scientific Coordinator of the so-called SH2 Panel, bringing together 15 panellists – from Sociology but also from Anthropology, STS, Political Science, Religious Studies, Law and Communication Studies – in charge of evaluating between 120 to 200 proposals.

The way the ERC assesses proposals – singularly in Sociology – is quite peculiar and tends to blur boundaries between disciplines.

The evaluation procedure is done in 2 steps and, at step 1, each proposal is given to 4 reviewers. The latter are, frequently, not specialists from the main proposal's discipline. It follows, from that, debates among them not only about the excellence of the proposal but also about its relevance in confront with its subject, hypotheses or methods.

This fruitful interdisciplinary debate 1) helps panellists understanding each other point of view while bringing them, in most cases, to a consensual decision about any given proposal; 2) gives interesting hints about the various paradigms in use in disciplines apparently close from each other; 3) raises a lot of questions about the fact that some disciplines seem more "successful" than others and 4) allows to grasp at best that having reviewers from different disciplines can have paradoxical effects for interdisciplinary proposals.

Such a debate is undoubtedly helping outlining the main features of Sociology as a discipline increasingly aware of the needed 'porosity' of its own boundaries and, by extension, of the other social sciences' ones.

### *Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany*

Since the 1990s, two distinct processes of marketization in long-term care provision can be found in Sweden and Germany. First, professional long-term care services were restructured inspired by ideas oriented towards New Public Management. Second, tax deduction policies were established to create a new mix of (ir)regular domestic and professional care services. Despite the international character of the development, the existing structure of professional and (ir)regular domestic services at the beginning and the approaches selected, their effects on the infrastructure and on the situation of care (and domestic) workers differ significantly between both countries. In both countries, research findings indicate – however country-specific – patterns of a worsening of working- and employment conditions of care workers embedded in distinct processes of hierarchisation among care workers. The paper aims to compare pre-existing service structures, policy approaches, their effects on service restructurings and the situation of care workers. Based on a comparison, it will reveal and explain the effects of country-specific policies and restructurings on processes of hierarchisation among care workers.

Conceptually, the paper combines international comparative research on care policies and marketization and intersectional approaches developed within sociology to relate the effects of marketization to the emerging patterns of inequalities within the care work force based on gender, social class (training levels and

positions) and ethnicity. Empirically, it will include documents and laws, literature review and representative statistics to analyze policy changes and existing- and changing infrastructure. Findings of a German-Swedish research project on the situation of professional carers with approx. 600 care workers in each country, will be used to reveal the country-specific restructurings and processes of hierarchisation within formal care provision, which is complemented by research on the developments within domestic service provision.

[gt274@cam.ac.uk](mailto:gt274@cam.ac.uk))

### *Göran Therborn: The Killing Fields of Inequality*

This is a theoretical as well as an empirical book. Theoretically, it sorts out the differences between difference and inequality, it sets out a moral argumentation for why inequality matters, it presents a multidimensional analysis of inequality, and it lays bare the mechanisms of equalization as well as of unequalization. Empirically, the book is global in scope, historical in depth and multidimensional in range, analyzing life expectancy, health and body measures, and existential recognition, rights, and respect, as well as income.

It also tries to answer three puzzles: Why have the Northern welfare states failed on vital inequality? Why has existential egalitarianism been so (relatively) successful in the past fifty years? What is the connection between the concurrent inter-national convergence of income and rising intra-national inequality?

The book ends with a discussion of the world politics of (in)equality and the possibilities reducing inequalities.

### *Des « Cyber-Résistants »? Résister Aux Pratiques Militantes En Ligne Au Sein Du Parti Socialiste*

Encore marginal au début des années 2000, Internet s'est propulsé sur le devant de la scène politique française lors des campagnes sur le traité établissant une Constitution pour l'Europe de 2005 et lors de l'élection présidentielle de 2007. Cet attrait grandissant pour les technologies est particulièrement visible lors des campagnes électorales où les candidats se livrent une véritable « course politique virtuelle ». Les adhérents sont fortement incités par l'institution partisane à utiliser le web dans leurs pratiques militantes, si bien que certains en arrivent à militer uniquement sur Internet.

Helen Margetts parle de « cyber-parti », au sens où un parti tendrait à se détacher des structures traditionnelles et des modes de communication en face à face et privilégierait la machine sans intermédiaire humain (Margetts, 2006). Le PS serait-il en train de se transformer en « cyber-parti » ; tendance déjà amorcée en septembre 1998 avec la création d'une section virtuelle, Temps réels ? Ou reste-t-il fortement ancré dans des modes d'organisation traditionnels, réduisant les pratiques numériques à des effets d'affichage ?

Notre analyse se base sur un questionnaire diffusé auprès des militants PS (n=504) afin de dégager le profil sociodémographique du « cyber-militant » et du « militant-résistant » ; ainsi que sur 45 entretiens, réalisés auprès des militants PS au sein des Fédérations de Paris, de Gironde et des Alpes-Maritimes.

Nous verrons qu'au-delà de personnes âgées ou incompetentes sur la Toile, il existe de jeunes militants revendiquant les vertus de la militance sans l'intermédiaire de l'écran, préférant « le contact humain, au cœur même du socialisme » ; ou de façon plus modérée, se refusant à utiliser certains types d'outils numériques.

### *Simultaneity of Seeing and Doing in Wayfinding from an Ego-Perspective. Eye-Tracking and Video Analysis As Tools of Visual Sociology*

We examine eye-tracking data that stem from an interdisciplinary user study that aims at evaluating different cartographic methods for indoor navigation maps (cartography) and at exploring social practices of orientation (sociology).

In order to collect data we have been conducting social field experiments every year since 2009. Participants' task is it to find their way from the ground floor of the university's main building (starting point) to the rooftop (goal) as fast as possible. To accomplish this challenge, they are asked to use specially designed maps that they should rate afterwards.

Each year, we broaden the range of our methodological instruments and test their usefulness for analyzing spatial practices. Among the instruments we are currently mixing are: different cartographic methods, surveys, ethnography (both participant and non-participant observation), photography and eye-tracking.

To use eye-tracking devices for data collection gives us the opportunities (1) to visually document an ego-perspective of participants' experiences during the way finding process and their use of the maps, (2) to capture the focus of their gaze and (3) to record simultaneously what they said and heard during the way-finding task. To combine all of that is not possible with any other data collection technique.

To analyze the data we used the video analysis method (Tuma et al. 2013). It includes the selection of relevant scenes, transcription (visually and in written form), their interpretation and the presentation of results.

In this paper we want to present some of our results, show how we got there and discuss what worked out well and what problems we had in applying this approach.

### *The Potlatch of the Young. the Paradox of Excessive Intergenerational Solidarity in Aging Welfare States*

In this paper a new theoretical model is applied to a research field that is somewhat fragmented, namely that of intergenerational solidarity in aging societies. Inspired by utilitarian considerations many scholars tend to problematize the lack of commonality and reciprocity characterizing intergenerational exchanges. As some generations are longer old and more numerous they may receive excessive support of the younger generations, especially in a democratic setting. However, in reality there is limited empirical evidence of intergenerational conflict and theoretical explanations of this paradox are dim. An integrated and dynamical approach that incorporates Durkheim's solidarity theory, Honneth's intersubjective recognition theory, and the current work on reciprocal exchange is necessary in order to understand the survival of intergenerational solidarity in aging welfare states. Our integrated approach is inspired by a cyclical model of solidarity (Thijssen, 2012). According to this integrated model in a prefigurative culture where the status of the young has risen dramatically, the empathization of exchanges is the driving force of intergenerational solidarity. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing excessive transfers might be counterproductive because they may erode the empathic underpinnings.

### *Intra-EU Mobility: Posting As Permanent Organization Of Poor Labour*

An employee is legally considered as "posted" when working temporarily in a member state of the European Union other than its usual workplace. However, the temporary, neutral and legal status of posting tends to conceal the very na-

ture of the process: organizing permanent mobility from south and east-European countries to the richer states, exerting of pressure on local bargaining standards (social dumping), giving legal appearances to illegal practices, underestimating the massive character of the phenomena. These are at least the first results of a transnational French-Portuguese research programme in the construction sector. From a sociological perspective more questions occur about how the legal rule of "posting is challenged. We distinguish here three different ways.

1) The first challenge is the existence of differences between legal and **social rules**. In fact the legal component is not opposed to the social component of the rule. It would rather be two sides of the same rule. There is not a peaceful legal side of posting and another conflicting social side.

2) The second extension of the legal rule we want to deploy in our research concerns the **social regulations** of conflict, agreements and collective action. They combine legal initiative, jurisprudence, the actions of the Labour Inspectorate, the tribunal but also the initiatives of the workers themselves, the unions and employer organizations.

3) The third shifting from the legal rule is related to **networks**. The first element concerns the Portuguese community in France. Posting that is based in large part on channels mounted on the initiative or with the help of employers who are former Portuguese employees. The second element of networks relate here to interpersonal relationships. Indeed, recruitment in Portugal is often effective because a friend or a colleague did already work for the same company.

### *Understanding The UK Graduate Labour Market: An Occupational Approach*

The UK graduate labour market has in recent times received a lot of interest within policy, media and academic circles. With relative high levels of under- and unemployment and growing differences in labour market outcomes for graduates, there seem to be a changing relationship between degrees, skills, jobs, careers and rewards.

Our current understanding of the graduate labour market is currently lacking. We need to understand the graduate labour market in a wider framework rather than solely as supply and demand forces. There is a need to investigate as well as integrate how and where skills possessed by graduates are formed, what skills graduates offer employers, what skills employers want from graduates, how graduate skills are used and what impact graduates have on the workplace. Also, the majority of existing studies on the graduate labour market link labour market outcomes with aggregate educational categories and do not explore the role of skills and credentials within occupations or professions.

This paper explores the meaning of graduate skills within three graduate occupations and draws on qualitative in-depth case studies with software engineers, financial analysts and laboratory scientist in biotechnology and pharmaceutical companies. For each occupation it will show how and where graduates obtain their skills; how the competition to enter the occupation is organised; What the role is of degrees and other credentials within the competition; the employability strategies of those who enter the occupation; the skills demanded by employers to access the occupation; the skills and abilities that are utilised in the work process; and how careers are developed and maintained within the occupation.

By focusing on the variation in development, demand, supply and deployment of skills the paper will highlight the heterogeneous nature of the modern graduate labour market as well as outline a renewed sociological understanding of graduate labour.

### *Expectant Parents, Expecting Perfection: Constructing Down's Syndrome in UK Antenatal Care*

In the UK, expectant parents are offered screening for Down's syndrome, an incurable chromosomal condition, as part of routine antenatal care. Drawing on an ethnography of two antenatal clinics, I explore how the prospect of Down's syndrome is interpreted and negotiated by healthcare professionals and expectant parents during screening consultations. The potential diagnosis of Down's syndrome, despite the condition being recognised by professionals as "compatible with life", is confined within universalising discourses such as "risk", "problem", or "abnormality" which not only construct Down's syndrome as a detrimental pregnancy outcome (the common vernacular of risk, in particular, becomes synonymous with danger or threat), but also imposes a collective category which masks the considerable variation of the condition. By drawing attention to the mundane interactions and materiality (e.g. booklets, posters, architecture) of the clinic and by considering diagnosis as both a category and process, I capture how this framing of Down's syndrome structures, and is further embroiled in, cultural ideologies around perfection/imperfection and normality/abnormality. This creates a range of affects including producing self-blame among expectant parents, though particularly expectant mothers, who are enacted - within a neoliberal era

of "total motherhood" (Wolf 2013) - as individually responsible for their unborn child's welfare and who may have their maternal identities disrupted and shifted should they not produce a "perfect child". Nonetheless, I ultimately reveal how a diagnosis of Down's syndrome, before being fully established or even suspected, is demarcated as an emotional tragedy and future family disruption in the early stages of antenatal care. I conclude by reflecting on what this focus on one aspect of the reproductive process can contribute to the sociology of diagnosis and, at a general level, to exploring the tensions which develop once medical technologies intersect with the complicated world of Down's syndrome.

