Professor Hannibal Bara at the official website of National Commission for Culture and the Arts claims that "The cohesiveness of the 11 Muslim groups under the spirit of Islamic brotherhood is a living reality of Bangsamoro nationalism"<sup>[1]</sup>. Nevertheless, the question of the future of Bangsamoro identity can be asked.

At my presentation I intend to discuss the ethno-religious nature of Bangsamoro identity in order to point out the emerging patterns of the complex ethnic relations in the South of the Philippines.

*Public Religion, Collective Memory in a Multilocal and Global Society*

The new times we live are characterized by the public role of religion (Casanova): not only the religion as an institution, but the real dimension of religions entering and pervading the public sphere: affecting the relationships between religion, family, cultures, public politics, welfare state, health problems: this phenomenon is not a return to medieval time where church and political systems tried to dominate one upon the other, but the new modernity or post traditional society conveys at same time the autonomy of religious sphere respect to the political one, but at same time the partial exit of religion from the boundaries of the religions institution still influencing many aspects of social life.

Public religion or civil religion (R. Bellah) is closely related to a collective memory which is a social construction and representation of reality, but it is also a sedimentation of symbolic capital within a cultural system, in a given historical time and space. It is also a stratified reality almost as an archeological circle where the present, the past and the projection toward the future constitute a collective memory. The analysis of collective memory leads up to the discovery of the magma of popular religiosity, the families lineage, the mythological points, the grounding meanings (M. Weber) the collective unconscious (Freud, Jung, Neuman) the place of transcendence in the social life (R. Bellah) The analysis of collective memory can be analyzed in a small community in the South of Italy as I have done in my research on Images of Death and Symbolic Construction of Reality or at global level by analyzing the cultural bases and the collective memory in a process of development and globalization, as I have done in my work on the Grammar of Development.

*The Dynamics Of Rational and Non Rational In The Process Of Social Change and Disease Of Contemporary Society : Pareto and Freud*

The paper will focus of the dynamics of rational and non rational exploring in a new light the contribution of Pareto to the structure of social action beyond the only interpretation of T.Parsons and confronting the concepts of logic and non logic action with the analysis of S.Freud on the role of the unconscious. It is possible to establish any connection between the concepts of residui and derivations developed by Pareto with the dynamics of unconscious for the disease of our civilization and at the same time to use the processes of rationalization to make sense of the substratum layed in our culture and of its ground meanings. Probably in the symbolic construction of reality there is a meeting point for the interaction between so distant thinkers whose fortune has been unequal in developing the sociological and psychological analysis of modern society. The interest of the analysis is about the concept of residui in Pareto and to what extent they can fit not only in the social action but in the archeology of savoir of Foucault and the unconscious of Freud. At the same time the process of rationalization linked with the concept of derivation can be related not only with super ego and the ego of Freud, but also with the process of rationalization of M.Weber which ends up with the iron cage of bureaucracy and the irruption of charisma in the social fabric of reality.

*Une Recherche « Avec » Les Personnes En Situation De Handicap Mental : Un Projet Utopique ?*

Ces dernières années, la compréhension du phénomène du handicap a largement évolué. Nous sommes passés d'une compréhension du handicap comme déficience liée à une réalité personnelle, au handicap vu comme un construit social, résultat de la rencontre d'un individu avec un environnement incapacitant (Sen, 1999). Comme le précise Boucher (2003), un nouveau paradigme d'analyse du handicap a vu le jour: l'approche émancipatoire (Oliver, 1992). Si les chercheurs de ce courant iront parfois jusqu'à opérer un renversement du stigmata (Goffman, 1975), reprochant aux chercheurs non handicapés leur incapacité à aborder la question du handicap telle qu'elle est vécue par les personnes handicapées (Barnes et al., 1999), nous nous interrogerons sur la situation particulière

des personnes en situation de handicap mental. Ces dernières sont en effet souvent exclues par principe de la construction des recherches qui les concernent (dans leurs objets, méthodologie, appropriation des résultats). Or, nous portons le projet utopique (Mannheim, 1929) d'une réelle participation de ces personnes à nos recherches. Selon nous, elles sont tout à fait capables (Sen, 1999) de participer à des dispositifs de recherche, pour peu que l'on mette en place les conditions le leur permettant. En orientant notre propos sur une recherche-action menée avec une section d'usagers d'un établissement d'aide par le travail, nous exposerons de quelle manière la complémentarité entre les différents types de savoirs (chercheurs, personnes en situation de handicap et professionnels) peut devenir effective à travers la mise en place d'outils et comportements particuliers. L'originalité se situe dans l'association des personnes en situation de handicap et des professionnels, comme véritables acteurs y compris de l'analyse des matériaux récoltés. Nous verrons comment le travail mené permet de dépasser, à différents niveaux, une représentation de la personne handicapée mentale comme étant « incapable », tout en pointant les limites et les difficultés rencontrées.

*Ethnic Discrimination and the Collective National and Ethnic Identities of Turkish and Moroccan Minority Students in Flemish Secondary Schools*

Many scholars focused on the negative consequences of racial/ethnic discrimination on different behavioral and psychological outcomes. However, there is a lack of large-scale quantitative studies giving insight in the experience of racial/ethnic discrimination by peers and teachers within a school-context, especially in non-Anglo-Saxon contexts. The first goal of this study is to examine the impact of perceived racial/ethnic discrimination on the anti-school attitudes of students of Turkish and Moroccan descent in Flanders (the northern part of Belgium). Furthermore, in the literature, racial/ethnic discrimination is seen as a risk factor that increases the probability of negative outcomes without directly causing them. As such, it is interesting to focus on factors that can buffer or compensate for the experience of racial/ethnic discrimination. Research in the US shows that identification with collective national and ethnic identities both compensate for and buffer against the impact of perceived discrimination. It is theoretically interesting to test this for Turkish and Moroccan minority students in Flanders. Hence, the second goal of this study is to explore whether Turkish and Moroccan minority students' identifications with collective national and ethnic identities mediate and/or moderates the relationship between (perceived) racism and anti-school attitudes. On the one hand we take identification with the dominant society into account (e.g., Flanders and Belgium), on the other hand we focus on different dimensions of the ethnic identity (centrality, private and public regard of the Turkish or Moroccan identity). To answer the research questions, we will analyze data from a large-scale study (N=767 students of Turkish and Moroccan descent, 47 schools) collected during the school year 2011-2012 and designed to study ethnic discrimination and racism in Flemish secondary schools.

*The Impact of Perceived General and Ethnic Victimization By Peers and Teachers on the School Belongingness of Ethnic Majority and Minority Students in Flanders*

The relationship between ethnicity and educational inequalities, especially in relation to the achievement of ethnic minority students, is an important topic in educational research. However, the present study does not want to focus on achievement, but wants to examine a less researched factor that plays an important role in the academic and personal success of students, namely school belongingness. Belongingness has a positive influence on the behavior and motivation of both ethnic minority and majority students, and because of that it is interesting to explore if both groups of students feel to belong in Flemish schools. In addition, it seems very interesting to examine which factors influence the school belongingness of ethnic minority and majority students, especially since the determinants of school belongingness received little research attention. This study focuses on the impact of victimization. We might expect that victimization will have a negative impact on school belonging, but we have little knowledge about the difference in impact for ethnic majority and minority students. Furthermore, in relation to ethnic minority students, it is important to differentiate between general victimization (e.g. because of clothes or appearances) and ethnic victimization (e.g. because of race, ethnicity or skin color). In sum, this study focuses on these three research questions: 1) Do ethnic minority and majority students feel to belong to Flemish schools?, 2) Which impact does victimization have on school belongingness and does this differ for ethnic minority and majority students?, 3) Is there a difference in impact of ethnic and general victimization on the school belongingness of ethnic minority students? To answer the research questions, we will analyze data from a large-scale study (N=4322 students, 56 schools) collected

during the school year 2011-2012 and designed to study ethnic discrimination in Flemish secondary schools.

### *Participation and Transnational Restructuring Agreements*

The literature about the "Europeanization" and the "internationalization" of industrial relations has increasingly been dealing in recent years with transnational framework or company agreements and the European Commission database on transnational company agreements currently contains over 200 such texts. Do these new tools of transnational industrial relations at the company level also constitute a new form of regulation? What kind of employee participation do they entail? How have they changed with the crisis? First different levels and actors of transnational industrial relations will be identified, among which multinational firms, Global Union Federations, European Industry Federations, and/or European Works Councils. Then existing transnational forms of regulation will be analyzed with particular attention to restructuring and the crises. This communication is based on ongoing field work about transnational framework agreements with a focus on restructuring. The conclusion will reconsider the notion of "industrial democracy" and outline the evolution of the notion of "participation" as applied to the transnational level.

### *"Offshore Workers": The Case of Mexican 1.5 Generation Returnee Migrants Working in Mexico City's Bilingual Call Centers*

Over the past few years, return migration from the U.S. to Mexico has been an increasing phenomenon. As it involves the conventional return migration, composed in its great majority by males adults who migrated to the United States in a traditional worker migration pattern, it also concerns a less common category of returnees which is composed by young people who belong to what the migration academics calls the 1.5 Generation: the children of the first generation migrants who were not born in the U.S. In the US-Mexican immigration context, it also often implies that these children are, as their parents, illegal migrants. It is estimated that today in the U.S. more than two millions individuals face such situation. When they arrive in Mexico, a country that most of them barely know, as they often grew up most of their lives in the U.S., they are confronted to limited job opportunities mostly due to the fact that they're unskilled. As a consequence, many of them incorporate into bilingual call centers thanks to their cultural capital - English linguistic skills, American cultural codes - which are the result of their life experience in the U.S. Based on thirty interviews with 1.5-generation Mexican returnees working in Mexico City's call centers, this paper focuses on these young return migrants as key figures of globalization, transnational and transborder processes. The aim is to highlight the factors that push them to return to their parents' homeland and their incorporation patterns into the Mexican labor market. The analysis shows how their lack of formal diplomas is compensated by the cultural capital gained in the U.S. and how bilingual call centers have progressively become the only job niche in Mexico for most of them. Finally, this case highlights the intimate connection between the issues of international migration and globalized economy.

**DA CRUZ, MICHAEL\*** (LEST-UMR 7317 - Aix-en-Provence, [dacruz.michael@gmail.com](mailto:dacruz.michael@gmail.com))

### *"Uncle Sam's Illegitimate Children". the Mexican 1.5 Generation Returnee Migrants Case*

Over the past few years, an increasing number of Mexican migrants from the United States have gone back to Mexico. Among these returnees we individualized a group composed by members of what the migration academics call the 1.5-generation: the children of the first generation migrants who were not born in the U.S. In the US-Mexican immigration context, it also often implies that these children are, as their parents, illegal migrants. It is estimated that today in the U.S. more than two millions individuals face such situation.

The case of these return migration trajectories is worth attention at least for two different issues: first, it does not correspond to the conventional return migration to Mexico which in its great majority is composed by males adults who migrated to the United States in a traditional worker migration pattern. Secondly, more than deportees - an increasing phenomenon that implies more and more long stay Mexican and Central American migrants - we identified a considerable group of young voluntary return migrants.

The motives of their return to Mexico, a country that most of them barely know, as they grew up most of their lives in the U.S., are plural. Among these decisional factors, the impossibility of social and economic ascension - Glass Ceiling - due to their illegal status and the reverse family reunification processes in Mexico, play a crucial role.

In this paper, based on thirty interviews with 1.5-generation returnee migrants working in English-speaking call centers in Mexico City and Monterrey, we analyze these new return migration trajectories which interrogate, on the background of the Dream Act debate, the social and economic obstacles that 1.5-generation are confronted with and the role the latter play in decision making process to return to their parents' homeland.

**DADLANI, PRADEEP\*** (Working Group, [pradeepdadlani@rediffmail.com](mailto:pradeepdadlani@rediffmail.com))

### *Sustainable Urban Development for Poor*

Cities in India today are drivers of economic growth. About 70% of GDP is accounted by urban areas. Today cities remain the home of an increasing numbers of urban poor living in the informal settlements, with large infrastructure backlog, poor service-delivery, extensive housing shortages, and weak urban management and governance systems. Hence, there is a strong reliance on improving informal settlements as a strategy to address urban poverty.

A recent report by the Committee on Slum Statistics/Census estimates that 93 million people currently live in slums in India, and this number is expected to increase to 104 million by the end of the 12th plan period in 2017.

Govt. of India launched The JNNURM in 2005 a flagship program aimed at creating economically productive, efficient, equitable, responsive and inclusive cities. The program is considered to have been more successful in its infrastructure investments than its urban reform agenda. To complement this The RAY program was launched in June, 2011 but after a research, it has been found that a new program needs to be introduced to incentivize and support selected states and cities towards the implementation of their slum-free city strategies through cost effective solutions i.e. *in-situ* upgrading of tenable slums, alternative approaches to new housing delivery such as sites and services, and support pilot integrated urban livelihoods activities. The major component of the program include financing of selected physical infrastructure investment, support to community mobilisation, project implementation and technical assistance to implementing agencies at city and state level.

This is expected to augment and complement the Rajiv Awas Yojna which focuses on primarily on the Housing for the slum dwellers. Thus improving the overall infrastructure & the life style of the people staying in the slum.

**DAGIRAL, ERIC\*** (Université Paris Descartes, [eric.dagiral@parisdescartes.fr](mailto:eric.dagiral@parisdescartes.fr))

### *Step By Step Self Learning? the Quantification and Interpretation of Walking Activities*

In recent years, the rise of sensors and tracking devices in the field of health and fitness has renewed the ways people trace and represent their physical activities. Promising "self knowledge through numbers", the Quantified Self movement has helped popularize the expectation that continuously wearing an electronic device (wristband, watch, mobile phone, etc.) is key to a better understanding of one's body, mind and self. Nevertheless the many ways people start and/or stop using such tools, experience and experiment with them are not well documented, especially when it comes to spheres other than sports activities.

Drawing upon an empirical study of how individuals equip and experience -lastingly or not- footsteps tracking devices (Fitbit, Jawbone, etc.), we consider issues of appropriation, embodiment and interpretation these mobile technologies entail. We focus on the practices that allow one to: describe one's own physical relation to the tool(s) and user interfaces; read into generated data and upcoming application messages; and possibly share these and new data.

Our findings underline the role of meaning making and reflexivity in making pedometers and accelerometers technologies wearable and usable in everyday

life's embodied experience, and ensuring that measurements, data sets and comparisons can be performed. When it comes to confrontation with traces of one's own -apparently trivial- walking activity, much encoding/decoding and multiple interpretations are at work. For some, the knowledge produced can be criticized for being inaccurate or even pointless, whereas others find motivational support and unexpected ways of relating to their physical activities, on their own or through the online sharing of data and experience. At some point, all users are confronted with the normative dimensions (excess weight, inactivity, illness, etc.) scripted and embedded in these devices and the advice they produce. This in turn questions the sociopolitical implications of these embodied technologies.

#### *New Constitutional Framework, Persisting Authoritarian Practices: The Case of Morocco after the 2011 Constitutional Reform*

Following one of the largest waves of protests that the country had experienced since its independence, Morocco witnessed the drafting and the adoption of a new and arguably less authoritarian constitution. The subsequent electoral success of the Islamist Parti de la Justice et du développement (PJD) and the formation of a PJD-led government were considered tokens of goodwill demonstrating the monarchy's commitment to the reforms. Nevertheless, the optimism faded away in the face of increasingly repressive responses from the state to the protests, the continuing inability (or unwillingness) of the PJD government to pursue its reformist electoral promises, the extremely slow pace of the drafting of organic laws pertaining to the enactment of various constitutional provisions, and the awkward responses of the government to scandals that elicited popular outrage and sporadic protests.

The overall picture emerging from a review of the political situation in Morocco in the years following the adoption of the new constitution is that of a political system unable or unwilling to follow through with the process of reforms in which it engaged itself. Thus, this paper argues that the Moroccan state seems unlikely to be able to move beyond the repressive modes of authoritarian governance that it has hitherto relied upon, given the deeply entrenched interests of its elites, a factionalized and divided opposition, and a population that mistrusts institutionalized politics and is wary of the risks associated with revolutionary changes. It also analyzes the uncomfortable position of the PJD, caught between its inability to deliver on its electoral promises and the recurring snubs that it receives from the monarchy and its allies. Finally, this paper suggests that the reform in itself is better understood as being more of a show of goodwill targeted at the international community rather than a sincere commitment to democratization.

### JS-59.4

**DAHER, LIANA MARIA\*** (University of Catania, [daher@unict.it](mailto:daher@unict.it))

#### *Reproductive Rights and Bioethics. Feminist and Feminine Action and Consequences in Italy*

Abortion and fertility treatments issues involve bioethical values and choices usually influenced by ideology and religion belonging. This is particularly true in Italy where the two principal women standpoints openly clash. From the Feminist perspective, in fact, the above practices have to be free and depend only on the woman's choice (*ethics of choice*) whereas from the "feminine" one the defending of life and family comes first (*ethics of care*). However, both positions seem to defend the rights of women and family.

But, the effects of those reasons and the way of dissemination of the related principles contributed to the implementation of some widespread individual behaviour (e.g. conscientious objection) and cultural opinion. The many restrictions, which are not found in the same laws of most European countries, of in vitro fertilization treatments (L. 40/2004) are an emblematic example, underlying the hypothesis of a strong correlation among ideology, religion and law.

Therefore, looking at the consequences of feminist and feminine discourse on reproductive rights several questions emerge about women's rights that seemed to be solved. First of all, if the power of women on their body and life project has increased so much as to allow them to choose freely; secondly, if the concept of citizenship is today held on behalf of gender equality, especially in relation to the mental and physical health of women and their rights concerning motherhood and if the relationship between rights (needs) and obligations (responsibility) could emerge from an extension of this concept in a bioethical sense.

This paper aims at answering the above opened questions through the analysis of the contributions of feminist and feminine engagement in bioethics (Document analysis) and focus groups with activists, so as to arrive at some conclusions regarding present-day conflicts in Italy.

### RC48-795.2

**DAHER, LIANA MARIA\*** (University of Catania, [daher@unict.it](mailto:daher@unict.it))

#### *Second-Generations Asking for Citizenship. the Italian G2 Network Against the Consequences of Migration*

Migrants' descendants associations are now quite common in Italy. Their main claims are focused on the issue of citizenship, demanding a redefinition of the law that takes note of the changed conditions of the country after migration flows.

This is the case of Rete G2 that, along with other more or less formalized groups, have recently given birth to the media campaign on the rights of citizenship named "I am Italy, too" (L'Italia sono anch'io), and to a large number of petitions and claims.

A lack of recognition of equal opportunities in the labor market, but also the exclusion from active participation in the political and social life of the country to which they feel they belong are the main topics of their claims. Thus, the "right to difference", often invoked by their parents, becomes a handicap for their full social integration: being different involves the risk of becoming "second-class citizens."

Second-generation youth believe they have gained the same rights of mobility of their native peers, but they often remain anchored to the subordinate social position of their parents. They do not feel like foreigners even though they are placed as such, at least from a legal point of view. They live the complexity of migration without being migrants adding to the typical adolescent insecurity conflicts emerging from the inter-relationships between home country, parents and receiving society. In this context, the construction of a balanced definition of identity in a plural sense often becomes uncertain.

The paper aims at examining the underlying reasons of migrants' descendants protests relating to social inclusion, as unexpected and unwanted consequences of migration, and looking at these associations/movements as one of the possible agents of legislative/institutional as well as cultural change. The speech will also be articulated referring to empirical data collected on the ground.

### RC02-58.12

**DAHIWALE, SAMARTH\*** (Retd. University of Pune, [smdahiwale@yahoo.com](mailto:smdahiwale@yahoo.com))

#### *New Economic Policy and Its Impact on Marginal Segments in India*

The essay deals with the impact of New Economic Policy (NEP) on poverty, employment, farmers' suicide, displacement of peasants and adivasis (aborigines), slum dwellers, etc. Wage employment schemes under the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) of the Congress led United Progressive Alliance (UPA) government has helped alleviating poverty in rural India. In the reform era, the overall employment rate in organised sector has come down, but it has increased in private sector with uncertainty of both income and job security.

The UPA government described its economic growth "inclusive." The government saw inclusion in terms of social inclusion and financial inclusion. In social inclusion, the government devised: poverty alleviation, employment generation, health, education and social welfare, and in financial inclusion, subsidies, loans and social security benefits to be directly credited to the accounts of the beneficiaries. Since there are reports of corruption in the implementation of welfare schemes and social services such as education and health have become privatised/commercialised, marginal sections, viz., Scheduled Castes, Scheduled Tribes, Other Backward Classes and Muslims remained excluded from the benefits. Inclusive growth, therefore, is questioned. And, thus NEP has become a stumbling block to supporting the development of social sector in general.

Interestingly, the governments, viz., Left Front in West Bengal, Bahujan Samaj Party in Uttar Pradesh, Jharkhand Mukti Morcha in Jharkhand and the like, known for the cause of the disprivileged, failed to address the issues of survival and governance. The author, therefore, calls for the initiative of civil society/ the role of intellectuals in taking up the programme of conscientisation, i.e., an approach of perceiving contradictions and taking action against the oppressive elements/ forces in society.

#### *Economic Crisis, Social Policy and Health Inequalities: A Systematic Review of the Research Literature*

Purpose: The purpose of the systematic review is to collect and review research that has examined how economic crises have impacted on population health and health inequalities and to which degree the welfare state has played a modifying role. Based on the available evidence the ambition is further to develop testable theories and hypotheses for the empirical analyses to follow. The review is part of a larger project funded by the Norwegian Research Council which will use com-

parative data sets to study health-related consequences of the current downturn in Europe.

**Background and Research questions:** We will draw from insights and findings from Brenner's earlier studies of business cycles and mortality and Ruhm's more recent studies. Also experience from countries that have undergone deep crisis or transformations like Russia and other Eastern European countries will be scrutinized. Further, the experience of recessions in the two Nordic countries during the early 1990s, Sweden and Finland, will be examined, in particular the hypothesis that the welfare state was able to buffer the detrimental consequences of the economic downturn. Studies of the current recession by e.g. Stuckler and collaborators will certainly provide valuable material. In the review, we will try to identify the following dimensions of crises that we suspect will have an impact on the outcomes: What kinds of crisis are we facing, (economic, political, fiscal, social), what is the speed with which it has evolved, how has the state responded to meet the crisis, and what are the changes in social and health policy?

**Methods:** We will comply with guidelines issued for instance by the Campbell collaboration by developing clear inclusion/exclusion criteria, having an explicit search strategy, and a systematic coding and analysis of included studies.

THALER, ANITA (Alpen-Adria-University Klagenfurt)

#### *Glass Elevator Versus Sticky Floor: Tackling Gender (In-)Equality in Academia*

Women's under-representation in science and technology has been a major concern for the European Commission since nearly two decades (c.f. ETAN Report 2000, ENWISE Report 2004, Gender and Excellence in the Making 2004, WIRDEM Report 2008, Benchmarking Policy Measures for Gender Equality in Science 2008, She Figures 2013). While first the attention was brought the women themselves, the research during the years emphasized more and more the importance of structural change for achieving gender equality in research organisations or institutions of higher education. Supported by Joan Acker's work in 1990, this led to the common recognition of organisations as 'gendered organisations'. Organisations and institutions cannot proclaim gender neutrality as gender as social category is deeply embedded in all organisational processes.

The European project 'GenderTime' wants to tackle this challenge by initializing organizational structural change through identifying the best systematic approaches in the participating institutions with the help of tailor-made gender action plans. The plans involve activities in the fields of careers development & networking, institutional culture, management & policy making, recruitment, staff development & support, and work-life balance. But even though these individual measures benefitting career progression of academic staff can be considered as a crucial factor, it is important to focus on the prevalent organizational structure itself for achieving gender equal workplace conditions (Castaño et al 2010).

In our presentation we want to discuss how the female academic staff, who is mainly the target group of those implemented gender measures perceives their organizational work culture. Are the activities considered as helpful and/or career supporting? Or are informal support mechanisms much more efficient in term of achieving a scientific career? Our deliberations will be based on the results of a quantitative survey on 'working culture' carried out at the participating institutions supplemented by qualitative focus groups.

**DAI, GUOWEN\*** (University of Amsterdam, [g.dai@uva.nl](mailto:g.dai@uva.nl))

#### *Institutional Hybridity of the Chinese High-Speed Railway Oriented Development: Exemplified By Three Chinese Cases -- CANCELLED*

The rapidly extending High-Speed Railway (HSR) network and new stations are expected to be the catalysts for a new round of leapfrog spatial expansion and regional restructure in China. Unlike the redeveloped (central) stations in European and Japanese cities, most of the Chinese HSR stations are peripherally located on the collage of urban-rural land. They are speculated with airport-style spatial arrangement and ambitious urban plans. It triggers the power game between the transport actors, governmental actors, local civic actors, and developers. Given the hybridity of institutional settings, the current HSR oriented development are heading towards different directions. The actual implementation of the blueprint is profoundly dependent on the games between various actors with differentiated preferences and orientations.

Therefore, this paper introduces the perspective of Actor-centred Institutionalism, aiming to illustrate the action arenas of the speculated HSR new towns on urban periphery. It addresses the research question: How do the institutional hybridity under the Chinese Urban Entrepreneurialism impact the decision-making of location choice and implementation process of HSR oriented development? It gives comparative insights into three Chinese cases, Hongqiao CBD around Shanghai Hongqiao Integrated Transportation Hub, South City Extension around Nanjing South Railway Station, and Yangchun-lake Sub-city-centre around Wuhan Railway Station. Each case represents one specific type of actor arena, which is il-

lustrated by analytic unit of four collective action problems: location choice, infrastructural integration, spatial integration, and social coherence. The paper is not to conclude with the ideal typology, but to gain implications to avoid segregations in such a rapid urbanization trajectory of Chinese cities.

#### *Saying 'I' - Gender, Identity and Social Status In Japanese Pronouns*

The question of 'I' and first-person pronouns is one that needless to say differs between and within cultures and contexts, and in this presentation I will focus on the case of Japan, and specifically on the first-person pronoun use of individuals who identify as x-jendaa. 'X-jendaa' (x-gender) is a term that emerged in Japan in the late 1990s, and simply put, refers to identifying as neither woman nor man, although the definition of the term and its specific usage depends on the person employing it. There are a number of first-person pronouns in Japanese, and a person is not limited to using just one fixed pronoun throughout their life-course, but rather shift pronouns depending on social context. The use of social pronoun depends on a number of different factors – social hierarchy (especially in a business or work context), geographical region, and significantly, gender. Although there do exist pronouns that can be considered gender-neutral, most first-person pronouns have a notable gender bias, and one would be expected to use a specific pronoun depending on how one appears and passes gender-wise. Based on interviews conducted with individuals who identify as x-jendaa, in this presentation I will seek to examine how these individuals choose what pronoun to employ in their daily lives, and at the same time explore the social ramifications that these pronouns have in turn. It should also be noted that it is possible to communicate in Japanese without using first-person pronouns, which is a tactic that some of my informants also employ. Through this presentation, I seek to bring forth the restrictions as well as possibilities that language brings forth, and how using or not using personal pronouns reflect as well as forge one's social experiences.

#### *"Forever Young". Biomedical Innovations and Temporality: Sociology of Anti-Ageing Promises*

According to anti-age advocates, the « elixir of life » has finally been discovered. Hormone replacement therapies, that aim to compensate the natural decline in hormones secretion during the ageing process, stand as one of the major medical strategies developed to address biological ageing. With anti-ageing medicine, biology is no longer destiny but an opportunity. The body is construed as biological mechanism; organisms seem amenable to transformation and optimization.

Since the mid-1980's, scientific claims have raised hope about a sex steroid – the DHEA – which came to be presented as a "fountain-of-youth" molecule. In spite of the doubts expressed by public authorities and other scientists, DHEA consumption rose all around the world and bolstered the very idea that biomedicine could "cure ageing". This paper, relying on an analysis of DHEA trajectory in France (1980-2010), will show that understanding the institutionalization of anti-ageing promises – and the challenging of these promises – requires exploring the interactions between different social spaces: media, market, scientific and political spaces. Anti-Ageing Medicine as a new medical offer convey a new conception of the aging body in our society. Aging is no longer seen as a state of life, but a lifelong reversible process, the greatest risk factor for every age-associated pathology. By considering the impact of biomedicine on the conception of old age, this presentation will contribute to the study of the articulation between biomedical innovation and temporality in our society.

#### *Sport, Nationalism and the Politics of Language in Canada : Celebrating Francophone Belonging at the Pan-Canadian Francophone Games but Avoiding the 'National Question' at the Quebec Games*

Canada's *Official Languages Act* aims to advance the equal status and use of English and French while also supporting the development of English and French linguistic minority communities. While this legislation establishes the bilingual character of the Canadian nation, Canada is not composed of two demographically equal linguistic communities. Indeed the 2011 census showed that less than 25% of Canadians had French as a mother tongue or spoke French at home. Only in the province of Quebec are the tables reversed where Francophones represent

the majority and English-speakers are the minority. The comparative study of the 2008 pan-Canadian francophone games and the 2010 Quebec games illustrates the complex relationship between nationalism and the politics of language at French-only large sporting festivals. The 2008 pan-Canadian Francophone Games funded by the federal government successfully serve to foster Francophone identity and sustain minority Francophone community development. Organizers and youths proudly claim their Francophoneness and celebrate French language and culture throughout the weekend. Conversely, the Quebec Games focus on their sporting character rather than their nation-building purpose. This annual multi-sport competition financed through the Quebec leisure and sport policy is also meant to foster a distinct cultural identity among Quebecers (Harvey, 1999), Quebec being the only province with French as its sole official language. While Quebec is formally recognized as a nation within Canada, the use of the provincial Games as a vehicle to promote the Quebecois distinct language and culture depends on the government of the day as well as on local organizers. The 2010 event avoided any reference to the 'national question' celebrating youth and sporting performances in a taken-for-granted, but also unacknowledged, French environment. The comparative analysis outlines the distinct challenges of promoting a Francophone distinct majority vs. minority identity in today's bilingual Canada.

### *Voter Demand and Politics of Redistribution - Does Democracy Correct Market-Inequality?*

Rising income inequality partly has been mitigated by public income redistribution in most highly developed countries during the past decades. However, a widening market income distribution not automatically creates government response. In a democracy, of course, citizens can address governments and demand an intervention into the distribution of market incomes. Disparities of market income distribution could be healed by a political majority. However, as the Median-Voter model and other explanations of redistribution from political sociology and economy pointed out, the poor need coalitions with the middle class to put through their demand for more equality. The poor resp. parties representing their interest in measures compensating the market income losses especially the poor had to endure in past are not powerful enough. So, the median voter should constitute political power within cross class coalitions of redistribution. Is this really so? Moreover, social scientists pointed to the fact that only political factors transfer voter demand into the political system. So class specific participation and the way, parties represent different political cleavages and transit their demand, are decisive steps constitution politics of redistribution.

The paper to be presented wants to confront the assumptions underlying the model with data on political behavior of the median and the poor voter, on party polarization and the ideological shift of left parties and on the institutional incentives for political participation. These questions will be discussed: Do middle class voters sympathize with politics for the poor or do they rather support coalitions with the affluent? Did left parties shift to the middle of the political left-right-spectrum and did this make them successful in political competition? Is there congruence between voter demand and actual political programs? Data come from Luxembourg Income Study, the Comparative Manifesto Program and attitude surveys (ISSP, ESS).

### *Voter Demand and Politics Of Redistribution - Does Democracy Heal Inequality?*

Rising income inequality has been mitigated by public income redistribution in most highly developed countries during the past decades. According to the classical democratic model citizens can address governments and demand for an intervention into the distribution of market incomes. In this ideal model, 'inacceptable' disparities in the market income distribution can be healed by a political majority. This basic model has been developed further and enlarged by political factors. Explanations of redistribution from political sociology and economy assume that coalitions between middle class and the poor are necessary to put through demands for more equality. The poor resp. parties representing their interest in measures compensating the market income losses especially the poor had to endure in past are not powerful enough. So, the median voter is decisive for the political power necessary to build cross class coalitions of redistribution. Three points are decisive in that model: a) The political orientation and behavior of the median resp. the middle class voter; b) the political participation of the poor; c) the transmission of voter demand into politics. Recent debates doubt that governments respond to demand.

The paper will confront assumptions underlying the model with data on the changing political orientations of the median and poor voter/ class specific voter behavior, on party polarization and the ideological shift of left parties and on the institutional incentives for political participation. These questions will be discussed: Do middle class voters sympathize with politics for the poor or do they rather support coalitions with the affluent? Did left parties shift to the middle of the political left-right-spectrum and did this make them successful in political

competition? Is there congruence between voter demand and actual political programs? Data come from Luxembourg Income Study, the Comparative Manifesto Program and attitude surveys (ISSP, ESS).

### *Conspicuous Modesty in a Cosmopolitan Environment? a Study of Nordic Expatriates in Strasbourg*

Within the framework of my comparative studies on social distinction, I have emphasised that in some societies (such as those of Nordic European countries), social differentiations are more often than not under-communicated while sameness is over-communicated. What can often be observed is a relative avoidance of distinction from one's peers.

The question arises, however, as to whether what I call 'conspicuous modesty' in those countries is a phenomenon that can also be observed among Scandinavians or Finns working abroad - and sometimes interacting with fairly conspicuous well-to-do people from other cultural areas. This paper summarises the results of a research about Nordic expatriates in the 'Euro-city' of Strasbourg along such lines.

### *« Le Rôle D'aidant Familial Et La Vie Professionnelle En Période D'austérité. Articulations Et Points De Rupture. La Comparaison France/Japon »*

Cette communication présente la méthode et les résultats de l'enquête comparative sur les aidants familiaux et leurs trajectoires professionnelles en France (Ile de France) et au Japon (à Osaka).

L'objectif de l'enquête est d'appréhender deux types de trajectoires, professionnelle et du care, et d'étudier leur interdépendance. Nous ne limitons pas notre recherche à un type de fragilité. Dans le contexte de prolongement de l'espérance de vie, un individu peut fournir de l'aide dans sa vie à plusieurs périodes, périodes qui peuvent être discontinues, continues ou chevauchées. Il peut avoir également plus d'une personne à aider dans la même période. Dans les deux cas, il peut s'agir de fragilité de type différent. Ce constat appelle la prise en compte des temporalités et de la globalité de la vie de l'aidant. Nous employons la méthode d'analyse séquentielle des données sur les trajectoires de vie de l'aidant, afin de repérer et analyser les variables qui influent sur la trajectoire professionnelle. L'analyse séquentielle est complétée par l'étude de réseau de care constitué autour de l'aidant interviewé, identifiant les acteurs qui interviennent dans le déroulement du care.

Quelles sont les différentes figures d' « aidant » qui peuvent être dégagées ? Comment éclairent-elles à la fois les conceptions et pratiques d'aide à un proche en situation de « dépendance » et certaines dynamiques à l'œuvre sur le marché du travail ?

Si les caractéristiques de l'aidant, le sexe et la place dans la famille par exemple, semblent jouer un rôle important dans les trajectoires, les politiques publiques autour de la prise en charge des situations de fragilité dans chaque pays ont également une influence qui doit être évaluée. Dans quelle mesure les modifications de ces politiques sous l'effet de l'austérité, variables selon le type de fragilité et le pays, modifient-elles les articulations entre rôle d'aidant et vie professionnelle ?

### *National Answers to Global Challenges: An Example of Faculty Employment Regulation at Public Universities in Brazil and Germany*

All advanced national higher education systems around the world are challenged by the increasing and strengthened global norm of efficiency, above all, in the management of universities, in teaching, and in research. Through the argument of global competitiveness this leads in many countries to a greater flexibilization of working contracts and insecure career opportunities and paths for the academic faculty. Although this is a global trend, there are significant differences between distinct national states. While some national higher education policies

internalize the "new trends" in flexible management of their universities and the ideology of the market, others stick more to their own traditions and open up little to these new trends. One outstanding example of the first group is Germany, an example for the latter group is Brazil. Even though both countries are closely intertwined in the global market and challenged by global competitiveness in formation and knowledge production they follow distinct ways to meet those tasks. Through the example of employment regulation of faculty in public universities in Brazil and Germany, this paper seeks to analyze the influence of national traditions and state politics in dealing with the global challenges for the national higher education systems.

#### *Educational and Professional Ambitions of French Girls*

##### **Educational and professional ambitions of French girls.**

With the European research project GOETE (Governance of educational trajectories in Europe), we are able to deepen the educational and vocational guidance by taking the teenagers' point of view.

To explain and understand the construction of educational trajectories, GOETE associates a double quantitative and qualitative approach in 8 European countries. Data was collected by questionnaire aimed at teenagers in the last year of lower secondary school and from questionnaires aimed at their parents, and also by interviews with teenagers, parents, and professionals (teachers, guidance counselors, supervisors, social workers, nurses, youth workers).

The first statistical results reveal that on average the girls' vision for their future includes a longer educational trajectory than the boys', with sometimes large gaps in their favor as in Slovenia for example. Contrary to this, in France, despite better success in schooling, young women remain less ambitious than young men.

Following a general panorama of the perspectives of these young European people, we will focus on French youth to understand this phenomena. We will expose the objective and subjective barriers : how the French teenage girls cope with divergent advices from guidance counselors, teachers, parents and why they limit their educational trajectories - often marked by their gender and their social background.

#### *Teenage Girls and Leisure : The Social Construction of a Plural Culture*

##### **Teenage girls and leisure : the social construction of a plural culture.**

In an intersectional perspective, this paper aims to highlight inequalities in accessing leisure by focusing on teenagers in France.

Based on quantitative and qualitative data collected in three French regions in 2013, the focus of this paper is to shed light on the leisure activities of teenagers in terms of differentiated social practices according to gender, age, social class, physical and social morphology of the neighbourhood, and relational and situational criteria. Their leisure is channeled by public policies as well as educational, family, and socio-educational care that structure their time and space. However, this paper also aims to highlight the subjective dimension. Gender, age and social network define living conditions and possible futures. More or less forgotten by the authorities (and by researchers), the teenage girls studied have different leisure activities from that of the boys. This paper seeks to point out that teenage girls in deprived neighbourhoods, in reaction to what they perceive as a social limitation, try to meet friends in other places and other networks, to experience new activities, situations and spaces.

Ultimately, the framework of their leisure experience brings these teenage girls, compared with the boys, to develop more heterogeneous leisure practices without hostility to conventional culture. In doing so, they build a plural culture.

#### *Inequalities in the Elementary Teaching System in São Paulo (Brazil)*

##### **Inequalities in the Elementary Teaching system in São Paulo (Brazil)**

In São Paulo, the Brazil's most developed state, it was promoted a process of transferring Elementary Teaching's supply (ET) from the state level to municipal

level in recent years: in 1995 were enrolled 5.263.112 students in the state net and 646.500 in the municipal nets. While in 2011 there were respectively 2.563.326 and 2.359.825 students.

Many believed that this would bring positive effects, such as best access conditions to the ET and a better students' performance, due to higher accountability in the municipal nets and greater management capacity as a consequence of the reduction of the state net's enormity.

The public system showing a better students' performance, would be possible to think that a growing percentage of different social classes members would prefer it, giving to students from variable familiar origins background to compete in an equal way for positions of quality either in subsequent stages of learning or in the labor market.

Viewed this way, the so called decentralization of the ET may be understood as one of the adopted policies by state of São Paulo government to reduce the educational inequalities.

This article intends to observe, based on data produced by SAEB (the Brazilian Basic Teaching Evaluation System) for the years 1999, 2001, 2003, 2005, e 2011, what kind of audience is attending each network (state, municipal and private schools) in order to verify the evolution of the students' performance in each system.

Supported by these observations, it will be possible to identify if this process is contributing to the reduction of ET's inequalities or, on the contrary, if it's being built a public system of questionable results for underprivileged population and a private system of better results for privileged people, increasing educational inequalities across the region.

#### RC36-622.1

**DANILOVA, ELENA\*** (Russian Academy of Sciences, [endanilova@gmail.com](mailto:endanilova@gmail.com))

#### *Changing Nature of Individualization in Post-Communist Countries*

In post-communist countries the process of individualization has been reinforced and accelerated during last two decades. Not denying similar globalizing factors, the extra pushing forces of individualization in these countries seem to be different from those in the western societies. Such forces are encapsulated in the consequences of the dramatic social transformation. The researches show that individualist values and egoistic claims increased so fast in these societies. Russian society is a telling example of the trends. There seem a lot of 'naked individualism' and alienation in the way people arrange their lives and in social practices under capitalist conditions aggravated by unadjusted rules and norms. The trend is arguable as the phenomena contain traits of pseudo-individualism and a kind of patrimonial relations. The paper searches for explanation in the field of competing theories. Changing paradigm of social development in these societies and the fall of the safety of individuals rather led to the mobilization of traditional mechanisms of survival and self-preservation, with the consequent transfer into modern as well as patron-client relationships. The structural framework in which individuals and groups act is constantly reinterpreted and in this way the social setting acquires new shapes and agency.

#### JS-90.2

**DANILOVA, ELENA\*** (Russian Academy of Sciences, [endanilova@gmail.com](mailto:endanilova@gmail.com))

#### *Inequality, Social Justice and Transformative Change in Russia and China: Who Feels Better in Big Cities?*

The paper raises a question of egalitarian demand in the transforming societies such as Russia and China. It involves unique comparative data from the surveys of adult population of two big cities (St.-Petersburg and Shanghai). Economic and political reforms go differently by speed and ways of implementation in these countries, however produce the similar challenges. Increasing social inequality evokes public awareness of social justice and egalitarian thoughts in both Russia and China, but egalitarian demands differ in a number of aspects.

The study reveals that Russian citizens produce more radical egalitarian demand as they view the changes in distributional arrangements as unfair zero-sum game in which some high status groups and privileged citizens appropriate much of economic benefits, whereas in China the perception of distributional regime applies rather variable-sum principle and provokes functional egalitarianism with focus on introducing reformist measures for social inequality reduction.

The data shows that the model in which the most economically deprived and lower status groups feel more radical in terms of welfare distribution not exactly true for Russian and Chinese cases but in different ways. There is the evidence that in Shanghai those with higher status position express less radical but functional egalitarian demand. In St.-Petersburg the professionals with higher education feel deeper resentment in comparison with those in Shanghai and express more radical egalitarian views. The paper offers explanation of found similarities and differences by looking at the institutional changes and their adjustment to cultural contexts.

**DAO, HA\*** (Australian National University, [ha.dao@anu.edu.au](mailto:ha.dao@anu.edu.au))  
*Stay or Return, When and Where Family Reunion Will Happen?*

Since early of 2000', due to a high demand for their labor, Vietnamese women have dramatically joined and out-numbered men in spontaneous migration streams especially from rural areas to cities and industrialized zones (*General Statistical Office 2005b, 2010b*). Participating in the movements are not only single but also married women, many of whom had to leave their families behind. General Statistical Office and IOM Vietnam (2012) reported that married female migrants who moved alone to work made up the single biggest group of migrants in their study. However, until now little is known about the group. This paper will contribute to the knowledge gap by exploring the plan for family reunion among mother-migrant/father-stay-at-home families in contemporary Vietnam. Based on in-depth interviews carried out in 2013 with matched husbands-wife pairs in the receiving city and the sending villages, this paper counters the commonly-held view of internal migration that migrants moving for work once arrive in the city will try to remain and live there. This paper argues that wife-out-migration for work after getting family consensus does not lead to spousal abandonment. Family reunion will definitely happen often in village of origin due to the commitment to ancestor and elderly, the land or house ownership in the sending village and the unfamiliar feeling with city life. The decision on when family reunion happens tends to be the choice and negotiation of migrant wives while the decision on where it happens more likely belongs to stay-at-home husbands. By claiming that family reunion certainly happens in the village of origin, this paper also stresses the need to provide more social supports for migrant mothers/wives and their left behinds in maintaining family ties while living apart and readapting into family and community once migrants return home.

*Investigating Financial Contagion Links in the U.S. and Eurozone Financial Crises upon Non-High Income Countries*

In this paper we are investigating the relationship between high income countries on the one hand and middle and low income countries on the other hand. The paper analyses the effect of financial contagion of the U.S financial crisis of 2008, and later by the Eurozone crisis on non-high income countries. The paper utilizes social network analysis combined with regression analysis. Several hypotheses will be tested: most notably, (1) financial markets (countries with developed financial markets have been affected worse than those who do not have developed markets), (2) trade links (export dependent countries affected more than those with little export), (3) international aid and remittances (countries dependent on aid were hit harder, if aid-flow decreased to these countries). . This paper is part of a larger project on the effect of the economic crises (U.S. and EU) on child poverty in middle and low income countries, and therefore, special attention will be given to this matter (inequality, poverty, etc.).

*Emotions and Movement Identity: Emotional Boundaries in Memories of the Global Justice Movements in Italy, Germany, and Poland*

Collective memories play a crucial role in movement identity. Next to providing a sense of continuity, these narratives draw emotionally loaded boundaries that distinguish the movement from the outside as well as provide internal differentiations. This paper examines the emotions activists of the Global Justice Movements in Italy, Germany, and Poland attach to boundaries drawn in collective memories. Which emotions are attached to internal boundaries, which to external ones? How does this differ across different constellations of the Global Justice Movement in Europe?

The analysis draws on 48 narrative interviews conducted with Italian, German, and Polish activists in 2011 and 2012. Italy, Germany, and Poland constitute different constellations of the movement with respect to actors, repertoires, and size. The analysis shows that a broad range of emotions are linked to boundaries across countries. In particular, it reveals that the relation between emotions attached to internal and external boundaries varies with the degree of movement cohesion. In constellations with a high degree of movement cohesion emotions attached to external boundaries clearly differ from those attached to internal boundaries: feelings such as mistrust and anger are linked to the first, while trust and sympathy predominate in the second. When cohesion is lacking, emotions linked to external and internal boundaries either converge or are reversed.

*Enhancing Local Users in Water Resources Decision Making in Burkina Faso : How to Modify the Balance of Power*

People in the watershed of the Bougouriba 7 are facing multiple issues to ensure their access to water for drinking and irrigation purpose, livestock watering and fishery activities, but also in terms of quality as artisanal mining activities or bad fishing practices led to water pollution. In 2010, a local water management committee, the CLE, has been set up in the context of a broader Integrated Water Resources Management policy developed since 1998 in Burkina Faso. But after its establishment, the CLE remained inactive for 3 years, largely because water was not a priority for its president, the High Commissioner, whose mandate concerns the overall development of a province that is much larger than the Bougouriba 7 watershed.

However, the CLE is meant to be a dialogue platform where representatives of deconcentrated technical administration, decentralized government, users and civil society can discuss local water management issues. Whereas the CLE has been created with the hope that it would «give a way to overtake the usual and exclusive focus on an administrative regulation, which puts public authority and its departments at the center of the institutional, legislative, statutory, and normative plans» (MAHRH, 2004) our study shows that local users have still limited

decision-making power which is not an isolated situation as the comparison of 13 other CLE has shown.

In this communication we analyse the process of implementing the CLE to show that it was not a "bottom up" approach. Then we describe how we have given voice to users and local stakeholders to express their viewpoints about water issues in front of national to provincial administration representatives. As result, the CLE has been stimulated, the users have pushed and built their own action plan, some of them envision now to ask for decisional positions in the new board.

### *Inequalities Faced By Women in IWRM Policies in Burkina Faso and Ghana*

The aim of our communication is to show the inequalities still faced by women in the uses and the decisions related to water management despite their recognition as central to Integrated Water Resources Management (IWRM). Since almost 20 years, IWRM is at the core of the water policy framework of more and more countries, specially in Africa. One of the Dublin principles of IWRM includes « participatory water resource management and inclusion of women » (Prakash, 2007, 293). The Action Plan for IWRM in Burkina Faso and the National Water Policy in Ghana insist in the involvement of women in water management. Notably because of their numerous activities in rural areas they are considered as one of the crucial components to alleviate poverty and increase food security. Nevertheless, studies we have conducted in the South West of Burkina Faso and in the Upper East Region of the Ghana shows that women are still facing inequalities in terms of access to water and in decision making process about this resource. Several elements lead to this situation : a land tenure in customary and modern systems allow them to cultivate small and less fertile lands, at best ; an ineligibility to obtain large loans to expand their farming and processing endeavors ; a disconnection between policies that adress women issues in the boards of IWRM institutions, from local to national levels, where their integration is weak. We show that a participatory modelling approach, called Companion Modeling has been useful to give them more room to express their voice.

### *Global Economy Network, Leisure and New Urban Teenager Life Style in Jakarta. -- CANCELLED*

This paper is the result of two undergraduate student thesis at undergraduate program of Sociology University of Indonesia, by using two different methods which are quantitative and qualitative. "Nongkrong" or hangout at Seven Eleven (Sevel) and using Behel (dental braces), Blackberry, and Belah tengah (even god hair style) called "3B" is urban teenager life style preference in Jakarta to spend their free time. Hanging out in some places has become urban teenager culture. 63% of them agreed to spend their free time at Seven Eleven (Sevel). Seven Eleven as one of global economy groceries network oversees the business opportunity in Indonesia. They are providing comfortable stools and benches and Wi-fi. It created a new lifestyle for urban teenager in Jakarta to spend their free time (60%). This lifestyle preference called "anak Sevel". Interestingly, parents have become primary contributor of hanging out style, 95% agreed to hangout in malls or Seven Eleven. On the other hand, sociology study about dental brace (behel) found interesting findings. At the beginning, dental brace was used to re-align and straighten teeth. Nowadays, it has become a part of teenager lifestyle beside Blackberry mobile phone and even god hairstyle. Dental brace used as part of dental health became one of lifestyle accessories in particular social class. This teenager lifestyle is threatening social deviation in association perspective also from health point of view. Dental brace is sold as one of accessories which are below health quality standard. It expected can increase social status in urban teenager association. Both studies found, teenagers from particular social class want to proclaim their social class status is higher than the others by using "3B" and becoming part of "anak Sevel". This social symptom is becoming social prestige for urban teenager as indirect cause from global economy network.

### *Embeddedness In Action: The Socio-Cultural Institution Of Gift Giving As a Resource In Consumer Markets*

Social embeddedness is often presented in the research literature as framing economic action, and socio-cultural institutions are portrayed as influencing the preference function of markets actors, rather than as a flexible resource in the ac-

tual process of economic exchange. But what happens when institutions become an interactive part of economic action? By focusing and analyzing the context and content of daily sales encounters in a computer chain store in Tel-Aviv, Israel, this study presents how and when sellers and buyers mobilize the socio-cultural institution of gifting to further their diverse socio-economic interests as they buy and sell goods. The article divides the empirical manifestations of the socio-cultural institution of gift giving into three phases of the sales process: Pre-sale gifting, closing gifts and post-sale gifting. In each case the distinct mobilization of gift giving is described and analyzed as part of the interactive sales encounter. Discussion centers on the flexibility of gift giving as it becomes a resource in economic transaction, and on the more general claim that the notion of social embeddedness of economic action can be strengthened by examining the mobilization of socio-cultural institutions in action, that is as part of interactive sales encounters.

### *IMPACT of Krish Vigyan Kendra (AGRICULTURE SCIENCE CENTRE) on Knowledge and Adoption Behaviour of Farmers*

#### **IMPACT OF KRISH VIGYAN KENDRA (AGRICULTURE SCIENCE CENTRE) ON KNOWLEDGE AND ADOPTION BEHAVIOUR OF FARMERS**

**Prashan and Dr. E. P. K. Das**

The present growth rate of population in India demands Production of additional 5-6 millions tons of food every year for ensuring food security at the household level. To increase the food production at the rate of at least three per cent per year the effort of government organization alone is not sufficient. The Indian council of agricultural researches (ICAR), during the fifth five year plan, launched an innovative project for imparting training in agricultural and allied areas to the farmers, school drop outs and field level extension functionaries in the country by establishing Krishi Vigyan Kendra (KVKs).

#### **objectives**

The as certain the socio- economic profile and trainees and non trainees of KVK To determine and compare the knowledge and attitude of trainees and non trainees towards KVK.

Bharthana block of etawah distric was selected purposively for the present study.

6 village of this block were selected randomly. 10 trainees and 10 non trainees of KVK were selected randomly from each of these sex villages.Total number of respondent were 120 (60 trainees and 60 non trainees).

45.0 per cent trainees and 48.33 per cent non trainees belong to middle age group i.e. 36-50 years of age. 38-33 per cent trainees and 31.67 percent non trainees belong to young age group i.e (20-35) years of age.20.0 per cent trainees and 15.0 per cent non trainees are educated up to junior high school.

48.0 per cent trainees and 43.0 per cent non trainees have medium socio – economic status. Trainees have more knowledge about KVK than non trainees. Same way trainees have more favourable attitude toward KVK than non trainees. Trainees of KVK have more adoption of improved paddy practice.

### *The Dual Role of Christian Women, at Home and in the Workplace*

Economic pressure is the main factors for women's employment. Women also opt to work in order to face future crises or economic disaster. They are also engaged in earning extra money due to inflation and low income of husband. Low or class women work in-order to fulfill the need to the family whereas middle class women work in order to raise the standards of living. But education sense of equality and consciousness of modernisms also inspired Christian women to opt for job. Christian working women are satisfied with their social and economic life. But they remain dissatisfied with insufficient care of their children.

#### **objectives.**

1. To ascertain the socio – economic profile of Christian working women.
2. To determine the material adjustment of Christian working women
3. To analyze the new forms for adjustment with the work.

The present study was conducted in Varanasi and Allahabad district of Uttar Pradesh, India. 200 Christian working women were selected randomly for the study. 100 from Varanasi and 100 from Allahabad.

47.5 per cent Christian working women are between 31-40 year of age. 45.0 per cent Christian working women are intermediate, 28.0 percent are graduate. 50.0 per cent Christian working women are teachers. 28.5 percent are nurse. As far as the marital life of Christian working women is concerned 64.5 percent women have high marital adjustment. As far as adjustment with work situation is concerned 54.5 percent working women said that they are satisfied with their salary. 60.5 percent women said that they have got this job by competition. 54.0 percent women have good relations with their higher authorities at the work place. Only 10.0 percent women have average relationship with higher au-

thorities. Same way they have good relations with their colleagues. 42.5 percent women said that their children are suffering due to their employment.

#### *Dances on Hooves: Embodiment and Interspecies Communication through Dressage to Music*

Horses and humans have a long shared history, spanning millennia and continents. Once vital to the development of human societies via agriculture, transport and warfare, the horse is now predominantly a leisure animal, partnering humans in sport and other forms of physical recreation. Following on from popular success in the 2012 Olympic Games, dressage to music (DTM) represents one contemporary manifestation of the horse-human relationship. DTM is a form of interspecies dance. Combining the quiet, controlled power of traditional dressage with original choreography and musical interpretation, DTM offers an opportunity to consider some of the complexities of embodiment in action.

The ultimate goal of equestrian sport is to achieve "a oneness with the horse, a kind of fluid intersubjectivity" (Birke and Brandt, 2009: 196) and through DTM horse and rider try to achieve this mutual becoming as a form of dance. This paper draws on an ethnography of DTM, including participant observation, interviews and autoethnographic reflections, to consider how the horse-human dance is developed and performed.

If dance is a form of bodily education, then DTM is about training human and non-human bodies, and an attempt to decrease the boundaries between bodies and between species, albeit temporarily. In this paper I consider how DTM, as a form of interspecies dance, encourages human participants to focus both on their bodily movements and on their mental/emotional state, as they attempt to lead their equine partner through the complex dance routine. DTM is a form of competitive sport, which is judged for both technical and artistic merit, and the public performance of the interspecies dance offers an opportunity to consider how the musical interpretation of complex physical practices (dressage, in this case) is produced on and through bodies, human and non-human.

#### *How to Measure Religious Plurality and Mobility in Sub-Saharan Africa? Lessons from Research in Rural Mali*

The study of religious affiliation of individuals in sub-Saharan Africa faces distinct challenges to those encountered in Western countries. The strong influence of traditional religions, coupled with the recent implementation of universalistic religions (especially Christian religions in West Africa) contributed to the adoption of non-exclusive religious practices (syncretism, religion changes). Even though debates on the plurality of religions and dynamics are present in sociology and anthropology, they are rarely based on statistical data, which would allow measuring the diversity of practices and resulting social differences. Conversely, quantitative studies, although they often collect information on the religion of peoples, ignore the diversity of religious practices and mobility. In this paper we evaluate, based on a case study, the relevance and feasibility of a statistical approach to religious practices, taking into account the complexity and variability of practices in the individuals' lives. Our data covers a population followed over 25 years in Southeastern Mali, in bwa villages where traditional and Christian religions coexist. A particular strategy, balancing demographic and anthropological approaches, has been developed to capture the complexity of religious behavior. Thus, in the context of a comprehensive biographical survey (2 villages, 3165 biographies), a specific module has been dedicated to religious itineraries. It recorded for each individual the succession of religions over their lifespan, as well as information to approach the level of commitment to the Christian religion and the level of distance taking from the traditional religion. This study contributes thus to sociologists' and anthropologists' debates on religious mobility by proposing a formal quantitative perspective and other elements on the feasibility of a complex record of religion in quantitative surveys.

#### *Exploring Social Backgrounds of Domestic Violence in Japan: Findings from Japanese General Social Survey 2008*

This study aims to explore social backgrounds of domestic violence in adulthood toward female in Japan. Researches of domestic violence against female have pointed out that experiences of violence in their childhood are related to the opportunity of victimization of domestic violence in their adulthood. Based on this finding, this research will verify whether this phenomenon is observed

as well as in Japan by national sample data, and analyze whether this is related to other factors such as social stratification of origin, home discipline types of father and so on. These analyses are based on the Japanese General Social Survey 2008 (N=2060). This data set includes three types of violence; punched or beaten experience in childhood, punched or beaten experience in adulthood, severely criticized or yelled experience in the past 5 years by their spouse or intimate partner. According to basic analyses, we found that female respondents experienced domestic violence much more than male. For example, 9.5% of female respondents reported that they experienced physical violence by intimate partner or spouse, while 0.5% of male respondents reported. Moreover, 11.8% of female and 3.6% of male reported that they had experience of verbal violence. We also found that people who were victimized by violence in childhood also tended to experience domestic violence in adulthood, both physically and verbally. In addition, the types of home discipline from father were slightly related to likelihood of both abuse experiences. On the other hand, social stratification variables didn't directly affect violence experience in adulthood. Overall the findings indicate that their status of origin is less significant when we predict the likelihood of domestic violence in adulthood. Other outcomes about the relationships between social stratification and disciplining will be discussed.

#### *The Socio – Cultural Changes of Naga Tribes – Its Effect on Women*

The paper talks here on the effect of socio-cultural changes among the Naga tribes of North Eastern part of India and its effect on the women community living in dilemma and fighting constantly either for being deprived of community culture or in adjusting with new culture of plain community. The women in a Naga family though grow up in a matrilineal family, they are allowed equally with man. They are such allowed to migrate to the city for higher education but they are not allowed to violate the community culture inherent in them. As per Naga culture they are not expected to marry non tribe community. In case of any such occurrence, they are expected to be killed by the community people. So in Nagaland, the women in case of her involvement with any male from the outer community they leave the community connection and come down to the plain land for the fear of losing life. The shift in settlement from the tribal community to the plain land does not help them much to get rid of their problems. They are expected to pick up the new culture in which they are culturally and feature wise mismatch. The negotiation with the new community culture puts her to a dilemma. The present paper while talking on the impact of cultural changes on Naga women and difficulties witnessed by them while negotiating with the outer world.

#### *Text and Contexts: A Pragmatic Approach to the Interpretation of Biographical Interviews*

According to the methodological concept of interpretive social research, analysing biographical narratives is conceptualised as a process of re-construction. Methodological writings usually concentrate on theoretical arguments for this approach ("why") and present more or less idealised methodical steps for the procedure itself ("how"). Of course, they can hardly show exactly "how it works". In my paper I will focus on the question what we are really doing by "re-constructing" the meaning of a text. I will suggest a notion of "co-construction" which draws attention to the contexts that are made relevant by the interpreter when she or he produces an interpretation (or better: various 'readings') of a text, e.g. a transcript of a biographical narrative interview. I will introduce a model reflecting on some text-context relations which play an important role in the research practice and will exemplify them by using the case provided by the session organisers.

#### *The Born and Unborn Children of the 1989 Hungarian Transition: Analysing Childbearing Intentions on a Three Waves Family Panel Research*

In 1989 the Sociological Institute initiated a longitudinal panel study among parents expecting their first child in 8 settlements in Hungary. In the first phase of the study 300 women in the last trimester of their pregnancy were asked to fill out standardized questionnaires. In the second phase, the families were revisited 3-13 months after giving birth. Then altogether 194 families (both mothers and fathers) filled the questionnaires plus 50 in-depth *mother interviews* were made.

From 2011 a 3 year research is funded to (re)continue the study of this special family panel data, to follow up the life history of the families taking part in the research 20 years ago. This data collection aims not only to find and ask the parents but to involve their children born then, and grown up adults by now. In the 3<sup>rd</sup> wave 110 families were interviewed.

Our presentation is a journey in time with an interesting account of the societal and demographic changes 20 years after the transition. We give a thorough and detailed picture of the childbearing intentions of both, the parents' as well as the young adult's generation. What are the causes, explanations how the parents' generation realized their childbearing intention, and what are the reasons behind the postponement or abandonment of childbearing intentions of the young generation.

#### *Transitional Justice and Collective Memory: Dealing With Japan's Occupation In South Korea*

##### **Transitional Justice and Collective Memory: Dealing with Japan's Occupation in South Korea**

**Roman David**, Lingnan University, [roman.328@gmail.com](mailto:roman.328@gmail.com)

**Abstract:** This paper examines the effect of transitional justice, defined as measures that deal with historical wrongdoings, on perceptions about wrongdoers. According to major schools on collective memory, the perceptions may stem from the past, the present, or the interplay of both. In order to assess these perspectives, we draw on Freedman's analysis of political ideologies and theorize that memories of wrongdoing have a morphology that resembles ideologies: wrongdoing forms "the core" of memory, transitional justice its "adjacent parts," and denial its "periphery." We hypothesize that transitional justice transforms perceptions about wrongdoers if its reparatory, retributive, and reconciliatory components are all implemented. These components were operationalized as an experiment based on a 2x2x2 factorial design, which was embedded in a cross-sectional survey of 640 adults randomly selected from the Gallup Korea online panel. South Korea was selected as a research site owing to the unresolved legacy of Japan's occupation in 1910-45. The non-linear distribution of the five-item perceptions scale and the significance of the third-order interaction term from a tobit analysis suggest patterns of memory. Perceptions about wrongdoers can be transformed by their abandonment of denial and the implementing of comprehensive transitional justice.

**Key words:** collective memory, morphology, transitional justice, South Korea

#### *Surprise... An International Labor Center In China*

Difficulties accompany the establishment of an International Labor Center in China - political restrictions, historical antagonisms, and logistical opacity. Yet such a Center is now in its flourishing infancy at Sun Yat-sen University in Guangzhou, having found a conceptual "space" in which to thrive. One opportunity for an academic center is to create a space where labor exploitation and resistance can be recognized and analyzed, while not transgressing on the official mandate of the All-China Federation of Trade Unions (ACFTU). Owing to the particular legacy of state socialism in China, workers facing the relentless coercion of capitalism may neither organize themselves nor be organized by a union; the space for this is "occupied" by the ACFTU, but remains largely empty. Similarly, the space for ideological development is occupied by formalistic theory ("socialism with Chinese characteristics" in word; free-market fundamentalism in practice). Yet, increasingly, critical thinking is arising at universities, as students insist on finding a lucid explanation for the contradictions exploding in the middle of their own lives. A Labor Center should help ground this inquiry in the broader intellectual world. Seeking to meet these needs we established the International Center for Joint Labor Research, following several years of relationship building among academics and practitioners in the U.S., Germany and China. This Center now maintains a steady pace of research, analysis, inquiry, outreach, publication, skill development, and exchange. We help cross-fertilize ideas between some of the world's leading labor scholars and the most anonymous, grass-roots level activists, between PhD candidates from remote Chinese villages and battle-scarred trade union officials from former Eastern European socialist states. In short, we provide a platform of mutually respectful engagement between the full spectrum of actors in the global labor family, in the milieu of the world's rising capitalist hegemon.

#### *Testing the Equivalence of Values in Europe with the New PVQ-RR Scale*

Investigating whether European societies share common values requires that the values are in the first place comparable. Since its inception in 2002 the European Social Survey (ESS) has included a short version of 21 questions to measure ten basic human values (Schwartz 1992). This enabled studying European values across countries and over time. Studies assessing whether and to what extent these values are comparable across European societies have led to partly disappointing results: Whereas it could be shown that associations between values and other theoretical constructs of interest may be meaningfully compared across countries, statistical tests of equivalence demonstrated that value means may not be comparable. Methodologists have suggested that this finding was a consequence of the efforts of the ESS to maintain value coverage while using nonhomogeneous items to measure each value. This might change now. In 2012 Schwartz and colleagues have proposed a refined value theory with 19 more finely distinguished values and a new instrument, PVQ-5X with 57 questions to measure these values. This scale has better reliability properties of the older ESS instrument, it takes only 2-3 minutes longer to complete, and most importantly, first results suggest that it displays better equivalence properties across countries and may allow comparing means of at least some of the values across some European countries. The current study investigates the comparability of values in Europe with this new instrument, and enquires if sufficient levels of equivalence are achieved, to study the similarity, commonality or uniqueness of value priorities across European societies.

#### *A Multicultural Perspective on Leisure in the 21st Century – Tradition and Modernity*

The paper focuses on the perception of leisure in Israel in terms of time, activity, value, and self-realization. Our aim is to explore the changes in the perception of leisure in Israel over the 65 years of the state's existence; identify the factors that shape the perception of leisure and styles of leisure in Israel, a young state that has fought for its existence for many years, and whose citizens also experience existential anxiety, and as a state whose cultural foundation combines tradition and modernity, a state whose social fabric includes longstanding new immigrants, minorities, religious and secular individuals. We will explore the leisure culture in Israel and the changes that have occurred in it. This paper may have practical implications for the educational challenge of leisure education that promotes understanding of others, tolerance, and may even pave the road to unity.

#### *The Role of Food Safety Risks in Facilitating Agricultural Transitions: Alternative Beef Production in Alberta, Canada*

Alternative beef production in the Province of Alberta, Canada is evaluated in the context of recent discussions of sustainability transitions. By combining the insights of Archer's sociological Reflexivity/Morphogenesis Theory with Sustainability Transitions Theory, we analyze the findings of a qualitative case study comparing the interviews of conventional and alternative beef producers, treating alternative beef production as a niche operating within the dominant regime of global industrial agri-business. In particular, we highlight the role of food safety crisis events in niche dynamics. Among our key findings are that food safety crisis events—some of which emerge as a direct consequence of the socio-ecological contradictions embedded in industrial agriculture—represent opportunity windows for the further establishment of system niches with the potential for contributing to sustainability transition. Further, the anticipated common identity among niche producers was not borne out empirically; to the contrary, producers are motivated to support this niche on the basis of a wide diversity of histories and sentiments. Finally, our study raises the possibility that the long-term viability of alternative agriculture sectors may well depend upon their stabilization as niches, rather than their expansion.

*Reconceptualising Family: Negotiating Sexuality in an Era of Neoliberalism*

Based on qualitative research, this presentation examines the complex kinship relations involved in constructing queer families. We focus on the heterogeneity of queer families; the difficulties encountered in association with processes of recognition and how this is negotiated across different contexts within queer families, extended families, and bureaucracies; how sexual subjectivities are articulated within the context of 'family'; and concerns raised by queer families in relation to children's early schooling. Of particular importance to this discussion is awareness that in a governmental climate of neoliberalism, there are contradictory and competing discourses about queer subjectivities, the child, and constructions of family. The queer subject is frequently and increasingly positioned as a targeted consumer and this consumption extends to accessing foster care, adoption, reproductive technologies, the healthcare system, and education. However, despite the invitation to queer families to be consumers in these contexts, the normative family is still viewed as heterosexual, with queer families continuing to be excluded and rendered invisible in representations of family. Early education should include knowledge about different kinds of kinship relations including queer families, non-biological formations of family, including fostering and adoption, and alternative reproductive practices and technologies through which many young children are now conceived. Currently, most early childhood education and primary school curricula in Australia do not reflect the reality of many young children's lives. Educating all children and youth about alternative families and sexuality is critical to children becoming socially informed citizens and politically active members of their communities who can participate in creating alternative and more equitable futures.

*Gangnam Style Versus Eye Of The Tiger: People, Police, and Procedural Justice In Indonesia*

This paper explores whether people in Indonesia would welcome a procedural justice model of policing. I take procedural justice to involve the quality of police decision-making, the quality of treatment extended by police to the public, and moral similitude between police and citizens. While a large volume of work has been published on procedural justice and policing since Tyler's model was developed in 1990, this work has been predominantly quantitative (and largely grounded in psychology), and almost exclusively based in the US, the UK, and Australia. In exploring the applicability of procedural justice to policing in Indonesia, this paper extends the geographic scope of the procedural justice model, and provides a richly contextualised and nuanced account of people's everyday experiences with police within a procedural justice framework. The article draws on data from nine months of ethnographic fieldwork on policing in Indonesia spread between 2011 and 2013. What this data suggests is that people in Indonesia would be receptive to a procedural justice model of policing.

*The Category of Religion in Alain Touraine's Critique of Modernity*

Alain Touraine's distinctive contributions to sociological theory include his theory of action, his approach to social movements and his critique of modernity which offers a 'post-social' approach to contemporary societies. In *Critique of Modernity* (1992) his vision of the transition to modern society is one of conflict between the technocratic vision of industrial society (system) and new movements to liberate the subject (actor). One of Touraine's key aims is replace normative, integrationist notions of modernity and provide a sociology of the subject as a corrective to institutional sociology. He draws on evidence and examples from the forces of modernization at work in nationalism, markets, consumption and sexuality. In subsequent publications he develops the political and ethical aspects of his critique at greater length, with more frequent references to religion. The paper will explore this development which has puzzled some commentators and intrigued others. One of the arguments of his latest book *La fin des sociétés* (2013) opposes mainstream secularization theories, insisting that the liberation of the subject from alienating dogmas and sacralised institutions allows a new kind of subject to emerge, laden with meaning for the contemporary world. Touraine neither intends to reinstate a principle of transcendence nor to oppose the secularization of the social order. But subjectivation of religion is one way for subjects

to apprehend human destiny and fill the void between instrumental action and cultural orientation. The paper will investigate a number of questions which arise from Touraine's latest presentation of the problem of modernity including: the relationship of religion to the categories of individual, subject and actor; religion, culture and the principle of universalism; and the capacity of critical sociology to capture the self-transforming character of social relations in modernity.

*A Case Study in IP Arising in Art/Science Performance Research and Transdisciplinary Collaboration*

In this paper, I discuss the projects and practice of the art/science collective Davis & Strathmann as a case study in transdisciplinary, collaborative, practice-based performance and design research with a unique history of unresolved trademark and intellectual property (IP) conflicts between members.

Transdisciplinarity is examined through the history of two projects, *Sink* and *Hunter/Symbiosis*, as examples of work conceived by Davis and developed for the exchange between members from U.S. and Argentina and as part of a six-week art/science design residency at the Helen Riaboff Whiteley Center, University of Washington's Friday Harbor Laboratories, highlighting the expertise of project members in audio and media production, performance and critical studies, publishing, concept and visual design, and on the application of these shared practices toward art/science research.

Issues arising from creative practices including divergent views on the role of performance as documentation, media authorship, process versus product, ethics and professional discourse, and transparency are examined and, specifically, methods of production, communication, administration, and IP leading to the dissemination of the Davis & Strathmann collective. In particular, this study examines unresolved IP challenges after the residency including the abuse of on-line administrative permissions, exploitation, irresponsible behavior toward the collective identity, threats of legal action and IP misconduct with regard to the exhibition of future work, subversive efforts to deface fundraising platforms, and the withholding of media by collective members for personal gain.

This study examines contributions of members to the above issues, how these actions may have been avoided, and steps taken in preventing the recurrence of IP conflict. In closing, it offers suggested actions and recommendations for resolving complex performance, creative, and strategic agendas addressed by individuals and organizations seeking to avoid IP conflict and to improve communication standards in their field. Supported by the National Science Foundation under Grant No. 1142510.

*Passion, Experience, and Biography: What Can Tango Dancers Tell Us?*

Biographical researchers depend upon communication with their informants, usually in the form of a chronological story about their lives. However, not all experience can be put so easily into words, let alone into a linear narrative with a beginning and an end. Drawing upon my research with people who are passionate about dancing Argentine tango, I will explore how they make sense of this passion – a passion which is highly embodied, attached to strongly-felt emotions, and often implicated in biographical transformations, yet difficult to capture in words. I will argue that their attempts to talk about their passion for dancing tango can help us as sociologists to expand our discursive approaches to the investigation of biographies in productive and provocative ways.

*Promoting Gender Equality Using CEDAW: The Case of Zambia*

In 1963, the UN began to prepare language for a single instrument describing the rights of women; this declaration was drafted to lay the foundation for a treaty that specifically addressed issues pertaining to women's rights. In 1979, the General Assembly adopted CEDAW and it entered into effect in 1981. The Republic of Zambia ratified the convention on June 12 1985. Zambia has submitted two reports in prudence of CEDAW's Article 18; the third and fourth reports that covered the period from 1964 to 1997 and the fifth and sixth report submitted in 2007. The Committee on the Elimination of Discrimination against Women has reviewed both these reports and published summary of records of the proceedings. This study analyzes the reports submitted to the CEDAW committee, the records of the proceedings and data from a study conducted in a peri-urban settlement in Lusaka, Zambia, which includes observations, secondary analysis of in-country newspapers, 60 in-depth qualitative interviews with and the administration of a survey instrument to 205 women in the study community. Findings suggest that

since its ratification, various parties have deployed elements of CEDAW in an effort to address gender inequality. This paper discusses the progress the country has made since it ratified the convention in 1985 and the ways it has negotiated customary laws and traditional practices, which are often in direct contradiction with the principle of CEDAW. The findings show how the settlement has adopted elements of the convention to improve gender equality, individuals describe the changes in their community, and the convention can be further implemented to increase the rights of women in Zambia. This case offers important implications of how multiple agencies can effectively utilize CEDAW as leverage, and at times succeed, in changing negative gender ideologies.

##### *Women's Capabilities and Empowerment in Lusaka Zambia*

Sen (1985) states that resources and agency constitute capabilities, which are the potential that people have for living in the way they want to and of achieving valued ways of being and doing. Drawing on Sen (1985), Kabeer (1999) defines empowerment as the ability to exercise choice, and states that this ability is composed of three interrelated dimensions: resources, agency and achievement. The concept of empowerment has been defined in several ways, including decision-making capabilities, and is often proposed as a way to improve women's overall wellbeing. For example, due to women's increasing risk for HIV/STIs, several organizations have promoted interventions that empower women as a way to improve their health outcomes and reduce their sexual risk. This study focused on women's empowerment and its relationship to sexual risk and sought to delineate the roles of the family and social context in both empowerment and sexual risk. Data from the study, conducted peri-urban settlement in Lusaka, Zambia, includes observations, secondary analysis of in-country newspapers, 60 in-depth qualitative interviews with and the administration of a survey instrument to 205 women in the study community. Findings from this study highlight the complicated nature of the concept of empowerment. Results indicate that the nature of a woman's relationship with her male partner is a crucial mediating variable in her sexual risk. A positive partner relationship was associated with lower levels of violence and men's sexual risk behaviors. Further, joint decision making between a woman and her partner was associated with lower risk for HIV, whereas individual decision making by the woman or the man was associated with increased risk for HIV. This study lends support for empowerment interventions that take a holistic approach to risk reduction by not only involving women's male partners but also targeting changes in societal and cultural norms.

##### *Bodily Aesthetic Affects in Trans Erotica: Towards a Wider 'Spectra of Desire.'*

The sexualisation of trans people is a thorny issue due to the pathologizing undertones within sexological literature. After many years of being on the one hand, silenced about sexuality or on the other hyper-sexualized, for fear of being pigeon-holed as unworthy recipients of medical interventions by the medical teams providing healthcare, transsexual and transgender people have started to explore and produce their "sexual bodies" and represent them in novel ways through prose, poetry and pornographic film. 'The political move to illustrate the wider 'spectra of desire' (Stryker, 2006) and experiences of trans-sexuality was announced to be politically important as a way of shifting stereotypical associations surrounding trans embodiment and sexuality generally. These projects of sexual representation rely on transforming spaces and discourses within cultural mediums in which transpeople explore their sexuality. Pornography and erotica are two sites that offer personalized accounts of trans-sexuality that often speaks back to medicalization. I argue, in the words of Kate Bornstein (1994: 163), these erotic productions offer "irreverence for the established order" and incorporate the "often dizzying use of paradox" which underpins my analysis. Using trans erotica texts, I will illustrate that 'transsexualism' and 'transgenderism' are not solely about gender, as a core characteristic, and suggest that sexuality is part of trans subjectivity too. I will suggest further that new representations of trans-sexuality within the erotic representations pose challenges to the medical policy and practices surrounding trans medicalization and the sedated ideas surrounding transpeople as either non-sexual or hyper-sexual. This focus on erotica allows for new analyses and conceptualizations of trans-sexuality that incorporate bodily aesthetic affects of the transitioned and transitioning body. Simultaneously, understanding trans bodily aesthetic affects helps us move away from territorialized identitarian markers, such as gay, lesbian and bi and explore a wider spectra of trans desire.