### *Naked Protest, Vulnerability and Power: Gendered Scenarios of Visibility and Protest*

'Allah made me visible'. This is what some young German women shouted while they were protesting IKEA's decision to remove all the women from the furniture catalogue for the Saudi-Arabian market. Protesting topless was meant to raise media attention and to get publicity; additionally it was unequivocally inspired by the Ukrainian feminist group 'Femen', which some have called one of the most successful campaigns of feminism in recent times.

In this paper I'd like to invite the participants to consider diverse examples of naked protests - e.g. fighting for peace and human rights in Liberia and Nigeria - from a transcultural perspective. In enacting nakedness as a performance of vulnerability and precariousness these examples draw our attention to particular corporeal actions, activities, practices, and events and they also clearly illustrate that 'the body' signifies more than a site of cultural inscription. At the same time one can realize that such protest performances and their depictions in the media in particular have been criticized as self-commodification, as pornography reinforcing power structures of heteronormativity, and as the idea of the (post) colonial West and the Rest. I would hereby like to argue, that these examples make us well aware of the ambiguities and dilemmas of visibilities and that they point to the challenges that those in the public sphere are confronted with by transcultural media.

### *On Cosmopolitan Solidarity for Women's Rights*

1,127 is the number of dead people mentioned in the last reports on the disaster in the garment factory in Sabah, Bangladesh, 2013. The mostly female workers, who sew clothes for Western consumers were among the lowest paid in the industry worldwide. They died as a result of an accident that, according to critical voices, could have been avoided. Our research about 'Western' media coverage of this catastrophe is based on a concept of critical cosmopolitanism that strongly reflects the idea of recognition and solidarity. This means that on the one hand, we will discuss the media coverage of this disaster and how the portrayal of the victims as vulnerable could have evoked empathy. On the other hand, we will discuss different ways of making use of media to emphasize interdependencies among included populations and to demand social justice. This way we want to contribute to a renewal of cosmopolitanism as a concept of competence and practice and that may help us to elaborate the media's potentials to promote solidarity.

### *Laboratorios Sociales De Turismo Experiencial. Exploración Colectiva De Un Paradigma Decrecentista Para El Turismo En áreas Rurales*

La presente ponencia estudia el caso de los laboratorios sociales de turismo experiencial, un espacio de exploración colectiva para el desarrollo de un paradigma de turismo decrecentista en la comunidad indígena matlazinca de San Francisco Oxtotilpan, en el Estado de México. Esta propuesta vincula a las comunidades, la academia y la sociedad civil a través de una experiencia de viaje, orientada por los principios de respeto a la naturaleza, la dignidad humana, los valores locales, la cooperación social y la simplicidad voluntaria. En este sentido, cobra un especial valor el aprendizaje colectivo en el que los anfitriones descubren oportunidades alternativas para complementar sus necesidades materiales; y los turistas construyen una experiencia de viaje creativa, auténtica y enriquecedora. Estos laboratorios funcionan desde la articulación que la academia realiza entre las comunidades y los visitantes, y orienta sus acciones desde la búsqueda de alternativas para incrementar la calidad de vida y el derecho a disfrutar el tiempo libre. En estos términos tiene un especial interés la capacidad de *reconceptualizar*

el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; *revalorar* los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; *reestructurar* la actividad turística a partir una nueva escala de valores basada en la equidad, la ecoeficiencia y la simplicidad; *relocalizar* la actividad turística abriendo la posibilidad de redescubrir los espacios de proximidad y así ayudar a una *redistribución* de los recursos mediante una actitud de cooperación; *reducir* los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo explora las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se benefician mutuamente sin incentivar el crecimiento y la acumulación.

[thompsonmi@wpunj.edu](mailto:thompsonmi@wpunj.edu))

### *Reification: Reconstruction and Extension Of a Concept*

This paper will seek to reconstruct the concept of reification and extend it along three different social-theoretic lines. I argue that reification needs to be seen not simply as a the reduction of human relations to relations between things, but that it also constitutes a deep pathology in the capacity of individuals to conceive of the pathological nature of the social relations themselves. reification constitutes, on my reading, a cognitive defect within the thinking subject and therefore as a pathology of epistemic, cognitive, and evaluative capacities of subjects. This renders them unable to perceive and understand the true nature of their social being and, as a result, they come to distort the social and material world of nature around them. The depth of reification therefore leads us to an explanatory model of why individuals are susceptible to accepting forms of social power and domination that do not serve common public ends. There is, I suggest, a social ontology that is barred from their world-view due to the defective nature of reified thought. I take this theory to move against contemporary forms of Critical Theory such as Habermas and Honneth to bring us back to the more radical impulse of the Critical Theory tradition through a reworking of reification.

### *Women and Aging: Appearance and Age Appropriateness*

Evidence suggests that Baby Boomer women may 'do' ageing differently to previous generations (Calasanti and Slevin, 2001). To date, there has been only minimal research considering Australian Baby Boomer women's embodied experiences of ageing. Drawing on data from semi-structured interviews and personal journals from 28 Australian women aged between 55 and 81, this paper explores the ways in which women's presentation of self was strongly informed by notions of appropriate dress, grooming and even behaviour for older women. Often these "rules" were taken for granted, and connected to broader ideas of 'doing' normative femininity and presentation of self.

This paper will consider the women's motivations for doing this "appearance work", and the impacts this had on their sense of self. While their endeavours were largely informed by established norms of female beauty and "appropriate" ageing, there was also considerable resistance to these norms and acceptance of the ageing process. Competing discourses, such as 'resisting age' and 'being yourself', were also apparent, and these processes of contesting and disrupting appearance norms will also be considered.

### *Art As Acute Action: Art and Articulations of Public Concerns in the Wake of 3.11*

In the wake of the immense earthquake disaster that struck Japan on the 11<sup>th</sup> of March 2011, a myriad of art-based projects were conceived and shaped instantaneously as a response to the issues and concerns faced by people in the affected areas. Responding to the acuteness of the situation, artists and art professionals - alongside various other social actors - turned their practices towards aiding the disaster-zones. In doing so, artists started shaping their artistic practices according to the realities faced by North-Eastern Japan, in close cooperation with those affected and other actors involved in disaster support. I suggest that such disaster-driven art projects can be fruitfully viewed through Bruno Latour's concept of matters of concern, and the wider theoretical context of Actor-Network Theory (ANT). With the notion of matters of concern, Latour allows for the analysis of new hybrid formations, prompted by public concerns and criss-crossing the spheres of art, activism and disaster relief. Analyzing specific artistic projects, I argue that this approach enables one to follow the practices and movements at stake as hybrid undertakings, which serve to publicly articulate, and thus give cultural shape to, the multiple concerns triggered by the disaster.

*Figurative Methods: Towards 'Bridging the Gap' Between 'Transition' and 'Cultures' Research*

The study of 'youth transitions' has consistently highlighted the persistence of class influences on life chances and opportunity. The study of 'youth cultures' has had a more troublesome and fluctuating relationship with class. The foundational subcultural studies and more recent work continuing that tradition has been critiqued for (among other things) over-romanticising working class practice; finding 'resistance' everywhere; and having an unhealthy focus on the 'spectacular' while disregarding the 'mainstream'. Work done under the loose banner of 'post-subcultural' studies (including 'scenes' and 'neo-tribes') has been critiqued for giving too much heed to fluid notions of identity; ignoring structural constraints; and over-romanticising 'choice' in consumer culture. In general, youth researchers have tended to focus on 'people like us' or young people for whom we have empathy. There has not been a lot of work on what I would call the more 'mundane vulgar' end of youth cultural practice. By utilising Tyler's 'figurative method', this paper proposes that tracing the use of terms such as 'bogan' or 'hipster' can enable an understanding of the ways symbolic violence is disseminated at the same time 'class' is shunned from public discourse. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant symbolic and moral struggles. This can help bridge the gap between 'transitions' and 'cultures' research and work towards ensuring that youth researchers do not unknowingly reproduce unhelpful stereotypes. Further, figurative methods can enhance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justice, symbolic and material inequalities and moral economies.

*Global Reflexive Hipsters Vs. Local Abject Bogan: Towards Understanding Affective Inequalities in Youth Cultures*

This paper looks at terms like 'hipster' and 'bogan'. Using 'figurative methods', analysing the ways these terms are operationalised towards young people in media and popular culture can enliven global comparative youth sociology. These floating signifiers enable distinction to be performed while eschewing the very notion of class. Both terms are mostly used as a pejorative towards various youth taste cultures. The hipster is a global figure used in many English speaking countries. It tends to equate with middle class endeavours and is at least allowed a reflexive irony that sees the term used in a quite playful way. On the other hand, the bogan is a specifically Australian term but has relations in other countries that denote a similar class position such as 'chav', 'white trash', 'red neck' etc. Through processes of symbolic violence, the 'bogan' has rapidly become a prominent cultural folk devil in Australia. For Skeggs, 'Some people can use the classifications and characteristics of race, class or femininity as a resource [hipsters] whilst others cannot because they are positioned as them [bogans]' (my additions). These figures are indicative of the ways class is made and of the ways the boundaries between them, both local and global, are fuzzy sites of cultural conflict. As precariousness becomes normalised for even the well-educated middle classes, these figures also serve to highlight processes of global social change as they illustrate new forms of class based anxieties. The 'bogan' and terms like it tap into middle class insecurities producing forms of 'downward envy' (Everingham) and 'disgusted subject' (Lawler). The 'hipster' plays a dual role: it represents a kind of clown that allows the middle class to both 'reflexively' laugh at itself alongside an 'ambivalent' and somewhat sheepish recognition of the 'cruel optimism' (Berlant) of consumer culture.

 Research, [ftr@sfi.dk](mailto:ftr@sfi.dk))

*Segmented Social Capital and Ethnic Diversity in the Work Place*

Work places employing many highly skilled and low skilled migrant workers and members of ethnic minorities are interesting focal points for investigations of the potential build-up of social capital along and across ethnic and national lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure, interaction and formation of social relations between different employees depending on the composition of the work force, the work tasks, working conditions etc. Therefore these social spaces represent sites in which workers may build-up social capital encompassing members of other social and ethnic groups in their networks. However, so far research has paid insufficient attention to the way in which social capital formation among immigrants, ethnic

minorities and locals in the work place is influenced by issues such as race and class. Nevertheless, we may expect differences in relation to social capital formation depending on the composition of the work force (highly skilled vs. low skilled workers), working conditions (permanent vs. temporary jobs), ethnic origin (western vs. non-western background) etc. This paper addresses research questions such as: Which is the impact of increasing ethnic diversity among the employees on social capital in the work space? In which ways does social capital formation differ depending on whether the employees at the work place are highly skilled or low skilled as well as on racial and ethnic origin? The analysis will be based on interviews with 49 employees from three highly ethnically and nationally diverse Danish work places. One of these sites employees many highly skilled migrant workers while the two others primarily employees low skilled workers, including low skilled immigrants and ethnic minorities.