##### *An Emerging Profession: Mechatronic Engineering In South Africa*

The professions have perpetually arisen as a topic of contention within the sociology of professions. For the most part, these debates have centred on the definition of the term 'profession.' However, only a few have concerned themselves with the question of how new professions emerge and become established. Fewer have investigated this process contextually. The paper explores this question from the perspective of new, emerging professions in South Africa. It attempts to interrogate the question in two sections. The first sections draws on the literature within the sociology of professions and the relevance of traditional professions and models of professional development. It will also draw on theoretical meanings embedded in the emergence of a new profession. These include the concepts of qualification, cultural mandates and closure. Through this analysis, I will argue that a contextual or practical analysis into the emergence of professions is necessary.

In the second section, I draw on the practical example of the emerging profession of mechatronic engineering in South Africa. This section, based on fieldwork, focuses on 3 issues. These include- what constitutes mechatronic engineering as new or emerging, how the concepts discussed in the first section interact or shape the emergence of mechatronic engineering, and finally, the challenges to the emergence of this profession in South Africa. The paper draws on current qualitative research throughout the country using the snowball or referral method. This paper hopes to contribute South African voice to the literature on emerging professions and provide new insight into a novel profession.

##### *'Fitter, Faster, Stronger, Better': Crossfit as a Reinventive Institution*

In a world where health and fitness are upheld as values that we should all aspire to, we have witnessed the emergence of global, corporate 'body projects'. One of these body projects is CrossFit – a fitness regime founded on a 'belief in fitness. Its frontman, Greg Glassman, claims that CrossFit is designed to 'best prepare trainees for any physical contingency – prepare them not only for the unknown but the unknowable' (Glassman 2010). Careful scrutiny of the promotional culture and language of CrossFit reveals that it is not unlike the dogma of both mainstream and unconventional religions, including cults. The serious implications of cults are evident in the case of Jim Jones who successfully convinced more than 900 of his cult followers to take their own lives in order to avoid a range of implausible eventualities. This study examines the beliefs and motivations of CrossFit trainees and coaches and contrasts them with the views of avid gym-goers and fitness trainers who do not subscribe to the CrossFit regime. Findings suggest that elite fitness programmes, like CrossFit, constitute what Susie Scott calls 'reinventive institutions', which are aimed at finding and cultivating the 'perfect self'. Using Scott's notion of 'performative regulation', the paper highlights the parallels between CrossFit coaches and trainees and cult leaders and disciples. It argues that the gurus and devotees of the CrossFit regime, are caught in a contradiction between 'forging elite fitness' on the one hand, and establishing a CrossFit community on the other.

##### *The Revolution Will Be Televised: Youth, Political Protest, and Hip Hop From The U.S. To Egypt --CANCELLED*

The impact of hip hop music has transcended borders and transformed global understandings concerning the relationship between music and protest. This paper will use the emergence of the hip hop movement by Arab youth as a lens to analyze the influence of United States hip hop and its subsequent influence on global hip hop culture. It examines in particular, the Egyptian rap scene and the crucial role of rap music in galvanizing youth to act and in articulating the betrayal felt by many Egyptians from President Hosni Mubarak's oppressive regime. The use of hip hop as a form of solidarity and a tool against political oppression was brought to the fore during the Arab Spring in 2011, which set off a number of revolutions in the Middle East and North Africa. Rappers such as El General from Tunisia, the Arabian Knightz and Deeb from Egypt, and the Syrian American artist Omar Offendum—frequently point to United States rappers such as 2Pac, Biggie, and Public Enemy as providing inspiration to their craft. I argue that the emergence of rap music in Egypt was fueled by many of the similar exigencies (high youth unemployment, failed revolutionary dreams, and political marginalization) that fueled the development of the hip hop movement in the United States but that its impact on the political establishment has been even greater. The Egyptian hip hop scene that came of age during the revolution showcases how rap music's influence on citizens and political institutions has dramatically increased in the modern global era. In other words, this paper argues that we can learn a lot about

the current state of youth led social movements by examining Arab rap music during the Egyptian revolution.

#### *Why Dead Ends May Remain Well-Trodden Paths: Epistemic Hopes and Obstacles in the History of the Delphi Technique*

Quite in contrast to any conception of the scientific process as being determined by verification plus adoption versus falsification and dismissal, one interesting feature of ideas in the (social) sciences is the relative inertia that accompanies their identification as dead ends. Even if under relentless fire by a wide array of critics, proponents of a dead end idea can continue to believe in its quality and capacity and defend it against any kind of attack. This might, in some cases, be explained by reference to Leon Festinger's theory of cognitive dissonance, and the historian of science can analyze the ways in which proponents attempted to reduce the dissonance extant between their claims and reality. However, especially in the social sciences and humanities, a clear-cut event that causes the dissonance is missing. The paper proposes to use the concept of epistemic hopes for such cases. As an analytic category, epistemic hopes are the expectations towards capacity, productivity, efficiency, and impact of a scientific idea that guide the author(s) of this idea in its creation and development. Moreover, epistemic hopes can also be used as an explanatory category. They can draw attention away from the flaws of one's own idea and obstruct an objective assessment of its capacity, productivity, efficiency, and impact. In this, they are similar, but not identical to Gaston Bachelard's epistemic obstacles. Referring to the history of the Delphi technique, the paper discusses the concept of epistemic hopes and its relation to Bachelard's epistemic obstacles.

#### *ARE Water Conflicts Changing The Modern State? Reflections On Informalization In Mexico City*

In the past decades, the sociological literature on environmental issues and natural resources has attempted to characterize the demands, the actors, and the international channels used by environmental movements, and in environmental protests and struggles. This paper is located in this literature, focusing primarily on water conflicts in a large city of the Global South.

More specifically, using a political ecology framework, the paper explores how the notion of informality can shed a new light on hydropolitics through a discussion of the modern state's relation to non-state actors. The paper compares traditional political mechanisms such as clientelism or electoral promotion, with emergent informal practices such as the multiplication of intermediaries and water provision through a network of water trucks ambiguously subsidized by public institutions.

Through an empirical analysis of the various means through which people face hydric stress in Mexico City, the paper offers a reflection on the transformation of the Mexican modern state.

The chronic insufficiencies of the modern state (or of governments with fragile legitimacies) articulated with clientelistic practices channelled through local intermediaries illustrate clearly how formalization and informalisation processes work in a country where formalization was never complete, but where the modern state has a long tradition of authoritarianism. The aim is to better understand the instrumentalization of the water crisis in current state restructuring processes, and its impacts on hydric precariousness.

#### *River Doce: Water As an Environmental Perception Factor*

The act of perceiving the environment where one is inserted awakens the notion for co-responsibility of the users, leading them to better understand the interrelationships between man and environment. Of those: cognition, perception and interpretation of levels and dimensions of river Doce's reality, its singularities and importance contribute to the understanding of visible and non-visible transformations, tangible or not, of the landscape, perceived and interpreted as heritage of the people, which must be passed on to future generations. The river Doce that bathes the city of Governador Valadares, Minas Gerais, Brazil, is the 10th most polluted river in the country, according to the Brazilian Institute of Geography and Statistics (IBGE). Currently, its water surface is extremely reduced, at serious risk of compromising the city supply. Having been raised by its margins, River Doce represents memory, identity, culture and history to Governador Valadares. This study presents the social perception of water manifested in a survey

of high school students and teachers from public and private schools of Governador Valadares. Analysis of data collected through the questionnaire allowed the assessment of links between attitudes, values and social practices with regard to the Doce river, natural and cultural heritage of the community. Preliminary information identified in this exploratory study is relevant to the formulation of public and private policies that focus on the sustainable development of the Doce river basin.

#### *The Senses in Scene*

##### **The senses in scene.**

This article reflects part of the trajectory of the collective *Theater of the Instant*, associated with the research group *Poetics of the Body*, from the Department of Scenic Arts at the University of Brasília. This group, since 2009, gathers researchers and artists around the processes of scenic creation, and exercises inter-disciplinarity through the interface of theater and other areas such as literature, music, aesthetic computing and new media. It also aims at experiencing processes of reception, with research dedicated to provoking the spectator's different senses, amid other aspects of experimental dramaturgical treatments.

This group's creation presents itself as an unfolding of the research begun in my doctorate in anthropology, which is described in the book *Being in Scene: Flower in the Wind. Ethnography of hybrid looks*. The book took from training in traditional techniques such as the seita-ho, a bodily education of Japanese origin that aims at rescuing and maintaining the body's sensibility and the yoga of voice, a technique that unites chanting traditions of Indian, indigenous and African cultures. The contact with these outlooks offers an exercise in displacement, the construction of a gaze and a body that transform day-to-day life and the situations of aesthetic performance.

In this friction between traditional and contemporary knowledge there is a focus on experience, with an emphasis on perception and the relationship with the senses, both in those responsible for the performance and in those watching it. There is an exploration of new sensorial experiences and an intention of expanding the potentiality of interaction and communication with the other. A notion of body-memory is at work, looking to create a field of activating imagination so that the fragments of each other's life-stories emerge in the direction of a web of fictional dramaturgic constructions.

Keywords: experience, senses, body-memory, imagination.

#### *A Pharmacist without Sweets. Bending Incentives to Enlarge the Scope of Practice of Pharmacists in Primary Care*

To improve patient safety in primary care regulatory agencies aim to enlarge the scope of pharmacists in primary care in the Netherlands. We started a study to measure the effect upon patient safety of the employment of clinical pharmacists in practices of general practitioners (GPs). For this study, we had to define the exact position and role of the clinical pharmacist in GP practices. We set two conditions. The first condition was to align the incentives for patient safety with pharmaceutical care. The second condition was to create a stable jurisdiction for the clinical community pharmacist.

The particular position of the clinical pharmacist in primary care in the Netherlands is a perfect case to conceptualize incentives and interests as 'incenterests'. Financial incentives are important features of the position of pharmacists in the community pharmacy. In addition to financial incentives, an uncertain jurisdiction shapes the professional behavior and identity of pharmacists.

To conceptualize the 'incenterests' for medication safety, we conducted a literature study, analyzed policy documents and did a pilot study. In this pilot study, the first author acted as clinical pharmacist in GP practices. The data were analyzed with the agency theory in institutional economics and by sociological theory of new professionalism.

Based upon the analysis we came to the following intervention. From 2014 onwards, we will employ ten clinical pharmacists in GP practices. As the pharmacists have a fixed income, they have no incentives to dispense medication nor to stop medication. In addition, the clinical pharmacists will become part of the community of GPs as they share the offices and their case notes within the GP practice.

## Domestic Violence and Rationality on Small Islands

### Quality of Governance in Domestic Violence Policies in Small Island Development States (SIDS): a Case of the Dutch Caribbean

Small island development states and territories face special difficulties in taking care of domestic violence policies. Characteristics of governance need their own fine tuning in a context of fear, a sensitive subject, and small scale territories, where everybody knows each other, professionals, public servants, politicians, victims and perpetrators. From a rational choice perspective we look at how professionals and public servants in such a context deal with conflicting values, public service motivation, incidents and the public's view. How do the values of politicians and street-level professionals relate and what care institutions and juridical institutions do matter? The qualitative research (40 interviews with professionals and public servants) took place in the three Dutch Caribbean islands (Bonaire, St. Eustatius en Saba) in the context of the intended ratification of the CAHVIO-Treaty (European Treaty against Domestic Violence and Domestic Violence). From an external perspective the coping strategies found could suggest irrational elements, while they were rational from an insular cultural perspective. Conflicting modern and traditional value systems slow the quality of governance.

### Prostitution Policy in Sweden

In 1999, Sweden became the first country in the world to adopt a law that criminalizes the client in prostitution – but not the person offering sexual services. Since then, Finland, Iceland and Norway have adopted similar legislation, making it illegal to purchase sexual services but not to sell them. The wording of the Swedish Sex Purchase Act is gender neutral. However, the law was politically motivated, discussed and enforced from a gender equality perspective in the context of women selling sex to men, and prostitution was constructed as a part of the patriarchal oppression of women. In contemporary time, the law is largely uncontroversial and has been officially accepted across the political spectrum. However, questions regarding the effectiveness of the law remain somehow unanswered.

In this paper, the "language of prostitution" in a Swedish context is put under scrutiny and is analysed in relation to gender, ethnicity and sexuality. Drawing on empirical data consisting of interviews with Swedish police officers and social workers, my analysis indicates that the implementation of the Sex Purchase Act differs from the explicit intentions in the draft works. Firstly, practitioners do not seem to perceive the law as a mean to achieve gender equality. Instead, they cast prostitution as a 'human problem' and how they apply the law is largely dependent on stereotype notions that exist on certain groups involved in prostitution. Secondly, analysis shows that the enforcement of the law is highly gendered, racialised and sexualised. On a practical level, the law is used in a much larger extent in relation to men buying sex from foreign women working in Sweden, and used as a strategy for border control. In relation to men buying sex from men, however, the practitioners do not comprehend the law as applicable at all.

### Social Networks and Popular Movements in Brazil

Brazil witnessed, in 2013, a growing wave of social manifestations that spread throughout the country. Initiated by secondary school and college students, the movement took over an increasingly large dimension potentialized mostly by the use of social networks. With diverse causes, the movements revealed a generalized popular dissatisfaction, which is compared to that of specific historical moments of the country, such as the movement *Diretas Já* and the support towards the impeachment of president Fernando Collor de Melo. This article specifically intends to discuss the appropriation from the popular manifestations of a concept created by an advertisement campaign launched by and automaker on the occasion of the Confederations Cup of football. The campaign, called "Vem pra rua" (meaning "come to the streets"), was subversively used in the realm of the social manifestations symbolizing the calling for all the population to join the manifestations for the defense of diverse causes, such as the improvement of public transportation, education, healthcare, the end of corruption, among others. From the standpoint of the social movements, which were the meanings (re)built from the appropriation of the campaign? How should the automaker deal with this situation? The initially violent reaction of the government towards the manifestations gave the movement strength, because it brought up the discussion about the freedom of speech, in all instances. In this context, it was demanded of all social actors to give their opinion and position themselves on the debated matters and about the consequences of the movement in general. It is thus necessary to discuss about how a social movement can appropriate of social networks and of the institutional discourse of an organization and the role that social networks

play today in social manifestations in opposition to traditional media and the role of the government.

### The Young Students of Th University of Brasília: Professional Aspirations

This communication is supported by two central themes addressed by contemporary sociology: the changes in the transition to adulthood and the rise of the values of self-expression, from the perspective of post-materialist theory. This study examines how the young university students from the University of Brasília, entering the 1st half of 2012 (N3564), reveal their aspirations in the work sphere. We use a quantitative data obtained by means of a framework of work values, similar to those that have been used in the World Values Survey research. We are mapping the main work values between this group. Inglehart's thesis was observed in significant valuation question "interesting work", however, in this group, there is still a predominance of aspiration "job security". The data express a transversely this scale of values when analyzing the differences between the social origins, gender and scientific area of each course. Is important to note that this is an exploratory study, it is worth while track for future studies aiming to better understand the various dynamics experienced by university students, among them the aspirations in the sphere of work, as well as adjustments of these tables of values throughout the process transition to adulthood.

### Nudging Wage Earners into Accepting the Burden of the Financial Crisis: The Politics of Choice and the Individualisation of Retirement Risks

During the last two decades of the 20th century a shift in the finance of old age pensions, from a PAYG logic towards a funded strategy based on equity finance, appeared to be a miraculous solution to the problem of an ageing society. Countries with a tradition of social insurance engaged on a path of gradually replacing the second tier function of their public pensions by privately funded occupational pensions. Countries with a Beveridgean tradition removed the PAYG elements from their funded second-tier by reforming their funded DB schemes (tampering with the indexation to wages and inflation of pension accruals and benefits), or by altogether closing down DB schemes and replace them by DC systems (in an attempt to limit the back-servicing liabilities that form a PAYG element in funded DB schemes). During the final decade these changes seemed to come at no cost to future pensioners, as stock markets were booming. But following the dot.com crisis of the turn of the century the first dark clouds started to appear, and after the banking crisis the risk, uncertainties and transaction costs of individualised forms of funded retirement provision became apparent. One way that policy makers seem to have sought to make these new risks and burdens, that individuals increasingly are exposed to, acceptable to the population, was to masquerade them under the mantra of individual choice. The paper investigates how this individualisation has taken shape in a number of different kinds of welfare states: Germany, Australia, the Netherlands, Sweden and the United Kingdom. It not only looks at the attribution of various risks, but also at measures that attempt to counteract possible adverse effects of expanding individual choice, such as the myopia and bounded rationality of the pension plan participants, and the possible opportunism of private providers of pension products.

**DE JONG, BART\*** (Municipality of Haarlemmermeer, [bart.de.jong@haarlemmermeer.nl](mailto:bart.de.jong@haarlemmermeer.nl))

### Understanding Amsterdam Airport Schiphol through Controversies

Due to its ambiguous multi-actor character, the decision making process concerning complex governance systems, such as Amsterdam Airport Schiphol (AAS), is experienced as being incremental and highly indecisive. That is why in these cases collaborative arrangements of involved stakeholders are often created to give advice on how to tackle these complex problems. In this paper I would like to stress that complex problems and policy deadlocks cannot be resolved by the use of specialist knowledge and technical expertise. Even the opposite may be true: There is a multiplicity of stakes associated with specific issues while, at the same time, there are often disagreements about values, norms, objectives, research, information and knowledge; leading to complex and unstructured problems. This means that reductive solutions are not available.

To shed a different light on Schiphol's deadlocked situation, I will use the Actor Network Theory (ANT). ANT not only takes the mutually intertwined impact of facts and values, governance and governance systems for granted, but it is more

focused on (collaborative) politics in the making through socio-technical controversies. I will use these theoretical insights to analyse the quest for an alternate route design for the Schiphol Spijkerveer departure in 2009-2010. Redesigning this departure route became focal point of a major controversy between the concerned actors. The case will point out that decision-making processes should focus on the disposition of complexity: as a multiplicity of stakes and divergent perceptions arise, disagreements, ambiguities and uncertainties ensure that the decision-making process takes place in an undefined area somewhere between facts and values, where science and politics are mutually intertwined. By shifting the focus from "studying complexity" to "studying the disposition of complexity", deadlocks can be understood in a different way, leading to new insights on how to break free from them.

#### *Scale Effects in Workplace Innovation*

Workplace innovation is defined as the implementation of new and combined interventions in work organisation, HRM and supportive technologies, and strategies to improve performance of organisations and quality of jobs. Previous research indicated a positive relationship between workplace innovation and organisational performance. Through OLS regression we empirically tested whether firm size moderates the relationship between workplace innovation and organisational performance. We used a sample of 1,132 Dutch firms. Our database consist of variables from The Netherlands Employers Work Survey (NEWS; 2010) and balance sheet statistics for non-financial firms (NFO; 2010 and 2011) collected by Statistics Netherlands (CBS). Organisational performance is operationalized as the labour productivity growth, employment growth, and growth of return on capital. Firms are categorised into four size classes: micro firms ( $\leq 9$  employees), small and medium firms (10- $\leq 249$  employees) and large firms ( $\geq 250$  employees). Workplace innovation is measured with four sub-constructs: strategic orientation, flexible work, smart organising and product-market improvement. We find a combined effect of firm size and strategic orientation on labour productivity growth. In terms of labour productivity growth strategic orientation is significant more beneficial for micro firms compared to small and medium sized firms. Additionally, the result show a combined effect of firm size and product-market improvement on labour productivity growth. For micro sized firms product-market improvement seems to have a negative effect on labour productivity growth, whereas it has a positive effect on labour productivity growth for small and medium and large firms. Furthermore, we find an interaction effect for firm size and product-market improvement on employment growth. For large firms product-market improvement has a negative effect on employment growth, however it has a positive effect on employment growth for micro and small and medium firms. This indicates scale effects exist and policy measures aimed at stimulating workplace innovation should differentiate between size classes.

#### *Farmer Approaches to Animal Welfare: Understanding on-Farm Animal-Human Relations*

In the last three decades, livestock production practices have risen to importance in scientific, political, and public debates on sustainable development. Topics of debate related to livestock farming's environmental impact, food safety and security, and animal and human health have received considerable sociological attention. Animal welfare issues, and particularly the farm animal-human relations implicated in these, have only recently become a topic of sociological scrutiny and remain under-theorised – despite an increasing public and policy attention for animal welfare. This paper aims to contribute to the understanding of approaches to animal welfare by a group of actors whose actions are particularly consequential for farm animals' well-being: farmers. The paper argues that to date studies of farmers' stances on animal welfare have focussed too little on how these stances are informed by farmers' embodied, and socially and materially contextualised interactions with their animals. In this light, the paper develops a practice-oriented conceptual framework that allows for an analysis of the situated dynamics of farmers' animal welfare approaches. Drawing on qualitative interviews with Belgian pig farmers about their implementation of EU animal welfare legislation that required them to group-house their gestating sows, the paper discusses how farmers 'negotiate' an amalgam of political, ethical, socio-economic, and practical demands when designing and managing their daily interactions with their sows. Furthermore, the paper analyses how farmers' understandings of their sows' welfare experiences and needs were affected by their daily interactions with these animals in the context of the new sow housing system. Moving beyond understandings of farmers' involvement in animal welfare governance as economic rational actors or as rather passive recipients of governmental and market-based

norms, the paper ends with a reflection on the scientific and policy implications of its more situated understanding of farmers' animal welfare approaches.

#### *The "Born Free Generation" in South Africa: Vulnerabilities and Aspirations -- CANCELLED*

Almost twenty years after the end of apartheid, South Africa remains one of the world's most unequal countries. Despite promises of a 'better life for all', racial and class inequalities continue to shape young people's identities, life chances and dreams for the future. 'Black' and 'Coloured' youth are especially vulnerable, with high levels of school drop-out, unemployment and large numbers of 'discouraged work seekers'. The situation has given rise to a new moral panic around the country's exceptionally large youth cohort. Yet little is understood about how ordinary young South Africans experience their reality of un(der)employment in the context of transformation and promises about upward mobility. This paper draws on 18 months of ethnographic research with 6 young South Africans of the so-called "Born Free generation" in the Western Cape. The study provides rich insights into the participants' current life trajectories and their families' background. Detailed family histories enable us to unravel how differences in racial categories, geographical location, and class influenced the decisions people made at the time of the transition. Such decisions continue to affect the socio-economic position of many young people today. In-depth research also enables us to focus on individual trajectories, for example, in the search for employment. The paper describes detailed trajectories in search of work and the "saw tooth" patterns of youth transitions through employment stages. The discussion identifies gaps in our understanding of life with long term unemployment or constant short term employment, problematizing the ways in which employment or unemployment are generally measured and the category of young adults "Not in any kind of Employment, Education or Training". The work notes severe psycho-social consequences for young adults in un(der)employment, and offers detailed insights that are relevant to policy discussions about a Basic Income Grant or Youth Wage Subsidy in South Africa.

#### *Le Cas Oscar Pistorius, Analyse Des Débats Médiatiques à Propos De La Technologisation Du Corps Humain*

Oscar Pistorius est un athlète Sud-Africain bi-amputé fémoral. Il court avec deux prothèses insérées sous les genoux. Ses performances le porte sur les plus hautes marches des podiums en sport adapté. En 2007, il demande l'autorisation de participer aux Jeux Olympiques (donc avec les sportifs "valides"). Cela lui est

interdit par la Fédération Internationale d'Athlétisme en janvier 2008. Il fait appel auprès du Tribunal Arbitral du Sport qui autorise sa participation en mai 2008. Depuis cette date, le "Cas Pistorius" alimente une controverse dans les médias autour de deux questions.

- Est-il légitime qu'il participe ou non aux J.O. ?
- Est-il avantagé par ses prothèses de jambes, au détriment des autres athlètes non appareillés ?

L'analyse des discours de cette controverse médiatique montre qu'Oscar Pistorius pose un problème de catégorisation anthropologique. En effet, tant qu'il court dans la catégorie « sport adapté », il ne suscite aucune réserve. Par ailleurs, la controverse ne porte pas sur le fait qu'il soit handicapé, car dans l'histoire plusieurs handicapés physiques ont participé à des Olympiades sans provoquer ni rejets, ni débats. Mais pour la première fois, un sportif produit ses performances grâce à un appareillage technologique rajouté au corps et celles-ci se rapprochent des performances des sportifs « valides ». Ce faisant, Pistorius remet en question les imaginaires sociaux définissant la place des personnes handicapées ; elles sont « moins » que les personnes dites « valides ». Il oblige ainsi les sociétés à s'interroger sur la place des personnes qui, suite à un accident, une maladie, ou un choix personnel, vivrait avec un corps « augmenté » par une hybridation technologique.

#### *Demography in the Early 21st Century: An Insight from French Doctoral Theses in Population Studies*

French demographers have played a major role in the development of quantitative techniques in demography. More recently, population studies more opened to other social science disciplines and qualitative approaches have flourished in many countries. How does demography relate to population studies in recent doctoral studies in France? Which topic do these studies address? In which institutional context are they realized? To answer these questions, we draw on a database of doctoral theses defended in France during the last decade (2000-2012). This database has been built using the French Documentation University System and related indexing language. The topics are classified in 14 categories. Among 851 references, 746 theses have been selected and are analyzed using EXCEL, SAS and IRAMUTEQ software. Analyses performed include principal component analysis and textual analysis.

Results show that the number of doctoral theses per year is relatively constant, with fluctuations due to institutional constraints. Doctoral students are mostly female (55%). The concentration of researches in six main geographic poles reflects the structure of demography training. Demography is the main discipline (65%) followed by sociology, geography, political science and economy. Studies on mortality and health tend to involve more modeling and to be more associated with population structure whereas fertility is often analyzed in conjunction with family and sexuality and tends to more frequently adopt a gender perspective. By contrast, migration, which represents the most frequent topic, is more associated with culture, minorities, using qualitative approaches. It also addresses issues related to environment and territory. This analysis provides insights into population studies boundaries as well as the way disciplines complement each other. In the longer term, our database should be completed with theses prior to 2000. It may participate in the constitution of a comparative international database of doctoral theses in population science.

#### *The Membership in the Italian Democratic Party*

Several parties throughout the world are democratizing their internal life. The most recurrent tools to this aim are the primary elections to select candidates and party leaders. This process of democratization has accelerated the decline of the party members figures. For this reason, the new key actor has become the "selectorate", in which the members seem to have lost power compared to the figure of supporters.

This paper tries to explain the role of the party members by using survey data relating to a web-survey carried out to the members of the Italian democratic party. We interviewed more than 13,000 members with regard to their relationship with the party (participation and activism), the use of information (including new communication technologies) and their role during the electoral campaign.

#### *Community and/or Versus Gemeinschaft? about the Emerging Problems By the Translation of a Concept from 'Central' to 'Peripheral' Cultural Spaces. the Case of the Sociological Work of Gino Germani*

*Community and Gemeinschaft* certainly made a long and prolific way along the history of social/sociological theory. They still remain key concepts, in the space of these theories and also in the broader political and cultural debate. These trajectories were not linear, and were marked by the deepest divergences between cultural fields as well as within them. Thus, Dewey, the authors of the Chicago School of Sociology and Parsons, in (North)American cultural field, and Tönnies, Weber, Plessner and König, in the German one (among many other names that could be mentioned here), overlapped different layers of meaning on a conceptual construct which invariably refers to ways of living together, usually (but not always) positively connoted.

For very complex and historical reasons, it is an indisputable fact that both cultural fields (German and North-American) were for a long time (and still are even today) "central" in relation to other cultural fields, as the Latin American, which were so located as "peripheral". In ways that still could only be exploratory, this paper aims to analyze some of the problems of translation which necessarily emerge whenever *Gemeinschaft* and *community* were reappropriated, and creatively invested with new meanings by different Latin American social theories, in also different historical contexts of problematization, since the 40s of last century to the present times. Special attention will be given to the work of the Italian-Argentine sociologist Gino Germani, who in the 50s of the last century gave a strong impetus to what was then called "scientific sociology", in strong connection with "modernization theories".

#### *Collaborative Governance in Intersectoral Strategic Planning for the Development of Healthy Public Policies: A Case Study of the Ontario Food and Nutrition Strategic Alliance*

Society's wicked problems are complex and intractable problems whose resolution depends on a whole-system approach that involves many actors from various policy sectors. The ability to undertake intersectoral policy action rests on the collaborative processes and structures of governance. The Ontario Food and Nutrition Strategic Alliance offers an excellent example of a system-wide initiative to tackle one of society's most pressing wicked problems: failure of the food system to support healthy living and a vibrant regional economy. **OBJECTIVE:** To understand how, and to what extent, a multi-stakeholder strategic alliance is able to create and sustain the necessary conditions and requirements to undertake intersectoral strategic planning at a system level, as viewed through the lens of collaborative governance. **METHOD:** Yin's qualitative case-study method is used, entailing three data-collection techniques: a review of documents; direct observation; and semi-structured interviews. Dimensions of interest include (1) stakeholder engagement in terms of level of diversity of perspectives, extent of agreement on goals, and degree of articulation of operating terms; (2) shared motivation in terms of trust, mutual understanding, and commitment; (3) capacity for joint action in terms of leadership, resources and governance structures and procedures; and (4) other factors supporting collaborative-governance sustainability. **EXPECTED RESULTS:** This case study will yield insights as to the enablers, barriers and lessons learned regarding the further development of collaborative governance arrangements. This knowledge will highlight opportunities to move beyond silo-based administration towards viable means of intersectoral collaboration for effectively addressing society's wicked problems, and in particular, for building a strong and diverse food system through which to promote healthy eating, help prevent chronic diseases, and ensure both economic and environmental sustainability.

#### *Human Rights as Capabilities. From Political Philosophy to Sociology. CANCELLED*

In our global world, domination *and* critique use the same vocabulary : the "human rights discourse" has become a general framework of political conflicts. How can sociology deal with this new aspect of the "objective spirit" (as Robert Fine puts it) of our times? Sociology must overcome the traditional dismissal of human rights as an abstract universal masking Western imperialism. Nevertheless, the critique of formalism and hegemonic distortions are more than ever necessary. On the *epistemological level*, two discussions are to be connected : the discussion inside the political and legal philosophy on the idea of *rights* (Sen, Raz, Habermas...); the discussion of legal sociologists on the efficiency of legal institutions in a globalized world. The "Capability approach" to rights can be a fruitful approach if we supplement it with a *pragmatist, institutionalist and pluralist* sociology. On the *empirical level*, we should use the Capability approach in order to overcome the legalistic understanding of human rights. Implementation of rights is more than sheer application of a legal rule; social control of human rights implementation is more than judicial review. Discussions in social movements on the meaning of the rights are quite important (the "right to food sovereignty", for instance, in the "Campesino movement"). If used by a critical sociology, human rights can be an efficient way toward global justice.

**DE SOUSA SANTOS, BOAVENTURA\*** (Colegio San Jeronimo, [bsantos@ces.uc.pt](mailto:bsantos@ces.uc.pt))

#### *Boaventura DE SOUSA SANTOS: Para descolonizar Occidente*

Modern Western thinking is an abyssal thinking. It consists of a system of visible and invisible distinctions, the invisible ones being the foundation of the visible ones. The invisible distinctions are established through radical lines that divide social reality into two realms, the realm of "this side of the line" and the realm of "the other side of the line." The division is such that "the other side of the line" vanishes as reality, becomes nonexistent, and is indeed produced as nonexistent. Nonexistent means not existing in any relevant or comprehensible way of being. Whatever is produced as nonexistent is radically excluded because it lies beyond the realm of what the accepted conception of inclusion considers to be its other. What most fundamentally characterizes abyssal thinking is thus the impossibility of the co-presence of the two sides of the line. To the extent that it prevails, this side of the line only prevails by exhausting the field of relevant reality. Beyond it, there is only nonexistence, invisibility, non-dialectical absence. To decolonize the West offers a fundamental theoretical synthesis to question and reinterpret the modern Western thinking.

#### *Syndicalisme Face à L'organisation: Un Paradoxe?*

The trade unionism and the organization in the sense of all the decisions and the choices which structure the work maintain a critical and sometimes distant relationship. On one side, the trade unionism seems always late with regard to the organization. On the other hand, the employer holds the monopoly of choices and ways assigned to implement them, with the exception of the zones of dialogues planned with the labor union in the various committees, but we can summarize the labor-union intervention in his participation.

By leaving of cases pulled by our studies in the territorial public service, we clarify on one hand, one news forms of the trade unionism which we call "trade unionism of organization"; it is situated between the trade unionism of opposition and the trade unionism associated with the power and it differs from the trade unionism of control (Tourraine, on 1962). Supported by groups of exchanges and confrontations with union activists, we clarify on the other hand, in which and under which conditions the work of the union activist allows to act on the organizational causes of the organizational skids, of the degradation of the professional situations and the deterioration of the health.

The union activists are not against rules, but for working rules on the condition of participating in their training and negotiating them: on one hand, they react to the individual requests of the agents to analyze it as a faintness of the organization and on the other hand, act on the organizational deviations by trying to stand out as a normative power. The trade unionism tries to build controversies

on choices and decisions taken by the managers and be recognized as competent to discuss these choices.

#### *Brazil, Colombia, and Venezuela. Policies against Poverty and Inequality: A Comparative Analysis of Results 2000-2010*

After the *Lost Decade*, Latin American countries started to explore innovative strategies aimed at reducing poverty and social inequality. Their search was conducted with a certain degree of independence from the dictates of multilateral organizations, which lead to two trends: (a) a renewed confidence in the state's capacity to guide social planning; and (b) a rejection of the rigid fiscal austerity measures typical of structural adjustment plans. This study looks at three countries: Brazil, Colombia, and Venezuela and their attempts at improving the social conditions of the poor. Special attention is paid to key policies implemented by each government: *Family Grant* in Brazil, *Families in Action* in Colombia, and the *Social Missions* in Venezuela. Flagship policies in Brazil and Colombia are of the *Conditional Cash Transfer* type, whereas in Venezuela, most social spending is channeled into a direct-service model. Attention is also drawn to reforms in social security: the three countries have all procured important reforms in pension regimes aimed at allowing non-contributing citizens, such as the elderly at risk, to draw welfare benefits. The reforms also seek to incorporate informal sector workers into social security. Data for the period 2000 - 2010 reveal that each country has made advances against poverty and inequality: poverty rates have declined and so have GINI coefficients. However, no key policies have been able to drive a substantial number of workers into the primary labor market, nor have they resulted in the expected vigorous participation by beneficiaries in the administration of policy at local levels. So far the policies' effects have been mostly compensatory. Reforms in social security have aided some targeted populations though statistics regarding the inclusion of informal workers into social security are vague and inconclusive.

#### *Socioeconomic Mobility and Household Welfare of Female-Headed Households in Eastwood, Pietermaritzburg (South Africa)*

Drawing from life-histories of female heads of households (FHHs), this paper examines social mobility and household welfare of FHHs in the community of Eastwood, which is historically a working class community in Pietermaritzburg, South Africa. This paper broadly assesses the working and dynamics of social mobility as framed against, on the one hand, the milieu of South Africa's increasing inequality and poverty, and, on the other, the context of increasing feminization of poverty and the workplace. As individuals squeezed by market forces and neglected by the state, I pay particular attention to the social networks and associations to which female-headed households in the community of Eastwood belong to, invest in, and how they benefit from them. I also closely interrogate the kinds of exchange, sharing, reciprocity, trust and support systems that characterize these networks and associations that contribute to household welfare and socioeconomic mobility. Following Waite's (2000:155) assertion that FHHs cannot be understood as non entities operating in a vacuum away from the broader social, economic and political institutions in which they are embedded in, I start by asking what social and structural factors constrain or enable socioeconomic mobility and household welfare of FHHs.

#### JS-2.7

**DEBNAR, MILOS\*** (Kyoto University, Graduate School of Letters, [milos.debnar@gmail.com](mailto:milos.debnar@gmail.com))

#### *Skills, Occupations, and Inequalities Among the Europeans in Japan*

In this paper, I consider the cases of skilled European migrants in Japan and attempt to deconstruct the image of highly skilled and privileged group often associated with them. The paper is based on empirical research among 56 migrants residing in Japan conducted between 2009 and 2012.

Similarly to, for example, Shanghai (Farrer, 2010) the unvarying picture of the 'privileged elite' from the West is getting distorted through increasingly diverse migration flows as well as persistence of the nationalism. Whereas on the basis of their residency status or Japan's standard occupation classification, the jobs many of my interviewees held are classified as professional or high-skilled, they often engaged in very specific jobs characterized by their culture. Many Europeans in the job market are seen primarily as authentic bearers of the 'foreign' or 'Western' culture that is usually associated with globalization as well. This 'culture' is being commodified and consumed and, in a certain way, represents Japan's modus

vivendi of engaging with the global world. On the other hand, access to other spheres of job market is constrained by strong expectations of the majority population seeing the foreigners as intrinsically 'other', temporary sojourners rather than possibly more permanent residents possessing also professional skills not related to their culture as well as particularities of the Japanese job market such as high importance of the school to work transition in the career formation.

Consequently, such a closure of the Japanese job market produces a new class of skilled migrants located in segregated job niches that are not exerting the skills for which they are praised in policies and public discourse. Their positions are less privileged and inequalities with the majority population as well as other, more typical high-skilled migrants such as expatriates are produced.

#### *Continuity and Innovation in Higher Education. the Case Study of Sapienza University of Rome*

The paper involves a secondary analysis of longitudinal data of administrative type for a description of the phenomena of student late performance and dropping out.

It focuses on the batches of students enrolled in specific key moments before (from academic year 1991/1992 to 2000/2001) and after the DM 509/1999 - a didactic reform - (from academic year 2001/2002 to 2006/2007) at Sapienza University of Rome. Each of these batches (about 410,000 student enrolments) was monitored up to the official closing date of academic year 2006/2007.

The analysis take into account *ex novo* enrolments, excluding both the re-registrations and students who have already obtained another degree. Longitudinal analyses (the generational approach) allow us to individually monitor students in a single generation for a number of years, reduce the risks associated with aggregate data.

The assumption behind this research design is that the longitudinal perspective is able to provide an *accurate frame* of student curricula (that are monitored at intervals of six months) and to reconstruct the potentially relevant events to the outcomes of their university career. Longitudinal *panel* studies monitor the same generation of students (that is an aggregate of students enrolled during the same year) over several years; consequently these strategies are able to offer quite more accurate results because they reduce the risks related to the utilization of aggregate data.

From a practical point of view, we analyzed how the DM 509/1999 was introduced and implemented within and by the university organization (analyzing a wide variety of phenomena such as dropping out, delayed and decreasing graduations). From a methodological point of view, we came to the creation of longitudinal multidimensional models of the students' careers, aiming at identifying the "mechanisms" through which from an initial state  $t_0$ , a subsequent state  $t_1$  is generated.

#### *Police Officers' Conflict Management and Restorative Justice*

Generally, citizens call the police when things happen that deviate from normality and (may) lead to all sorts of conflicts. In particular, interpersonal conflicts have to be solved by police officers. Consequently, police officers' respective conflict resolution activities need to be sustainable and fair to prevent conflicts from new and repeated outbreaks. Restorative justice approaches refer to the idea of sustainable and fair conflict resolution, e.g., by defining principles of restorative justice. However, there is only scarce literature on police officers' daily conflict resolution. Additionally, there is little literature on the link between conflict resolution by the police and restorative justice. We addressed this topic by conducting an interview study with 12 German police officers examining their view on conflict resolution by the police. We asked them which strategies of conflict resolution were applied, and which obstacles occurred during conflict resolution. Interview data were analyzed using grounded theory methodology. The research shows that police officers use cooperative as well as dominating strategies of conflict resolution. Main obstacles are formal requirements and citizens' role expectations of the "typical police officer". Furthermore restorative principles like respectful communication were named as critical conditions for successful conflict resolution. This is the first study to investigate the interplay of police officers' subjective theory of professional conflict resolution and restorative principles. Study findings can be used for police officers' conflict management trainings.

#### *Research Program Gap Between Luhmann's Social Systems Theory and Contemporary Systems Sciences*

We discuss the issues of social systems theory in comparison with contemporary systems sciences. Social systems theory by N. Luhmann is characterized by theoretical approach of macro communication process [Luhmann, 1984]. This approach came from the theory of representation collective by E. Durkheim. This macro approach is natural from a sociological point of view.

While it is strange and out of scope from the standpoint of standard semantics of analytic philosophy. In the history of analytic philosophy, the meaning of proper name is given by referred object in the real world or at least as rigid designator (Soul A. Kripke) or definite description (Bertrand Russell) [Kripke, 1972]. Common noun is treated as a set of objects. There is a weak connection between sociological treatment of representation collective and these analytic philosophical treatment.

There is a strong gap of research program between Luhmann's social systems theory and contemporary systems theory. The gap causes incommensurability between two research groups about theoretical terms such as systems boundary, environment, micro-macro link, self-reference, communication, complexity, and autopoiesis. The purpose of this presentation is to find the missing link between research programs and bridge this gap from theoretical and methodological points of views.

### RC51-830.1

**DEGUCHI, HIROSHI\*** (Tokyo Institute of Technology, [deguchi@dis.titech.ac.jp](mailto:deguchi@dis.titech.ac.jp))

#### *Toward Next Generation Social Systems Sciences - from Cross Cultural and Science of Artificial Points of View -*

In this presentation, we focus on cross cultural analysis of social systems as a social science of artificial. There are many sociological ideal types and its systemic properties that are developed by sociology and social systems sciences. These models are sometime considered as cross cultural ones but sometime not. Compared with economics, sociology does not depend on rational nor normative standpoint. Where do the universality of the ideal types and its systemic properties come from? That is a basic question for social systems theory and the reason we need more cross cultural consideration and talks. Besides the cross cultural universality of the theory, we have to consider another universality of the theory for constructing new generation social systems theory. Nowadays our society is becoming more artificial day by day. On the one hand each society has its historical root, but on the other hand we are constructing artificial new global society. We have to design our society and life world from "as is" to "to be" by ourselves as something artificial. There is no sacred canopy. How the process should be analyzed, how it can be managed and what type of theoretical concept should be constructed? That are open and serious questions for social systems sciences. We focus on basic concept of sociology such as individual, self, reference group, family, organization, society, social norm, micro macro link, meaning, role taking, function, structure etc. How these basic concepts can be defined on more artificial context and cross cultural context. We reconsider these systemic properties from theoretical and a cross cultural point of view.

#### *Beyond Shame and Guilt Culture to Globalised Solidarity: Reappraising Keiichi Sakuta's Sociology of Values As a Galapagosized Sociology*

Keiichi Sakuta (1922) is Professor Emeritus at Kyoto University and one of the most influential sociologists in post-war Japan. In my presentation, I reconstruct the sociology of values that he developed in the 1960s and reappraise it as an innovative theory of solidarity in the age of globalisation.

To reappraise Sakuta's sociology, I introduce the methodological concept of galapagosisation. This term originated from the Galapagos Islands, which is inhabited by rare and endemic species of fauna and flora that have undergone a unique process of evolution due to their separation from the mainland. Similarly, Japanese sociology has been protected by a strong culture and language barrier, consequently developing unique social theories. Using this term, I clarify the characteristic features of Sakuta's sociology of values.

Sakuta adopts western sociological and anthropological theories and applies them to an analysis of post-war Japanese society. However, he never accepts western theories uncritically, always revising them to fit the characteristic structure of Japanese society. Particularly, he reconsiders the "shame culture" that Ruth Benedict introduced in her famous writing, *The chrysanthemum and the sword*, to characterize Japanese culture. In addition, Sakuta discusses another feeling called *shuchi* (embarrassment), which is positioned between shame and guilt. According

to Sakuta, people feel *shuchi*(embarrassed) when they are alienated from both reference group (state) and membership group (intermediate group) and lose their organisational support. As a result, these people seek solidarity that is not based on strong organisation.

Although Sakuta developed his inquiry into *shuchi* in line with post-war Japanese modernisation and rehabilitation, in my presentation I reappraise his sociology as an innovative theory of solidarity in the age of globalisation.

### *Critical Theory and Its Development in Post-War Japanese Sociology*

In my chapter, I examine the process of the adoption of Critical Theory and its unique development in post-war Japanese sociology from the perspective of the theoretical response to capitalist modernization. In Far Eastern Japan, nearly all theories of social sciences have originated overseas since the government opened the country to the West and capitalist modernization began with the Meiji Restoration in 1868. In general, the adoption of social theories and their unique development has natural biases resulting from the social-cultural structure and development peculiar to the adopting country. Japanese society has been characterized by a historical situation never observed in Western countries: too rapid capitalist modernization. In particular, the post-war rehabilitation and economic growth have been so swift that during the process of rapid modernization, pre-modern feudal elements co-existed with the late modern—or sometimes seemingly post-modern—circumstances of mass society. That is, the power of democratization, which was imported from the West with outside pressure after the Second World War, remained at a superficial level of society and did not reach the foundation of the social structure. Hence, Japanese critical sociologists continued to have a sense of criticism against superficial democracy, which did not establish itself firmly in post-war Japan; and it is those critical sociologists and their critical sociology that I examine in my chapter. 'Critical sociologists' refers to those in the field of sociology who have developed a critical social theory under the strong influence of German critical theorists such as M. Horkheimer, T. Adorno, E. Fromm, H. Marcuse, J. Habermas and A. Honneth. To explain the uniqueness of this Japanese version of critical sociology, I will introduce it in comparison with Habermas's reconstructive approach, the concept of 'dialectical constructivism' or the 'dialectical constructive approach'.

### *Neoliberalism, Social Christianity and the State in Singapore*

This paper explores the complex interrelationship between Christian organizations and neoliberal policies in the context of the island-city-state of Singapore. It departs from an understanding that rather than globally homogenizing, neoliberal ideas, practices and policies are embedded in specific socio-economic and politico-institutional settings and thus bring forth local variegation and hybrid forms that are mutually constituted and evolving. In this regard, the Singaporean neoliberal model of governance can serve as an interesting case study as it manages to combine two seemingly opposing logics: high levels of state intervention and regulation on the one side and the strategy of pursuing economic growth at all costs through deregulation, liberalization and privatization on the other. What emerges is a type of hybrid state, in the form of the neoliberal-developmental state, where neoliberal logics of the free market and the ideal of national communitarianism are deeply intertwined.

This form of governance has affected the relationship between Christian organizations and the state in considerable ways. On the one hand, the Singaporean government exercises strong bureaucratic and legal control over the functioning of all religious matters, therefore limiting the freedom of action for Christian organizations. Yet, on the other hand, Christianity is recognized and valued as a constructive social and stabilizing moral force within the multi-confessional and multi-ethnic Singaporean polity, which in turn has led to public-private partnerships between government agencies and Christian organizations. This paper argues that Christian organizations in Singapore have become to function as important non-state sites that do not negate neoliberal restructuring *per se*, but re-embed neoliberal logics by addressing social needs and providing certain social services that have gone unmet by the state. Empirical examples will be given from my ongoing Ph.D. project on Pentecostal organizations in Singapore.

### *Displaced Workers in the Great Recession and Not-so-Great Recovery: Gender, Race, and Class Inequalities in the U.S. Labor Market*

Early in the recession (2008-2009), OECD data showed much greater unemployment among men than women in many industrialized economies, leading to a media narrative of a "mancession" whereby men were depicted as suffering much more than women. Knowledgeable analysts showed the mancession was due to the higher concentration of men in sectors experiencing greatest job loss such as mining, construction and manufacturing. By 2010, reports showed men doing better than women in the recovery. Looking beyond a quarterly or yearly snapshot to the recession-recovery period over time, I examine whether gender inequality in the U.S. labor market increased, decreased, or remained unchanged.

The media narrative of the mancession missed complex and intersecting dynamics of gender with race and class based inequalities. Men who lost job were disproportionately non-college, blue-collar workers. As among men, certain groups of women, such as single moms, non-college, and racial-ethnic minorities, were much more likely to experience job loss and less likely to find new jobs than college educated white counterparts.

My research uses data from the 2010 and 2012 Displaced Worker Surveys (DWS), a supplement to the U.S. monthly Current Population Survey in January of even numbered years. In these statistically representative U.S. national sample household surveys, individuals are asked if they lost or left a job in the previous 3 years (covering 2007-2011) due to: a plant or facility closing, a layoff, or the abolition of their position or shift. Data were collected on household and individual demographic and economic characteristics, on wages and other characteristics of the lost job, on re-employment including characteristics of the new job. I conducted multivariate statistical analyses to examine intersecting race, class, and gender effects on (a) incidence of job loss, (b) patterns of post-displacement employment, and (c) changes over time.

### *Mistreatment of Immigrant Workers in U.S. Workplaces: Are Discrimination Lawsuits Against Employers a Viable Remedy?*

In many parts of the world, immigrant workers do not have access to the same legal protection against mistreatment by employers as citizens, and undocumented workers have less protection than "legal" migrants. Lack of access to legal protection is due in different contexts to varying combinations of shortcomings in the law itself, lack of enforcement, and to obstacles to making claims.

Currently, in the U.S., although it is illegal for undocumented immigrants to obtain employment, "illegal" workers are nonetheless protected (in principle) by U.S. anti-discrimination laws regardless of of immigrant or immigration status. While there is no civil or human rights protection against discrimination based on immigrant status *per se*, immigrants are protected, to a degree, by laws banning discrimination based on race and national origin, as well as sex, religion, age, and disability. However, among many other obstacles, those who complain risk deportation. Additionally, immigrant workers are concentrated in low wage industry and occupational sectors where labor law and civil rights law violations are rampant.

Some scholars and human rights advocates find U.S. employment law, and the U.S. Equal Employment Opportunity Commission (EEOC) as the equal rights enforcement agency, inadequate to protect vulnerable immigrant workers. However, in recent years, the EEOC has filed and settled a growing number of employment discrimination lawsuits on behalf of immigrant workers, many of whom are undocumented. Most of these cases involve charges of sexual and/or national origin harassment. Harassment, in some of these cases includes threats or incidents of sexual and other physical assault as well as verbal and psychological abuse. The lawsuits have resulted in significant monetary awards, court-mandated workplace reform, and some protections against deportation. My research examines over 80 lawsuit settlements, asking whether and how Title VII lawsuits can or do address the legal vulnerabilities of undocumented immigrant workers.

### *Second Homes in Spain: Transnational Mobilities and Family Capitalization*

**Topic, hypotheses:** Spain has a big rate of second homes although it is not one of the wealthiest countries in Europe. There are two main scenes: the mediterranean coast, devoted to international tourists and retirees, and the inland areas, with a much more complex dynamic. We try to show how second residences in Spain indicate family strategies of residence and mobility. These are related to consume patterns as well as with reproductive conditions of households.

**Methodology:** Our research is focused on the relationship between second residences and trends of populations' spatial distribution and mobility. A quantitative research has been conducted using data from population registers (Census

and migration flows from the Spanish Statistical Bureau). The analysis combines cross-section tests, focusing on 2001, and a longitudinal enquiry (focusing on the period between 1986 and 2008). Malaga illustrates the case of an international coastal destination developed by the real estate and the international touristic services sectors. We also examine the cases of two inland territories, Segovia (near Madrid) and Zamora, in order to contrast the role of second homes in two rural environments with different recent demographic trends. Results: In the case of the Mediterranean coast, the development of international tourism led to a real estate boom based on the purchase of second homes by foreign people. Many Spanish families were also attracted to buy a second home, which would be used as an asset and as a resource for family strategies (retirement of the elderly, emancipation of youth), contributing territorial restructuring processes.

In the case of inland second homes, there is a great complexity based on the degree of tourism specialization and the strength of counterurban mobilities. Demographic dynamics make second homes to play either a residual function in a context of depopulation or a revitalising role for new developed areas.

#### *Secondary Spanish Teachers: Advances of a Research on Educational and Professional Guidance*

This paper constitutes a first approach to a research project submitted to the Ministry of Economy and Competitiveness, in the call for research grants within the State Program of Research, Development and Innovation for funding corresponding to the State Program for the Promotion of Scientific and Technical Research, I + D + i.

Our goal is to present the progress of an ongoing research whose purpose is to analyse the social and cultural representations that influence teachers in the role and practice of counselling students, both educationally and professionally. It means to examine these social and cultural representations in order to identify guidance models deployed and practiced by teachers, according to the characteristics and socioeconomic and cultural conditions of the environment. So, with job opportunities, aspects such as the location and characteristics of schools, the social origin of the school population, its cultural capital and ethnic background, or gender ideology, become relevant in this analysis, due to its impact on the interaction between students and teachers and, consequently, in the construction of the valuations that teachers offers about students.

In this first approach to the phenomenon, we have chosen four autonomous regions: Balearic Islands, Basque Country, Andalusia, and Madrid to try to develop a typology of teachers and curriculum models, considering the existing socio-economic sectors in the Spanish territory.

**TATE, JANE** (Homeworkers Worldwide)

#### *A Federation for Informal Workers: Networking Workers Across Global Labour and Global Production*

This paper positions the Federation of Homeworkers Worldwide (FHW) as a new organisational form within the global labour movement. The FHW collaborates with a range of union and NGO organisations to support new organizing amongst informal, low paid women homebased workers in a broad range of sectors and global regions, although a large extent of its work has been in the textile, garment and footwear industries.

The over-representation of women in informal and precarious work suggests that the gendered nature of global production remains an important site of investigation. This is further informed by the challenges to understand how workers may gain legitimacy or assert influence in the global production network (GPN). The purpose of this paper is to describe and analyse the role and activities of FHW within the global labour movement, to understand how it supports women's networks to build new labour organizing for women. Through our examination of the efforts of FHW in India, we illustrate some recent initiatives to establish and build organisation of Sumangali and camp labour textile workers in Tamil Nadu, India. Trade unions appear to have little presence in these mills and have been further marginalised by the employer strategies to keep unions out. NGOs

in the Tirupur region have been actively campaigning on this issue since the early 2000s, but little progress has been made towards collective organisation.

The paper explores the question of why there is a need for a federation of informal workers and examines how it functions with minimal resources to work with informal worker groups, which in turn reveals important lessons for unions and labour rights groups around the possibilities of organizing with few resources and employing participatory, grass-roots strategies as opposed to top-down approaches.

#### *The Refusal of the Vegetables Consumption : A Resistance Act ?*

We shall present an analysis of an experimental action of supply in fresh vegetables and premises implementation, in France, by one of the actors of the food aid. This experiment is connected with the will of an appreciation of the food of the disadvantaged said social classes. The consumption of vegetables (the set of three : hunger / bad balances food / problems of health) allows to build the Other one, "poors", as radically different from ourselves and seems to serve as measure and to « make border ».

Considering the actors in presence: beneficiaries, volunteers, persons in charge of grocer's shops, in their culinary practices and respective food representations, taking into account their routes and statuses ; observing food retailings in social grocer's shops of the Southwest and the Central France, the concrete organization and the means of the grocer's shop, we question the idea of the lack of taste of the beneficiaries for vegetables; suspected, of having none of it, and thus of foiling the initiatives.

It is during these daily relations voluntary / responsible for grocer's shops / beneficiaries and within the framework of the intrinsic relations of power in the food aid, as much as in routes and statuses of the profitable persons, that takes place the way the food practices build themselves.

Between the lines, we shall highlight how the border builds itself between the "good eaters" and the "bad eaters". The representations of a "good food" revealing in hollow the "bonuses" or the "places" in the society that are looking for those who get involved there, particularly, the volunteers and those who refuse it, to whom this action is supposed to benefit, the beneficiaries, these categories sometimes confirming itself.

#### *Creative Parenting in Transnational Families and the Gender Diagonal*

Having followed immigrant families (coming from North Africa), in France, in Belgium and in the Netherlands over long periods as ethnographic observer and biographical-narrative interviewer, I have recurrently been impressed by the centrality of the parents' project for a better life: for themselves, for their kin at home, and especially for their children (boys and girls) whom they invest with the responsibility of carrying on further this project. This project drives all their courses of action under harsh life conditions. Deprived of "capital" such as money, education, or "useful connections" (all "objective" resources), they can only mobilize their "subjective" resources, that is to say: themselves, their energies, their reflexivity, their character and creativity. A lot of creative parenting takes place in their homes.

In patriarchal societies where these parents come from, gender contrasts are very sharp. They entail differences in the hopes and aspirations that are projected onto sons and daughters by father and mother. Initially, fathers will tend to project upon their sons their own frustrated upward mobility aspirations. They expect good grades at school. Some sons will live up to their father's expectations; but others will not, while some of their sisters will do better. In such cases the father's hopes will move over the years from his son to his daughter. It is this phenomenon that we have come to call "the diagonal of generations", or "the gender diagonal".

This comes on top of the host society's differential discrimination, which is stronger on boys. To avoid the damaging consequences of rivalries between brothers and sisters, and eventual splits, parents have to find ways to teach them to resist stigmatization (or "discredit"). We will show how family relationships are continuously shifting, under these dynamics, necessitating a continuous effort of creativity in parenting.

## Analyzing Recurring Themes in a Life Story with Social Context in Mind

### Analyzing Recurring Themes in a Life Story with Social Context in Mind

Every life story tells about the history of a person who has lived in a given social niche of a given society with a specific cultural model. Thus sociologists may learn a lot from it about this social niche and cultural model; especially if multiplying life stories lived in the same social context. In analyzing the life stories I have collected myself, I usually follow three main steps. First, as Bertaux (2007) indicates, I reconstruct the *chronology of life events*, which during the interview have usually been mentioned according to some semantic associations rather than strict chronology. Secondly, through *thematic analysis* I'll look for *recurring themes*; their very recurrence usually signals crucial processes (e.g. discrimination, selection) *out there*, in the external social world. Thirdly I'll look for *hints, indices, clues* about social processes *out there*; e.g. constraints, limits to action, social barriers, or - by contrast - opportunities, spaces for initiative, creative courses of action. Bertaux states that a life story should be read and re-read many times while focusing - and trying to imagine - patterns of *social relations* 'out there' that shaped it. I agree, but I also pay much more attention to *childhood*. Indeed I believe (with Wordsworth, Nietzsche, Freud ...) that *the child - i.e. childhood - is the father of the adult*. A given childhood includes many keys which, if unraveled, will prove very helpful in deciphering the grown-up adult's inner workings. Another issue is about *turning points* in the course of life. As Hareven and Masaoka have shown, far from happening out of nowhere through impact of some external event, turning points in life usually result from a slow maturation taking place in the inner space of psyche.

### Are National Parks Inherently Unequal? the Reform to Parks and Its First Application in Metropolitan France

In France, many conflicts have marked the genesis of national parks enabled by the Law of 1960, right up to the blocking of their creation or had a lasting effect on their existence (Larrère 2009). In an attempt to overcome the local resistance that inevitably accompanies having a natural site classified as a national park, the French government passed a new Law (2006) which grants greater power to local elected representatives, explicitly recognizes the rights and knowledge of local users, and invites them to participate in actually defining the park project.

Our research into the creation of the new Calanques National Park, however, points up that the application of these new principles actually reinforces the environmental inequality that they were meant to reduce. How should we interpret this apparent paradox? The goal of this paper is to outline the interacting processes at work in the park's creation that exacerbated local environmental inequalities. We will look at both the weight of procedures and the more structural factors behind such inequality.

We will show how the consultation procedures adopted tend to reproduce the asymmetry of the public sphere (in the Habermasian sense) that developed throughout the 20<sup>th</sup> century around the protection of the Calanques. They as such helped institutionalize in the park project the dominant norms through whose lens certain uses seen as "worthy of a park", whereas others are downgraded. In a related phenomenon, the new National Park label has re-increased the environmental value of the surrounding neighbourhoods, further boosting their new appeal. This process has even affected the poorest areas and led to a relocation of the most economically distressed populations outside the site, meaning far from the natural amenities that had formed the bases of their living conditions and leisure activities.

### No/Place

This creative non-fiction essay, which is ethnographically-informed and located in critical geographic theory, contemplates remote and deeply overlooked places in Northern British Columbia (Canada) located along Highway 16, colloquially known as 'The Highway of Tears' because of the more than 30 (mostly) Indigenous women who have been murdered or gone missing along its paved shoulders in the past two decades. The photo-accompanied essay works in multiple textual registers, from poetry to research interviews, in order to consider and evoke a variety of emotional and material places making up the always colonially-impacted geographies along Highway 16. These places include homes of on-reserve families whose children are routinely removed by the provincial government, staff in women's centres and police detachments tasked with organizing search parties for women's bodies dumped in ditches, and vast regions of forest and watersheds routinely characterized by both industry executives and often urban dwelling nature-enthusiasts as unpopulated and open for development and discovery.

### A Panamazonian Project Facing the State? Particularities and Constrains of Indigenous REDD+ Proposal

As globalized economies develop new forms of intervention in the Amazon, using various levels of governance to further their encroachment, halting the abatement of "indigenous space" (Chirif, 2006) seems both ever more urgent and highly implausible. Payments for ecosystem services (PES) expand as a paradigm for environmental management in the biome, REDD+ being one of its most ambitious experiments (Corbera 2012). PES schemes are contributing to change not only legal frameworks that regulate access to natural resources but also the value of "natural" assets. These transformations lead to further changes in indigenous peoples' recognition, legal rights and economic opportunities.

Indigenous peoples networks detain different praxis in order to protect themselves from dispossessionary process (Li, 2010). Facing the national-state has always being hard for their movements. One of their main strategies to gain influence was to change the scale of their intervention (Pieck, 2006). In 2009 a proposal for "holistic management of forests", that seeks to adapt REDD+ objectives to indigenous worldviews, is presented by their umbrella organization, the Coordinator of Indigenous Organizations of the Amazon River Basin (COICA).

States engagement in the climate regime can be seen as a 'denationalized state agenda' (Sassen 2006), as they actively participate in new kinds of trans-governmental partnerships and highly specialized convergence in regulatory issues. Tropical countries are adopting new institutional arrangements aspiring to receive climate financing in the form of cooperation and new business opportunities. How do Amazonian States currently read indigenous peoples' proposals regarding territorial management? What can we learn from indigenous movement's practices facing green economy? Based on fieldwork both in the UNFCCC and in Peru and Bolivia, this paper seeks to contribute to a reflection on the role imagined for and attained by communities with diverse approaches to the biophysical environment.

### Indigenous Peoples Facing Climate Change Policies: The Struggle for Autonomy of « Forest Dependent » Communities

While globalization of both extractive capitalism and indigenous rights policies has deepened during the XXI century, contention over access and control of "environmental" and "natural" resources in indigenous territories is escalating around the world. Since the national becomes a more complex site for the global, the specific and deep histories of a country become more, rather than less, significant and hence produce distinctive negotiations with the new endogenous and external global forces (Sassen 2006). In this context, how do indigenous peoples struggles for their communities deploy at different levels of governance? Which shared meanings can we find in the diverse political spaces where their movements intervene? In this presentation we would like to tackle these questions analyzing the Amazonian indigenous peoples participation in the global climate change policy debate.

On the climate change regime, one of the most ambitious international policy scheme is being negotiated under the acronym of REDD+ (reducing emissions of deforestation and forest degradation) (Corbera 2012, Bernstein and Cashore 2010). In this framework indigenous peoples and "local" communities are presented as *forest dependent people* attaching issues regarding their rights and livelihoods to the conservation of forests. How do indigenous peoples movements see this process *vis-à-vis* their will for autonomy and demands of respect for their worldviews? This presentation is based on fieldwork with indigenous peoples organizations of the Amazon Basin both in the United Nations Framework Convention on climate change negotiations (UNFCCC) and at national and territorial level in Bolivia and Peru.

### Biocultural Diversity and Agriculture: Reflections on Worlds in Movement

Since the 1990's, we have experienced an increased amount of literature presenting case studies that explore the relationship between human beings and nature from the point of view of biocultural diversity and agricultural practices. There is also a recent academic literature on global projects defining alternative worlds to the dominant model called "Western-liberal-modernist ontology". That literature labels those projects as "political ontologies" or "worlds in motion". In

our presentation, we will examine, in the light of that academic literature, numerous case studies. To be more specific, we will be looking at the social, political, cultural and knowledge dimensions of the biocultural diversity and agricultural practices contribution to the foundation of these worlds in motion.

##### *South-South Statistical Cooperation*

This presentation proposes to examine on the current state of South-South cooperation in the production of statistics in matters related to development. Based in part on the author's fieldwork in Africa, Central America and South East Asia as well as a literature review, this presentation would like to reflect on some current and upcoming challenges in technical cooperation. Taking the stance of a political sociology of the state in so-called developing countries and of a critical study of the international system, this presentation will examine issues related to bilateral and multilateral cooperation between countries in the "South".

Surveys and census are an area generally acknowledged to be still mainly dominated by "Northern expertise". However, current research show that South-South cooperation in statistics is emerging in terms both of knowledge and technology transfer. Indeed, regional powers in the South as well as countries from the BRICs emerge as possible new poles of knowledge and technology which they share at the regional or global level. This is, for instance, the case of Brazil in Portuguese-speaking Africa and that of the Philippines in Myanmar and North Korea. In spite of being a promising avenue for challenging "Northern expertise", this emerging South-South cooperation in statistics is not exempt from possible issues (such as the reproduction of schemes of dependence) which this contribution will reflect on.

##### *Killing without Hatred? the Social Construction of the Consent to Kill in Modern Warfare*

Killing other people is not something trivial. Therefore, the military organizations spend a great deal of energy in order to prepare the soldiers to this prospect. As J. Butler recently put it, they do so by constructing "frames of war", i. e. meaning structures that regulate the military "economy of compassion". This paper aims at identifying the frames of war at work in the new Western way of war. The literature on this issue suggests that the Western modern frames of war are subject to two contradictory dynamic. On the one hand, modern warfare seems to be deeply engaged in the path of rationalization of violence and reification of the enemy. On the other hand, a discourse is (re)emerging which frames the Western wars as "humanitarian". The paper tries to understand whether and how the latter affects the former. It does so by focusing on a particular case study: the frames of the French soldiers who participated to the war in Libya in 2011. The research relies on forty semi-structured interviews with military leaders and fighter plane pilots. The analysis reveals a dominant frame which shows great sympathy for some and total indifference for others. The paper argues, in other words, that the discourse on the humanitarian war displaces rather than enlarges the economy of compassion.

##### *Le « Clone » Dans Les Romans De Science-Fiction, Support De Métaphores Politiques*

Depuis que le génie génétique a initié l'exploitation scientifique et technologique du clonage, faisant passer un phénomène naturel dans le domaine de la technologie et de l'invention, le « clone » est un objet hybride et ambigu qui déplace les limites et les conventions politiques, déstabilisant les frontières animé/inanimé, humain/non-humain, mortel/immortel, objectivité/subjectivité.

L'humain ou l'animal sensible semblent pouvoir s'incarner dans des artefacts

La représentation la plus populaire, dans le film Star Wars, met en scène des légions de « star-troopers », produits en masse, organisés, hiérarchisés au service d'un vaste projet impérial de domination des humains et de la nature.

On propose de s'intéresser à la situation diversifiée des clones dans les romans de science-fiction. Souvent exploités et stigmatisés, ils peuvent être les instruments passifs de systèmes implacables de domination, ou en revanche, dans quelques romans, acteurs, secondsaires ou emblématiques, de luttes pour l'émancipation et l'égalité des droits.

Le clone est ainsi un outil fictionnel commode pour penser des rapports sociaux dans lesquels l'autre humain est d'abord un objet, par la faute des hommes, et doit conquérir son humanité. C'est une métaphore pour penser les rapports

de domination: esclavage, colonialisme, exploitation sauvage, pour renouveler la thématique de l'accès à l'individualité par la socialisation, l'entraide et la communion et subvertir la répartition des rôles entre héros, masses et pouvoirs.

##### *Retournements Symboliques Autour Du Handicap Psychique: Les "Pairs Aidants"*

Le « handicap psychique » donne lieu actuellement en France, après des expériences similaires aux États Unis, au Québec, et en Hollande, à une expérimentation qui remet en cause bien des habitudes dans les services psychiatriques : il s'agit de la création de fonction de « médiateurs de santé pairs » en santé mentale, « pairs – aidant » professionnels, c'est-à-dire anciens malades, en cours de rétablissement, chargés de travailler au côté des soignants des hôpitaux ou des services psychiatriques ambulatoires pour aider les patients.

L'expérimentation est sans doute portée par une utopie : déstigmatiser la maladie mentale, montrer l'utilité des savoirs et points de vue profanes dans le processus du soin, créer un nouveau métier sur la base de l'expérience de la maladie et du rétablissement. La reconnaissance et la mise en œuvre d'un type inédit de compétence remettent en cause nombre d'a priori symboliques et économique de l'emploi, la fonction et de la relation de soin. L'évaluation de ce dispositif est en cours, mais on peut déjà analyser les difficultés idéologiques et pratiques qu'il révèle en s'y confrontant et parfois surmonte.

##### *Subverting Hegemonic Discourses in the Country of Origin Via Transnational Activities and Networks: The Case of Kurds*

Kurds have been present in Europe since the 1980s (see for example, Griffiths 2002; Wahlbeck 1999). They are now a sizable community, and a significant component of many vibrant neighborhoods of European cities. The movement of Kurds from Turkey has been fuelled by the suppression of their cultural and linguistic rights and their forceful displacement from Kurdish villages, as well as their facing multiple forms of deprivation and exclusion in Turkey. They now run transnational community organizations, businesses, and satellite channels; they are increasingly active and involved in the social, cultural and political life of Europe (Demir 2012). Indeed, as Hassanpour & Mojab (2004: 222) also state, 'the Kurds of Turkey have maintained a hegemonic presence in [European] diaspora politics'. This is because Kurds in Europe have created an alternative diasporic space which has turned them into active transnational agents, enabling them to challenge and disrupt Turkey's construction of the Kurdish problem, and tell an alternative story about Kurdishness. Gaining rights in Turkey and subverting the hegemonic discourses about Kurds in Turkey rests, partly, on how well the Kurdish diaspora can build transnational networks in Europe (and elsewhere) and thus mobilize to gain influence and recognition. Moreover, the translation of Kurdish culture, rebellion and struggle (both to Europeans and to their second and third generation) and the transnational battles of Kurds are closely interrelated. My paper will examine such processes by discussing the findings of my recent ethnographic research.

##### *Children As a New Witness of Disasters: Drawing the Experiences of Van Earthquake 2011 Turkey*

For a few decades the experiences of children have been gained more attention by social sciences scholars. From the social constructionist point of view, it is asserted that their everyday experiences shape their sense of self and their views of others, events around them and the society as a whole. However it must be added that the culture and region are also important factors that effect the world view and the other things listed above. In this presentation it is aimed to explore the children's view of disaster by depending on both their drawings and expressions in the case of 2011 Van Earthquake in Turkey. This earthquake has some specific features in some senses. This City is located at the Eastern Anatolia and the density of Kurdish ethnic group is higher. Since then it can be assumed this earthquake contains some complex relations at political, social and economical levels in Turkey

##### *The Politics of Religion in Turkey*

**The Politics of Religion in Turkey**

According to the World Values Survey, the percentage of Turkish citizens who consider religion to be important in their lives increased from 61 percent in 1990 to 81 percent in 2001. This data indicates that Turkish people have become more religious than they were ten years ago. Although founders of sociology, including Emile Durkheim, Karl Marx, and Max Weber, have argued that religious beliefs and practices would decline because of modernization, why was this not the case? What happened during this period of time? In the face of rapid modernization, why did Turkish people become more religious?

The country of Turkey serves as a sociologically and culturally illuminating, theoretically inspiring, and historically timely case study for an analysis of the relationship between modernization and secularization. Turkey is a modern republic moving towards becoming member of the European Union.

In addition to all these unique characteristics, Turkish history is a compelling test case for the relationship between the politics of religion and collective memories of religious and secular past as well. Late Ottoman Empire (1876-1923) tried to construct an Islamic identity. The Modern Turkish republic was immensely devoted to educational and social efforts to secularize Turkish society by creating a secular national identity from its foundation in 1923 until 1950. Although these efforts were reduced after 1950 because of democratic elections, they would keep continuing in a diminished capacity until 1980. After the political and social liberalization of the 1980's, Turkish Republic tried to construct a Turkish-Islamic synthesis emphasizing collective religious memories of Late Ottoman Empire. After 1980's, reactivating collective religious memories has provided an opportunity structure for religious movements to emerge in Turkey. My paper examines this emergence by analyzing the relationships between the politics of religion and collective religious memories.

***Women's Lives behind a Migration Story***

The main aim of this study is to understand how women's lives change in terms of authority, power and gender roles after their husbands' migration from Fatsa (Turkey) to Nagoya (Japan) since the beginning of 1990s. In this regard, the research question of this study is how women's lives change in terms of authority, daily life practices and gender roles after the migration of their husbands. Otherwise stated, this study inquires whether male migration empowers women's lives; especially their controls on the household, in terms of decision-making processes in the family issues and if yes to what extent it takes place. This research question also provides an opportunity to shed a light on a further point to grasp the meaning of the whole picture of women's lives. Although, male migration has similar impacts on women's lives in different parts of the world; how do women develop different strategies from the other cases to handle with the absence of men in Fatsa? In other words, what makes this study different from the others? How do women experience the process of migration from Fatsa to Japan? Perception of the migration process by the women is essential to focus on as it can be argued that this process is the point where everything starts to changes in women's lives. The process of taking the decision of migration to Japan, specifically the city of Nagoya, and women's strategies to handle with this decision and process will be discussed from the perspective around this point.

***Narrations of the Shooting Death of Trayvon Martin and the Trial of George Zimmerman As Intersectional Challenge to the School-to-Prison Pipeline in the United States***

Reactions to the shooting death of unarmed seventeen year-old Trayvon Martin in February 2012 and the not guilty verdict in the trial of George Zimmerman in July 2013 could be heard throughout the United States and around the world. In Al Jazeera, Susan Abulhawa, a Palestinian writer, wrote, "The contempt, the disregard, and the disrespect for the black body runs through this whole case. It runs through this country and transforms itself to adapt to the times."

On August 12, 2013, U.S. Attorney General Eric Holder announced that the Justice Department would work with the Department of Education, "to confront the 'school-to-prison pipeline' and those zero-tolerance school discipline policies that do not promote safety..." but instead lead to the criminal justice system. Reactions to the death of Martin and the announcement of a new approach to the disciplining of youth are acknowledgements of the systemic use of violence to control people of color in the United States.

While many accounts of the Martin/Zimmerman case have focused on race as a central theme, some have pointed to race as it intersects with gender and/

or age. A narration is constructed so that it resonates with an audience, thereby providing a kind of truth. Intersectional analysis complicates a narrative, but it also provides a nuanced view of societal violence/power as well as a vantage point from which to exercise agency and bridge the research/practice gap.

Using content analysis of media from around the world, we identify multiple ways in which the Martin/ Zimmerman case has been narrated, focusing on intersectionally-framed accounts that along with race point to gender--masculinities deployed--and/or age--youth/adult to make sense of the violence. Statistical data on incarceration in the United States will be used to show the relevance of the narrations to the school- to- prison pipeline.

***Global Relational Dilemmas and Commercial Surrogacy***

Commercial surrogacy continues to be illegal in a number of developed Western countries such as the UK and Australia due to concerns about the exploitation of women and children. At the same time, commercial ART clinics patronized largely by Western clients (many from Australia and the UK) have flourished in developing countries such as India and Thailand due to the more lenient regulatory frameworks and the lower costs of services for intended parents.

This transnational commercial use of reproductive technologies is generating a range of what I call 'global relational dilemmas'. These include the creation of stateless and parentless children when mismatches occur in countries' laws, impediments to children born of these procedures to obtain knowledge of their biogenetic or gestational origins, and concerns about how to facilitate connections between intended parents, surrogates and gamete donors across considerable cultural and socio-economic divides.

In this paper, which builds on Viviana Zelizer's notion of 'relational work', and Jennifer Mason's concept of 'tangible affinities', I argue that the heavily defended distinction between 'commercial' and 'altruistic' surrogacy in some Western countries such as Australia hampers thinking through creative solutions to the global relational dilemmas generated by international surrogacy. Based on empirical social research into surrogacy use by Australian gay men, along with analysis of Internet-based sources such as surrogacy blogs and websites, I explore the relational and kinship work performed by clients, managers and clinicians in commercial surrogacy settings. This is with a view to thinking through what might constitute sustainable transnational practices in family formation through commercial surrogacy that respect the human dignity of the children born, surrogates, gamete donors and intended parents.

***Expanding Labour Market Effect Measures: Measuring Distance to the Labour Market As Increase or Decrease in Barriers Hindering Access to the Labour Market for the Unemployed***

Do Active Labour Market Programmes (ALMP) reduce the number of barriers hindering unemployed persons entering the labour market? Studies show that ALMPs have little, non-existent or negative effect on unemployed persons who have been assessed by their case worker to have problems besides unemployment. These studies typically use subsequent employment or reduced welfare benefit dependency as effect measures.

There are no validated effect measures that include steps before actual entry to the labour market; steps in which the unemployed may come to feel healthier, happier, more confident etc. Therefore I develop and test a graduated measure of distance to the labour market. The measure explicitly factors in a complex set of barriers assumed hindering entrance to the labour market for unemployed individuals. The measure consists of internationally recognized measures of and questions on well-being, health, and happiness supplemented by questions on e.g. subjective feeling of readiness for work. Indeed, among the group in question, issues in these areas of life are widespread, and so focusing on these aspects may show other results regarding the effects of ALMPs than previous research.

I test the measure as an indicator of distance to the labour market in three ways. 1) analyze data from a panel survey on a sample of 4,400 unemployed from Copenhagen, Denmark, with waves in 2013 and 2014, 2) assess whether the measure is a good proxy for future employment using detailed data from administrative registers, and 3) compare the measure to findings from qualitative interviews with case workers and unemployed.

In developing the measure, I draw on marginalisation theories in viewing unemployment as degrees of marginalisation from, at the one end, social exclusion from the labour market and, at the other, social inclusion in the labour market, where health and related problems act as a barriers against inclusion.

**RC46-760.3****DENG, FURJEN\*** (Sam Houston State University, [soc\\_fjd@shsu.edu](mailto:soc_fjd@shsu.edu))**SWARTZ, MARIA** (University of Texas -MD Anderson Cancer Center)**LEE, SHEAU YUEN** (Light and Salt Association)**SUN, HELEN** (Light and Salt Association)*A Home-Based Dietary Intervention for Chinese-American Cancer Survivors*

Cancer is the leading cause of all deaths among Asian American populations in the United States (CDC, 2013). Asian Americans are also reported to have lower cancer deaths compared to non-Hispanic Whites. Consequently, more Asian Americans will survive cancer diagnosis and live a longer life after treatment. Studies also confirmed that cancer survivors generally are more likely to develop progressive, recurrent, secondary cancers, cardiovascular disease, and other chronic diseases (Yabroff, et al., 2004.). For Chinese cancer patients and survivors in the United States, quality of life can be further deteriorated because of language, cultural, and structural barriers.

This study is to test the effectiveness of a home-based diet intervention in Chinese American cancer patients and survivors. The goal of the study is to engage Chinese cancer patients and survivors in systematic changes toward desired health behaviors. The intervention includes a 50-week period with four sessions of consultation by a registered dietitian (1<sup>st</sup>: 30 minutes, 2<sup>nd</sup>, 3<sup>rd</sup>, and 4<sup>th</sup>: 10 minutes), 13 telephone consultations by trained volunteers (1<sup>st</sup> month-weekly, afterwards bi-monthly and monthly), and 4 telephone prompts.

Evaluation data are obtained from baseline surveys and post (10-month follow-up) surveys of those who complete the intervention. In addition to basic demographic characteristics, weight status, medical history and NCI-24-h dietary recalls, three standardized scales are used to measure quality of life (SF-36), physical activity (CHAMPS), and health education impact (heiQ). Fifty five cancer patients and survivors were recruited for the study and all of them have completed the baseline surveys, 24-hour dietary recalls. Currently, we are in the process of last stage of intervention. The research team will start to collect the follow-up surveys by the end of this year. In the spring of 2014, the research team will analyze the data and prepare a manuscript based on results from this study.

**JS-2.1****DENG, JIAN-BANG\*** (Tamkang University, [dengjb@mail.tku.edu.tw](mailto:dengjb@mail.tku.edu.tw))*Marginal Mobilities and Social Inequalities: The Migration Experience to Inner China for Taiwanese Expatriates and Chinese Skilled Workers*

After twenty years of conducting operations in China, many Taiwanese manufacturing companies are facing a problem of transformation, particularly in terms of the change in the socio-economic environment surrounding the area of the Pearl River Delta. However, recent developments in Inner China have given Taiwanese manufacturing companies new opportunities, enticing them to migrate inward, towards the middle and western regions of China. This paper explores the inward migration of Taiwanese manufacturing companies and the mobility of Taiwanese and Chinese skilled workers to Inner China.

Three research questions will be addressed: 1) How did the process of Taiwanese manufacturing companies, moving from Taiwan to China's Pearl River Delta area, develop and also how did Inner China's development contribute to the inward movement of these companies in the past recent years? 2) What kind of new relationships, in terms of the workplace regime, are created between migrant (Taiwanese and Chinese) skilled workers and local Chinese employees? 3) What is the migration experience to inland provinces of China like for Taiwanese and Chinese skilled workers, and how these (highly) skilled migrants negotiate social inequalities during their migration and mobility to Inner China?

**RC04-78.5****DENIS, ANN\*** (Université d'Ottawa, [adenis@uottawa.ca](mailto:adenis@uottawa.ca))*Women Students in Canadian Engineering Faculties and Their Sub-Disciplines: Gender Inequalities, Inclusions and Exclusions - Empirical and Theoretical Considerations*

Women Students in Canadian Engineering Faculties and their Sub-Disciplines: Gender inequalities, inclusions and exclusions - empirical and theoretical considerations

Engineering remains one of the few undergraduate programs in Canadian (and American) universities in which women are a numerical minority (typically about 20% of the engineering enrolment), but their percentage in engineering sub-disciplines ranges from 10% or less to over 50%. On the one hand, there has been little empirical study of Canadian engineering students, while on the other American

research has posited a number of explanations for continuing gender inequality in engineering, including the structural features of engineering programs, the lack of female role models within engineering, and the macho culture associated with engineering.

This paper draws on material from a multi-disciplinary study which uses a variety of methods to question both women and men - students, administrators and professors in faculties of engineering in three Canadian universities, in each of which a relatively high percent (about 30%) of the engineering undergraduates are women. Based on the Canadian empirical data, we explore various theoretical explanations, seeking answers to such questions as:

- Is gender equity a priority in the engineering programs of these universities? And if so, how is this manifested?
- Are some of the sub-disciplines in engineering more explicitly socially relevant than others and is social relevance more appealing to women than men (as has been suggested)?
- Do considerations of gender equity influence women's choice of university, their decision to study engineering, their choice of sub-discipline within engineering?
- To what extent does a stereotyped macho culture persist in the classroom, in para-academic activities and in social activities within these engineering faculties? And what are the implications of the prevailing culture(s) in terms of gendered inclusions and exclusions?

**RC05-106.19****DENİZ, A. CAGLAR\*** (Usak University, [caglar.deniz@usak.edu.tr](mailto:caglar.deniz@usak.edu.tr))*Ethnic Identities and Consciousness of University Students from Turkey in the Metropolitanization Process***Ethnic Identities and Consciousness of University Students from Turkey in the Metropolitanization Process**

Dr. A. Çağlar DENİZ, Usak University

Key Words: Ethnic Identities, Youth, Adjustment, Metropolitanization

**Abstract:**

Turkey hosts lots of ethnic groups. All ethnic groups in the research sample are Muslims traditionally and they are distinct from the classical perception of minority in Turkey which is given with international agreements such as Lozan. This research has used qualitative research methods.

University youth coming from rural areas and small or medium sized cities to Istanbul, it is called the only metropolitan city in Turkey, have been involved to a metropolitanization process. Each ethnic group's experiment is unique and different than others. For example, Kurdish young people have developed an ethnic pride attitude about their identity. They involved to learn academic Kurdish language, try to speak to each other in Kurdish language and appropriate the Kurdish literature and history as parts of their national identity. This attitude could be regarded a very modern, it aims to a nation construction in a constructed nation.

Arab people have strong relations with other parts of Arab world. They use their language opportunity to communicate and make a trade with them. But Arab youth studying in metropolitan universities have a weak relation with their mother language. Most of them understand Arab language but they can not speak it fluently. The young Arab people in Turkey tend to assimilate to the Turkish community whether Alawites or Sunnis.

Laz people and Greek spoken Muslims have shared same lands. They live on the coast or Black Sea. They have unique languages and communicate with them to each other in their special community. But they tend to assimilate to Turkish community, and most of them are very proud to be a Turk, although they have disparate ethnical roots.

**RC19-328.3****DENNEY, JUSTIN\*** (Rice University, [jtdenney@rice.edu](mailto:jtdenney@rice.edu))**TOLBERT KIMBRO, RACHEL** (Rice University)*Helping out to Get By: The Poverty Paradox in Children's Food Insecurity*

Sociologists should be concerned with understanding the contributors to food insecurity. In the United States (U.S.), one of the most developed nations in the world, more than 1 in 5 households with children are unable to access and provide adequate food for a healthy, active lifestyle. Prior work has established important individual and family predictors of food insecurity but largely failed to account for local context. Partially as a result of this focus on individual families, solutions and policy aimed at eliminating food insecurity have fallen short. In fact, in recent years, food insecurity in the U.S. has increased. In this study, we examine the relevance of community contributors to food insecurity among children, utilizing geocoded, nationally-representative data from the Early Childhood Longitudinal Study, Kindergarten cohort (ECLS-K). We propose and test hypotheses suggesting 1) an accumulation of family and community risks, whereby the most disadvantaged families living in the most disadvantaged communities face the highest odds of food insecurity and 2) a poverty paradox, whereby the most disadvantaged families in the most disadvantaged communities may have better access to helpful resources and collaborate in unique ways to alleviate food

insecurity, especially when it impacts the community's most precious resource – children. We find that community environments matter over and above characteristics of individual families and that family and neighborhood traits combine in ways consistent with the poverty paradox. Our next steps include gaining a better understanding of the mechanisms underlying our findings as it will aid in our understanding of how community resources in disadvantaged areas can be leveraged to alleviate food insecurity and thus improve the health and achievement of children.

#### *Health Insights Across the Life Course of Oglala Lakota Elders: From Wellness to Illness*

In my research with 25 Oglala Lakota Elders (22 women and 3 men between the ages of 55 and 98 years of age) living on the Pine Ridge Indian Reservation in South Dakota in the United States, I employed an qualitative Indigenous methodology called the Conversational Method. The recorded conversations ranged between 1.5 hours and 9 hours in length. Elders were directly approached and recruited from nine elder meal sites throughout the reservation, through snowball methods with friends and family members of the elders and from cultural community events. The narratives were analyzed using thematic analysis. These American Indian elders faced great adversity over their life course in terms of social conditions and weathering the federal assimilation strategies asserted on their communities throughout the 20th Century. The elders reveal the modes of food production and communal living in their childhood years. They resided on family homesteads where they raised farm animals and grew their own vegetables. This self-sufficiency gave way to federal food programs in their adult years leading to increased experiences of chronic diseases. Modern life on the reservation has moved away from communal living and caused a great deal of strain on health of the elders. Many of the elders lived alone and struggled to acquire adequate healthy foods, which negatively impact their physical health. Additionally, the elders had limited access to formal health care for much of their lives and they traced the early years of being nurtured by their grandmothers with traditional medicine to the shift to western medical care. The elders struggled to navigate western medicine and shared the confusion of living with chronic diseases in a resource poor environment. Tracking these changes across the life course reveals sites for intervention to positively impact the health of Lakota elders.

#### *Medicine, Hybrids and Management in European Hospitals*

##### Abstract

This paper examines the changing character of hospital doctors and management across Europe and explores the concept of professional 'hybrids'. The relation between physicians and managers has undergone changes over recent decades, in the wake of the now well entrenched new public management reforms and newer governance arrangements. We are seeing in many countries what has been termed the 'hybridisation' of medical roles with doctors increasingly taking on managerial responsibilities (Dent, Kirkpatrick and Neogy 2012). This development, however, is one that is variegated as between countries. In this paper we examine the cases of Denmark, Germany, France and England and explore some of the reasons for the similarities and differences. The paper draws largely on research collected within the European COST Medicine in Management (IS0903) network.

#### *Rice-Fish Coculture for Environmental, Economic, and Cultural Well-Being*

Rice is one of the staple grains that feeds the modern world, and as such holds a very important place in agricultural systems internationally. Because rice is such an important dietary element, particularly in Asiatic countries, it has also become a foundational cultural component. As populations across the globe expand, however, the demand for rice has increased drastically, and while technology and modern farming methods have resulted in higher yields of rice, this comes at a severe environmental and sociocultural costs.

Rice paddies are a significant source of several environmental pollutants, including pesticides and fertilizers. Industrialized methods of growing rice have compounded this problem by pushing out more traditional, sustainable practices. Interestingly, some of these 'old' ways of growing rice can have similar yields to modern cropping systems while utilizing far fewer externally sourced inputs,

resulting in less pollutants exiting the system and becoming problematic in the surrounding environment (Xie et. al, 2010). This could be extremely useful information given current environmental concerns, as well as providing an avenue for cultural retention of traditional systems.

Specifically, a form of time-honored rice cultivation known as 'rice-fish coculture' has been studied as a way of reducing the environmental impact of rice paddy cultivation while maintaining high yields in order to provide economic security. Additionally, the reintroduction of rice-fish cocultures offers the opportunity for cultural revival and diet diversification. For example, rice-fish coculture was practiced in China for thousands of years and was recently designated as a Globally Important Agricultural Heritage System (GIAHS) praised for its ecological, economic, and social functions. (Koochakan, P. & dela Cruz, n.d). This system provides an excellent opportunity to combine traditional knowledge and practices in a way that will increase the sustainability and viability of small, rural rice paddy operations.

#### *'Aesthetic Labour' in the Emerging Labour Market*

*'Aesthetic Labour' in the Emerging Labour market: A case study on female labour migrants from North Eastern India to the metropolitan city of Chennai, India.*

Since the onslaught of globalization, the emergence of new service industries have attracted 'single women migrants' towards sectors such as retail services, hospitality industry, call centers etc. These newly emergent service sectors have become one of the major employers of women that accelerate the process of single female migration to urban centers. Thus, globalisation has blurred down the stereotypical gender roles and reconstituting itself by inventing a new category called 'aesthetic labour' which is in fair demand in the labour market.

The aesthetic labour force in Indian cities is largely populated by the female migrants from the North Eastern regions of India, who now are creating a niche in certain labour markets in the metropolitan cities. Their nature of being flexible, fair skinned and the fact that they are ready to migrate from the economically poorer regions of India easily qualify them as an ideal workforce for services like retail selling and hospitality. A new dynamics of inequality is framed through this processes of globalisation that prioritises soft skills (the attitude and appearance of employees) when it comes to selection and performance evaluation in their respective fields. The 'Pan Asian' physical appearance is a central character that negotiates interactions with the members of host community and they are subjected to different kinds of social evaluations and treatments from the host.

This paper would examine the process of migration of single female migrants from the North Eastern states of India to the Chennai city to see how the aesthetic labour market functions these women migrants negotiate and reconstruct their gender roles and identities.

#### *Autobiographical Narration in Turkish Women Weblogs*

##### AUTOBIOGRAPHICAL NARRATION IN TURKISH WOMEN WEBLOGS

Last decades have witnessed a shift in the textual genre of life narratives from conventional biography to autobiography. Both the feminist qualitative researches and the quantitative data on the profiles of weblog users reveal that this shift from biography to autobiography also led to a remarkable transition from a male domain towards the female one in life narratives. Moreover, in the era of digital media, new communication technologies also created significant changes in the form and content of "writing about oneself". They have enriched the forms of expressions through new textual and audio-visual supports. Besides, the intellectual and emotional mood of the autobiographic texts has also changed in a considerable way. Autobiographic texts of today, which are framing a new kind of "private publics", are roughly being generated in the light of certain dichotomies such as the present versus the past, fictional versus factual/real, life versus death, whole versus partial, *Erlebnis* versus *Erfahrung* (in terms of Benjamin's conceptualization), and, intimacy/subjectivity versus objective distance.

Moreover, today not only the celebrity/famous people but also ordinary people can share their autobiography through the internet. Hence, it is possible to speak about a kind of democratization through the new media also in terms of acting as autobiographic personas.

In this paper, following the main path determined and marked by this ongoing shift, I will attempt to analyse Turkish women weblogs in the context of "autobiographical narrative" and the "construction of the self and identity" with regard to the controversial discussions on empowerment through new media.

**DERRICK, STEPHEN\*** (Monash University, [stephen.derrick@monash.edu](mailto:stephen.derrick@monash.edu))

## Food Supply Chains, Refrigeration and Performativity

This paper explores food supply chains through the lens of refrigeration technologies and systems and examines how they have influenced approaches to food. The first commercial household refrigerator was introduced in the 1920's. Refrigeration of food is now so pervasive that it influences what we eat and has shaped understandings of "fresh". Callon's notion of performativity (1998) is useful in making sense of how refrigeration has shaped our practises and understandings. The discourse around refrigeration and fresh food is both 'outside of the reality that it describes' and at the same time is a part of the 'construction of the reality of an object by acting on it' (Callon 2006). The increasing length of food chains and reliance on fossil fuelled systems of handling, storage and transport of food reinforces feelings of increasing time space compression (Harvey 1999) and peoples' remoteness from their food supply. This separation from food also is also connected with increasing reliance on food packaging and pre-preparation techniques which are an inherent part of global food supply systems. The types of foods that are available and transported globally, have implications for greenhouse gas emissions; food waste; food security and nutrition and health among others. In a world where food availability and price is heavily determined by agro-industrial corporations, an examination of the social implications of further economic concentration in our food supply sector is needed.

### Language Codes and Production of Meanings in Emergency Calls of Domestic Violence

Violence against women is a world spread phenomenon. Even in moderns Western societies domestic violence is transversely present and affects not only lower classes, as it could be believed, but also women of upper-middle classes, different culture backgrounds and origins. The emergence call is a crucial mechanism to assist women when there is an aggression. For instance, these calls have been centralized in call centres (112) in Catalonia since 2007. Professionals of this service have structured violence situations into codes with institutional meaning. We are wondering how this service is implemented, the different actors involved, which are the proceedings to decide that the woman is in danger. Structuring codes implies to produce meaning for the different agencies involved (police, health services, woman agencies...). I.e. how codes should be used to measure and the efficiency of the service, in terms of the response to the emergency and its quality. Even though Catalonia is one of the regions which has increase the most the number of denounces (*Informe anual del observatorio estatal de violencia*, 2007), there is still a debate among professionals about whether is better denounce or not. That is due to the fact that it implies a double victimization for women. Therefore, it is important to denounce in the following hours or day after the aggression, in which case this service has an important role in the process and achievement of the goal: the security of women.

**DANIEL, ANTJE** (University of Bayreuth)

### Social Movements in Kenya: Navigating Between Individual Motivations, Visions of Social Movements Organizations and Targets of Collective Action

Are social movements' necessarily political actors that exist for a certain period of time before they disperse or transform themselves in institutionalized organizations? How does the organizational structure changes, and how do different individual purposes and organizations visions correlating and shaping social movements' claims?

Transformation processes as well as their trajectories will be described and analyzed in the paper proposed. In order to explain the relation between organizations and movements it is important to consider the contradiction between individual behavior of activists, organizational missions and social movements claims as well as their specific historical and political context. We use empirical data to analyze the meaning and modality of student's and women's movements in Kenya. The movements transformed themselves over certain periods of time and due to their specific political, societal, cultural and historical settings.

In the case of student movements the students changed themselves from a de facto opposition to the one party system in the 1980s to a current organization which is influenced by and connected to national politics. Current student leaders in Nairobi, for instance, are sponsored by national politicians and are integrated in clientelistic structures of Kenyan politics. Individual purposes of students seem at least partly in contradiction to organizations aims.

The example of women's movements in Kenya shows how activists negotiate social movement claims in a contradicting field of international norms of women's rights, the guidelines of donors and individual targets. A reasonable chance of so-

cial movement's success decides about the strategy of action and to what extent they seize up an issue.

RC09-178.2

**DEUTSCHMANN, ANNA\*** (University of Vienna, [anna.deutschmann@univie.ac.at](mailto:anna.deutschmann@univie.ac.at))

### Student's and Women's Movements in Kenya Transforming the Political Landscape

Social movements are an important part of the political landscape in Kenya. For instance, social movements have been strong forces during the struggle against the authoritarian rule in the 1980s, while they remained co-opted before. Social movements transformed themselves over certain periods of time and due to their specific political, societal, cultural and historical settings. The particular historical relation between social movements and the state shapes the impact of the activism and limit their contribution to the democratization process.

In order to explain the state-society relations we draw attention to the political environment social movements and in particular social movement organizations (SMOs) face in Kenya: First, SMOs fill political gaps left open by the state, such as the provision of extensive social services in fields where the state is not sufficiently active. With support of international donors, SMOs provide social services beyond states responsibility. Thereby, they de-legitimize the state and the ownership for development processes. Due to the fact that social movements highly depending on the support of the donor community, SMOs ensure accountability towards the donors rather than towards the state or the citizens. Furthermore, SMOs undertake the political recruitment for parties. SMOs are important vehicles in order to develop the profile of political aspirants and to gather political loyalties by adopting SMOs visions or using existing recruiting networks of social movements.

Based on field studies in Kenya, two case studies - the student's and the women's movements - show the structure and impact of social movements in Kenya. In order to explain to what extent social movements shape the democratic processes we analyse the particular relation and interaction between social movements and the state.

### Managing Communication Access in Health Care: Who's in Charge?

Disability rights activists have made substantial progress in securing the rights of citizens with disabilities. In the United States, the landmark Americans with Disabilities Act, passed in 1990, stands as both a signal achievement of that movement and also the foundation for future efforts. As with any legislation, however, achievement of the intent of the ADA—full social inclusion for people with disabilities—will depend on the implementation of the legislation, a fundamentally social process. This paper focuses on deaf patients' experiences of health care in the United States, and on the responses of health-care professionals and facilities to the ADA mandate to provide access. Drawing on interviews with professionals in different positions within the health-care hierarchy, I examine policies and practices. The results suggest that managers and front-line professionals must navigate a web of competing mandates as they confront communication differences, and that well-intentioned policies may sometimes give the appearance of access while significant problems remain.

### Disaster Exercises and the Shape of Organisations

What is the relationship between disasters and organisations? Does it matter, whether a disaster preparedness organisations prepares for floods or for earthquakes? Does the organisation itself conceive itself in the light of particular disasters? Or did so-called all hazards approaches solve the problem of organisational diversity matched to particular disasters?

The problem we have to confront here is two-sided: From the viewpoint of disaster studies, the question is simply which organisations are best suited to tackle disasters. Yet from an organisational perspective, it is clear that from a comparative and historical viewpoint, disaster organisations evolve according to their own logic, tied as much to particular (local) organisational models. Moreover, particular organisations may have evolved for one type of disaster and may now deal with others.

A particular problem here, which distinguishes disaster organisations from other organisations, is that most disaster organisations need to operate usually

in the absence of their main object, i.e. actual disasters. Most of the operations take place with stand ins for this object, as in exercises. The problem then becomes how enactments and representations of disasters in exercises shape organisations.

In our presentation we compare disaster preparedness organisations in the UK, Switzerland and India and analyze how their organisational structures reflect varying disasters through the lens of exercises. We report from ethnographical studies among state disaster organizations in these countries. We pay particular emphasis on how exercises are adapted to particular disasters and how these disasters structure organisational routines, but also how disasters are viewed through the lens of the feasibility of exercises.

#### *Young People, Youth Work and Inequality in Austerity Ireland*

At the outset of the 21<sup>st</sup> century Ireland experienced the unprecedented economic boom of the short-lived 'Celtic Tiger' followed by a precipitous collapse and a protracted period of austerity, disproportionately impacting young people. Meanwhile the youth population, unlike much of Europe, is projected to increase by more than one third in the coming decade. However, there is a return of net outward migration, the highest among the most qualified young people. For the least qualified, options of all kinds are severely limited and unemployment the highest in living memory. Rather than celebrating the country's 'demographic dividend' media commentary and political discourse portrays the dangers of a 'lost generation'.

We explore the circumstances of diverse young people in Ireland and how long-established inequalities are persisting while new ones are emerging. Case studies of youth work responses to class, gender, 'race' and ethnicity, disability and sexuality show contrasting levels of attention to, and action on, different forms of inequality. A focus on LGBT issues has increased greatly while gender rarely features prominently either in policy and practice fora. Despite examples of excellent work with ethnic minorities, a comprehensive intercultural strategy for youth has never been adopted at national level. Action relating to disability remains poorly developed within generic youth work organisations; and class inequality continues to be addressed (if at all) primarily through the prism of 'disadvantaged youth'. On the other hand, recent policy statements relating to youth place a greatly increased emphasis on human rights, equality and diversity as compared with those of the 1980s and '90s. A forthcoming national youth policy framework and a number of developments in Europe, if combined with appropriate initiatives both in youth work practice and worker training and education, hold out the possibility of a more concerted and coherent youth work response to inequality.

#### *Youth Workers As 'Knowledge Professionals': The Irish Experience in International Context*

While youth work (non-formal and informal educational work with young people) has a long history, going back at least to the 19<sup>th</sup> century, it is taking new forms and facing new challenges and opportunities today. It has always been 'knowledge-based' in that it is centrally concerned with the generation, facilitation and even 'manipulation' of both information and ideas among young people: information and ideas about self and society and the relationship between the two. It has therefore always had an inescapably ideological dimension.

Recent and current social and economic change is influencing both the types of knowledge with which youth workers are concerned and the ways in which they, and the young people they work with, relate to it. It is also influencing youth work's relationship with other occupational and professional areas such as formal education, employment and training services, commercial leisure and the media.

This paper will provide a case study of the 'state of play' regarding professionalism and professionalisation in Irish youth work, making reference also to some relevant developments elsewhere in Europe and further afield. It will explore the tensions and apparent contradictions between an increasing policy focus on quality standards and professionalism among workers and an austerity-driven climate in which workers themselves are increasingly often in precarious job situations and the young people they work with are disproportionately affected by the economic crisis and its impact on jobs and public services. It will also consider the legacy of youth work's history as a social movement as well as a professionalising occupation, and the 'problems' as well as possibilities that lie in relationships between volunteers and paid workers. Finally it will refer to recent efforts (often through the use of new media) to develop a stronger collective purpose and voice among youth workers and young people.

**DHAOUADI, MAHMOUD\*** (Univ. of Tunis, [m.thawad@yahoo.co](mailto:m.thawad@yahoo.co))

#### *Sociopsychological Map of Tunisian Bilingualism*

The Tunisian society uses two languages: Arabic its native/national language and French as the colonial language. Written and oral presences of these two languages in Tunisia create two types of bilingualism: 1- a bilingualism which does not blame the use of French instead of Arabic among Tunisians. This bilingualism is the most widespread. 2- a bilingualism that avoids the use of French between Tunisians. Only a very tiny group of Tunisians stands for this. The two bilingualisms are also associated with two forms of "Arabization" whose first meaning is the promotion of the wide societal use of Arabic. The second meaning of the term is what I call "psychological Arabization": having a very close relationship with Arabic. Bilingualism 1 does not strongly promote either of the two types of "Arabization". But bilingualism 2 is very committed to the promotion of the two types of "Arabization". Sociopsychological analysis shows that bilingualism 1 continuing prominence in Tunisia is the outcome of: a- the spread of French in Tunisian society during the French colonisation (1881-1956). b- Many Tunisians went to schools in Tunisia where French language and its culture were dominant. Furthermore, Some Tunisians had attended French universities. c- The Tunisian graduates of secondary schools and universities have taken power to rule the country after independence. In Boudieu's terms, these French educated Tunisians have reproduced themselves in Tunisian society by giving great importance to the presence and the use of French and its culture in independent Tunisia!

#### *Gender Based Violence (A case study of Gujarat Stree Kelavani Mandal)*

Gender based violence is violence against women based on women's subordinate status in society. Gender based violence includes physical, sexual and psychological violence. It occurs in both the public and private spheres.

This research paper is an empirical and secondary data based paper. The data is collected from Gujarat Stree Kelvani Mandal, a well known prestigious NGO of Ahmedabad.

The main objective of this study is to know the types of gender based violence, causes and role of Gujarat Stree Kelvani Mandal for removal of domestic violence.

Since the last five years there were 542 cases related to domestic violence in Gujarat Stree Kelvani Mandal. The study indicates that gender based violence has no barriers of social class, caste and religion. Patriarchal society, power relations and subordinate status of women are the basic roots. There are some socio cultural and economic reasons for gender based violence.

Women suffer physical, mental and economic violence because of stereo type roles and attitude of family.

The Gujarat Stree Kelavani Mandal has played a positive role as arbitrator between the two parties. The study makes a number of recommendations for action.

This paper is divided into four parts. The first part shows aspects of gender based violence. The second part shows socio-economic profile of respondents. The third part shows the main causes of gender based violence and the role of Gujarat Stree Kelvani Mandal. The last part contains concluding remarks and recommendations.

#### *What Drives National Differences in Intensive Grandparental Childcare in Europe?*

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparent childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Greece. This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations

in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, a mother is in paid work in a country where mothers are expected not to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers' employment, particularly in Southern European countries where there is little formal childcare.

#### *Vulnerable Workers in Action: Self-Organization and Unionism in the Work Fragmentation*

In the last two decades, fragmentation, precariousness, casualization, flexibility, insecurity, individualization of the working life have become major problems for an increasing number of workers (Castel, Castells, Gallino, Sennett, Standing). In Italy, and in a large part of Europe, there is an increase in the use of temporary contracts, employment agencies, false self-employment, "poor workers" and "mini jobs", as well as there is an increase in unemployment and dismissals due to the frequent downsizing and outsourcing processes. As result of these trends, a growing number of individuals is more and more "vulnerable", while trade unions have many difficulties to represent a large part of workers in this changing world of work. Nevertheless, inside and outside the institutional trade union organizations, individuals try to create collective actions with the aim to affirm their workers' rights and to improve their quality of work and life.

This paper analyzes the collective actions of "vulnerable" workers, considering individuals with a temporary job, without a job, or at risk to lose their job. We analyze the actions promoted by the unions as well as by the workers' "self-organized networks", with a focus on the Italian context and an analysis of the European perspective (20 interviews in Italy and 10 interviews at European level). Objectives of this paper are: a) understanding the meaning of action (Touraine) of the individuals involved in these social movements; b) understanding the relationships between "institutional" trade unions and "self-organized networks"; c) understanding the impact of these collective actions on the public sphere, especially considering the relationship between workers' movements and democracy in the present age.

**DI PUPPO, LILI\*** (National Research University, [lilidipuppo@gmail.com](mailto:lilidipuppo@gmail.com))

#### *The Russian State Promotion of Islamic Education*

The paper will examine the Russian state initiatives to promote an Islamic education in Tatarstan and the North Caucasus. It will ask the question of what forms of Islam does the state promote and what is understood as "moderate Islam".

The question of the form of Islam promoted by the Russian state highlights how certain boundaries are being drawn between a secularised, traditional and "Soviet" Islam that is represented by the Sufi branch of Islam and alternative forms of Islam such as a Salafi inspired Islam that are portrayed as being alien and not compatible with Russian secularism. References to collective memories linked to the Sufi tradition are thus emphasised in Tatarstan, even if the region also proclaims to represent a modernist trend in Islam in the form of *jadidism*, in order to draw a boundary with Salafi inspired movements. Furthermore, Tatarstan emphasises the connection with global efforts aimed at promoting a moderate Islam, for example in Western countries.

At the same time, such boundaries shed a new light on the way in which concepts of "modernity" and "tradition" can be associated to notions of "secularity" and "religion". Indeed, the Russian state is perceived as supporting the traditional Sufi establishment that is described as being "non-democratic" and lacking in religious knowledge and authority by alternative Islamic movements such as the Salafis, in particular in the North Caucasus. Further, the Russian state has tended to isolate the North Caucasus from transnational networks of Islamic knowledge. The Sufi establishment, also represented in the region of Tatarstan, has been delegitimised as a religious source of authority due to its perceived cooptation with Soviet structures and with federal authorities after the end of the Soviet Union.

#### *Chinese People's Tolerance of Inequality*

Based on the analysis of national representative survey data, Chinese Social Survey (CSS), this study probe the factors influencing people's attitudes toward inequality. Journalists used "social volcano" to predict the protests and discontent of grassroots, while researchers found that Chinese respondents, on the whole, still think that current resources allocation model is equal, moreover, rural residents have a stronger sense of fairness than urban residents. This paper try to figure out why Chinese people tolerate inequality and why the rural residents in lower socio-economic position have positive attitudes toward inequality. If the objective socio-economic positions of people are not tightly associated with their subjective attitudes, we try to find out what are the intermediating factors between objective positions and subjective attitudes. Factors including value of success, class identity, and urbanization are analyzed to explain how Chinese People are facing inequality.

#### JAPA-14.3

**DIAS, ANTHONY\*** (St Xavier's College, [anthonyda@gmail.com](mailto:anthonyda@gmail.com))

#### *Fukushima's Impact on India*

The Nehruvian vision of development envisaged mega projects: Industrial estates, dams, highways and thermal power plants. These necessitated acquisition of natural resources, often the livelihood base and safety net of the poor. Economic growth was compelling enough to overshadow environmental and social costs. A burgeoning population, economic reforms and opening up of markets led to more demand for power. This inexorably led to the nuclear energy option, despite opposition.

Mega projects resulted in massive displacement of people. Resistance began to grow as the narratives of human suffering and environmental degradation began to be documented and told; and re-told. Although safety considerations were important in projects such as dams, they became more pronounced in the case of nuclear power plants. With Fukushima embedded in public consciousness, the fierce agitations against India's current nuclear installations – Tarapur and Jaitapur in Maharashtra, Koodankulam in Tamil Nadu and Mithi Virdi in Gujarat have intensified.

Fukushima has altered the terms of the debate over the choice of nuclear power and has challenged the traditional notions of 'development' and 'public interest'. It has triggered a re-prioritizing of issues. Safety has become an overriding concern. Fukushima became a weapon in the hands of people's movements and intellectuals. The disaster is being repeatedly cited as a warning to the proponents of nuclear power. As the people battle the state, it has become more defensive. It claims highest standards of safety. It also offers enhanced compensation. When its attempts to mollify people fail, it becomes repressive. Women, children and men were arrested and beaten up; NGOs were warned and in some cases their funds were frozen and false cases filed against them.

People's movements, larger alliances and the search for energy alternatives offered by intellectuals and scientists are reasons for hope.

#### *The Social Dimension of Coordinative Arrangements and Work Organization in the Export Chain of Grapes and Mangoes from the São Francisco Valley, Brazil to Europe*

Since 1980's the São Francisco Valley region in the Northeast of Brazil has been going through a period of accelerated shifts. The structural transformations based on public investments in large-scale irrigation infrastructure boosted with the singular results in exports. This way a semi-arid area earlier dominated by extensive live-stock ranching and small-scale river side agriculture and fishing was turned into a pocket of production of value-added agricultural commodities such as mangoes and table grapes. Phenomena related to these shifts include the migration of individuals from a variety of social backgrounds, levels of instruction and technical capabilities inserted in a complex array of productive functions from rural wage labor to sophisticated logistic systems. Drawn by their perspectives on local potentialities these social actors are since then entangled in the region's routes of development. By its turn, all such routes involve coordinates and priorities accruing simultaneously from local and global determinants. Central for reflecting this context is the conceptualization of particular institutional arrangements found in global chains of fresh fruits. These arrangements are understood to constitute coordinative mechanisms organizing what, how, how much, when and the means of transport of given products. The aim is to investigate how social actors are involved in this export chain experience and tackle dilemmas of coordination with consequences for the configuration of production and labor. The research is based on the collection of qualitative data. Furthermore, the research work followed a methodological strategy informed by Grounded Theory's core principles. Generated insights illuminate on an array of rationales of evaluation

on issues such as, product quality, the legitimacy of contractual arrangements, labor relations and work routines, among others. These rationales were employed by the actors in concrete business relationships.

#### *The CEDAW: How a Cold War Product Could Become a Key Instrument for Women's Rights in the Global Society*

Women's rights were controversial in the international arena at the early 20<sup>th</sup> century. Nowadays, women's human rights and women's empowerment have spread over the world. This process has been supported by the United Nations agenda for gender equality, the global women's movements, the international public opinion, and Western powerful democratic countries. The CEDAW, and its Optional Protocol, is the most relevant legal instrument in this global trend. The CEDAW itself has a global dimension, since just a few countries have not already signed the document. Feminist movements all over the world use the CEDAW in order to put pressure on nation-states for the recognition of women's rights.

In this paper we will analyze three aspects of the CEDAW from a global society perspective that can be useful to think about current and future strategies to face gender inequality in the 21<sup>st</sup> century. First, we will try to find out global and regional trends in the expansion of the CEDAW and its Optional Protocol in order to identify contagion effects, reference groups and followers. Second, we will focus on the role of the inter- and transnational women's movements regarding the success of the CEDAW ratifications. Diverse considerations and uses of this document need to be seen in relation to the different "waves" of the transnational women's movement and its ideological debates. And third, we will address the content and limits of this document since its approval in 1979. We will take into account the Cold War context – with emphasis in the shocking US refusal to sign the CEDAW – that shaped the document and we will set out current transnational women's movements proposals to update our "international bill of rights".

#### *Profesores De Posgrados De Calidad. Ética Profesional y Requerimientos Institucionales*

Los programas de posgrado se clasifican de acuerdo con su orientación en los siguientes dos tipos: de profesionalización y de investigación (Conacyt, 2013). Recientemente en México se observa que, en el mayor número de casos, las instituciones de educación superior privadas ofrecen estudios de posgrado orientados a la profesionalización (actualizar a los profesionistas de diversas áreas de conocimiento), mientras que las universidades públicas incluyen ambas orientaciones (con énfasis en los procesos de generación de conocimientos).

El reconocimiento y acreditación de los programas de posgrado en este país obligan a cubrir un conjunto de requisitos entre los que destaca el contar con una planta académica de tiempo completo con altos grados de habilitación y experiencia en la docencia e investigación. Para esto los profesores de tiempo completo se someten también a un proceso de acreditación y evaluación ante diversas instancias (por ejemplo el Programa de Mejoramiento del Profesorado o el Sistema Nacional de Investigación).

En la ponencia se retoman experiencias de profesores de tiempo completo de la Maestría en Estudios Culturales y el Doctorado en Estudios Regionales que han colaborado en el diseño y conducción de estos programas que actualmente se encuentran inscritos en el Padrón de Posgrados de Calidad del Consejo Nacional de Ciencia y Tecnología.

Estas experiencias se recuperan a manera de dilemas en los que se les cuestiona sobre los beneficios e inconvenientes que conlleva el reconocimiento y mantenimiento de los programas de posgrado en este padrón de calidad, aludiendo a los principios de ética profesional en los que fundamentan su práctica.

### RC10-197.3

**DIBOU, TANJA\*** (Tallinn University, PhD student, [dibouta@hotmail.com](mailto:dibouta@hotmail.com))

#### *Cooperation Of Various Stakeholders In Providing Youth Services In Estonia*

Youth policy is a relatively new challenging phenomenon studied under various contexts. In the context of EU studies, the youth policy is seen as system of the complex interactions between domestic, transnational, and supranational actors in the youth field. The young people require a new attitude, that means seeing

youth policy across traditional sector boundaries and from youth perspectives. Currently, the main issue of youth policy implementation is the problem to organize an efficient interaction between different institutions and stakeholders across levels and sectors.

The important task of the paper is to present Estonian experience of the implementation cross sector integrated model of youth policy. The objectives of the paper:

- to explore how the main actors of youth policy identify cross sector integrated youth policy, their attitudes, views about it;
- to analyse how is youth policy playing out across vertical levels or horizontal levels of governance. If it is not working well and if so why? Consideration of and barriers to better implementation of integrated youth policy;
- to share good existing practices of cooperation between various stakeholders in the youth field and to introduce the key tools for good cooperation and participation in youth policy.

The main theoretical conceptions that are used in work:

-Simona Piattoni multilevel governance framework to study vertical and horizontal dimension of cooperation in Estonian youth policy.

-Howard Williamson theoretical approach "the five Cs" to characterize Estonian youth policy.

The analysis is based on the results of semi-structured interviews and 1 focus group with experts from youth field in Estonia. The survey examined the following issues:

- Knowledge about integrated youth policy across various stakeholders,
- Contribution of main stakeholders in developing Estonian youth policy
- Cooperation between stakeholders.

### WG01-887.3

**DIBOU, TANJA\*** (Tallinn University, PhD student, [dibouta@hotmail.com](mailto:dibouta@hotmail.com))

#### *Youth As Youth Policy Actors: Options Of Youth Participation In Estonian Youth Policy*

##### **Youth as youth policy actors: options of youth participation in Estonian youth policy**

Raising youth active participation in decision making process is the one's of main priority of many international and national agendas on youth. For instance, one of two overall objectives of the European Union Youth Strategy (2010-2018) is to encourage young people to be active citizens and participate in society.

Comprehensive analysis of the present existing options of youth participation in youth policy offers a more effective way to understand youth ability to influence their own lives. A focus on the youth involvement in civil society brings to discuss about various forms from 'true' to 'false' forms of activism. Scholars in youth field identify that not every action of young people in society should be seen as the full of value.

The objectives of the paper is to explore how and whether the state provide opportunities to youth participate in decision-making process of youth policy and how this process is organized in Estonia. Author have chosen for analysis Estonia, as example of Baltic states, where in youth policy it is possible to find at the same time EU approaches and post Soviet experience.

The youth participation will be analyzed through a review of theoretical literature with providing some practical examples and empirical data from youth sector, using the Estonia states' documents, statistics, surveys and data from individual research (10 interviews and 1 focus group with experts from youth field) The main question for author is to explore whether youth opinions are taken into consideration by politicians.

#### *South Africa's Public Rdp Programme in the Light of Temporary Migrants' Housing Needs: A Critical Reflexion*

In spite of moderate immigration rates in the last decade, South Africa's large cities have been experiencing an unhalting growth of informal settlements. This, so the present paper argues, is a consequence of the 'missing link' between public housing schemes and the housing needs of temporary migrants. Drawing upon primary and secondary data collected during three short field visits to South Africa in 2012 and 2013 the authors explore the background of the mismatch and outline possible solutions for a pro-poor led National Housing Policy considering temporary migrants' housing needs.

South Africa's Government Housing Policy has experienced various programmatic turns in recent decades. The first and possibly most important one is related to the end of Apartheid in 1994. In order to counter the huge housing backlog of the time, a massive, policy driven public housing program for low income households in the context of the Reconstruction and Development Programme, RDP,

was put in place: since 1994, approximately 3 million housing units were built. In 2004, with the start of the "Breaking New Grounds" initiative, the importance of in situ upgrading of informal settlements for the affordable housing provision of the urban poor, was acknowledged and becoming part of policy agendas.

At the same time South African society has profoundly changed in many ways. The evolving 'post fordist' labor market has become much more flexible than during Apartheid years, pushing people to move behind informal job opportunities, thereby changing the 'spatiality' of cities. In this context it is argued that, due to a combination of job-related constraints and socio-cultural connections with regions or countries elsewhere, highly mobile temporary migrants have different housing needs than permanent migrants. They even tend to be systematically disadvantaged by the RDP programme, which pursues the number-driven objective of converting 'informal' into 'formal' dwellers.

**DICKENS, BARBARA\*** (Flinders University, [barbill@internode.on.net](mailto:barbill@internode.on.net))

#### *The Challenges in a Fragmented World of Achieving a Holistic Approach to Urban Planning for a Sustainable Future*

In our 'complex, fragmented urban world' (Stoker) 'global problems are generated at the local scale and should be solved there too' (Condon). Yet, neither governments nor citizens take responsibility for the collective problems, while political systems focus on short-term rather than long term benefits.

Held emphasises 'the need for a strong public sector, and the requirement for multilateral governance', while acknowledging 'conflicts between economic development and the strengthening of civil society'. McIntyre-Mills argues, 'policy and practice needs to consider social, economic and environmental implications for all life'.

The field of urban planning exemplifies this. Key issues of democracy and participation in public policy making at local and regional level, the role of the private sector and the balance of markets, government and civil society, and a containerized approach by government, results in much urban planning failing to recognize future consequences of current choices.

Any approach to resolve this complex mess and balance the state, market and society requires, as McIntyre-Mills says, 'a democracy/governance cycle that spans conceptual, spatial and temporal boundaries'. At the same time democracy needs to change to meet the convergent social, economic and environmental challenges. McIntyre-Mills recommends 'both centralized controls to protect the global commons and decentralized engagement to test out our ideas'.

Urban planning also will only succeed if it recognizes that 'we need to be the subjects not the objects of other people's designs' (McIntyre-Mills). However, participatory design is complex and difficult and, while digital communication can potentially include more voices, like any engagement it works best when complementing other processes and 'built around the needs, goals, and concerns of the potentially engaged,' (Leinghninger).

Sarkisian therefore argues that urban planning needs to take a holistic approach, 'taking into account multiple layers and components of social systems' and to be long term focused.

#### RC03-67.1

**DICKENS, LUKE\*** (The Open University, [luke.dickens@open.ac.uk](mailto:luke.dickens@open.ac.uk))

#### *Creating Hackney As Home: Youth Perspectives on Gentrification in London*

This paper focuses on how studies of and with young people contribute to our understanding of contemporary urban redevelopment including processes of gentrification. Within urban centres, demands from competing stakeholders have led to juxtaposing expectations of space use and a concomitant potential for everyday conflict between residents, local authorities and developers. These processes of change are being documented through various approaches but there remains a need for more focus on how young people experience this urban transformation and what this means for urban theory and practices of redevelopment.

The *Creating Hackney as Home* project, working with five peer researchers, has used participatory visual methods to document young people's experience of gentrification in the London Borough of Hackney. This area has been marked by rapid transformation given its location close to the financial centre of the city and the Olympic site. The project found that young people maintain an ambivalent relationship with this locality, recognising that changes can be beneficial but 'not always for them'. Feelings of exclusion from planning processes and displacement from their neighbourhoods were matched by expressions of comfort in new public spaces and shops. Participants noted the uneasiness generated by changing demographics, such as the movement of creative industries and young urban professionals into the borough, as well as the skills necessary to adapt to these new circumstances. In conclusion, the paper highlights the complex, ambiguous processes of growing up in post-industrial cities.

#### RC34-601.2

**DICKENS, LUKE\*** (The Open University, [luke.dickens@open.ac.uk](mailto:luke.dickens@open.ac.uk))

#### *Rethinking Public and Private Boundaries: The Ethical Challenges of Using Social Media in Participatory Research with Young People*

The London Borough of Hackney has become iconic of the intensity of change in contemporary cities, marked as it is by high levels of mobility, urban regeneration, cultural diversity and social inequalities (Mayhew et. al. 2011; Wills 2010). Within this context, young people are at the centre of debates on social inclusion, crime and media representations of the borough.

The *Creating Hackney as Home* project used a participatory approach to explore with young people their experience of space and space use in Hackney, and in particular the formation of a 'home' in which they have a stake. The project centred on the production of films by five peer researchers which were later broadcast on the project website, linked to an online discussion forum as well as social media such as Facebook and Twitter. Moderated by the peer researchers, this online presence generated debate among young people locally, nationally and internationally.

This paper will focus on the methodological and ethical challenges that the project raised, particularly related to using social media and online technologies. The *Creating Hackney as Home* platform brought new possibilities for participatory research but also its own set of challenges in terms of ethical practice, with social media at times blurring the line between public and private, confidentiality and anonymity. The paper will also address questions of power dynamics in university collaboration with third sector organisations and an analysis of the conditions under which participatory methods should or should not be used.

*Project information and the films can be found at: [www.hackneyashome.co.uk](http://www.hackneyashome.co.uk)*

#### *The Role of Governments in Education for Sustainable Consumption (ESC): Capacity for the Effective Implementation in Asia-Pacific Region*

Sustainable consumption is an integral element of sustainable development and an issue of paramount importance to the United Nations. At the UN Conference on Sustainable Development (Rio+20) in 2012, the Heads of State reaffirmed that promoting Sustainable Consumption and Production (SCP) is an essential requirement for sustainable development and the outcome *The Future We Want* adopted the 10-Year Framework of Programme on SCP. The importance of education in facilitating a shift towards sustainable development and in promoting sustainable lifestyles has also been internationally reaffirmed in the UN's decision to launch a UN Decade of Education for Sustainable Development 2005-2014. Hence, Education for Sustainable Consumption (ESC) is understood as the way to promote responsible environmental citizenship and national policy for ESC is a powerful instrument to influence sustainable consumption behaviour.

This paper addresses how to improve the capacity of governments in implementing effective ESC. The research was conducted through primary interviews with relevant government officers, survey/ questionnaires, and analysis of policy documents in Asia-Pacific Region: East Asia cases from P.R.China, Japan, R.O.Korea in 2010-2011 and Southeast Asia cases from Malaysia, Philippines, Thailand in 2013-2014. This research targeted governmental capacity for implementing effective ESC as an important opportunity for strengthening the meta-level structures through which transformative change can be encouraged.

The findings identify key aspects of current governmental context for promoting sustainable consumption. The six country cases are analysed in a comparative capacity assessment based on the four levers of change identified in UNDP's capacity development framework: institutional arrangements, leadership, knowledge, and accountability. The recommendations aim to strengthen policy and institutional frameworks for ESC and to link with wider policies for SCP and Education for Sustainable Development.

#### *Mgnrega a Way Forward to Development: A Case Study of a Tribal Village in Madhya Pradesh*

*The National Rural Employment Guarantee Act currently provides right of employment to the rural poor of the country. The Act provides employment guarantee to every rural household for 100 days in a year. This is perhaps the first time that the*

*Panchayats have been provided with the freedom to plan and execute works and is backed by substantial resources, which are at their own disposal. Ideally, the Act and the programme design reflect to bring about a radical change in the rural areas as far as employment generation and creation of sustainable assets for the villages is concerned. The NREGA programme's efficacy is based on the logic of using the productive capacity of ordinary rural folk to build and nurture productive and infrastructural assets, while simultaneously alleviating the problem of chronic unemployment and poverty. This paper is based on the study Eradication of Poverty and MGNREGA conducted recently in Harda district of Madhya Pradesh. Madhya Pradesh accounts for 23 percent of the total tribal population in the country. In spite of favorable resource conditions, tribal regions perform poorly in terms of infrastructure, returns from agriculture and almost all human development indicators. As compared to other sections of the Indian society, the tribal population has the lowest Human Development Index (HDI). Among the social groups, scheduled tribes (STs) have the highest proportion of the poor (54 percent), followed by scheduled castes (SCs, 50 percent). So, this paper will examine the implementation of MGNREGA in Bori village of Harda district in terms of development. It will explore the impact of MGNREGA on the lives tribes of Bori village and also present the ground realities related to the MGNREGA.*

#### *Turkey Case Study: Occupy Gezi! Public Protests*

This presentation focuses on Istanbul's *Occupy Gezi* protests that started on May 28 2013 and spread via *Facebook*, *Twitter*, *Friendfeed* etc. The purpose of this research is to find out how and to what extent social media activism is changing the role of social actors - online and offline -. Some of the research questions to be answered are:

- Are communities more active because of the opportunities offered by digital tools?
- Have community engagement and participation improved because of digital transformation?
- What cultural and media practices of communities affected by digital transformation?
- Who are leading on increasing the use of digital tools in communities?

The protest which started on May 28, 2103 in Istanbul was against the destruction of *Gezi Parki*, the only big green park left in the centre of Istanbul, and construction of a shopping mall instead. Protesters spread the word by using social media; starting *Facebook*, *Twitter* and *Friendfeed* and using the following hashtags: #ayagakalk #geziparki #occupygezi. In short time the protest became an international news issue. Within hours their page was liked by hundreds of thousands of people and by the end of the day, *Occupy Gezi Park* became world news. Nevertheless, the coverage of the Taksim Square protests will not be remembered as a moment of glory for a number of Turkish mainstream media. While demonstrators were being tear-gassed and beaten by police, *CNN Türk* was airing a documentary on penguins and *Habertürk* had a debate on mental illness.

**DIMMER, CHRISTIAN\*** (The University of Tokyo, [Chr.Dimmer@gmail.com](mailto:Chr.Dimmer@gmail.com))

#### *Relational Place-Making, Actor-Networks and the Emergence of Tokyo's Sub-Centre Shibuya*

Much has been written about global(ising) Tokyo. While some have identified familiar neoliberal, entrepreneurial forms of governance as response to pressures of global competition, with big corporations playing a major role in urban restructuring, national government cheer-leading and local governments increasingly marginalised (Sorensen 2003, Jacobs 2005, Waley 2007), others have emphasised Tokyo's rootedness in local policy frameworks and a distinct development state that evade universalistic narratives (Saito 2003, Fujita 2011, Tsukamoto 2011). This paper seeks to contribute to these discourses. While existing studies tended to be macroscopic and quantitative, this research focuses on the making of one major place in Tokyo —the Shibuya Sub-centre— in the *longue durée*. It traces systematically how contestation and collaboration between different actor-networks over history led to dominating rationalities, legitimising discourses, and established political traditions that informed the ongoing spatial restructuring of this hub of consumption, post-industrial cultural production, symbolical representation; and vice-versa. As places are not inherently local nor fixed at a particular scale, major national and international events, such as the Beijing Olympics 2008, or Tokyo's Olympic bids in 2009, 2013, as well as developments, such as technological progress, policy innovations, or changing patterns of consumption, are important. The paper, then, seeks to develop a more nuanced understanding of how the socially negotiated, constantly changing and contingent "networked politics of place" (Pierce, Martin, Murphy 2010) are emerging at the intersection of national, metropolitan and local urban politics, the place-making efforts of two powerful railway and retail corporations, diverse community building initiatives, social movements, and everyday users of public space. ANT serves to untangle this "complex weave of competition, struggle, and cooperation within shifting social and physical landscapes" (Harvey 2001); among different actor-networks of many types and scales that only become visible in moments of contestation.

#### *{Re}Assembling Public Space/ Creating New Urban Commons: Evolving Geographies of Contestation, Celebration, and Collaboration in Contemporary Tokyo*

When Walter Lippmann (1925) famously called the public a phantom, he meant to stress its fragile, provisional nature —ceasing to exist, once no longer upheld, re-assembled, performed. Clive Barnett suggests that publics do not simply exist a priori, but must be convened in open-ended, contingent processes without the certainty of success (2008). Nancy Fraser emphasises the presence of many "sub-altern Counterpublics," where marginalised groups congregate to discuss matters of common concern (1990). Also Bruno Latour rejects the idea of one unitary public sphere, where only the quality of the best argument matters but not the identities of those presenting it — suggesting that the public and the political are constantly {re}assembled through devices, procedures, and mediums; crystallising around specific issues, or topoi. Highlighted are the processes of how publics are created, and the many small, mundane acts and things that support these. 'True' public space has therefore a performative and ephemeral quality, that only exists in an instance when a public sphere is temporally supported, or even convened into being by a physical setting. In such a moment a public space turns into more than just a state-owned venue of accidental, amorphous sociability and begins to take on a broader collective, often political, relevance. This paper is interested in the transformative potential of such public spaces and examines the myriad of new commons in Tokyo, having recently sprung up in the form of collective houses, artists communities and others places. Here people are testing new modes of sharing time, goods, skills and spaces beyond state and market — prefiguring new models of post-consumerist society in privately owned settings. Although neither explicitly political, nor fully public, arrangements like these create new affordances, and social capital that may later become pertinent; transforming society in many small, quotidian, pragmatic steps.

**DINERSTEIN, ANA CECILIA\*** (University of Bath, [A.C.Dinerstein@bath.ac.uk](mailto:A.C.Dinerstein@bath.ac.uk))

#### *'Decolonial Marxism' and Neozapatismo: Bridging Counterhegemonic Struggles in the Global North and South*

How can we understand the diversity of forms of radical counter hegemonic resistances within current processes of accumulation of capital, from a non-Eurocentric perspective? In this paper, I anticipate a conversation between two approaches to resistance: Decolonial School and Open Marxisms. By constructing the imaginary dialogue between these two perspectives I identify their theoretical strategies, limitations and mutual misrecognitions that prevent fruitful cross-fertilisation, in order to delineate a new direction in the study of counterhegemonic politics and social emancipation. To DS it is indispensable not only to recognise particular trajectories of experience of power, oppression and domination but also to overcome 'both Eurocentric and Third World "fundamentalisms"' (Grosfoguel 2008). Marxists and political economists reproduce the 'coloniality of power' that movements in the South are struggling against. However, a DS fails to consider the material processes of emergence of counterhegemonic pluriversal resistance within and against new forms of accumulation of global capital. (Open) Marxists and radical political economists offer an adequate critique of global capital. They explain how current forms of 'accumulation by dispossession' (Harvey 2003) and 'crisis' have changed the experience of oppression, exploitation and resistance. Yet, are they aware of the epistemic distortion implied in the (North-centric) character of their critique of capital? I offer the term 'Decolonial Marxism' to designate a form of critique that bridges diverse forms of counter hegemonic resistance within current processes of accumulation of capital from a non-North centric perspective. 'Decolonial Marxism' offers a new understanding of *pluriversal* forms of resistance against and beyond global. I also contend that Neozapatismo constitutes the practical and political embodiment of Decolonial Marxism for it bridges the struggles of indigenous, rural, urban counter hegemonic struggles, in the North and South, challenging in practice, the theoretical divide and allowing the incorporation of movements' own theorising into the critique of capital.

#### *Danish Exceptionalism: Explaining the Unique Increase in Social Trust over the Past 30 Years*

Contrary to the general trend in most countries, social trust has been rising steadily in Denmark for the past three decades. The purpose of this paper is to understand this development. Our analyses show that the rise in trust can partly

be attributed to generational differences, a rise in education, an improvement in the quality of state institutions, and the trust in these institutions among citizens. The analyses build on data from a number of Danish surveys, including both a cross-sectional and a panel survey.

#### *Ethnic Diversity and Social Trust: The Role of Exposure in the Micro-Context*

In this paper we argue that residential exposure to ethnic diversity reduces social trust. Previous within-country analyses of the relationship between contextual ethnic diversity and trust have been conducted at higher levels of aggregation, concealing substantial variation in actual exposure to ethnic diversity. In contrast, we analyze how ethnic diversity of the immediate micro-context – where interethnic exposure is inevitable – affects trust. We do this using Danish survey data linked with register-based data, which enables us to obtain precise measures of the ethnic diversity of each individual's residential surroundings. We focus on contextual diversity within a radius of 80 meters of a given individual, but compare the effect in the micro-context to the impact of diversity in more aggregate contexts. The results show that ethnic diversity in the micro-context affects trust negatively, while the effect vanishes in larger contextual units. This supports the idea that interethnic exposure underlies the relationship.

#### *Mapping the Modern Chinese National Identity through Celebrity Body: The Rise and Fall of the Sporting Hero Liu Xiang*

In the globalization of modern sports, celebrity sports athletes have acquired a stardom equal to that of entertainment icons. Celebrity athletes serve the role of national representatives and shoulder the responsibility to win glory for the nation. This acquired identity has put elite athletes under the media limelight, and celebrity athletes are constantly subjected to media scrutiny and framing, especially when they fail to live up to national expectations. Discourses of the elite sporting bodies are "characters within a set of narratives" (Laclau, 1977, quoted in Whannel, 1992: 121), and the formation of sporting celebrity is "intrinsically tied to the rise of the modern nation-state, yet in both realms the nation-state has increasingly come under pressure as the dominant frame for the organization of political and sporting discourses alike" (Sandvoss, Real & Bernstein, 2012: 11-12).

This paper maps the media discourses surrounding Chinese 110m hurdler Liu Xiang (刘翔) from his record-breaking success in 2004 to his two-times withdrawal from both 2008 Beijing and 2012 London Olympics. Data were collected from two major Chinese newspapers: *People's Daily* and *Titan Sports*. Analysis also draws from data of semi-constructed interviews with 13 Chinese sports journalists regarding the myth surrounding Liu Xiang. Through in depth research, it provides 1) a comparative content analysis of the attributes to his body before and after his failed performance within the frenzy of Chinese Olympic success in Athens, Beijing and London; 2) an account of the production site for the media representation of Liu Xiang through journalists' interviews; 3) a discussion of Chinese national identity projected through the discourse formation of Liu Xiang.

#### *A Duboisian Dogma Appropriate for Addressing Social Context and Global Health: The Case of Cardiovascular Disease*

W.E.B. Dubois (1906) was the first Sociologist to show "social context" was a major mechanism driving racial differences in morbidity and mortality. The problems identified in Dubois' empirical studies "The Philadelphia Negro" and "The Health and Physique of the Negro American" have continued relevance for understanding the underlying factors driving race/ethnic disparities in health presently. Using two of his seminal projects as frameworks, this paper uses empirical evidence from 3 secondary datasets to investigate the role of "social context" in cardiovascular disease, measured by hypertension prevalence, for race/ethnic groups in the United States, Canada and South Africa. Findings suggest African American hypertension rates remain higher than whites (OR=1.48; CI= 1.47, 1.48) that are explained by education, smoking, drinking, age, sex. For South Africa, Coloureds (OR=1.44; CI=1.44, 1.44) and Asians (OR=1.43; CI= 1.43, 1.44) had higher hypertension rates compared to Whites, that were explained by heavy drinking and smoking. In Canada, "visual minority" groups had higher hypertension rates (OR=1.11; CI=1.02, 1.21) compared to whites that were explained by education, health behaviors and age. This paper proves the factors implicated in high mortality rates for African Americans identified by Dubois, continue to be

the same factors driving health disparities for Blacks, marginalized race groups and "visual minorities" presently. Conclusions challenge scholars, researchers and public health professionals to think critically about how to address race/ethnicity and racial subjugation in global health policy in order to move forward to improve population health in varying geographic spaces, particularly in countries with socialized medicine.

#### *Black and Executives in France : Straw Women?*

In France, the managers assume autonomy, weak hierarchical constraints and progression within the organization (Flocco 2006). Paradoxically they are both filled and devoid of these attributes. They have a power which is not real. They can act with a limited and confusing scope. Their initiatives remain uncertain. (Cousin, 2008). A current qualitative survey with Black women graduates in public and private French companies provides some answers to the following questions: Do they actually chose their own rules of action? Their potential autonomy is it effective and proven? What are the forms of objective and subjective requirements which they face? Are they the actresses of their own careers? (Flocco, 2006). In labor relations, the "ethnic imbalance", issues of sex, class and race, lead some employees to refuse the authority of people that they perceive as dominated (De Rudder, 2000). Then, Black women graduates often occupy functional jobs with no command and / or financial responsibility, when they are not isolated from collective work and management. As if these executives were "straw women", who do not really have the power, but a limited scope and uncertain initiatives. However they allow France to show a diversity and equal opportunities façade. This paper is based on biographical interviews, an intersectional methodology and a feminist and post-colonial approach. It draws on studies conducted in the Netherlands and the USA with highly qualified bicultural Black women (Essed 1984, 1991 2004) to analyze the aspects of labour cross cultural relationships in France. It asks questions of leadership style and values related to diversity, gender, age, disabilities, etc. It testifies pseudo success stories of women who are faced with the role reversal in the home and workplace and in the social order of invisibility.

#### RC25-446.4

**DIOP, CARMEN\*** (Université Paris 13 Villetaneuse, [carmendiop@yahoo.com](mailto:carmendiop@yahoo.com))

#### *Standpoint Epistemology, Auto-Theorization in France: A Counter Hegemonic Knowledge?*

How does language (biographical empirical data) account for the social relations and their context? My research on untold experiences of suffering in the social space of work is the result of my own immersion in the social relations that I am studying. It is embodied in the French debates on gendered equality at work and post-coloniality. The French scientific knowledge production promotes distance vis-à-vis the object. Nevertheless, I highlight the heuristic value of the standpoint epistemology (Mathieu 1971; 1991; Juteau, 1981, Haraway, 1988). My epistemic advantage (Hartsock, 1998, Harding, 1990; 2003) is central and my work is likely to be returned to journalism, fiction and socio-political subversion, and excluded from academic recognition (Bourdieu, Morrison, 2000). This epistemology denies the rift between commitment and sociological knowledge (Guil-laumin, 1981; 1992; Delphy, 1998; 2001) and raises the issue of race and gender diversity in academia (Essed, 1997, 1999). Considered "unscientific" by "the White North Western male bourgeois", this approach questions both the producer of knowledge and his object. In French sociology, it is considered harmful (Boudon, 2001) and auto-theorization remains marginal. The issue is: How am I represented, and how do I self-represent myself outside the usual frameworks, based on a theory of personal experience (De Lauretis, 1987)? I aim to produce an academic knowledge from practical and subjective discursive truths, in a process of translation of subjectivities. As an Afro-Caribbean researcher in "a sexualized and racialized world" (Morrison, Din 1994), I use my epistemic advantage, in order to produce a counter-hegemonic knowledge of the social relations of gender, race, etc. inside the academy (hooks, 2000; Hill Collins, 1989) in France.

#### RC40-681.2

**DIXON, JANE\*** (Australia National University, [Jane.Dixon@anu.edu.au](mailto:Jane.Dixon@anu.edu.au))

#### *The Role of Social Protection Policies in the Food Security of Farmers and Agricultural Labourers*

The role of social protection policies in the food security of farmers and agricultural labourers  
Jane Dixon, PhD

Senior Fellow, National Centre for Epidemiology and Population Health, Australian National University

Cheap fresh food provokes a conundrum: it can provide higher levels of nutrition security than if the food was more expensive but it can also lead to inadequate and unsustainably low farmer livelihoods. What is good for consumer health, in terms of fresh food availability and affordability, is not necessarily good for agricultural sector worker incomes or health. Farmers now constitute a growing proportion of the world's poor. It is in this context that numerous international agencies argue that food security is first and foremost a matter of human security (including income/social protection and universal health coverage). This paper outlines arguments linking food and human security and social protection being made by the World Health Organisation and the Special Rapporteurs on the right to food and on extreme poverty and human rights. It also describes the wider applicability of The WorldFish Centre's recommendation that poverty and food security goals become explicit in fisheries sector policy. The paper concludes that operationalising the links between human security and food security within all agricultural sectors is the best way to ensure the long term survival of agriculture.

#### *Mentally Disordered Offenders' Perspectives on Their Level of Risk to Others*

Mentally disordered offenders subject to section 37/41 of the Mental Health Act 1983 (England and Wales) are subject to conditions and restrictions operated by the Ministry of Justice. The legal basis for such an order is that it is 'necessary for the protection of the public from serious harm' and mental health services are tasked with identifying, monitoring and minimising mental health risks in order to maximise public safety. Relatively little has been written about the way in which this group of offenders understands and makes sense of their own level of risk. This paper draws on original research with mentally disordered offenders subject to this order and demonstrates the way in which they sought to dignify and explain behaviours that had been identified as risky by others. It is argued that offenders gave accounts relying heavily on notions of identity in order to justify their actions. I begin by examining those who explained their offending as having occurred as a consequence of being ill. I then turn to those who rejected illness explanations and examine techniques which they used to present themselves. Not all research participants fell neatly into groups of people accepting or rejecting notions of mental illness. A large proportion gave complex and sometimes contradictory accounts. Within these accounts, risk and safety were framed in a variety of ways in order to emphasise the moral aspects of service users' identities. Attention will be given to the wide range of strategies used to achieve this. I will explore differing ways in which participants described mental disorder, notions of risk as fate, hierarchies of risk and the use of jokes. Finally I draw a number of conclusions in relation to what this tells us about service users' understanding of their identities.

**ZAINI, REZA\*** (University of Indonesia, [reza.zaini@yahoo.com](mailto:reza.zaini@yahoo.com))

#### *Becoming Chinese in Indonesia: A Study on Ethnic & Nation Identities in Tangerang, Banten*

Studies of ethnic Chinese in Indonesia tend to look at in an objective, general and static perspective. Imagining that all members have the same characteristics, they voluntarily acknowledge as a single community of Chinese people. The following study conducted over a number of people in South Tangerang, Banten, shows a different situation: there are many sub-groups in what collectively known as "Chinese people." Each individual member has the freedom to identify her/himself as a member of the community. They initially refused to be known as "the Chinese," preferred to identify themselves as "orang keturunan (descendants)." A term that draws her/him to the neighborhood of "orang pribumi (natives)" i.e., Betawi and Sundanese. With the physical and socio-cultural characteristics more like Indonesian people in general, what they do are just convert themselves from Confucianism and or a Buddhist to a Muslim, automatically they are recognized by the surrounding community as full members. But in its development, along with their geographic mobility to Jakarta, Chinese migration from other parts of Indonesia and settled in their traditional settlement, as well as the change of Indonesian government policies that tend to be more pro-Chinese, they do the necessary efforts ranging from religious conversion (converted to Christianity), learning languages (Hokkien dialects and Mandarin), change the mentality (trying to be more diligent at work), changing profession (from peasants to traders), to improve their economic statuses (getting rich) and whiten skin color (from brown to a lighter one). All was done so that they can claim and recognize as "Orang Cina Udik (uphill Chinese)" and, even better, "Cina Benteng" ("Chinese of the fort" a term that despite distinguish themselves with other Chinese people in Indonesia (Chinese of Medan, Bangka, Pontianak etc.), but confirms them as one single community: "Chinese people".

**DOANE, ASHLEY\*** (University of Hartford, [doane@hartford.edu](mailto:doane@hartford.edu))

#### *Alienated Consciousness and Dominant Group Racial-Ethnic Identity*

The evolution of dominant group racial-ethnic identities is a key factor in understanding alienation and intolerance. Historically, the emergence of nationalism, racism and ethnocentrism was an important element of global capitalist development that was grounded in colonialism, enslavement, and other forms of domination. Ruling elites fostered what Charles Mills has called a "racial contract" in which dominant group working classes received limited social and economic privileges in return for their acquiescence to systems of racialized capitalism. This served as the basis for cross-class racial and national alliances to resist anticolonial and antiracist social movements in order to maintain group-based privileges. Over the past half-century, the increasing pace of globalization and the expansion of neoliberalism have placed dominant group working classes in an increasingly precarious social and economic position. This has included a rearticulation of the "racial contract" and the increasing alienation of dominant group working classes. In this paper, I analyze the nature of this new "racial contract," the rise of reactionary social movements and the prospects for progressive social movements.

#### *Renewable Energy As Factors of Equality ? Socio-Anthropological Case-Studies of RE Communities in Austria, France and Germany*

According to many research, energetic crisis and environmental problems will cause new inequalities between countries or communities. However techniques like Renewable Energy can also be factors of more equalities (economic, social and environmental). Indeed, a socio-anthropological study of rural towns having achieved full or partial renewable energy self-sufficiency in three western countries (Austria, France and Germany) shows that these RE projects emerge in territories with local difficulties (poverty, unemployment, few economics opportunities or tourism, decrease and/or ageing of population, poor soils, pollutions, etc.). How should we explain this fact? What are the local implications of this energy choice? And how can RE be factors of equality?

RE are indeed opportunities of local development, with a more sustainable energetic system. All territories have sustainable energy resources (sun and/or wind, and/or biomass, etc.). RE are also simple and appropriable techniques and its maintenance can be locally managed. Therefore this local energy self-generation has economic but also social and symbolic implications: local employment, tourism, solidarities within or outside the community, redefinition of the role and the place of farmers and inhabitants living inside those villages, local and collective identity, etc. The use of RE inscribes itself in another relationship to the world and all this constitutes a new form of social appropriation of energy (technical, symbolical, economical and political).

Paradoxically, the energy crisis and necessity of a more sustainable way of life in western societies could create new opportunities for communities in difficulty, and contribute to more equality between territories.

**WALDNER, LISA** (University of St. Thomas)

#### *Right-Wing Populist Rhetoric Among White Power Supporters In The United States*

Populist rhetoric has characterized numerous movements in the United States as well as elsewhere. We draw on data collected mainly during the 1990s based on interviews of and questionnaires from white power supporters. Our analysis focuses on the penetration of populist rhetoric among individual supporters rather than the framing of issues by white power leadership. Drawing especially on work of Kazin, Berlet and Lyons, and Caiani, della Porta and Wagemann, we focus on the elements of producerism, elitism, conspiracism, scapegoating, and demonization. Supporters tend to see their organizations as working class based and are critical of those at the top and at the bottom of society. The framing of the hard working white man unjustly being taken advantage of by the very rich and those on welfare may well appeal to a number of people in hard economic times. A small portion of interviewees mentioned support of the Populist Party (e.g., David Duke and Bo Gritz) and were much less likely to support the use of violence in the movement. The penetration of populist rhetoric illustrates how more recent movements like the Tea Party are likely to be attractive to white power supporters and how the white power movement could be attractive to a certain segment of supporters of the Tea Party movement.

*Japan's Pre-War Jury Trials As Seen By the Journalists of Hōritsu Shinbun (Legal News)*

In May 2009, the Act Concerning Participation of Lay Judges in Criminal Trials ("Lay Judge Act") was enforced in Japan. This piece of legislation established a new mixed-court jury (*saiban'in*) system where the verdict and sentencing in major crimes are decided by a panel comprising three professional judges and six laypersons.

The introduction of the *saiban'in* system is not the first experimentation with citizen participation in the criminal justice system in Japan. The twelve-layperson jury system functioned in early *Shōwa* Japan between 1928 and 1943.

Just like the first *saiban'in* trials in contemporary Japan, the first jury trials in the pre-war period attracted a significant amount of attention from the general public, academics, and journalists.

This paper describes and analyzes the journalistic accounts of the first cases tried by jury in pre-war Japan that appeared in the *Hōritsu Shinbun* (Legal News). The *Hōritsu Shinbun* articles not only contain the objective description of the jury trial proceedings and the strategies of the defense and prosecution, but also include a subjective element—the personal impressions of their authors. The observations of the authors of the articles provide readers with important insights into how the jury system was perceived by the general public at the time.

Highlighting these insights is the first objective of this paper. Outlining the features of Japan's pre-war jury system is another. Placing the details of the functioning of the *saiban'in* system in contemporary Japan into a historical context is the third goal.

**DOCENA, HERBERT\*** (University of California, Berkeley, [herbertdocena@gmail.com](mailto:herbertdocena@gmail.com))

*A Climate for Change: The 'Climate Justice Movement' and the Rise of Green Capitalism*

Since global warming first burst onto the global political agenda in the 1980s, a new global movement has also emerged: Environmentalists, indigenous peoples, women's, labor, other social movements, working in uneasy, coalitions with governments from the South, have come to constitute a "global climate justice movement." Straddling and negotiating North-South, inter-state, and intra-state divisions, this movement has pushed for more radical globally-coordinated measures to address the ecological crises, pressed for far-reaching changes to how the international community is governed, and offered alternative visions for how the earth's commons should be shared. They have demanded not only drastic greenhouse-gas emission reductions from Northern states, they have also called for more punitive measures, such as penalties and reparations, to counter the industrialized states' and corporations' insistence on more voluntary, incentives-oriented market-based approaches to global environmental problems. Critical theories of nature-society relations which seek to explain the emergence of a neoliberalized "green capitalism" over the last two decades, however, have largely overlooked the significance of this movement or see its impact merely in terms of its effects on capitalisms "crisis of accumulation." Drawing from archival research on, and interviews with people involved in, the international climate change negotiations, I argue that this movement has mounted a counter-hegemonic challenge to the North and that the North's attempts to contain or absorb this challenge can better account for capitalism's turn to market-based environmentalism. In making this argument, I seek to contribute to reconstructing theories of global politics and nature-society relations.

**DODDASIDDAIAH, N\*** (Department of Sociology, Karnataka State Open University, [ndoddasiddaiah@rediffmail.com](mailto:ndoddasiddaiah@rediffmail.com))

*Division of Men in Uniform: Formal and Informal Bases*

Police department is ideally assumed to represent a streamlined bureaucracy organized on the basis of rank, authority and responsibility, following strict principles of super ordination and subordination. Each rung in the hierarchy right from orderlies to the top brass is vertical differentiated while horizontally being homogenous in status, powers and privileges. But such depiction of ideal hierarchy appears to be far from actually being in operation with different sections in police coming to be associated with differing tasks being in different trades. The paper focuses on the tenability of other forms of differentiation based on considerations other than mere rank and responsibilities in view of strong preferences for different branches and trades within police force despite pay scales and other perks being the same across the police force for similar ranks. An investigation into preferences and their determinants or bases among police in the State of Karnataka through a structured interview of 435 men and officers of

police force reveals that, horizontal inequities operate on the lines of trades like, law and order, traffic, crime, investigation, special tasks and vigilance assignments in other Government departments. Despite similar pay and privileges across similar ranks, there are differential preferences on the grounds of importance, public authority, immunity, autonomy, visibility and the like. These considerations appear to have given rise to an informal hierarchy of branches and trades within police, based on a sense of superiority and inferiority, which in turn appear to be the bases of satisfactions, deprivations and inequalities.