[t.thurnell-read@coventry.ac.uk](mailto:t.thurnell-read@coventry.ac.uk))

*'Called to the Bar: Serious Leisure, Consumer Protest and the Campaign for Real Ale (CAMRA)'*

Since its formation in 1971, the Campaign for Real Ale (CAMRA) has been a frequent, if at times contentious and often derided, voice in debates relating to British drinking culture, the drinks industry and, by association, contemporary leisure. This paper explores the various ways in which CAMRA has sought to challenge and influence consumer tastes, brewing industry practice and government policy. Notably, during the 1970s and 1980s, CAMRA launched a string of attacks on the small number of large breweries that had, through aggressive takeovers and conglomeration, come to dominate the British drinks industry as the 'Big Six'. By analysing both CAMRA's early activities and contemporary campaigns, it is possible to see how the meaning of beer consumption and ale appreciation as a leisure practice has been fiercely contested over time. The paper presents findings drawn from extensive interviews with both salaried campaign staff and grass roots level volunteers. Drawing on Stebbins' notion of 'serious leisure', the paper will detail how involvement in CAMRA as a consumer movement and social network provides participants with a means for expressing both personal identity and a collective orientation to contemporary developments in the commercialisation, rationalisation and regulation of leisure and consumption. The paper concludes by reflecting on the wider temporal nature of the campaign which incorporates elements of nostalgia, utopian idealism and resistance to corporate, neo-liberal, agendas of market 'progress'.

*'Men, Masculinity, Travel and Tourism: Emerging Themes and Future Directions'*

While the implicit masculine position of the tourist gaze has been identified and problematised, understandings of specific male tourists has often failed to engage with the gendered notions of independence, adventure, embodiment and 'risk' which underpin much tourism experience and practice. Drawing on the author's own ethnographic study of British stag party tourism in a Polish city, the paper will draw out key themes emerging from in recent debates about the positioning of masculinity in the complex social interactions fostered by tourist mobility and the creation of new and developing tourist spaces. Through observing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into wider notions of how masculinities are negotiated through embodied, relational, performances within tourist spaces and through tourist practice. In particular, the notion of masculinities being increasingly fragmented and pluralised must be reconciled with the apparently straightforward and taken for granted 'hyper-masculinity' commonly enacted during the stag tour weekend. The paper suggests that the emergence of such male bonding rituals which are frequently based around excessive inebriation, transgressive behaviour and disinhibition illustrate the convergence of numerous emergent strands in men's lives. As such, sociological knowledge of the stag tourism phenomenon is a pertinent catalyst to wider discussions of themes relevant to the critical study of men and masculinity. In conclusion, the paper will suggest various future directions for the study of tourism and masculinities.

*Perspectives on Environmental Justice in the North; The Case of Denmark, Sweden and Japan*

What is the recent development of environmental movements (EM) in the North in response to the institutionalization and globalization of environmental issues and the speeding up of climate change? How and to what extent do activists link EM issues with those of global social justice? *This article will present preliminary results from a 4 four-year research project titled Environmental movements in a globalizing world: transformation and/or institutionalization?* In a pioneering study of the EM in Sweden, Denmark and the Netherlands from 1990, Jamison et. al. showed how the development of the EM linked to national political traditions and to different strategies adopted by each state in dealing with social movements. 20 years later, we analyse and compare the current development of the EM in Sweden, Denmark and Japan. In all three countries, the EM face the challenge of global politics as parts of relatively strong national political consensus cultures. In Scandinavia, the EM is increasingly focusing on climate change, while parts of the traditional movement seem to be in decline. Local mobilization has given way to intensive networking and interaction on the global level via internet forums, websites and social media, a development that actualizes and articulates the idea of climate justice. The Japanese EM is comparatively weaker, but since Fukushima, the issue of nuclear power is giving rise to new movements and to heated debates regarding its pros and cons in fighting climate change. While the nuclear accident has pushed the climate issue to the background, it has also stimulated interest in energy and public debate regarding democracy and the fair distribution of risks in relation to energy.

### *Changes in Social Interactions in Reform-Era Urban China*

The pattern of social interactions represents social divides and inequality. The homophily principle suggests that people are likely to interact with others of the similar sociodemographic, behavioral and intrapersonal characteristics (McPherson, Smith-Lovin and Cook 2001). As resources are differentially embedded within networks, social interactions represent the hierarchical structures of the society (Lin 2001).

Tönnies (1887) argues that the industrialization changes the pattern of social interaction from *Gemeinschaft* (community), interactions based on kinships, to *Gesellschaft* (society), interactions based on education and work. It was confirmed by much empirical work documenting a decline of intergenerational interactions (Cherlin 2012) and an increase of marriage patterns based on education and work (Kalmijn 1998).

We examine the changes in the general pattern of social interactions in the reform-era urban China – a nation with strong cultural traditions regarding kinship ties and one that has experienced rapid economic and industrial development over the past several decades. Using the position generator from two social networks surveys collected in 1998 and 2005, we aim to answer two questions: First, is economic reform associated with interactions less based on kinships and more on occupations? Second, does the pattern differ by gender?

### *Changing Pathways To Adulthood In China: Urban-Rural Divides, 1982-2005*

Pathways to adulthood have been increasingly diversified in the United States and Western Europe in the economic globalization (Buchmann and Kriesi 2011; Shanahan 2000). The standard, tight, sequential pathway to adulthood (Stevens 1990) has been postponed, prolonged, or twisted (Bruckner and Mayer 2005). These patterns are divided across the socioeconomic line: while most middle-class youths postpone the transitions, an increasingly proportion of working-class youths no longer follows the sequence of education, full-time employment, marriage and parenthood (Settersten and Bay 2010).

Little is known, however, about how economic change affects the life experience of the youths in the developing world. This analysis aims to fill the gap, using reform-era China as a case study to examine how the pathways to adulthood have changed from 1982 to 2005.

It will also focus on the urban-rural difference. In these twenty-third years, China has experienced a noticeable increase in the urban-rural income gap (Sicular et al. 2007). The urban-rural divide arguably contributes substantially to the increasing income inequality in China (Xie and Zhou 2013). Therefore, it is both theoretical and substantial interesting to compare the pathways to adulthood between urban and rural youths, and explore the relative contributions of each institution (i.e., school, labor market, and family) to the difference.

To answer these questions, this analysis uses three censuses (1982, 1990 and 2000) and 2005 inter-censal survey. Instead of examining one transition at a time (Yeung and Hu 2013), this analysis incorporates education, work and family transitions simultaneously. Methodologically, it will treat each census as a synthetic cohort, and will use the entropy index to measure the level of heterogeneity in

these pathways (Fussell 2005) and the bootstrap to test the statistical significance. It will also use de-composition method to examine the institutional contribution to these changes. (References available upon request).

### *The Power of Media Communication: How Propaganda Techniques Used in Advertising Influence Japanese Women*

Media, as a communication tool, has a great impact on society. From the traditional simplex communication tools such as T.V., radio, newspapers, and magazines, to the most current bidirectional communication tool, the Internet, media has a great amount of influence on society. Media is a powerful tool that can influence a country's policies, shape public opinion, and even set the standard for societal norms. Consequently, research has shown that media outlets use propaganda within advertising. Advertising agencies skillfully manipulate female emotions, in order to create and bolster a perpetual culture of consumption. As a result, this directly contributes to gender inequality.

The primary purpose of this paper is to analyze how media propaganda influences females in Japanese society and the impact it has on their lives. Additionally, this paper will detail how media outlets use propaganda techniques, which have profound implications to female identity. This greatly affects how females view themselves and their roles within society.

Social problems including, excessive consumption, identity, and gender inequality, are viewed as generalized social problems. These social problems are often ignored or downplayed by the mainstream media. This paper will engage in a historical analysis, to include the studies that have been conducted, concerning media propaganda on women in Japan.

Although, the news media is supposed to report objectively, studies have shown that notion to be false. The news is often skewed to serve the interest of the power elite. As a result, the news media often reinforces the dominant social ideology. In Japan, the dominant ideology is largely male-oriented. Similarly, this paper argues that the propaganda techniques used by advertising agencies, even as a byproduct, serve that same purpose: to maintain a male-dominated power structure in society.

### *Gender Segregation in the German Vocational Training System*

Transitions from education to work are known to be particularly smooth in Germany. This is mostly attributed to the "dual system", which combines firm-based training and vocational schooling (Müller/Gangl, 2003). In the dual system trainees spend 2-3 years in a company as apprentices and acquire firm specific skills. Both firm and apprentice thus invest in the training which leads to a mutual commitment and a high probability that the apprentice is taken over by the company after training.

However, the German vocational training system does not only consist of the dual system but also of school-based vocational training. In these schools, the contact to potential employers is limited and the curriculum is not firm-specific. We therefore expect that the transition from education to work is less smooth for trainees from school based vocational training. They should face a longer transition period and/or more job mobility.

As gender specific occupations coincide with the type of vocational training, training types are highly gendered in Germany. Women are more likely to enter school based vocational training. We therefore expect that their pathways into employment are less straightforward. The lower firm-specificity of their skills and the lower commitment of employer and employee also should lead to higher job mobility.

We use the German National Educational Panel Study (NEPS). This dataset consists of detailed retrospective lifecourse information about educational and occupational biographies of approximately 11.000 individuals. We examine transition patterns of German women and men after completion of their vocational training and assess how much of the gender differences in the duration of the job placement process and early career mobility can be attributed to the type of training.

### *Political Participation and Procedural Utility from a Gender Perspective: Activities in Neighborhood Associations in Japan*

Political participation and participation in the community is often associated with higher levels of reported subjective happiness, but in the case of Japan a negative correlation between activities in neighborhood associations among female members was found by Tiefenbach and Kohlbacher (2013). The current study uses data gained from an online monitor survey (n=1600) conducted in September 2013 throughout Japan to get a better understanding of the relationship between happiness and participation in the community. A special emphasis is put on the sources of procedural utility (competence, autonomy and relatedness) as well as on voluntariness and loneliness as moderators and mediators of the effects of participation on happiness. Preliminary results suggest that participation in the community leads to higher or lower levels of happiness depending whether it is conducted voluntarily or not. In either case, participation leads to lower levels of loneliness, which in return has a positive effect on happiness. Finally, the sources of procedural utility can be linked to higher levels of happiness, but significant gender differences can be observed.

**TIEN, CHIA-LING\*** (University of Tokyo, [tangeaya@gmail.com](mailto:tangeaya@gmail.com))

### *Historic Preservation of Significant Cultural Sites in Taipei-Comparing 2 Case Studies in the Aspect of Cultural Heritage Management*

Cultural heritage management has traditionally been concerned with the identification, interpretation, maintenance, and preservation of significant cultural sites. The public face of CHM, and a significant source of income to support continued management of heritage, is the interpretation and presentation to the public, where it is an important aspect of tourism. Communicating with government and the public is therefore a key competence.