*Educational Expansion and Social Exclusion*

Education is the most crucial component of Human Development Index evolved world over and has been viewed as a potent means, mechanism and strategy of equity and empowerment of weaker sections particularly in the context of developing economies. Despite being aware of this, educational equity has still been a major concern of all the societies. In India education has been accorded highest priority in Five Year Plans since independence and Right to Education Act has been passed recently. But realisation of educational equity for empowerment in true sense of the term still appears to be a distant dream. Based on the analysis of data from Census, World Bank, UNDP, Government department reports, the paper seeks to identify the nature, extent and constraints of educational inequities with a view to provide empirical insights and inputs for future policy initiatives. The analysis reveals that inequities in educational attainments vary significantly with religion, family occupation, parental education, residence and size of family and much against commonly held assumption, the role of gender and caste is on the decline owing to the massification of education. The analysis further reveals that expansion of education has had limited impact on inclusivity because there is still disparity in access to education that empowers which continues to be at the disposal of the advantaged sections resulting in perpetuation and in some sectors accentuation of inequalities. Equity in technical, professional and higher education appears to hold the key for inclusive development

*Language Shift in Progress: The Case of Iranian Languages*

The paper presents an overview of a variety of situations typical to the Iranian languages that are located in a wide area of Eurasia, from westernmost Kurdish up to the Wakhi language in China.

All minor Iranian languages are in various stages of endangerment: We analyse situations of minor Iranian languages and their status in such countries, as Iran, Afghanistan, Tajikistan, and Turkey, Russia, Armenia, Iraq, India/ Pakistan, China. In this perspective we give analysis of environment of the Iranian languages that are or were historically situated out of the mainstream of Iranian languages. These situations are typical for spoken languages in various non-Persianate countries, such as marginal Kumzari in Oman, Saryqoli and Wakhi in China; in these cases the process of language shift is most intensive. This type of the sociolinguistic situation can be supplemented by the state of Ishkashimi in Afghanistan, where the process of language shift is in progress, and has come a long way in one part of the community and finalized in the other, as local communities do not speak mother tongue any longer.

In our paper we provide specifically detailed record of endangered East-Iranian languages spoken today in Pamir-Hindu Kush region – the Pamiri languages spread in Badakhshan and its vicinity – a single linguistic and cultural area divided by a political border between several countries. Furthermore, we examine situations of extinct East-Iranian languages in Afghanistan, Tajikistan, India/Pakistan and China, such as Khotan Saka, Bactrian and Soghdian; in addition, we offer an account of the stagnation of the Yaghnobi language – an offspring of one of the dialects of medieval Eastern Iranian Soghdian language.

We examine situations of pressure of one minor language on the other, and discuss migration, and cross-cultural processes.

In conclusion we propose approaches to the problems of endangered Iranian languages.

*Making Trouble: Ruling Relations For Students and Teachers In Non-Academic Pathways*

In 2009, all Australian states raised the minimum age for compulsory schooling. Young people are now required to be 'earning or learning' until age 17. Where upper secondary schooling selected students into limited academic opportunities, now the same institutions must accommodate different sorts of students. Alternatively, such students can attend pre-vocational programs offered in Technical and Further Education (TAFE) colleges which are more oriented towards industry, credentialing and employment. The policy change has effectively grafted classrooms of a different ilk into two institutional templates. The paper will draw on a project designed to explore what kind of moral order these two institutional settings invoke when it comes to managing such students. Originally designed as classroom ethnography, the project involved extended observations and ongoing semi-structured interviews of teachers and students in three TAFE settings and two high school sites in towns experiencing high youth unemployment. Three to four weeks were spent observing the same core English and Maths classes for sixteen year olds in non-academic pathways in each site. The project was motivated by the wish to support teachers to work productively in such classrooms with such students, under the assumption that teachers orchestrate classroom interactions. However, it became clear events in these classrooms were forcibly shaped by relations and parties above and beyond the classroom, as much as by those present. Teachers and students were observed to both comply with, and push against, the layers of policy and institutional processes regulating their behaviours. This paper re-thinks the project through the gaze and resources of institutional ethnography, to reveal layers of policy texts, accountabilities and documentation practices that impacted on routine behaviours. By mapping the multi-nodal webs of 'ruling relations', it shows how both teachers and students could make trouble, and then be held accountable for this trouble.

##### *The Constraints Of Relevance On Curricular Knowledge*

Under the Council of Australian Government's 'Compact with Young Australians' in 2009, all Australian states raised the minimum age for leaving school with the expectation that young people will be 'earning or learning' until age 17. Where upper secondary schooling has historically focused on selecting students into further academic opportunities through disciplinary studies, it must now cater for students who do not identify with the traditional academic pathway. The presence of this new group of 'retained' students has institutionalised a second layer of school curriculum premised on, and legitimated by, its claim of relevance to the students' lifeworld. This paper will draw on an ethnographic study of five classrooms catering for such students in high schools and Technical and Further Education (TAFE) colleges in towns experiencing high youth unemployment. It will typify the curriculum and modes of assessment offered to students in these non-academic pathways, highlighting both the similarities and differences across institutional settings. While the curriculum offered to these students aspired to be prospective, orienting to future work and life scenarios, the students often, in volatile classroom discussions, demanded that the curriculum be grounded in their present, that is, as knowledge for immediate consumption, given their limited prospects to imagine skilled futures. In addition, teachers in their efforts to foster and recontextualise such relevance, stripped the curriculum of any vertical discourse. This in effect reduced any mileage the students might make from the knowledge acquired. Using an analytical language from Bernstein's distinction between vertical and horizontal discourses and knowledge structures, the conclusion reflects on what is gained and what is lost when relevance serves as the only principle for curricular selection.

VAN DUIJN, MARIJTJE (University of Groningen)

##### *Political Protest and Social Integration. the Role of Online Brokerage and Offline Activity in the Formation of Facebook Friendship Ties: The Case of Russia 2011*

Despite their different political agendas, recent protest movements in the Arab World, Europe as well as North and South America share a strong reliance on social media. The use of Facebook or Twitter for recruitment, information dissemination and coordination also was common during the protests emerging during the Russian parliamentary elections in 2011. A striking feature of these protests is that a large group of citizens from competing political camps endorsed the opposition's general agenda. We suggest that political protest increased social integration among participants by fostering friendship ties between political opponents. We elaborate two alternative mechanisms of the link between political protest and the formation and stability of friendship ties: "offline activity" during protest events (e.g. demonstrations) and "online brokers" (individuals with many online contacts) facilitating the creation of friendship ties between political opponents. The effect of offline activity is inferred indirectly, by comparing structural changes

in the online group during demonstration periods and demonstration free periods. The effect of online brokers is inferred directly as the tendency towards closing structural holes in the contact network. Longitudinal data extracted from one of the largest Russian protest groups on Facebook is used to test both hypotheses. The dataset consists of about 3000 participants and more than 35000 friendship links, measured at four time points. Two types of data were collected. First, attribute data (e.g. gender, place of living) and friendship choices were drawn from Facebook pages. Second, political opinions (socialist, liberal) were determined based on content and discourse analysis of users' pages. Stochastic actor-oriented modeling is applied for testing the hypotheses.

##### *The Individual Child, the Future, and the Duty to Protect: Individualization and Changing Standards of Care Towards Children in Ireland*

Following a figurational sociological theoretical framework, and empirically drawing upon changes in teachers' manuals, educational handbooks, curricula, and newspaper reports, this paper examines the escalating notions of innocence and individualization attached to childhood in Ireland since the nineteenth century. The conceptual identity of, and emotional identification with, the child changes in non-linear ways over this long time frame. At various historical periods, there were oppositional views of the nature of childhood and consequent practices of appropriate intervention. Broadly speaking, the earlier concern of building the character of children to serve the needs of the adult world and social expectations was overtaken by the adult responsibility to nurture and reveal the individual personality of each child and enhance his or her self-esteem. This indicates, as Elias argues, the widening distance between adults and children in terms of the individual civilizing process; the standards of emotional self-control expected of adults and children widen. But in another respect the cultural distance between these social categories diminishes in that children are increasingly afforded rights to express themselves and exert agency. The prohibition on personal violence between adults is extended to relations between adults and children, especially in schools where corporal punishment is eventually banned in Ireland in 1982. These changing adult-child relations are connected to broader processes such as state formation in Ireland when state and nation builders after the disintegration of the United Kingdom of Great Britain and Ireland looked to the collective past for sources of tradition and national distinction. This tilted the We-I balance towards the 'we'. The increasing openness of Irish people towards global others from the 1950s encouraged a greater future-orientation. Increasing social differentiation and mobility meant children were not destined to follow in their parents' footsteps and each child was increasingly expected to 'choose' a path in life.

##### *New Urban Movement As an Emerging Field in Poland*

Since 2008 we observe the intensification of grassroots neighbourhood activism in Polish cities along with popularization of the Lefebvre's idea of the "right to the city" among urban activists (Lefebvre 1968, Harvey 2012). With a number of international actors on global level promoting the idea of "placemaking", Poland becomes a country where a dynamic neighbourhood movement emerges, inspired by specific local problems fused with external influence (coming mostly from so-called "norm entrepreneurs", Finnemore & Sikkink 1998).

The main focus of this paper is to understand the dynamics of this emerging phenomenon and its wider international as well as national context. We argue that the visibility of ideas and actors of this new movement is a result of growing severity of urban problems as well as raising awareness of cities' inhabitants, willing to participate in the city governance and striving to become an important actor at the "urban scene". Although very diverse in nature, we claim that this process and the involved actors can be described and explained using framework of field theory (Fligstein & McAdam 2012).

We use qualitative data from in-depth interviews with both local and international key urban activists as well as with experts in the field to examine the processes that shape the new urban movement and its development in Poland. We postulate that urban renewal can be viewed as a distinct field, as defined by Fligstein & McAdam (2012), in-between the tension of a number of earlier and more established fields and that in the particular case of Poland we can also observe the process of „field-maturing“, with already well established main actors and common definitions. On the other hand, the dominating discourse is still developing, which creates tensions between different parts and actors of this rather heterogeneous movement and raises questions about its future.

*Associations As Quasi-Public Bodies in Japan: Cases of Maintenance and Management of Public Lands*

This research focuses on associations to be quasi-public bodies to maintain and manage public lands in Japan. Public lands are generally maintained and managed by governments because the governments have owned them. However, the governments often lease their public lands which are used especially as community farming and growing to associations after they made lease agreements in the USA and the UK. In these cases, associations can show their ideas to maintain and manage the public lands. On the other hands, the governments had only maintained and managed the public lands in Japan. Therefore, associations had not had chances to show their idea to manage and maintain the public lands. However, the Office of Nerima Ward of Tokyo enacted the Ordinance for Liveable Development in 2002. The ordinance has the definition of the community engagement on the public lands. In the Nerima Ward, associations can suggest their idea to manage and maintain public lands to the ward office. Moreover, the ward office authorises the associations as the bodies to manage and maintain the public lands. There is one case authorized by the ward office at present. In this case, there is a finding that the associations are needed to get approval from neighbouring landlords and users to be authorised by the ward office. This is considered that the associations are not just "Not for Profit Organizations" but "quasi-public bodies".

This research suggests a question why the ward office should authorise associations as the bodies to maintain and manage the public land in the Nerima Ward of Tokyo, though local governments make lease agreements with associations in the USA and the UK. Through to resolve this question, this research will clarify the meaning of the association which maintain and manage public lands and the public matter on the Japanese context.

*Global Modernity: Levels Of Analysis and Conceptual Strategies*

This paper tackles some methodological issues in sociological theory, in particular as a way to resume the discussion of modernity with a systematic intent. Descriptions and descriptive concepts are distinguished from middle-range analytical categories which are distinguished from general analytical categories. History and evolution are also included methodologically in the analysis. Trend-concepts, which imply the development of some features of modernity in the long run, are some of these concepts, which have not been adequately dealt with by sociology recently, though, their status therefore remaining undefined. They offer the focus of this article. This is discussed initially in general terms and the theme is then deepened with recourse to an analysis of secularization processes, with the concept of collective subjectivity drawn upon in order to take the discussion beyond individual action and structural-functional features. Analytical concepts receive pride of place in the methodological strategies suggested in the article.

*Comunidad Virtual*

La comunicación en una comunidad se manifiesta como un evento independiente de las tecnologías de información, una tendencia que se ha mantenido durante siglos. Por otro lado, las tendencias de las redes sociales ha incrementado, y cada vez más personas alrededor del mundo se unen a estos grupos virtuales, esto dado, a que las barreras como la distancia y diferencias sociales no existen. La construcción de una comunidad virtual para un territorio supone un nuevo paradigma que representa una infraestructura tecnológica innovadora en la cual los habitantes de una comunidad podrían interactuar y colaborar en sucesos tan relevantes como eventos culturales, campañas de limpieza, pasando por asistir de manera remota a reuniones comunales donde se estén tomando decisiones trascendentales de la comunidad, hasta la oportunidad de detectar problemas sociales como la delincuencia y organizar viajes en el transporte público. Los puntos relevantes de este trabajo es identificar las necesidades básicas que expone la comunidad como requerimientos directos para generar comunicación y que puedan transmitirse en la comunidad virtual. El reto final es encontrar los componentes genéricos que permita proponer esta infraestructura a diferentes territorios y se beneficien de utilizar estos medios de comunicación como individuos y como integrantes activos de una comunidad. El contexto base de este tema es el puente que hoy existe en las comunidades de un país y el uso de tecnologías de información, conocimiento y comunicación que permita el surgimiento de territorios inteligentes.

**DOMINGUEZ ALFARO, BRUNO DAVID\*** (IPN-UPIICSA, [bdomingueza1200@alumno.ipn.mx](mailto:bdomingueza1200@alumno.ipn.mx))

*Las Tecnologías De Información, Conocimiento y Comunicación: Una Nueva Infraestructura Para La Participación*

La participación dentro de una comunidad es tan visible por el lugar donde impacta las decisiones que se toman, pero muchas veces esta expresión de los integrantes de una comunidad no se da en las cantidades que podrían beneficiar a la misma comunidad. Este fenómeno para para muchos pudiera ser "normal". En realidad puede tener diferentes razones, desde un contexto personal, dado por diferencias entre los vecinos, hasta un contexto dado por las insuficiencias del medio de comunicación para involucrar a todos los vecinos en los eventos que se suscitan. Entonces, estos contextos que por su naturaleza, presentan características, da la pauta que exigen un nuevo medio por el cual la participación presente su mayor cualidad: beneficiar a los vecinos y la comunidad. Todos los vecinos juegan un mismo papel como integrantes de la comunidad, y para generar la participación se necesitan alguien que emerja en un nivel que le dé un carácter como organizador, que establezca los principios que promueva la participación. Sin embargo, hoy en día, ya no se necesita un actor que solamente organice, sino que vaya más allá. El nuevo perfil debe entenderse como un conjunto de vecinos que si promuevan y organicen las participaciones, pero también, una herramienta que pueda cubrir las carencias de los medios de comunicación típicos de la comunidad y establezca las bases de una base sólida para generar conocimiento.

**DOMMARAJU, PREMCHAND\*** (Nanyang Technological University, [premchand@ntu.edu.sg](mailto:premchand@ntu.edu.sg))

*Family, Elder Care and Caregivers in India*

Filial piety, a traditional virtue espoused by religion and culture in India, places the responsibility of support and care for the elderly on the family. In addition to cultural values, lack of affordable formal and institutional care, and limited state support for the elderly means that the elderly have to rely on family support. The importance of the family is further underscored by recent legislation, Maintenance and Welfare of Parents and Senior Citizens Act, 2007, which provides redress for the elderly to seek maintenance from children and other family members.

This paper examines elder care from the viewpoint of the caregivers in the context of India where legal, social, cultural and economic values emphasize the role of family in elder care. While there is research on the situation of the elderly in India, literature on the type and magnitude of care provided by the family and the impact of such care on the well-being of the caregivers is very limited. Using data from the WHO Study on Global Ageing and Adult Health (SAGE) survey conducted in 2007, which interviewed about 11000 respondents in six states in India and has a section on impact of caregiving, I'll examine following key questions. First, I'll examine the characteristics of the caregivers (age, gender and relationship to the care receiver), and the type of care provided (physical, emotional, financial and health care) by them. Second, the analysis will examine the subjective and objective well-being, and quality of life of the caregivers. Especially the analysis will investigate the role of gender, education and relationship of the caregiver and receiver on the well-being of the caregivers. The findings will be situated within the broader family, social and cultural context of India.

**AGADJANIAN, VICTOR** (Arizona State University)

*Marriage, Divorce and Remarriage in Kyrgyzstan*

Post-Soviet Central Asia has witnessed massive changes in economic, political and social spheres, which in turn have influenced demographic behaviours in areas of marriage, fertility and migration. Much of the research on changes in demographic behaviour has focussed on changes in fertility that is evident in all countries of Central Asia though the magnitude and direction of such changes varies by country. There has, however, been little research on various aspects of marriage—decision to marry or cohabit, type of marriage (arranged, forced, free-choice), age at marriage, spousal characteristics and homogamy, marital stability and remarriage—in the context of the rapid changes in Central Asia.

This paper examines some aspects of marriage, with a focus on marital dissolution and remarriage, in Kyrgyzstan, a multi-ethnic Central Asian republic, using detailed marital history data from a nationally representative sample survey that interviewed about 2000 households in 2011-12. The paper has two main objectives. First, provide a detailed overview of the various aspects of marriage in Kyrgyzstan using quantitative data. Second, conduct an in-depth examination, using rigorous multivariate statistical procedures, of the changes and variations in entry into marriage, marital stability (divorce and separation) and remarriage.

The analyses will pay particular attention to differences by gender, education and ethnicity (all three have shown to have important influence on other demographic behaviours). The findings will be contextualized within the socio-economic and political changes in Kyrgyzstan such as the revival of Islam and "traditional" practices, ideological changes, lack of significant economic growth, ethnic tensions and migration. The changes and variations will also be interpreted by drawing on the rich social and demographic literature on marriage and divorce from developing countries.

#### *Perceptions and Experiences of the Frail Elderly: Definitions of Family, Home and Independence*

Projections anticipate that the frail elderly, individuals who are 85 years old and older, are the fastest growing sector in all developing nations and in particular in the United States. Majority of the elderly live in non-institutional settings, however, more than 15% of them require services and some accommodations to support their current lifestyle. The number of elderly of individuals requiring institutional support and or assistance with daily living is rising. The services available to this age group can include two types of support within the home: instrumental support for activities of daily living such as shopping and cleaning and personal care support with activities of daily living such as eating, dressing and moving within the home. Additional services are offered through institutions and may range from adult daycare services, graduated assisted living experiences, nursing home care and hospice care. Extended family and friends may provide some of the social and instrumental support needed as many of this age group are single and/or widowed. By this point in their lives, the frail elderly have often responded to life changes that have influenced family structure, the physical home and the perception of need and acceptance of assistance. Modifications in the community that have addressed access for individuals with disabilities are now benefitting those with difficulties due to age. This mixed methods study explored the experiences of the frail elderly in the mid-Atlantic region of the United States. Data collection included individual interviews with open ended questions and a short quantitative survey. Perceptions of independence, definitions of home and family, and knowledge and use of services and accommodations were explored. Implications for policy and service provision will be discussed.

#### *Risk, Victimization and Vulnerability*

In this paper, I intend to make a principal original contribution to the risk-based criminological literature by concentrating on risk in the context of victims. Although there now exists a significant body of scholarly work examining the impact and complexity of clinical and actuarial risk assessment methods on criminal justice decision making (see, e.g. Feeley and Simon 1992; 1994; Hudson 2004; Kemshall 1998; 2003; Hannah-Moffat 2005), efforts to construct a strategic knowledge of risk are yet to provide a coherent set of theoretical and conceptual tools that can be used to explain the dynamics of risk both in terms of the 'risky' individual, as well as the 'at-risk' victim. While the argument developed in this paper relates to empirical developments in England and Wales, the theorizing of victim-oriented approaches to risk management is both innovative and more generally applicable beyond the jurisdiction examined herein.

The theoretical contribution to the risk-based literature that is offered in this paper should be understood as both aligned to, but distinct from, O'Malley's conceptualization of the potential and limits of risk. For O'Malley (2008; 2010), the promise of risk-based techniques often lies in discovering the disparate possibilities for experimentation, and identifying those sites of resistance that exist within the 'culture of control' (Garland 2001). While O'Malley's account offers particularly interesting insight into how risk functions through proxies of experimentation and resistance, this paper instead focuses on the central importance of a risk-based paradigm in facilitating the ascendancy of victims in constructing notions of victimhood, vulnerability, resilience and in contributing to the development of responses/outcomes and professional praxis.

TAYLOR, CHRIS (North Sydney Council)

#### *Aged Care Challenges and Solutions In Australia*

This paper will examine some of the issues relating to the provision of community aged care in Australia. It will outline the population trends and major issues that impact on the delivery of community aged care services. The second part of the paper will assess some of the challenges raised by the Productivity Commission report (2011) into Aged Care. Finally it will put forward some solutions that were not fully considered by the Productivity Commission report as a way forward to making the provision of community aged care more sustainable in Australia.

Community aged care services in Australia will undergo significant change in the next four years. In 2012 the Australian government took over the funding and administration of Aged Care services and programs from the State governments. It is anticipated that there will be major changes in the way that services are funded with an expected move to more consumer directed services and individual funding by July 2015.

Many community organisations that provide Community aged care services will have to adjust the way in which they provide services and how they market services to the older population. In the last 20 years attitudes to residential care have also changed. More older people are expected to choose to reside for longer within their own home and local community. Australian Governments have recognised and encouraged the trend to remain at home. Governments have supported it with increased funding for community based services and community aged care packages. However, there remain significant challenges facing the Australian aged care system.

#### *Rough Sleeping In Tasmania: Homeless Not Helpless*

This paper provides a brief outline of the activities, outcomes and partnerships involved in the Rough Sleepers project in Hobart, Tasmania. In 2011 The Salvation Army (Tasmania) agreed to work with Common Ground Tasmania and a number of other NGOs to implement a campaign to address rough sleeping, which they called the 50 Lives/50 Homes (aka 50/50 campaign).

The broad objective of the campaign was to generate business, community, and government support for rough sleepers to enable a coordinated response to homelessness in the Greater Hobart area. The aim of the Hobart campaign was to identify and respond to the needs of 'rough sleepers' in the Hobart area who were susceptible to dying prematurely due to the poor health outcomes caused by sleeping rough. The campaign involved three stages; the planning stage; the street survey (or count); and the follow up of rough sleepers by a homeless response group, which was comprised of non-government and government support, health and housing services.

#### *Internalization of Israeli-Zionist Othering Processes? Doctoral Researcher Self-Critique -- CANCELLED*

In this paper, based on examples taken from recent field work, I intend to self-critique my position as an Ashkenazi-Israeli doctoral student interviewing Palestinian and Mizrahi-Jews on one hand. I am concerned by understanding whether I ended up reproducing othering processes within these interviews. Therefore this paper will first present othering processes within Israeli-Zionist context. I will then present questions such as: Whether holding the interviews, with the Palestinians participants, in Hebrew, thus my mother tongue and the hegemonic dominant one, is at the end of the day my internalization of hegemonic othering processes. How then did this influence the interviews? What dynamics did it generate?

Social and political positioning are key factors in transformation processes to radical consciousness. Asking Israeli and Palestinian political actors to expose themselves and their consciousness transformation processes, I am thus concerned by my own ethnic/national and gendered position as a researcher. Born to South-African parents, I have experienced to this day socio-political positioning of an Ashkenazi-Jewish woman in context of armed conflict such as the Israeli case.

Mechanism of war and militarization create socialization processes which are often expressed in military concepts of superiority and power. Within the Israeli-Zionist context othering processes were first applied to the Palestinians, by Israeli hegemony. However, later with the construction of Israeli state, it was also employed when referring to Mizrahi Jews. This view of the East as aberrant, underdeveloped, and inferior, exists in order to constitute the Occidental self, thus Hegemonic I, as rational, modern, and superior. Israeli Ashkenazi-Jewish identity aims at constructing a western image of self, in order to distance oneself of the representation of the passive, oriental body that might have been their identity in Diasporic Europe and was now projected onto the native Palestinian population and Arab-Jewish migrants.

*Inégalités Sociales Et Capital Numérique*

Le développement des réseaux socionumériques a permis de renouveler les questionnements relatifs à la notion d'influence.

Les recherches actuelles étudient ce phénomène selon deux directions : sous l'angle d'un processus relationnel (qui influence qui ?), et à partir de la problématique de sa mesure (quelles sont les variables qui traduisent le mieux la notion d'influence ?). En revanche, ces travaux ont délaissé une question centrale : comment devient-on influent sur Twitter ?

En s'interrogeant sur la manière dont se produit l'influence au sein de la twittosphère politique, cette communication s'intéresse aux mécanismes d'accumulation et de reproduction du capital numérique.

À partir de l'étude de plusieurs centaines de milliers de comptes, nous avons identifié deux logiques d'accumulation du capital numérique. La première repose sur une accumulation progressive de la part d'agents n'occupant pas de positions dominantes en dehors de l'espace numérique. Dans ce cas, il n'existe pas de conversion de capitaux du *offline* vers le *online*. À l'opposé, nous avons identifié un second mode d'accumulation reposant sur la conversion de capitaux de la part d'agents disposant d'importantes ressources *offline*. Pour ce second type d'agents, l'espace numérique prolonge et renforce des positions d'influence préexistantes.

À partir d'une sélection de tweets émis pendant la campagne présidentielle 2012, nous avons constitué un panel des 1048 comptes Twitter les plus « influents » sur le plan politique. Ces comptes ont été systématiquement analysés et codés de manière à déterminer avec précision les positions sociales - *offline* et *online* - de leurs auteurs.

Nos résultats permettent d'établir que dans la majorité des cas l'influence numérique est déterminée par la possession préalable d'un important volume de capital *offline*. Néanmoins un certain nombre de comptes semblent échapper à cette logique. Avoir été un primo-arrivant sur Twitter peut permettre de pallier ce déficit de capital initial.

*Panel Random and Digital Networks*

The great majority of research studies on social digital networks focuses on interindividual relationships ("friendship" or "followers" networks) and represents them by graphs. On another hand, works about individual internet users' attributes give a greater place to qualitative approaches on smaller corpus.

This communication shows that, to analyze social digital networks, more precisely Twitter, it's possible to adopt a quantitative approach, taking account of individual users' attributes. Panelisation method, applied to the "twittosphère", let us to reconcile these two exigencies. Analyzing reasoned sample, panelisation allows to qualify Twitter accounts manually (sociodemographical attributes or audience data, etc.) and allows to explore message contents on the long way.

In these conditions, the question is: according to what logic can we sample Twitter? Is a panel randomly selected really representative of the network? Does Law of large Numbers apply to a socio digital network where every individual doesn't have the same weight neither the same visibility? Actually, on Twitter, accounts don't have the same visibility neither the same influence. How taking account of these inequalities?

We experiment two sampling logics. The first with a random sample: every account has the same weight, whatever its activity or its influence. From an exhaustive list of the population, we randomly select a panel of 2000 accounts. The second logic takes account of the hierarchical structure of Twitter. The "influence panel" is constituted from a list of accounts classified according an index of influence. We select the 1000 first accounts of the list.

*Governing Cities Facing Demographic Decline: Insights From The Case Of Saint-Etienne (France)*

Studying the political capacity building process in cities with weak assets for governance represents a real scientific added-value: how to deliver collective actions when economic actors are less inclined to cooperate with public actors? Starting from fieldwork carried out on the policy-making in urban renewal in Saint-Etienne, a French city nearby Lyon which has faced a huge demographic and economic crisis for forty years, we propose to present three main research results concerning shrinkage and governing capacity.

Firstly, in contrast with scholars insisting on the State rescaling, we observe that a form of spatial Keynesianism is maintained. Budget and technical expertise are granted by the French central State for the urban regeneration of Saint-Etienne to limit uneven development within the Lyon's metropolitan area. State appears as schizophrenic: mainstream urban policies are meant to position French (including shrinking) cities in the international territorial competition and contribute to the increasing of uneven development; but, other policies are implemented to fight against urban decline.

Secondly, if a grant coalition dominated by public actors has been stabilized in Saint-Etienne around the objective of increasing the residential attractiveness of the inner city, the mobilization of local private actors is really limited. Global investors are absent. Local land owners prefer renting flats at low prices but without making works than being actors of the urban regeneration with weak perspectives of financial profit.

Thirdly, while urban regeneration policies have a direct impact on the social profile of neighborhoods (social housing demolitions, development of housing for medium and upper average classes), local contention remains limited. It will be explained by the low share of the middle class in the social structure, by the closure of the local political arenas and by the neomanagerial French urban renewal policy orientation which limits local democratic process.

*Debiasing By Law: Rules Vs. Standards***Debiasing by Law: Rules vs. Standards**

The distinction between rules and standards is central to legal theory and to the practice of any judging. Recently there is a growing interest in this distinction, and particularly in the role that these distinct types of rules may play in the process of decision making. From the point of view of Behavioral Decision Theory (BDT), law can be regarded as a social mechanism aimed to prevent, control or compensate for human cognitive biases. In this respect, the choice between different types of legal rules may be highly relevant to the kind of strategy that the law may adopt as a vehicle to debias legal decision makers. Research in BDT, however, is only beginning to address major questions regarding the impact of rules on legal decision-making of judges and bureaucrats.

We join the efforts to probe into the function of different types of rules and their effect on debiasing cognitive errors in legal decision-making, specifically focusing on the context of competitive bidding procedures (CBs). We propose a series of studies aimed to test the impact of cognitive bias on evaluations and decisions made by public officials who specialize and are experienced in CB procedures, versus lay people, under varying types of rule conditions, i.e. discretionary, clear-cut rules, and ambiguous standards.

**DOUCET, ANDREA\*** (Brock University, [andreadoucet@mac.com](mailto:andreadoucet@mac.com))

*Rethinking the Concept of 'Stay-at-Home Father': A Progressive or Conservative Concept?*

The term "stay-at-home dad" (SAHD) has become a taken-for-granted one in academic and popular discourses. Increasing numbers of cross-disciplinary research projects and journal articles use the term to categorize fathers and families; scholars and journalists often employ it as a short hand description for fathers who leave full-time leave paid work for intermittent or extended periods of time; government statistics cite growing numbers of stay-at-home dads in many countries - especially in North America and Europe. Yet the concept 'stay-at-home dad' is a particular historical and social construction. Its meanings and the everyday practices of work and care of men who use, or are given, this label are incredibly diverse; moreover, there are contradictory gendered implications that emerge from this concept and this rising set of practices.

Informed by a twenty-year research program on breadwinning mothers and 'stay-at-home' or secondary earning fathers, this paper traces the historical and social evolution of the term 'stay-at-home dad'. It makes three arguments and poses two questions: First, I argue that 'stay-at-home father' is an ambiguous concept, which simultaneously essentializes and creates a binary between breadwinning and caregiving. Second, while it seems to indicate a radical gendered change, the concept, and its associated practices, inadvertently support the privatization of care work while possibly shifting attention away from more collective and radical solutions for caregiving. Finally, I argue that the term should be re-thought in the light of shifting dynamics between gender, work, care, and consumption. The paper poses two questions: Is the SAHD a progressive or conservative concept?

And what are the practical and theoretical implications of discarding or changing this concept?

### *Organizational Planning for Future Droughts: The Instructive Case of the Edwards Aquifer Authority in Central Texas*

For over a decade we have been studying the construction and implementation of rules and regulations of the Edwards Aquifer Authority (EAA). The EAA was created to conserve the waters of the Edwards Aquifer. In 2011 a severe drought engulfed Texas. This prolonged drought represented the first major test of the rules passed by the Authority since it assumed responsibility for managing the aquifer in 1998. Our objective is to highlight the theoretical implications of the activities of the EAA. We ground our framework in the ongoing activities of the EAA; we are influenced by the works of Beck, Giddens, Firey, Ostrom, Mol and Spaargaren, and Famiglietti -- whom we take into new directions.

We outline some of the fundamental sociological issues that have emerged from our empirical investigations of water planning. We begin with the composition of the EAA Board. This elected board represents key sectors of the Aquifer. By design the largest stakeholder, San Antonio, has a dominant voice on the board but not an exclusive one. In order to enact strategic legislation San Antonio board members must forge alliances with members representing other jurisdictions. The Board has also shown flexibility in its governance. While the Board created rules for all groups who live in the region, due to aquifer variations, these rules cannot always be applied in a standardized manner.

We believe Elinor Ostrom's notion of commons property to be central to planning for water and the future. We also focus on the growing importance of conservation. Conservation planning extends beyond the aquifer itself as the aquifer is dependent on the recharge zone. As a karst aquifer, the Edwards is self-replenishing. However, to replenish takes rain - a resource in short supply in this part of Texas. This abstract highlights a few problems we consider in more detail in the paper.

### *Societal Control of the Armed Forces - New Criteria for an Old Framework*

Although the primacy of the political has incontestable manifested itself in established democracies, the question of the control or oversight of the military by civilian actors proves to be as relevant as ever before. However, the executive power as point of reference in a mostly self-referential civil-military-debate is of limited explanatory value today. Holding not only national security structures, but also the "guardians of the guardians", accountable is the task of an emancipated civilian side that encompasses a broader than usual understanding of civilian expertise. This submission seeks to deconstruct the limitations of prevailing civil-military relations concepts based on new criteria and a methodology that widens the focus of inquiry by drawing on a cognitive-interpretative approach (exploiting data from problem-centred interviews with grassroots actors). The aim is to show how actors have changed or been integrated into the debate on security and defense in response to altering institutional frameworks.

### *Between Promise and Risk. RFID, a Controversial Technology*

La protection de l'environnement et de la santé des personnes, la sécurité publique et des chaînes logistiques, la maîtrise de la demande d'électricité, sont des nouvelles opportunités de développement pour l'identification par Radio-Fréquences (RFID). Des objets et des environnements communicants - faits de réseaux de capteurs, d'étiquettes électroniques, de lecteurs, d'infrastructures réseau - sont aujourd'hui développés avec un objectif de traçabilité et de contrôle : tracer des objets ou identifier des personnes, surveiller des comportements, localiser des produits, modéliser et faire des prédictions statistiques. Invisible, la RFID fait déjà partie de notre quotidien et son déploiement à large échelle est préconisé au niveau gouvernemental.

Pourtant, lorsqu'on observe ses différentes applications, notamment celles orientées vers le grand public, force est de constater que le marché de cette technologie tarde à trouver ses usagers. Car son déploiement massif ne va pas sans

risques et fait l'objet d'un débat public émergent. Des controverses sociales et scientifiques se construisent progressivement autour des risques et des problèmes associés à certains usages de l'identification par radio-fréquences : risque d'atteinte à la vie privée, risque sanitaire, risque écologique, risque socio-professionnel.

En nous fondant sur une analyse des controverses, nous essayerons de montrer les termes du débat sur la technologie RFID et de cartographier les risques que les acteurs concernés lui attribuent lorsqu'ils s'expriment publiquement.

La recherche dont nous faisons état dans cette communication a été réalisée à partir de trois terrains d'enquête : la presse écrite grand public et spécialisée, que nous avons analysée quantitativement et qualitativement ; les laboratoires de R&D en systèmes RFID, que nous avons approchés par des entretiens et par observation directe lors de manifestations publiques ; une expérimentation d'usage dans le domaine de la santé, que nous avons suivie par observation participante.

### *The Quantified Self in the Energy Demand Management: A New Forme of (bottom-up) Regulation of Practices ?*

Our presentation analyzes the development of "reflexive" socio-technical infrastructures in the field of environmental protection and energy demand management. Such reflexive infrastructures aim at enabling and organizing the encounters between people and real-time dynamic visualizations of their own practices, in the hope that such encounters will give rise to new forms of individual conduct. Such reflexive infrastructures are crucial to the development of a trace-based regulation of practices by offering "augmented" subjects ways of coming together and interacting in a kind of public space of traces.

Based on an experimental case study of smart metering for the residential electric consumption, we will try to understand how users are affected by such encounters with traces of their own activity, and how such encounters constitute particular types of subjects and attachments, i.e. "quantified selves". But mostly, we will discuss the limits of these technological infrastructures of self-tracking. And we will show how several social devices, based on gamification and social interaction, are used to reinforce and make such attachments socially accountable, for instance by using the accountability requirements or reward for the effort that seem to promote virtuous practices in the field of environmental protection.

### *Integrating Eastern Europe: Experience from the Multi-Level System of Worker Participation in Europe*

This contribution reflects on the experience of conducting and communicating research on industrial relations and labour issues in post-socialist Eastern Europe conducted within the European Trade Union Institute (ETUI). The institute runs a research programme on the multi-level system of worker representation in Europe. In this context, the integration of East-European worker representatives into this multi-level system, particularly through European Works Councils, is an important concern. In this context, the links between researchers and labour activists are important on two levels. First, ETUI researchers use the experience of local worker representatives and trade unionists to collect data about the functioning of the European system of worker representation and its significance and impact on outcomes on the company level in Eastern Europe. Second, research produced by ETUI and in its networks is used in training activities for worker representatives organized by the ETUI in the region to enhance capabilities of local actors through using the opportunities provided by the European structures. The research on labour issues in Eastern Europe also informs activities of industry union federations on the European level.

### *The Moral Economy Of Global Crowds*

#### **The moral economy of global crowds**

In four decades, neo-liberal world ordering has grown into a totalitarian attempt at mining societies like quarries for best practices from which to assemble a global, self-reproducing, social order.

Presuming hegemony, critical theory has not problematized this mutation. Here, I want to stay a little longer with praxis itself as it takes shape in moments of encounters between global power and its opposite, when world order can still be problematized as if it was at stake.

In the first section, I look into three distinct episodes when 'global crowds' gathered: the so-called 'bread riots' in Egypt (January 1977); the general strike in Barcelona (March 2012), and the 'V for vinegar' protests in Brazil (June 2013). From a political point of view, global crowds are never more than mobs. Their myopic rebellions of the belly beg for a new prince to draw them out of themselves. Seen less condescendingly, global crowds reveal common legitimizing notions: a moral (or sociological) economy at work. In contrast to the 'steady-state' morality of peasants, the moral economy of global crowds is more properly thought of as a morality of *situation*. It not about subjectivity placed and embodied, but, more radically, about the possibility of presence in the world.

In the second section of the text, I argue for the relative coherence of resistances as part of a 'moral and ethical order', against which capitalist world ordering, for all its hegemonic swagger, remains fragmented and reactive, still excluded from actually-existing social relations.

That we may still be in a time when it appears unnatural for power to be defined outside concrete, historical, situations when presence is possible suggests that domination, not hegemony, should serve as our reference point for thinking about world order and resistance.

#### *The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?*

In a classic 1968 paper Merton described the "Matthew Effect" as the tendency among elite scientists to accumulate advantage. Alongside Merton's analyses, Zuckerman and Cole (1975) documented the experiences of women scientists and found women's productivity was routinely eclipsed by men's. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention around the world. Recently, the Council of the Canadian Academies' Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academics.

In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research grants and publications), career advancement, and awards and honours. As well, we examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

**DREHER, JOCHEN\*** (University of Konstanz, [jochen.dreher@uni-konstanz.de](mailto:jochen.dreher@uni-konstanz.de))

#### *Construction and Constitution of Community – Epistemological and Cultural Comparative Reflections*

The community concept gives rise to cultural comparative reflections since diverse notions of community are represented when going back to the roots of the sociological discipline contrasting the Anglosaxon and the German tradition, opening up the comparison to the American, Asian and other contexts. Combining a social science with a phenomenological perspective, I will analyze the *construction* and *constitution* of the community phenomenon. On the one hand, from a social science viewpoint, it will be investigated in which expressions in diverse socio-historical conditions the idea of community was *constructed*. On the other hand and from a phenomenological perspective, it is highly significant that communities or communal relationships are *constituted* on the basis of general structures of experience in activities of consciousness. The phenomenological perspective allows describing the structures of the life-world as "mathesis universalis" which is seen as a priori of the social world. It opens up the ground for historical and cultural comparison of diverse ideas and empirical expressions of community, even though Ferdinand Tönnies considered it to be a general sociological concept. The 'parallel action' of phenomenology and social science allows

reconstructing the specificity of the respective community concept within a particular cultural background. It permits e.g. to analyze the distinctiveness of Max Weber's idea of the communal relationship, in which the orientation of social action is based on the subjective affectual and traditional feeling of the parties of belonging together.

### RC35-611.3

**DREHER, JOCHEN\*** (University of Konstanz, [jochen.dreher@uni-konstanz.de](mailto:jochen.dreher@uni-konstanz.de))

#### *Construction and Constitution of Individuality – a Parallel Action Between Social Science and Phenomenology*

The present study investigates the concept and social phenomenon of "individuality" from two different perspectives. From a social science viewpoint, I will concentrate on socio-historic expressions of concrete forms of individuality or the individual which appears in different cultural contexts. The second focus applies phenomenological reflections which describe constitutive processes of the "individual" from an egological perspective. My analysis starts from the assumption that phenomenology and the social sciences have to be seen as two disciplines with differing research methods which complement one another. Therefore I will present a "parallel action" of phenomenology and the social sciences which is used to study the constitution and construction of the phenomenon of "individuality." The structures of the life-world from a phenomenological perspective serve as "mathesis universalis" which is considered to be the a priori of the social world. It opens up the ground for historical and cultural comparison of diverse expressions of individuality in contrast to cultural and theoretical conceptions that do not consider the individual as the primary unit of consciousness, but the belongingness to a social relation.

#### *After the Meltdown: Energy Regime Crisis and Environmental Conflicts in Post-Fukushima Japan*

Since the Kyoto Protocols, Japanese environmentalism largely avoided a critique of the hazards of the nuclear industry with the energy demands of the country. Instead, small and marginal anti-nuclear movement organizations remained focused on this issue. Then, in 2011, the Fukushima nuclear disaster and humanitarian crisis caused by the Tohoku earthquake and tsunami called the entire nuclear industry into question. However, the silence among established environmental organizations continued. Based on an extensive study of Japanese environmental organizations, we investigate why the Japanese environmental movement was relatively silent on the largest environmental crisis in the country's history. Why were environmental organizations not in the lead of the mass protests demanding an end to nuclear energy in earthquake and tsunami prone Japan? We address this question historically and quantitatively, incorporating survey data on the Japanese environmental movement as well as extensive network data. This research is the first to quantitatively operationalize power structures in Japan and test their impact on the behavior of a large sample of environmental organizations. Our network data trace ties between the private electric utility companies (nuclear) and their key industry partners in finance, insurance, and the media to key government agencies in Japan. These industry, government and media connections are then traced to board memberships of a large sample of environmental organizations. Among other factors, the statistical analyses identify significant negative associations of government and corporate ties on environmental groups' adoption of a reflexive and critical position on nuclear energy following the Fukushima meltdown.

#### *An Energy Industrial Complex in Post-Fukushima Japan: A Network Analysis of the Nuclear Power Industry, the State and the Media*

Despite suffering the force of a nuclear meltdown amid a natural disaster, national political leaders have re-committed Japan to a heavy reliance on nuclear energy. By examining the network connections between 400 energy corporations, government agencies, and other large corporations in post-Fukushima Japan, we

argue that a nuclear Energy Industrial Complex (EIC) uprooted attempts to criticize nuclear power and helped re-establish nuclear energy as a major priority for the country's energy mix. The network analyses of our original data depict this EIC as an institutionalized power structure that empowers corporate policy preferences and shapes public opinion in order to secure long-term energy development agendas suited to their particular profitability interests. We also observe how environmental organizations are embedded in some of the same networks with the state energy regulatory boards, energy companies, lawmakers and advertising corporations. The density of network overlap between the EIC and environmental organizations is interpreted as a highly constricted political opportunity structure, limiting avenues for claims by environmental movement activists that strive to expose the risks of nuclear power. We conclude that national energy policy priorities are not determined by responses to disaster (human or environmental) but are instead propelled by the relative power of large scale corporate interests that force *Energy Industrial Complexes* with government leaders and agencies.

**DRUTA, OANA\*** (University of Amsterdam, [o.druta@uva.nl](mailto:o.druta@uva.nl))

#### *Negotiating Independence: Housing Transitions of Younger People and Family Support in the UK and Japan*

The restructuring of welfare states coupled with changes in housing systems across advanced economies have exposed deepening inequalities in the housing transitions of younger people. Japan and the UK are two countries in which ownership of housing has been avidly supported by governments and considered key to sustaining a welfare system based on individual responsibility. However, labor market changes and economic upheavals have challenged both these systems. Younger generations, entering the housing market in the last decade, have especially felt the effects. Family support has become a main factor determining housing transitions, as evidence suggests that inter-vivo transfers and in kind support both speed up transitions and make them smoother. Using data from qualitative interviews with young households who have achieved residential independence and members of their family networks who supported them, this paper will trace the housing trajectories of younger people, focusing on the negotiations of family support and the generational interdependencies that the giving and receiving of support create.

#### *Organization As a Way of Life: On the Continuing Significance of 'the Classic Stance' in Organization Theory*

Many of the concepts and concerns animating practitioners of what I term 'the classic stance' in Organizational Theory are now seen as having little explanatory 'traction' in the present. This paper explores the work of one significant, but now largely forgotten, exponent of 'the classic stance', the businessman, minister of state, and organizational theorist, Wilfred Brown. Through an exploration of Brown's analysis of 'bureaucracy', 'authority' and 'the judging of performance', I question the common assumption of the present having 'moved beyond' the sorts of concerns, and the organizational toolkit, developed by practitioners of the 'classic stance' in Organizational Theory. Perhaps contemporary matters of organizational concern are not so far removed from those animating the classicists? And maybe, their conceptual toolkit is not quite so anachronistic as we might assume? Maybe their highly formulated knowledge of 'what makes up good organization' (Brown, 1965:32) has some possible traction for us, here and now?

#### *The Site of Recaptalizing the Spiritual Capital of the City: Welcoming the Stranger with Intention and Architectural Edifice*

Violence during the protests in Tahrir Square, buses driving through London that threaten undocumented foreigners with extradition, and xenophobic attacks in South Africa. These events divulge a spiritual capital bankruptcy in the city of our era. The dominant reaction to this spiritual bankruptcy is analysis, but the spiritual capital present in the city is not analytically-complicated, it is (counter) intuitively-complex. Rather than an Analyst narrative, we need the Lacanian opposite: a Master narrative, which offers solutions to the spiritual capital bankruptcy. In our paper we offer a Master narrative of spiritual capital that moves beyond the Analyst narrative. This we do by combining our two fields of study: Spirituality and Architecture. The Master narrative of spiritual capital comes in the form of the Stranger, who passes through the city. The Stranger, as political neighbour, has the potential to recapitalize the city spiritually. Then, we move to conceptualise and visualise an architectural edifice that can facilitate the spiritual recapitalization of the city in the Stranger's movement in and through the city. This architectural edifice will aim to recover a historical aspect of spiritual architecture that has been neglected: architectural edifices as build expressions of kindness extended in acceptance to the Stranger. From the intricate systems of asylum offered by medieval churches, to the social functions embodied in the Ottoman Külliye, spiritual architecture traditionally upheld the way of life of the place, while being open to the influence of the Stranger. The above-mentioned edifice will be conceived as a re-interpretation of Norberg-Schulz's formulation of 'belonging' to the 'vocation' of the place, inspired by Heidegger's concept of 'sorge' (care). As an expression of the art of care, the architectural edifice extends kindness to the Stranger and provide a location for the spiritual recapitalization of the city.

#### *Contextualising Right to Education Act (2009) in Globalising India: A Sociological Introspection of Marginalised Communities*

This paper attempts to contextualize Right to Education Act (2009) in neo-liberal India where the state has been declining from welfare activities and social responsibilities. Institutional reforms followed by structural adjustment programme concomitant with second generation reforms have forcefully advocated privatization at every level of schooling. Unfortunately, this notion of unprecedented privatization of education system has not been much supportive for children hailing from socio-economic and educationally marginalised communities like Scheduled Castes and Scheduled Tribes. India is one of 135 countries to implement RTE as one of the fundamental rights but data from Ministry of Human Resource Development indicates that more than 20 million children in the school going age are not enrolled anywhere. Though government caters to the educational needs of almost eighty percent of children, research studies illustrate that the schooling system has responded poorly on the bench mark of Retention and Quality. The overall situation appears pathological when broad indicators like NER, GER, drop-out rate, retention rate, gender gap are considered. Majority of 'sarkari' schools are facing challenges like poor infrastructure, acute shortage of trained teachers (particularly) in science subjects, adverse Teacher Pupil Ratio (1:59 in Bihar), and poor cognitive outcomes. Educational history of India shows that after independence in 1947, it adopted a policy of Protective Discrimination by reserving twenty two and half percent seats for SCs and STs in government education system but the objective is yet to be achieved. Again making and implementing a new act like RTE with provisions to provide 25% reservation for disadvantaged children in private schools appears to be quite exigent in the era of globalisation where profit making by private school managements have emerged as stronger and more powerful in manipulating norms and not confirming with provisions laid down in RTE Act by the Indian Government.

#### *Pathways and Transition to Work in New Economies: A Study of Young People in Lucknow City, India*

Two decades of economic reforms has brought about far reaching changes in the nature of Indian economy. The nature of employment and industrial organization is also undergoing change. Highly flexible labour market, located in global

market economy, has emerged. This is best described by the term post-Fordism. The workforce is required to be multi-skilled and flexible in new economies. Further, the growing economic instability and rapidly changing technoscapes pose a big challenge for making smooth transition to work life. Post-Fordism brings an accentuated division between core and periphery workers. The workers in the core are relatively well paid and have secure jobs. But the workers in the periphery lack job security. It is further argued that career decision making are mainly about 'opportunity structures' which in turn is strongly influenced by social class and associated social and cultural resources of young people. This paper answers three research questions. Does core employment in current labour market is restricted to well-educated and trained youth? How the location of young people in hierarchical career structure of market economy is influenced by their cultural resources? What pathways are followed by young people belonging to different class position? The study reveals that both core and periphery workers in market economy needs high level of education with constant re-skilling to adapt themselves continually to new and more demanding work opportunities. The adaption of young people in workforce is in turn affected by the cultural resources at their disposition. The young people in Lucknow are not a homogeneous group; they belong to different class positions and hence face different challenges in their transition to work life. Career decision making of young people and their pathways of transition to work is largely determined by social structure and cultural resources and partly determined by 'reflexivity of the self'.

#### *La Télésanté à l'Épreuve des Savoirs Profanes*

**Résumé de la proposition :** Le principe d'une fracture numérique recèle très souvent un implicite, à savoir que l'évolution des sociétés humaines suivrait une seule voie dont le développement des technologies numériques, ou la communication numérique, serait le modèle. Mais ce que mettent en relief les inégalités d'accès ou d'usage à ces technologies est, d'une part, qu'il existe différents modes de communications dont certains sont rétifs à la numérisation (et il faudra s'interroger sur les savoirs alternatifs sous-jacents à ces « résistances »), d'autre part que l'existence d'autres modalités de connaissance et de savoir suppose d'autres trajectoires technologiques que celles qui sont actuellement proposées ou imposées. Tout l'intérêt de l'examen de ces pratiques de braconnage ou de résistances consiste justement à mettre en lumière, et à réactualiser la pluralité des formes d'intelligence pratique non prises en compte dans ce modèle unique. Par comparaison cela nous invite également à interroger les changements en profondeurs induits par l'extension du paradigme numérique sur les cadres de l'expérience commune. C'est ce que nous proposerons de faire en partant de l'exemple de la télésanté. Nous montrerons en particulier que les difficultés formulées dans un langage avant tout technique (celui de l'ingénierie informatique) reflètent en même temps qu'elles recouvrent des réalités incommensurables avec les procédures de modélisation algorithmiques actuelles (savoirs profanes, amateurs, à base historique avec une prévalence des situations particulières, des cas individuels, des éléments biographiques...). Nous illustrerons ce point à partir du cas de la domotique et de la robotique personnelle dans le cadre de l'assistance aux personnes (robotique personnelle ou cobotique pour robotique collaborative), mais également des usages des smart technologies et des réseaux sociaux dans le domaine de l'autonomie et de la santé.

#### *Rapid Social Change and New Religious Movements in Post-Independent India*

The changing texture of religion is considered to be an important part of the structural transformation in post-Independent India and one worthy of closer analysis. As we know, theorist of modernity had written off religion in the 1950's and 1960's. It is now accepted, if a little late in the day, that religious identity rarely disappears with modernity. Rather, modernity refashions religious identities in various ways. It is manifested in the global religious resurgence of 'New Religious Movements' (NRMs). Possibly the rise of 'New Religious Movements' are felt rather strikingly in modern western societies undergoing rapid social change and experiencing diverse anxieties and ambiguities inherent in a hyper-modern and technological civilization. Yet, what gives meaning to the proposed paper is that it sees beyond the west, and examines how new religiosity is increasingly visible even in a society like ours.

As our society is undergoing rapid transformation and a new middle class with new aspirations is emerging, we witness the steady growth of religious channels on television, phenomenal growth of new gurus and cults, and new preoccupation with yoga, ayurveda, health and alternative life practices. This research paper aims to highlight Rapid Social Change which necessitated and facilitated rise and growth of new religious movements in Post-Independent India. It focuses on a fast-growing and high-profile contemporary Guru faith originating in India

and attracting a transnational following. By drawing upon multi-sited fieldwork among the Sri Mataji Nirmala Devi primarily urban, educated 'middle-class' Indian devotees, the researcher provides crucial insights into new trends in popular Hinduism in a post-Independent and rapidly modernizing Indian setting. It attempts to locate the macro structural sources of New Religious Movements in post-Independent India; highlight the micro structural availability of people in a particular New Religious Movement.

#### *Analyse Des Processus D'émergences D'une Politique Publique Au Croisement De La Santé Publique, De La Cohésion Sociale Et De L'agriculture*

Cette communication est issue d'une recherche interventionnelle ECOALES (Empowerment, Comportement Alimentaire et Economie Solidaire). Cette dernière, vise à évaluer l'intervention UNITERRES portée par l'A.N.D.E.S, un réseau d'épicerie sociales et solidaires. L'intervention UNITERRES repose sur le possible lien entre le développement de systèmes durables de production et de distribution de l'alimentation et une amélioration des comportements nutritionnels.

En se basant empiriquement sur l'intervention UNITERRES, cette communication souhaite interroger les processus institutionnels et politiques à l'œuvre dans l'émergence d'une nouvelle vision du lien entre santé publique, cohésion sociale et agriculture. Comment des conceptions issues de la consommation critique se diffusent ou sont incorporées au sein d'institutions parties prenantes de ce programme? Peut-on parler d'un phénomène d'empowerment, dans le sens où des associations issues de l'économie sociale et solidaire imposeraient cette nouvelle vision dans l'agenda politique et administratif? Il s'agira d'explorer les processus sociopolitiques qui sont à l'œuvre autour de cette intervention. Quels processus ont permis la mise sur agenda de ces questions? Comment analyser les jeux d'échelle et les relations entre les niveaux local, national et européen?

Si la vision sous-tendue par ce programme est loin d'être adoptée comme un nouveau modèle, il est intéressant de comprendre comment elle a réussi à occuper une place non négligeable dans l'agenda politique. Nous avons mis au jour deux facteurs qui nous semblent centraux dans ce processus. Le premier est que, loin d'être uniquement le fruit du secteur associatif (qui l'aurait « imposé » aux administrations), ce projet est dès ses origines une co-construction entre les administrations centrales et les associations. Le second facteur concerne les jeux d'échelles entre le niveau local, national et européen. Nous avons pu observer un processus d'imbrication entre différents niveaux d'échelles qui ont contribué à renforcer la visibilité et l'émergence de ce projet.

#### *Why Environmental Standards Do Not Guide Food Practices: The Role of Certified and Rewarding Dimensions of Standards in Understanding the Sustainable Consumption of French Households*

Several researches have been emphasizing how much food practices are inertial and not so easy to convert. Indeed, they are embedded in cognitive, symbolic and material devices that constrain them by producing routinized path of consumption. However, households are submitted to a variety of standards that they may refer to in different manners. In France, they have been educated for several decades to implement the rules of a balanced meal; more recently, they have been regularly exposed to different public messages on how to consume eco-friendly food. However, environmental standards are often competing poorly with other kind of standards, especially nutritional standards. They may either be ignored or disqualified by individuals. Why environmental prescriptions are not more efficient in orienting food practices in France?

By relying on an in-depth ethnographic study conducted among 30 households in France, we identify the conditions of use of nutritional and environmental standards by households in their food practices (planning, shopping, cooking, eating). Our results are twofold. First, we state that individuals rely on standards they consider as stabilized knowledge, even though they may use it in a very idiosyncratic way. Since they may consider environmental standards as relying on negotiable belief rather than certified knowledge, they are less prone to implement them. Secondly, standards are not only guiding practices, individuals also use them to get rewarded. Considering the case of food practices, following proper nutritional standards for a mother is a way of receiving rewards from peers and family for being a good mother. This is not the case for the environmental standards, for which the peer group does not generally play this role, and, moreover could deny the existence of such a standard. These insights could be of help for understanding the unsustainable features of some food consumption practices.

*Public Communication in the Processes of Transparency and Accountability in the Era of Open Data*

Transparency and accountability in the public sector are currently at the center of the communication policies by public administrations in different institutional contexts. With the development of ICT and the prospective of open data and open government that invests in recent years the renewal of the public system in various countries and supranational realities (such as Europe), accountability seems to find new impulse. Public institutions tend to make available to the public information concerning the processes of administration, the manner of use of public goods and resources.

At the same time, in the Network Society (Castells 2008, Jenkins 2006) each institution is called upon to deal with the demand for transparency and participation of citizens, which use for this purpose increasingly the Internet and social media (new forms of civic engagement) (Castells 2010 to 2012, Dahlgren 2010).

Observing the ways in which public authorities are transitioning towards open data (through the analysis of significant cases at the level of local and national governments) emerge strengths and weaknesses, including a problem of attribution of sense to produced data, at the macro level (institutions) and the micro level (individual and associated citizens).

Public communication plays a crucial role because it can accompany open government, through a contextualization and adequate communication of the data that goes beyond the mere publication.

This effort, associated with the ability of individual and associated citizens to practice a selection of data, it is possible the emergence of the construction of sense that it favors the desired micro-macro link (Ardigò 1998, Mazzoli 2001, 2012), the possible compatibilization between macro-systems and environment, life-worlds.

*Performative Turn and Epistemological Reconfiguration of Social Knowledge*

This report discusses the process of epistemological reconfiguration of social knowledge from representation to performativity, which can be observed in the context of performative turn in social sciences and outlines some features of performative epistemology.

For the last decades, sociological knowledge has changed but epistemological concepts are still based on representational idiom. Representational epistemology is the epistemology of observation. Social knowledge is estimated by the criteria of observation and other dimensions of social cognition are overlooked.

Performative turn is redefining basic elements of research. In the context of performative epistemology the epistemic subject (knower) should be considered not as a person or a scientific community, but as a dispersed knower enfolded in complex machineries of different devices, networks and social conventions. Scientific facts and observations are effects of agency. Fact is not something that should be discovered, rather it should be produced or performed. Performative social theory takes part in enacting reality which it describes and it could not be evaluated in accordance with the representational criteria. The criteria of accurate representation should be replaced by the criteria of reconfiguration of reality. New scientific objectivity implies that the main criterion for evaluation of sociological knowledge is not the accuracy of representation, but the degree of reconfiguration of social reality.

Shift from representation to performativity provides a new prospective for social science. If social sciences take part in enacting reality, struggle between different scientific models and theories implies the struggle between realities, enacted by these models and theories. If sociologists want to make sociology more credible they should think not only about how to represent reality, but how to promote sociological version of reality.

*Decomposing the Determinants of (Dis)Trust in Outgroups in Germany and Spain: Results from an Experimental Design Using the Factorial Survey*

Social trust is understood in social sciences as a key component for social cohesion, economic growth and political development of a society, as it is the "glue of social life". Immigration caused by the economic miracles after World War II and by refugees from crisis areas generated a growing religious and ethnic diversity in Western societies. The plurality of origins, denominations and cultures

that increasingly form part of our society is frequently assumed to undermine social trust in current modern societies (Putnam). The purpose of this paper is to decompose for the first time empirically the impact of different factors that are assumed to be determinants of trust and distrust by using a factorial survey. This experimental design carried out among students from Bilbao and Cologne consists in judging varying descriptions (vignettes) of fictitious persons acting in an from the researcher in advance defined situation. By using multilevel analyses the impact of the described characters of the fictitious persons as well as the impact of respondent characteristics on trust can be estimated simultaneously. Besides that it also allows to answer the question of whether trust is higher a) among people that share the same characteristics and b) in denominational comparably more mixed Cologne than in denominational rather homogenous Bilbao.

*The New Global Life of Cosmopolitanism in Social Science*

Cosmopolitanism as an idea is not a new one. Its use within the realm of social sciences and humanities has yet dramatically increased since the early 1990s, even becoming part of various labels – Ulrich Beck's "cosmopolitan sociology", Laurence Rouleau-Berger's "cosmopolitisme méthodologique", Adam Kuper's "cosmopolitan anthropology" to name a few – and concepts – Daniele Archibugi's "cosmopolitan" or "cosmopolitical democracy", David Held's "cosmopolitical governance". The objective of this paper is first to investigate the link between the end of the Cold War and this resurrection of cosmopolitanism in the academy; second to provide an historical analysis of the re-emergence of this perspective and of its use; and third to study how this "cosmopolitization" of global social science and humanities addresses the issue of the "spatialization" of the world.

*How to be a Good Financial Advisor in the M&a Sector ?*

This communication presents research evidences about peculiar Knowledge Workers : professionals who work in mergers and acquisitions Financial Services (M&A) as employees in consulting or financial firms. This professional group is structured by a "up or out" rule, with high turn-over and sharp selection. In order to keep their job or to be promoted, workers have to think and act in line with a peculiar way of representing the firms they sell and buy. Hence, we investigate the set of images, frameworks, language and meanings which is shared by this group of workers. We examine it as a social construction which institutionalize, and at the same time, is institutionalized (Berger and Luckmann, 1997).

The communication is based on a large sociological qualitative inquiry, conducted since 2011 (observations of work and more than 70 interviews with M&A French financiers) and an analysis of curriculum vitae of professionals of financial services. Theoretical frame is mainly borrowed from sociology of professions and sociology of work and particularly French activities's analysis.

We will briefly introduce the professional milieu and its occupants. We'll then demonstrate that they construct a specific representation of the companies they sell and buy. We argue that this mechanism of subjectivation derives from 3 main social processes: daily activities (characterized by obedience and extra work), socialisation (limited) as well as professional pathways and careers. We demonstrate that those workers are binded to narrow their representation of firms they sell and buy down to a set of abstract figures so as to stay as employee and, for a few of them, to reach the top.

*L'évaluation Du New Public Management Par Les Travailleurs. Ou Comment Joindre L'inutile Au Désagréable*

L'évaluation du New Public Management par les travailleurs. Ou comment joindre l'inutile au désagréable.

Le New Public Management s'est imposé dans les administrations publiques européennes et américaines depuis un quart de siècle. Cette communication rend compte des résultats d'une analyse de cas clinique dans des organisations françaises (observations au poste de travail, entretiens individuels, analyse documentaire, mise à l'épreuve collective des hypothèses). Le cadre théorique est la sociologie clinique du travail.

Nous rendons compte de l'évaluation que les travailleurs font de ce mode d'encadrement du travail. Nous montrons qu'à hauteur d'activité, le pilotage par les nombres sous contrainte de productivité, engendre quatre processus typ-

iques : l'accélération, la simulation des résultats, l'abandon de tâches incommensurables et la sélection des dossiers et donc des citoyens. Cette réponse pratique opère une triple dévalorisation, d'après eux : la valeur immanente de l'activité (la possibilité d'en faire une ressource pour la santé) comme la valeur sociale d'usage des services sont altérées, au même moment que la performance semble n'être pas au rendez-vous, d'après leur expérience. Le *New Public Management*, d'après eux, joint donc l'inutile au désagréable.

Dans la suite d'une sociologie critique du travail taylorien, ces résultats interrogent finalement l'épistémologie même du *New Public Management*, c'est-à-dire la représentation du travail qui préside à son organisation. Dans une veine foucauldienne, nous montrons que cette forme de management à distance exercé par la médiation de dispositifs, s'oppose point à point à une épistémologie clinique du travail.

#### *Trust and the Reflection on Social Media Related Risks*

Several weeks ago newspapers were full of the Prism-scandal and still there are lots of discussions about it. Platforms like facebook presumably gave access to their user data. In a seminar I held last semester about internet-based exchange and cooperations some students discussed this problem where the spectrum of comments reached from "it doesn't really matter, because my data isn't relevant to them (NSA)" and "everybody is responsible for what data he or she offers to facebook" to disgusting reactions with the announcement to leave the platform. I don't know if these students really left facebook, but usually events like this irritate only for a short time the "habitual trust" people have in technology. To put it shortly people's naive confidence in technology is disturbed by short moments of reflection caused by the thematization of technology related problems respectively risks.

In contrast to the main assumption of the session organizers in our opinion not a loss of confidence but an unreflected attitude at least towards social media technology is common. We would like to discuss these contrary positions in regard to sociological approaches on trust. In sociology the phenomenon "trust" is mainly considered as a form of calculated risk taking corresponding to specific decision situations in social interactions. With this a mainly reflexive form of trust is addressed. Even approaches in which several types of trust are differentiated there is a tendency to regard i.e. "habitual trust" as a form which evolves from "reflexive trust". Beyond this we would like to figure out the preconditions "reflexive" as well as "habitual trust" in relation to the phenomenon of distrust.

#### *Epistemological Consequences of a Global Encounter: The International Institute for Applied Systems Analysis (IIASA)*

The International Institute for Applied Systems Analysis (IIASA) in Laxenburg near Vienna is a remarkable example of a transnational scientific organization due to the political circumstances of its foundation during the Cold War, its institutional setting as a meeting place for scientists with different national and political backgrounds, and its research into some of the most pressing issues of global change.

First proposed by US-President Lyndon B. Johnson in 1966 as part of his 'bridge building' initiatives between the USSR and the USA, the institute's rationale was both political, in hoping to foster rapprochement between the blocs by organizing cooperative research into common problems of the industrialized nations and scientific, in that solutions to large-scale global problems shall be facilitated which cannot be achieved by either of the sides alone.

The IIASA-Charter was eventually signed by representatives from twelve member countries from East and West in October 1972, establishing IIASA as a non-governmental research institute, where scientists from all member states worked together in applied research projects. Within the methodological framework of systems analysis, research problems included questions of the environmental dangers of the modernization process, population growth, urban planning, energy production and water resources, thus being inherently interdisciplinary and global in scope.

The paper builds upon a thick contextualization of IIASA to explain the methodological changes, systems analysis has seen as a consequence of its internationalization. These changes are marked by a gradual, and in retrospect dramatic increase of 'soft' social science perspectives and an ever growing skepticism towards the formerly strong positivistic epistemology in systems analysis. Though primarily concerned with the case of IIASA, this effect of internationalization shall be underlined by drawing comparisons with earlier US-American versions of systems analysis as well as other international research contexts like that of area studies.

#### *Choice and Decision-Making in Swedish Elderly Care*

The Act on System of Choice (2008) has resulted in increased expectations on the Swedish municipalities to implement customer-choice models in elderly care. Proponents of choice models predict the empowerment of older people as well as improved quality. However, knowledge of the impact of competition, privatisation and choice models on elderly care quality are limited. Hence, it is uncertain how older people act within customer-choice models, both as regards to how active they are in the situation of choice and as to what extent they base their considerations and choices on available information. It has been showed that older peoples' choices and decisions within elderly care are not isolated instances, but rather have the character of ongoing processes in which choices are constantly negotiated and renegotiated depending on changing circumstances and priorities. Few older people change their choice of elderly care provider, and if so it is usually because the providing firm ceases. Research also shows that older people who are in most need of care may be so cognitively and/or physically affected that they have great difficulties to act as rational consumers. In addition, research show, that rather than acting as willing customers in an elderly care market, older people are trying to accept that they may need help. The introduction of choice models involves changing roles for older people in need of care, their relatives and local care managers. The aim of this study is to investigate older peoples' decision making in the Swedish elderly care context with respect to the grounds and conditions for decisions that contribute to well-being and preserved autonomy. Three municipalities with different models according to older peoples choice and influence in elderly care have been selected for the study. Preliminary results from interviews and participant observations will be presented.

#### *Sociological Perspectives on Climate Change: American Realism and Pragmatism Versus European Constructivism and Agnosticism*

Anthropogenic climate change (ACC) has been the subject of sociological analyses for over two decades. Early on the large majority of sociological work employed constructivist approaches. Scholars employing social problems theory analyzed the manner in which ACC was constructed as a major societal problem (emphasizing the role of issue entrepreneurs and media) while those operating from a sociology of science perspective analyzed the development, practice and limitations of climate science (ranging from micro-level analyses of climate models to macro-level analyses of the IPCC). By 2000 the strong constructivist approaches came under criticism for their relativism and post-modern excesses in "deconstructing" ACC, and more moderate forms of constructivism came into vogue. At the same time, not only did the evidence for ACC become stronger, but data on greenhouse gas (GHG) emissions at various geographical scales (especially the national level) became available. These latter developments, as well as advances in analytic techniques like GIS, have led to an increase in realist-based analyses of ACC by sociologists, as illustrated by the work of the American Sociological Association's Task Force on Sociology and Global Climate Change. Accepting the reality of ACC and adopting a pragmatic approach in which the best available data on GHG emissions and projected biophysical impacts are incorporated into sociological investigations, the Task Force provides analyses of the drivers and impacts of ACC as well as adaptation and amelioration efforts. In contrast, European scholars continue to adopt an "agnostic" stance toward ACC, emphasizing constructivist analyses that do not "privilege" climate science and theoretical explorations that avoid employing empirical data. The relative strengths and limitations of the pragmatic and agnostic approaches are examined, especially their abilities to enrich societal understanding of ACC.

#### *Involving People in the Mitigation of Electric Demand Peaks: Attitudes and Behaviours in a Peak Pricing and Load Shedding Experiment*

As part of the current quest to reduce energy demand in buildings, people behaviors are increasingly seen as one of the main factors driving households consumption, making them potential levers for energy savings or peak shifting. Peak shifting is an increasing concern in a context where electricity demand grows while networks need massive investments and generation becomes less flexible in the process of its decarbonisation.

Among the different ways people can be driven to shift their electricity consumption from peak to off-peak time, we've studied load shedding remote signals and tariff incentives effects through a field trial. How do people perceive those interventions? How do they change their daily practices? What are the outcomes in terms of peak shifting and energy consumption?

Our work relies on both qualitative and quantitative materials. In depth interviews and observations at home revealed the diversity of the changes and actions undertaken by people in reaction to the signal and/or incentive. A comprehensive analysis of the energy consumption main dimensions (usage, project, context) was carried out, from the motivations leading people to take part in the experiment to the underlying semantic fields and the antagonisms structuring them: individualism/community, comfort/moderation, transformation/preservation, efficiency/morality. Eventually those attitudes and behaviours could be related to the measured consumption shifts and load shedding acceptance, providing insights on how to enhance or mitigate existing dynamics in people practices impacting energy consumption.

NEUGEBAUER, JOHN (University of the West of England)

#### *The Vulnerable Organisation: Austerity and the Third Sector*

The on-going economic recession in the UK has led to the introduction of austerity measures by the coalition government, which has been accompanied by feminist analyses of how the recession is disproportionately affecting women. Cuts in government budgets and public sector jobs have occurred alongside cuts in government support services, especially those set up to support women. At a time when these third sector, not-for-profit, organisations are most needed by women, financial support to this sector has either been reduced or simply withdrawn. Despite these measures, in 2010, the UK coalition government launched the 'Big Society' policy initiative, with an aim to empower local people. One of the stated priorities was to support charities and social enterprises.

This paper will examine the extent to which three key, third sector organisations, set up to support women in the South West of England, have been affected by these austerity measures. Through qualitative research with key personnel, the extent and implications of the cuts will be examined. Ironically, demand for support services is increasing as more women are affected by the austerity measures, such as cuts in public sector jobs, a reduced level of pay in the private sector, a public sector pay freeze and changes in the benefits system. On the other hand, such individuals may find themselves turning to alternative third sector

organisations, such as foodbanks, set up to help individuals and families who face such difficult financial situations.

To what extent have third sector organisations, set up specifically to help women, been affected by austerity measures? How vulnerable are these organisations? How sustainable is the concept of 'the big society'? What does all of this mean for the future of gender equality?

#### *A Matter of Rights: Social Inclusion Among Refugee Children in Canada and Sweden*

In 2010, Canada accepted approximately 25,000 refugees. Of these, 25% were children under the age of 15. Refugee children often have experienced trauma, exploitation and human rights violations, which can make it difficult for them to become fully included in the society they are entering. The United Nations Convention on the Rights of the Child (CRC) obligates States to ensure the social inclusion of all children, including refugees. While all but two countries have ratified the CRC, few have fully implemented it. In this paper, we explore the relationship between a country's level of implementation of the CRC and its level of social inclusion of refugee children. We examined the policies of Canada, which has made relatively slow progress in implementing the CRC, to those of Sweden, which has extensively advanced CRC implementation by incorporating it into legislation. We focused on five policy areas particularly relevant to children's social inclusion: 1) family reunification; 2) health care accessibility; 3) housing accessibility; 4) education accessibility; and 5) economic security. To measure CRC implementation in each policy area, we developed five CRC Implementation Scales based on criteria recommended in UNICEF's Implementation Handbook. Each country was scored on whether the implementation criteria were met in each policy area. To measure refugee children's social inclusion, we identified comparable indicators in each country of family reunification; accessibility of health care, housing, and education; and economic security. As expected, Sweden's CRC Implementation scores were higher than Canada's in all five policy areas, and these differences were reflected in a higher level of social inclusion among refugee children in Sweden than in Canada in each of the five areas. The findings suggest that the well-being of refugee children reflects a country's level of commitment to upholding their rights.

OLSEN, GREGG M. (University of Manitoba)

#### *Leaders and Laggards: Banning Corporal Punishment of Children in Scandinavia and the Anglo Nations*

This paper will explore the unfolding of a global phenomenon – the legal prohibition of corporal punishment of children. Until 35 years ago, this near-universal practice was considered appropriate, necessary and a parental right. But a paradigm shift in conceptions of childhood has led to a global movement to redefine it as violence and as a violation of children's rights. Today, 33 countries have prohibited it in all settings, including the home. This remarkable shift reflects profound cultural changes in thinking about children and their development, parent-child relationships, and the role of the state in family life.

This movement began in Scandinavia, when Sweden became the first country to explicitly abolish all corporal punishment of children in 1979. Finland and Norway were the second and third countries to prohibit corporal punishment of children – in 1983 and 1987, respectively. Interestingly, but perhaps not surprisingly, progress in the Anglo nations has virtually stalled. New Zealand became the first Anglo nation to pass a corporal punishment ban in 2007, but this did not happen easily. In all other Anglo nations (Australia, Canada, UK, US), legal defences continue to protect adults who corporally punish children.

In this paper, we will examine the process of law reform in the three Scandinavian "pioneer" countries and contrast it with the situation in the Anglo countries. We will address the following three questions: 1) Why did this particular law reform movement begin in Scandinavia? 2) What social, political and historical reasons account for Sweden, Finland and Norway being the first to reform their laws? 3) What accounts for the Anglo nations' slow progress on this front?

#### *Research University in Modern Russia: From Science to Innovation*

Historically, science in Russia was concentrated at the academic and applied-research institutions. Nowadays, state science policy is aimed at the development of scientific researches in higher education institutions. As a result, some universities received the status of National Research University. Research universities become entrepreneurial, characterized by the managerial model similar to business. The consequences of such business-oriented strategies turned into unstable conditions of work for scientist, limitation of permanent contracts, public perception of scientist as ordinary worker.

The principles of research universities were imported into Russian educational system, which is included into particular socio-economic conditions: the state, not private sector, is a major customer in producing public goods. In this regard, it is important to understand the effectiveness of Research University in Russian reality.

This report will present the results of empirical study, conducted in 2013 at the laboratories under the supervision of leading scientists in St. Petersburg. These laboratories represent Biomedical and IT clusters. We have sent 50 questionnaires per e-mail to the young researchers. The questionnaire includes three parts: global situation in Russian science, situation at the university, own professional career. We obtained 9 interviews with leading scientists.

We have created rating scale with following items: the prospects of line of investigation, the potential for innovation, scientific productivity, efficiency of management, the training of young researchers and their academic advancement on the labor markets. The resulting survey data are being processed. Interviews revealed "trigger points" for the work of research laboratories. In spite of the high scientific productivity, there is a weak role of business in the financing of science, "bureaucratization", uncertainty for laboratory at the end of the project, continuing "brain drain". Thus, in Russian educational environment some universities may become "research", not entrepreneurial.

#### *Suffering and Capabilities in Chile*

In Sen's and Nussbaum's capability theory, subjective wellbeing or suffering as usually measured is a functioning, i.e. a realization or state of being. This mental and emotional state is a result of different factors including the capabilities that each individual enjoyed to pursue her life projects. The chapter examines the factors associated with different indicators of suffering - negative affect, depressive symptoms, scale of suffering and life dissatisfaction- using a unique Chilean survey conducted by UNDP to evaluate subjective well being in Chile. These factors include different variables considered in the literature such as sex, age, civil status, labor status, personality, recent negative or positive events, etc., as well as individual capabilities. By doing so, the paper provides a novel empirical assessment of the relationship between suffering and capability deprivation. The results suggest that some capabilities are more related to suffering than others.

#### *Reconciling Work and Family Care for Women : What Different Impacts on Working Carers and Care Workers ?*

Since the late 1980s, French policies are intended to promote the development of household services, especially for children and elderly care, through social contribution exemptions or tax reductions. The main political discourse was to justify these policies both through the creation of jobs and the answer they provide to the needs of children and elderly care. But it was also said that these services help women to balance work and family care, as women are still the ones who mainly care for others in households.

This paper will examine the effects of these policies in terms of gender and social class: are the inequalities between men and women being diminished? and among women?

To answer these questions, we first use the results of researches conducted in the 2000s on the quality of employment in household services in France and secondly qualitative data obtained through the French part of European FLOWS program. On one hand, we show how public policies have resulted in a low quality of care jobs : care workers, who are almost only women, more often have part time jobs that provide them low wages and are hardly reconcilable with their own family responsibilities. On the other hand, we also

show how this low quality of care jobs results in poor quality of services available to women in employment, especially those with elderly dependent parents. So this policy involved in a "job creation" quantitative perspective has perhaps helped to reduce the burden of care tasks for women already engaged in the labor market ; but it has not helped to reduce inequalities or progress towards equality between men and women or between women in employment.

#### *Exploring Multidimensionality in Women's Marginalization: The Intersection of Gender, Language and Social Class in 21st Century Kolkata*

The present paper explores the interrelationship of gender, social class and language in India from 'intersectional perspective'. The introduction and application of 'intersectionality' in feminist sociological theorizing has burgeoned since late 1980s, when Kimberle Crenshaw (1989) coined the term and rejected 'single-axis framework' by embracing multiple dimensions. Moreover, the increasing worldwide affinity among feminist sociologists to adopt 'intersectionality' perspective has contributed significantly not only to the understanding of gender but as well as to emphasize women's lived experiences by unearthing the hitherto uncultivated and subjugated areas of knowledge regarding everyday practices, including their linguistic usages. However, language in general or more specifically in intersection with other social variables like gender, class, age, ethnicity and sexuality etc. have not adequately been dealt with by sociologists in India, in spite of its multilingual social reality. The substantive 'second-grade existence' of women as well as their marginalization has always been accentuated by the catalytic roles played primarily by their gender, followed by their language and social class. Even today, language is fundamental to gender inequality, where language used about women, and also used by women places them in a double bind between being appropriately feminine and being fully human. In addition, women's social class positions based on their education, occupation, income and lifestyle patterns also further their domination giving rise to 'multiple oppressions'. Therefore, with the help of 'narrative' analysis of 80 Bengali women in Kolkata, the present paper attempts to reflect how subjectivity is constituted by mutually reinforcing vectors of gender, language and class and thus to underscore the multidimensional inequalities of these marginalized subjects (i.e. women) in Kolkata, a modern urban metropolis in 21<sup>st</sup> century.

#### *Politics and Distributional Dynamics of Conditional Cash Transfer Program in Turkey*

Conditional cash transfer programs were promoted by International Organization as the most efficient policy instrument for poverty alleviation with its focus on human capital development of children addressing inter generational transfer of poverty (Handa and Davis, 2006). The growing scholarly interest on the diffusion of conditional cash transfer (CCT) programs (Ancelovici and Jensen, 2013; Fiszbein and Schady, 2009) orients researchers to concentrate on the national stories of this adoption process to understand the variation in the program design across cases. By focusing on the institutionalization of conditional cash transfer programs in Turkey since 2004, this research investigates the politics of CCT social assistance program examining how its design and its institutionalization were shaped by the vote seeking practices of the Justice and Development Party government (*Adalet ve Kalkınma Partisi*-AKP) (Aytac, 2013; Yoruk, 2012). This research will aim to understand the "translation" (Campbell, 2004) or the "vernacularization" (Levitt and Merry, 2009) of ideas and policy instruments (Dobbin, Simmons and Garrett, 2007). There is an important role of domestic actors in the adaptation of policy ideas into domestic circumstances. Following the financial crisis in 2001, the CCT program was launched in Turkey within the scope of the Social Risk Mitigation Project initiated by the World Bank. Although the financial assistance provided by the World Bank has been exhausted in 2006, AKP government has institutionalized this social assistance instrument. How can we explain the institutionalization of the CCT by the AKP government as an anti-poverty scheme? What are the implications of the CCT for the welfare and citizenship regime in Turkey considering regional, ethnic and gender dimension of poverty in Turkey? This research suggests that CCT has been used to contain the Kurds in Southeastern regions of Turkey as well as to gather and increase votes in local elections by the AKP government.

### *Humanity and Institutional Categorization of the Unemployed Poor in the Context of Czech Welfare System*

When welfare professionals in the Czech Republic speak about unemployed, they specify different kind of humanity of the unemployed and qualify them as „deserving” or „undeserving” poor. Similar processes of moral differentiation among the poor are ethnographically described by sociologists and anthropologists such as Howe, Haney, Dubois etc., who in their analysis focus on changes of welfare systems in Europe. They focus specifically on the process of creation of categories and thus also moral communities according to which the unemployed were measured and evaluated as „un/deserving”. In the Czech context this process of evaluation is highly loaded with ethnicity - *Gypsy/ness*. Roma/Gypsy are the only visible „group”, that is publically assigned to the „undeserving” category. The welfare professionals has to stand up to paradoxical situation: they mostly share the common-sense and understanding the Roma as „undeserving”, on the other hand they stress neutrality and standard criteria for distributing money to the poor and thus pretend the welfare system as not being ethnically loaded field. The paradox in their standpoint brings ambivalences also into everyday situations among professionals and claimants. These ambivalences open space for responses and for the negotiation of quality of humanity by professionals and by claimants themselves. In the paper (that comes up from participant observation at two Czech welfare offices that I did in 2012) I show, how this pretended neutral space is in Czech context morally loaded field that always come up from racial differentiation among different quality of humanity. In other words I show how these ambivalences are filled with specific meanings of humanity and how claimants stress their humanity in opposition to other claimants alongside the racial line.

### *Žaneta's Life: Whose Fault? "Patient" Unemployed and the Others in the Czech Welfare System*

In the paper I would like to portray the life of one Roma woman Žaneta, who lives in Czech town Chomutov and whose life I could follow during fieldwork in 2012 and 2013. On her life experience I would like to illustrate how changes in Czech welfare politics produced new discourses about the poor ("patient poor" are "deserving"), new way of social work (from social work to discipline work) and also how through categorization of the unemployed welfare professionals exercise power and reproduce inequality among the poor. Žaneta was one of the unemployed who were "suspicious character" for her social worker also because she was sensitive to any kind of devaluation of her self-esteem and responded back in order to protect her identity. Later on she was found as "undeserving", "cheating" the system and thus "abusing state money". This categorization created new situation to her. It sentenced Žaneta to live without welfare money, limited her possibilities to responses and also refused her Czech citizenship. In sentenced her to live without support by the welfare office, later on without support by local NGO, and later on without support by the Czech and Slovak legal systems. Showing her different responses in different periods of her life I show, how her difficult life was more and more understood by different institutions as outcomes of her own faults, not being "patient" specifically.

### *Japan Redefining National Culture: Unintended Consequence of 'Cool-Japan'*

Since the word 'Cool Japan' was introduced by Douglas McGray in his article of Japan Gross National Cool in 2002, the word represents the global strong wave of Japan's pop and youth culture; and the academic debates on it also focuses on these various cultural products that can be classified as the 'Cool Japan', consumed by people outside of Japan or foreigners in Japan. Among abundant academic findings on the subject, though conducted from various approach, ranging from media to economic studies, very few academic studies put forward arguments on the impact of 'Cool Japan' to the Japan as a nation and a state in term of redefinition of national culture. This study will elaborate how the 'Cool Japan' wave has led Japan to position and re-position herself in the global world, and as the (unintended) consequence of the repositioning, how Japan attempts to re-define the National Culture. Through a qualitative approach that includes close study on the content of media coverage on the 'Cool Japan' and interviews to key-person in the government and non-government institutions of Japan who are closely connected to the policy of 'Cool Japan', and by making comparison with other country's experience, this study attempts to understand the process of re-definition of national culture for Japan, as a nation and as a state.

### *Spatial Justice for Urban Informal Sector: The Case of Indonesia*

Urbanization and urban development in Indonesian cities had resulted in co-existence of formal and informal sector, despite the fact that restructuring of physical and economic activities had caused the core of the city to shift from a manufacturing center to a services and financial activities. Intensive and borderless flows of investment, goods, information and people contribute significantly to the co-existing formal and informal sector, creating spatial injustice. The condition was further enhanced by the Asian Economic Crisis at the end of 20<sup>th</sup> century, which for Indonesia was coupled by political crisis that led to the ending of the 33 years long centralized-regime. The commencement of 21<sup>st</sup> century in Indonesia -known in Indonesia as the era of reformation- was marked with the implementation of a new decentralization law in 2001, which should have given more opportunities to city government in their attempt at creating spatial justice for the citizen including the informal sector. This study will elaborate the positioning-contestation-repositioning of the informal sector in two local cities in Indonesia whose city governments have adopted contrasting standpoint on informal sectors. By applying qualitative approach on two local cities through on-site observation, coupled with several interviews of key person from the city governments and informal sectors, as well as other important actors, also through study on secondary data, conducted approximately one decade after the implementation of the new decentralization law in Indonesia, this study aims at understanding the underlying process of the production of spatial (in)justice.

### *Feasibility Of Social Capital and Leprosy Patients In India : A Quantitative Study*

#### **Feasibility of Social Capital and Leprosy patients in India: A Quantitative Study**

Leprosy still evokes social stigma and prejudices in the society and it exercises constraints on the patients to live a socially excluded life. Low level of social capital is one of the manifestations of social stigma associated to leprosy. In the present study an attempt has been made to understand the observance of effect on social capital in case of patients suffering from leprosy. A total of 120 leprosy sufferers were selected randomly from 'The Leprosy Mission (TLM)' hospital of Allahabad district of Uttar Pradesh (India). Both deformed (N=60) and non-deformed (N=60) patients were selected in the sample. Data were collected through interview - schedule in two time context; i.e. before the onset of ailment and after the onset of ailment. Interaction patterns of leprosy sufferers with their family and community were also observed. In addition, a four point scale was also used to observe the intensity of social capital with the increased intensity of deformation. Analysis of data indicates that deformed leprosy patients have low social capital in terms of interpersonal trust, reciprocity, social support and social participation than non-deformed patients. 'Sin of previous birth', 'punishment of God', 'fear of infection by germs' and 'visible signs of deformation' lead to low social capital in case of leprosy patients. On the contrary 'unawareness about the ailment', 'lack of physical deformation', and 'modern medical belief system' are promoting their bonding with their family and community as much as before the onset of ailment. In that case patients have good stock of social capital.

### *Neoliberal School Accountability Policies and Gaming Practices By School Personnel: Consequences For Schools, Children, Teachers and Society*

Professional ethics in public K-12 education requires that teachers and school administrators ethically perform the duties of their position within schools that serve to enhance the learning and welfare of their students and prepare their students for future adult roles as citizens of their society. The traditional relationship between teachers and other school professionals has been based on organic trust (Bryk and Schneider 2002), in which teachers and other school professionals accept salaries that are lower than those earned by similarly-trained professionals in the corporate world in exchange for job security. Neoliberalism associated with globalization impose external accountability systems on schools and schooling have altered that social contract, as they assume that school personnel will

not work for the welfare and learning of their students unless they are pressured to do so under the threat of draconian measures. Within Neoliberalism, the principal indicators of school effectiveness are scores on standardized tests. Low-performing schools face closure and the termination of staff. The current accountability systems adopted in several developed nations and increasingly considered in developing nations are thus based on a *hierarchy of distrust* (Dworkin and Tobe 2012). Especially in high-poverty schools teachers and school administrators do not trust that their students will perform adequately enough on high-stakes, standardized tests to ensure their own job security. This leads many to "game the system" by an array of techniques that give the appearance of student learning gains when such gains are fraudulent. School teachers, administrators, and even government education agencies have been found to engage in such gaming, with the result that student learning deficiencies are not detected and students are deprived of the education they deserve. The systems of accountability and the need to game the system adversely affect the morale of school personnel.

#### *Emerging Society and Sociological Discourse in Brazil*

Sociological research in Brazil pays little attention to the dynamics of economic and cultural globalization, and especially not to that with the BRICS. This paper proposes a sociology of the Brics, based in symbolic interactionism and a classification which sees globalisation as occurring in three relatively autonomous spheres: supra-national, economic and cultural. (Wiewiorka) Following upon Weber, I define the sociology of the BRICS as having at its centre the significant interactions that occur between citizens (and 'objects') that represent the BRICS countries. This research uses mixed methods, drawing upon observations, interviews and readings. A massive increase in Brazilian presence in China is observable over the past two decades, this has been accompanied by a rising number of strains between Brazilians and Chinese. The results of recent field research in Southern China, especially with Brazilians who serve as cultural intermediaries, will be analysed. Some consequences drawn from this study for Brazil-China relations are detailed and some future research initiatives suggested. My hypothesis is that the objects of sociological discourse will adjust to meet the emerging needs in the society.

#### *The Consumerist Aesthetics and the Spirit of Capitalism: New Forms of Inequality in the World and Modern Russia*

From the 60th years of XX century the thesis of a fundamental change in the type of capitalist relations existing in developed countries became popular. It is, primarily, the transition from the classic puritan capitalism (that was described by Weber and Marx) to its hedonistic and consumerist type. Examining the "spirit of capitalism", we naturally approach to its two main aspects – the ethic and aesthetic. And the role of aesthetics, that increases over time – is the main subject of our study. The special role of "aesthetic shift" was played in the development of capitalism in the Soviet Union / modern Russia, where it's changed, but not completely adapted aesthetic was adopted actually before it's economic and ethical components. In many ways, the collapse of the ideological system of communism was defeat in this direction. This paper examines "aesthetic shift" in retrospect, and referring to the data obtained by the author about aesthetic aspect of perception and attitude toward capitalism in different parts of the modern Russian society.

PIRZER, CHRISTIAN (Humboldt University)

#### *Connecting People and Nature: Challenges and Potentials for Reducing Vulnerability through an Ecosystem Based Approach*

In January 2011 the population in the mountain region of Rio de Janeiro state, Brazil, suffered once again from an environmental disaster: excessive rainfall in a short time provoked landslides and floods which caused more than 900 fatalities and led to a major material damage. Generally, those events are natural because of the rugged topography and vulnerable geology and soils, but anthropogenic land degradation and informal housing contribute to disaster risk. Due to scarcity of inhabitable land, lack of public transport and social infrastructure poor people are increasingly forced to live in high risk areas.

In order to reduce the risks for the population, an integrated disaster risk reduction approach is needed. Apart from "grey" infrastructural measures and relocation of the most vulnerable inhabitants, it is essential to implement "green" measures such as using ecosystem services to achieve a more feasible and cost-effective reduction of vulnerability.

An important precondition for the inclusion of all levels of society into risks reduction strategy is the assessment of social perception regarding options and constraints for actions. The focus of our study is the potential for the valorization of ecosystem services through the participation of the population via preservation and recuperation of nature.

The paper presents a case study in the municipality of Teresópolis where quantitative and qualitative data collection has been conducted in order to assess the perception of the local population of environmental risks and the potential for reducing vulnerability through the valorization of ecosystem services. This analysis is an essential basis for developing a sensitization strategy for ecosystem based measures for disaster risk reduction.

Especially the poorer strata of the population perceive a lack of possibilities and empowerment. Sensitization measures have to be adapted to the special needs of the target group in order to ensure their contribution on community level.

#### *Social Perception of Climate Change and Ecosystem Based Risk Reduction in Teresópolis, Brazil*

In January 2011 once again the population in the mountain region of Rio de Janeiro state, Brazil, suffered from an environmental disaster: excessive rainfall in a short time provoked landslides, mudslides, floods and rock debris which caused more than 900 fatalities, left more than 35.000 people homeless and led to an estimated material damage of 1.2 billion USD. Generally, those events are natural because of the rugged topography and the vulnerable geology and soils, but anthropogenic land degradation due to inadequate land use by agriculture and informal housing contribute to an elevated disaster risk. To worsen the situation, predictions of climate change for south-eastern Brazil forecast an increase of torrential rainfall and, therefore, enforcing the need for adaptation to environmental risks in the region.

Up to the present, the disaster risk reduction strategy followed by the authorities in the mountain region includes mainly "grey" infrastructural measures such as contention of slopes or channelization of rivers as well as the partial relocation of population in risk. However, rather than relying solely on grey infrastructure, "green" measures based on the ecosystem services approach are important for a feasible and cost-effective adaption strategy and an increase of resilience. The preservation and recuperation of dense forests on steep mountain slopes, gallery forests on river banks or flood parks play an important yet underestimated role for efficient risk reduction.

The paper presents a case study in the municipality of Teresópolis where quantitative and qualitative data collection has been conducted in order to assess the perception of the local population of environmental risks, climate change and the potential of adaptation through the valorization of ecosystem services. This analysis is an essential basis for developing a sensitization strategy for ecosystem based measures for disaster risk reduction in times of climate change on community level.

#### *Physicians' Perceptions of Patient Autonomy in Do Not Resuscitate Decision-Making: A Comparison Between the US and UK*

In both the United States, and increasingly in the United Kingdom, consumerization and deprofessionalization have resulted in increasing demands for patient autonomy in health care decisions (Haug, 1973). Loss of physician authority and concerns over paternalistic practices shifted decision-making power towards patients at the expense of physician control over clinical decisions (Truog, 2012).

Using the example of the Do Not Resuscitate (DNR) order at the end of life, I discuss how decisions made between physicians and patients reflect changing power dynamics, and how unlimited patient choice might threaten the physician's ability to act in the best interest of their patient. In the US, DNR decisions are largely determined by patient choice whereas in the UK, physicians are permitted to make decisions unilaterally based on what they believe is in the patient's best interest. Through semi-structured interviews in the US and UK, I explore how prioritization of choice and patient autonomy over clinical judgment result in con-

flicts in DNR decision making and moral distress in American doctors in ways that do not occur in Britain.

Less experienced physicians in the US feel especially compelled to offer unlimited choice, as compared to more experienced physicians who feel more comfortable giving recommendations based on clinical judgment. Despite this, most American physicians acknowledge that patients often do not have sufficient information or the tools necessary to make informed decisions. Junior doctors tend to perceive recommendations as a violation of patient autonomy and are less willing to take on the burden of responsibility for clinical decision making due to lack of experience and confidence. These prioritizations of unrestricted choice forces physicians to perform futile therapies that they believe are harmful to the patient and ethically unacceptable.

#### *Indigenous Peoples Organizations in Intergovernmental Policy: Conflicts and Strategies for Participation*

This paper analyzes the ways in which Indigenous Peoples Organizations (IPOs) have negotiated their participation in intergovernmental policy that has been deliberated within the context of the United Nations Framework Convention on Climate Change (UNFCCC) and the United Nations Convention on Biological Diversity (CBD). In both bodies, Indigenous Peoples Organizations have been influential in shaping various aspects of the policy processes. The paper identifies some of the most salient issues that have arisen for Indigenous Peoples in the two policy processes, and analyzes some of the strategies that IPOs have used to influence the policy decisions. The broader legal framework of international law as it pertains to Indigenous Peoples has focused on self-determination and sovereignty. However, within the UN system, nation-states are given primacy, thus relegating IPOs to "non-governmental" status. The legacy of the nation-state system upon which the UN is predicated presents obstacles for IPOs who advocate for rights for people who are often marginalized or not recognized by UN-legitimized governments. However, competing processes, such as those taking place under the United Nations Permanent Forum on Indigenous Issues (IPFII), can serve to put pressure on parallel policy dialogues. Additionally, Indigenous Peoples' participation has been institutionalized in both the CBD and the UNFCCC, with varying results for the efficacy of Indigenous participation. Informed by institutional ethnography, the primary data for this paper were collected through participant observation at UNFCCC, CBD, and IPFII meetings. Additionally, I have followed transformations in various policy texts as they have been influenced by IPO engagement with the policy processes.

#### *The Dynamic Interface Between Bustos Alliance of Christian Churches and the Municipality of Bustos, Bulacan in the Good Governance and Transparency Advocacy*

This paper explores the dynamic interface between Bustos Alliance of Christian Churches and the public servants of the municipality of Bustos as advocates of good governance and transparency. As a practitioner of community development, the mayor of Bustos, Bulacan has introduced participatory governance since he was elected in 2010. The partakers of this form of governance are representatives of various sectors such as the members of Bustos Alliance of Christian Churches who have been empowered to safeguard the budget and monitor the expenditures of the municipality. They actively participate in the planning, implementing, monitoring and evaluating the municipal development program. This alliance collaborates with the municipal government and in return, the latter allocates fund to their activities that address holistic development of the people of Bustos.

The researcher uses Pierre Bourdieu's 'practice theory' and the theory on participatory governance as its framework in this research. It also utilizes in-depth interview of the key informants, participant-observation and triangulation. Key informants include the mayor, the municipal councilors, the secretary to the mayor, the municipal department heads and the officers and members of Bustos Alliance of Christian Churches. Participant-observation is done during the actual municipal planning, implementation, monitoring and evaluation. Triangulation is done to validate the data gathered. Findings are analyzed using specifically the theory on participatory governance of Dr. Oscar P. Ferrer of the University of the Philippines followed by the conclusion and recommendation derived from the result of the study.

#### *Do Gender Differences in Vocational Choice Result from the Need for Social Approval?*

Gender segregation among occupations which can be traced back to gender specific vocational choice leads to gender inequality in the labor market. According to Gottfredson's (1981) theory of vocational choice and role identity theory (Stryker & Burke, 2000) gender differences in occupational choice appear because gender is a significant part of the self-concept. Since adolescents attempt to fulfill

social expectations regarding gender roles they choose occupations in which persons of their own sex are predominant. By doing this, we assume, young persons try to receive social approval from significant others in order to develop and enhance their self-concept.

To test the hypothesis whereby gender specific vocational choice is driven by the fundamental human need for social approval we used data from a representative survey of 4.621 applicants for vocational training in Germany in 2010. Within this survey participants were asked to anticipate the reaction of their social environment if they would choose a specific occupation. The adolescents assessed 16 different occupations varying with regard to status and sex ratio. Furthermore the participants provided information about the occupations they had actually applied for.

Using regression models, we firstly demonstrated that young persons anticipate social approval from significant others more likely if the assessed occupation is appropriate to their sex. Secondly, we showed that the likelihood for applying for a job is influenced by the adolescents' expectation about how their social environment will react upon their occupational choice.

The results indicate that adolescents use vocational choice as a tool to gain credit and avoid blame by showing gender appropriate behavior.

#### *Global Financial Class and Precarious Work Societies*

##### **Global Financial Class and Precarious Work Societies**

The purpose of this paper is to investigate whether the formation of a global financial class is paralleled by the development of a global precarious work society. Taking global developments into account, the paper will trace differentiating and integrating aspects of global work relationships. While the formation of a global financial class could be described as a new integrating and collectivising element in the global economy, I argue that it comes with a shadow side. This shadow side I describe as a global precarious work society. Wherever we can observe the development of a global financial class, the development of a precarious layer of work relationships is not far behind. The paper will map out which industries, which population groups or economies play which role in the development of a global precarious work society. The formation of a global financial class and the development of a global precarious work society ultimately cannot be separated and need to be looked at as social consequences of financialisation as a differentiating and integrating process.

#### *The Institutional Dynamics of Transnational Entrepreneurship: Theoretical Considerations and Empirical Evidence*

The phenomenon of transnational entrepreneurship refers to the transnational operations of the start-up enterprises of migrant entrepreneurs. It may be viewed as a complement to the networking dynamics of large transnational companies, thus resembling a 'globalisation from below' (Portes). Transnational entrepreneurs combine resource mobilization in their countries of origin and destination, augmented by resources in third countries. The factor movements of labor, capital and knowledge are framed by network relationships that combine local and transnational components in terms of a 'multiple embeddedness' (Kloostermann and Rath). Against this background, the question arises in what sense transnational entrepreneurship exhibits strategic qualities regarding the utilisation of socio-cultural resources. This would imply that transnational entrepreneurship gains an institutional logic of its own. Empirical evidence regarding this matter has been gained from empirical research projects that have been carried out in Frankfurt/Rhine-Main during 2011 and 2012, primarily by making use of interviews with entrepreneurial actors. Frankfurt/Rhine-Main is the economically and socially most internationalised region in Germany with a share of migrants in start-up enterprises that is set well above 40% since the mid-2000s. Corresponding transnational segments of business operations involve not only capabilities in mobility, multilingualism and intercultural interaction but increasingly also human capital in terms of professional qualifications. In exploring the multiple dimensions of embeddedness the projects confirm the hypothesis that transnational entrepreneurship goes together with a strategic utilisation of socio-cultural resources and identities.

#### *Transformations of Industrial Policy in East Asian Capitalisms: The Rise of the Entrepreneurial State*

The role of industrial policy in the rapid economic growth of the East Asian economies is subject to persistent discussions. A key issue in these debates is the concept of the "developmental state", which takes on the exposed role of the governmental executive in political systems and its relative autonomy in the relationship with the business sector. The state exercises industrial guidance in a national effort of catch-up growth. In this manner, the concept of the developmental state has been said to address key aspects of the 'East Asian miracle' that unfolded since the 1960s and lasted well into the 1990s, providing the empirical basis for ongoing concerns with the institutional specificity of Asian capitalisms. During the late 1990s, however, East Asian types of capitalism have been subject to an ongoing transformation, including the set-up of the corresponding developmental states. Political systems have been marked by a flexibilization of government-business relations with firms turning into global players while approaching the technological frontier. Besides, the Asian financial crisis of 1997 contributed to this process. The proposed paper explores the institutional transformation of government-business relations by addressing the reorientation of industrial policies in East Asia, with a focus on Japan, Korea, Taiwan and Singapore. The key argument is that the developmental state is transforming into a post-developmental constellation that is in line with the pressures of globalisation and technological as well as structural change, well approached in terms of an entrepreneurial state.

#### *Don't Know Much about History? Methodological Insights and Challenges in Examining the Archival Record to Understand Gendered Linguistic Inequalities*

In this paper, I share methodological challenges I have faced in trying to understand the historical factors contributing to gendered inequalities that persist in the use and symbolic meaning of the Basque language ("*Euskera*"). Mainstream discourses currently define a Basque person who speaks the Basque language, which presumably would make the identity available to second-language learners of the language in addition to native speakers. The linguistic properties of the language also make the identity seemingly available to female as male speakers alike: *Euskera* has no grammatical gender ("el" or "la") or natural gender ("she" or "he"). The only place that gender is marked is in the second-person familiar pronoun, "*hi*," *noka* marks the addressee as female; *toka* marks the addressee as male. However, my ethnographic research has shown that the prototypical Basque is constructed as the native, male speaker who uses the familiar. I have further shown that contemporary discourses consider *noka* as "semiotically inferior" to *toka* even as it is linguistically equal: its use is "looked badly" upon and considered disrespectful, while *toka* is semiotically linked primarily to hegemonic masculinity, which has both negative and positive associations. To better understand the differential symbolic weight attached to *noka* and *toka*, I have used methods drawn from sociolinguistics and historical sociolinguistics – such as intra-textual analysis – to examine the archival record, composed primarily of biblical texts, folksong, legends and myths. To my knowledge, however, few sociologists have examined historical documents such as these to understand gendered use of linguistic variables in the present. In this paper, I will share some findings, insights and challenges my methodological approach with regard to the Basque case have yielded thus far.

**ECHEVSKAIA, OLGA\*** (Novosibirsk State University, [etchevskai\\_olga@student.ceu.hu](mailto:etchevskai_olga@student.ceu.hu))

#### *Reshaping Inequalities, "Reassembling Selves": Community Transformations and Narrative Identities of Former Factory Workers in Siberian Industrial Town*

The paper focuses on the transformation of communities and emerging new inequalities in an industrial town of South-Western Siberia, Russia.

The large-scale crisis of tree town-forming enterprises in mid-1990s, accompanied with dispossession, large-scale poverty and massive unemployment, resulted in the erosion of communities due to disappearance of the organizing role of work and labor, decline of the structured leisure, erosion of factory communities, individualization and fragmentation of life paths accompanied with the feelings of insecurity and uncertainty.

The economy and community life in town was almost "rebuilt from scratch". Currently the economic consequences of the crisis are mainly over, but not the transformation of inequalities or emergence of new communities and subjectiv-

ities. Basing on the analysis of interview transcripts (91 interviews collected in town in 2007-2008), the paper contributes to the study of new subjectivities including, but not limited to, class-based ones.

The transformations of subjectivities are traced on the basis of the narratives of "coming back to life" (life trajectories and their interpretations) after the collapse of factories, which are told by former factory workers more than 10 years after the collapse. The decision to focus on people working for the three factories is based on a suggestion that the experience of living and working in shared environment, community building, and loss of both, constitutes a relational setting which shapes the repertoire of events and justifications used for making sense of common past, multiple present, and diverse visions of the future.

"Narrative identity" is understood as a performing subjectivity creating and maintaining an individual's permanence in time and space. The research shows how the new "modes of permanence" emerge after the collapse of "factory-based" ones, focussing on materialities and moralities as building bricks for new subjectivities and communities in town.

### *Responsible Fatherhood: A Narrative Analysis of Finnish First-Time Fathers*

In Finland, a gender-balanced distribution of childcare is the goal of official family policies, an issue promoted by family experts, and nowadays also a cultural norm of parenting. Thus, in most families, fathers play an extensive role in hands-on caregiving from the very onset of parenthood. This presentation draws on the results of a recent study analyzing the narratives of early fatherhood produced by Finnish first-time fathers. The narratives were produced in 60 interviews conducted with 44 fathers during the first three years of their fatherhood. In this presentation, the men's narratives are considered within the framework of recent time-use and parental leave statistics.

The men's narratives emphasized responsibility, especially in terms of nurture and care, above issues of age and social class. Beneath the surface, however, the narratives exhibited wide variation in what aspects of paternal care were stressed. For example, whereas in some narratives equally shared parenting, from family planning to daily care practices, was emphasized as a matter of gender equality, in others, although the father was seen as competent in nurturing, the mother was nevertheless more important in this respect. However, although breadwinning was also emphasized in most of the narratives, it was generally subordinate to "hands-on" practices. The statistics also highlighted the increase in men's share and engagement in childcare, but contrary to the narratives, socioeconomic differences remained significant and a notable gender gap in parental practices and parental leaves emerged.

As the results suggest, while the cultural ideal of shared parenting has probably promoted the narration of nurturing responsibilities among fathers, these have not yet been fully realized in practice. To turn the narratives into reality, in addition to men's own willingness to adjust their paternal behaviors, more support from the mothers, working life and family policies is needed.

**EGGER DE CAMPO, MARIANNE\*** (Berlin School of Economics and Law, [marianne.egger@hwr-berlin.de](mailto:marianne.egger@hwr-berlin.de))

### *How the Rhetoric of Reaction Justifies the Legalization of Migrant Care Labour in Austria*

Austria legalized the 24/7 care for older adults provided mainly by migrant carers from poorer Eastern European countries. The debate around this legalization during the years 2006-2008 shows patterns similar to Albert Hirschman's *Rhetoric of Reaction*: The *jeopardy thesis* claims that a legalization according to established labour law standards of domestic care personnel would lead to skyrocketing costs jeopardizing the sustainability of the welfare state. The *futility thesis* denied that the existing legal system of elder care would be sufficient for severely care dependent older adults, since home care is delivered in relatively short house calls and hardly available on weekends or at night. The *perversity thesis* again imputed the paradox effect of a veritable care crisis to the legalization, because migrant care workers would fear retroactive punishment.

The Rhetoric of reaction aims at diminishing social rights for people in need of the welfare state.

So the legalization subjected the mostly migrant care workers to much worse working conditions compared to domestic care personnel enjoying social security and the benefits of collective bargaining.

**EGGER DE CAMPO, MARIANNE\*** (Berlin School of Economics and Law, [marianne.egger@hwr-berlin.de](mailto:marianne.egger@hwr-berlin.de))

### *Translations of Concepts over Time: What Criteria Decide about the Appropriateness of a Translation?*

About children's literature it has been amply discussed whether certain terms or plots of classics are to be changed in new editions in order to comply with a notion of political correctness. To what extent is something similar taking place in social science literature?

Translating Lewis Coser's *Greedy Institutions* (1974) into the 21<sup>st</sup> century provides an example for the difficulties of relating a theory to contemporary phenomena.

Between the 1950s and 1970s Coser discussed various forms of Greedy Institutions with their total claim on the individual. Greedy Institutions demand undivided time and loyalty from the individual who will voluntarily devote him/herself for exclusive benefits granted to loyal followers only. Although the ancient authorities have vanished – princes with their court Jews, masters with their servants, or religious and political missionaries – the concept is far from obsolete today. Management consultants, 24/7 old age carers from Eastern Europe and particularly the hive mind of the New Social Media show that a revival of Coser's theory can help understand power relations governing today's individuals. Consequently this justifies a German translation of Coser's work, particularly since it has hardly been received in the German speaking world.

Whether shifting the context from Coser's original examples of court Jews and eunuchs in Byzantium is accepted within the scientific community as appropriate, is not a question of mere plausibility. While e.g. the proposition that internet based Social Media act similar to religious or political sects received wide approval, depicting spin doctors or management consultants as present day equivalent of the court Jews is seen critical.

Thus, translation also requires an effort of cultural sensitivity to the political culture. This eventually determines how the scientific community is going to receive the translated work.

## RC46-759.3

**EGGS, JOHANNES\*** (Institute for Employment Research, [johannes.eggs@iab.de](mailto:johannes.eggs@iab.de))

### *The German Welfare Reforms and Individual Health*

In order to improve the competitiveness of its labour market, major welfare reforms were implemented in Germany in the last decade. Old schemes of welfare and unemployment assistance were amalgated into a new type of welfare called unemployment benefit II (UB II). UB II was supposed to be the new basic social security scheme and as such supposed to provide the minimum resources necessary for an individual to meet his or her basic needs. The central aim of UB II was the reintegration of individuals back into the labour market, that had been detached from it. Eligible for UB II receipt are not only long-term unemployed and people that received welfare prior to 2005, but also individuals, where other forms of income are not enough to provide the sufficient resources to meet basic needs.

The aim of this study is, whether UB-II-receipt has a singular effect on health. A negative effect could be caused by the stigma attached to the new welfare program.

In order to analyze this possible association, longitudinal data from the panel study "Labour market and social security" is used. The sample consists out of 12000 respondents aged 18 to 65, who participated up to five years from 2006 to 2011. Subjective health measures are the outcomes of interest. Fixed Effect panel models are calculated to establish a possible association between subjective health, unemployment and UB-II-receipt.

#### *Ethnic/ Religious Insurgencies and Nation-Building in Nigeria*

Over the last decade, the activities of ethnic/religious insurgencies have permeated the Nigerian nation, bringing into question the essence of survival of the Nigeria project. This ranges from the activities of the Movement for the Emancipation of the Niger Delta (MEND), the Niger Delta Volunteer Force, the indigene/settler crisis in many states, and the Boko Haram saga in the North-East region. Several factors ranging from economic, political and cultural marginalization, widening social inequalities, lack of basic infrastructure and exclusion have been cited as reasons for these insurgencies in order to attract attention from the national government and the international world, it is the contention of this paper that employing tactics of violence and killings against innocent individuals, communities and armed conflict with the state creates more long-term devastating consequences than the short-term goal of attracting attention to whatever genuine demands any group may hold. The paper further argued that insurgency creates conditions where the most vulnerable particularly women and children are more at risk of hunger, malnutrition related illnesses and death. Furthermore, countries in conflict suffer disruptions in livelihoods, infrastructure, schools, markets, assets, nutrition, health and loss of resources required for food production and distribution. The end result is that instead of the nation building sustainable development, the perpetration of conflict and violence causes the country to suffer long-lasting losses, including losses to food production. The paper concludes with the recommendation that employing constructive non-violent dialogue and demanding accountability from the leadership in all spheres of life and authority without recourse to employing parochial ethnic and religious sentiments would go a long way in getting answers to the people's socioeconomic grievances so we can all galvanize our collective drive, energies and resources in generating more secure livelihoods for the population currently mired in poverty, hunger and insecurity.

**EGHAREVBA, MATTHEW\*** (Covenant University, Ota, Nigeria., [matty\\_osa@yahoo.com](mailto:matty_osa@yahoo.com))

AHMADU, FREDERICK (Covenant University, Ota, Nigeria.)

JEGEDE, AJIBADE (Covenant University, Ota, Nigeria.)

#### *NEO-Liberal Reforms and Health Disparities in the Global South: The Case of Nigeria*

For over two decades since Nigeria's adoption of the neo-liberal policy, its impact on standards of living of the citizenry has not been rather satisfactory as manifested by the unequal income distribution gap between the rich and the poor over the years. Besides, the health conditions of the people has experienced a decline as revealed by the increasing rate of child/infant mortality and maternal mortality which expresses the failure of government reform in adequately addressing goal 4, 5 and 6 of the United Nations Millennium Development Goals (MDGs) targets. Using secondary sources of data, and the elite and world system theoretical models, the paper argued that government implementation of the neoliberal policies of removal of subsidies on essential goods and services, reduction of capital expenditures in the provision of healthcare and educational services and infrastructure have contributed to growing inequality, poverty and unemployment which had adversely narrow opportunities for human development. Today, Nigeria's position in the UNDP Human Development index (HDI) ranking over the past years have remained poor, reflecting a combination of intense poverty, low educational levels and limited life expectancy. The paper concludes with the position that what is required to address the challenge of human development in the global south is a strong government commitment in looking inward to fashion out people oriented policies that channel the nation's economic resources into promoting healthcare, education, infrastructure, sanitation, nutrition and equity as well as incorporating safe and viable indigenous methods of treating health issues that are easily accessible and affordable.

### RC28-486.3

**EHLERT, MARTIN\*** (WZB Berlin Social Science Center, [ehlert@wzb.eu](mailto:ehlert@wzb.eu))

#### *Household Influences on Employment Insecurity over the Life Course*

Previous research on employment instability mainly focused on labor market related factors. I argue however, that employment instability over the life course is also influenced by the household a person lives in. Building on literature about the "marriage premium" and the "maternal penalty" in labor earnings, I expect that there are several mechanisms through which households shape the incidence of involuntary displacements. The household context may influence preferences toward stable jobs, impose constraints on job search, or influence employers' hiring and layoff decisions. These mechanisms differ by gender. For example, men in male breadwinner households may have a preference for stable jobs. Mothers in couple households on the other hand, who more often have to reconcile paid work and housework are constrained in their job searches and therefore may have to take up less stable jobs. Finally, especially among men, being married may be seen as a positive signal for productivity by employers and therefore they more often obtain stable jobs. Moreover, employers may displace married men and women with children less often because they are considered more productive and also have to support a family. In sum, these considerations suggest higher employment instability among single adult households, mothers and especially single mothers. I test these expectations by comparing the risk of involuntary job loss between different household types using the German Socio Economic Panel (GSOEP). To control for selection into households, I apply discrete-time event history models. Preliminary results indicate a higher risk of job loss among single men and to a lesser extent among single mothers. This seems to be rather driven by employer discrimination than by self-selection into unstable jobs.

### RC20-350.4

**EIDLIN, BARRY\*** (University of Wisconsin-Madison, [eidlins@ssc.wisc.edu](mailto:eidlins@ssc.wisc.edu))

#### *Just Another "Special Interest": Collective Identities and Union Strength in the U.S. and Canada in the Twentieth Century*

Why are labor unions weaker in the U.S. than in Canada, despite the two countries' many similarities? This was not always the case: unionization rates only diverged in the mid-1960s, with consequences for inequality and social policy. Standard explanations emphasizing long-standing differences in national characteristics and policy differences are insufficient. I argue that union divergence resulted from different processes of political incorporation, which created different collective identities for labor in both countries. Labor was incorporated as an interest group in the U.S., and as a class representative in Canada. These collective identities enabled and constrained labor's scope of action. U.S. labor's interest group identity led it to focus on using inside influence and lobbying. As its influence within the Democratic Party weakened and employer attacks intensified in the 1970s, labor was unprepared to return to a more mobilizational strategy, its independent organizing capacity sapped by decades of behaving as a responsible interest group. By contrast, Canadian labor's class representative identity allowed it to retain its independent organizational capacity. Labor fought for legislative reforms, while also mobilizing outside political pressure. This left Canadian labor better equipped to withstand increased employer and government attacks on labor beginning in the 1970s and 80s.

**EIDLIN, BARRY\*** (University of Wisconsin-Madison, [eidlins@ssc.wisc.edu](mailto:eidlins@ssc.wisc.edu))

#### *Why Is There No Labor Party in the United States? Political Articulation and the Canadian Comparison, 1932-1948*

Why is there no labor party in the United States? This question has long stood at the heart of debates about the shape of American politics and social policy. Existing explanations use a "reflection" model of politics, whereby parties reflect pre-existing differences in political cultures, institutions, and cleavages. But an analysis comparing existing U.S. electoral data with newly compiled Canadian data challenges reflection models: instead of difference, the data shows similarity prior to the 1930s, then divergence. Labor party support collapsed in the U.S., and took off in Canada. To explain this, I propose an "articulation" model of politics, which emphasizes the role of parties in assembling and naturalizing different class coalitions. I show how struggles surrounding working and agrarian class political incorporation during the Great Depression reconfigured class alliances in both countries. In the U.S., FDR and the Democratic Party made the Great Depression a class issue, and used state policy to articulate a liberal-labor alliance that undermined labor party support. In Canada, mainstream parties excluded agrarian and labor constituencies, leaving them available for an independent left political coalition. This foreclosed the possibility of a liberal-labor alliance and allowed the Cooperative Commonwealth Federation (CCF) to take root as a farmer-labor party.

*Quality of Semantic Differential Scales - an Application of Multiple Correspondence Analysis*

Semantic Differential Scales (SDS) are frequently used to assess self- and other-descriptions. The application of SDS is based on a number of assumptions: (1) the linearity of rating scales, (2) the symmetry of scales, (3) the equal distance of scale points; however, these assumptions are usually not matter of analysis. Against this background, the present study employs Multiple Correspondence Analysis (MCA) to analyze the underlying assumptions of SDS. A randomized between-subject experiment (split-ballot) was realized, varying three different forms of SDS. The first form was a classical form with polar adjectives (good – bad), the second form used unipolar adjectives (good-not good) and the third form was a bipolar form, but with nonsense pairs (good – passive). The respondents had to evaluate themselves and a well-known German politician by one of the SDS forms. We conducted a web survey on a probability sample of German residents (N = 552, 53% males, age M = 42.63, SD = 14.77). The results of MCA are reported and discussed with regard to their methodological implications.

*Teenagers' Use Of Mobile Media As Practices Of Social Inequality*

Mobile media have become a fundamental part of adolescents' everyday lives. Serving as "permanent digital companions" and taken for granted by its users, mobile phones and internet capable smartphones are deeply embedded in peer interactions. Mobile media usage encompasses both mediated interactions and face-to-face-interactions related to media, creating different technosocial situations in which specific social rules and interaction orders are generated.

In the context of qualitative research (group discussions, interviews and media diaries), respondents (aged 12-18) gave valuable insights about such situations, focusing on interactional routines and conflicts as well as social expectations towards media (related) interactions. When looking at new media sociologically it is *firstly* necessary to question the associated social norms being negotiated by users and its implications for interaction orders. *Secondly*, it is instructive to scrutinize to what extent media (related) practices produce and reproduce social inequalities.

Deriving from the respondents' narratives, it is argued that mobile media on one hand facilitate new forms of pairing and bonding within peer groups, but on the other hand reveal and amplify processes of social exclusion. Finding them faced with certain constraints, expectations and obligations with regard to mobile media, it becomes apparent that the young actors handle certain situations in various ways which are highly specific to their social background and gender. This is remarkable as teenage peers are often seen as rather inclusive collectives operating in their own logic beyond institutional or political belongings and an "unequal world" – especially when we look at studies on adolescent media usage. Indeed all respondents happened to own a mobile phone and participate in corresponding practices. Nevertheless their distinct use of mobile media mirrors social polarization within juvenile groups as they steadily (re)produce inequalities through interactions.

**EKERWALD, HEDVIG\*** (Uppsala University, [hedvig.ekerwald@soc.uu.se](mailto:hedvig.ekerwald@soc.uu.se))

*Life Trajectories of Three Swedish Sociologists*

To contribute to our knowledge of the social production of sociology, this paper builds on three interviews. The interviewees are Swedish sociologists, two men and one woman, one of the men having a foreign background. They are born between 1935 and 1955 and represent the active group of the first two generations of professional sociologists in Sweden.

The first Swedish chair in sociology in 1903 (shared with economics) did not get any successor. Therefore the starting year of the next chair in sociology more often counts as the start of the discipline in Sweden, namely 1947. The discipline was built up during the first three decades and is now represented at 21 universities and colleges in Sweden.

The chosen three personalities are not "ordinary", but they fit in based on the criterion 'median academic rank'. One of them reached professorial status being 65 years old, and the other two are associate professors. The man with Swedish background has had the strongest career, also with an international impact. The woman could have been a top professor had she been raised now, not in the patriarchal times when she made her doctoral thesis (the 1970s). The man with the foreign background is a political refugee from Latin America who has over-

come many obstacles in his way to get to his present university position. They are interviewed as historical witnesses under their real names. As familiarity with sociological concepts can be presumed, the interviews themselves are based on an interactive sociological analysis by interviewer and interviewee. The interviewer is a Swedish, female sociologist born in the 1940's who started to study sociology in 1968.

*Spatial Inequality As Political Inequality? How the Spatial Distribution of Immigrant Networks and Organizations Affects Political Participation*

One result of international migration is that a significant amount of people do not live in the nation states of which they are citizens. They therefore do not have full citizenship rights in their countries of residence because they are not full members of the polity. A result from this is an increasing democratic deficit, especially in cities where immigrant communities tend to concentrate.

This presentation examines how chances to participate politically are affected by residential location of Turkish immigrants in Berlin. Past studies have shown that the embeddedness in immigrant communities, namely in immigrant social networks and immigrant organizations, is able to include people politically even when they do not hold full citizenship status. Social networks and organizations activate immigrants by informing about politics or by motivating immigrants to e.g. take part in demonstrations.

However, chances to build such networks or to get active in voluntary organizations are different in different localities – even in one city. People living in different parts of the city, under different contextual conditions, have therefore different access to structures that make it easier to get politically active. In the presentation the impact of these structural conditions (namely the density of migrant organizations and the availability of immigrant networks) are examined using data from a multilevel-survey currently conducted in 30 Berlin neighborhoods which focuses on people with a Turkish migration background.

In the first part of the presentation citizenship policies of the German state towards people with a Turkish migration will be examined (especially in regard to political rights). In a second step, it will be analysed how these citizenship practices interact 'on the ground' with practices of immigrant social networks and civic organizations.

**EL-KAYED, NIHAD\*** (Humboldt University Berlin, [nihad.el-kayed@hu-berlin.de](mailto:nihad.el-kayed@hu-berlin.de))

*The Meaning of Space for Civic and Political Participation of Immigrants*

The topic of immigrant voluntary organizations and their importance for immigrant incorporation has gained more and more attention in recent years. However, so far we have a limited understanding of how the spatial distribution of voluntary organizations affects immigrant civic participation, although immigrant organizations cluster in certain cities and even in certain spaces in cities.

The presentation is empirically based on a multilevel-study which is currently conducted in 30 Berlin neighborhoods and focuses on inhabitants with a Turkish migration background (first data will be available at the end of this year). It examines especially if the residential context affects the likelihood that immigrants participate civically, mainly through the spatial availability of immigrant networks and immigrant organizations. Thus, it examines in essence if access to civic participation is spatially segregated.

In a first step the presentation analyses if and how the spatial availability of civic organizations influences civic participation of Turkish immigrants in Berlin. This is examined in relation to personal resources such as education, income, citizenship status and access to informal networks. In a second step it is asked how this affects different kinds of political participation.

The central question that is asked here is how immigrant organizations are embedded in space and how this affects the process of civic and political inclusion of immigrants. This will be examined in relation to several dimensions of personal resources such as education, income and citizenship status.

*Entrepreneurship As Immigrant Women's Strategy for Coping with Unemployment: A Canadian Case Study*

Immigrant women, particularly those from Africa, often confront devaluation of their foreign credentials and work experiences gained from their countries of origin. Some of the women who migrated to Canada under the family unification

program are often perceived as dependants of their husbands and, therefore, not destined for gainful employment. The fact remains however, that economic challenges often confront the women's families as husbands/fathers' incomes do not adequately meet the needs of family members especially where children are involved. Mothers who cannot find gainful employment and who have limited access to child care, often resort to setting up small-scale enterprises in the basements of their homes. Such enterprises generally involve hair-braiding, tailoring, and sale of ethnic food and products which yield some much needed income for meeting some of the needs of family members. This paper will highlight what establishing an enterprise entails and the challenges small-scale entrepreneurs confront in running their enterprises some of which are transnational in nature. The paper will also explore ways in which support can be generated for the growth of such enterprises in order to become major alternative means of employment for unemployed African immigrant women in Canada.

#### *Visualising Dispossession As a Mode of Reconciliation: An Australian Case Study*

In the late twentieth century non-Indigenous Australians came face to face with the violent past of settler colonialism. During a decade of Reconciliation (1991-2000) they engaged (voluntarily or otherwise) with materials that informed them about the often ignored atrocities and everyday violence that had been directed at Indigenous peoples for the past two centuries. Thinking about a series of images of land and belonging, the paper addresses the question of violent representations and pedagogy. Using three different modes of the visualisation of violence directed towards Indigenous peoples – popular cultural (commercial television and film), documentary (public television), and government commissions (photography) – produced in the period of reconciliation or its aftermath, it asks the question what and who does it cost to re(member) a violent past. Analysis draws on Anthony Moran's (2002 1016) notion of non-Indigenous fantasies of Australia as empty space, which meant:

settlers could build their own utopias without hindrances. Such discourses [represented] indigenous society... [as] not count[ing] as historical societies with their own traditions and historically sedimented relationship with the land. Therefore nothing stood in the way of the establishment of those new utopian societies.

It is this clearing of space – the elimination of Indigenous peoples through massacre, removal to reserves or 'adoption' as a cheap source of labour – that has been a key site of disruption to the 'utopian' vision of peaceful Australia. The paper explores how the three modes of visualisation address different audiences, and the how the subtly different logics that underpin each genre produce different affects for the intended non-Indigenous audiences, but also the Indigenous peoples who are the subject of the images. Making a distinction between a desire to right injustices and the needs for dominant groups to address their own problem, this paper considers the effects of remembering.

#### *Defining The Gift*

There is increasing sociological interest in contemporary giving practices; the literature, however, continues to be strongly influenced by the Maussian tradition of economic anthropology, with its stress on reciprocity and conceptions of the gift as a form of deferred exchange. Implicitly, and sometimes even explicitly, this tradition defines *giving* and *the gift* as theory-laden terms of art, and the theory with which they are laden is derived from the study of non-modern societies. The assumptions built into such definitions are thus potentially problematic: first, because they exclude many phenomena that are *included* in *giving* as it is understood in contemporary lay usage. Secondly, failure to recognise the disconnect between the concept of gift implicit in anthropological accounts and the everyday concept of gift leads to misguided attempts to argue as if actual gifts in contemporary late-modern societies are or must be subject to the analytical conclusions reached by the anthropologists.

The sociology of contemporary giving, I will argue, must begin from a definition of *gifts* that is based in contemporary lay usage. The paper will consider the issues involved in defining empirical terms for use in social theory and take these into account in developing a definition of *gifts*. Each significant term in this definition itself raises a number of issues. Must the gift, for example, be voluntary? And if so, what sorts of influences on the decision to give are compatible with it being so? Does giving entail a transfer of property rights? Or can gifts be made that evade our conceptions of property? In examining such issues the paper will map out a range of types of giving that is significantly different from that implicit in work in the anthropological tradition.

**ELDER-VASS, DAVE\*** (Loughborough University, [d.elder-vass@lboro.ac.uk](mailto:d.elder-vass@lboro.ac.uk))

#### *Rethorising The Concept Of Mode Of Production In Diverse Economies*

*Mode of production* is a central concept in political economy, and one that has often seemed relatively uncontroversial. The prevailing usages, however, tend to frame modes of production as thoroughly dominant in their epochs, thus tending to marginalise other forms of production as socially and economically insignificant. Yet even today, in capitalism's pomp, there are massive sections of the economy that are far from capitalist in form. Labour in the household, subsistence agriculture, and the many and varied forms of gift and solidarity economy take a vast range of economic forms, few of them recognizably capitalist. And increasingly it is clear that alternatives to capitalism will not be imposed by taking control of the state but rather are developing all around us in the interstices of our already diverse economy. We cannot make sense of this diversity without discarding or radically revising the concept of modes of production.

This paper engages with some of the issues that arise when we do so, and introduces an alternative approach organised around the concept of *appropriative practices*. If we think of the economy as a mixed economy of appropriative practices, which may be combined and recombined in a variety of economic forms, we can give ourselves the theoretical flexibility to make sense of a far wider and more open range of alternative futures – and indeed of the varied and complex range of actual contemporary economies. We may then begin to theorise the forms of interaction between these competing economic forms, the sometimes surprising ways in which they bolster and undermine each other, and develop a political economy that is no longer trapped by its own terms between an inexorable capitalism and an impossible socialism.

#### *Please Call Me "You" Rather Than 'you': Culture of Honor and the Significant Consequences of Subtle Insults*

Culture of Honor is a significant and fruitful field for examining the cultural characteristics of some areas of the world like Mediterranean region. It is certain that the Culture of Honor in social psychology requires more studies to expand and deepen this important and relatively new field, and the related studies in Turkey have great potential to provide such findings. Regarding the honor cultures, insult is a significant issue, and violent response to insult is one of the decisive properties of the Culture of Honor. However, this conclusion mainly results from the studies where insult is obvious and direct. In this study, it is hypothesized that if insult is very critical in honor cultures then it can also be detected in situations where insult is even subtle, and after perceiving the insult corresponding reactions are given. For that purpose, two real-life short videos of a popular international TV show (i.e., Turkish version of the show) depicting a small conversation between a performer and the judges of the show were watched by the participants of this study. After each video, participants were asked to answer some open-ended and closed-ended questions. It was revealed that even subtle insults (i.e., word choice: usage of informal "you" -"sen" in Turkish- rather than formal "You" -"siz" in Turkish- by the performer towards each judge member) were generally perceived as great insult and reacted by anger and the desire of retaliation by the majority of the participants. The findings also match with the related findings of the previous qualitative studies (i.e., field and focus group studies) conducted in Turkey by the same researcher, which will also be mentioned during the presentation. The results of the study and suggestions for the future studies about the Culture of Honor will be discussed on the basis of the literature.

#### *Max Weber and Modern Nation-Building*

##### **Max Weber and modern nation-building.**

Max Weber is in several respects "mossgrown", since he dealt with contemporary problems of German nation-building and security policy more than a century ago. He has no immediate fresh response to problems of multi-level governance or globalization. He takes the state for granted as the natural unit of analysis and his international community is one of Hobbesian realism. He also overestimates the role of charisma.

He nevertheless remains both a source of inspiration and a sustainable sparring partner to many new approaches, only to mention multi-Modernity paradigm and post-secularism, both challenging Weber's basic vision of the roots of the dominance of Western rationality.

Weber, moreover, gains new relevance for problems of nation-building, especially among "late children of 1848" in the newly independent states East of the Elbe. Charisma is one concept which gets a second and prolonged life after the implosion of the Soviet Empire. Weber might be a part of cosmopolitan bourgeoisie but is basically a nationalist political economist and his problem agenda – renewal of forms of state, political sociology and political representation – has many parallels today.

It is high time for an inventory of Weber's work from the vantage point of its relevance and utility in today's world.

#### *Using Arts to Generate Representations of Resistance to Hegemonic Understandings of 'Deprived Communities'*

This paper will explore how community representations produced through creative arts practices can be used to challenge and disrupt numerically based framings of health policy and practice. Policies for health improvement in the most deprived localities in the UK tend to focus either on the impact of poverty and deprivation – but with little historical or cultural differentiation of the meaning of deprivation – or, most commonly, on the prevalence of 'unhealthy behaviours', with limited attempts to connect these with meaningful ways of life under varying conditions of disadvantage. Whilst health inequalities continue to be a priority for the UK government, many of the policies designed to address 'austerity' have served further to stigmatise, blame and silence those who languish in the bottom population quintiles produced by standard indices of deprivation. This paper will draw on theoretical development and early data collected from a three year research project, working in five neighbourhoods in Wales, Scotland and England. In this project, academics from the social sciences and the arts and humanities together with creative artists and community members seek to use the arts to develop new modes of describing and representing who they are and where they live. This experiment starts from the conviction that the creative arts, along with modes of analysis and critique derived from the humanities, can play a transformative role in a process of improving communication, dialogue and knowledge exchange as well as providing the resources of hope for forms of collective social action and agitation. The paper will also discuss the implications for sociology of developing an epistemology that is nourished by the literary, visual, and performative arts, and how this might influence processes of knowledge exchange with policy makers.

#### *Characteristics in the Personal Network and Mortality Risk in Older Adults*

Research on aging has consistently demonstrated increased chance of survival for older adults who are integrated into rich networks of personal relationships. Theoretical explanations are that personal relationships offer direct behavioral and physiological pathways to longevity, as well as buffer stress and provide coping resources during critical life-events. These pathways often operate independently from age, sex, lifestyle, well-being, chronic diseases and functional limitations. Besides these insights, many studies fail to establish a strong link between social integration into personal networks and risk of mortality. We suggest that the life-prolonging effects may vary considerably across the different conceptualizations of integration into personal networks. Furthermore, research designs need to account for changes in the personal network during the aging process. The objective of this study is to model mortality risk depending on a variety of personal network characteristics, including for example network size, social support and diversity in relationships, e.g. with a variety of family members. We expect most protective effects for complex and multifunctional personal networks (e.g., diversity). Data are from the Longitudinal Aging Study Amsterdam (LASA) and include >2,900 Dutch participants aged 54 to 85 at baseline in 1992 and six follow-ups covering a time span of twenty years. Preliminary findings suggest dif-

ferential impacts of the personal network characteristics, e.g. there is a reduction in mortality risk for individuals integrated into diverse personal networks.

#### *Even the Most Marginalised Can and Do Exercise Collective Agency!: Case Study Empowerment Programme for Caregivers of Children with Disabilities in a South African Township*

This case study examines the medium-term outcomes on collective agency contributed to by a Community-based Rehabilitation (CBR) empowerment programme for caregivers of children with multiple disabilities in a peri-urban South African township. CBR is the World Health Organisation-endorsed approach to promoting human rights and improving quality of life for people with disabilities in developing settings. The newest conceptualisation of CBR includes an empowerment component that encourages interventions to mobilise communities of people with disabilities; promote self-advocacy and effective communication; and develop peer-led self-help groups. This paper adds to a small but growing evidence-base for CBR using empowering, participatory qualitative methods to allow members of a CBR self-help group to participate as co-researchers in analyzing the outcomes of their participation in the programme. Concrete examples of their burgeoning civil engagement and collective agency illustrates how even the most marginalised in society can and do exercise agency.

#### *Challenges for Farmers Field School in Sudan: Towards Participatory Synthesis of Traditional Practices and Modern Knowledge for Sustainable Farming and Livelihood*

Farmers in Gadarif State, Sudan, are suffering from Striga, a parasitic weed also known as witchweed, which attacks sorghum, their staple food crop. Given the threat to food security, Farmers Field School (FFS) program, launched by Sudanese researchers with funding from Japan, works with local farmers to develop weed control techniques combining traditional practices with outcomes of modern research. This paper, based on interviews with the researchers, examination of technical documents, and survey and interviews with farmers, presents our self-critical assessments of prospects and challenges of FFS striving to improve the food security and build sustainable livelihood. First, FFS attempts to revive, combine, and scientifically validate traditional practices to control Striga, including crop rotation, deep plowing and soil flooding, which currently few farmers adopt. Assessing these methods with local farmers, FFS is expected to generate a feasible, effective, and hence sustainable weed control regime to improve the food security of the underprivileged farmers. Second, while the livelihood in rural Gadarif is likely to continue centering on agriculture, many farming household members now seek non-agricultural income opportunities, as informed by the livelihoods approach literature. The livelihood diversification may indicate that FFS's scope should eventually be widened to respond to diverse needs of farmers, such as comprehensive farm household management, financial literacy education and entrepreneurship. FFS's participatory approach therefore should dedicate its efforts to truly empowering the participants beyond the technical development. Third, despite its promising bid, FFS leaves an essential question unanswered as to why Striga has recently come to damage sorghum devastatingly. Answering this question may demand a scrutiny of changes in political-ecological conditions of the region. Whatever the true reason is behind the Striga epidemic, attention to wider social, political, economic and ecological conditions is vital to tackle the problem and build sustainable farming and livelihood in Gadarif.

#### *Caught Between the State and the Subject: Studying Identity and Belonging within State-Based Classifications*

Public research funding often requires researchers to frame their work in relation to the state-based classification schemes (e.g. ethnic and racial statistical categories) that guide government interests. Surveys and interviews built around these classifications set durable, *a priori* boundary markers between groups, and respondents must articulate an identity within those confines. They also elicit re-

sponses that capture only one component of identity: a consciously articulated sense of one's location within the available classification system that cannot capture the implicit, situational, and interactive component of identity. What strategies are available to researchers wishing to avoid the pitfalls of the 'groupness' that state-based classification schemes imply?

This paper explores one methodological solution to this dilemma, using the example of research conducted with an NGO in London, which was commissioned by the government to study the financial inclusion of aging 'Black and minority ethnics' (BMEs). Our method draws on analytical techniques developed by German sociologists for operationalizing Mannheim's notion of 'documentary meaning'. Instead of asking subjects who they 'were' or 'were not' in relation to the official category that they were recruited to represent, we implicitly explored what it 'meant' to be an aging BME by observing how subjects engaged in political communication at a deliberative assembly on matters central to being a member of a political community. At the core of this technique is an intersectional impulse wherein identity markers are seen as emergent through practices, relationships, and interactions and thereby deeply enmeshed with other identity markers: in this case, generation, citizenship and class. The deliberative context also created a critical distance between participants and researchers that enabled the former to challenge directly the empirical and analytical validity of state-based practices of classification, such as statistics.

#### *Diversity Ideology, Alienation and Social Exclusion in the Post U.S.-Civil Rights Era*

This paper explores alienation and social exclusion in major transnational corporations. Specifically, it is interested in the ways that inequality is embedded in the business world through both ideological and structural processes that help to exclude women and minorities while creating opportunities for the majority through "white male bonding." The result in many corporate settings is a business climate that is hostile to women and minorities. Such a climate is socially isolating for the few women and minorities who work in middle management or higher positions. However, under the guise of diversity and inclusion, corporations are able to mask the inequities in the workplace while maintaining the status quo. Women and minorities in such extreme social situations find themselves not only having to maneuver an uphill battle to keep their jobs or get promoted, they have to do so often while socially, politically, racially, and gender isolated.

#### *Collective Action As an Instrument of Control? the Case of Employment-Focused Movements in Morocco*

Contentious action in coercive settings has been given different explanations. The level of repression, the stock of legitimacy of authorities and the prospects of efficacy have been mobilized as explicative variables. In this paper, we will propose an alternative framework in order to understand some cases of contentious action in North Africa. Our framework is built around the possibility for collective action to be used as a regulation instrument by governmental authorities, concerned about the control of social unrest.

This explication applies to some examples of collective action targeting material goals. We consider that material-focused movements can not be simply described as corporatist phenomena, since they invoke arguments about the fairness of resources distribution among different categories in a given society. But the materiality of the pretended goals plays a key role in our analysis: we argue that it is the result of a process of construction and definition of the movement's

targets. The fact of claiming a material goal explains a great deal of the viability of a contentious movement in a coercive setting.

We will focus on two examples of employment-oriented movements in Morocco: the "unemployed graduates" collective action and the collective demand of jobs in the Office Chérifien des Phosphates, in Khouribga. Both cases differ in terms of geographical setting (the first one is national, while the second is regional), but they deploy an analogous discourse towards government authorities. Both cases differ also in terms of efficacy. Since the mobilization of the unemployed graduates appears more efficient than the OCP one (in terms of obtained jobs), this difference allows us to test our assumption about the "regulation instrument" status of contentious action.

This research is based on ethnographic observation and semi-structured interviews in Rabat and Khouribga, between 2005 and 2012.

#### *The Mobilization for Dignified Housing in Spain: A Case Study of the PAH*

Since 2008, there has been a sharp increase in the number of house evictions in Spain and mobilizations in favor of "dignified housing" (*vivienda digna*) have multiplied. They are mostly based on unemployed home owners facing downward mobility that depart from the traditional profile of radical youths active in the squatters' movement (*okupa*) or the global justice movement. These home owners are middle-class and working-class people that benefited from easy access to housing credit in the 2000s, during the real estate bubble. When the bubble burst and they lost their job, they became unable to pay their mortgage and faced eviction threats from the banks.

In order to explain the multiplication of mobilizations in favor of "dignified housing," we focus on a particular organization created in 2009 in Barcelona and which has become the most visible and influential actor of this movement: the "Platform of people affected by mortgages" (*Plataforma de los Afectados por la Hipoteca*, PAH).

We argue that the growth of the PAH is not a mere side-effect of the crisis. Many other categories of people are affected by the crisis but do not mobilize as much. We claim that its relative success stems from two processes. First, the PAH has managed to reframe the housing crisis in terms of fraud and deception rather than personal responsibility and as a systemic rather than individual issue. Second, the horizontal structure of the PAH is highly inclusive, allows for multiple types and degrees of involvement, and feeds the development of a sense of belonging that helps sustain the mobilization over time.

Our research is based on semi-structured interviews as well as participant and ethnographic observation in Barcelona in 2013.

### JS-53.1

**ENARSON, ELAINE\*** (Independent Scholar, [enarsone@gmail.com](mailto:enarsone@gmail.com))

#### *Gender-Based Violence in Disasters: An Action Research Agenda*

Does gender-based violence increase after disasters? While the question is still asked, international studies have documented this social fact while taking into account significant contextual differences and measurement challenges. This essential baseline research supports the new global planning resources now available in the "good practice" tool kit of contemporary humanitarian relief work. Some proactive training, preparedness, and mitigation steps are also apparent from service providers, feminist activists, and anti-violence advocates, generally in response to specific disaster events.

Based on the author's prior research and on critical review of English-language work in the field, this presentation will synthesize and challenge the main international lines of research, analysis, and action to date. Four specific issues will be considered, each grounded in the assumption that gender-based violence can and must be prevented in disaster contexts: (1) the distinguishing features of gender-based violence in disaster contexts; (2) persistent gaps in evidence and analysis; (3) research designs supportive of the most pressing research questions; and (4) prospects for using our expanding knowledge in this area to better protect fundamental human rights in disasters.

The presentation will also situate the Japanese experience in broader context, and potentially help launch a proposed international research collaborative for understanding and addressing gender-based violence in disasters.

### RC12-230.5

**ENDO, NAOYA\*** (Fairness Law firm, [endo@fair-law.jp](mailto:endo@fair-law.jp))

#### *The Pyramid Model of Legal System Toward Responsive Law*

In Japan, the social system has been disturbing by abrupt and arbitrary criminal punishment in the field of political conduct, business behavior and medical treat-

ment. Apart from the natural and traditional crime, criminal sanction should not be used or should be limited to extremely heavy legal violation.

In order to develop the economical social system or to prevent the injury and restore the damage, preventive administrative system should be formulated, civil procedure should be strengthened and soft-law should be put to practical use in administrative organs, various parties and business groups.

In Japan, old criminal system has been carried out in the every field. For example, here has been the heavy grilling without recording in the detention center for long term, and no complete criminal discovery system. "Beyond a reasonable doubt" principle has not been observed on the adjudication of the court. Criminal punishment to the politicians, enterprisers, doctors, accountants and lawyers gave the serious bad effect. On the other hand, Japanese police didn't prevent abduction by North Korea and other heavy traditional crimes.

Japan should massively use the power for preventing the violent crimes, and depend on other new system for defending the technology, the freedom and the health.

Japan should proceed to responsive legal society from repressive law or autonomous law that I originally present by the 4 steps pyramid model of legal system as follows:

1. Criminal Penalty, final sanction to violent crime
2. Civil Trial Relief, compensation to damage, restoration to original state
3. Administrative Prevention, hard-law, soft-law
4. Self Governing, soft-law, self-rule

#### *Depressive Love: A Contemporary Form of Self-Alienation*

Both *love* and *depression* are central concepts in science, art and everyday life. They are frequently used to capture the fundamental needs of human beings: *love* is seen as the result of the recognition or satisfaction of those needs, whereas *depression* is seen as the result of the misrecognition or violation of those needs.

Love and depression are key elements in the cultural script of emotions or affectual life within contemporary Western society.

In this paper presentation the following surprising observation will be discussed as a form of *self-alienation*: Love and depression tend to be intertwined in the cultural script of emotions or affectual life in contemporary Western society to such an extent that it is informative to talk about depressive love as a sign of the time.

The surprising observation triggered questions by help of which a concept of depressive love as a contemporary form of self-alienation will be developed:

In what ways are depressive love expressed in contemporary Western society? Is depressive love a new phenomenon? Is it possible to find expressions of depressive love in other epochs or time periods of Western society?

If so, what distinguishes the depressive love of contemporary Western society from the depressive love of other epochs or time periods of Western society?

What (dys)functions do depressive love have in contemporary Western Society?

#### *Embodiment in Consumer Society: The Case of Store Window Mannequins*

In this paper presentation I will investigate the embodiment of ethos as part of self-development within modern consumer society. Modern consumer society has reinforced the focus on the body and invented new forms of desires that aim at the sexed and gendered body (Featherstone 1987; 2012; Bartky 1990; Bordo 2001; Howson 2005). Empirical material that points at the changes of *gendered embodiment* within modernity will illustrate its significance. The aim of the paper presentation is twofold: First, I will outline a theory that explains how ethos becomes embodied as part of the self. The theory will elaborate the concept of ethos by integrating it with theories of self-development and the part embodiment plays in that process. Especially, George Herbert Mead's theory of self-development will be considered, but also more contemporary ideas such as the notion of *postsocial relations* (Knorr-Cetina and Breugger 2002) is taken into account. Second, I will trace the transformation of ethos as it appears in Swedish shopping windows from the beginning of the 20<sup>th</sup> century until today with special considerations to gender. Going beyond the obvious message of the store window's sales argumentation, I will decode the different ethos that store window mannequins portray. My empirical material consists of over one thousand pictures of shopping window displays. The more recent material, 2000-2012, is from different shopping windows in down town areas in different cities in Sweden, whereas the historical material from 1930-1970 belong to a large collection of pictures from MEA (Militär Ekiperings Aktiebolaget)

#### *Systemic Gender Discrimination or Psychopathic Gangs? Media Representations of Femicide in Guatemala*

The objective of this paper is to analyze the way that murders of women are represented in Guatemalan newspapers and how that representation has changed in response to women's organizations' efforts to bring a gendered analysis to the issue. For several decades women's organizations have argued that newspaper reports of murdered women use language that blames the victim, minimizes the problem, and deflects attention away from systemic gender violence within the family and other institutions by suggesting that the majority of murders are carried out by psychopathic youth gangs. In order to combat this representation of the problem they have conducted studies of violence against women, held press conferences reporting those results, worked on changing and introducing laws, and held workshops with the media in order to sensitize them about how they report these crimes.

For this analysis I use reports of murdered women, feature articles on gendered crimes, and articles reporting on the activities of women's organizations for the last five years from the two Guatemalan newspapers with the largest circulation. I analyze the way that victims and perpetrators are represented, theories of causation offered by different social actors, how feminist language is used by these different actors and by the journalists, and the overall "moral of the story" that is being presented to the Guatemalan public. I compare this to the points of view of women's organizations and human rights groups gleaned from their publications and interviews with key members. I argue that while there is more inclusion of feminist language and points of view in media reports, these are dwarfed by the daily barrage of murder reports that, with bare minimum descriptions and very little follow up, leave the Guatemalan public to fill in the blanks with their own interpretations of what is "really" going on.

#### *New Practices, Old Debates : Ambivalence and Conflict in Identity Politics*

Identity-based social movements face a well-studied and basic contradiction: using their difference to achieve equality reinforces their differentiation. Tensions between difference and equality have permeated activist discourses at least since the 60s shaping various activist positions that range from assimilationism to radicalism.

In the current Spanish LGBT movement the tension between assimilation and radicalism has produced an 'official' LGBT activism (hosted by the FELGTB [1]) and a 'critical' activism being LGBT Pride celebrations their main battlefield. The progressive incorporation of entrepreneurship - LGBT or not- to such celebrations, and the ambivalent position of public institutions deepen the split between these activist positions. Madrid will not hold the 2020 Olympics, but will hold the World Pride in 2017. Its candidacy was championed by AEGAL (LGBT business association) and the City Council with the support from the 'officialist' LGTB associations.

The importance of tourism as a source of income, identities as business, the spectacularization of the claims and the idea of consumption as the backbone of identities all mark the present and seem to mark the imaginable future of LGBT activism in our country. This 'gaypialista' (Shangay Lily) Pride is presented as opposed to 'authentic' conceptions of vindication.

In this scenario, it is urgent to overcome old antagonisms and find new ways to represent and visualize vindications, new 'practices' that aspire to the articulation of the 'inevitable' (reification, commodification and exposure of identities) with the defense of rights and claims.

We aim to analyze the strategies for the present and the future in this field through content analysis of in-depth interviews with businessmen, politicians and activist leaders ('officialist' and critics) and various digital media (blogs, comments on news and websites).

### ***Beyond Empowerment or Consent: Labor Law, Legal Action NGOs and Workers' Negative Capabilities***

Since the mid 1990s, accompanying the development of legal frameworks that regulate the Chinese labor regime, there has been the upsurge of non-governmental organizations (NGOs) that pursue the protection and promotion of peasant-workers' (*nongmingong*) rights. These labor-legal action NGOs play a multifaceted role: reproducing and maintaining capitalist arrangements and structures embedded in the labor laws; diffusing the legal discourse; and, providing a support structure for workers' legal actions when experiencing an industrial dispute.

The purpose of this paper is to examine the interplay between labor laws, legal action NGOs and workers' actions. It illustrates how structural conditions reach workers through a double channel - the legal system and legal action NGOs. Unsurprisingly, the convention is that both the simple existence of labor laws and workers' contact with NGOs have an empowering effect on workers as they have been entitled with rights, they acquire legal knowledge, raise their rights awareness and are enabled to pursue legal action. The critique or counter-argument would sustain that this legal structure obtains workers' consent to the capitalist labor regime and contains their actions within the borders of legality.

However, in line with Roberto Unger's (2004) *false necessity theory*, there are subtle spaces for peasant-workers' *negative capabilities* or self-empowerment and action both within and outside the structural constraints posed by the law and legal action NGOs. This paper will illustrate through ethnographic material gathered during fieldwork in three NGOs in China throughout 2012 and 2013 that it is in fact because of workers' apprehension of these structural constraints and their contact with legal action NGOs that many of their *negative capabilities* are developed, stimulating their actions to go beyond the predetermined by law.