The thesis focuses on 2 sites in the city of Taipei, Taiwan. Both targeted case studies are defined as art spaces of cultural property organized by Taipei City Government. Spot-Taipei Film House, built in 1926 with a southern colonial architectural style under the Japanese colonial period, was originally the residency of the U.S. Ambassador. Once closed due to Pacific war and reopened for the residency of the U.S. Ambassador under the rule of Republic of China. It had faced another closed due to U.S. changed its diplomatic recognition to PRC. Tsai Jui-Yueh Dance Research Institute, built in 1920, was a Japanese style house for the residency of the Japanese Governor. The later owner, Ms. Tsai Jui-Yueh, a dancer who was educated in Japan during the Japanese colonial period, had settled her dance studio in the dwelling, held a 24-hour-long creative activism to save it from demolition by the later ruling government of KMT. This paper will look at Taipei city government's action toward the two historical buildings. How did the two dwellings process their way to become cultural heritage? The difference movements represent the interpretation and preservation of the space. Additionally, the thesis will review how the two culture heritages present themselves to the public as well as the spatial reinterpretation of Taipei citizen.

**TIERNEY, HILARY\*** (National University of Ireland, [hilary.tierney@nuim.ie](mailto:hilary.tierney@nuim.ie))

### *'standpoints': Attitudes to Global Justice Among Young People and Youth Workers in Ireland*

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues.

Young people's views ranged from the very knowledgeable, critically aware and insightful to the uninformed and apathetic, with the majority in between these two positions, showing some limited knowledge of global issues or relationships but an appreciation of their relevance and a willingness to explore them further. Youth workers (particularly but not only those with direct development experience) for the most part showed a high level of knowledge and awareness of global issues and relationships, and of the links between the global and the local. There were however considerable divergences of opinion among them as to the interpretation of certain key concepts, including 'global justice' itself.

Some young people gave examples of actions they had taken themselves in response to global issues and concerns (for example decisions about where or what to buy), but respondents on balance felt relatively ineffectual with regard to such issues. While the youth workers were much more likely than the young people to say that they thought they could make a personal difference to how the world works, there were very different views of how this could be done; and the researchers noted that workers commonly spoke in terms of what they *could* or *should* do in response to development and global justice issues rather than describing what they *had* done or were *currently* doing. Overall the research suggests that there is a high degree of *ambivalence* regarding the nature of global justice, the operation of key, related concepts such as power and agency and the relevance of these to youth work practice.

### *Transnational Somali Families and Resilience: Experiences of Two Generations*

#### **Transnational Somali families and resilience: experiences of two generations**

Following the civil war and collapse of the Somali state, sizable Somali diasporas may be found in particular in North America and Europe. In Toronto alone an estimated number of people of Somali descent is around 100,000; in Finland the corresponding number is about 15,000. In many places of resettlement Somali migrants have faced challenges as regards education, employment, housing, discrimination and racism. Also economic recessions have contributed to low-income status of many Somali families, where not only the first generation, but also the second generation often ends up in low-paid and precarious jobs. A family unit, including transnational family connections, is important for increasing the overall resilience, wellbeing and safety of the family members.

This presentation will address the role of (transnational) family as experienced and narrated by both Somali parents and their children who have grown up in the diaspora. What kinds of expectations do parents have towards their children as part of the family? What are parents' strategies to support and protect their children and youth? In which ways do the children – young adults – contribute to the wellbeing and resilience of their families? How do they feel about and relate to transnational family members, including those in Somalia?

The presentation is based on ongoing research on transnational Somali families in Canada, Finland and Somalia, funded by the Academy of Finland (2012–2017). The data consists of ethnographic interviews of two generations in the families of Somali descent residing in Toronto and in Helsinki. In addition, transnational family members in Somalia and some European countries will be interviewed.

### *"Generation IV" Nuclear Reactor Design Project As a Controversial Innovation Process: A Qualitative Study of the French Case*

This communication aims to qualify the socio-material and organizational processes that affect local and institutional decisions related to the design of future nuclear reactors in France. In the post-Fukushima context, nuclear risk is less and less tolerated by society. Yet, France, along with thirteen other countries, is currently engaged in the design of new generation nuclear reactors, known as "Generation IV". The "GenIV" concept and the renewal of interest for these technologies are linked to the launch in 2000 by the USA of the "GenIV International Forum" to coordinate researches' efforts on a global scale. It led to the identification of four "GenIV" objectives: highly economical, minimal waste, proliferation resistant and safer. Six concepts are currently being researched. Even if these designs are not expected to be available for construction before 2020, they arouse oppositions and remain highly controversial.

Our proposition builds on an on-going empirical study of the 'new reactors' design process in France, where one concept appears dominant: the sodium-cooled fast reactor, supported by the CEA. However, this choice is disputed, especially by academic scientists who try to re-open the choice. Based on qualitative data, we analyze this innovation process as an "interactive chain" (Callon *et al.*, 2002) that involves distinct actants (Latour, 1987), both humans and non-humans, from university labs to industrial production unit, through industrial research centers and political organizations. By observing innovation "in action", we aim at showing how the "uncertainty/irreversibility" dilemma is collectively managed through the construction of scenarios relying on explicit and implicit hypotheses. We want to demonstrate how the positioning, the power and the level of knowledge of the different actors guide the hypotheses' formulation and can support technological "lock-in" phenomena, finally affecting the innovation process far from being of a pure rational choice based on the four "GenIV" criteria.

### *Cuando La Participación Ciudadana Argentina Tomo La Palabra*

La adopción en 2009 de la Ley de Servicios de Comunicación Audiovisuales constituye un paso muy importante en el proceso de democratización de los medios audiovisuales argentinos. Frente a un sector audiovisual fracasado (construido sobre el decreto-ley n° 22.285/80 –adoptado por el gobierno de facto de 1976–), esta ley se presenta como el punto de partida de la tentativa de reconstrucción del sistema audiovisual e instaura un nuevo modelo audiovisual democrático,

multicultural, pluralista, inclusivo y respetuoso de las misiones de servicio público (los pueblos originarios, ocupan un lugar privilegiado en este nuevo sistema audiovisual).

Por primera vez el debate legislativo argentino implicó una participación ciudadana digital sin precedentes. Mas de 300 organizaciones sociales, sindicales y comunitarias y mas de 12.000 personas (inconformes con el modelo audiovisual en vigor) participaron, desde el 2004, a esta discusión a través de foros y debates con el objetivo de lograr un consenso institucional y social. Como resultado de esta iniciativa ciudadana llamada "Coalicón por una radiodifusión democrática", se elaboró en julio 2008 un texto de 21 puntos que fue tomado en consideración por los legisladores argentinos. En este contexto, el activismo de las movilizaciones sociales orientado a participar al proceso de transformación del sistema audiovisual se vehiculó a través de la utilización de las redes sociales.

Esta que ley debió afrontar una fuerte resistencia del sector privado y que padece hoy en día las consecuencias de un sistema político-jurídico anómalo (freno a su eficacia como consecuencia de su judicialización) sigue siendo el centro de movilizaciones sociales generadas a través de la red. El objetivo de esta comunicación es de presentar esta experiencia argentina, de entender esta participación en la esfera pública, de analizar la fuerte expansión del uso de las TIC en diversos sectores de la sociedad (en especial : los pueblos originarios).

### *Identidades Políticas y Culturales. Entre La Crisis Económica, Mediatizaciones y Tecnologías*

Esta ponencia tiene como objetivo presentar los avances de una investigación que estudia los procesos constitutivos de las identidades políticas y culturales en relación con las actuales formas de implicación y participación de los sujetos en la esfera pública.

Al mismo tiempo, se propone presentar reflexiones sobre las prácticas culturales con el fin de analizar las características más sobresalientes de la interacción de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Los resultados aquí presentados contribuyen al conocimiento de la constitución de las identidades en relación con los procesos de mediatización actuales, sistemas derivados de las tecnologías digitales y la crisis económica y financiera de la fase actual del capitalismo.

El contexto empírico de la investigación se sitúa en dos universos institucionales y urbanos: la ciudad de Toulouse (Francia) y la ciudad de Rosario (Argentina), en el marco de sus respectivas regiones. Dos sociedades pertenecientes a dos países que también han sido diseñadas como ciudades potenciales comunes como hermanamiento entre sus respectivas autoridades en 2008.

Existen dos corrientes de investigación que encuadran de manera diferente el objeto de estudio que nos ocupa. Por un lado, todo lo relacionado con la llamada videopolítica y sus derivados en el desarrollo actual de las tecnologías digitales. Por otro lado, la tradición de la participación social, que se centra hoy en la emergencia de nuevos actores.

La cuestión que aquí se presenta es heredera de las dos tradiciones, priorizando la existencia de un nuevo orden político sesgado por la mediatización y la comunicación digital en un contexto de creciente crisis económica

### *Workers Who Organize in the Public Square: A Comparison of Mexican and U.S. Informal Worker Organizing Models*

The growth of informal employment in Mexico and the United States cries out for solutions. For informal workers, unprotected by existing laws, this requires developing new and distinct organizing strategies, and building alliances. Our study uses case studies of organizing of informal workers who contest over the use of public space in the two countries to understand this process in comparative perspective.

Our central questions are:

- What forms does this organizing take in the two countries? How and why are these forms different between the two?
- How do informal worker organizations formulate and implement their strategies, and how do they target and develop alliances, in the two countries?

- What is the role of worker identity in these organizing processes?

Our analysis undertakes two case studies grounded in interviews and participant observation: day laborers in the US, and street vendors in Mexico. It is a bit unconventional to carry out such a non-parallel comparison of different sectors in the two countries, but we have chosen to examine these two informal groups because the literature suggests that they are the most advanced instances of informal worker organizing in each country. We will need to take the sectoral differences into account in explaining differences in strategic direction and degree of success, but choosing the two most advanced cases should give us leverage on our central questions.

In our case studies, we will examine national-level organizations, but our main focus will be on day labor organizations in Los Angeles California and street vendors in Mexico City, Mexico. These respective cities not only house the greatest concentration of these groups of workers, but are also the home base of the leading national organizations representing these trades.

### *Re-Imagining The UK National Health Service Patient In a Neo-Liberal Policy Context*

Historically, the UK National Health Service (NHS) has been taxpayer funded, and largely free to patients. Though some private sector service has always been part of the NHS, this has increased substantially in the last 15 years. Hospitals are important sites for biomedical research, with many patients participating in studies, though this is voluntary. While much research is state-funded, there is also privately funded research in NHS hospitals. In policy terms, the NHS is now being seen as a potential driver for economic growth, as a well as a service to citizens.

In this paper, I will analyse an initiative that represents a new configuration between public and private, and a re-imagining of the patient's role in the UK NHS. This is an NHS Biobank. A biobank is a repository of biological specimens combined with data about the donors of those specimens, stored for the purposes of medical research. In this instance, the aim is that samples will be collected routinely from NHS hospital patients (with consent), but, rather than patients consenting for a specific study, they will give an enduring and general consent for their samples to be used. At the same time, their samples will be linked to the data that is collected about them for clinical (rather than research) purposes. Biomedical researchers are excited about the possibilities that such a biobank may offer, and there is a significant private sector involvement in the funding of this initiative, though it remains part of the NHS.

I will argue that this initiative represents a re-ordering of the moral contract between the UK NHS and its patients. Rather than receiving NHS services as a right of citizens and taxpayers, there is now an increased expectation that NHS patients will donate samples and data to be used in (commercial) biomedical research.

### *Beyond Mannheim: Conceptualising How People 'See' and 'Do' Generations in Contemporary Society*

It is sometimes argued that generation has been hollowed out as a sociological concept outside the family context, yet it continues to feature prominently in policy debates, media discussion and everyday talk. The solidarity, conflict and ambivalence frameworks continue to be widely and usefully applied, but are unable to capture the complex ways in which we perceive and enact generation within and across the family and societal spheres. This paper seeks to develop a more grounded conceptual framework for both characterising and explaining the evolving notion of generation. We view generations as dynamic and varied reflections of how people relate to family members, their own cohort, and groups in wider society. The paper draws on qualitative primary data collected in the course of several recent projects pertaining to intergenerational relationships and the life course; it also draws on learning from the application of this data with final-year undergraduate sociology students who were engaged as an interpretive community to examine ways of 'seeing' and 'doing' generation. Far from outdated, generation emerges as a still-relevant concept that encapsulates the meaning of generational family relations but also perceptions of how material resources, period effects and the welfare state context shape lives in contemporary societies.

### *Social Networks and Environmentalism: Structural Embeddedness and Ongoing Participation in the Canadian Environmental Movement*

"Common sense" arguments for participation in movements like the environmental movement often refer to grievances, or beliefs, as key factors that give rise to participation. However, structural analysts have demonstrated that neither discontent nor ideology are sufficient conditions to explain social movement participation. Rather, while discontent and beliefs might help to define those who might potentially be mobilized, individuals need to be connected to other movement participants in order to become active. We explore the relationship between social network ties and participation in the Canadian environmental movement. Data are from a self administered questionnaire, collected from nation-wide probability sample of environmental organization members. We find that ongoing participation is positively associated with ties to individuals in a range of environmental organizations. This effect is net of positive effects for identification with the movement, and the respondent's NEP score, on participation. Past participation is the strongest statistical predictor of network embeddedness. Thus we argue that both "social selection" and "social influence" effects are in play. People develop ties through their participation, and are more likely to participate in new activities because of their ties. We further examine the mechanisms underlying these patterns, and discuss practical implications of these insights.

#### *Social Media Use for Contentious Politics: Facebook-Activism Against Imposed National Education Curriculum in Hong Kong*

This paper examines the use of social media for the protest against the "Moral and National Education" curriculum in Hong Kong. Employing media content analysis and archival research, it explores how social media use facilitated grassroots movement organizations and stimulated cyber-activism among atomized users in practice. On 30 August 2012, a local student organization – Scholarism – went on a hunger strike. Occupying the public area in front of the Headquarters of the Hong Kong Government, members of Scholarism protested against the controversial curriculum imposed by the Education Bureau. In the subsequent days, tens of thousands of people joined the protest. Nine days later, the government succumbed to the pressure and retracted its plans. While new information and communication technologies provide the technical infrastructures for organizing movement campaigns and protests, various uses of new media configurations offer flexible mechanisms for people to take part in contentious activities. During the occupation protest, Scholarism eagerly employed Facebook technologies to coordinate collective actions and mobilize participants. At the same time, numerous users made active use of Facebook to communicate about the movement, forge social networks, produce alternative knowledge, and create innovative protest activities. As diverse actors simultaneously undertook online activism, the patterns of their computer-mediated communication facilitated the emergence of counter-publics and the development of movement practices and culture. Borrowing insights from the growing theory on computer-mediated social movements that challenges the assumption about requirements for formal leadership and organizational hierarchies, this paper argues that new media use modified the relationship between social movement organizations and individual users, and permitted alternative forms of civic engagement for democratic participation.

**TIRADO, RICARDO\*** (UNAM, [tirado@unam.mx](mailto:tirado@unam.mx))

#### *Blood Sacrifice, Instant Celebrity, Organization and Mobilization*

The paper deals with cases in which almost unknown persons, because of a tragedy, suddenly jump from anonymity to the civil sphere converted in celebrities with great capacity for civil intervention.

These celebrities owe their instant fame to the fact that they are closely related to the victim of a bloody tragedy: the kidnap and murder of a child, a wife or a husband.

The paper will concentrate in these aspects:

- 1) The casual birth of a new (involuntary) celebrity, because of a blood tragedy.
- 2) Scandal, annoyance, desperation, and new tragic stars in the media.
- 3) The re-edition and impact of the old myth of sacrifice, blood spill and redemption.
- 4) The effectiveness of the myth that tragic death of an innocent victim is a sacrifice and sacrifice should be useful and deserve compensation.
- 5) The great impact of bloody sacrifice symbol. Bloody sacrifice and "conscience crisis" (Habermas).
- 6) The great possibilities of social action and intervention of some of these people.
- 7) The different strategies, goals and routes of social action.
- 8) The discovery of the possession of an unknown new great "magic" like power.
- 9) Amazement and improvisation of the action of the new celebrity
- 10) Why some of the co-victims can develop social leadership and others don't?
- 11) Resources for the mobilization of this mythical power.

- 12) The process of diminution or transformation of these leaderships.

The empirical base of the study relay in the cases of some co-victims who lose in Mexico their relatives by criminal actions, and which after the event, they lived a quick process of transformation into sociopolitical leaders who, after a short time since their loose, create organizations, to call huge mass mobilizations and to question severely the incapacity of the government to display public security to the people.

#### *Secondary Education in South America: Analyzing Expansion Dynamics in Argentina, Brazil, Chile, and Uruguay*

This investigation examines the secondary school expansion process in four South American countries (Argentina, Brazil, Chile, and Uruguay) from its origins at the end of the nineteenth century to present day. The objective is to compare the processes of growth that these countries share while contrasting their specific characteristics in order to identify patterns in secondary schooling in national contexts of late modernization. This study begins by conducting a statistical analysis that allows for a subsequent description of how varying factors specifically influence each national context.

Consolidated national education systems emerged in these countries due to a combination of modern educational models and distinct cultural "figuration" within each national context. These consolidated "national education matrices" derived from the particular blending of four elements: society, state, market, and education. Chile, Argentina, and Uruguay have had highly centralized educational systems typified by mass primary education, whose aim was to culturally homogenize the population, and an elitist and selective secondary education. On the other hand, educational expansion in Brazil has been much slower, characterized by development of productive forces and industrial advancement.

Secondary education expansion began to intensify in the 60s and has undergone strong transformations in recent decades. Chile and Argentina decentralized their educational systems. The former converted into an unequal market directly correlated with students' socioeconomic levels, while the latter is clearly a fragmented system in terms of the population's economic and cultural characteristics. Uruguay maintains a centralized, public, and secular model, which, at the secondary level, has expanded at a slower rate over the last several years. In Brazil, secondary education has experienced a strong democratization process due to a political order pushing them to reach standards consistent with the leadership role that it has acquired at both the regional and international level.

**TODEVA, EMANUELA\*** (University of Surrey, [e.todeva@surrey.ac.uk](mailto:e.todeva@surrey.ac.uk))

#### *Business Network Theory and the Role of Country of Origin*

Business networks are recognised as the new organisational form of doing business, where cooperation and competition take place simultaneously, where the interdependencies between firms co-evolve through complementarity of skills, assets and capabilities, and inter-firm relationships thrive in the form of long-term repetitive exchanges and alliance membership. The theoretical and empirical literature is very rich in assertions about the benefits from networking and the positive impact of alliances and cooperation on firm performance, on supply chain integration, on dissemination of innovation and on learning and development of individual firms. Business Network Theory represents an eclectic body of theorising that focus at three distinctive levels – the level of actors' attributes, the level of dyadic and multilateral inter-firm relationships, and the level of overall configurations of multinational business networks, or multinational business operations trespassing firms' boundaries and countries' borders.

Traditional concepts of International business theory, such as 'country of origin' could hardly explain the complexity of resource flows that take place on a global scale. While research on Asian multinational firms demonstrates clear evidence of distinctive patterns of governance and investment strategies, 'country-of-operations' has become a more dominant concept that can explain global collaborative strategies.

The paper presents a new argument that global supply chains and commodity chains, or multinational business networks in a number of industries exhibit a common characteristic, where the regulatory environment in countries-of-operation induces similar strategic behaviour.

*Mothers' Use of Terms Referring to Their Child in Japanese Conversations: A Conversation Analytic Perspective*

This study examines ways mothers refer to her child in conversations in Japanese from a conversation analytic perspective. Conversation analysis is a methodology to examine real time interactions from the perspective of the participants themselves (Sacks, Schegloff, and Jefferson, 1974). Person reference has been among the major topics of conversation analysis since the seminal work by Sacks and Schegloff (1979). Studies have shown that forms of reference can do a special interactional work other than referring to (a) person(s) (Schegloff, 1997; Stivers, 2007). For instance, Oh (2010) shows that Korean speakers use a quasi-pronoun based on the distal demonstrative *ce* ('that over there') in referring to a co-present third person in order to distance themselves from the referent. In this study, I focus on the kind of interactional work mothers are doing when they use different expressions to refer to their child in conversations. My data were collected at two *Kosodate Hiroba* in Osaka, Japan. *Kosodate Hiroba* is a place where mothers of a very young child spend time watching their child and enjoy conversations with other mothers and staff members, often sharing their problems in child-raising and getting advice from them. I found that the unmarked form of a mother's reference to her child is either the child's name or *kono ko* ('this child'), neither of which does anything more than refer to the child. By contrast, the mother's use of *kono hito* ('this person') to refer to her child can do a special interactional work. For instance, mothers recurrently make reference to their child with *kono hito* when they complain about the child. I argue that the expression *kono hito* makes a complaint more easily recognizable because the word *hito* ('person') conveys that the referent has independent thought and is difficult to control even for her/his mother.

*Improving the Quality of Volunteer Web Panels: Evaluating Propensity Score Adjustments Methods for the Leisure Panel*

With the rise of the Internet more and more data are collected via volunteer panels. These panels are not based on probability mechanisms and hence inferences are difficult to make. Post-survey adjustments techniques such as propensity score weighting are often used to improve data quality. However, which methods work best and which variables need to be taken into account differ per survey. In an attempt to structure methods of post-survey weighting techniques for the volunteer Leisure Panel, different weighting methods are evaluated as well as different weighting variables, such as behavioral, attitudinal, lifestyle, and socio-demographic variables. Results are compared to outcomes of a probability-based panel (LISS Panel) and figures from Statistics Netherlands.

**FUNKE, FREDERIK** ([frederikfunke.net](mailto:frederikfunke.net))

*Investigating Response Quality in Mobile and Desktop Surveys: A Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales*

Mobile devices have smaller displays, touch screens and different methods of navigation compared to desktop computers. This may limit the amount of information that can be placed on a mobile phone screen and it can also affect how a survey is comprehended and completed.

The most traditional rating scales in Web surveys are made from radio buttons. Radio buttons require quite a lot of space, which is scarce on mobile devices like smart phones. Thus, only a limited number of response options can be presented simultaneously. Otherwise, respondents have to scroll to see all response options which may bias ratings.