**RC12-224.2**

**ENJUTO MARTINEZ, REGINA\*** (London School Economics & Political Science, [R.Enjuto-Martinez@lse.ac.uk](mailto:R.Enjuto-Martinez@lse.ac.uk))

#### ***Framing Disputes: Labour Law and Legal Aid NGOs in China***

In the year 2008 a significant legal reform was introduced into China's labor regime with the enactment of new laws, the Labor Contract Law and the Labor Disputes Mediation and Arbitration Law amongst them. Since then, labor disputes brought to the legal channels -which had steadily grown throughout the 1990s and early 2000s- experienced an exponential rise: a 98% increase between 2007 and 2008.

Official statistics on labor legal disputes evidence a greater readiness to use the established legal channels to resolve conflict. Key in inducing this readiness has been the role of legal aid NGOs that provide legal services to peasant-workers (*nonmingong*, the bulk of Chinese labor force in industrial areas). These civil society actors - legal aid centers, labor NGOs and lawyers - provide free legal services, legal consultation, and legal training. On behalf of peasant-workers, they advocate for the protection of their legitimate rights, claiming for better enforcement and compliance of the laws, hence contributing to the development of the legal system. Moreover, they elicit the rise of workers' rights consciousness and kindle their dispute behavior into legal action.

Through an analysis of the aforementioned labor laws and through qualitative material collected during ethnographic research in China during 2012-2013, this paper argues that the labor laws and the support structure of legal aid centers, NGOs and lawyers intends to relieve the increasing levels of industrial conflict in China by framing the nature of labor conflict and dispute behavior: the definition of what constitutes a legitimate dispute in labor relations and its procedures for resolution (including a specific idea of legal justice) is pre-determined by law. This way labor conflict is contained, and by avoiding its spread and radicalization, the government of the Chinese Communist Party maintains the necessary and desired social order for its economic development model.

**ENOCH, Yael\*** (Open University of Israel, [yaelen@openu.ac.il](mailto:yaelen@openu.ac.il))

#### ***Equality of Opportunity in Higher Education***

Equality of Opportunity in Higher Education: The Contribution of an Open University

An issue that has concerned sociologists, who have studied the expansion of higher education, is the consequence of this process in terms of social stratification. Does the increase in the number of universities and colleges ensure growing access by students from disadvantaged social categories? Or does the inequality tend to persist, because potential students from the more advantaged groups tend to utilize the growing opportunities better than those from lower social strata?

Previous studies that have examined the expansion of higher education and its effect on educational inequality have usually discussed the contribution of all educational frameworks taken as a whole and have not distinguished between various types of educational institutions. These studies which have been carried out in a large number of developed countries (see summary in Boliver, 2010) tend to agree in their conclusions: Expansion in higher education does not necessarily reduce inequality.

The present paper examines the contribution of a special type of educational framework, an open access distance teaching university - as exemplified by the Open University of Israel (OUI). Does this type of university provide a unique contribution to the increase of equality by eliminating several barriers that have previously prevented equality of opportunity in higher education?

Data relating to the OUI and characterizing its student body at two different points in time show that also in this educational framework, students from a higher status background tend to choose the more prestigious fields of studies, whereas students who hail from a lower status background are usually registered in the less prestigious subject areas. This is noticeable in view of the entirely open admission both to the university as such and to its different departments. The general significance of this finding will be discussed.

**ENOMOTO, MIYOKO\*** (Tokyo International University, [enomoto@tiu.ac.jp](mailto:enomoto@tiu.ac.jp))

#### ***The Japanese Way of Coping with Vulnerability: Divisions Among Lay-People after the Great East Japan Earthquake***

In Japanese society, in the discourses on ecological risks and health risks, we are all included in the terms mankind, global citizens, the nation, and consumers, all of whom bear responsibility for the earth or body in the future. There are tacit premises such as scientific correctness and rational choice that we should obey. We are expected to be good citizens. However, there is also the risk that discourse will lead to divisions among lay-people. By clarifying how the Japanese judge risk and make decisions when facing their fears in everyday life, we can see the divisions in society brought about by those decisions. This study involved a qualitative investigation based on interviews with various groups such as mother activists who aim to protect their children from radioactivity, volunteers who evacuated people from Fukushima, people who collect and dispense scientific information through SNS, people who are disinterested, and so on. Risk was what primarily divided my interviewees. For example, some people reported that they could not speak of their fears of things such as radioactivity because they wanted to maintain good relationships with others. Additionally, many people do not trust mass media reports and government announcement and thus they must decide for themselves what to do or whom to trust. For these respondents, preference was an important factor when they needed to judge which scientific discourse is correct. We can find many divisions related to many decisions and judgments, such as what or whom to trust, what media to use, what to eat, and where to live. By discussing why and how people are divided, and what drives people's emotional connections to each other, I suggest ways to resolve these divisions.

**ENSTEDT, DANIEL\*** (University of Gothenburg, [daniel.enstedt@lir.gu.se](mailto:daniel.enstedt@lir.gu.se))

#### ***Apostasy, Deconversion and Collective Religious Memories: Religious Faith in the Context of Religious Disaffiliation***

This paper will examine the impact religious memories have on collective and individual identity formation in the context of religious disaffiliation. Through a series of apostasy and deconversion narratives from former Muslims, I will examine how religion - in this case Islam - is remembered, and the influence of such religious memories, even when religion is abandoned. What impact has collective and individual religious memories in apostasy and deconversion processes, and what role plays religious memories for religious defectors?

This paper tackles questions about how Islam is understood and represented in apostasy and deconversion narratives by making use of contemporary theories about collective and cultural memory. From such a point of view, religious disaffiliation is not primarily about religious amnesia. It could rather be understood as a, more or less far-reaching, reformulation of religious memories. I will discuss theories about 'emblematic' and 'loose' memories, as well as concepts of power and authority, especially when focusing on how hegemonic memories are at work in the exclusion, erasure and silencing of non-hegemonic memories.

OCENAR, CRISTINE (Social Weather Stations)

#### ***Attitudes and Views on Working Mothers: Findings in the Philippines Compared to China, India, Japan, Taiwan and South Korea***

Traditionally, Filipinos see men as the "pillar" of the home and women as its "light". In plain words, Filipinos view men to provide for their family by earning the money his household needs, while women are tasked to take care of the household and their children's needs. But with the growing inequality in income and

wealth distribution, women are forced to work and leave their traditional roles out of necessity.

This paper will focus on findings of surveys done by Social Weather Stations (SWS), a non-stock, non-profit research institution based in the Philippines. Since 1991, SWS has been annually implementing the International Social Survey Programme (ISSP) module in its national surveys, with the module on family and gender roles being implemented in 1994, 2002 and 2012, thus allowing for comparison with fellow ISSP member countries such as China, India, Japan, Taiwan and South Korea.

In particular, this will look into Filipino society's view and acceptance of the multitude of roles portrayed by Filipino working mothers through time. In addition, the survey findings will show if these views and attitudes are changing or are being reinforced in relation to traditional gender roles.

#### RC06-123.7

**ENTOMA, CHRISTIAN MICHAEL\*** (Social Weather Stations, [mike.entoma@sws.org.ph](mailto:mike.entoma@sws.org.ph))

##### *Attitudes on Gay Parenting Across Countries*

In recent years, Lesbians, Gays, Bisexual and Transgender (LGBT) groups in the Philippines have been actively advocating for equal rights as citizens of the Philippines. These groups even formed their own political party list groups that joined the political race in 2010 and 2013 elections, but unfortunately did not win any Congressional seats because Filipinos were not yet ready for LGBT leaders. Therefore, it would not be surprising if attitudes towards gay parenting would not be so favorable.

Social Weather Stations (SWS), a non-stock, non-profit research institution, conducted the International Social Survey Programme (ISSP) module that asked about, among other things, attitudes towards marriage and alternative family norms – which includes gay parenting – in its 2012 November nationwide survey. The survey found out that opinion is split towards the idea of a same sex female couple raising a child, with no differences in opinion among males and females. Plurality is not in favor of a same sex male couple raising a child, with this opinion being also true among females. This paper will also compare findings with 47 other ISSP member countries to see the level of acceptance of these alternative parenting setups.

##### *Suspended Space: Ambivalence and the Making of Chinatowns in Japan and Korea*

In the course of Japanese expansionism in Asia, Cold War politics, and the post-war state-building projects, an assertion of national belonging remains highly contested for the overseas Chinese communities residing in Japan and South Korea. Looking at Chinatowns as suspended spaces of their in-between lives, this paper explores how the built environments of Chinatowns have become the locus for the Chinese immigrants to negotiate their fluid identities in the two host societies. In so doing, this paper questions the notion of dwelling related to their ambivalent belongings not only to their native homelands but also to their adopted places of residence, the Chinatowns. With multiple identities situated somewhere between (or beyond) Taiwan, China, Japan, and Korea, how have the Chinese grappled with their places of residence? Examining the postwar developments of the Chinatowns in Yokohama (Japan) and Incheon (Korea), the largest Chinatowns in their respective countries, this paper investigates the built environments of the Chinatowns which have reflected such endeavors of the overseas Chinese with their ambivalent identities located in the center of their lives. Although outside visitors may view the Chinatowns merely as a variation of Disney-like theme parks, the way the spaces have transformed into major tourist destinations in the postwar years not only reveals how the Chinese quarters have been recognized by local governments as cultural assets. Rather, it also shows the very ambivalence of the immigrant communities for whom the Chinatowns are the only feasible means to assure their spatial belongings. Arguing that the built environments of the two Chinatowns are the spatial manifestations of the ambivalence felt by the Chinese communities on an everyday basis, my paper recasts the notion of ambivalence not as a negative emotion, but as the very characteristic of migrancy that helps produce spaces that we call Chinatowns.

#### RC04-78.18

**EPIKHINA, JULIA\*** (Russian Academy of Science, [epikhina@gmail.com](mailto:epikhina@gmail.com))

##### *Class Position As a Determinant of Learning Skill Acquisition in Russia's Secondary Schools*

Russian educational system has been undergoing reform for the last 20 years. The reforms have been contributing to inequality in Russian society. Traditionally, the Russian sociology understood inequality in education as differences in access to educational resources. It has been consistently revealed by sociological

studies that different social classes have different chances to access higher education. Differential access to economic and cultural resources associated with a class position provide for a variance in outcomes of educational trajectories. We propose to add another type of inequality that differentiates education – the inequality of learning quality. We assume that members from the different classes delve into curriculum differently and receive the different educational skills. This can be substantiated by the data of the international survey PISA. Russia participated in the PISA surveys 5 times (2000, 2003, 2006, 2009, 2012). The PISA data include the results of school math and reading tests as well as information on the pupils' social background, their families' economic and cultural resources. There is evidence showing that the inequality of the learning process has been increasing and the difference of tests results is related to families' economic and cultural resources.

**ERANTI, VEIKKO\*** (University of Helsinki, [veikko.eranti@helsinki.fi](mailto:veikko.eranti@helsinki.fi))

##### *Organization of a Networked Presidential Campaign in Social Media*

Even though participation in traditional party politics is in decline, novel campaigning approaches can create momentous movements and mobilize people outside traditional party membership. Finland, with its until recently stable party system, is no exception. Following the overseas examples of the campaigns of Howard Dean and Barack Obama, Pekka Haavisto (Green) pioneered usage of social media in an unprecedented scale during the Finnish presidential election of 2012. This paper explores how traditional party structures can use social media and campaigning tactics that are traditionally more suited to different types of social organizations.

Mr. Haavisto comes from a small party with a lousy track record on previous presidential elections and a lackluster funding. Although Haavisto ultimately lost the election, the campaign is a landmark in how it used social media. The most effective parts of the campaign were based on completely autonomous campaigning groups with little or no oversight from the campaign office. These groups were self-organized around memes, which were also an effective tool in online campaigning. 80% of campaign was funded through a micro-funding tool.

My paper aims to describe in detail how the campaign used social media for communication and fundraising. It uses key person interviews and a collection of material from social media to create a rich profile of the campaign tactics. The paper analyzes, what the campaign looked like and what new conflicts emerged from the setting that included 1) the campaign office, 2) party headquarters and most importantly 3) hundreds of volunteers without direct oversight. The paper argues, that a move from a centralized traditional campaign office towards more agile and decentralized forms of networked campaigning especially regarding funding and communication can be made even inside party structure.

#### JS-44.21

**EREL, UMUT\*** (Open University, [umut.erel@open.ac.uk](mailto:umut.erel@open.ac.uk))

##### *Mobile Citizenship: Gender, Ethnicity and European Privilege*

Mobility rights within the Europe Union are a key feature of European citizenship. Yet there is little research on how this privileged form of mobility engenders new forms of belonging and identity. Drawing on empirical research with migrant women from Europe in London, the paper explores how they construct belonging for themselves and their children. European citizenship is an important social division between migrant mothers: European citizens are entitled to migrate to and work in the UK, whereas non-European citizens have to legitimate their presence with recourse to humanitarian reasons (refugees) or their ability to economically contribute. The project explores how a group of middle class, white mothers with privileged mobility rights in the EU experience and conceptualise cultural identity, mobility and belonging for themselves and for their children. The paper presents different mobility strategies of these mothers, and discusses how these intersect with economic, professional and national positioning. Furthermore, the paper explores how the social positioning of these mothers relates to the moral and political positions they take on migration, mobility and citizenship rights.

##### *"Once upon a Time We Had the Commons" the Change on Small Peasantry: The Case of Kocaoba, İzmir, Turkey*

Especially after the post-80s, the rural Anatolia has been under rapid change due to the neoliberal policies. Capitalist penetration into rural, crystallized through the Structural Adjustment Policies, have provided radical consequences for the small peasantry, which is still the dominant category in agriculture. However, despite having experienced intensively the process of commodification, the land acquisition by inter/national companies is not a common phenomenon yet.

Unlike many countries of the South, the land has newly become a commodity itself in Turkey.

The case of Kocaoba could be seen as one of the exceptional examples in this manner. The company of AGROBAY, has bought 150 hectares of land recently, with the purpose of establishing a large-scale greenhouse. Yet, the land occupied by the company has been previously used as a pasture by the peasants, whose livelihoods depended mainly on husbandry. However AGROBAY have started production and marketing to European countries successfully. The other companies have also started to come to the area.

In this study, the main socio-economic consequences of land grabbing as such would be investigated on local community level. Could the change of the ownership of the rights be counted as a beginning of a new phase in the process of commodification? If so, what would be the response given by the peasants, how do they deal with the new situation in their daily life? In the light of the discussion on dispossession/proletarianization of peasantry, the strategies of the villagers would be included to understand the main dynamics underlying the re-formation of the households. In this context, the ongoing field research will be extended on the village of Kocaoba; in-depth interviews and focus groups are planned to be conducted with the villagers.

## RC20-351.6

**ERGIN, MURAT\*** (Koç University, [muergin@ku.edu.tr](mailto:muergin@ku.edu.tr))

### "Ottomania" and "Cool Japan" in Comparative Perspective

Japan and Turkey have comparable histories of modernization, with both countries experiencing the epitome of their westernization in the nineteenth century, at the end of their imperial eras. Both produced modernities that are considered a mix of "eastern" and "western." Over the last decades, both have had to face their histories of modernization, pondering the question of what comes after modernity, and manufacturing their versions of an authentic and exportable modernity.

This presentation discusses two symptoms of this process. Ottomanism refers to the increasing cultural consumption of Turkey's imperial past in Turkey and neighboring countries. Cool Japan is a government-sponsored project, emphasizing popular products in entertainment, fashion, youth culture, and computer, and intending to shift Japan's image into a "cool" place. The collapse of traditional hierarchies in Japan and the erosion of the trope of modernity in Turkey have paved the way for the promotion and export of new identity claims rooted in imperial cool.

Internal and external representations of Ottomanism and cool Japan differ: 1) Internally, Japanism and Ottomanism are fragmented. The meaning of cool is perishable in Japanese popular culture while different interpretations of Ottomanism are a matter of debate in Turkey. 2) Externally, cool Japan and Ottomanism are linked to international "soft power" through TV dramas and other exported cultural forms, and offer alternative and accessible forms of modernity to their former imperial hinterland—China and Korea for Japan, and the Middle East and the Balkans for Turkey. The main difference is that, Ottomanism corresponds to declining government intervention in popular culture whereas "cool Japan" represents an explicit attempt to shape Japan's image. After decades of pursuing aggressive paths of modernization, Turkey and Japan seem to be claiming new Middle Eastern and Asian identities, a process fraught with uncertainties and multiple interpretations.

**SAMMET, KORNELIA** (Universität Leipzig)

### Disciplined Masculinity: Self-Conceptions of Young Immigrant Boxers

The social inclusion of young male first or second generation migrants in Germany is often perceived as precarious. They are considered as a peculiar problematic group with a high risk of being excluded or marginalized in the education system and the labour market. Commonly the main reason for this precarity is seen in their orientational dilemma between traditional family life on the one hand and aspirations to proficiency and individual fulfillment on the other hand. In this situation semantics of honor and respect can be held as guidelines. They are found in the peer groups of young migrants but cannot be filled with practical substance due to the distance from mainstream society.

In our presentation we assume, that sports can provide a field to avert this problematic condition and enable social inclusion. We show how young males develop particular patterns of orientation and life conduct that are approved by the mainstream society. Based on qualitative interviews we analyze how they train them during their practice and even borrow them for their daily life. Coaches function as role models, give orientation and stress the acknowledged value of proficiency and self-discipline.

The presentation takes boxing as a sportive discipline that provides the possibility of social inclusion and identity work for males from immigrant families. On the basis of qualitative interviews we reconstruct self-conceptions of young immigrant boxers and discuss the hypothesis that boxing introduces the possibility to embody a socially acknowledged form of masculinity characterized by discipline.

The presentation refers to qualitative interviews that were conducted within the framework of a research project titled "Worldviews in precarious conditions of life". They were evaluated by using the hermeneutic procedure of sequential analyses.

### Policy and Practice Of Dementia Care - Comparing Japan and Sweden/Norway

Background: The trend towards aging populations is worldwide. Japan has the oldest population in the world, the Nordic countries have almost the same figures. Increased rate of dementia goes along with expanded life span, and dementia diseases are predicted to be one of the most prominent future public health threats. In this session, results from an ongoing study on dementia care will be presented. Findings so far indicate for instance that dementia care in both countries is highly person-centered, but also with differences in emotional nearness between users and staff.

Aim: To compare policy and practice of dementia care in Japan and Sweden/Norway from macro/national and micro level perspectives, using mixed methods.

Method: Comparative study on macro/national level concerning: 1) historical background, 2) statistics on dementia prevalence and distribution, 3) legislation, 4) health and care organization, 5) economics, 6) ideological base (emphasizing medical vs social aspects), and 6) methods of scrutinization/diagnosis. Official statistics and national documents will be analysed, the latter through comparative discourse analysis. In addition, personal interviews with experts and central politicians will complement and deepen the data material. Comparative studies on micro level will be designed as case-studies in 4 settings of dementia care: special housing, long-term hospitals, day care activities and group homes. Prominent aspects of comparison will be 1) physical conditions, 2) staff parameters, 3) content of care/daily activities, 4) relations between users and staff, 5) emotional atmosphere. Data will be collected through interviews and observations, and analysed via comparative case study method and qualitative content analysis.

Results: The results will be presented as statistics, discourse analysis, case descriptions and qualitative content analysis. Comparison between Japan and Sweden/Norway, and comparison of macro and micro level will be four integrated aspects of the result presentation.

### Comparing Post-Stratification and Propensity Score Nonresponse Adjustment: Bias Correction and Precision Loss – a Case Study with the Swiss ESS 2012 Data

Nonresponse bias is a well-studied issue. Some techniques to reduce this source of errors are applied during data collection (e.g., targeted fieldwork) and some post-survey. Depending on the available paradigm, nonresponse adjustments can be calculated to hopefully correct for bias. The problem, especially with low response rates, is the loss in precision that it causes. If adjustment weights vary highly, the confidence intervals become larger. The increase in standard errors can in some cases counter-balance the decrease in bias. Moreover, a good nonresponse adjustment is based on variables that highly correlate with the response propensities; such variables are rarely available. For this reason the choice of a nonresponse adjustment technique and variables used have to be thought of carefully.

We will study two nonresponse adjustments for the ESS 2012 survey in Switzerland. The first will be based on socio-demographical variables from the population register from which the sample is drawn. Such paradata are commonly used in post-survey adjustment, as they are often the only data available. But they are known to have low correlations with response propensities and with many key variables. In a second step, data from the nonresponse survey that was conducted shortly after the main ESS 2012 will also be used to construct post-survey adjustment. The nonresponse survey is designed to collect information that correlates highly with the propensity to answer and should lead to an efficient nonresponse adjustment. The expected decrease in bias could sadly be neutralized by the possibly substantial effect on precision of such a weighting scheme. A second shortcoming is that the core of the nonrespondents that did not participate to either survey cannot be corrected for. Our aim is to compare these two methods, assessing the effect on estimates, nonresponse bias and on the precision of these estimates by applying a bootstrapping.

*Parental Unemployment, Socioeconomic Status and Economic Recession*

We study the intergenerational impact of parental unemployment on the socioeconomic status of the children. We compare the Finnish children facing parental unemployment during the rapid economic growth of the late 1980s and the recession of the early 1990s at the age of 12-18, taking into account the length of parental unemployment spell. The recession was one of the worst in the OECD history and in Finland far more severe than the recession of the 1930s. The ISEI status of the children was observed when they were 30 years old in the mid-2000s, after a decade of growing economic prosperity.

We use propensity score matching to analyse high quality Finnish register data, including 15991 children. We match each individual experiencing parental unemployment in childhood to a pair with similar parental background according to matching variables and calculate the average treatment effect (ATE) to measure differences in ISEI. The matching variables include the occupational class status and educational background of both parents, whether the parents were divorced or separated and household income during the examined period.

The results indicate that parental unemployment has a statistically significant negative effect on the socioeconomic status of the children only during economic growth. Only when the spell is longer than three years the unemployment also has a negative effect during depression. In the further analyses we consider the gender differences and the unemployment of both or only one of the parents.

The results suggest that the negative effect of parental unemployment is largely related to non-economic factors, such as lost social capital or stronger negative stigmatization. They also indicate that the economic depression may level off the negative intergenerational effects otherwise associated with parental unemployment.

*A Sociological Examination of Property Inheritance System in Esan LAND of Edo State Nigeria*

This paper examined Property Inheritance system in Esan land which constitutes Central Senatorial District of Edo State, Nigeria. The study examined variants of inheritance system as they affect the women folk and the coping strategies adopted by the women in living with inheritance pattern. Qualitative research method was adopted. We discovered there is strong desire for male preference for the purpose of inheritance even among the women folk. To sustain this hegemony of male preference for inheritance purposes, women were further manipulated consciously or unconsciously, through various socio-cultural constraints, to give credence and legitimacy to these variants of inheritance system. From the study population, a marriage without a male child was deemed not be a successful one. Three major strategies were identified to have been employed by women to cope and live with the inheritance systems: The first involved those that resigned to fate and accepted the system. The second are those who have also accepted the inheritance system but devised a means of creating their own wealth; and thirdly, those who stressed the need for women empowerment and education of the girl child. However, there appears to be some windows of change opening up in relation to the issue of Property Inheritance systems in Esan land. In order to squarely address the problem of Property Inheritance in Esan land some recommendations were suggested.

*New Players, Old Game: The Chinese-Brazilian Relations*

Spokesmen of countries in the global South frequently use the rhetoric of South-South cooperation. At the same time many of these countries integrate themselves all the more closely into the international free trade regime as it was installed during the height of Western hegemony. This paper analyzes the relations between China and Brazil as a case example of South-South cooperation that has intensified rapidly in recent years. Based on qualitative interviews with scholars and policy advisors realized in 2011/12 in both countries and backed by a review of secondary literature, it focuses on the question of whether developments in the South remain guided by thinking in Western categories and

worldviews or whether they actually present new approaches to international cooperation.

Politicians from both countries often speak about equality, mutual benefit, and the rejection of hegemony. This implies a rejection of the disproportionately strong position of Western states in global economic affairs and a struggle for self-determined development. The argument of this paper is, however, that this does not necessarily imply a rejection of Western norms and values. Development models in the South – be they free market or state-led – first of all aim at growth and competitiveness. Both China and Brazil benefit from their mutual economic exchange within the liberalized global economy. They benefit, however, in terms of national economic growth, while connected problems like social inequality are considered as issues for national social politics. Accordingly, reform-proposals of the global economic order basically aim at changing the power balance between states rather than the underlying principles of cooperation. Therefore, the question to be addressed is whether the rise of and cooperation among the South represents an alternative globalization or whether it merely reproduces material and power imbalances and their epistemological justifications, not only between but also within these countries.

*Designing Technology-Mediated Democracy: Case Citizen Participation in Urban Planning through Mobile Apps*

How can technology improve local democracy? Governments around the world seek opportunities to engage citizens in matters of public policy through a variety of technology-mediated tools. The tools are intended to contribute to democratic ideals such as transparency and inclusiveness, but how these ideals can be met in practice is not clear. In this paper, I examine this question through the case of citizen participation in urban planning through smartphone apps, or *mobile participation*.

Smartphones are seen as tools to engage a broad audience in urban planning, in particular youth and young adults who do not participate in traditional public meetings. By reviewing a broad range of relevant literature in urban sociology, democracy theory, and interaction design, I examine the conditions, requirements and design principles that must be met for this objective to be attainable.

The findings of the review show that building technologies for participation requires taking into account a broad range of factors, such as social norms, trust and reputation, motivation, opportunity, feedback and dialogue. Participation on-the-go from a specific location also raises the question of who owns a tool with which to participate as well as issues of privacy in a public setting. I conclude that citizen participation needs to move past present shortcomings and become a sustainable process grounded in democratic principles.

**ERTURK, ISMAIL\*** (University of Manchester, [ismail.erturk@mbs.ac.uk](mailto:ismail.erturk@mbs.ac.uk))

*Post-Crisis Technocratic Vigilantism: New Unconventional Roles of Central Bankers*

Since the 2007 financial crisis central bankers in all major capitalist economies have introduced what they themselves call "unconventional monetary policies" to prevent a catastrophic collapse of financial markets and restore economic normality. Bernanke in the US, Draghi in the euro zone, King and then his successor Carney in the UK, and Kuroda in Japan have almost become household names through their heroic acts of quantitative easing that involved injection of trillions of dollars into the financial system and recently through their communicative weapons called "forward guidance". Increasingly these unconventional monetary policies of central bankers attract public debate because there are concerns about their allocative and distributive implications as well as their democratic legitimacy. In this paper I will develop a cultural economy framework based on the figure of superhero vigilante to discuss the transformation of central bankers from independent technocrats responsible for inflation targeting to public servants fighting against the economic forces that threaten the collapse of financialized capitalism. What we witness here is blurring of identity and role at sociologically and economically underexamined public servant whom the financial crisis empowered in a very ambiguous and contestable way.

*Hypothesis Testing: The Role Of Intersubjective Constructions In The Development Of Spanish As a Foreign Language At Entry Level In Japan*

The present study deploys a socio-genetic notion of hypothesis testing based on activity theory and Bernstein's theory of codes. It analyses hypothesis testing in different pedagogical settings, from grammar to communication courses at entry level in Japan. In light of the results, it is suggested that the hypothesis-testing processes carried out by students are specific activities closely linked to the pedagogical objectives set by the teacher and not easily transferable to other settings. In other words, in grammar tasks that have as object the learning of the formal system, students will see severely limited their capacity to test hypotheses in the field of pragmatics or explore the communicative potential of language. In contrast, during a communication class, students will see limited their capacity to explicitly test hypotheses concerned with formal aspects of language. The apparent integration of a programme does not ensure hypothesis testing (or L2) development. Instruction should be subsumed under developmental targets and not the other way around. It is concluded that structural instructional tasks represent a bridge between theory and practice and an opportunity for students to test their hypotheses, as they are given more control over instructional tasks.

##### *Making Home in Helsinki: Indian Skilled Migrants and Housing*

How have Indian skilled migrants settled in the Finnish built environment? This paper discusses the issue by analysing the housing experiences of Indian skilled migrants living in the Helsinki metropolitan area, Finland. The study's background is in urban geography and housing studies, and it employs both structuralist and humanistic views in order to tackle this multifaceted research problem.

Immigration to Finland is a relatively new phenomenon. As a receiving country, Finland offers rather homogeneous housing alternatives. Furthermore, India and Finland differ greatly in climate and culture. What are the home-making practices of Indian migrants in this challenging environment? How do they choose their dwellings and what are the important aspects of housing for them? Do they feel at home in their neighbourhoods and in relation to native population? How do they construct their social life in the frame of the build environment?

The data consists of semi-structured interviews with Indian skilled migrants who have migrated to Finland to work. All of the interviewees were highly educated and worked in knowledge-intensive positions in research and business fields. The results of this study offer insight to the home-making practices of this migrant group and can be utilized in shaping the housing policy of the diversifying country.

##### *Children and Intimate Partner's Violence Against Women. Quantification and Mother's Perceptions*

Over the last years, a growing number of authors have been raising the necessary incorporation of children in the study of gender violence, and specifically in the study of violence against women by an intimate partner. Such incorporation can provide not only a lower level of invisibility and vulnerability of exposed children, but also a better understanding of the characteristics and dynamics of the violence itself. Based on these considerations, we have developed a secondary analysis of the data obtained by the Spanish Center of Sociological Research (CIS for its acronym in Spanish) through the last national survey on gender violence (2011). Despite the fact that the main objective of this survey it is not the analysis of children, relevant information can be gathered about the presence of boys and girls in the context of gender violence and about the possible relationships between this presence and women's perceptions of aggressors' parental role and the decision of reporting the aggression.

##### *An Assessment of Intervention Programmes Aimed at Addressing the High Failure RATE of Students at Universities in South Africa (SA)*

Since the early 1990s, the failure rate among students and especially first year students enrolled at South African (SA) universities has been exceptionally high. In 2008, *Higher Education South Africa* (HESA), the vice-chancellors' association representing the country's 23 public universities reported that the student drop-out rate had grown alarmingly and had hit 35% at some universities, with the bulk of those leaving being first year students (Makonyi, 2008). Specific to the SA context is the political and moral imperative of access, equity and success – forces playing themselves out in a society undergoing massive and rapid transformation.

Needless to say, the literature provides extensive explanations and reasons for this high failure rate ranging from poverty, lack of funding, poor student housing to academic under-preparedness. Most of the reasons are neither new nor spe-

cific to the SA context. Parallels can be drawn with universities in diverse and heterogeneous societies. Universities have responded in several ways through the implementation of programmes ranging from supplemental instruction to staff development programmes.

The aim of this paper is to provide an assessment of the type and nature of intervention programmes offered across all 23 universities in SA with a focus on its objectives, the intended outcomes and the sector it targets. The method used for gathering information is based mainly on documents and official publications of the institution which may be combined with a few interviews.

##### *Intimacy in Mexican Society over the XX Century*

Intimacy is a relatively recent theme in international literature. It is also a difficult area of sociological research since it relates to affection, emotions, feelings and subjective interactions, all of which are difficult to grasp. This paper aims to analyse intimacy in Mexican society throughout the 20th century, specifically in family settings. My aim is to explore two aspects of the ideas developed by Giddens and Jamieson regarding the Western debate: on the one hand, to identify the features of 20th century Mexican society that point towards different types of intimacy, taking as a criterion for classification the balance between the bonds of family obligation and freedom of choice when making those bonds, and on the other hand, to consider whether over the course of the century there was a trend towards increasing disclosure and democratization when building intimacy; in other words, what kinds of intimate citizenships – to use Plummer's term – developed during that century. I accept as a starting point the argument of Jamieson that all societies develop some sort of intimacy grounded on close association and privileged knowledge. Mexican society and family life can be therefore analysed from this perspective. This will be done mainly by reviewing the socio-cultural narratives and norms that moulded or influenced social life and behaviour. The discussion is organised as follows: I first develop some of the theoretical assumptions which guide the study of intimacy nowadays and how it can be applied to a Latin American society, and in Mexico in particular. Secondly, I trace some of the characteristics intimacy has assumed in three periods: from 1900 to 1950, from 1950 to 1970, and from 1970 to 2000.

#### RC02-52.8

**ESTEVEZ, ANA MARGARIDA\*** (Sunway University, [anamargarida.esteves@gmail.com](mailto:anamargarida.esteves@gmail.com))

##### *The Emerging Action Fields of Solidarity Economy: The Brazilian Case*

This project aims to produce theory about "emerging action fields" (Fligstein & McAdam, 2012) that promote and sustain, through normative and strategic innovation, community-based initiatives based on principles of "Solidarity Economy". What factors prevent the over-determination of agency and resource management within these initiatives by mainstream economic logic, while promoting their integration within larger society?

Fligstein and McAdam's (2012) claim that an "emerging action field" (EAF) is a space where "rules do not yet exist", but are progressively constructed as a result of the discursive construction of collective interests. This communicative process, in its turn, results from the interaction between participating actors. This perspective does not take into account the possibility that such process may in itself be regulated by pre-existing norms and repertoires of action and repertoires that were circulating within the public sphere. As a result, it is not able to account for the way in which "challenger groups" within EAFs challenge those pre-existing norms and promote new rules and action frames, therefore contributing to their emergence and consolidation as autonomous "Strategic Action Fields" (SAF). This paper aims to fill that gap in SAF theory by connecting it with Habermas' theory of "communicative action", as well as Fraser and Young's theory of "counterpublics". It uses the process of emergence of the Brazilian Solidarity Economy movement as an illustration of: 1) how pre-existing norms and repertoires of action within a "counterpublic" regulate the emergence of an EAF; 2) how "challenger groups" within an EAF promote normative and strategic innovation, therefore promoting the emergence of an autonomous field; 3) how the pre-existing norms and repertoires act as a common "matrix" that prevents secession, by ensuring that the norms and action frames developed by "challenger groups" will not diverge too much from those of other groups within the EAF.

#### RC07-143.1

**ESU, AIDE\*** (University of Cagliari, [esu@unica.it](mailto:esu@unica.it))

##### *Contested Land, the Implicate Relation of Memories and Traumas of Israelis and Palestinians*

Israel and Palestine, over the course of their historical conflict, have created a complex patchwork of memory narratives dealing with different representations of the same landscape. The paper examines how the two peoples have elaborat-

ed their narratives of national identity by practicing a pre-modern repertoire to shape a modern identity, and by knitting together their collective, multiple visions of the land. Israelis and Palestinians have used space as a temporal-spatial tool to practice the remembering of lost land and to elaborate an imaginative geography.

In an intractable conflict like the Israeli-Palestinian one, a culture of conflict and a psychological repertoire of conflict have developed. This repertoire includes ethos, emotional orientation and collective memory, which all sustain and reinforce the conflict. My purpose is to focus attention on both narratives adopting Bar-Tal's view: "Israeli society represents a mirror image of the Arab societies, particularly of the Palestinian society (...) both societies shared beliefs and mutually held social representations." (Bar-Tal 1998). The case of the Israeli and Palestinian memories raises many questions; however, I wish to limit the discussion to the relationship between dreamt/imagined space in the Diasporas memories, and the entanglements related to loss and claims of return. The time line does not follow a unified, progressive chronology. A temporal dialogue keeps memory alive, but the past is not simply "preserved." The results of the 1948 war dramatically changed the relationship to the land. Political Zionism fulfils for "people without land the dreamed-of homeland. The uprooting from the homeland is the focal point of Palestinian national identity, the trauma and the loss feeds their memory and nourish their narratives.

#### *Is Mobilization for a Better Life a Challenge to Change Society?*

##### **Is mobilization for a better life a challenge to change society?**

Contemporary social movements are in large extent linked by networked communication technologies, quickly developing a borderless public sphere in a mix of new cosmopolitan citizenship deep-rooted to local issues. The social movements of the internet age create online and offline communities to share views, practices, and strategies, creating a third space defined by Castells a space of autonomy to challenge the disciplinary power. In the paper, first we pay attention how the communication flows across the offline and the online communities are set up, how the local level is intertwined to borderless frame to enhance collective strategies. We analyse how they capitalized past social movements backgrounds, like campaigns, and networking platforms, how they appraised the repertoire of action and communication forms of past social movements. Secondly, we pay attention to Middle East social movements in the call to question the Western concept of citizenship rights, pressuring the illegal migration flows and showing the EU exclusionist vision.

**EULE, TOBIAS\*** (University of Bern, [tobias.eule@soz.unibe.ch](mailto:tobias.eule@soz.unibe.ch))

#### *Contested Control: An Institutional Ethnography of Immigration Offices in Germany*

This presentation takes a closer look at the place in which the legal status of migrants, and thus their access to public life, is decided. Without legal residence, immigrants are unable to work, study or attain most social welfare. The focus is on the process of the regulation of immigrants in immigration offices in Germany. Rather than looking at legislation, its application and implementation will be considered through an institutional ethnography of the bureaucracy of migration management. The presentation is thus about individual stories and the system that assesses and processes their requests. It is based on four four-month periods of participant observation in different immigration offices, gaining repeated in-depth and longitudinal insights into the implementation of immigration law in Germany. The study is neither a technical assessment of the efficiency of German immigration bureaucracy nor does it measure the application of individual paragraphs and passages of the law. In its broader approach, it examines the law as well as those who apply it, the conditions under which it is applied as well as the forces that shape these conditions. In looking at the "human face" of migration policy and immigration policing, this study aims to shed light on the practice of decision making, to illuminate the dilemmas, troubles and hazards faced by immigration caseworkers in exercising their power: to decide who can stay – and why.

**EULE, TOBIAS\*** (University of Bern, [tobias.eule@soz.unibe.ch](mailto:tobias.eule@soz.unibe.ch))

#### *Migrants Vs. the State: Courtroom Dynamics in Immigration Law Cases in Germany*

Appeals on immigration law decisions are usually the first points of contact between migrants and the legal system of their country of destination. As a result, the courtroom has a highly symbolic role to play, as it represents "the" overall legal system and will shape general attitudes and expectations of immigrants of "the law". In addition, immigration law cases can be highly politicised and held under high levels of public scrutiny. Finally, they matter greatly to the appealing party, because the legal residence status mediates all other aspects of life for immigrant. Based on ethnographic observations of court sessions in Germany and

interviews with all agents involved (migrants, their lawyers, immigration officials, judges), this presentation will show how all courtroom interactions engage on these three levels: the actual case, the symbolic-integrative, and the political. As a result, informal interactions and side remarks between legal agents play a crucial role, especially if they are outside of official court transcripts. Specifically judges acknowledge the specific challenge of dealing with recent immigrants, and go out of their way to either include immigrants into the proceedings or to show their impartiality by completely ignoring the precarious situation of the appealing party.

#### *Bridging the Silos: Curriculum Development As a Tool for Crossing Disciplines in the Arts, Sciences and Humanities*

Investigators in the 21<sup>st</sup> century are finding that there are tools, information and points of view from other disciplines than their own that can answer the problem they are studying. However, higher education becomes more restrictive as a student moves from general education courses into graduate school, where a single department awards degree based on a usually narrow set of course requirements and a thesis or dissertation. Little is known about the kinds of cross-disciplinary courses that are currently being offered, the mechanisms that employed to offer them or their pedagogical effectiveness. A first necessary step is to research current cross-disciplinary offerings in higher education on an international basis in order to understand the modes of development of such curricula. We present an analysis of a compendium of arts-science-humanities cross-disciplinary courses created through several Calls for Contributions (2009 to 2013). A web site was created and submissions were posted at <http://www.utdallas.edu/atec/cdash/>. Permissions and updates were received for over 100 courses, along with additional material. The data (from courses) was analyzed as to the nature of the cross-disciplines, level of offering (graduate vs. undergraduate), geographical location, level of collaboration (number of instructors) and department(s) offering the course. A comprehensive re-visioning of curricular structure to encourage collaborative and cooperative teaching of integrative courses and programs is needed. Suggested actions include specific ideas to enhance networking and visibility, asset mapping, sharing of syllabi and course materials, and a research effort to demonstrate the effectiveness of cross-disciplinary art-science-humanities courses. This preliminary study points the way towards further efforts in curricular design and research that will be required for cross-disciplinary courses to be integrated into college curriculum.

This project was initiated for a SEAD white paper, developed in collaboration with the Leonardo Education and Art Forum (LEAF), and supported by the National Science Foundation under Grant No.1142510.

#### *Alternative Visions Of Work In a Neoliberal World: An Impossible Dream Or a Project Under Construction?*

"We give people jobs" is the capitalists' prime legitimation for monopolizing political and economic power. The reality behind this ideology is that the role of capitalists is to make sure that the supply of jobs is inadequate and to degrade those jobs that remain. Yet, the idea that supporting the dominance of capital is the only route that will enable people to exercise their productive capabilities and receive livelihoods in return remains one of the most powerful elements of neoliberal "commonsense." Replacing this "commonsense" with an alternative vision for organizing social production that is credible and compelling in the context of the contemporary global political economy is a central challenges in the production of counter-hegemonic knowledge. The centuries old history of frustrated efforts to escape the imposition of inhumane and counterproductive modes of organizing work notwithstanding, it remains a project that must be resurrected anew in every era. This paper will combine an effort to systematize an analytical counterattack on the current commonsense together with an exploration of existing efforts to formulate alternative strategies for expanding productive livelihoods and implementing alternative organizational forms for securing those livelihoods in practice, within the hostile environment of global neoliberal capitalism.

**EVANS, PETER B.\*** (University of California-Berkeley, [pevans@berkeley.edu](mailto:pevans@berkeley.edu))

#### *National Terrains and Transnational Articulations: Global Labor's Evolving Architecture Under Late Neoliberalism*

The neoliberal era has undermined worker's rights and labor's power at the national level, but there have been some positive developments in the transnational articulation of national labor movements. The growth of global corporate empires has expanded opportunities to use connections among national labor movements for "reverse whipsawing" – applying labor's strength in one national terrain to increase the power of labor in another national context where it is weaker. Extreme adversity at the national level has pushed U.S. unions toward a new transnationalism. Brazil shows how the more important global economic role of major countries in the South, when combined with a strong national labor movement, can create fruitful opportunities for transnational alliances. The growth of Global Union Federations, which has outpaced the growth national unions, and the development of new governance instruments like Global Framework Agreements, have also created opportunities for articulating the efforts of national labor movements and strengthening labor's ability to mobilize globally. These developments must be balanced against global labor's inability to find effective ways of supporting the ability of insurgent workers to become a political force in the home of world's largest national working class and the likely future hegemon – China. Assessing both recent advances in the architecture of the global labor movement and its future prospects as positions in international hierarchy of nations shift is an essential task for global labor studies.

#### RC04-84.4

**EVANS-ANDRIS, MELISSA\*** (University of Louisville, [mevans@louisville.edu](mailto:mevans@louisville.edu))

##### *Improving Teacher Quality: Outcomes of a Clinical Model for Teacher Preparation*

Teacher quality, as it relates to the preparation of new teachers, has drawn widespread national attention in recent years. With problems such as teacher attrition, especially among early career teachers (Cochran-Smith, 2004; Darling-Hammond, 2003; Ingersoll, 2001), the need for a new model to educate teachers in the service of P-12 student learning is compelling. Guided by principles detailed in the *Blue Ribbon Panel Report* (NCATE, 2010), current reform in teacher education focuses on clinical preparation and partnerships between higher education and P-12 to prepare teachers for improved student learning.

Using qualitative and quantitative data, this project examines the implementation of a clinical partnership for teacher preparation involving a college of education at a Midwestern research university and one large urban public middle school in the local district. The partnership builds on the previously established collaboration among educators in the district, the college, and the university, to offer a more authentic, comprehensive, and systemic approach to clinical teacher preparation. The project addresses two goals:

1. To determine the extent to which the clinical model in this middle school develops toward "integrated" on the Continuum of Partnership Development for Clinically Based Teacher Preparation (Howell, 2013; NCATE, 2001);
2. To document, assess, and track improvement of teacher candidate performance and related outcomes of a clinical partnership.

Project findings inform the development and implementation of model of teacher preparation and provide direction for educators who are establishing or refining clinical partnerships. The transformation of teacher education through clinical partnerships forms the organizing structure within which all stakeholders commit to the recruitment, admission, preparation, assessment, and continuing development of teachers who effectively enhance student learning in all contexts. The extent to which this is successful holds broader implications for replicating and sustaining the model at other middle schools with similar characteristics both locally and beyond.

**EVERHART, KATHERINE\*** (Vanderbilt University, [katherine.t.everhart@vanderbilt.edu](mailto:katherine.t.everhart@vanderbilt.edu))

##### *Everything but the Funnel Cake: Art and the University of Puerto Rico Student Occupation of 2010*

My dissertation, *Everything but the Funnel Cake: Art and the University of Puerto Rico Student Occupation*, explains the use of aesthetic performance and display in protest. In the summer of 2010, students occupied the University of Puerto Rico (UPR) for 62 days, protesting austerity measures by newly elected Governor Luis Fortuño. In retrospect, the occupation would be referred to as "The Creative Strike," for its overwhelming aesthetic dimension. Drawing upon two years of ethnographic data, including both on-site and virtual observations, 31 in-depth interviews, and movement documentation, my research is situated at the nexus of sociology of culture and social movements.

The use of artistic intervention in protest is not novel; however, contexts specific to the 21<sup>st</sup> century, including new media, paved the way for an emerging set of tactics in response to increasing privatization and economic austerity measures. The UPR protest resembles past actions like the Battle of Seattle in 1999 and anticipated coming actions, such as the Occupy movement. These actions are notable for the heterogeneity of participants, stated commitment to non-hierarchical

organization, and dynamic aesthetic atmosphere. This dissertation illuminates the elevated role of art as a means to manage movement pluralism, demonstrating how aesthetics are deployed to both unify and differentiate movement participants. It combines major theoretical perspectives from social movements, the sociology of culture, and political sociology, filling in disciplinary gaps in "user-created" culture and identity formation, and the challenge of political pluralism. In doing so, it illuminates both longstanding protest challenges and 21<sup>st</sup> century configurations.

##### *Knowledge Transfer: From Identify Determinants of Poor Sleep in Nursing Homes to Developing and Implementing Solutions Supported By Technology*

This paper presents the process of knowledge transfer from within a research project into the development of best practice recommendations. It will show how research findings inform practice development involving the use of technology and how this can improve night time care provision in nursing homes. Building on research conducted in England, best practice recommendations have been developed to improve sleep in nursing homes.

An extensive study of 10 nursing homes in England aiming to identify the determinants of poor sleep incorporated a collection of quantitative and qualitative data from 183 residents aged 65-100 and 40 members of staff. One of the key findings from the study was related to sleep disruption caused by regular, physical checking of the bedclothes to establish if they needed changing. A recommendation from the study was to enhance person-centred care at night by the use of technology, e.g. sensors in the mattress. In this instance the use of sensors in a mattress can for example indicate whether the bed is wet or dry and when the resident is more restless, implying that they are not in a deep sleep phase. Care supported by technology can be provided when it is needed and suits the individual sleep pattern of residents. Consequently restorative sleep can be achieved and dignity maintained. Thus the evidence based knowledge and understanding related to a determinant of poor sleep is transferred to the development of care giving procedures involving the use of technology. This process can be seen to improve care delivery and result in an outcome which acknowledges the individuality of night time sleep and maintains personal dignity of older people.

The research was supported by the New Dynamics of Ageing initiative, a multi-disciplinary research programme funded by AHRC, BBSRC, EPSRC, ESRC and MRC (RES-339-25-0009)

MALAURENT, JULIEN (ESSEC)

##### *What Impact Do Various Sociomaterial Assemblages Have on Collective Thinking Activities?*

The association "Pole Bio" has created a multi-tenant project called "Melibio" to support organic agriculture in the Massif Central region, France. Pole bio is intending to manage this project for a three years period (2011-2014) to improve knowledge sharing in the organic farming field. And this focus group is specifically interested in meadows composed of a variety of flora or forage crops. It brings together a group of heterogeneous actors: researchers in biology, computer scientists, Chamber of Agriculture officials, trainers, agricultural experts, farmers' associations. The project is funded by the region and aims to find new techniques to tackle the climate change.

The project has two main objectives: the first one consists in producing a decision-making model to assist seeding. This decision-making model will be embedded within an online platform to assist farmers to calculate the ideal mix for seeding flora in meadows. The ideal-type process is the following: farmers will have to enter local data into the software (such as location, soil type, weather conditions), and will get back advices for seeding recipes. The second objective is related to the creation of a wiki-based knowledge platform to articulate both expert and lay knowledge to improve the collective expertise of the organic farming community in that region.

Given the complexity of the relationships between group members due to a number of factors such as personal interests, institutional interests, and geographic distance, we wish to focus our interest in the role played by sociomaterial assemblage for collective thinking activities. To do so, we suggest the adoption of a slightly different research paradigm compared to the classic sociomaterial apparatus (Leonardi and Barley, 2010; Orlikowski, 2007) based on a Cultural Historical Activity Theory (CHAT) framework, suggesting an original perspective to look at the role of material artefacts during thinking activities.

**EZAWA, AYA\*** (Leiden University, [ayaezawa@gmail.com](mailto:ayaezawa@gmail.com))*Dutch-Japanese Encounters: Gendered Experiences Of The Japanese Occupation Of The Netherlands East Indies*

This paper examines the stories of women who transgressed national and racial boundaries by entering a relationship with the 'enemy' during the Pacific War: Indo-European women (with Dutch citizenship) who conceived a child with a Japanese man during the Japanese occupation of the Netherlands East Indies (1942-45). To date, their actions remain highly controversial in the Netherlands, as they apparently willingly engaged with an enemy that even now evokes strong emotions for subjecting large parts of the Dutch civilian population to three years of internment. Unlike Comfort Women, they have not received recognition for their wartime experience in form of pensions for war victims, as they were considered as collaborators, opportunists and prostitutes. The treatment they suffered by their own families and communities left deep scars in the lives of women and their children, and evokes memories that are often too painful to articulate even in private. The persisting silence surrounding the origins of their children constitutes an important starting point to investigate the political and social processes that have defined the 'truth' and memory of the war and women's experiences of the occupation. Their stories reveal that their actions not only contradicted the wartime enemy image, but also the prevailing ideologies of women's expected relationship to the nation and its men. Based on Japanese and Dutch archival documents, including interrogation reports and accounts of mothers themselves, and 21 life history interviews with children born of these unions, I reconstruct the wartime experiences of these mothers from the perspective of their children. Their stories not only shed light on women's agency and their gendered experience of life and survival during the Japanese occupation, but also a family and community discourse, that continues to marginalize and silence women and children within the history and memory of the Japanese occupation.

**EZZY, DOUGLAS\*** (University of Tasmania, [Douglas.Ezzy@utas.edu.au](mailto:Douglas.Ezzy@utas.edu.au))*Sex and Witchcraft: Performing and Transforming the Gendered Body*

Eighty people dance naked around a large bonfire during an all night ritual at Faunalia, a Pagan festival in Australia. This paper examines how these ritual performances transform embodied forms of gender inequality for women and men. Women with poor body image find self confidence and pleasure in their somatic performance. Men discover new ways of relating to the feminine sides of themselves. Both men and women explore same-sex interactions, such as kissing someone of the same gender, and as a consequence become more comfortable with homoerotic desire. The paper argues that many forms of gender inequality are located in emotional and somatic self-understandings and that ritual performances allow these to be countered and transformed.

**FABA, PAULINA\*** (Universidad de Chile, [pafazu@hotmail.com](mailto:pafazu@hotmail.com))*The Museification of Military Coup and the Years of Dictatorship in Chile. the Construction of Post-Conflict Visual Imaginations at the Memory and Human Rights Museum of Santiago*

Through the example of the Memory and Human Rights Museum of Santiago (MMHR), this paper analyses the display of different images and objects associated with the military coup (September 11, 1973) and the years of dictatorship in Chile (1973-1989). Inaugurated in 2010 under the government of Michelle Bachelet (2006-2010), the MMHR constitutes a major architectural and curatorial project created in order to "never forget" the traumatic past of the country. Since the last five years, different forms of images of this past have been publicly reproduced and exposed, especially by television. This text explores the hypothesis that the emergence of the Memory and Human Rights Museum constitutes a powerful signal of re-definition of national memory that seems to "leave behind" all social conflicts and political divisions in Chilean society. Are the visual strategies of collective remembrance contributing to a process of consensus? What is the relationship between the museification of images and the redefinition of the national memory? These questions are explored by following the MMHR visitors in their interaction with architecture as well as by the analysis of the formation of collections and the display of museum images.

**FABBIANO, GIULIA\*** (CADIS - EHES, [gfabbiani@hotmail.com](mailto:gfabbiani@hotmail.com))*Mediterranean Crossings : Postcoloniality and Migratory Practices from France to the Maghreb*

Despite shifts in perspective and theoretical renewal, socio-anthropology continues to neglect evermore significant North-South movements. Inverting the canonical distinction between countries of immigration and countries of emigration, this proposal problematizes the categories hitherto used to define these movements and presents the main results of a group research project on mobility from France to the Maghreb countries. At the crossroads of urban and migration studies, the proposed approach underscores the complexity of actors' experiences, in addition to the ways in which they position themselves in relation to the spatial movement undertaken. The diversity of figures, trajectories and networks but also the imaginaries and practices that emerge from mobility, giving rise to distinct social situations, will be discussed using a specific and historically salient ethnographic case study: that of Algeria. Particular attention will be paid to the impacts of these social situations on local society and the logics of interaction produced.

**FABIANSOON, CHARLOTTE\*** (Victoria University, [Charlotte.Fabianssoon@vu.edu.au](mailto:Charlotte.Fabianssoon@vu.edu.au))*Edgework: A Modern Phenomenon Or a Discourse Symbolising An Innate Human Quest?*

The paper explores if edgework is rooted in a human quest for excitement and challenge and if contemporary edgework can be compared with historical explorative expeditions, where humans and equipment endured extreme challenges. Hunter Thompson (1971, 1979) defined edgework as a voluntary risk activity requiring extraordinary knowledge, mental and physical skills, which is different from voluntary risk taking actions where no skills above everyday knowledge are required. More recently, Lyng (1990) explores the edgework discourse in analysing skydiving and Fletcher's (2008) risky behaviour and practices within elite and professional sport. Activates based on a perception of having control of a situation, such as gambling, might also relate to edgework (Fabianssoon 2010). The paper argues from Bourdieu's (1978, 1984) habitus discourse the influence of the social and cultural environment on human action and perception of societal place, that contemporary edgework activities and historical expeditions have common grounds in symbolising an innate human quest to challenge the everyday, but differs in presentation of the achievements in the private and public spheres. Where historical expeditions are placed in the public sphere for the explorer to gain public acknowledgement, while modern edgework is practiced in the private sphere or within a close knit group of likeminded edgework followers.

### *Young People Feeling Valued and Safe In Mono - and Multi-Ethnic Australian Communities*

The paper explores if young people growing up in mono-ethnic regional or in multi-ethnic urban communities present different experiences in feeling valued and safe in the community. The paper argues from Bourdieu's (1978, 1984) habitus discourse that the social and cultural environment influence the community setting and young people's feelings of being supported by friends, their social networks, and trust in people. The mono-ethnic young people live in regional communities dominated by generations of Anglo-Australian heritage and traditions. While the multi-ethnic young people live in ethnically diverse urban communities in Western and South Western Sydney with it's intermix of young people from Arabic and Middle Eastern, Pacific Island and Asian heritage. The young people in the mono-and multi-ethnic communities are all aged between 13 and 21 years and live with their families. The research shows that the urban young people living in multi-ethnic communities feel more valued by friends and they have more positive experiences about community living. They feel more supported by friends, but also by their extended family, a contributing circumstance for them to feel more secure in the community, then what the mono-ethnic regional young people expressed.

### *Neo-Traditionalism, One or Many? Structure of Gender Roles at Individual and Country Levels*

Transformation of gender roles is regarded as one of the key dimensions of modernization. Notions of gender, as hardly any other set of beliefs, possess universal relevance and pervade everyday life. Not surprisingly, the gender issue has become one of the key themes in rhetoric and sources of mass mobilization for neo-traditionalism. As a result of the polarization of positions in global public debate, most gender role expectations are easily recognized as belonging to either a liberal or a neo-traditionalist value set. What remains less clear, however, is the variability of modernization patterns for different gender norms. Do all role expectations form a one-dimensional factor, or are there several autonomous dimensions of notions about gender, each with its own liberal versus neo-traditionalist extremes? Can the same dimensions be used to compare gender role expectations at individual and country levels? To answer these questions, we analyzed the integrated database of the European Values Survey and World Values Survey by means of multilevel structural equations modeling. The formulations of relevant items, as well as the current theoretical agenda, suggested their possible division of gender roles into those describing behavior in work and family settings. The results, however, revealed a division along different lines: the first factor comprises duties, both in public and private spheres, while the second factor includes hedonist gender role expectations, related to self-fulfillment and enjoyment. At the country level, the first factor proved to be non-existent, while the second was reproduced with almost the same structure as at the individual level. Thus, gender roles are both horizontally and vertically differentiated, and form different dimensions of neo-traditionalism. To account for these differences, we compare sets of predictors for the two factors, with special regard to cross-level interactions.

### *Post-Nationalism, Cosmopolitanism, and Modernization of Values: Empirical Evidence from 85 Countries*

At the start of the current phase of globalization, nationalism was supposed to become obsolete, with new means of communication opening new degrees of freedom for individuals worldwide and thus giving way to cosmopolitanism. Later it became apparent that the established significance of national identities and nation-states gave way not so much to new individualism and cosmopolitanism, but to new forms of collective identities and entities, including supranational unions like the EU, transnational corporations, and new international organizations, but also a revival of local ethnic identities. Moreover, instead of losing its emotional appeal, as was expected from the cosmopolitan turn, these new manifestations of post-nationalism opened a new debate on the meaning, origins and consequences of nationality and ethnicity, and sometimes in its rhetoric and actions closer resembled the prototypical nationalism, or even xenophobia, than cosmopolitanism. What is the relation between these two transformations of nationalism at the microlevel? What value orientations lie behind cosmopolitanism ad post-nationalism? What is to be expected from post-nationalism in the future? To answer these questions, we used the integrated database of the World Values Survey, including the third, fourth, and fifth waves – in 1995, 2000, and 2005 respectively. A series of multilevel regression models estimated on these data show that, contrary to what might be expected, the contemporary nationalism in most countries is not significantly related to xenophobia and, moreover, positively related to cosmo-

politanism. Unlike in its structural dimension, the contemporary nationalism, as viewed from the cultural perspective, implies primarily not relocation of power, but a general quest for identity, which makes post-nationalism a sophisticated interplay of loyalties. For this emerging post-nationalism, modernization theories are revealed to have higher power than modernist theories aimed at explaining earlier forms of nationalism.

### *Civil Society Actors and the Construction of Human Rights in India*

Human Rights discourse has increasingly been adopted by social movements and civil society actors around the world since the 1990s. This discourse has generated negative and critical assessments from scholars in a variety of discipline. However, there is little scholarly research on how local organizations strategically adapt human rights discourses to local exigencies and challenges. In this paper I present original research on the practice of human rights activism in New Delhi, and I focus on NGOs that frame their activism in terms of human rights. I demonstrate that human rights activism is multidimensional, and that notions of 'human' and 'rights' are empty signifiers which are given contextualized meaning by local actors in the course of activism. I argue that human rights discourse can empower local actors by providing a framework within which they can bundle claims and frame localized struggles. Thus, I suggest that the criticism of human rights discourse is misguided, and instead scholars should focus on how this discourse can serve as an emancipatory vehicle for localized struggles.

### *Envisioning a Real Utopia in Iran*

The Real Utopia scholarship is overwhelmingly focused on cases that take place in liberal democratic political systems. It remains unclear however, how real utopias can be envisioned and realized in the absence of a vibrant public sphere. In this paper I present original research on a utopian project in Iran, an initiative called *Sustainable Living* which is a cooperative that embraces an alternative lifestyle and whose aim is to create Iran's first eco-village. Through an analysis of this initiative I elucidate how a real utopian vision becomes desired and acted upon in Iranian society. I demonstrate the channels through which utopian visions are circulated and are adapted to local context in Iran, and ultimately I seek to broaden our understanding of the realization of emancipatory social science. Hence, I not only show how utopias are envisioned in Iran but I examine the groundbreaking struggle of people to make them real in a restrictive political environment.

### *The Political Economy of Religiosity: Development and Inequality Reconsidered*

Existing studies present economic development and income inequality as two key determinants of cross-national differences in religiosity, and of changes in religiosity over time. But the case for both explanatory variables remains uncertain. First, some studies claim that religiosity has not been declining over time; if so, rising incomes cannot have had any impact. Second, there is as much reason to think religiosity is a cause as a consequence of development and inequality. Third, the mechanisms linking inequality to religiosity remain unknown. Addressing each of these limitations, this paper tests more robustly whether and potentially how development and income inequality shape religiosity. I find, first, that inequality, though not development, correlates with religiosity over time. Second, using an instrument to rule out reverse-causality, historically rooted differences in both inequality and development have powerfully shaped countries' current levels of religiosity. Third, deference to authority correlates with both inequality and religiosity, suggesting it is a key mechanism linking the two. In recent decades, then, the increasing inequality experienced by many countries appears to be one reason for the relatively modest decline in religiosity.

**FAIRBROTHER, MALCOLM\*** (University of Bristol, [ggmhf@bristol.ac.uk](mailto:ggmhf@bristol.ac.uk))

### *Two New Tests of the Relationship Between Inequality and Political Engagement*

Does inequality discourage political engagement? Previous studies have noted that people are less politically engaged in societies with higher income inequality. This cross-sectional association has been taken as evidence of a causal relationship, with inequality discouraging engagement by leading all but the wealthiest people to conclude that politics is not about them or their concerns. If correct, this interpretation suggests that the increasing inequality seen in many countries in recent decades has been driving down engagement, with potentially serious implications for the quality of democracy. Yet the association could be spurious, or due to reverse-causality. The very reason scholars care about political engagement is that they believe it has consequences for democracy and distribution; rather than inequality discouraging engagement, disengagement could foster inequality. Using multilevel models fitted to two measures of engagement from all five waves of the World/European Values Surveys, this paper re-assesses the thesis of a causal relationship running from inequality to disengagement, in two ways. First, I investigate whether the relationship holds not just cross-sectionally but also longitudinally. Second, I use an instrument for inequality to test whether the correlation between inequality and engagement holds even when ruling out reverse-causality. I find mixed evidence for a relationship over time, but a clear correlation when instrumenting for inequality. At least over the long run, then, it seems that unequal societies tend to develop less participatory politics.

LINN, JAMES G. (Optimal Solutions in Healthcare)

*Providing AIDS Nursing Care In Botswana; what Explains The Level Of Job Satisfaction*

Despite the many strengths of its health services and economy, Botswana has experienced one of the world's worst HIV/AIDS epidemics. HIV prevalence for most age groups doubled over the 1990s resulting in an adult infection rate of 38.6%, which was reported in the National Survey for 2001. HIV/AIDS infection became the main cause of hospital admissions as health services in all units of the healthcare system became strained and shortages of clinical personnel, especially nurses, appeared nationwide. As a result of many new & expanded government health services, the HIV infection rate and number of new cases has declined significantly. Recent data shows that 31.8% of women attending antenatal care clinics & 17.6% of the general population are infected with HIV-1. Yet, as with other countries of Southern Africa, Botswana continues to have a generalized epidemic that for the foreseeable future will present a challenge to its healthcare system. Nurses and other clinical service providers must constantly treat HIV symptoms and AIDS related illnesses while also giving other required care. The purpose of this analysis is to determine the level of job satisfaction and its predictors among a sample of 202 nurses involved in HIV/AIDS care in Botswana. A model is derived for explaining job satisfaction among these nurses which can be tested in other healthcare systems in Africa.

*Returns to Vocational Education and Training (VET) in Times of Crises: A Stepping Stone or a Trap for Career Advancement?*

VET is often acknowledged as being a very efficient stepping stone to integrate the labor market: it prevents unemployment risks and insures good returns to first employment. However, while benefits of VET are undeniable from a short-term perspective, they remain more questionable from a longer-term stance: it would seem that, from a longer-term perspective, graduates of VET face higher unemployment risk and lower career advancement opportunities than their counterparts with general education. Yet, this under-studied aspect is crucial as the political response to the recent economic crisis has been to promote vocationally oriented education rather than general education (see Europe 2020 strategy).

Therefore, I will investigate the following research questions: Does VET offer better – short terms and long terms – returns to education than other academically oriented educational levels? How these returns vary according to institutional arrangements and according to economic context? I will focus on four countries who depict different educational systems, namely France, Germany, Switzerland and the United-Kingdom to investigate these questions. In order to gain insights as regard to the evolution of returns to VET, I will analyse the evolution of career prospects of each cohort of VET graduates using labour force survey data on the longest-time frame as possible. In other words, the analysis will consist in analysing returns to VET in each country at an aggregated level to see whether we can observe cohort and/or period effects.

I expect important cross-national differences in returns to VET, with higher returns to VET in countries with vocationally oriented educational systems (Germany and Switzerland) and lower returns in more academically oriented ones (France and UK). I furthermore expect overall long-term returns to VET to have decreased since the emergence of repeated economic crises.

**FAN, GANG-HUA\*** (Shih-Hsin University, [ganghua.fan@gmail.com](mailto:ganghua.fan@gmail.com))

*Gender Differences in Religious Influence on Subjective Well-Being: Evidence from Japan, South Korea and Taiwan*

Research has consistently shown that women tend to be more religious than men. The structural location theory proposes that, due to disadvantageous social positions, women are more likely than men to regard religion as an alternative source of social support. The relative importance of religiosity versus socioeconomic status on subjective well-being is thus expected to be more salient among women. Nevertheless, empirical verifications of this thesis, especially under East Asian contexts, are relatively few. To address this gap, this article uses data drawn from AsiaBarometer 2006 survey to examine gender differences in religious influence on subjective well-being (measured with happiness and life satisfaction) in three East Asian societies: Japan, South Korea, and Taiwan. The three hypotheses proposed in this research are: 1) the association between religiosity and subjective well-being is stronger among women; 2) the relative importance of religiosity compared to socioeconomic status on subjective well-being is greater among women; 3) gender differences in religious influence on subjective well-being are more salient in societies with greater gender stratification. Results of analyses provide certain support for the above three hypotheses. In these three East Asian societies, the influences of religiosity on subjective well-being are more significant among women in both absolute and relative measure. Also, gender differences in the association between religiosity and subjective well-being appear to be more salient in South Korea, where gender stratification in terms of education and occupational status is greater than that in Japan and Taiwan.

**FAN, WEN\*** (University of Minnesota, [fanxx102@umn.edu](mailto:fanxx102@umn.edu))

*Education Delayed but Not Denied: Returning to School of the Chinese Cultural Revolution Cohort*

This paper examines a unique Chinese cohort whose educational opportunities were lost due to an unexpected exogenous shock. The Cultural Revolution (CR) cohort came of age during China's Cultural Revolution decade (1966-76), when the educational system came to a halt (especially colleges whose normal recruitment stopped for 11 years). Based on life history data collected in the *1994 State and Life Chances in Urban China Survey* (Zhou and Moen 2002) and Cox proportional hazards models, I find that, compared with the pre-CR cohort just before them, the CR cohort members are considerably more likely to return to school after their late 20s to compensate for their initial educational disadvantages, thus narrowing (but not closing) their educational gap with the pre-CR cohort as they age. Marriage and having young children discourage women - but not men - from returning to school. In addition, children whose fathers held a senior-high degree and/or whose fathers were cadres or middle-class/intellectuals have significantly higher school reentry rates, which lead to a widening educational stratification with respect to social origins, nullifying the state's success in attenuating intergenerational transmission of educational (dis)advantage by launching the Cultural Revolution, as reported previously using data collected from the CR cohort in their early adulthood (Deng and Treiman 1997; Zhou, Moen, and Tuma 1998).

**RC04-97.5**

**FARIAS, MAURICIO\*** (Fundación Chile, [mauricio\\_farias@yahoo.com](mailto:mauricio_farias@yahoo.com))

*Choice and Inequality: Transition from Secondary to Tertiary Education in Chile*

Higher education is increasingly desired by families because it is seen as an important mechanism of social mobility that allows students to achieve better living standards. However, access to higher education appears consistently correlated with student socioeconomic status. The lack of prior opportunity to study a curricular program that provides both the quality and content required to proceed to higher education is suggested as the most important barrier. It is worrisome, then, that some low-income, high-performing students who expect to continue to higher education choose programs with lower-level content or quality.

This study utilizes the case of Chile to explore whether choice between vocational and academic education at secondary level (VESL and AESL respectively) could help to the reproduction of inequality throughout the diversion of high-performing low-income students from the academic to the vocational track. This study approaches a causal analysis combining propensity score matching and robustness check strategies. It also uses an ad hoc survey and a rich panel of census data that follows students from eighth grade to higher education.

The findings show that socioeconomic status, culture, the environment, and self-perception are correlated with enrollment in VESL. In addition, there is an important gap in the national entrance test to higher education between comparable VESL and AESL students (0.2 – 0.5 SD). Results also show that high-performing, low-income VESL students are less likely to go to a bachelor degree program and more likely to enter a vocational program at tertiary level than a comparable AESL student. Finally, VESL students tend to have a lower persistence at vocational tertiary education than AESL students. Hence, VESL could be distracting and preventing some low-income, high-performing students from obtaining better incomes, employability, and social status, ultimately reducing their social mobility. In this way, choice could be contributing to the reproduction of inequality.

**FARIAS, RHAISA NAIADÉ PAEL\*** (Universidade de Brasília, [rhaisapael@gmail.com](mailto:rhaisapael@gmail.com))

MULLER, FERNANDA (Universidade de Brasília)

#### *Childhood in the City: The Children in Focus*

Research indicates that children have spent more time in institutionalised places than in public spaces (WARD, 1978; RASMUSSEN, SMIDT, 2003; TONUCCI, 1996). However, the same studies show the ability of these children in breaking the charges of adults, transforming spaces planned for them in their places. Thus, the claim that urban children experience fewer public spaces is not universal but may vary from city to city, neighborhood to neighborhood depending on the social groups that live there. The present work aims to study specifically how four five-year-old children, two girls and two boys, who live in Brasília/Distrito Federal/Brazil, perceive the city. Thus, from the recognition of children as social agents, producing meaning and that regardless of their size interact with the physical environment (CHRISTENSEN; O'BRIEN, 2003), we propose this research. The methodology of the study considers the child as a primary informant and seeks to involve their perspectives from visual methods connected to the narrative. Each child was invited to build a city map with blocks of wood and artifacts in miniature, like cars and trees. Later, presenting the picture of the city map construction, it was possible to conduct a photo-elicitation exercise (CLARK-IBÁÑEZ, 2004; BANKS, 2009). The methodology helped to increase the involvement of children in discussing aspects related to their urban experiences.

**FARIDA, ANIS\*** (University of Wijaya Kusuma Surabaya, [anis6872farida@gmail.com](mailto:anis6872farida@gmail.com))

#### *Women's Local Social Movements*

This study aims to understand whether the phenomenon of rural women's collective action in Dasun, Kediri can be interpreted as a social movements, and related to the issues, actors and the setting, how's that social movements can be categorized and have an implication to social justice, and can improve the inequality of women's life. Based on this, this study aims (1) to explore and interpret the phenomenon of collective action undertaken by women in Dasun, if indeed a social movement and (2) the implications of social movements to improve inequality of women's life and to develop a social justice.

This study is a qualitative research with an ethnographic approach, which a plural method include observation, participation, analysis of records, and interviews. The subjects of this study included some Dasun's women activist and outsiders who were involved in the growth of the local social movements.

Based on the results of field research and theoretical analysis led to some the conclusion, an important finding of this study, show that a women leader is the product of the movements. The ability to produce a leaders, as far as the author know, is the specific notion that can not be found on collective action in other places. Collective action in Dasun can be interpreted as a social movements, with the fulfillment of the element of collectivity, shared goals, a loose organization, leadership, spontaneity, and moving beyond the village's authority. The implications of the achievement of social movements in family life is shown by the involvement of women in decision-making and financial control lies in the female. In society, women have begun to participate in the socio-cultural, political, economic

and environmental fields which can improve inequality of women's life and to develop a social justice.

#### *Race without Racial Classification: The Case of Australia*

Australia is a settler nation that has been structured along racial lines, in particular, the White Australia Policy, which limited migration to people who were considered first 'white', then to those from Europe. However with the end of the White Australia Policy in the 1970s Australia stopped collecting most forms of racial data. As a result, Australia has no official racial classification system. Nevertheless, race and racism are part of everyday experience and discourse in Australia.

There are debates around the collection of racial data. Proponents argue that it is difficult to measure racism without first measuring race. The counter-argument is that race, a social construction, is solidified and reified as a social institution through racial classification. If we are to dismantle racial hierarchy, we must first dismantle racial categorization. This paper considers race in the absence of a racial classification system. Through an examination of race in contemporary Australian media discourses and through Australia's census categories, I explore what happens to race and racism when race outside of Aboriginality not officially measured.

#### *Family, Neighborhood, and School-Based Networks of Black and White Adolescents: Effects on Conventional and Unconventional Behavior*

Adolescents drift between family, school, and neighborhood networks, taking on situated identities in each context and being subject to different idiosyncratic. Their behavior may vary depending upon the degree to which they are embedded in each type of social capital. We examine how embeddedness in family, school, or neighborhood networks affects conventional and unconventional behavior. Data were gathered as part of a longitudinal study of families (N=699), friendships, and adolescent development in Buffalo, New York. We first compare network size of black and white adolescents, along with the degree to which they are embedded in family, school-based, or neighborhood networks. Second, we examine the effects of embeddedness in each type of network on conventional and unconventional behavior. The larger the percent of network members seen in a context, the more embedded in that context. Finally, we examine whether effects vary by race. On average, black adolescents' networks are smaller than whites, but they include a much larger percentage of family members (i.e., blacks are more embedded in family networks). Whites are more embedded in school-based networks. Both groups are equally embedded in neighborhood networks. The more embedded adolescents are in family networks, the higher their GPAs and the less likely they are to smoke, use marijuana, get drunk, commit acts of major deviance, or have multiple sex partners. Interaction effects show stronger effects of family embeddedness for black adolescents on multiple sexual partners, and for whites on marijuana use. Regardless of race, the more embedded in school-based networks, the higher their GPAs, the less likely they are to smoke cigarettes, and the fewer sex partners they have had. The more embedded adolescents are in neighborhood networks, the more likely they are to smoke cigarettes, use marijuana, and commit major acts of deviance, such as robbery, assault, or gang fighting.

#### *The "Foreigner" in China's Corporate Labor Market: A Critical Race Perspective on Skilled Migration*

This paper wed's field theory to critical race theory to conceptualize the inter-ethnic competition among actors in the multinational field of corporate employment in China's most global city Shanghai. In sum, the field of corporate work is constituted as a field of relationships and activities in which ethnic social, cultural and symbolic capital serve as field-relevant resources. In this field "highly skilled" migrants working in Shanghai are hired in part for their cultural and ethnic backgrounds, so that ethnic and national identity are part of the cultural constructions of technical "skills." There thus can be no separation between purely technical and culturally based accounts of human capital within this field. Rather the field of corporate labor is revealed to be a site of ethnic and racial micropolitics, including forms of ethnic "boundary work" through which actors claim and contest a position in the racially and ethnically stratified field. Grounded in a long-term

ethnographic study with over three hundred in-depth interviews, this approach provides an account of the changing position of the foreign skilled migrant in the corporate labor force in Shanghai from the 1980s to the 2010s, a period in during which expatriates transition from a dominant field position as incumbents who defined the "rules of the game" for employment, to challengers who must defend a marginal position within a much expanded field.

#### *Narrowing The Pipeline? Assessing Female Participation in STEM Fields*

The underrepresentation of female Science, Technology, Engineering, and Mathematics (STEM) faculty members at teaching institutions leaves few role models for young female students, particularly racial/ethnic minorities, interested in pursuing careers in STEM academic fields. A shortage in the number of professional women in STEM narrows the pipeline for future progress in every STEM discipline. The underrepresentation of women STEM faculty members everywhere, but most notably at small, primarily teaching institutions parallels the national statistics, which indicate numbers disproportionate to student and community demographics at institutions of higher education.

We intend to: examine and evaluate the specific needs and practices regarding advancement of women in STEM fields at a small, southern, rural, primarily teaching university and similar regional teaching institutions, and formulate specific sustainable strategies and goals toward increasing representation of women for the success of female scientists, our institution, and the future of scientific innovation.