Visual Analogue Scales (VAS) are operated by point and click: respondents move the mouse arrow to any position on the line and after clicking the mouse button a marker (e.g., a cross) appears at the very position. In contrast, slider scales have a handle visible directly on load of the Web page. Ratings are done by drag and drop. Both scales can either be implemented as continuous rating scales, or as discrete rating scales where only a limited number of different responses can be given. A continuous implementation is especially valuable if respondents use mobile devices like smart phone where an efficient use of space is required.

A comparison is needed of radio buttons, VAS, and slider bars to see how they affect data quality on mobile phones compared to regular desktop completion. Finger navigation on mobile phones is less precise than mouse navigation on desktops. This could result in selecting the wrong (not intended) answer option in radio buttons. Slider bars or VAS might be more efficient in selecting the intended

response option. The usability of question formats is conjectured to be related to the number of scale points.

**TOGNATO, CARLO\*** (National University of Colombia,  
[ctognato@hotmail.com](mailto:ctognato@hotmail.com))

*Alien Money: A Cultural Sociology Of The Ecuadorian Dollarization*

Over the past two decades scholars have extensively addressed the influence of money on the formation and consolidation of national space. After the launch of the European Monetary Union (EMU), though, their interest has increasingly focused on the struggles over the definition of who should belong in a currency community and what cultural credentials countries should exhibit in order to gain their ticket in. What happens, though, when countries surrender their own currencies, severing the link between national identity and the currencies circulating in its jurisdiction? How do they manage to hold onto such *alien* currencies? The literature has not fully addressed the social struggles and the cultural mediations that take place under such circumstances. By focusing on the full dollarization Ecuador has experienced since 2000, and therefore by addressing a case that comes close to an ethnomethodological breach of our expectations about what currencies should be about and how they should relate to their own societies, I hope to shed new light on the relationship between money and national space. The study of societies that take up foreign currencies as their own, even when these belong to countries they might not necessarily sympathize with, may shed some light on the factors and processes that sustain the legitimacy of currencies, especially in situations where the money becomes alien to the national identity. This case has implications for how we understand alien monies, national spaces, and legitimacy in such situations as the current Eurozone crisis.

[ctognato@hotmail.com](mailto:ctognato@hotmail.com))

*Undrinkable Coke? Corporate Scandals, Civil Society and Cultural Difference*

Over the past two decades corporate (mis)behaviour, scandals and accidents have stirred passionate debates around the world over the limits of corporate practices. By shaping public opinion over this issue, civil societies have sustained the action of those agents of civil repair, both outside and inside corporations, who have sought to resist and correct corporate malpractices. So far, social movement scholars have explored the cultural resources that social actors tap into for the purpose of mobilizing public opinion over these issues. Impression management scholars, on their part, have looked into the verbal accounts by which corporations seek to defend their legitimacy in public. Very seldom, though, have analysts accounted for the deep cultural metrics of legitimacy on which actors on both sides draw in public debates to win the support of their fellow-citizens and, when they have, they have mostly focused on the discursive structures that underpin the working of civil societies in well-established liberal democracies. Given the global horizon of transnational corporations, however, corporate crises have been increasingly occurring in Third World contexts within which different discursive structures compete to orient the functioning of civil society. In this paper I will focus on a scandal that had a far-reaching impact on international public opinion a decade ago and that hit Coca-Cola as a result of the accusation against its local bottlers in Colombia for using illegal paramilitary groups to intimidate, threaten and eliminate some vocal trade-unionists. I will show that the participants to the public debate in Colombia over the role and responsibility of Coca-Cola drew from two alternative discursive structures that contributed to orient local public opinion: the liberal discourse of civil society and the corporatist discourse of the *hacienda*.

**TOIKKA, ARHO\*** (University of Helsinki, [arho.toikka@helsinki.fi](mailto:arho.toikka@helsinki.fi))

*Energy Regime Change and Institutionalism: Understanding Developments in Carbon Capture and Storage*

Many analyses of energy technology development disregard the importance of institutions and the interdependence of economic, technological, political and societal concerns and events. I propose a dynamic institutional systems framework to integrate the various concerns into a simultaneous analysis and demonstrate the frame with case analyses on the budding developments of Carbon Capture and Storage (CCS) technologies in Europe.

The framework integrates cognitive institutionalism, Socio-Ecological Systems (SES) and socio-technical transitions theory. Institutions are the rules of the game in a society shaping human interactions; both formal rules, such as laws and regulations, but also informal institutions through traditions, practices and beliefs. Individual but shared beliefs about energy regimes shape how the systems develop, leading to issues of technology lock-ins, incremental change, institutional inertia and path dependency.

This paper focuses on self-referentiality in the mental models of stakeholders as a factor that shapes these issues. The institutions held by the actors are seen to organize in a nested mental model: the three levels of socio-technical landscape, socio-technical regimes and the innovative niche (Geels 2002) are seen nested holons or SESs.

This paper is based on case studies in Finland. The case studies are focused along two projects: one cancelled retrofit of a coal power plant and one case of technology in development, mineral carbonation. These two projects are deeply embedded in a national and international context, and the aim of this paper is to establish how stakeholder's institutional self-referentiality affected the developments in the projects and what these project issues tell us about CCS and energy regime change in general.

**TOIKKA, ARHO\*** (University of Helsinki, [arho.toikka@helsinki.fi](mailto:arho.toikka@helsinki.fi))

*Measuring Path Dependency in Politics through Text Mining*

This paper demonstrates novel methodology to measure path dependency in policy-making. The method takes large text corpuses of policy documents, plans, scenarios, roadmaps, preparatory text and the like, and analyzes the flow of concepts, phrases and blocks of text as later documents inherit bits of earlier documents. The analysis proceeds by looking at relative frequencies of words and phrases in documents through a measure called term frequency-inverse document frequency, and translates this into two networks: the document-document network of similarities and dissimilarities describes how conceptual usage is inherited between documents and the concept-concept network describes discourses or network areas of concepts that are used together and start to institutionalize in the political language.

The paper demonstrates the method through an analysis of energy policies in Finland, and how various technologies, policy tools, and conceptualizations rose and fell over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.

**TOIVANEN, MARI\*** (University of Turku (Finland), [marito@utu.fi](mailto:marito@utu.fi))

*"Belonging" in the Study of Younger Generations of Migrant Background*

This study discusses the analytic purchase of the concept of "belonging" to study identity formation among younger generations of migrant background. It is argued that "identity" has more usage as an empirical concept, whereas "belonging" provides more analytic purchase to grasp the underlying mechanisms of inclusion and exclusion that inform young people's identity formation.

The theoretical discussion will be informed by an empirical study on young Kurds' negotiations of belonging in Finland. The qualitative study looks at how young Kurds narrate their belonging in terms of various mechanisms of inclusion and exclusion, including institutional arrangements and (racialized) discursive categorizations. The broader theoretical premises of the empirical study lie on transnationalism, intersectionality and narrativity, and the theoretical discussion leads to question the analytical edge of "belonging" and how it addresses the questions of who gets to belong and who does not. The case study shows that young Kurds construct a sense of belonging in terms of the discursive construction of national belonging and "otherness" in the Finnish context. The racialized boundaries of "Finnishness" echo in their narrations and position them as the "other", namely the "immigrant", "refugee" or "foreigner" on the basis of their darker embodied signifiers.

Floya Anthias argues that belonging, in contrast to identity, assumes access and participation, and becomes activated in situations of denied membership and experiences of difference. In this sense, it is suggested that "belonging" better captures the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences on the methodological questions. This study employs the intersectional frame to analyse the intersecting attributes of gender, age and ethnicity impacting researcher positionality and the interaction situations with the interviewees. Hence, the theoretical and methodological challenges of employing "belonging" in juncture with the intersectional frame will be explored.

*The Impact of Community Size and Characteristics on the Articulation of a Doubled Security and Social Dimension: The Case of Urban Mediators in France*

In France, an increasing number of local authorities have developed programs focusing on "urban mediators", which aim to reduce insecurity within districts referred to as deprived areas. These individuals make the rounds in such districts to ensure a calming presence for inhabitants as well as to speak with them. This street intervention allows mediators to meet with various persons distant from public services, such as drug addicts, juvenile delinquents, victims of domestic violence, or immigrants facing integration problems. This demonstrates that such interventions include security and social dimensions at the same time: The mediators intervene not only with persons who "cause" insecurity but also with those who suffer as a result of it. Therefore, they differ, on one hand, from the police, whose actions consist mainly of repression (Roché, 2004) and, on the other hand, from social workers, who intervene mainly in the long term as a result of requests.

These features led us to question the way the characteristics of different districts can influence the respective importance given to both dimensions (security and social) of the mission. The fieldwork and the analysis of archives performed since the year 2010 show that this action can be classified not only according to the degree of the municipal coordination but also to the community size (larger or smaller), the networks which the municipality has with other actors, and the social status and cultural background of mediators. This communication will reveal the impact of the municipal coordination on the articulation of these two dimensions, the process of construction of partner networks around the question of the insecurity, and the interaction between urban mediators and inhabitants.

*By Whom Do You Want Your Wallet to be Found in Ethnically Diverse Neighbourhoods?*

The claim that ethnically diverse living environments drive down social cohesion between and within ethnic groups, remains disputed, despite abundant empirical tests performed all over the globe. The Netherlands have proven to be an intriguing test site for this so-called 'constrict proposition', as numerous studies – using different operationalizations of ethnic diversity and social cohesion, different data, performed in different time era and defining macro-level geographical units differently – reached rather similar conclusions: in general, ethnic diversity does not erode social cohesion. That said, within ethnically diverse neighbourhoods, trust in neighbours is indeed hampered. Yet, various questions remain. First, does ethnic diversity only drive down trust in neighbours of ethnic outgroups or also trust in coethnic neighbours? Second, is the neighbourhood the crucial geographical unit of which one would expect (negative) diversity effects? And related to the second question how should we define the neighbourhood and consequently operationalize neighbourhood diversity? In this contribution we answer these questions through analyses of the Religion in Dutch Society 2011-2012 dataset, supplemented with unique GIS-data. Our dependent variables are so-called wallet-items in which we systematically varied the ethnicity of the target of trust (co-ethnics versus outgroup members) and the location of the target of trust (neighbours versus non-neighbours). We introduced spatial thinking into the diversity-cohesion discussion and investigated to what extent the impact of ethnic diversity depends on the definition of the neighbourhood (administrative units versus egohoods) and on the geographical scale of the neighbourhood. We applied spatial regression techniques and multi-level models to test our hypotheses.

*Isolation of Children Who Leave Social Care Facilities*

On the basis of the results of a qualitative study in a children's self-reliance support facility, this presentation will discuss the reason why children, who leave social care facilities, become isolated. In Japan, the social exclusion of children who are, or were, placed in these facilities has been a pressing topic. However, the relationship between the purpose of social care and the lives of the children who leave these facilities has not been sufficiently discussed.

The study was conducted in a children's self-reliance support facility (called "Z" in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: First, even children who overcome a particular issue while living in the facility may regress to their previous behaviors depending on the environment in which they live after leaving the facility. Second, children, particularly those who serve their time and leave the facility, are often compelled to choose between returning to their families and living independently. This problem is caused by a severe shortage of institutions that provide aftercare to children who leave such a self-reliance support facility. Third, although all staff members want children to depend on them when they confront difficulties after they leave the facility, in some cases, the children are sometimes reluctant to do so.

On the basis of the above results, I will discuss the dysfunction of self-reliance as a social norm.

### RC53-854.5

**TOMA, KOTA\*** (Keio University, [k\\_toma222@hotmail.com](mailto:k_toma222@hotmail.com))

#### *The Process of Children's Socialization in a Group*

This presentation will discuss the process of children's socialization in a group. Although the socialization of children has been one of the most important research topics in sociology, the concrete aspect of it is still uncertain.

The study was conducted in a children's self-reliance support facility (called "Z" in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: (1) In Z, living with a group is optimally used to treat, care for, and socialize the children. In particular, their rank in their relationship, which is based on age or phase of treatment, plays a very significant role. (2) It is important to note that such a rank is not permanent. As the upper-class children leave the facility, or when a new child enters the facility, the rank shifts. (3) Moreover, the children do not uniformly experience the reconstruction of these ranks. Rather, it is an individual experience.

As indicated above, living in a group and experiencing the construction and reconstruction of ranks in their relationship take very important role in children's socialization. This process can be interpreted as the process of "role-taking" in group dynamics. Moreover, such "role-taking" can be regarded as a type of anticipatory socialization that occurs after children leave the facility. I will conclude by discussing the implications of these findings for the field of sociology.

#### *Gender, Development and the 'De-Privatization' of Religion*

'Poverty has a female face' in many contexts, which has been exacerbated by the recent global economic crisis. Amongst the range of actors that have responded to declining levels of welfare support by the state are 'faith-based organizations', and international donors and agencies increasingly recognize these as significant 'development' partners. This 'turn to religion' within mainstream development policy and practice has taken place against the backdrop of a perceived 'religious resurgence' or 'de-privatization' of religion, which casts doubt upon earlier predictions that secularization and modernization are two sides of the same coin.

From a 'gender and development' (GAD) perspective, the 'rise of religion' coupled with declining levels of state welfare provision presents a threat to gender equality and women's rights. The preference for 'secularism' amongst numerous women's rights activists and GAD practitioners is no secret, and has been promoted as the best route for securing equality, freedom and security for women globally. Therefore, it is crucial to view the recent 'turn to religion' by mainstream development actors through a gender lens. This is not only because women are more vulnerable to poverty, but also because 'religions have a male face' (see also Tadros 2010; Tomalin 2011).

This paper examines the future of the 'secular' in the light of theories about the 'de-privatization' of religion and the implications this has for gender equality and women's rights, which are central to GAD. Currently, understandings of religion that influence mainstream development policy and practice rely upon frameworks for analysis that are outdated and unhelpful for addressing the above concerns. Focusing upon examples from South Asia, I will demonstrate that distinctions between the religious and secular, the private and public, and the idea of a clearly defined thing called 'religion' are unhelpful in addressing contemporary questions around 'gender, development and the de-privatization of religion'.

#### *Albaryo Ritual Healing: A Construction of Ethnicity of Filipino Immigrants in South Korea*

The transnational movement of people around the globe has challenged migrants' belief systems and their quest for well-being. The movement of people in itself is a form of ritual performance, a journey towards a dream and the aspiration to acquire a new sense of self and identity. The goal of this research is to illumine how migrants reconstruct their ethnicity through access to the *albaryo* ritual healing of their homeland. In this paper, migrants are viewed as secular pilgrims who experience the manifold stages of *liminality* as they continue to seek well-being. Along the journey they suffer from *pneumopsychosomatic* illness, which has a certain connection with "home." They romanticize the memories of their homeland. They access shamanic ritual healing, which brings into the real "here and now" the interplay of memory and the self's narrative that defines their identity. The research is based on the ethnographic data collected April to June

2013 in South Korea. It focuses on the story of Filipino immigrants who experienced shamanic healing in their homeland and continue wearing the amulets given to them by shamans to prevent illness and protect them from evil while in a foreign land. The migrants' definition of their "new selves" is shaped by the core institution of modernity.

Findings indicate that the root cause of disease from pre-industrial society to the age of globalization is emotion. Negative emotion breaks one's social ties with the self, significant others, and the divine. Physical illness often stems from one's spiritual sensibilities in his/her religious worldview. Also, migrants' state of identity consciousness is "in betwixt and in between" – that is, "neither here nor there" – and they must undergo different stages of *liminality* in restoring selfhood. Thus, healing is an outcome of rebuilding relationships– practicing one's spirituality and reconstructing one's ethnic identity.

#### *Development, Inequality, and Discrimination in Europe: A Comparison of Post-Socialist and West European Democracies*

This paper uses the European Social Survey 2002-2012 to examine trends in discrimination, taking into account two different groups: those who feel discriminated against because of their ethnicity, and those who espouse xenophobic attitudes. The country-level relationship between feelings of discrimination and xenophobic attitudes calls for explanations that consider economic development and social inequality. A complimentary research question is: To what extent does social inequality influence feelings of discrimination and intolerant attitudes, beyond economic-development factors, individuals' socio-demographics and various personal outlooks? Our analysis covers post-socialist and West European countries (N=16) in the period 2002-2012. Multilevel regression analysis on the ESS data provides the statistical means to examine the effects of country-level and individual-level determinants and their interactions on feeling discriminated and on xenophobic attitudes. Economic variables at the country level include national income per capita and Gini index of income inequality. At the individual level, we focus on social stratification – education, occupational status, and income – subjective evaluations of standard of living, as well as a range of attitude measures. Results demonstrate how these variables are related to ethnic discrimination and xenophobic attitudes, controlling for political views and national orientations. We show that in post-socialist countries ethnic discrimination became more salient as society embraced party pluralism and freedom of speech. At the same time, in both post-socialist countries and Western democracies right-wing and nationalistic attitudes are strongly fuelling discrimination. At the end of the paper, we discuss theoretical implications of our findings for analyses of development, inequality, and democracy.

#### *Peruvian Immigration to Chile: Racism and the Deskilling of Female Transnational Workers*

Historically Chile has been a country of emigrants rather than a country of immigration. There are around one million Chileans living abroad. However, in the last decades immigration to Chile has accelerated. Immigrants from Peru, Ecuador, Bolivia, Colombia, China and Korea confront a hostile and racist society. The largest of these groups is formed by Peruvian migrants. About 130000 Peruvians live today in Chile. Of these, 60% are women, many of whom end up working as domestic servants. Peruvians have become a large group among domestic laborers, in particular as live-in domestics. Although the levels of education of Peruvians are higher than those of Chileans, they are consistently pressed into low paid work with little protection. By using a netnographic methodology I investigate how racism, that has historically casted mestizo Chilean women in the role of '*nanas*', today streams Peruvian women into the homes of wealthier families as domestics, regardless of the levels of education and skills they bring with them at the time of immigration.

#### *A Study of Policing the Protest in Japan: Effects for Social Movement Organizations and Arrested Activists*

This study investigates the policing for social movements in Japan. Compared with other countries, a few studies empirically examined the policing in Japan. In 60s/70s movements, over 5,000 activists were captured by police. Though arrested activists had dramatically decreased since 1970s, policing still have an impact on social movement organizations (SMOs) and participants in Japanese political activism. In this study, the author conducted the research regarding the effect of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: Interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing is relatively not violent, but the period of detention is extremely longer than other countries. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person. On the other hand, seized participants face to the crisis collapsing their careers as a student, businessman, housewife, and other roles in their usual life. Participants received a wound in not their bodies, but their minds. From the interview and network data, the author cleared that policing becomes a barrier for participating and continuing the social movements. Once the participants are arrested, some activists avoid taking part in and continuing the social movements. SMOs have to spend their money and time to release the arrested one from police, thus their resource are decreased and it is difficult to continue the movements as they used to be. Moreover, arrested participants sometimes break off with external relationship from the social movements: his/her offices, friends, and families.

#### *Heart Transplant Recipient Identities: Between 'a Patient' and 'an Individual'*

This study explores how heart transplant recipients' (HTRs) post-surgery chronic conditions affect their identities, consisting of the roles of 'a patient' and 'an individual' in everyday lives.

HTRs need lifelong medical treatment to control their immune systems. After overcoming heart disease through transplant operation, HTRs tend to think of themselves as individuals, while doctors see them as patients. Therefore, the experience associated with lifelong chronic conditions presents a difficult challenge for HTRs regarding their identity.

Three key theoretical concepts can inform the subjective experience of the lifelong chronic conditions: biographical disruption, narrative-based medicine and identity reconstruction. These concepts address issues of stigmatization of chronic conditions, loss of self, and reconstruction of identity following a heart transplant.

The participants for this study were recruited through 'snowball' sampling. Inclusion criteria required individuals age 20 and over who had undergone a heart transplant operation more than one year before the time of the study. Nineteen Japanese HTRs were interviewed by using semi-structured face-to-face interview techniques. All interviews were recorded and transcribed into a simple text. Interview data was thematically analysed.

The results of this study show that HTRs do not simply face an issue of 'loss of self', but reconstruct identities between 'a patient' and 'an individual' through experiences of stigma. HTRs' identity reconstruction process is primarily influenced by the location of the surgery, its duration, and the presence or lack of fund-raising support from the public. Depending on these conditions, recipients tend to experience stigma, which can be categorized as 'enacted stigma' or 'felt stigma'. Their stigma experiences are attributed to their relationships with doctors, family, friends, and the public. HTRs tend to experience 'felt stigma' than 'enacted stigma'. This indicates that HTRs' distress may be internalised; apart from the medical support of immune control, they may not receive enough support.

#### *Repoussées Par Le Travail Ou Attirées Par La Vie Privée ? L'inactivité De Jeunes Diplômées En Italie*

La montée des taux d'activité a intéressé les femmes de tous pays occidentales depuis l'après guerre. Cette croissance a été en Italie plus tardive et plus faible qu'ailleurs. Encore aujourd'hui, et encore plus dans l'année d'après la crise économique, la composante de femmes qui travaillent ou qui sont prêtes à le faire demeure beaucoup plus basse que dans les autres Pays d'Europe même parmi les plus jeunes et le plus diplômées. Le recours à des explications culturaliste est toujours à portée de main, mais est-ce que rester à la maison représente pour autant d'italiennes une véritable choix ou l'accomplissement d'un désir ? A partir des résultats d'une recherche de terrain qui porte sur les expériences d'un échantillon de jeunes mères au foyer titulaire d'un niveau d'études élevé on montre d'abord que leur vécu est très loin du stéréotype d'antan. Ni choisie ni subie leur condition tiens plutôt à la façon dont elles font face aux évolutions qui, avec l'austérité, ont caractérisé à la fois le marché du travail et l'organisation de l'état

sociale y compris la disponibilité de famille d'origines à soutenir leurs enfants dans la conciliation entre vie privée et vie professionnelle. Dans un cadre de plus en plus caractérisé par la précarisation de l'emploi et l'affaiblissement de politique publique et privée d'articulation travail/famille, rester temporairement à la maison est aperçue, pour des femmes qui n'ont jamais expérimenté une insertion stable, comme une façon de faire face à des impératifs professionnels et familiaux contradictoires. In ne s'agit pas, pour autant, d'une stratégie comme une autre. L'absence de toute sorte d'allocation et la réduction de dispositifs d'insertion et de formation continue, aussi que la persistance des inégalités soit sur le marché du travail que dans les ménages risquent d'enfermer ces femmes dans une condition plus que temporaire.