A variety of measurable quantitative data and qualitative information will be systematically gathered from female STEM faculty and from a comparison group of male STEM faculty to determine causal factors influencing the underrepresentation of women in STEM. All baseline data gathered on female STEM faculty will be compared to results obtained from male STEM faculty. The data will be analyzed in order to assess needs and methods for implementing policies and conditions favorable for achieving positive change in the number of and professional advancement of STEM female faculty at this institution and to contribute to the existing body of knowledge regarding the underrepresentation of women STEM faculty.

#### *Subjective Struggles and Collective Movements*

Movements are constitutive parts of contemporary global realities, buttressed forward by online communicational flows. They present a counterpoint to broad systemic powers which aim to condition and control individuality, thereby deconstructing social life. Financial forces are increasingly constituted through informational platforms, which take place outside the real economy. Moreover these movements increasingly underscore the differentiation between themselves and systemic actors. Movements underscore for us the separation between systemic forces and real life as expressions of the fragmentation of social life. Individual subjects become participants in the construction of collective movements to affirm themselves in the face of systemic domination as well as to engage in experiments around new living constructs as an alternative sociability to fragmentation. Communication by physical and online networks enables individuals to establish a common cultural framework. The result of this is a new political re-democratization and sociability confronting the contemporary context of global reality.

#### *Urban and Environmental Development Issues*

Collective movements operating at local, national, regional levels are contesting the increasing global trend of urbanization as a threat to environmental sustainability. These movements have become central to the economic, social, cultural and political contexts of environmental management. They confront the problematic activities of dominant financial actors whose activities mold urban spaces. They highlight the importance of subjective engagements with actual physical space that increasingly takes the form of individual actions. The individualization of collective action brings forward new experimental spaces that suggest the building of a new sociability as they contest urban development and the risk it poses for environmental sustainability.

#### *Sharing to Belong: African Women in Sydney and Practices of Social Solidarity*

Nestled inside a 1980s-style arcade in the Western Suburbs of Sydney, the African Village Market is a meeting place, social enterprise and a site of recognition. The market was established as a means through which African women in Sydney could sell their own products, provide African goods that were otherwise hard to get and foster a sense of community across African groups in Sydney. Drawing on ethnographic research conducted at the African Village Market in late 2013-early 2014, this paper will explore how women at the market experience and give meaning to solidarity. While the market holds a particular resonance for the Kenyan community in Sydney, it also functions as a meeting place for other African communities. It is a particular site where solidarity is practised in the everyday through the act of sharing; the sharing of space, friendship, knowledge and support. By asking why people choose to share with each other, what they choose to share and who they choose to share with, this research will explore the complex ways that solidarity functions across various axes of difference. In the context of a steady decline in funding for ethnic group organisations, it is necessary to understand what role these spaces play as sites of difference that foster a sense of social solidarity within and across communities.

#### *Geographies of Reflexivity: The Spatio-Temporality of Contemporary Youth Subjectivities*

This paper approaches the spatio-temporality of contemporary youth subjectivities through a discussion of the spatial dimensions of individualisation. The paper argues for a renewed focus on the reflexive practices of young people in relation to the way that local social conditions are shaped and reshaped as part of broader processes of social change taking place across the western world. Emerging debates about the meaning and significance of reflexivity are situated within geographical theories that emphasise the construction of space as a meeting point of temporalities, as well as the relationship between place, identity, and social practice. In order to provide a located and spatialised understanding of the consequences of social change for young people's identities, the reflexive practices and biographies of young people in different spatial contexts are situated within this theoretical context. The paper argues that reflexivity is a spatialised phenomenon: young people mobilise reflexive practices in relation to local structural conditions, themselves embedded within the spatial dynamics of globalisation and individualisation. The paper concludes by calling for a spatialised understanding of the consequences of social change for young people's identities.

HARRISON, TIM (University of Ballarat)

#### *Place, Rural Youth Identities, and Social Change*

This paper responds to emerging critiques of the metrocentric and placeless focus of contemporary youth studies with a located, emplaced analysis of youth identities in rural and regional Australia. While theories of social change currently influential in youth studies depict a homogeneous and placeless modernity, nevertheless the processes these theories describe have reshaped young lives differently across urban and rural environments. Drawing on a research project ongoing in western Victoria, this paper analyses young people's identities and biographical narratives in relation to arguments about social change, including arguments about globalisation, individualisation, reflexivity and the meaning of place in late modernity. Narratives and biographical imaginings of rural and regional young people articulate identities constructed across geographical scales, as well as providing a located understanding of the genesis of reflexivity and its relationship to locality and local inequalities. Discussing the contemporary significance of place, mobility, and changing geographical inequalities, this paper moves towards a spatialised and comparative analysis of youth identities in a changing world.

### *Everyday Boundaries and 'Queer' Experiences in the Transit Migratory Space of Turkey*

Looking at the everyday as a crucial site for being and becoming as well as for (re)shaping belonging(s) of marginalized social groups (Manalansan, 2003), this paper seeks to examine the everyday worlds of Iranian queer refugees in Turkey. The paper draws on findings from a doctoral dissertation project, which is based on 11-months of fieldwork consisting of key-informant interviews as well as on ethnographic data and narratives collected through in-depth interviews with 43 Iranian sexual refugees living in different "refugee" cities in Turkey.

Turkey is a transit locality for non-European refugee communities due to its 'geographical' limitation to the 1951 Geneva Convention. Among other irregular migrants and transit refugees, Turkey hosts many Iranian queer subjects, who are seeking asylum based on sexual orientation and gender identity persecution and waiting for resettlement to a third country in the global North. Time they spend between 'home' and 'final' destination affects and inflects their everyday life struggles and experiences as they shift across multiple boundaries and hierarchical axes of difference within the conditions of cross-border mobility as well as of asylum seeking while living in the transit migratory space of Turkey. In that sense, the main aim of the paper is to go beyond a panoramic snapshot of what the mundane activities of Iranian sexual refugee population in transit in Turkey looks like, toward a sociological analysis of how race/ethnicity, class, gender, and sexuality intersect and create borderlands in the daily life struggles and experiences of migrating Iranian sexual dissidents.

RC31-524.2

**FARSAKOGLU, EDA HATICE\*** (Lund University, [eda.farsakoglu@soc.lu.se](mailto:eda.farsakoglu@soc.lu.se))

### *Identities, Migrations, and Asylum: Thinking through the Experiences of Queer Refugees*

Since the early 2000's Turkey has become a prominent transit destination for Iranian queer subjects who are seeking asylum based on sexual orientation and gender identity persecution. However, to date, there has been little research focusing on this growing component of queer/asylum mobilities. In line with the larger literature on international forced migration, much of the existing literature has avoided asking questions about these queer subjects' understanding of self in relation to their movement, as well as concerning their choices and motivations for departure. Often, this lack of academic coverage is due to so-called protection-related ethical dilemmas which many researchers are facing. Paradoxically, however, to avoid asking such questions in our researches strengthens the victim perspective on humanitarian responses towards queers and refugees. This might even further diminish possibilities of inclusion for (queer) subjects who seek justice, safety, and belonging beyond the borders of their countries. Moreover, this lack of academic coverage elides the real complexity of (queer) asylum mobilities.

Drawing upon in-depth interviews with 43 Iranian sexual dissidents seeking asylum and waiting for resettlement to a third-country in transit in Turkey, this paper offers insights into Iranian queer refugees' understanding of self in relation to their movement as well as concerning their choices and motivations for departure. More specifically, the paper draws on the migratory trajectories and identity accounts of Iranian queer refugees to formulate an understanding of how they create, sustain, and/or negotiate a sense of self and belonging while shifting across multiple boundaries and hierarchical axes of difference within the international refugee regime. The main argument of the paper is that experiences at the intersection of *queerness* and *refugeeness*, influenced by the norms, politics, and processes of the refugee apparatus in the migratory space of Turkey constrain Iranian queer refugees' possibilities for being, becoming, and belonging.

### *Poplife. a Strategy to Mitigate the Social Risk*

The research is centered on the hypothesis that the propensity of a significant number of young people to participate to a reality show is related to social risk and uncertainty in planning their own life. Such an hypothesis is captured under the concept of realtyism. From a theoretical point of view, realtyism may be defined as a social logic characterizing the relationship between reality and imagination as strategy to cope with fundamental social risk. Such a logic has been very pervasive in the past fifteen years in Italy as well as in many other countries. From an empirical standpoint, the research is supported by 750 video interviews, and pictures of individuals wishing to participate to the reality show "Big Brother" (Italian edition). The results show that realtyism is, in many cases, the response of individuals to the fragmentation and the precariousness of social experience from both neo-liberalism and failure of societal institutions in keeping alive the emancipatory promise. Particularly, the logics of the action of the young people surveyed are specified in two directions. In the first, they show a sort of "camouflage" through which they intend to mitigate the discovery of a social insecurity that becomes existential and that seeks to transform the feeling of con-

fusion and demoralization in challenge and euphoria. In the second, participation to the reality show it is only a realistic strategy. They use imaginary to be able to live an "ordinary" life that is now made impervious by social conditions. It is the project of life that is configured, today, for them, as "microutopia". As a result, the audition replaces the "social proof" and the Big Brother house becomes a space suspended between imagination and reality having the appearance of a melancholy therapy to survive.

### *Experiences on Improving Quality in Home Care Services for Seniors in Argentina*

In this paper we present research progress on the National Home Care Program in Argentina that has been carried out continuously since 1997 and with greater intensity in the period 2003-2013. The objective of the research is to investigate the impact of public policy aimed at the older population with some degree of dependence with respect to the learning incorporated by public and non-governmental organizations involved in the decentralized structure from which perform these services.

The proposed research is a comparative case study of implementing organizations of National Home Care Program in order to detect changes and learning that occurred in these organizations from the perspective of the actors (members of these organizations and users of its services, including home caregivers service cooperatives originated in the program) to build indicators and make proposals for continuous improvement of the quality of this public policy

### *Caregiving and Employment in the Canadian Context*

According to Statistics Canada, in 2012 more than 8M Canadians had provided care to a family member or friend with a long-term health condition, disability or aging-related needs during the previous year. The largest proportion (44%) were age 45-64—that is, baby boomers in peak earning years. Moreover, the number of boomer caregivers increased by 20% between 2007 and 2012. As in most developed countries, most Canadian caregivers are employed and many report care-related employment consequences. Many also report psychological, emotional and physical health consequences, many of which are serious enough to result in a visit to the doctor. Gender differences are narrowing: a slim majority (54%) of caregivers were women in 2012, but women still spend more time on care tasks, do more high demand tasks (personal and medical care), and experience more health and economic consequences.

Demand for care will continue to grow in Canada, as in most parts of the world. But Canada's public caregiver support infrastructure is under-developed compared to other countries. And, despite growing awareness of the negative impact caregiving can have on labour force attachment, commitment and productivity, Canadian employers remain largely uncommitted to supportive workplace practices for caregivers.

In this paper we report results from further analysis of Statistics Canada's 2012 General Social Survey on Caregiving and Care Receiving examining incidence and predictors of care-related health and employment consequences for caregivers, as well as estimates of monetary costs that accrue to caregivers' employers as a result. These findings will be interpreted against the backdrop of the Canadian public and private policy context and implications for future policy and practice in the health and continuing care and labour domains discussed.

### *Children's Health and Well-Being: Making Sense of the Health Conundrum*

Lifestyle related morbidities affecting children have attracted attention from national and international policy makers. One response to these public health concerns is to inform children and their parents of health promoting behaviours so as to establish life long habits for good health. However, epidemiological trends suggest that the prevalence of childhood morbidities is increasing. This suggests that health promotion programs appear to be struggling in effecting change in response to a complex set of factors driving this trend.

This paper attempts to make a small contribution to understanding this problem by presenting some research on children's understandings of health and well-being. The study is based on a participatory, multi-stage qualitative research study with 123 children aged 8-15 years, focussed on children's understandings of 'well-being'. While a significant amount of research draws upon the sociology

of health to understand children's perspectives of their illness, less common is research that obtains children's perspectives of what health or well-being means.

Our findings show that when children discuss their health they invoke themes from health promotion campaigns, which share many of the features of 'healthism' (Crawford 1980). However, children also call upon different and more broad-ranging meanings of well-being which problematise these healthism discourses. These include locating health as one dimension of well-being that prioritises agency, security and a positive sense of self; as promoting the body as a 'functional entity; and of health as generated intersubjectively which reproduce patterns of moral anxiety among carers. The findings suggest that children's understandings of well-being provide important clues as to the limits of health promotion campaigns and a set of considerations policy-makers need to take into account to effectively respond to the health conundrum.

**FATTORE, TOBIA\*** (Macquarie University, [tobia.fattore@mq.edu.au](mailto:tobia.fattore@mq.edu.au))

*Enterprise and Network As the Basis of Solidarity – Strong and Weak Ties in Children's Work on the Informal Economy*

Fundamental transformations in the world of work have created different opportunities for social integration depending on group membership. Furthermore these transformations have helped define the different economies that children work in. This presentation critically evaluates children's work in the informal economy. Based on a study of 11000 children 12 to 16 years of age in New South Wales, Australia, the presentation examines, for the work children perform on the informal economy, how the particularity of relationship between employee and employer prescribes rules of conduct given the absence of other forms of social integration, such as formal regulations. It examines the extent network solidarity, and particularly reciprocity, provides a normative structure that underpins operation of the informal economy for children.

Three categories of informal work performed by young people on the informal economy are identified: enterprise workers, informal employees and associative workers. Each category of work is embedded in different social relations between 'worker' and 'employer' that represent different relationships of appropriation. These relationships of appropriation reflect latent class structures with young people from poorer backgrounds more likely to undertake work as informal employees and wealthier young people more likely to be involved in enterprise work.

The nature of appropriation also influences intrinsic and extrinsic orientations towards work. Informal employee' relations, predicated upon strong particularistic ties, do not evidence greater levels of intrinsic attitudes, but are least commodified. Enterprise work, predicated upon weak universal ties, is characterised by higher levels of instrumental attitudes. However young people from poorer neighbourhoods are more likely to show altruistic orientations.

*New Roles in Rural Contexts. Women, Work and Family in Chile Today*

Globalization, modernization and neoliberal policies have significantly contributed to the transformation of traditional rural life in Chile in the last decades. A more heterogenous and modernized rural world has emerged, although still strong gender and social inequalities remain. Within these changes, the visibility of women in public spaces highlights, in particular in the educational sphere and in labor market, even though Chile still has a low rate of female labor participation compared to other Latin American and OECD countries. These new reality implies that the traditional sexual division of labor is being transformed or questioned, since women incorporation to higher educational levels and to labor markets implies for them geographical mobility, new social and economic networks and new perceptions and images about their roles in society. Therefore, the new productive role contributes to women "empowerment" at personal, family and local levels, having accordingly an impact in family life and men's role.

From a perspective that combines quantitative and qualitative methods, this paper analyzes the effects of the new productive role of rural women in the restructuring and current dynamics of families, in the intra-family relationships, negotiation processes and strategies of conciliation between work and family, and explores the implications of these changes at local and community levels and for society as well. The paper is part of a broader study held in the province of Nuble, Central Chile, concerning with female work in different social and geographic spaces and the effects of paid female work at personal and family levels and in local and national development (Proyecto DIUBB 133324 2/R).

*Famine Meets with Conflicts in West African Sahel Region: A Retrospective Study*

The Sahel constitutes the eco-climatic and bio-geographic zone of transition, in Africa, between the Sahara desert to the north and the Sudanese Savanna to the south. It covers parts of (from west to east) the Gambia, Senegal, southern Mauritania, central Mali, Burkina Faso, southern Algeria and Niger, northern Nigeria and Cameroon, central Chad, southern Sudan, northern South Sudan and Eritrea. Famine has been a perennial problem in the Sahel region of West Africa and some parts of Senegal, Mauritania, Mali, Niger, Chad and Sudan are hard hit. One of the area's worst droughts occurred in 1914, but the increased rainfall throughout the 1960s made the drier areas more sustainable. The highly visible famines occurred between 1968 and 1974, 2005 and 2007 and in 2010. And these recorded the presence of international humanitarian assistance. In the West African Sahel, majority of people survive by producing crops such as groundnuts, grains and in addition rearing of animal. Man-made problems also complicated the issues of famine and its attendant consequences particularly the political instability of several countries where the locust had infested their crops could not receive adequate treatment. For examples conflicts in Mali and Niger forced over 300,000 people from various households with many escaping to refugee camps in neighbouring countries. Traditional animal grazing routes have been cut off and many local markets were closed due to the conflicts, which have far reaching consequences for West Africa sub-regional food security. The paper discusses the historical antecedents of famine and conflicts in the Sahel region of West Africa, analyses the effectiveness of the World Food Programme, the governments of the various affected countries and other international humanitarian assistance in the quest for food security in the sub-region. Consequently, the paper recommends plausible solutions to both famine and conflicts in the region.

*The Influence of the Organizational Performance on Psychosocial Health at Work*

At the present time there is a domination of cost-effectiveness criteria in the practices of modern businesses which are more attracted by the economic and management activities that can allow the company to prosper and achieve efficient financial results. Nonetheless, statistics show a steady growth in the number of workers who are victims of diseases such as addiction to alcohol, drugs, mental disorders and insomnia, the difference caused by excessive stress due to adverse methods of work organization and interpersonal relations in the workplace. Downsizing, layoffs, retirement, overtime work and forced leaves without pay have a significant disruptive impact on workers, their physical, social and psychological wellbeing. Thus, there is underestimated the social aspect of a negative impact of the organization's economic activities on psychosocial health at work. The given research deals with the issue of social pollution, expressed in reducing the level of welfare and deterioration of physical and psychosocial health of workers caused by the economic activities of the company. The theoretical study has allowed us to formulate hypotheses about the toxic management practices and their negative impact on people's psychosocial health. An empirical study conducted by the authors in comparison between Russian and Italian companies has permitted to verify the given hypotheses: to examine in detail the nature of social pollution of the intra-organizational environment and to identify toxic elements of the socio-labour relations in the company. An important feature of the current research is studying the social pollution phenomenon from the point of view of employees, employers and trade unions.

**ORLOVA, IRINA\*** (Lomonosov Moscow State University, [irorlova@mail.ru](mailto:irorlova@mail.ru))

*Russian Universities in the Neo-Liberal Reforms*

In Russia, for two decades, neo-liberal reforms have been carried out in all spheres of social life: economy, politics, culture, and education. The higher education reforms (universities in particular) dismantle the previous Soviet national education system trying to substitute it by a new pattern based on the Western model "for the purpose of being fully integrated into the global community".

The process of transplanting Western education patterns on Russian ground resulted in the fact that education no longer performs its most important social functions of integration and differentiation.

The integration function implies the system of education that is supposed to reproduce a set of core values reflecting the spiritual priorities of society and uniting people in a common social, historical and cultural community. It is known far and wide that every society does its best to preserve national identity, socio-cultural and mental characteristics of the population. Therefore, in order not to lose national identity communities try to transmit (and reinforce) their most important values through education systems.

The differentiation function implies preparing people of the younger generation for "embedding" them into cells of the social structure; bringing social and occupational structure of society into the right track; preparing the right number of specialists of different skill levels and different specialties for the country, according to the strategy of its development.

But the paradox of contemporary Russian situation is that neither twenty years ago, when the construction of the neo-liberal capitalism was just at the beginning, nor now – nobody elaborated or formulated the development strategy. There was too much that was obscure: there wasn't ordered a priority system in the development of certain sectors in the economy, science, and social services. People were unaware of the economic model and the model of society they would create through liberal reforms.

##### *Pathways For Prevention: Disentangling Causal Relationships Of Preventable Mortality and Forced Migration In Post-Colonial Africa*

If humanity consensually agrees that innocent children should be spared the ravages of violence, political murder is not a reasonable means of debate, and that no person should be led to starvation at gunpoint, then we must also agree that humanity has failed modern Africa. This research summary points to a volume of historical evidence linking a host of independent factors that consistently predict higher rates of preventable mortality from violence, starvation, and disease across sub-Saharan nations. A wide-angle view of dictatorship and resource exploitation in the independence era (1957-1980) set in motion the foundation for modern conflicts that continue to brutalize millions of Africans. Sadly, violence, starvation, disease and other preventable mortality causes are easily predictable, yet continuously occur across many parts of Africa. A second function of this research summary is to highlight causal pathways between extant social, geographical, economic, and agricultural indicators and the increased likelihood of forced migrations and preventable fatalities. If scholars can disentangle the cause and effect relationships that have resulted in millions of lost African lives decade after decade, local and global society will be best prepared to prevent similar catastrophes in the future.

##### *Science of Selection: Developing Social Technology in Educational and Vocational Field 1920–1940, Norway*

This paper explores how creating the applied science *psychotechnics* redefined societies' views on abilities and disabilities during the early twentieth century. The main empirical sources are textbooks, articles and political documents. It studies the making of applied psychology as two interrelated processes: first, the early experimental laboratory developments of scientific knowledge and the new understanding of the relationship between body and mind, and second, the introduction of new quantitative techniques for measuring intelligence and aptitudes in schools, the military, and employment services – that is, for society in general. I name the first process 'scientification' and the second 'politicisation of the new sci-

entific techniques'. The two analytical terms point to how abilities and aptitudes were redefined due to scientific and political interests. This article first gives an overview of the international innovations that I term 'social technologies', and thereafter analyses how these technologies transformed the Norwegian system – first the special schools, then the vocational schools, and finally the employment services.

##### *Chronotopes of Youth in the Global City*

This session is based on the contributions to a book with the same title, to be published by Brill in 2014. It follows some similar themes represented in a previously edited collection published following the International Sociology Association World Congress in Brisbane, Australia in 2002 (Feixa & Nilan, *Global Youth? Hybrid cultures, plural worlds*, London and New York, Routledge, 2006). The new book builds on the themes of the previous volume but extends the analytical and theoretical approach to focus on the concept of chronotope, that is, the time/space dimension of social practices. Urban space and time are paradigms of analysis that can be productively applied to the study of contemporary youth phenomena, especially the study of youth cultural practices. Place is a defining element in the social relationships between youth, and between young people and the rest of the community. In the city, not only physical places are important though, social and symbolic spaces are equally significant. The virtual spaces available through mobile phone and internet technology enable communication, information, sharing and networking. In both public and virtual spaces young people can collectively connect with the cultures and political agendas of a world brought closer by the pressures of globalisation (Nayak, 2004), even while they give priority to the local. 'The local now transacts directly with the global' (Sassen, 2001), altering the conditions of everyday life and producing new kinds of spatial and temporal relationships in urban settings. The spatial temporality of the contemporary city therefore offers a 'strategic lens' (Sassen, 2000) for the study of a major social formation – the period we know as youth – in terms of practices and representations.

##### *Comparative Research on Contemporary Youth Social Movements: The Case of the Sahwa Project*

The methodological approach of the SAHWA project responds to the call of the European 7FP under the topic SSH.2013.4.1-2 "Facing transition in the South and East Mediterranean area: empowering the young generation" by conducting a systematic analysis of young people political participation, economic prospects, job opportunities, and the experience of such processes of transformation in other regions such as Europe, as well as the nature of change in social values and norms in the SEM countries. The data and insights produced by the research and the prospective foresight exercise will provide the basis for new policy approaches to a region that is undergoing profound transformations. This approximation lies on the border between scientific disciplines and concepts and its interdisciplinary approach. SAHWA explores norms, social values and the role of youth cultures in the SEMs in a comparative and critical perspective. Its intent is to build upon previous research, employing an innovative, pro-active approach that views youth's political participation as a potential tool for the exercise of agency by different youth groups. In this way, the norms, social values, agency, economic challenges and political empowerment phenomena can be assessed according to the critical nodes emerging from encounters of the local with the global, conceptualized as "the increasing interconnections between youth across the world and their awareness of such connections" (Schafer, cited in Hansen 2008). It has become clear that the current challenge for sociological and anthropological research is to map the new contours of these changing times and the roles being played by various social agents. The epistemological orientation is guided by the extended case method proposed by M. Burawoy (1998). This method is based on an interpretive view of social science, generalizing from structural and symbolic connections between actors and social processes, as revealed by the research itself.

##### *When Men Kill Women and When Women Kill Men: The Aspects of Gender and Social Class in Legal Discourse at Homicide Trials*

This work investigates how aspects of gender relations permeate the system of justice, giving rise to practices that corroborates relations of dominance and of reproduction of inequalities in the trial by Jury. It analyzed the discourses of the prosecutors and public defenders who acted in the trial by Jury in the city of Porto Alegre, in the State of Rio Grande do Sul, in Brazil, from October 2008 until November 2010 only in cases involving men who killed women and women who

killed men. A total of 26 sessions were observed and systematically registered in field diaries. The study identified aspects related to gender and social classes being mobilized in the discourse of those agents in the legal field to substantiate their thesis for both accusation and defense. It is possible to perceive that these aspects are summoned in representations elaborated in the discourse as an strategy undertaken by the agents for a differentiation of the cases submitted to the trial as being either "crimes of passion" or "drug trafficking crimes". According to the findings of this research, the resort to this strategy makes evident a discursive violence in relation to aspects of gender and social class yielding the idea of defendants (female or male), victims (female or male) or crime committed being "more accepted" or "more tolerated" than others.

#### *Globalization, Market Transition, and Variety of Developmental Models: The Case of the Chinese Car Industry*

The Chinese automobile industry has been experiencing some profound changes during the recent market transition and globalization of the Chinese economy. Regarding to the ownership structure and technological upgrading strategies, there have been emerging four major developmental models among the domestic assemblers. Three major theoretical perspectives are then employed including the Schumpeter's hypothesis, the approach of global value chain, and the developmental state argument; however all have major limitations to provide a good explanation.

This paper proposed to apply an institutionalist approach to understand such a variety of developmental models in the Chinese automobile industry. Four representative cases including FAW, SAIC Group, Chery and Geely were sampled for a systematic comparison in the empirical analysis. The major argument is that the divergent paths among these Chinese car makers were historically rooted in the pre-reform ear of the planned economy, from where the local political structure, developmental ideas and related agencies took on different looks in the market transition and together contributed to a local social construction over the local automobile sector.

#### *Image of Occupational Stratification in China*

Based on the traditional social stratification theories, this research focused on the image of occupational stratification in China. According to different principles, such as income, prestige, power, the population can be divided into different occupational groups. From the perspective of academic study, this research firstly set up a serious of occupation titles, then exam how and why the interviewers divide the occupational titles into groups. As a consequence, the principles which be used most frequently is the key factor to distinguish the occupational stratification including some special influences such as household registration and the property of the working units. Hence, an image of occupational stratification can be constructed and be test by using survey data.

#### *Bringing the State(s) Back in: From Lula's Bolsa Família to Dilma's Sem Miséria*

Since Brazil's former President Lula Ignácio da Silva launched his successful national conditional cash transfer program (CCT) known as *Bolsa Família* (BF) in 2003, academics and development practitioners have been fixated on—who gets it, how are the beneficiaries identified, where does the money come from and how is it delivered, and what are the program's impacts—usually, does it reduce poverty. Judged upon these variables, BF has been quite successful and has been widely diffused throughout Latin America. It has however, been criticized for being a rather narrow form of social protection. This paper argues that BF and like-CCTs should not be considered as ends in themselves, but rather as a means towards consolidating a broader poverty alleviation strategy that includes complementa-

ry social investment initiatives such as labour activation policies and vocational training. Within *Sem Miséria*, new supply-side initiatives are being grafted onto the otherwise stable framework of BF. By tracing the timing and sequencing of Brazil's poverty alleviation initiatives over three presidents, this paper will demonstrate that Dilma's *Sem Miséria* is an institutionally feasible next step in expanding Brazil's social investment strategy beyond CCTs, a strategy that is dependent both here and elsewhere on cross-sectorial and intergovernmental collaboration.

**FEOFANOV, KONSTANTIN\*** (Moscow State Technological University, [konstantin.feofanov@gmail.com](mailto:konstantin.feofanov@gmail.com))

#### *Civilizational Basis of Russian Modernization*

Every country participating in the global modern age contest, has its own unique modernization profile, which is based on the country's civilizational features. Speed and specifics of every country's traditional societies evolution into the modern ones and further, are still subject to close analysis with a view to discover efficient methods, reasons, mechanisms, recipes and secrets of "progressive" and "accelerated" modernization development.

Russian modernization determinants are of a special interest because they hold back progressive, sustainable and effective growth. For over three centuries they have been recurring repeatedly, with great persistency and literality, and the modernization processes have been of inorganic, catching-up, tardy, mobilization, relapsing and recurrent nature. Their implementation procedure includes initiation not by society but by government using force. These processes are deeply rooted in Russian civilizational history and culture, as well as character and psychology; they are enormously powerful and no matter how much the government or population want it, they cannot easily "adjust" them.

These features of Russian modernization obstruct the transfer from tradition to modernity, and disable long-term and productive Russian modernization on a Western model, which would result in actual democracy, corruption level decrease, rule of law, and thereupon, in economic, environmental, cultural and technological achievements. Individual reforms and "modernization leaps" initiated "from the top-down", can only lead to temporary and relative results. Specific version of traditional society based on recurrent waves and de-modernization elements of the largest modernization projects, keeps prevailing. There is "balancing" between the imminence of "catching-up" copying of certain elements from Western modernity, and "national peculiarity" as inability to implement this assimilation, as well as floating influenced by increase of one factor after another without a resulting vector.

#### *Perception of Discriminatory Practices Among Brics' Countries: Brazil and South Africa*

This paper addresses the question of whether individual perception of discrimination is affected by occupational segregation by race and job status. We use data from Brazilian 2000 Census, Belo Horizonte Area Survey (2005) and Cape Area Survey (2005) conducted by the Federal University of Minas Gerais and Cape Town University. These surveys were designed to have comparable socioeconomic measures of many kinds of both cities. Processes of opening and closing of the labor market due to racial discriminatory practices are well-established topics among social stratification literature.

Perceptions of discrimination in South Africa and in Brazil are unique phenomena. In South Africa, up to 1994 discriminatory practices based on race were straightforward and safeguarded by national constitution. African, Coloured and Indian inhabitants were denied the right to vote and forced to reside in peripheral townships. Interracial sex or marriage was formally prohibited. In Brazil, in another hand, there is no clearly distinct cultural boundary that separates blacks from whites. Both groups have the same mother tongue and most identify themselves with the same icons of Brazilian nationality. The commonalities among Brazilian ethnic groups led to the establishment of a myth of racial democracy, that despite being contested with evidences, still seems to prevail in some sectors of society, whereas discriminatory practices linger as a tacit social agreement. We found evidences in both countries that point to a higher perception of social discriminatory practices when the socioeconomic and cultural status of the underprivileged group is higher. We can imply that more access to material and symbolic goods of the dominant group – as information, earnings and culture – could increase, instead of diminish, the perception of the minority groups of their conditions of prejudice and discrimination in the society.

#### *Changes in the Health System of the B'laan Indigenous Community– Its Factors and Effects*

The influences on the changes of the health system within a B'laan indigenous community in Southern Philippines deserve a deeper sociological analysis to partly explain the disparages in the epidemiological trend presently observable in indigenous health. In here, understanding health system adaptation is logically focused on the various aspects of belief system on health and illness, the health providers, preventive and curative treatments, utilization of medicines, and food source and dietary patterns. External factors in the form of exposure to outsiders, government intervention, acculturation to western-based medicine, and agro-industrialization are considered to be strong influences to the changes in the health system. On the other hand, internal influences to change include the demise and decline of traditional healers in the community as well as the non-utilization of the present locals to their traditional health knowledge.

As the change in the health system among the B'laans is inevitable and apparent, their ability to create an adaptive mechanism in the management of sickness, health and well-being is very limited. In turn, low adaptation capacity to western-based medicine likely result to poor health outcomes among the indigenous groups when compared to their referent majority population. Beneath the forceful influences, we go through the production and relations of power within the health system as the driving element for low-adaptive capacity.

#### *Agobiados?: El Impacto Del Plan Bolonia En La Estructura De Usos Del Tiempo Del Profesorado Universitario*

Se ha producido en Europa una profunda transformación del sistema universitario, para adaptarlo a los principios pragmáticos y de empresa propios de la cultura anglosajona, pero ajenos a la tradición de la Europa continental. Hemos asistido a un drástico cambio que ha afectado a todos los componentes estructurales de la Universidad desde sus formas organizativas a las metodologías do-

centes. El principio que alienta dichos cambios es que la práctica docente pasará a estar centrada en el profesor, para centrarse en el alumno.

Este proceso ha supuesto que, frecuentemente, alumnos y profesores han sido, al par, actores, sujetos y objetos. Paradójicamente, a pesar del fuerte impacto (y rechazo) que el Plan Bolonia ha supuesto, y del interés sociológico del proceso y sus efectos, es escasa, y en el caso español prácticamente nula, la investigación sociológica generada hasta la fecha. Sin duda una de esas cuestiones más impactantes, por la importancia que el uso del tiempo tiene en nuestras sociedades avanzadas, es la aparición de muchas nuevas obligaciones para el profesorado, que van más allá de las tareas docentes e investigadores y de gestión, propias de su trabajo.

Nuestra comunicación presenta los avances de una investigación sobre el impacto que la citada reforma ha tenido en los hábitos de trabajo del profesorado, en términos de usos del tiempo; esto es el tiempo dedicado a la investigación, la formación, la docencia, la gestión, la evaluación de su propia actividad o de otros profesores, etc., y de qué forma ello está afectando a su vida personal. La investigación se ha realizado con un abordaje de triangulación, mediante la utilización de tres técnicas complementarias: los grupos de discusión, una encuesta masiva de actitudes y una aplicación de laboratorio para el seguimiento durante varios meses de los usos del tiempo de un grupo de profesores.

#### *Between Academic Tourism and Student Mobility: Narratives of Students on the Move*

More than ever before student mobility is playing an important role to fulfill the idea behind "becoming a global citizen". Whether private or public, universities all over the world are including in their mission statements the commitment of attaining global citizenship by their students. US universities have a long tradition of sending students abroad (Hoffa 2007), in Europe they have developed a similar structure as a result of the Bologna Process. The vast majority of students involved in mobility are non-degree students who spend a year, semester or a few weeks abroad. Being abroad involves a complex process in which several agendas intersect, the university sending the student, the host university, the student's family, the host communities with all their cohorts and the student. From each side, several discourses and concerns arise: global citizenship, campus internationalization, cultural awareness, safety and security and the student personal, and often times, not clearly formulated agenda. Having received US students regularly in Merida, Mexico for over a period of twenty years, in this session I explore the narratives of travel and experiences that they have created/constructed in order to cope with their daily experiences while in Mexico when trying to conceal the different agendas. Of particular interest is their effort to avoid stereotypes, create a community on the move and engage with other communities avoiding academic tourism and the tourist gaze.

#### *A Comparison Between Time-Use Data Collected By Smartphones and a Paper Diary*

Smartphones and "apps" allows time-use research to be set up in a completely different way, such as for example a time-use app. Smartphone users have (almost) permanently access to this device, so respondents can report (more easily) their activities at multiple times per day, instead of using a paper diary in traditional time-use research. Additionally, smartphones enable to collect complementary information, such as exact location (by GPS), how people feel at random moments during the day (i.e. experience sampling), what short-term activities they do throughout the day (by pop-up questions such as about social media use), etc.

The Netherlands Institute for Social Research | SCP and CentERdata jointly conducted experiments to collect time-use data by smartphones. An app was specifically designed for this purpose (following HETUS-guidelines) and tested (n=150). The pilot study was evaluated positively regarding the technical software development and tests, as well as the willingness of respondents to participate, their response quality and the ease with which even inexperienced persons were able to use the smartphone app. Therefore the smartphone app is implemented in a larger survey. Data are collected from a random selection of the LISS-panel, which is representative for the Dutch public aged 16 years and older. People without a smartphone can borrow one, in this way everyone is able to participate. In order to be as similar as possible to the data collected by the traditional time use survey in the Netherlands (2011/12), data are collected for an entire year (2012/13). This paper will compare the smartphone data collection with the traditional Dutch time use surveys using a paper diary, both based on the HETUS guidelines.

*Economic and Labour Market Outsideness Among Young People in the EU*

This paper analyses economic and labour market outsidership for young people across different European countries and welfare regime models. We define 'outsiders' as those people who are either unemployed, in temporary contracts or have an income below 60% of the median. By using cross-sectional data from the European Union Statistics on Income and Living Conditions (EU-SILC, 2006) we find: (1) a considerable variation in rates of youth outsidership across EU member states. The persistence of youth outsidership – measured observing the duration of the spell of outsidership – is higher in Mediterranean countries than in Liberal, Continental and Scandinavian countries; (2) that the depth of youth outsidership is influenced by the different types of skills possessed by young people. However, the strength of the effect varies across different welfare regimes.

**FERREE, MYRA MARX\*** (University of Wisconsin, [mferree@ssc.wisc.edu](mailto:mferree@ssc.wisc.edu))

*Inequality, Intersectionality & the Politics of Discourse*

Paying attention to the history of the concept of intersectionality is essential if it is to be used to illuminate rather than disguise the dynamic politics of multiple inequalities in particular sites. The European borrowing of an originally US-centered term raises interesting questions of the kind of political work it is intended to accomplish. The naming of certain issues as "intersectional" (which implies that others are not) and the frequent use of the term "diversity" as a near-synonym to intersectionality as a process (which tends to remove it from a political to a managerial context) are two of the potential problems that arise in transplanting this term from one specific context to another. Intersectionality arose as Crenshaw's means of naming the exclusions in US antidiscrimination law targeting race and gender separately; what work does intersectionality do instead in a context in which diversity is framed as an addition to gender mainstreaming ("gender plus") or as localizing and individualizing culture as "differences" in Europe? Can intersectionality travel transnationally without either obscuring the distinctive history of racialized nationalism in the US or encouraging avoidance of confronting modern forms of racialization in Europe? Looking at several specific cases illuminates this argument about the "traveling discourse" of intersectional feminist policy discourse.

Global Environmental Change: Environmental Policies in China with reference to Brazil

**Abstract**

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proved to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century. Both Brazil and China still have many challenges to be addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investigate the trajectory by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two social spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research project. Regarding methodological aspects, different methods of investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary

research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

**Key words:** global environmental change, climate change, environmental policy, Brazil, China.

*Climate and People in a Region of Tension Between High Urbanization and High Biodiversity: Social and Ecological Dimensions of Climate Change*

Single policies adopted at a global scale are unlikely to cope with risks, impacts and uncertainties associated to climate change (Ostrom, 2009). Stakeholders of science, police and civil society recognize that dealing with environmental global change requires a multilevel and interdisciplinary approach to identify gaps and opportunities, and promote collective action. While climate change will expose regions to similar impacts, the extent of those impacts and effective response at the local level will be determined not only by the location's sensitivity and vulnerability but also by local groups and individuals' capacity, including their institutional links, social networks and motivation to actions. Considering this perspective, a research project is undertaken on São Paulo Coast, Brazil, a region of tension between high urbanization and high biodiversity. The São Paulo Coast exhibits the socio-ecological dilemmas of contemporary economic development. The combined pressures of tourism, industry, oil extraction transport, and sustainable development are increasingly difficult to resolve. The prospect of climate change intensifies this problem. Drawing on an empirical research on this area, our study aimed to set groundwork research on the environmental consequences of climate change along the coast of São Paulo, including the investigation of how solutions may require better understanding of local and regional government stakeholders' knowledge, concerns and actions related to climate change. Our results points out that are different arenas and conflicts around the local environmental issues. The identified arenas are characterized by different interests and aims, and asymmetric capacities to mobilize resources. The results highlight how local stakeholders and residents perceive climate change risks, indicating that the social and economic context and government support are determinants in the way people responded to risk threats. Our results also indicate how climate change issues are being framed by local governments in terms of policy strategies and instruments.

*The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal*

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and constitute the greatest challenge to the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empirically recent objects of the contemporary societies, in order to deal with the super complexification of social dynamics in a polycentric and polyphonic world. Considering this perspective, recent studies on conflicts demands a robust intellectual substratum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different restrictions or arbitrariness, such as: (i) legal issues, related to the use or appropriation of natural resources; (ii) scarcity related to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to review and analyze the state of art on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.

## RC01-44.1

**FERREIRA, RIALIZE\*** (RC01, [rializeferreira@gmail.com](mailto:rializeferreira@gmail.com))*Different Viewpoints of Contemporary African Intrastate Small Wars***ABSTRACT**

Africa has always been affected by external influences such as Western colonial rule and processes of independence of most states since the 1960s. The changing nature of African post-colonial politics led to increasing conflicts in most states because of power devolution and violent regime changes by military coups. Historical causes of intrastate small wars are mostly due to belligerents and non-state actors having greed and grievance issues, power struggles, resource wars, ethnic and religious differences, a lack of western norms and values which are not part of cultural ideas of development and also a lack of democratic principles, as these are not yet instituted in most countries. The default action is always to fall back on violence when belligerents are dissatisfied with current governments and breaking of peace accords by either of them. Changing sides in Africa is a normal occurrence, because alliances can change overnight. Enduring conflicts such as those in the Democratic Republic of Congo (DRC) and Sudan lead to economic hardships and social problems through the internal displacement of thousands of people in their home countries, as well as those of political refugees. Consequently, two-thirds of global conflict is currently in Africa and the majority of United Nations (UN) peace missions are hosted in these conflict-ridden African states. Reference to South African peacekeeping contributions in these states will be made briefly.

**FERREIRA DE ALMEIDA, JOÃO\*** (CIES-ISCTE-IUL, [ferreira.almeida@iscte.pt](mailto:ferreira.almeida@iscte.pt))TORRES, ANALIA (ISCSP-Technical University of Lisbon)  
BRITES, RUI (CIES-IUL)*Impacts of the Economic Crisis on Gender and Class Inequalities in Europe*

The presentation aims to understand to what extent the present crisis increases gender and class inequalities and subjective well being in Europe.

In periods of rising unemployment and reduced disposable income it is clearly relevant to assess their differential impact on gender and class relations.

Evidence will mainly be collected from the different rounds of the European Social Survey (ESS - 2002; 2004; 2006; 2008; 2010 and 2012). Other sources will also be used such as official information of GDP, Unemployment rates, Gini Indexes per country, Human Development Index (HDI), Gender Development Index (GDI) and Gender Empowerment Measurement (GEM), in order to "quantify" the effects of the crisis, comparing rescued and non-rescued European countries, the last ones being submitted for long to severe austerity policies.

Differences and inequalities between women and men should be accounted for, among other evidences, in social values types and loads of paid and unpaid work and in levels of life and work satisfaction.

**FERREIRA LEITE DE MORAES, DÉBORA\*** (FUNDAÇÃO GETULIO VARGAS, [debora.moraes@fgv.br](mailto:debora.moraes@fgv.br))*Reflections about Work, Time and Subjectivity in the Contemporary Culture*

The obsession for innovation, planned obsolescence and the consequent discardability have become conditions of the contemporary culture. A culture of consumption and the commodity form have impregnated our way of life, even people and their relationships. In this article, methodologically inserted in the dialogue between psychoanalysis and social theory, we will start from the premise that in this new version of capitalism, people can be considered as commodities in the labor market. And if we are commodities, in this endless shelf of products, we need to remain saleable because we are also disposable (or, to use common expression in business: we must invest, continuously, in our employability). It is precisely this point that interests us. The rules are unfair but clear: we must uninterruptedly upgrade to keep up with the frenetic speed of technological change. As well as the products, we have to innovate ourselves to keep our chances of employment. It is necessary to always deliver more in less time; we must permanently say yes to more tasks, donating our time of life to work. In fact, not only our speediness, performance and behavior have been constantly evaluated, but our personal values have been incorporated as a skill by the labor market. The contemporary discourse places our moral values at the same route of our technical or behavior skills. Our life has become a hurry to improve the commodity that we are and this include adapt our behavior, our moral values and also our beliefs according to the market demands. And all of this is necessary, but it is not enough. Besides not being sufficient there is no guarantee. Furthermore, in this condition of full mobilization, in this new capitalism of spirit, there is no separation between working time and lifetime.

COELHO, LINA (University of Coimbra)

*Family Money Management Arrangements: Using the 2010 Statistics on Income and Living Conditions Survey to Study the Portuguese Case*

In the last three decades, economists and sociologists have been interested in understanding intra-household money management arrangements among couples, its determinants and its implications on marital power, on intra-household inequalities and on the individual well-being within the family. One important contribution to the field has been the work of Jan Pahl and Carolyn Vogler (1993), who defined an useful, yet not free of criticisms and limitations, typology of money management systems, which has been applied in different cultures and contexts, mainly in the Western countries.

This research field has received limited attention in the Portuguese context, specific for its socio-demographic, labor-market, cultural, religious, and familialistic particularities, in the context of Mediterranean *organic communities* emphasize strong interpersonal interdependent relationships and close family ties within extended kinship relations. This research area may benefit with transcultural comparisons, as such international survey family micro-databases, as the 2002 International Social Survey Program, has been used in the recent years. Also the 2010 Statistics on Income and Living Conditions (EU-SILC) is an international survey whose data enables cross-national comparison. Nevertheless, it has never been used before with this purpose.

In this study, we apply Pahl's typology to the Portuguese case drawing on Portuguese 2010 EU-SILC data, enlightening the Portuguese intra-household money management patterns and its determinants. Of the 5182 households which participated in the Portuguese EU-SILC survey, 3331 composed by at least one heterosexual couple completed the study criteria and were included in our sample. Consistencies and inconsistencies, comparing to previous research, were found. Limitations in the applicability of Pahl's typology to the Portuguese case, and other difficulties in marrying up data collected at the individual and household level were also found, and its implications for the adaptation and refinement of this typology, as well as the particularities of the Portuguese case, are discussed.

BREIDAHN, KAREN N. (Aalborg University)

*Social Risks, the Nordic Welfare State and Institutional Trust – Do Migrants “Go Native”?*

In modern Western societies, the welfare state became a source of security against social risks. In general, social risks are often characterized by high uncertainty and vulnerability, e.g. concerning old age or unemployment. By granting a certain insurance against social risks the welfare state, conversely, provides the individuals with a certain “basis” for coping with social risks. However, what are the mechanisms that “translate” this basis into the individuals’ perceptions and understandings? Concerning this aspect, the role of institutional trust has been emphasized and characterized as both important for the individuals to handle social risks (i.e. “translation”) and the welfare state to gain and reproduce support by the citizens. The Nordic welfare states, characterized in general by a high social protection, universal, predominantly tax-financed welfare state arrangements, and comprehensive work/family policies, seem to do pretty well when it comes to trust, both concerning generalized social trust and institutional trust.

In this context, migrants in the Nordic countries constitute an interesting case – as newcomers to a high-trust country and thus its welfare state, how do they “adapt” concerning questions of how to handle social risks, the welfare state and institutional trust? Our empirical material consists of qualitative interviews with migrants in Denmark that contain e.g. topics like the migrants’ experiences with the Danish welfare state, their perception of it, how and if their perceptions on certain issues related to social risks have changed since their arrival in Denmark and how institutional trust is playing a role here. This gives us the possibility to shed light on mechanisms of (potential) institutional trust-building in the context of the Nordic welfare state.

FERREIRA, LEILA (Campinas State University)

*A Reflexive Calling: The Rise of Sociology and the Problem of Scientific Knowledge*

The rise of sociology during the Nineteenth century represented not only the strengthening of new ways of understanding the reality of social problems. In this historical process, it is also possible to see the rise of new ways of comprehending the scientific knowledge, specially the problem of objectivity in social science fields in connection with the objectivity foundations of natural sciences. The sociological "*Discours de la Méthode*" can be observed and understood throughout the classic period as a proto-reflexive critical concern about the logical development of the scientific reasoning, both in natural and human sciences (*Geisteswissenschaften*). As a result of the classical sociological analysis of the scientific method as a way of consolidating the epistemic roots of social sciences reasoning, the sociology developed during the XIX century an important and unique capacity of comprehending "science through the scientific method". Thus, in this paper we aim to develop a historical analysis of the rise of the critic and "reflexive vocation" of classic sociology as an important epistemic condition to the strengthening of the modern sociological conception of science in different fields of sociology like sociology of knowledge, sociology of science and sociology of scientific knowledge. In a first moment, the classics of sociology pointed out the "problem of knowledge" as an internal challenge to the development of a sociology as a scientific way of thinking; in a second moment, the contemporary sociology pointed out the "problem of knowledge" as a general difficulty to the whole scientific conception of reality, promoting a crisis in the logical demarcation of science in face of a real "social demarcation of knowledge".

#### *Russian In Israel: Group Competition and Language Status*

A linguistic situation in Israel has been charged with conflicts since the formation of the state. The primacy of Hebrew was the ideological cornerstone of Zionism. But the language that for centuries had been primarily used in religious practices had to compete with the flourishing languages of the Jewish Diaspora: Yiddish, Ladino, Judeo-Arabic and others, as well as with the European languages such as Polish, German, Rumanian and so on. Irrespective of the size of immigrant waves, all groups either voluntarily or by coercion rejected the language of their homelands in favor of Hebrew. The first immigrant group that showed determination to preserve its language and promote its status was Ex-Soviets immigrants of the 1990s. Today, Israel has two state languages, Hebrew and Arabic. De facto English functions as an official language, has high status and is essential for socio-economic upward mobility.

Ex-Soviet immigrants were primarily monolingual Russian speakers brought up in a multiethnic country where Russian dominated. Members of this group had higher education status than average Israelis and rejection of their mother tongue was perceived as the first step in downward mobility. This paper will analyze how creation of Russian-language media, schools, theaters, associations of compatriots and various informal networks went hand in hand with the promotion of the Russian language in the host society. We will look into the role of immigrant politicians, scientists and artists in bringing Russian culture to native Israelis thus preventing ghettoization of the immigrant community. We will also discuss linguistic implications of the rising status of Russian-speaking Israelis for one-and-a-half and second generation immigrants. Material for the paper was drawn from in-depth interviews, conventional and electronic media and participant observation.

**FICHTER, MICHAEL\*** (Global Labour University, [mike.fichter@global-labour-university.org](mailto:mike.fichter@global-labour-university.org))

#### *Meeting the Challenge of Global Corporate Power: A Strategy for Global Unionism*

Today, unions around the world are struggling to fulfill their role as voices of the political and economic interests of working people. In a climate of outsourcing, offshoring, flexibilization and casualization of work, the loss of union power and the deregulation of labor markets has flourished and opened the way for increasing precariousness and agency work. While continuing to fight to protect their hard-won regulatory instruments within their national domains, trade unions have also begun to look for transnational approaches to combat unfettered international competition that is fed by a race to the bottom over labor costs. The challenge for global unionism is in developing a strategy that will serve as a political and organizational answer to the dilemma it faces – namely, how to bring the power of unions, as locally or nationally organized entities, to bear on the transnational regulation gap in labor relations. I argue that there is a need to pursue a global union strategy consisting of three basic elements: First, it is based on the global framework agreement (GFA), a contract negotiated and signed between transnational corporations and Global Union Federations to set minimum standards of labour and human rights and enable unions to build and strengthen their organizational base. Second, it is dimensioned to extend labour relations be-

yond single transnational corporations to encompass the broader arena of global production networks. And thirdly, it is designed to link together local, national and global unions in transnational union networks to enhance the collective voice and organizational leverage of labour.

#### *The Role Of Farmer Education In South Australia*

There is a significant challenge involved with balancing food security at local and global levels whilst mitigating the environmental and social consequences of the historically productivist agri-food system, this work will address the importance of education in the South Australian agricultural sector as a tool to maximise beneficial outcomes. The results of a blended mixed method research project, which involved farmers and governance stakeholders in South Australia, are presented as empirical evidence highlighting the positive roles education, in particular university education, have in regard to increasing sustainability. Interviews with agricultural governance stakeholders emphasised the important role that education will play in building the adaptive capacity of farmers and having positive outcomes on the future development of the South Australian agricultural industry. It was also found that higher levels of formal education contributed to farmers: having greater confidence in their respective communities; being more likely to prioritise their environmental stewardship roles; being less concerned about the risks posed by large agri-business corporations; feeling there was less need to re-regulate the agricultural industry or restrict imports; and, looking for more support from government to adapt to a changing climate. Most importantly, however, was the dramatic reduction in farmer concerns with government support programs as education levels went from secondary or less, through to vocational qualifications, and finally university degrees. These results suggest that further education provides farmers with the capacity to compete effectively in a liberalised economy.

#### RC24-421.3

**FIG, DAVID\*** (University of Cape Town, [davidfig@iafrica.com](mailto:davidfig@iafrica.com))

#### *A New Tsunami : The South African Anti-Nuclear Movement in the Wake of Fukushima*

South Africa's government has made clear its plans to order a fleet of six nuclear reactors, providing an additional output of 9 600 megawatts. It also aims to reactivate other elements of the nuclear fuel chain such as the construction of an enrichment plant, a fuel fabrication plant, and a nuclear waste smelter. President Zuma has taken over from his deputy the chairing of the National Nuclear Energy Executive Co-ordination Committee, the intra-governmental body that is charged with overseeing procurement. The overnight costs of the reactors alone are likely to amount to between US\$60 – 100 billion, by far the biggest infrastructural purchase made by democratic South Africa in its 20-year history.

Seemingly the impact of Fukushima has not had repercussions among the responsible decision makers. Instead they have sought and gained approval from the International Atomic Energy Agency for the expanded nuclear programme.

However, civil society continues to challenge the plans as a *fait accompli*. Whilst the principal thrust in the anti-nuclear movement has come from its environmental NGO sector, new formations and new sectoral opposition is notable. Significant disquiet has been voiced by the trade union movement (in political alliance with government, but not on this issue), faith-based communities, academic energy researchers and civil society energy lobbyists, the consortium of large-scale electricity using companies, communities situated close to the construction of nuclear facilities, and even the government's National Planning Commission.

The paper seeks to understand the dynamics of government indifference to Fukushima, and the stress on Fukushima by opposing social movements, who have adopted TSUNAMI as the name of their coalition (The South African United National Antinuclear Mobilising Initiative).

#### RC24-433.1

**FIG, DAVID\*** (University of Cape Town, [davidfig@iafrica.com](mailto:davidfig@iafrica.com))

#### *Shale Gas in South Africa: Regulating a Resource Grab*

A number of transnational oil companies have recently been given the go ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier moratorium in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism in the area relies, and a subsequent loss of livelihoods, biodiversity and heritage. In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa's land surface.

The country's mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry's activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned by civil society, pointing to shale gas as typifying the 'resource curse'.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the new South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

### *Inscribing Dance: From Embodiment to Digital Media*

#### *Inscribing dance: from embodiment to digital media*

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It's matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanency.

Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, though video recording contributes to preserve intangible cultural heritage through the documentation of the *interpretation* of dance works, it cannot be taken for the work itself (as is the text of a play in theatre or the score for music). Further, this accessibility of information through technology, this "visibility in excess", is questioned both by practitioners and scholars; it can create a cultural bias, contributing to the contamination by cultural assimilation and globalization of a specific practice - to a certain extent, erasing what makes it unique.

Using specific examples of traditional and contemporary dance practices - the body as the first site of inscription of kinesthetic knowledge, text-based documents, audio and visual recording - this paper will attempt to shed light onto the different methods of inscribing and documenting dance, taking into account the sensory distribution of the different mediums. What is lost? What remains? And how does this sensorial translatability, from cells to pixels, generate alternative propositions to the documenting and/or re-enacting of dance/choreographic works?

### *Is There a Sociology of the Body Itself in Brazil?*

The sociology of the body can be understood as a fruitful research field, whose goal is to understand human embodiment (Csordas, 2008). By defining three research fields, Le Breton (1992) aimed to instigate reflections on how the phenomenon of embodiment is understood in the context of the social sciences and to build some sort of disciplinary matrix by mentioning many authors who are devoted to the study of the topic within the sociological field. Our work aims to answer whether there is a sociology of the body itself in Brazil by performing a bibliographical study of the period between 2000 and 2012. We used the journals A1, A2, and B1, classified by Qualis/Capes, from the fields of sociology and physical education. The keywords were: body technique; Mauss; and body. A total of 728 articles were found in sociology journals, of which two referred to body techniques, 36 to Mauss, and 690 to body. Of the total, 220 articles were selected (30%). With respect to physical education journals, a total of 1,791 articles were found. Of these, 45 related to body techniques, 46 to Mauss, and 1,700 to body. Of the total, 199 were selected (11%). Considering the range of works for the interpretative analysis, we selected 53 articles that referenced the term 'body technique' coined by Marcel Mauss. We aimed to identify: object of study; theoretical framework used; methodological approach; researcher's academic field; and the field corresponding to the journal. We found that there are scientific publications in Brazil, mostly from the social sciences and physical education, using the terms 'body technique', 'Mauss', and 'body'. In addition, we found that there is an important theoretical-methodological effort for establishing a sociology of the body itself.

### *The Dances and Their Meanings in the Kalunga Quilombola Community in Goiás/Brasil*

Paraphrasing Almeida and Suassuna (2010, p. 59), the stories and social relations that constitute the group are revived during the dances and, while dancing, people take their places in society, revealing the identities of the bodies and mechanisms of resistance or acceptance regarding new cultural patterns. Based on this understanding, this work intends to comprehend the meaning of dances for young people belonging to the Kalunga community of Teresina de Goiás (located in the State of Goiás, Brazil). We sought to analyze the transitional processes that have been taking place in the daily life of the Kalunga community in relation to the reception of the dances (values and practices) between the generations of older adults and young people. An ethnographic research using interviews and direct observation as techniques was carried out in the community. The interpretation of the information took place on the grounds of authors who discuss the topic in the field of social science in dialogue with physical education. As a conclusion, we can affirm that the bodies intertwine in the feasts and dances and promote dancing dialogues established between generations. The ritual system, constituted by means of feasts and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults' dance - *sussa*) and modernity (youth's dance - *forró*), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

### *"Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective*

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivations of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the polity as well. An institutionalized labour movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration; even when they have adopted "pro-migration" policy positions, approaches to organising and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course unions do not act to influence policy or organise migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organising efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

### *A State/Society Approach to Labor Standards Enforcement*

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be passed and then push the state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can work to create conditions for partnering with agencies in enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the notion that getting enforcement right is a technical problem that can be solved with the right strategy or correct internal organization of the bureaucracy. By contrast, it treats enforcement as apolitical problem of constructing institutions that can facilitate collaboration across the state and society divide, thus ensuring greater enforcement capacity. Using cases from highly different political and institutional contexts (US and Argentina), we contend that the latter approach has the potential to help

labor organizations further enforcement and argue that these findings suggest a need to develop more expansive theories of the enforcement process.

BRIATA, PAOLA (University College London)

#### *Comparing Two "Banglatowns" – Reflections on the Use and Transformation of the Streets in Rome and London*

The paper aims at comparing how two different "Banglatowns" were built-up in London and Rome. In both cases the "street" played a core role in urban transformation.

In London, the Spitalfields' case will be analysed. Here, a typical inner city has become in the last 40 years one of the biggest Bangladeshi enclaves in Europe. Since the end of the 1990s, its marketing as London's Banglatown was a product of an alliance between Bangladeshi political and commercial elites that represent the majority in the local Council. A number of area-based initiatives played a core role in this process.

In Rome, the Torpignattara case will be considered. This is an Italian "periphery" that started to receive foreign immigrants, in particular from Bangladesh, since the 1990s. Here it was the absence of this place in the policy agenda, and some consequent intensive uses of the streets by the immigrants' population that led to its labelling as a Banglatown.

Based on an idea of "diversity" that considers multiple axes of differentiation (e.g. national origin, class, gender), the paper will explore how these places' transformation led to a reconfiguration of the streets' uses that included new groups, excluding others.

The comparison between the two cases will focus on some core issues:

- With reference to the debate between formal vs. informal, policy vs. practice, citizenship right vs. urbanity right, was the presence/absence of a public policy where the immigrants played a core role a minus or a plus in these places?
- Is the street a privileged space for the cohabitation of differences? What kind of diversity is produced in the space of the street?
- With reference to the *Bangla*-towns image, what kind of "authenticity" was produced? Is authenticity a meaningful issue for the social construction of spaces?

#### *Distrust and Law-Evasion In Iran (Case study: Tehran city)*

Distrust and law-evasion in Iran. Case study: Tehran city  
Social capital is basis of development and stability in every society. Trust is one of the most important social capital indicators. Distrust is sign of erosion of social capital in every society. Erosion of social capital is named as Weak Intergroup objective and subjective relations in society, can issue disorder or law evasion in society. Therefore distrust to other (people and the authorities) about law-obligation can inbreed law-evasion in society. So this article explains distrust effect on law-evasion. In this research is used Putnam and Fukuyama theory to analyses social capital erosion. This method is survey research the study population of this study of women and men over 24 years in Tehran. And the data collected by questionnaire from a sample of size 384 people in Tehran. Method of sampling is Multi-stage sampling. After data collecting, research hypotheses examined in two inferential and descriptive levels by Amos and Spss package. Law evasion is divided in two dimensions: objective law-evasion (behavior) and subjective law-evasion

(orientation). In contextual variables, it is seen meaningful relation among gender, marriage position, type of job, age, education, economic position with two dimensions of law-evasion. Basic variables in this research with their total effect on dependent variable consist of, civil distrust (0/44), generalized distrust (0/21), disbelieve to law (0/26). Generally, these independent variables (with subjective law-evasion) explain %31 of the dependent variable variance (objective law-evasion). Whereas these variables explain %45 of subjective law-evasion variance. So social capital erosion has more effect on subjective law-evasion (orientation) into objective law-evasion (behavior). Hence to support inter group social capital in society can issue revival of law orientations and hence obey the law in society.

Keywords:

Distrust, subjective law-evasion, objective law-evasion, disbelieve to law,

#### *Race and Class Differences In Urban Environmental Participation: Investigating How School Gardens Connect Students and Families To Communities*

How are race and class related to environmental forms of civic participation? This project disentangles the differences in participation in environmental activities by race and class in one urban setting by studying the ways that students, families, and communities are/are not getting involved in their local school gardens. Building on the fact that there are few studies that specifically focus on non-White civic engagement, and even fewer that hold constant social class, compare across race, and look at environmental activities, this project is designed to fill these gaps by studying race and class differences in environmental engagement. Moreover, this study examines how student participation through a state-supported school garden program is related to environmental engagement, science aptitude, and nutritional knowledge of the students and parents of the children who are enrolled in the program. The project integrates pre-existing data on academic achievement, with survey and interview data collected through the three components of the project to understand the impacts the school gardens are having on students, their families and their communities. We find that there are significant differences in environmental engagement by race and class and we discuss how to understand them in detail.

**FITZGERALD, DAVID\*** (University of California/San Diego, [dfitzgerald@ucsd.edu](mailto:dfitzgerald@ucsd.edu))

#### *Comparative Ethnic Exclusion Of Immigrants In The Western Hemisphere, 1790-2010*

This paper calls into question the widely held view that in the long run democracy and racism cannot coexist. It shows that democracies were the first countries in the Americas to admit immigrants according to racial criteria, and undemocratic states the first to outlaw discrimination. Through analysis of legal records from twenty-two countries between 1790 and 2010, it explains a critical history of the rise and fall of racial selection in the Western Hemisphere.

The United States led the way in using legal means to exclude "inferior" ethnic groups. Starting in 1790, Congress began passing nationality and immigration laws that prevented Africans and Asians from becoming citizens, on the grounds that they were inherently incapable of self-government. Similar policies were soon adopted by the self-governing colonies and dominions of the British Empire, eventually spreading across Latin America as well.

Undemocratic regimes in Chile, Uruguay, Paraguay, and Cuba reversed their discriminatory laws in the 1930s and 40s, decades ahead of the United States and Canada. The conventional claim that racism and democracy are antithetical—because democracy depends on ideals of equality and fairness, which are incompatible with the notion of racial inferiority—cannot explain why liberal democracies were leaders in promoting racist policies and laggards in eliminating them. Ultimately, the changed racial geopolitics of World War II and the Cold War was necessary to convince North American countries to reform their immigration and citizenship laws.

#### *Who Builds Our Homes? the Power of Homebuilders in the Urban Landscapes in Brazil and the United States*

This paper analyses the transformations in the ownership structure of homebuilders in Brazil, and their relation to the financialization of the housing policy.

The analyses of the ownership structure of homebuilders, as well as their year-to-year transformations over the last ten years, allowed the identification of the investment flows that entered that sector: public funds, private equity funds, and

Initial Public Offerings. The results of our research indicate that these flows contributed to the increase in concentration and centralization of capital in the sector in Brazil. The flow of capital – affected by financial logic – has driven transformations in homebuilders' territorial and market strategies, in the building sites, and also in their products. In short, in architecture and urban forms.

At the same time, the ideology of homeownership and of the 'market economy solutions' were mobilized against other alternatives developed in different fights for the right to the city.

The increase of real estate companies' financial scale represents the increased asymmetry in the power to impose their requirements upon the city, as opposed to residents' power to democratically define the spatial organization of their lives.

The study compares the transformations that occurred in Brazil with those that took place in the United States. The concentration and centralization of capital in the American housing sector – with massive growth in open capital homebuilders – is also a recent process, fed by the housing bubble that exploded in the financial crises of 2007-08. This work discusses the similarities and differences of the impact of financial globalization in such different social structures, as are the Brazilian and the American systems.

This paper is based on research on the theme done during our masters and PHD in the fields of Urbanism, Sociology and Economics.

#### *Emotions and the Self's Past and Future*

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one's identity and morality. Many of his examples make it difficult to distinguish them from particularly strongly felt preferences. A British sociologist, Margaret Archer, proposed that in our inner conversations about our future commitments our memory of our past experiences and of the emotions that accompanied them contribute to the very process of decision-making about the future. Also in this case emotions seem to help in the process of teasing out one's preferences and, once these are chosen, of buttressing them. Discussing one form of reflexivity, however, Margaret Archer puts her finger on how the propensity to value strong emotional attachments can standardize personal responses to a great variety of situations, often with disastrous effects to the self. In my talk in contrast I want to show that specific emotions or, better yet, personal emotional geographies, are constitutive of unique individual identities in a sense of fixing or freezing the way an individual relates to her or his self, others and to the past, present and/or future.

#### *The Blinders of the Movement for Justice, Truth and Reconciliation*

What can be seen as a movement for Justice, Truth and Reconciliation is part of a larger movement for Human Rights and, along with the War against Impunity, a response to the atrocities caused by the perpetrators of dictatorships, civil wars and wars. In my presentation I would like to briefly sketch out the history of this movement before critically discussing some of its key discourses, and before turning to its forms of institutionalization, such as the Truth Commissions, International Criminal Tribunals and the International Criminal Court in the Hague. I will close by asking what these discourses and institutions leave out. In a Bourdieuan fashion I will propose that we deal with an emerging social field whose construction presupposes a specific, myopic vision of the world.

#### *Changing Family Models: Emerging New Opportunities for Fathers in Catalonia (Spain)?*

In the ongoing debate on changing family models as a result of the decline of the male breadwinner family model, the main focus has generally been placed on a possible shift towards a dual, full-time, adult worker model with a more equal gender balance and where fathers are expected to devote more time to the care of children (Lewis, Campbell and Huerta, 2008; Daly, 2011). On the other hand, in a context of growing family diversity less attention has been paid to the emergence of other work-family arrangements with emerging opportunities for fathers' dedication to their children. This is the case of couples with children in which both partners are unemployed or where the potential breadwinner is a woman.

In the present contribution, in the framework of a research project under way on father involvement in the care of children, we are trying to explore the characteristics and profiles of these families with a special emphasis on the changing role of fathers, in an institutional context where new social policies of fatherhood are being developed in the last decade. Using data from ECVP 2011, a regional social survey whose basic structure has recently been harmonized with EU-SILC, the paper examines the extent to which soaring male unemployment rates, in connection with other social and economic factors, are shaping new patterns of allocation of time involving a more equitable sharing of childcare and of domestic tasks between partners. What can be the long term consequences of these new developments for gender balance and for the relationships between fathers and children? Are these new arrangements here to stay as emerging new opportunities for fathers or will they fade away as soon as there is an economic recovery?

#### *Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)*

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women's employment patterns in different countries based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Pettit and Hook, 2005). However, very few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women's employment patterns over the family life course in different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women's employment patterns in different contexts (Pfau-Effinger, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to analyse from a qualitative methodological perspective how women's education partly explains differential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

#### *Indicators for the Institutionalization of the Social Sciences and Humanities*

We will present an interim report of work done in the EU funded INTERCO-SSH project, which deals with the institutionalisation and development of the social sciences and the humanities (SSH) in Europe. We will suggest a concise set of indicators which is being established for a comparative analysis of the development of the SSH in different national contexts. Preliminary data will focus on SSH disciplines in Germany, France and the UK from 1945 to the present. We will ask how these indicators can be used for the history of the SSH and what developments they are able to depict. The sources used are of qualitative and quantitative nature: interviews, statistical and bibliometric data, academic texts and archival records are gathered and combined for this purpose.

The objectives of this work is to identify national patterns of institutionalization which might explain the relative isolation of national traditions in the SSH and to assess the importance of the disciplinary division of labor within the SSH in order to reflect upon the historically changing power relations between branches of study, processes of professionalization of new disciplines, the reshaping of traditional forms of scholarship and the potentialities of new mechanisms of intel-

tual and institutional collaboration and exchange with or without consequences in terms de-disciplinarization of disciplines.

The development of SSH disciplines will be compared in the domains of research, teaching, publication outlets and professional associations. The social and intellectual characteristics of the disciplines' research staff, students, degrees, the research communities' dominant topics and study targets, the technicalities and methods applied and their preferential forms of both, scholarly and popular communication in various periods are part of the data processed in this project.

«The research leading to these results has received funding from the European Union Seventh Framework Programme (FP7/2007-2013) under Grant Agreement n°319974 (INTERCO-SSH)»

### *Why Understanding the Nazi Past Did Not Become the Topic of a Book Written By Everett Ch. Hughes*

Chicago sociologist Everett Ch. Hughes (1897-1983) spent a semester in post-war Germany as the first visiting professor in an exchange program between his university and the Goethe University in Frankfurt in 1948. As an ardent field worker he wrote field-notes about his experiences, his conversations with ordinary Germans, his observations about his students and the professors he met which he planned to make into a book after his return. He submitted a book proposal and a sample chapter to the University of Chicago Press but the editor rejected it because he thought that there would no public for such a report. Hughes did not approach another press and published only two short papers on the whole topic, one of them became relatively well known: "Good people and dirty work" appeared in *Social Problems* in 1962.

My paper will first give an overview of Hughes' unpublished book and then point to his "oral publication" of the idea of good people and dirty work, a concept which influenced besides others Hughes' student Erving Goffman. In addition I will indicate later usage of this concept by Hughes himself.

In concluding I will put Hughes' failed book project in the larger context of the remarkable lack of sociological publications about Nazism and argue that one should not blame sociologists for their neglect but also point to attitudes on the side of gatekeepers like publishers and the public at large.

### *Challenging the Routine in Peru's Hydrocarbon Sector – the Potential of Prior Consultations, Indigenous Mobilizations, and Conflicts for Change*

Peru's first case of prior consultation in the extractive sector concerns the country's most important oil block located in the Northern Amazon. Even though the formal process has not yet officially begun, local indigenous federations have already formed a potent opposition, trying to dictate the terms for conducting consultations in the first place. This means that in an area without much state structure, indigenous peoples were able to use the consultation's announcement to make their own claims heard.

The goal of this presentation is to analyze the preparatory phase to this first prior consultation using the contentious politics approach (Tilly and Tarrow 2007). How did political opportunity structures as well as the abilities to mobilize and build alliances enable indigenous peoples to successfully influence the political agenda and shape the consultation process? Moreover, how can these factors also be effective in shaping consultation outcomes and might they in the long run help to change the non-participative routine in the extractive sector and resolve socio-environmental conflicts?

These questions will be addressed by first taking a closer look at the case described above. In an attempt to generalize some of the findings the presentation will end by taking a brief look at 26 new consultations in the Amazon Area. Those were announced by Peru's state oil company Perúpetro and are currently scheduled for winter 2013.

### *International Mobility of German Diplomats and Their Families: Direct and Cross-over Effects on Quality of Life, Family and Partnership Outcomes*

International work assignments are often found to be stressful and to affect employees' and their accompanying partners' well-being. However, whether this applies also to diplomatic personnel who are relocated regularly is unclear. The study surveyed the health-related quality of life, the reconciliation of work and family life, and the partnership satisfaction of German diplomats. Potential risk factors are the duration of international mobility (years spent in the diplomatic rotation scheme; number of postings abroad), perceived stress, and employee's attitudes towards working/living in diplomatic rotation. Potential protective factors include cognitive coping, internal control beliefs, self-efficacy, preoccupation with the host country's culture, and social support. As a key aspect, crossover effects between employees and accompanying partners are analyzed. N=2.433 active diplomats in the German Foreign Service were assessed using self-rated online questionnaires. Corresponding assessments were obtained from N=321 accompanying partners. While perceived stress had negative effects on all three outcomes, the number of years passed in diplomatic service and the number of postings had no effect. Diplomats who saw more advantages over disadvantages of diplomatic rotation reported better health, easier reconciliation of work and family life and better partnership satisfaction. Cognitive coping, self-efficacy and social support had several positive effects on the outcomes. Additionally, cognitive coping moderated the effects of stress on health. Crossover effects revealed that accompanying partners' stress levels and their attitudes towards living in diplomatic rotation are among the determinants of expatriates' quality of life, family, and partnership outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employer's prevention strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

### *'cultures of Sick Leave': Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden*

In line with what has been described as a 'cultural turn' in the social sciences over the last decade, 'cultures of sick leave' has become an important concept in Swedish social insurance studies as well as in political debates. 'Culture' has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining *how* the concept is used and what it *does*, this study offers an ethnomethodological understanding both on the empirical level and on a meta-level. It is found that 'culture' tends to be used (or refuted) as *explanation*, without much theoretical or methodological grounding. Instead, culture is often applied in a common-sense manner, rarely problematizing how it translates into empirical studies. The paper discusses how the concept of culture works to negotiate the institutional category 'sick absentee' in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a 'culture' anyway, and what can be done about it? As an alternative approach, the paper suggests *ethnomethodology's* way of studying culture as it is being 'done'. Seeing culture as constituted in discourse, and placing culture in action rather than action in culture, opens up for a bottom-up analysis in which members' situated practices are in focus. Furthermore, *conversation analysis* provides a rigorous methodological framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctor, and the state official administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the category are co-constructed and negotiated: *how* 'cultures of sick leave' are done in the fine details of interaction.

### *Building Back a Better Nation: Disaster Rehabilitation and Recovery in the Philippines*

The paper explores the operationalization of Disaster Rehabilitation and Recovery in the Philippines context. It is divided into four sections. The first section discusses the origins and development of Disaster Rehabilitation and Recovery as a thematic area. It highlights the paradigm shift in the Philippine Disaster Risk Reduction and Management System which was brought about by the enactment

of Republic Act 10121 as its legal framework. The second section discusses the design principles of Disaster Rehabilitation and Recovery. It explains how Disaster Rehabilitation and Recovery is carried out through the National Disaster Risk Reduction and Management Plan. It explains the involvement of the communities in rehabilitation and recovery programs. It also discusses the Post-Disaster Needs Assessment (PDNA) as a specific Disaster Rehabilitation and Recovery tool. To further illustrate the use of PDNA, the third section presents the case of Davao Oriental, a province in the Mindanao region, which was heavily devastated by Typhoon "Pablo" (International Name: "Bopha") last December 2012. It also explains how civil property rights serve as among the major considerations in the aftermath of a disaster and how the PDNA takes into account the civil property rights of the victims.

#### *Buddhism and Critical Social Science on the Causes of Suffering: Towards a Dialogue*

In order to demonstrate the possibilities of building a philosophically and empirically informed framework for the study and alleviation of suffering, this paper compares the Buddhist tradition and critical social science from the perspective of their understanding of the nature and causes of suffering. Though both traditions are driven by the wish to combat suffering, their understanding of the causing of suffering differs. There may be, however, a productive complementarity in this difference; and yet frictions between the two traditions are real enough. Furthermore, neither tradition exists in a social or ideological vacuum. Thus, establishing a dialogue between these and other traditions calls also for reflexivity, critique and self-critique.