#### *"Looking at Invisible Woman. the Experience of Housewifery in Contemporary Italy"*

The contribution presents the outcomes of a research promoted by the Department of Political Science and Sociology, University of Florence. The aim of the research was to design an updated picture of nowadays housewives, as well as to investigate why so many Italian women still remain out of the labor market. In order to flush out a so "invisible" population, the research adopted a multiple methodology, reaching more than 500 women through online questionnaires, in deep interviews, meeting outside the malls and the schools, newspapers, blogs, etc. Outcomes show that the traditional label "housewife" is no more appropriate to describe a population more and more differentiated, with variable identities, personal histories, motivations and expectations.

The research investigate a high number of dimensions, nevertheless some of them (motivations, expectations, domestic life's organization, role identification) allow to identify at least four different types: **grateful housewives**, aged women, who choose domestic life according to their traditional image of the family and firmly claim the value of their choice as well as a major social appreciation of the role of housewives; **tailored housewives**, aged women, who share a less traditional picture of the genders' roles, has been employed and "adapted" to domestic life without represent themselves as only "housewives"; **forced housewives**, mainly women expelled by labor market, inactive because discouraged, who experience domestic life as a sort of punishment and do not represent themselves as "housewives"; **temporary housewives**, generally younger and highly educated women who, considering the uncertainty of their professional life, invest in their family and consider their role of wives and mothers as moratorium, waiting for more favorable times in the labor market.

#### *The Coordination Mechanisms of Organizational Routines: A Case Study on a Free/Open Source Software Project*

How might distributed, peer-production organizations that rely on the Open Innovation paradigm sustain task specialization and achieve effective coordination in the absence of formal hierarchical control? This question is increasingly relevant because a number of production processes are being shifted from the physical to the virtual domain. Traditionally, scholars identified in organizational routines the building blocks of coordinated action in organizations. In this paper, we draw on the evolutionary perspective of organizational change (Nelson and Winter, 1982) to investigate the emergence and change of organizational routines in the context of distributed, peer-production communities. We argue that change emerges endogenously from routines - which we define as ordered sequences of actions linking problem-solvers and problems within organizations. More specifically, we investigate how routines emerge dynamically from the dual association connecting individuals (or "problem-solvers") and tasks (or "problems") in organizations. In particular, we ask: How do organizational routines (structured sequences of actions) emerge, evolve and persist despite the demographic turnover of participants and the ever changing character of organizational problems? To answer this question we run newly developed class of Relational Event Models on the entire sequence of actions undertaken by software contributors on software bugs during the entire lifetime of the Apache HTTP server, a very large Free/Open Source Software (F/OSS) project. By examining directly the micro-level, socio-temporal interdependencies generated by individual actions performed by problem-solvers, we find that self-reinforcing processes underpin the endogenous coordination of a decentralized production community, by fostering task specialization learning mechanisms. Different types of activities can coexist and be coordinated over time in a decentralized decision environment. Our analytical goal is to show how sequences of interdependent problem-solving actions become embedded in temporal sequences of relational events, which then trigger

specific self-reinforcing mechanisms that provide the social infrastructure sustaining the production of F/OSS.

#### *Age of Transition to Parenthood Among Married Adults: Social Determinants and Gender Difference*

Using retrospective life history data from the 2008 Chinese General Social Survey (CGSS) and event history analysis, this study investigated the timing of transition to parenthood for both adult males and females for marriage cohorts spanning from 1965 to 2008. Within the neoclassical economic and second demographic transition frameworks, we expect that there will be a trend toward delayed childbearing and a lengthening of the duration between marriage and first child bearing across the cohorts. However, we found that a shortening trend of marriage-first child interval across cohorts, and the more recent cohorts are more likely to transit into parenthood net of other effects. We also found that higher educated people are more likely to transit into parenthood earlier than those who have primary or no education. We speculate that the trend in China contradicts the tendency for delayed parenthood in Western countries due to the resistance to change the traditional childbearing norm of "earlier parenthood after marriage." This is because child rearing is an issue involving extended families, rather than couples' own independent decision. Under the one-child policy, extended families can pool more human and financial resources that they utilize for childbearing. We also speculate that increasing intimacy between newly married couples in the more recent cohorts contributed to this trend.

#### *An Institutional Approach to Autonomous and Connected Cities: Ostrom's Distributed Metropolitan Governance*

Global cities are the economic and cultural centres in the world. They compete with each other for a number one status on various lists. International accessibility is essential for a city's ranking and for its 'supply' of people, goods and resources, putting a city's position in the international network of airports and harbours and in the international economy high on the political agendas of national and local governments.

Cities are constantly searching to improve their performance. Specialized planning models support city governments to deliver the various public goods and public services that are expected from them. More integrated models, such as the airport region and urban metabolism models, emphasize the tensions between international connectivity and local liveability. The extent to which current institutions are capable of managing these tensions is questioned by stakeholders. They search for institutional structures supporting the delivery of the public goods promised, with a prominent position for questions of scale. Technological developments have made these questions more urgent. The fast developments in the field of renewable energy technology, smart grids and electric vehicles call for redefinitions of rules and roles of consumers, producers, citizens, local, provincial and national authorities and of the public goods delivered to them.

In this paper, we address the search for institutions that match today's challenges by using the theoretical framework of distributed metropolitan governance as developed by Vincent and Elinor Ostrom. With this institutional approach, we explore current urban governance challenges in the Netherlands. To sustain their competitive position in the global network, Dutch cities strive to become resilient, self-organising and self-governing. We will explore how institutional mechanisms as consociationalism and pillarization, as identified by Lijphart, which have proven

to be able to bridge conflicting values, are still relevant for a renewed conception of distributed metropolitan governance.

#### *Possibilities for New Forms of Resistance in the Neoliberal Era: Unification of All Rights Movements During Tekel Workers' Resistance in Turkey*

The working class has become overwhelmingly disorganized in the neoliberal era partly due to the attacks on legal and institutional grounds of trade unions and partly due to the transformation of working class itself. Dialectically enough, the current phase of capitalism is pregnant with new crises and forms of resistance as a result of increasing precarious jobs, jobless growth, insecurity and extreme commodification. Under these conditions, unions are faced with altering their strategies. A possible formula is to organize unemployed and precarious workers as well as workers around counter-hegemonic united front a non-negotiable defense of collective rights (right to water, rights to transportation, right to shelter, right to decent work etc.). This study provides an historical account of a working class protest which took place in 2009-2010 in Turkey. It argues that this protest foretells the possibility of unifying all rights movements under an expansive struggle for collective social rights. June 2013 mass protests in Turkey also show that the sense of injustice is becoming stronger and felt increasingly by those who are subordinated to all sorts of unequal power relations.

#### *A Scientific Controversy Across the Channel: Unemployment Theories, Sociology and the Rise of Mathematical Statistics in the Early 20th Century*

In the early years of the 20th century, on both sides of the Channel, social reformers were struggling to define what « unemployment » could be. Political economy, sociology and social statistics were mobilized in the process of shaping the novel category. Defining unemployment scientifically seemed to imply that the unemployed should be enumerated or otherwise transformed in solid figures. Various statistical devices were imagined in both countries for trying to solve that same puzzle, but quite different scientific languages were mobilized: William Beveridge used the language of political economy (1909), Max Lazard that of Durkheimian sociology (1909), and Arthur Bowley the new tools provided by mathematical statistics (1912).

An argument developed in professional journals between Lazard and Bowley, who doubted of the statistical techniques the other one was using: Lazard had calculated an occupational unemployment rate, Bowley an index-number of the variations in the volume of unemployment. In order to describe this controversy, one can use the notion of « national scientific styles » and observe how tools circulated between British statisticians and French ones, through the International Statistical Association and an intense exchange of literature. The limited reception of the correlation coefficient among French statisticians raises an interesting general issue of the conditions of the circulation of knowledge.

Accounting for the difference between Lazard's and Bowley's formalisations implies analyzing sociologically what they were designed for and the relations that were being established between scientists and the users of their knowledge in the respective labour administrations. In both countries, a close relationship between scientists and administrators conditioned the development of abstract statistical forms that could be applied to formalizing a new social issue and contemplated public policies: in France unemployment insurance by industries, in Britain public works providing jobs when an unemployment crisis would be looming.

**TOPALOV, CHRISTIAN\*** (École Hautes Études Sciences Sociales, [topalov@ehess.fr](mailto:topalov@ehess.fr))

#### *Network Analysis and Spatial Analysis Combined: The Case of Reform and Philanthropy in 1900 Paris*

Historical monographs on specific spheres of social reform are many when it comes to the late 19th and early 20th c. in the largest industrialised countries of the time – it was a « progressive era » for all of them. Every monograph points out that a good deal of the characters involved were simultaneously present in many other fields of reformist action – e.g. public health, housing reform, work relief, « protection » of women and children, prison reform, social science, etc. This invites scholars to cross the boundaries of specialisation and study reform and philanthropy as a possible unified field of action, interaction and sociability. This can be done through network analysis: voluntary associations used to pub-

lish reports and lists of leaders, members and supporters – by making the names of their followers public they increased the legitimacy of the cause.

This circumstance made it possible to collect complete lists of members of 106 reform associations, totaling 17663 people in 1900 Paris. Two directories of Paris charities have been added to the data base, i.e. 1346 charities and 2060 people. Sources provide the address of the charities and most of the individuals. A GIS was set up that allows it to locate every address on the street plan of Paris (as of 1888). This material is exceptional by its quantity and systematic character.

Using the data base, we can separately and simultaneously consider both social and spatial links : the affiliation of people to the same institution, the residence of people in the same building or neighbourhood, the co-presence of two institutions at the same address.

The paper presents the most interesting results and discuss the methodological solutions that had been developed for combining social and spatial analysis, and facing the problems related to the bulky character of the data.

**TORBENFELDT BENGTSSEN, TEA\*** (University of Copenhagen, [tb@soc.ku.dk](mailto:tb@soc.ku.dk))

#### *Negotiating Normalcy – Self-Narratives of Troubled Young People*

Young people's risk-taking is in most contemporary societies a matter of concern. Research on troubled young people who have been placed in out-of-home care shows that these young people more often than other young people are involved in risk-taking behavior such as excessive drug use. What is rarely investigated, however, is troubled young people's own ways of understanding their risk-taking behavior in the context of their everyday lives. This paper analyses the role of excessive drug use and its influence on young people's self-narratives about their everyday lives. The young people's drug use experiences continuously inform their perceptions of what they consider a 'normal' youth life and thus how they negotiate their self-narratives accordingly. This paper is based on 15 in-depth interviews with young people at age 18 who in their childhood have been placed in out-of-home care and have experiences with extensive drug use. Drawing on theories of stigmatization and normalization the paper demonstrates that what the young people conceive as a normal youth life is influenced by their drug use experiences and troubled childhoods. Their risk-taking behavior thus challenges their wish to create meaningful and coherent self-narratives and the result is often the creation of fragile self-narratives based on subtle negotiations of what they perceive as normal.