#### *Globalización y Construcción Identitaria. El Caso De Los Jóvenes Universitarios En México*

La globalización ha generado diversos procesos que permiten la movilidad de productos, mercancías, personas, información e ideas sin que las fronteras de los países sean un obstáculo, salvo en algunos casos. En el proceso identitario, las costumbres, valores y significados de una determinada región eran los que conformaban la identidad de una persona o colectivo. Con los procesos de movilidad resultado de la globalización, la permanencia física en un lugar no son necesariamente determinantes en la conformación de la identidad, ya que al estar en contacto con los productos, valores e ideas de otros lugares, éstos van formando parte de los significados que se construyen. La globalización crea una nueva manera de construcción identitaria. Lo anterior puede observarse con mayor facilidad en las ciudades, donde existen los recursos que permiten este intercambio de ideas. Dentro de los centros urbanos, los jóvenes por sus características, resultan consumidores ideales de las propuestas surgidas en el entorno global. En este sector, quienes estudian un grado universitario pueden contar con mayores elementos de asimilación y mayor movilidad para integrarse en un sistema global. Por esto, resulta pertinente estudiar cómo es que la identidad de los jóvenes universitarios se construye. La ponencia que se propone es parte de la investigación que se realiza para integrar la tesis de grado dentro del programa del Doctorado en Ciencias Sociales. Se busca explicar cómo se da la construcción identitaria a través de los agentes socializadores presentes en la vida de los jóvenes. Los medios de comunicación y las tecnologías de información resultan de gran importancia en este proceso, ya que es gracias a ellos que se facilita el intercambio de ideas. Para entender cómo una persona ha construido su identidad con base en la internalización de los significados externos, se estudia cómo verbaliza su historia.

#### *On the Maturation of Immigration Detention: Theoretical Approaches and Evidence*

The detention of irregular migrants and asylum seekers has become a prominent feature of both national and international efforts to "manage" global migration. An important aspect of this phenomenon is the emergence of new institutions devoted to migrant detention, which can be observed for example in the gradual shift in countries across the globe from using prisons or other "off-the-shelf" facilities to dedicated immigration detention centers. This maturation of immigration detention regimes has important implications, not least of which is

the fact that it appears to have occurred at the same time that the number of migrant detainees has increased. Is there a correlation between the institutionalization of detention regimes and the increasing reliance of this method of migration control? Using data on detention regimes from the member states of the Council of Europe, where human rights norms appear to have had an important impact on how detention practices have evolved in recent years, this paper seeks to address this question through differing theoretical approaches to state behavior. For example, has pressure from human rights actors been a key driving force for the institutionalization of detention? If, so what implications might this have for how rights actors view the long-term consequences of certain liberal norms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the European region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

**NEMIROVSKAYA, ANNA** (National Research University Higher School of Economics)

#### *Frontier Societies: Culture and Social Institutions*

The paper presents a cross-cultural study of contemporary frontier societies, based on analysis of World Values Survey data from the USA, the Russian Federation, Canada, Australia, Argentina, and Brazil. Consistent with Turner's "frontier thesis", we find that frontier societies carry a common syndrome of socio-cultural attributes, ranging from higher levels of membership in voluntary associations and civic activism, to greater libertarianism and skepticism of government. The "frontier thesis" therefore explains not only the historical experience of America, but constitutes a common frontier phenomenon in other world regions and continents, with different settling patterns of new lands. The experience of living on the border areas leads to the formation of a stable set of values, distinctive features of frontier life, such as individualism, egalitarianism, libertarian commitment to the principles of economics, social activism, higher levels of social trust and tolerance of outgroups, civic protest, social conservatism, traditionalism, less support for the federal government rule and others.

#### *Re-Thinking Cautious Urban Renewal. the Iba (Berlin, 1984/87) As an Early Attempt for a Politicized Strategy for a Sustainable City*

Apart from the fact that the strategies for a sustainable city today form the basis of a neo-liberal urban, mainly environmental policy, the main question remains of the genealogy and initial potential of some of the key concepts. The International Building Exhibition (IBA) in Berlin in 1984/87 with its two areas IBA Alt and IBA Neu, and the two strategies of a critical reconstruction and a cautious urban renewal, seen as a paradigmatic case study in light of the specific situation in Germany in the 1980s, especially the conditions in West Berlin, by linking urban rehabilitation with social and ecological objectives produced alternative, but ultimately normative models of urban regeneration, not only with regard to European urban planning, but of global interest. This paper analyzes, to what extent primarily the IBA Alt – as a paradigmatic concept of development in response to the policy of redevelopment by demolition and reconstruction of the 1960s and the common squatting practice, with its procedures and highly conflictuous processes of advocacy, participation, and self-building for the socially engaged and responsible restoration and maintenance of old tenements, new forms of responsibility and ownership, the provision of green spaces and social infrastructure – at first promised a politicization and democratization of urban renewal and everyday life. Since the IBA, funded by federal and state agencies, is called back to mind for its projects and protagonists with various research, exhibition and publication projects to mark its 25<sup>th</sup> anniversary, I will discuss the function of cautious urban renewal, both its positive achievements and uttered criticisms. In revisiting the IBA, I intend to provide a historically argued contribution to the current debate on sustainability and the city, by not only by highlighting planning processes, but by challenging the dimensions of the ecological and the social.

#### JS-59.1

**FOGIEL - BIJAOU, SYLVIE\*** (The Academic College of Management, [sylvie@colman.ac.il](mailto:sylvie@colman.ac.il))

#### *The Cosmopolitan Future: A Feminist Approach*

Our study questions the approach according to which world society is shaped by "the clash of civilizations". For that purpose, referring to Beck and Sznaider (2010), we analyze what we call the cosmopolitanization of feminism, i.e. this pro-

cess which enables the gradual recognition of "the others's others", the women, through the evolution of the political rights of women at the global level.

In this context, the descriptive representation of women (understood as the increase in the number of women elected in order to reflect the composition of the electorate), as well as their substantive representation (women's political representation which advances women's human rights), and their voices within civil society in the North and the South highlight the fact that feminism is undergoing a process of cosmopolitanization, albeit very slowly and in a sporadic way.

In order to present our argument, we adopt a postcolonial feminist reading together with a research method based on national, regional or transnational NGOs' data or on data provided by the Inter-parliamentary Union, UNIFEM and U.N.-Women.

Our article is divided into four parts. In Part One, we precise the meaning of the process of cosmopolitanization as applied to feminism. In Part Two, we describe this process and the way it is articulated "from above" (top-down cosmopolitanization), referring, among other things, to electoral data from around the world and to International Law which, today, guarantees the political rights of women - more or less successfully. Part Three analyzes the cosmopolitanization of feminism "from below" and refers to feminist theories, cyberfeminism and to the global civil/feminist society. Finally, in Part Four, the conclusion, we discuss the common future of feminism and cosmopolitanism.

#### *Logement Et Structures D'accueil Des Usagers De La Psychiatrie : Les Enjeux De La Reconfiguration Socio-Politiques De 6 Pays Européens*

L'hôpital psychiatrique assurait jusque là un hébergement à long terme. Avec les grandes réformes de la psychiatrie et le développement des neuroleptiques le suivi médical des patients peut se réaliser en dehors de l'hôpital. L'intégration sociale du patient passe par l'accompagnement de professionnels de structures médico-psycho-sociales. Ce nouveau modèle, en rupture avec le modèle "asilaire" est porté par l'OMS et se développe progressivement en Europe. Le logement apparaît comme un déterminant majeur de santé et d'intégration sociale. Des dispositifs socio-politiques d'accompagnement et de maintien dans le logement des personnes en situation de handicap psychique ont vu le jour. En effet, comme les autres citoyens, les patients de la psychiatrie doivent avoir la possibilité de vivre dans un environnement social qui regroupe tous les lieux de vie : la famille, le logement, l'école, le travail, les loisirs. Est ce une utopie ? Comment renforcer les soins psychiatriques, dans la communauté, avec une dés-hospitalisation raisonnable ? Comment éviter l'héritage de l'ancienne relation asymétrique entre la médecine psychiatrique et la société ? Quelles sont les alternatives aux longs séjours en hôpital sur le territoire européen ?

A partir d'une socioanalyse sur le terrain de 6 pays européens, notre communication se propose de montrer comment dépasser la notion de handicap et accroître les possibilités d'accès aux soins psychiatriques et de prise en charge dans le milieu ordinaire. Elle précise comment des solutions adéquates sont trouvées en zones urbaines ou rurales quelque soit le pays. Elle dévoile les rapports de pouvoir, les conflits d'intérêt et les enjeux idéologiques, socio-politiques et socio-économiques qui sous tendent cette reconfiguration de la psychiatrie et de la santé mentale.

Notre projet de recherche porte sur les situations française, luxembourgeoise, belge, grecque, suisse et roumaine. Il bénéficie d'un financement Européen.

**FONG, ERIC\*** (University of Toronto, [fong@chass.utoronto.ca](mailto:fong@chass.utoronto.ca))

#### *Social Cohesion in Multi-Ethnic Community*

From the beginning of the sociological study, social cohesion in community, usually measured by community ties, have been a key topic of discussion. Community ties provide social support, foster social relations, and facilitate social capital among residents in a community. They also facilitate a sense of attachment to the community, encouraging a commitment to local institutions and involvement in community activities. Two major hypotheses have guided the discussion of community ties in the literature: the *race/ethnic homogeneity hypothesis*, and the *integration hypothesis*. The race/ethnicity homogeneity hypothesis suggests that the larger co-ethnic proportion in a community promotes community ties, while the integration hypothesis suggests that length of residency in the community facilitates community ties. Though there are many publications on these two hypotheses related to community ties, few of them have considered several significant changes in society. First, we know little about how the hypotheses are relevant to the current population of immigrants who come from diverse social and demographic backgrounds. It has been well documented that the representation of immigrants has grown rapidly in major North American cities. Second, as cities become more multi-ethnic, little is known of how the two hypotheses relate to different racial and ethnic groups. In this study, we merged the 2008 General Social Survey with the 2006 Canadian census to explore how co-ethnic composition and

duration of residence in a community are related to community ties. The findings suggest that, in a multi-ethnic context, co-ethnic proportion in the community is no longer associated with overall community ties for minority members and immigrants. However, our findings show that the association between residing for a longer time in a community and overall community ties is still applicable today.

#### *The Role of Intellectuals in the Construction of Public Policies: The Example of the Educational Reform of Vichy*

This paper aims to show how intellectuals can contribute to the imposition and the justification of a particular social order through their participation in the construction of a public policy. From the example of the educational reform of Vichy, we show the role played by some intellectuals in the definition of a "school problem" and in the prescription and the implementation of solutions to solve it.

Some of conservative intellectuals (academics, writers, journalists) assembled in networks (circles, leagues, associations) struggle, in the interwar period, against the republican school and its ideals. A relatively unified discourse about the problem of the school appears, transmitted by significant resources (specialized and mainstream publications, public meetings, etc.): the established educational institution would promote the moral decadence of society (I). In 1940, the emphasis of this "school problem" by Petain and other high-ranking military officers, members of the same groups which were marginalized under the Third Republic, give them a window of opportunity to contribute directly to the reforms (II). The seven ministers of Education under Vichy and their collaborators come from these networks and will do public policies inspired by the solutions suggested before the war (make the school a nationalist, elitist and religious institution), even if internal contradictions in the conservative group will appear (III).

#### *When Symbolic Violence Changes: The Example of the Educational Reform of Vichy*

This paper aims to understand the mechanisms of symbolic violence through the capacity of the State to impose a specific social order by means of public policies. Public policies are, according to Pierre Bourdieu, one of practical modes for the exercise of symbolic violence: as much as the government justifies and legitimizes its intervention, it legitimizes the dominant representations of the social world. From the example of the educational reform of the Vichy regime - on which focus our thesis - we will concretely evaluate what resources the new government has to impose a new vision of the educational institution and the limits to which it is confronted.

In 1940, the establishment of the Vichy regime allows activists of a conservative school, marginalized under the Third Republic, to occupy key positions in the Ministry of National Education. Against the republican school (free, secular, positivist) established in the late nineteenth century, it is an elitist, religious and nationalist school that is proposed as necessary to recover France (I). Beyond the speeches, some tools are actually implemented by the new government to produce this new vision of educational institution: change the structure of the Ministry, transform the organization of teaching, change teachers' formation, impose new men at all levels of the hierarchy, etc. (II). This symbolic violence, which really translates into some institutional structures of the society - very quickly because of the authoritarian nature of the regime - is however limited by some actors. Teachers, street level bureaucrats who are responsible for implementing the reform, will resist at this violence (III).

**FONTAN, JEAN-MARC\*** (Université du Québec à Montréal, [fontan-jean-marc@uqam.ca](mailto:fontan-jean-marc@uqam.ca))

#### *Social Innovation and Societal Change: Role and Impact of Clinical Sociology*

For over twenty years, a wide range of research processes and activities have been developed in response to demands brought forth by representatives from local initiatives working toward social innovation specifically by means of social transformation. Among the main organizations that embarked on this undertaking are the Service aux collectivités (SAC) of the Université du Québec à Montréal (UQAM), the Alliance de recherche universités-communautés en économie sociale (ARUC-ÉS), the Centre de recherche sur les innovations sociales (CRISES) and the Incubateur universitaire *Parole d'excluEs* (IUPE).

In that context, collaborations were formed with labour representatives (to counteract plant closures and mass layoffs), with local development initiatives (similar to those involved in the revitalization of the Angus brownfield in Montre-

al), with community organizations (working to provide social housing in the fight against poverty and social exclusion) as well as with the social economy and solidarity-based economy (through Quebec government support for the new social economy).

With this historical backdrop, we present a summary of our reflections on the capacity of such initiatives to impact social change. When evaluating initiatives, we proceed in three steps. To begin, we examine the extent to which an initiative is able to respond to social or socio-economic emergencies, thereby testing its reformist capacity. We then look at its institutional impact on the production of societal frameworks, namely through its ability to contribute to the determination of new path dependencies. In a third step, we identify the conditions that would allow it to increase its reformist or restorative capacity as well as its potential to act as an agent of change within the societal framework.

#### *Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales*

Les inégalités sont souvent définies à partir de l'adjectif qui les qualifie. Elles sont sociales (Bourdieu, 1966), scolaires (Duru-Bellat, Van Zanten, 2009), éducatives (Perier, 2007), culturelles (Lahire, 2004) ou numériques (Granjon, 2009) et renvoient au fait que les capitaux sont inégalement distribués dans l'espace social. Cela entraîne une hiérarchie des positions sociales des individus où l'inégalité touche ceux qui subissent (Bihl, Pfefferkorn, 2008).

Si les inégalités numériques s'intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques *off* et *on line* (Granjon, 2009 ; Casilli, 2010 ; Fontar, 2010). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

Le Mentec (2010 et ANR INEDUC<sup>1</sup>) interrogera l'articulation institutions/usages en montrant en quoi les institutions d'aide à l'insertion renforcent les phénomènes d'exclusion à travers la mise en place de dispositifs techniques présumant des savoir-faire chez les usagers. Plus largement, la relation d'aide proposée s'établit sur un rapport dominant-dominé créant une forme d'inégalité qui touche les capacités d'actions des personnes.

Fontar (2010 et ANR INEDUC) questionnera le rapport représentations/usages en montrant que la tyrannie de la majorité (Pasquier, 2005) crée une norme sociale pouvant générer des difficultés d'appropriation chez les adolescents. La pression sociale à « devoir y être » ne sous-entend pas nécessairement des compétences développées ni des usages variés. Elle s'attachera à déconstruire le mythe du « Digital Natives » (Prensky, 2001) qui présume implicitement une innéité des pratiques et voile le rôle des apprentissages.

Ainsi, cette proposition de communication contribue à relativiser les visions enchantées du numérique (notamment ces bienfaits émancipatoires) en en montrant son pouvoir de renforcement des inégalités sociales.

#### *Consumption and the Social Organization of the Illusion*

**CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION**  
Isleide A. Fontenelle

Associate Professor - Fundação Getulio Vargas- Brazil  
[idefontenelle@uol.com.br](mailto:idefontenelle@uol.com.br)

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. The analysis adopts the Marxist approach with regard to consumption's place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a consumer as a new form of subjectivity who is moved by a desire to consume. Resorting to the dialectical method as developed by Marx, i.e. based on the idea of movement and contradiction, the article tries to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life

and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the "enclosure of the commons".

#### *Disabled Women and Sexual Violence in Portugal*

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning difficulties either living in institutions or with their families (OPM, 2009; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in Portuguese society. Therefore the lives of disabled people are still marked by exclusion, poverty and prejudice. In a context that is particularly disabling, masculinized and male-oriented, such as Portugal, disabled women are in a particularly vulnerable position, accumulating the inequalities based on disability and sexism.

Based on the Social Model of Disability and drawing on the research project 'Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal' (funded by the Portuguese Foundation for Science and Technology - reference PIHM/GC/0005/2008) and on my post-doctoral research on disability hate crime in Portugal (funded by FCT - Reference SFRH/BPD/80059/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage and original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

#### *What's New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People's Movement*

Until the 1960s, social movements were comprised mainly of workers' movements, focused on class and economic issues, highly organized in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social conflicts beyond the workforce, particularly in Europe and North America, and the subsequent emergence of numerous social movements around new 'post-material' issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society as its key location, organized in non-hierarchical structures and networks and embracing direct action and protest.

As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled "for equality and participation on an equal footing with other citizens" (Driedger, 1989: 1). This action was made possible by the creation of the Disabled People's Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People's Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People's Movement in Portugal (completed at the University of Leeds - UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People's Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people's movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

### **Violence Against Female International Students and the Need for 'Gender Security'**

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than a third of women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for 'gender security'. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research involving 146 in-depth interviews with international students and other key informers who work closely with international students. The paper presents knowledge about stalking, rape, assault and domestic violence against female international students. The study also presents ideas about education and response programs that address the issue of gender security. The study uses an intersectional analysis and a claim for human rights to argue for an expansion of preventative and response programs relating to violence against female international students. Findings indicate that female international students are far more likely to be victims of violence than male international students. It is also suggested that low reporting of gender-based violence is exacerbated within the international student cohort. The findings of this paper will be of value to female international students and their families, wider communities including in particular women from diverse backgrounds, practitioners and scholars concerned with the issue of violence against women, the international education sector, and host education institutions and nations.

### ***Comparing Inequality of Educational Achievement in Australia, Britain and South Africa***

Using Critical Race Theory as a foundation, this paper will analyse inequality of educational achievement of racially marginalised groups in Australia, England and South Africa. The countries have quite different but connected histories. This paper will focus upon Indigenous Australians, Xhosa in the Western Cape of South Africa and Afro-Caribbean migrants to England and describe the scope of inequality. In each country the educational system is failing these marginalised groups, despite the recognition of inequalities based on racial, ethnic and cultural markers rather than on educational ability. Western style education systems privilege particular epistemological and pedagogical approaches, education structural features and teacher relations, whilst ignoring evidence of different, more inclusive and culturally appropriate approaches that could effectively reduce the inequality

### ***Breaking through or Locked in? Global Unions and Their Institutional Articulation with Trade Unions in Asia***

Both leading labour geographers and theorists of transnational activism have noted that there is a weak understanding of the articulation between global institutions and networks, institutions and social formations at other geographic scales. As Tarrow (2005) has suggested, what is lacking more generally in discussions of globalisation and civil society is recognition of the specificity of 'the mechanisms necessary to confront the concrete experiences that mould discontent into specific grievances against specific targets' and the ability to 'negotiate boundaries' between 'domestic political settings, national governments and international institutions'.

This paper takes up these concerns with regard to the articulation between the Global Union Federations (GUFs) and trade unions in Asia. The GUFs have all grown over the last decade in in terms of affiliated unions, members and geographic coverage. However, this formal increase in global representativeness has not always translated into legitimacy and meaningful influence with affiliates or externally. GUFs have coordinated many effective multi-scalar union-building organising and campaign initiatives – something their status as 'global' coordination bodies affords unique opportunities to do. However, it is also evident that the scope, form and intensity of GUF interventions are defined by their own institutional capacity and limitations (including resource constraints), leading to an uneven and opportunistic implementation of strategies and goals.

This paper analyses the complex interaction between the development, durability and effect of global/regional labour networks and campaigns and the institutionally embedded character of unions and workers at national and sub-national scales. It argues that, in Asia, such an analysis requires deep consideration of varying institutional and political landscapes as well as unions' forms, repertoires of action, understandings of labour internationalism and articulation to the state and politics at geographic resolutions including, but moving beyond, the national scale.

### ***Personalized Engagement in the Current 'New' Wave of Anti-Mafia Grassroots Mobilization***

This paper discusses the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully encourage a growing number of entrepreneurs and shopkeepers to refuse to pay racket fees to local mobs in the city of Palermo, Italy. By using communication technologies that enable personalized public engagement as part of a new interpretative frame which has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students formed in 2004 – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by organizing itself locally as well as globally, and via Internet. Data for the analysis came from several sources of information, such as interviews with the activists themselves, participant observation, media analysis and a unique dataset reporting the answers given to a structured questionnaire with more than 70 closed questions, distributed in 2011 to 277 entrepreneurs who had joined the mobilization campaign entitled "Change your shopping habits to fight the pizzo" at various points in time.

### ***United We Buy: Re-Embedding the Economy into Society for a Sustainable World***

It is increasingly argued that the environmental and social problems that afflict industrialized societies cannot be resolved without a change in citizens' lifestyles and consumption practices. In recent years, the inability (or unwillingness) of institutions in proposing solutions and implement policies to address these issues have stimulated the development of new social movements that, while increasing general awareness on the social effects of consumption practices, have favored the emergence and spread of forms of procurement based on the direct relationship and solidarity between consumers and producers. The paper focuses on some new grassroots initiatives promoting alternative forms of consumption as a way to protect the environment and the right of workers, which have been very successful in Italy in the latest decade. Born in 1994 "Solidarity-based Purchase Groups" (or "Gruppi di Acquisto Solidale") count today more than 900 groups. Their criteria for selecting producers flag up respect for the environment and solidarity, both amongst group members and with the producers. Nevertheless, such criteria are interpreted and appropriated on a strictly local basis. From many points of view, GAS are an important case study for understanding the mechanisms and decisional processes through which citizens can enter into a cooperative relationship amongst themselves and with individual producers or networks of producers, aiming for reciprocal benefit on a concrete basis, namely modifying the production processes towards a higher sustainability. The paper presents the results of two online questionnaires, filled out by 204 members of GAS in Lombardy and by 1658 families belonging to the same groups and reflects on the mechanisms that have fostered the spread of these forms of collective action, exploring both the reasons that have encouraged individuals to take part in these experiences as well as the internal organization and strategies of GAS.

### ***Housing and Social Re-Stratification***

This article looks at transformations in the role of housing in social stratification. During the 'golden age' with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented

dwellings to lower classes. However, with the ascendancy of neoliberal prescriptions in the 'global age', new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly been becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

#### *Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Contest in Western Europe*

Activation policies became the means of choice to address typically post-industrial unemployment rates in a context of "permanent austerity" (Pierson 1996). However, comparatively little is known about how these "novel" policy instruments influence the political contest and the coalition formation mechanisms in this policy domain.

First, in line with the debate on multidimensional modernising reforms (Bonoli and Natali 2012; Häusermann 2010; Clasen and Clegg 2011) this paper investigates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite's preferences pertain to more than one dimension.

Second, the analyses address the political elite's coalition patterns by focusing in particular on the political left testing the hypothesis whether social democratic parties address rather insider or outsiders' interests (Rueda 2007, Schwander 2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e. parties, state bodies, unions, employers' and social movement organisations in three dualising (France, Germany, Italy) and in two flexicurity-oriented countries (Denmark, Switzerland). The analytical strategy relies on factor and cluster analyses of preference measures weighted by the respective issue salience (cf. Kriesi et al. 2008).

The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite's preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a redistributive and on an activation dimension. Interestingly, the most salient and controversial issues are related to policies which do not pertain to the conventional repertoire of the labour market regime at stake. Finally, the results support scholars arguing that mainstream left parties support the interests of both insiders and outsiders (Schwander 2012), however, it results that the precise nature of coalitions is regime specific.

#### *'Belonging' in The Land Down-Under: Insights from Three Methodologies*

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodologies among different populations. Results from face to face interviews plus a photovoice exercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and post-national identities. Membership Categorisation Analysis is used to interrogate the presumptions included in the prompts used to generate the data (interview questions, themes for photographs, and images for focus group discussion). The range of parameters of belonging from the political (civic and ethno belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.

#### *The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management*

The participatory institutions appear as one of the greatest innovations occurred in Brazilian democracy since the 1980's, and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State's Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to examine how the participatory process was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting's minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide egalitarian conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

#### *El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual*

Desde hace al menos tres décadas la noción de comunidad se ha vuelto central para una variedad de disciplinas asociadas al campo de las humanidades. El así llamado "renacimiento de la comunidad" supuso la tarea de retrazar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es sabido, el surgimiento de la teoría sociológica a mediados del siglo XIX impactó de manera decisiva en la formación y el desarrollo del concepto de comunidad. La indagación acerca de las transformaciones en los usos y significados de dicho concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potencialidades de diversas herramientas y propuestas teórico-metodológicas provenientes de perspectivas no específicamente sociológicas. En este trabajo nos proponemos, entonces, analizar de forma crítica y programática las posibles confluencias de la investigación teórica o metateórica en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la "historia conceptual" y la "historia intelectual".

#### *Youth in the Age of Austerity*

This paper will draw upon international evidence of how 'youth' and the 'youth question' within social and public policy has been (and is) changing as a result of the global disruption to international capital. It will examine how 'financial restructuring' in different countries is impacting on public and social policies aimed at the young and how the concepts such as 'youth', 'age', 'transition', 'diversity', 'risk' and 'inclusion' and 'citizenship' are being reconstructed and reconfigured in policy discourses. Since the early 80s 'neoliberalism' has been seen as the major driver to national and international policy frameworks in western type states. This paper will argue that the recent 'crisis' does not create new responses but has accelerated neoliberal strategies that see public and social policies and practices help western states implement a range of new ways of managing young people and the 'youth question'. The focus of the paper will therefore be on how youth

'policy' is using the 'crisis' in responding to the youth question, how it is creating new narratives of youth and the life course and what new types of 'societal pathways' into adulthood for the young are emerging as a result of recent austerity measures in policy. The analysis will examine these developments by the use of a number of international case studies, across Austrasia, North America and Europe highlighting the political ecological framework of policy that integrates an understanding of how 'finance', 'markets' and various neoliberal policy responses to them are re-shaping the life course for the young through the implementation of austerity measures.

**FRANCIS, ARA\*** (College of the Holy Cross, [afancis@holycross.edu](mailto:afancis@holycross.edu))

#### *A Tale of Two Sorrows: Hurricane Katrina, Parenting Trouble, and the Politics of Suffering*

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars' participation in the construction of what constitutes "legitimate" distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of "sufferers." We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists' adoption of psychological and psychiatric vocabularies of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.

**FRANZEN, SARAH\*** (Emory University, [sarfranzen@gmail.com](mailto:sarfranzen@gmail.com))

#### *Contested Landscapes: Film Narratives and the Meaning of Land Rights*

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline of ownership. This trend has many causes, including intimidation, force, access to capital and information, and the legal nature of many African-American landholdings.

Alongside the legal battles and political movements that have come to define land ownership, however, are lived experiences and personal relationships that are intimately tied to landscapes. Using ethnographic film to document and present images of land and stories from rural African-Americans who claim land rights, my research examines the complex and overlapping interactions between humans and land. Land is more than an economic and political asset; for many rural African-Americans land holds meaning and memories and creates a sense of place and identity. These stories reveal that the best legal option for retaining land is not always congruent with the inherent meaning of ownership. In this paper, I use interdisciplinary modes of inquiry to examine the structure of historic and contemporary African-American land ownership and land loss and to demonstrate how personal stories and oral histories often reveal symbolic and temporal layers of understanding that question the very meaning of land rights.

#### *(Im)Mobile Youth?: Globalisation, Leisure and Social Change in Scotland and Hong Kong*

In recent years, the 'global' question has become central to debate in the social sciences. For some, processes of globalisation have increased mobility of people, culture and technology; for others, access to 'global' culture remains sharply stratified by access to resources, with those at the margins rendered increasingly immobile, both spatially and socially. At the same time, however, the globalisation of 'mobile' technology has opened up corridors of dialogue and interaction between disparate cultures and communities in ways that are both emergent and

inchoate. These new 'geographies of mobility' strike at the heart of debates surrounding the lived experiences of globalisation: the tension between 'spaces of place' and 'spaces of flows'. These debates have a particular resonance for young people, whose lives are lived at the precarious frontier of the global economy, and the leading-edge of global consumer culture.

This paper will engage with these debates through reflection on emergent findings from an ongoing comparative study of youth leisure, funded by the ESRC, in two geographically and culturally diverse research sites: Scotland and Hong Kong. The study adopts a historical and cross-cultural comparative design, building on landmark research carried out in both study locations by the pioneering sociologist Pearl Jephcott; involving concurrent fieldwork and data-collection in communities in both locales - including ethnographic observations, stakeholder interviews, focus group discussions, oral history interviews, and on-line data-collection. While methodologically rooted in these 'spaces of place', the paper will engage with the new configurations of power, identity, scale and mobility thrown up by the emergent 'spaces of flows' that compose the lived experience of youthful global modernities.

#### *Multileveled Uncertainty: Meso-micro Linkages between Trust and Confidence*

The paper seeks to conceptualise the relationship between trusting institutions and trusting people. While these two types of trust are clearly linked and share important similarities, they are also distinctly different at a phenomenological level. This paper elucidates these similarities and differences and the ways in which the two levels interact. First, it draws on Niklas Luhmann's analysis of uncertainty and contingency along with his phenomenological distinction between trust in people and confidence in systems and institutions. Secondly, it draws on K. E. Loegstrup's phenomenology of trusting as the default attitude within familiar social worlds.

Two fundamentally different ways of dealing with uncertainty are conceptualised. Trust, it is argued, is related only to alterity but depends on confidence in systems/institutions in order to bracket the contingency associated with any intersubjective encounter. Trust is possible only when preceded by a trusting orientation, a sense that whatever future is in store will not be a bad one. This orientation is it is an expectation of a more or less wide array of possible futures all within what is familiarly relevant to at specific situation, delineated by confidence. However, trust also provides the foundations for building confidence. Confidence can only be established once the issue of human agency invariable linked to institutions and systems has been settled in the form of trust. Consequently, confidence is learned from trusting. The contribution of this paper is two-fold. First, it brings together otherwise disparate writing on the relationship between trust in institutions and trust in people, helping to clarify this point in trust research. Secondly, it provides conceptual tools to describe and analyse the relationship between trust in intersubjective relations and the ways that familiar institutional and organizational backdrops provide the confidence to trust the other.

#### *Nordic Moral Repertoires: A Contribution To a Comparative Cultural Sociology Of Social Justice*

The great values similarity between the Nordic states seems to be a fact beyond dispute (Kildal and Kuhnle 2005; Svalfors 2003; Svalfors 2006). However, since contemporary research primarily focus on the historical and socio-economic causes of these attitudes, the Nordic inhabitants reasons for having these perceptions are all but unknown. This paper seeks to contribute to an understanding of these reasons.

Identifying macro level drivers is crucial to explaining the development and continued existence of welfare states and institutions. Nonetheless, these are inadequate for understanding why people hold values and perceptions supportive of specific institutional structures: people express egalitarian ideas because this is important and meaningful to them, not because they have a working class upbringing.

The analytical framework applied in this paper is drawn from the Sociology of Valuation and Evaluation (Hall and Lamont 2013; Lamont 2012) emerging in the intersection between political sociology (Boltanski and Thévenot 2006; Wagner 1999) and comparative cultural sociology (DiMaggio 1987; Lamont and Molnar 2002). This approach suggests that perceptions of what is good and just differs between groups and nations because of differences in preferred cultural standards of valuation and evaluation.

This paper seeks addresses these research questions:

- What are the dominant standards of valuation employed in justifying the level of redistribution in the Nordic welfare states?
- Which group identities (nation, class, generation) are most salient to differences in standard of valuation?

The research project is a comparative cultural study of Sweden and Denmark focusing on issues of social justice. 60 semi-structured interviews are carried out in each country with people between 25 and 70 currently employed. The sample

is balanced in terms of age, gender and class. The interviews explore the four subject areas: social justice, redistribution, work, and institutional legitimacy and trust.

#### *Sustainable Credit Guarantee Associations*

##### **Purpose of the paper**

This research analyses credit guarantee associations and their contribution to financial solutions in local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

##### **Research method**

Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (ÖNKGf), in Sweden.

##### **Research Findings**

Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that ÖNKGf creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. They get advantage to attract new members by emphasising democratic management and members' sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members' participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

##### **Main Contribution**

The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of ÖNKGf. We recommend managers to develop networks with members and other stakeholders to promote cooperative collateral financial activities in the local economy to legitimate and sustain their business in the local society.

#### *Social Memories In South America: Generational Narratives In Times Of Political Youth Activism*

##### **Social memories in South America: generational narratives in times of political youth activism**

##### **Raimundo Frei (PhD Candidate)**

##### **Humboldt Universität zu Berlin**

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries by those born after the dictatorships in the Southern Cone. Against this background, the main research questions are *whether* and *how* generational narratives have emerged in the context of political democratization.

Generational narratives link life course sequences with experiences of collective events. This connection must not be regarded in terms of Mannheim's idea of 'participation in the same destiny'. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives *are attempts to bestow coherence and connect biography and history*.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilization in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country's undemocratic past.

#### *Consumidores Críticos, Pacientes Informados y Pacientes Tradicionales: Visiones y Prácticas De Cuidado De La Salud Entre Usuarios y No Usuarios De Medicinas Alternativas En Buenos Aires*

Unos de los rasgos de las sociedades occidentales es el énfasis en la responsabilidad individual en el cuidado integral de la salud. Conservar y mejorar la salud se ha convertido en una medida del logro personal en un contexto epidemiológico en el que se han incrementado la mortalidad y morbilidad debido a enfermedades no transmisibles con etiologías múltiples. Al discurso biomédico se contraponen, o acomodan de manera complementaria, los de las medicinas alternativas que destacan su capacidad curativa, el bienestar psicofísico y espiritual, y el rol activo del individuo en la salud holística. Basándonos en el análisis cualitativo de 8 grupos focalizados con varones y mujeres de clase media de entre 20 y 50 años de edad realizados en el Área Metropolitana de Buenos Aires en el 2013, analizamos sus concepciones de salud y riesgo, la credibilidad otorgada a los distintos sistemas expertos y saberes populares, y las autoimágenes emergentes en torno a las prácticas de cuidado. Entre estas imágenes identificamos, la del *consumidor crítico* frente a la "moda de la vida saludable" y la creciente comercialización de productos y servicios bajo esta rúbrica, así como respecto del uso de fármacos; la del *paciente informado* que a partir de la experiencia personal y de terceros, la información disponible en Internet, los medios masivos de comunicación, y la literatura de divulgación, opta por distintas alternativas de cuidado --incluyendo la complementariedad terapéutica-- o bien descarta la opción de recurrir a medicinas alternativas; y la del *paciente tradicional* que se siente bien cuidado por los especialistas de la biomedicina y que participa de redes familiares y sociales en las que no se cuestiona el paradigma biomédico.

#### *The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management*

The participatory institutions appear as one of the greatest innovations occurred in Brazilian democracy since the 1980's, and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State's Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to examine how the participatory process was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting's minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide egalitarian conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

#### *Transparent Patients: Addressing Risk in Health Information Exchanges*

In the United States (US), Health Information Exchanges (HIEs) are emergent initiatives designed to pool the personal health information of individual patients in order to facilitate care. Proponents also hope that HIEs will support diverse secondary uses of health information (e.g. biomedical research, public health

surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIEs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content- and discourse-analysis), this paper considers how HIEs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIEs in the US.

*Solidarity (and alternative) Economy and Its Anarchist Grammar*

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a 'grammar' to articulate the normative macro-elements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19<sup>th</sup> century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Proudhon in the 19<sup>th</sup> and movement protagonists in the 20<sup>th</sup> century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammatical lens, but also how the movement can lose its critical edge when the grammar is 'extrapolated'. 'Extrapolation' offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-optation of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

*Solidarity Regimes and Individualization: Institutional Change In Social Security Schemes*

Since the 1990s so-called mature and upcoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic and cultural changes, and they are at the same time highly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to institutional convergence, in our case to institutions based on the concept of self-responsibility.

Concepts, however, find entrance into institutions in very different ways. Actors, for instance, interpret self-responsibility in terms of individualization on the one hand, or subsidiarity with corresponding family obligations on the other. And indeed, institutional differences are to be found both in international comparison and within single welfare states, and family elements cannot be interpreted as the remains of former family-based welfare models. Thereby, unexpected effects and unbalanced influence of concepts on single institutions can result in institutional contradictions which, again, might be contradictory for the social citizens and lead to new forms of social inequality. The degree of individualization of different social rights to social security has, however, not been systematically gathered, even though its social and economic importance is increasing.

The aim of this contribution is firstly to deliver an analytical tool to identify the degree of individualization in social security institutions. The institutional degree of individualization will be measured for old age schemes separately for the security levels of living standard and of poverty prevention since it is assumed that the institutions tend to contradict one another to some extent in this respect. The empirical analysis will focus on 4 European welfare states at three points in time. It will therefore, secondly, deliver original empirical results on instituted intergenerational dependencies and it will challenge the assumption of convergence of welfare institutions with regard to individualization.

*Understanding Mobile Childhoods: Children of Migrations from the Philippines to Europe*

Contemporary parental migrations have resulted in the rise of many transnational families characterized by solidarity despite family separation across geographical distance. Children of these families have attracted strong scientific attention for the last twenty-five years, which reflects the existing social concern about their well-being as they grow up separated from one or both of their parents. When family reunification takes place in the receiving country of the migrant parents, children themselves become migrants. Such mobile childhood is considered atypical in both the children's society of origin and of destination. How to capture the diversity of childhood experiences of these children migrants? In what way do their experiences present scientific challenges to the study of migrant children and their mobile childhoods? In this presentation, we explore these questions by focusing on the childhood experiences of Filipino migrants' children who grew up partly in the Philippines and partly in Europe, notably in France and in Italy. Here, we examine their experiences in terms of mobility to unlock their subjectivities and agency. The results of our ethnographic fieldwork among children of Filipino immigrants in France and in Italy demonstrate the different forms of mobility of young migrants throughout the migration process. Using mobility as an analytical lens, we attempt to move beyond nation-state borders by considering carefully the context and temporalities of mobile children's childhoods.

*The Emerging Church Movement in the USA As a Critical Response to the Neoliberalization of Religious Organizations*

The unprecedented decline in formal religious adherence and sharp increase of religiously unaffiliated Americans at the turn of the 21st century have led to critical assessments of the ways in which neoliberalized religious organizations respond to the spiritual needs of society in postmodernity. The mega-church model with its consumer-oriented, feel-good individualism and emphasis on entertainment and choice is a prime example of the encroachment of neoliberal, for-profit organizations employing private sector business strategies on the religious market. This model is increasingly rejected by those people seeking more 'genuine' ways of practicing their faith in 'authentic' faith communities.

The widespread opposition to the neoliberalization of religious organizations has resulted in the surge of a novel religious movement in the United States and elsewhere: the Emerging Church Movement (ECM). In the American context, the ECM was born as a reaction to mega-churches and seeker sensitive approaches in the late 20th century. Its followers question and critique existing religious organizations and the influence of neoliberalism on their practices and theologies. Interestingly, the ECM's flat hierarchies and localized organization are themselves characteristic of neoliberalism, which raises the question to what extent the theologies and variations of orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere.

This paper discusses the ECM as a manifestation of the rejection of neoliberalized religious organizations in the United States in the 21st century. It presents empirical examples of emerging church practices from the American Midwest that show not only which elements of neoliberalism-inspired religion the followers of this movement oppose, but also the kinds of alternatives they envision and implement. It addresses the question of whether the ECM is able to leave neoliberalized religion behind at all on its search for 'genuine' and 'authentic' faith.

**RC22-383.2**

**FREUDENBERG, MAREN\*** (Free University Berlin, [freudenberg@gsnas.fu-berlin.de](mailto:gsnas.fu-berlin.de))

*The Emerging Church Movement: A New Form of Religious Organization?*

The last 30 years have seen an unprecedented decline in formal religious adherence in the United States that has affected a range of religious organizations. As a result, institutionalized religion has undergone heavy scrutiny regarding its abilities to respond to the spiritual needs of society in postmodernity. With the deterioration of grand narratives and absolute truths, institutionalized religion is rapidly losing its monopoly on interpreting the faith and prescribing the ways in which it is to be practiced. Instead, local religious communities are claiming the right to redefine what it means to lead a faithfully Christian life in their individual social contexts.

The widespread criticism of institutionalized religion has resulted in the surge of a novel religious movement in the United States and elsewhere: the Emerging Church Movement (ECM). The ECM has no institutional structure or unified beliefs, instead spanning across a range of religious orientations from conservative to liberal, post-evangelical to neo-charismatic. It is often described as a "conversation" in that its followers question and criticize existing religious traditions and theologies and experiment with alternative ways of practicing their faith. They seek to overcome polarizing labels and preconceptions and the institutional and

dogmatic baggage that these bring with them. They reflect postmodernity's position that there is no absolute truth, deconstructing theological metanarratives and reorienting themselves toward early Christianity in an effort to 'get back to the roots of the faith'.

Using field data, this paper shows how the ECM's loose organizational form allows specific religious practices to take shape that offer viable alternatives to institutionalized religious membership. It then raises the related question whether the ECM as a growing movement defined by its non-institutionalization is a sustainable form of religious organization: if current growth rates continue, can the ECM escape organizational institutionalization at all?

#### *A Cultural Perspective on Challenges to the Use of Hospice Services in New Zealand*

**Background:** During the past 33 years New Zealand has developed hospice services based on the British model for caring for patients with life limiting illnesses. Given the rise in demand from an ageing and increasingly diverse patient population, do palliative care hospice services as shaped by a Western perspective adequately fulfil the needs for persons from non-western cultures? The aim of this research was to identify challenges to hospice service use for Māori Pacific and Asian clients in the use of hospice.

**Method:** The project involved qualitative interviews with 36 Maori, Pacific and Asian cancer patients, whanau/family as well as 15 health professionals (e.g. referring GPs, oncologists, allied health professionals) in one district health board.

**Findings:** Challenges to hospice service utilisation included a lack of awareness in the communities of available services as well as continuing misconceptions concerning the nature of hospice. Language barriers were particularly reported for Asian patients and their families. Issues concerning the cultural safety and ethnic representativeness of the hospice staff were raised.

**Conclusion:** The results offer an important addition to the literature providing the views of *both* hospice staff and non-European patients and their families regarding challenges to the access of hospice services. This information can be used for future planning to enable hospice to both provide high quality evidence based palliative care services for patients and families and provide consultative services to primary health care providers in the community.

#### *At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria*

**At the leading edge – Does gender still matter?** A qualitative study on successful coping strategies and prevailing obstacles in academia. Analysing female careers in Austria

Although academic science in Austria is still male-dominated to a great extent, recent development evidences change especially in higher positions. Statistics on the Austrian setting show that the share of female scientists at upper levels of the career ladder is shifting slightly but steadily. This article deals with explanations for this development and analyses crucial biographical phases of female academic careers in leading positions. For this reason, the paper focuses on three key research questions: *Which obstacles hinder successful female careers? How do successful female scientists overcome these obstacles and which long-term strategies are used to acquire or hold leading positions?* The findings are based on eleven qualitative interviews with the most successful female scholars in Austria (i.e. rectors and vice-rectors). The findings are arranged in three sections: (1) The results emphasise obstacles impeding female scientific careers. The analysis reveals that informal encounters, (male-dominated) social networks and the requirement both to be geographically mobile and to handle family issues at the same time are important obstacles. (2) The analysis concentrates on the underlying mechanisms in terms of how successfully female scientists manage to overcome these obstacles. With regard to informal encounters, it appears to be important to keep the distance from one's environment, while pursuit of change can be seen as a crucial mechanism in terms of coping with the negative effects of (male-dominated) networks. Planning and organisational skills are decisive in conciliating geographic mobility and family obligations. (3) Finally, this paper elaborates on different long-term strategies applied by women in order to achieve leading positions.

#### *Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?*

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOEP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the German rates of low-paid workers are quite startling (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrast, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation. Against this background we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

### Using Canonical Correlation for Index Construction with Aggregated Data

Indices constructed by aggregated data are frequently used for macro data or multilevel studies. There are several statistical approaches to construct such macro indices (as has been done by World Bank econometricians or psychometricians who deal with cross-country research questions).

For measuring multi-facet phenomena on the macro level (such as happiness, corruption or freedom), one would consider indices based on sub components which refer to the same phenomenon. Specifically, for convergent validity it seems important that the sub components measure different aspects of the same phenomenon but ideally nothing else (convergent validity). Statistical methods applied for index construction usually regard for convergent validity. This implies that most macro indices are constructed with high reliability. For preserving validity completely, one should also consider differences in measurement to other constructs or phenomena (discriminant validity). This is typically not under consideration in econometricians' way of procedures when indices are constructed. It is also only seldom regarded by psychometric attempts of index construction.

As a method that allows for both reliability and validity, e.g. for warranting discriminant validity, we suggest canonical correlation as a procedure of macro index construction.

We show the advantages of canonical correlation for macro indices construction by referring to the seldom scrutinized social phenomenon of personal freedom. One of canonical correlation analysis mostly used application is the reduction of dimensionality (Anderson 1984) which is a crucial matter in index construction when sub components are also concerned.

The construction process is compared to factor analysis results (e.g. the role of eigenvalues in both procedures, Burt 1948). It is shown that both methods do not necessarily end up with the same results. In sum, canonical correlation is a more flexible tool that comes with stricter assumptions but with a clearer concept of what should be excluded from the index.

### Housing Market and the Activities of Land Banks in Socioeconomically Distressed Neighborhoods in Cleveland, Ohio, the United States

Abandoned and vacant properties are a serious urban issue as blight induces further blight. Real estate prices are nominal in some parcels in blighted neighborhoods. Also, subprime lending hit low-income neighborhoods the hardest. Moreover, foreclosure sales sometimes malfunction due to speculators.

Cleveland, Ohio has lost more than 50% of its population from the peak. In case of Cleveland, distressed neighborhoods are found in the east of Cuyahoga River, especially areas bisected by Cleveland's primary corridor that connects Downtown and University Circle. Draft Cleveland Sustainable Development Pattern guides development and housing to high-priority zones. The map shows development horizon of short term, medium term and long term. Ordinary as well as distressed neighborhoods tend to be left "blank" or at best categorized as long term.

Land bank is an effective tool to repurpose blighted properties to productive use. Cleveland has a unique two-strata land bank system. The City of Cleveland Land Bank, a city government program, has existed since 1976 and now owns over 11,000 lots on conditions that such lots have no structure. Cuyahoga County Land Reutilization Corporation, an innovative land bank established in 2009, acquires properties including with structures from various sources: tax foreclosure, national mortgagors, REOs and deed-in-lieu. The two land banks work in partnership.

This paper quantitatively clarifies the situations of Cleveland's highly distressed neighborhoods and discusses how to tackle the issue of distress. Analyzed are private real estate transaction, foreclosure flings, Sheriff's sales and acquisition/sales by land banks as well as socioeconomic indicators including income, poverty and vacancy. The historical perspective, year 2000, 2006 (pre-housing crisis) and 2012, is put an emphasis. Stabilization of neighborhood and (re)creation of social capital are discussed through a case study of *Reimagining Cleveland*, a pilot program till 2015 to utilize City Land Bank-owned vacant lots by indigenouness of a community.

### Environmental Destruction and the Social Impacts of the Fukushima Nuclear Disaster

The Fukushima nuclear disaster is sometimes called as the worst environmental pollution in Japan. However, the social impact of the Fukushima nuclear disaster has particular features different from other previous environmental pollution cases such as Minamata disease. In this paper I'd like to point out the problems of the refugees from the highly radiation-contaminated area in Fukushima from the perspective on the social structure of pollution victims based on the sociological study of the cases of the 'kogai' or the industrial pollution in Japan.

In most cases of 'kogai', although it took many years for a human damage to be identified as a pollution related disease, the seriousness of the human damage was perceived. Whereas in case of the low dose exposure in the Fukushima disaster, it's impacts to human health have not been clarified yet and still controversial. At this point, in Fukushima prefecture, more than 150 thousand of people were forced to evacuate from their community soon after the accidents. Recently the national government is trying to shift a focusing point to return and rebuild the communities.

In relation with the evacuation, even family members have to be forced the separation. For example some mothers have taken refuge far away from Fukushima with her children, left their husbands for their jobs in Fukushima. Since there is no credible health standard for the radioactive contaminations, each of them has to make very difficult decision independently. These difficulties might bring the deep cleavages in human relationships within communities as well as within families.

Social stresses of refugees and residents are related with their previous attitudes and sentiments to nuclear facilities in the area. In comparison with the study of the victims of the past 'kogai', I will discuss this connection and their anxiety of being neglected their damages.

### Social Movements in Solution Process of Environmental Problems : From Case Studies of the Anti- Pollution Movements in Japan

In Japan, many environmental social movements arose against industrial pollution called 'kogai' in 1960s. However, most of them are dissolved in solution process of the current issues in 1970s. The decrease of social interests in pollution problems have been a cause of recurrences of similar problems. We can see same situations in Asian countries where the residents around the construction site for chemical factory do not know about the previous pollution problems such as Bhopal case.

In this paper I will start with two case studies of environmental movements which are related with 'kogai' and have continued.

Itai-itai disease (or 'ouch-ouch' disease, cadmium poisoning) is the first pollution related disease certified by national government in 1968. The grass-root movements Itai-itai disease have continued to work for more than forty years. They have also affected the cadmium regulation policy in Japan and have supported the residential movements occurred in other cadmium contamination area. And they have enforced the environmental measures of the mining company which was a defendant of the trial filed by the victims of Itai-itai disease in 1968. Recently they have succeeded to reduce the cadmium emission to nearly zero level. The long-term corporative measures between the residents and the company have attracted considerable attention from some East Asian Countries.

There are some movements to inform Asian people of the experiences of pollution problems in Japan. Asia Arsenic Network (AAN) organized after the settlement of Toroku Arsenic Poisoning low suit in 1991 is one of the most important groups in this respect. AAN supports the people who are suffering from arsenic pollutions caused by natural water flow, mainly in Bangladesh.

At the final section of this paper I'll consider the meaning of these movements, referring to the grass-roots movements following Love Canal case in the USA.

### Do Increasing Attorneys Mean Increasing Poor Attorneys?

In this paper, I will analyze the income distribution of active attorneys in Japan using the decennial income survey data from 1980 to 2010 collected by the Japan Federation of Bar Associations and the mail survey of attorneys of the 62nd Legal Apprenticeship Cohort (registered in 2009) conducted in 2010 and early 2014 by myself and other legal sociologists as well as the yearly tax statistics compiled by the National Tax Agency Japan. The number of Japanese attorneys is rapidly increasing, especially since Japanese style of law school was inaugurated in 2004. Not only this time, but also whenever an agenda to increase the number of attor-

neys was at stake, critics argued that the larger number of attorneys would have too much competition and yield many poor attorneys, and in turn debase the quality of legal services provided. Indeed media have repeatedly reported some new attorneys are so poor. I found that the income distribution of attorneys has not changed so much as critics argued even in the latest data available, controlling for the age and gender compositions of attorneys. However, the percentage of lower middle income attorneys are slightly larger in the 2010 survey compared to previous data. Based on these analyses, I will argue that current sentiment shared by many attorneys, like "the more lawyers are, the poorer they are," is not strongly supported by the fact but it would be a necessary sentiment of the transitional period from the age of the litigation lawyer to that of socially permeated lawyer.

#### *Work Motivation and Social Networking Development in Professional's Job Change Behavior: A Comparison Between the U.S. and Japan*

As professionals' work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough.

In the U.S. on the other hand, professionals in Silicon Valley, California found ventures one after another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new idea. They are also looking for colleagues with whom to collaborate to realize such idea.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed. These differences in the social environment surrounding professionals have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

#### *Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements*

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition/alliance—namely "coalition work" (Staggenborg 1986), "mesomobilization" (Gerhards & Rucht 1992), and "resource dependence perspective" (from the sociology of the organization)—are comparatively examined and tested in a case study. This paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources and benefit sharing, and biosafety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations, and academic committees built some coalitions, against sports fishing groups (2) nongovernmental organizations' (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/COP 10) in Nagoya city during 2010, in which there was coalition building between environmental NGOs, grassroots groups, consumer organizations, and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.

#### *Japanese Youth "Inward Tendency": Analysis of Surveys of Japan Youth Study Group*

This presentation aims to discuss "inward tendency" of Japanese youth based on the analysis of social survey of 2012, and a secondary analysis of social surveys of 1992 and 2002, all of which were conducted by Japan Youth Study Group. The term "inward tendency" refers to Japanese youth attitudes that is more "domestic-oriented," rather than "internationally-oriented" in character. However, up-to-date, its usage is not clear: it refers to both the decrease of youth travelling overseas, and the decrease of students studying overseas. Since the "inward tendency" of Japanese youth started to be considered a social issue in the beginning of 2000s, there is no previous studies, as well as statistical analysis, dealing with it. Therefore, I will review studies on youth in Japan in terms of methodology, examine some government surveys, and discuss which social factors contribute to "inward tendency." This presentation will attempt to address the following issues in dealing with the study of youth. Though in terms of methodology, it is important to make comparison with other age cohorts in order to understand the characteristics of youth (16-29 years of age), there was no such arrangements in previous surveys. Also in order to understand changes in youth attitudes, it is necessary to carry out repeated cross-sectional surveys. Though its necessity was pointed out, the age, period and cohort were not distinguished (Fujimura 1995). Furthermore, it is assumed that "inward tendency" correlates with other attitudes, such as intimacy, conservatism, and moral issues. The analysis of data makes it possible to clarify which factors correlate to "inward tendency." And, consequently, it will be discussed that it is not sufficient to analyze the issue of "inward tendency" just as youth attitude, but it is also necessary to consider other macro factors and policies that have an impact on society.

**FUJIYAMA, HIDEKI\*** (Dokkyo University, [fujiyama@dokkyo.ac.jp](mailto:fujiyama@dokkyo.ac.jp))

#### *Network Effects and Activities of University Students in a Seminar*

University seminars require students to be involved in intensive activities that require cooperation with each other and also develop their own skills and abilities. In such activities, their friends are also an important factor for their activities—we call these network effects. This is similar to activities pursued within modern organizations such as companies and non-profit organizations. Using Bonacich centrality we can take account of these direct and indirect network effects. The aim of this paper is to empirically examine the determinants of activities in a university seminar. In addition to network effects, we included other factors such as the "Fundamental Competencies for Working Persons" that is promoted by the Ministry of Economic Trade and Industry, "generalized trust" and students' GPA. Results indicate that Bonacich centrality has a positive and significant effect on students' activities and its magnitude is as the same as that of GPA. In the Fundamental Competencies for Working Persons the competency of "discipline" is both positive and significant. For generalized trust results are negative and significant and this effect is interpreted by Uslaner's (2008) generalized trust as optimism. These three significant factors are consistent with Putnam's (1993) definition of social capital.

#### *The Structure of the Bangladesh's Economy*

Bangladesh is described as the "Next 11" or "Frontier 5" and it is expected that it will grow to be a key player in the world economy. Macro-economic dates, such as GDP growth rate which keeps as high as 6% since 2000's, are indicators for the potential of Bangladesh's economy. The Ready-Made Garment (RMG) sector is the country's most dominant industry as well as its leading industry to earn foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4<sup>th</sup> place behind China, Hong kong, and Italy in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account when evaluating the real circumstance surrounding RMG sector: (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) The RMG sector, which is divided into two categories, woven and knit, can only self sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh's competitive advantage is found largely in lower wages among than other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Sourcing countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

#### *PR or Social Movement? : Against Climate Change Campaigns in Japan*

This presentation examines the national campaign against climate change in Japan through the "frame alignment process" with from the state to the public based on the frame analysis in the social movement research.

State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it into matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted.

Thus, I investigated one of the national campaigns against climate change, Team Minus 6% (2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and values and strategies that had been adopted. The results showed an overall preference for "frame bridging" and "frame amplification" in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through "All Japan."

In particular,  
1. They focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.

2. They presented the value of "individual environmentalism" in which the efforts of every individual adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.

3. They adopted a "personal interest strategy," whereas individual interests and climate change issues are connected.

#### *The Changing Gender Relations in Marriage and Fertility in Japan*

The trend toward later marriage and growth in the proportion of men and women who never marry is a major cause of the Japan's low fertility rate. Similar to some countries in East Asia, Japan is a country where traditional gender role expectations, i.e. a husband works outside home and a wife stays at home for household tasks and childrearing, have been firmly rooted in the society, despite of the high level of women's enrollment to tertiary education. Previous studies often pointed out that the gap between women's increasing demand or potentials for market labor and the norms of the traditional gender role attitudes leads to women's retreat from marriage, thus causing the expansion of the non-marriage population in Japan. However, more recent studies began to show a reversed relationship between women's socio-economic standings and marriage and fertility behaviors. For example, studies using the latest and largest panel survey which covers the first decade of the 2000s show that women with more income or higher education are more likely to marry than their less or lower counterparts in the era of 2000s. Other study also shows that married women who have a full-time standard job or who are entitled to childcare leave are as likely as women without a job to have the first and second births. How can we interpret these changes? This study first introduces some of the old and new findings regarding to the rela-

tionship between women's socio-economic characteristics and family and fertility transitions. Thereafter, the study seeks for the socio-demographic explanations behind the change and discusses the possible implications for the future trends of family and fertility in Japan.

#### *Uses of the Future: The Problem of Theodicy in Nagasaki*

How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focus on the religious mode of theodicy which can be seen among the catholic community on one hand, and "tragic mode of theodicy" (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Ceremony on the other, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a "burnt offering" by providence. Although the catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also creates semantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the catholic community, narratives of suffering observed in the municipal commemoration was not giving any meaning based on religious worldview. Rather, it makes a way to deal with contingency of the suffering potentially in the future by realization of the ideal of the "world peace" and "abolition of nuclear weapons." 68 years after the attack, the latter mode of theodicy is predominant in most of the public commemorations of the Nagasaki atomic bomb attack. It is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

**FUKUI, HARUNA\*** (Arizona State University, [haruna.fukui@asu.edu](mailto:haruna.fukui@asu.edu))

#### *Social Inequality of Immigrants in Old Age: Exploring Multiple Dimensions of Social Network and Resource Flow during the Great Recession*

This is a qualitative research project whose data comes from 10-month ethnographic field work at two senior centers in Phoenix, Arizona that respectively consist of either predominantly Asian or Latino and that the majority of the ethnic minority seniors are of foreign born. The project examines the access to social support and flow of resources among the older foreign-born population relative to their ties to the community as well as to their family. The primary goal of this study is to understand how the current sociopolitical context in Arizona affects the lives of old immigrants and might channel different ways of involvement in their social networks which are shaped by their living arrangements, relationships with younger generations in family/household, participation in community activities and in the labor market, and access to social welfare and services. The project tries to capture various ways in which immigrants in old age navigate their everyday lives when faced with economic and physiological obstacles as well as opportunities, and by doing so, it seeks to understand how they not only access and utilize but also contribute to the pool of resources. The secondary goal is to understand the life course impacts of quality and quantity of social and economic resources that are available to immigrants—individually as well as collectively as ethnic community. The project examines the factors that encourage the expansion of social networks and reciprocity throughout a life course as they impact well-being in old age. It also explores how individual experiences may cumulatively contribute to well-being of the members who share the social networks. With these goals in mind, the project seeks to investigate probable factors that are associated with persistence of social inequality in old age at community level which may be further impacted by the sociopolitical context of Arizona.

**FUKUI, KOTA\*** (Osaka University, [ktfukui@law.osaka-u.ac.jp](mailto:ktfukui@law.osaka-u.ac.jp))

#### *On the Potential of the Classic Japanese Theories of Sociology of Law*

After the end of the Cold War, since early 1990s, the structure of the world society has been greatly changing under the pressure of globalization. The world society becomes politically multi-polarized, economically covered with the global market and the law becomes complex and hybrid on the global level. Every national society becomes multi-lingual and multi-cultural. Worldwide information

networks make the global transaction much easier than in former times. Legal scholars are as if on an uncertain voyage.

However, against all expectations, I insist that we can find a helpful compass for the voyage in the discussion by classic Japanese socio-legal theorists. The modern Japanese law had been constituted under the pressure of the global colonialization in the second half of 19th century, since opening the country in the late Edo era. Still in the first half of 20th century, Japanese legal scholars had to be strongly conscious of the global pressure to harmonize between traditional Japanese/Asian laws and modernized Western laws. Even Japan's defeat in World War II was regarded as a result of less attainment of the legal modernization in Japan. The pioneer theorists of sociology of law acted in that age.

History repeats itself. Global legal issues similar to that of in the age of colonialization have been revived since 1990s. Current hot issues relating to the interface between the global economic laws and domestic civil laws are quite similar to that of the transplantation of western law into Japanese/Asian society. The discussion on the support for the development of laws in underdeveloped countries is also a revived issue in the colonialization age. Of course, the discussions on the polarization between traditional Japanese/Asian and modernized Western law are outdated. Nevertheless, it seems that we can extract valuable indications from the classic Japanese theories of sociology of law.

### *Representation on the Experience of Suffering in Urban Space: Wall Murals in Belfast*

The purpose of this presentation is to show how hostility and empathy have been expressed in post conflict Northern Ireland society by using an analytical framework of visual data in sociology.

Visual culture has been widely argued in various disciplines. Although many disciplines in human sciences have effectively analyzed visual representations, my focus here is to apply a sociological method of urban studies on the analysis of the visual representation.

My research interest is to examine the collective consciousness and memories of two communities where their identities have been in part shaped by the images and icons shared in their communities. To do so, I will deal with and discuss wall paintings in Belfast. Mural can be seen as a community medium (Rolston 1998), since the approval of the community is needed in order for a mural to exist in the community for a long time.

My focus is on production, circulation and reception of murals in the urban space. In particular, I will look at the emplacement of murals in order to assess the positioning of each image in community.

The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities, 2) Remembering the dark side of the history of their communities is considered to be expressed (not covered up) in both communities, although some of them are usually seen in residential areas, 3) "Empathy" between the two communities can be seen when they deal with the experience of sufferings under the authority.

### *Emerging Child Care Services in France and Japan: Public, Private or Associative?*

Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many countries various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parental day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associative sector are growing instead of the public sector. What are the factors of this change? How shall this change influence on the quality of ECEC system? I selected two countries for comparison: France and Japan. First I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second I will show some examples of good practices in education and care system provided by the associative sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.

### *From Field To Theory and Back – The Biographical (re-) Construction Of An Unconventional Family Through a Multi-Variant Range Of Data*

By use of the case-related reconstructive method, I will show how various types of data can be integrated in the research process. The topic of interest is an unconventional family, whereby unconventional means the absence of the biological parents. Instead of the conventional family structure, the parental role is fulfilled by a homosexual female couple, who realised their wish for children with the help of a sperm donation. The central method of data collection is the family-historical interview as a core component of the ethnographical access to the field. Apart from that, other methods of data collection were used to ensure that every case is incorporated in the analysis from various angles. This approach is based on the following principle: case reconstructions are not fulfilled in their entirety if only the transcribed interviews of the family history are considered. The set of data also consists of observational data (e.g. the constitution of interactions within the context of welcoming gestures, the seating arrangements, door bell nameplates), but also family indicative documents such as family photographs. Furthermore, data is obtained concerning the family of origin and the life course. This data is collected in a genogram, which is sort of a genealogical tree displaying the family in a generational context. This approach enables the investigation of the „biography as a life context of the milieu“ (Richard Grathoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of an isolated case. I will also discuss in my lecture the interpretation of the results in the context of theory development.

### *Network Diversity and Educational Inequality: A Case Study Of China*

Following the line of James Coleman, this paper focuses on how network diversity influences educational inequality. Social capital is positively related to one's academic performance. One way to gain more social capital is having a diverse social network as we can access to various kinds of social capital from network members who have different social backgrounds. Disadvantaged groups tend to have a less diverse social network. However, if students from a disadvantaged group have a less diverse educational support network, then why would some of them still be able to achieve academic success, such as attending an elite university? This study examines the case of students from both disadvantaged and advantaged groups in China as an example to answer the above question.

In the summer of 2008, we conducted in-depth interviews with 30 undergraduate students from two of the most prestigious universities in China – Peking University and Tsinghua University. Twenty were rural students, and the other 10 urban. By comparing the educational support networks of these two groups we discovered that the educational support network of rural students is generally larger than that of urban students. This is because rural students face more barriers than urban students and their network members are less able to provide them with resources, so they need more supporters than urban students in their journey to elite colleges. This indicates that rural students do not get enough help from the state and therefore have to rely on their own resources to achieve academic mobility.

### *Nervous System: Media, Communications and the Fight for the City*

As urban communities confront the specter of austerity budgets, growing inequality and a diminishing public sector, the question that organizers encounter is how to shift from multiple autonomous movements in a city to one movement for the city. This paper details and analyzes the role of media and communications in the process of developing a united front of people and organizations fighting for urban social change. Specifically, we look at the practices of the Media Mobilizing Project (MMP) in Philadelphia. MMP is both a community-based media and communications infrastructure and a network of organizations across the Philadelphia region that aim to "build a movement to end poverty led by the poor and working class, united across color lines." Through MMP's use of media and communications we argue that communication technologies can be reimagined as a nervous system that connects different parts of the urban social body, bringing students together with janitors, teachers, and community members fighting displacement.

In this paper we use the concept of the nervous system to analyze the manner through which media conjoins people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a united front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

**FUNKE, PETER N.\*** (University of South Florida, [pnfunke@gmail.com](mailto:pnfunke@gmail.com))

### *Rhizomatic Resistance: Social Movement Politics from Porto Alegre to Tunis and Frankfurt*

The last three decades have seen massive protests and mobilizations. From the Zapatista uprising in Chiapas in the 1990s to mass demonstrations against war and protests at virtually all gatherings of world leaders to struggles in North Africa and most recently Occupy Wall Street and anti-austerity type mobilizations, protests and social movement organizing have taken place across the globe against rising inequality, war, the dispossession of rights and entitlements, democratic deficits and austerity politics.

This paper examines this arch of movement-based politics. Situating it within former modes of social movement organizing and relating it to shifting dynamics of capitalism, I argue that contemporary movement-based politics is relying on and enacting a distinct and novel movement logic. Different from the so-called "Old Left" of mass unions and parties and the more identitarian politics of the "New Left", contemporary movement formations are based on what I suggest to call a "Rhizomatic Logic", forging linkages and synergies across the fractured landscape of "old" and "new" left. Thriving on multiplicity and thus lacking a dominant core or main axis, the rhizomatic logic emphasizes multi-connectivity and heterogeneity of political struggles, which has no central actor, issue, strategy, or ideology beyond opposition to neoliberalism and thus a subsequent need for thicker communicative processes. While this logic allows for unprecedented connections as well as tempering of inherent antinomies of diverse movements and groups, it simultaneously limits the degree of congealed and resilient movement building. Most recently this Rhizomatic Resistance model has found variegated expressions in pro-democracy as well as occupy-type and anti-austerity protests from Tunis to New York and Athens to Frankfurt.

### *Return of Religion in the Public Sphere? Comparing the Nordic Countries*

This paper analyses the role of religion in the public sphere in the Nordic countries during the past twenty years. While some scholars have claimed that there is a return of public religion in Western countries, this paper asks if this is a reasonable claim for the five Nordic countries. These countries harbor a combination of common and different features that make for an interesting comparative study. The public sphere is here identified as the state, politics, the media and civil society. The study is based on a wide range of quantitative and qualitative data. The data show a trend towards disestablishment, with the exception of Denmark and Iceland. Although religion is not a major issue among the political parties, it is more debated in the parliaments, except in Sweden. The media do not seem to center more on religion than before. Finally, religious communities seem to deal with the growing diversity by engaging with current political issues and dialogue initiatives. This study indicates that religion has had more of a continued role in the public sphere in the Nordic countries, although it is changing, most notably in Sweden, followed by Denmark, and Norway, and the least in Finland and Iceland.

### *Norms, Hierarchy, and Market Order: A Study of Closed Auction Markets for Antiques and Secondhand Goods*

This study explores how market order emerges in Japanese closed auction markets for antiques and secondhand goods. Most auction markets for antiques and secondhand goods are exclusive to dealers in Japan. The Antique Business Act (*Kobutsu Eigyo Ho*) states that participants in auction markets must have a secondhand goods dealer license. Participants also need to obtain a reference from an existing member to enter the markets. Dealers belong to auction markets and associate with other members. The markets are similar to groups rather than pure markets, although the members compete to acquire articles at the auctions. This paper presents the norms and hierarchical relationships in closed auctions that bring order to the markets.

Norms in markets are beliefs about the expected behavior of market participants. The norms alone are not sufficient to engender market order; enforcement mechanisms are necessary. A hierarchy is a typical enforcement mechanism. Authorities observe members and then sanction those who deviate from the norms. Although markets and hierarchies have been regarded as opposing governance mechanisms, hierarchical relations emerge in markets as well as in groups. Market participants in the same marketplace differ in terms of status and power.

The norms in Japanese auction markets require participants to bid based on their own evaluation of items. Buyers who do not have much expertise on auctioned articles may try to follow experts' bidding. Such bidding is condemned by auctioneers, senior members, and top buyers who have significant influence in the markets. Their status is earned by their contribution to the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

### *Youth Justice Programs in New York City*

Youth justice programs have been part of the fabric of urban landscapes since Civil Rights. During the 1960s and 70s such programs were explicit in helping young people, particularly young people of color, fight oppression and participate in democratic processes. Today, some argue that the sociopolitical aims of such programs are falling by the wayside due to the focus on "youth development" which emphasizes the growth of individual young people, rather than the growth and health of urban communities (Ginwright & Cammarota, 2002). Not only can we not expect young people to lead healthy, productive lives when growing up under abhorrent conditions, we believe young people can be a part of the solution for transforming their environments. Youth justice programs engage young people as active agents of change in their own lives. While the outcomes of youth justice programs have been examined (e.g., Austria, 2006; Ginwright and Cammarota, 2002; Hill, 2004), there has been a lack of analyses of the processes critical to determining how they work, how they are implemented, or why such processes are effective. The purpose of this research was to examine such processes by examining how youth workers conceptualize the inequities facing urban youth today and how those conceptions translate into practice (e.g., into methods for engaging young people in social justice). We wanted to understand the key inequities staff identify as critical in the lives of urban youth and how young people are engaged in understanding and responding to such inequities (what processes are used). We interviewed key staff from youth justice programs in the Northeast of the United States in order to obtain rich qualitative data for addressing the research questions.

### *Probability and Timing of Having a Second Child in Japan: Does Gender and Characteristics of the First-Born Matter?*

This study examines whether gender and characteristics of the first-born child predict the probability and timing of a second birth among Japanese parents. I examine two explanations.

Daughter preference has become common among Japanese couples since the mid-1980s (National Institute of Population and Social Security Research, 2011). In 2010, 69% of couples preferred a daughter if they were to have only one child. Past research reveals that having a child of the unpreferred gender is associated with a higher probability of a subsequent birth and a shorter birth interval if they choose to have an additional child (e.g. Larsen et al., 1998). Therefore, given wide-

spread daughter preference, I investigate whether Japanese parents with a first-born son tend to not only have a second child but also have one sooner.

Previous research shows that having a first child with socioemotional and behavioral traits that make parenting easier is associated with a second birth (e.g. Jokela, 2010). It is commonly known that young male children are more difficult to raise than females because they are more prone to illness and injuries. Also, boys are considered more physically active and require parental attention. Then, parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21<sup>st</sup> Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explanations. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how gender of the first-born child and measures of parenting difficulty (i.e. occurrence of illness/injuries/accidents, perceived parenting burden/anxiety) as well as other characteristics affect parity progression. Interactions between gender and parenting difficulty on parity progression will also be considered.

##### *Child Trafficking in the EU*

The paper presents findings from an empirical study of the trafficking of Roma children into the UK, involving the establishment of the first EU wide police Joint Investigation Team (JIT) to investigate the illegal movement of humans in Europe. The paper draws on 12 months of UK-based research and four research visits to Romania and Bulgaria yielding more than 100 hours of interview data collected from interviews with senior actors within policing and justice agencies, Roma advocacy NGOs, and child protection organisations in the UK, Romania and Bulgaria. This data is used to interrogate the problems of policing and protecting marginalised populations across different jurisdictions and how vulnerabilities are exacerbated by the diverse and often conflicting remits of the various agencies involved. The paper discusses how the impact of structural issues such as poverty and exclusion, and the resulting conflation of the criminalisation and victimisation of the Roma, has not only limited the effectiveness of available responses to child trafficking, but also served to aggravate the increasingly adverse conditions faced by 'Europe's favourite scapegoat'. The paper additionally seeks to progress a theoretical space by linking such analysis to sociologies of mobility, marginalisation and the pluralised rendering of criminalised and victimised 'others'. Key here are the myriad ways in which (national and organisational) borders are imagined, governed and responded to by diverse groups of criminals, victims, criminal justice and social services agencies.

##### *Security, Surveillance and Space: Contested Topologies of Anticipatory Urban Counter-Terrorist Surveillance*

Drawing on data generated from ethnographic research and two years of interviews with counter-terrorism practitioners this paper analyses practices and arrangements of domestic security surveillance operations in two empirical case studies: the London Olympic security programme and, also, urban counter-terrorism surveillance measures in a British city. Particular emphasis is placed on the anticipatory turn in security practice and how collapsing distinctions between internal and external security draw multiple new actors and agencies into the dispatch of counter-terrorism and attendant surveillance practices. With them come diverse practices, orthodoxies, values, techniques, weightings of risk and ambitions for security and surveillance. The paper argues that topological approaches informed by Foucauldian notions of 'security' (2007) and biopolitics (2008) provide particular utility for understanding of these heterogeneous configurations, techniques and practice of surveillance. Such approaches not only provide conceptual tools to articulate the diversity, plurality, conflict and cohesion within CT practice but, also, capture how power simultaneously operates at different scales and for varying (sometimes competing) purposes. Moreover, the paper argues that such conceptualisations of security represent a move beyond territorial control to the management of circulations, where subjects are left in situ, but their mobilities are monitored, delineated and assessed and, ultimately, reclaims elements of Foucauldian surveillance-focused debate from the shadow of panoptic analyses.

##### *Parental Leave Policies in the French Work Family Regime: Innovative Formulation, Disappointing Implementation*

Theoretically, this proposal hinges its analysis around the concept of Work Family Regime - which at the same time draws from the knowledge acquired from large European comparative studies and from those which come from the feminist critique of these works. It then makes a study of the French Work Family Regime through family policies and, in particular, the formulation and implementation of parental leave.

France has formulated parental leave that is neutral and very innovative in its formulation but which does not fundamentally question, in its implementation, the unequal position of men and women in employment and within the family. Consequently, despite the fact it is very innovative and well founded from the point of view of a better hinge point between Family and Work, the use of the device remains almost exclusively female, puts the employment of women at a disadvantage and reinforces gender inequalities. The world economic crisis, by making available employment and the means of the social investment more scarce, has only reinforced such a dynamic.

In fact, the real sociological question is less to understand how the crisis is putting the brakes on (or even destroying) acquired experience in terms of reconciling working life/family life than to measure the growing discrepancies between social practices and normative frameworks that cause dysfunction and inconsistency phenomena within most contemporary societies. The discrepancy between standards and practices are reinforced against three contradictory phenomena: one that refers to the process of homogenising employment ratios between men and women; a second that refers to the permanence of a sexual allocation of productive and reproductive activities (sexual division of social activities); and a third which expresses the desire of women and men to be able to be reconciled without wearing down their working life and their family life.

##### *Gender Inequality: Work and Family Conflict in Contemporary Japan*

The number of dual-earner households has increased during the last several decades in Japan. Nevertheless, women still perform most of the housework, despite being employed full time. The issue of work and family conflict—particularly for female workers—has drawn the attention of policy makers, because it has often been associated with the issues of low marriage and fertility rates. Thus, in order to create family-friendly work environment, many Japanese companies have recently begun implementing policies such as overtime work restriction for employees with young children, enhancement of employees' discretion over the pace and schedule of work, and introduction of various work-life balance measures. On one hand, these policies are expected to facilitate the continuous employment of women. On the other hand, their effects on household management—how spouses divide housework and communicate with each other—are uncertain, because these policies are often created taking into account women's responsibilities at home and aim to reduce women's work and family conflict. Gender biases may affect the way spouses divide the housework and communicate with each other. This paper examines the impact of family-friendly work environment on (1) the division of housework between spouses and (2) the frequency of communication (conversation and having meals together) between spouses. The Japanese Life Course Panel Survey (JLPS), a national longitudinal survey of the youth and middle-aged in Japan (i.e., individuals from 20 to 40 years old), was used in this research.

*'De-Pharmaceuticalizing' Sleep? Patient and Professional Perspective on Prescription Hypnotics in UK Primary Care*

In this paper we look at UK General Practitioners' (GPs) views of prescribing hypnotics in primary care and compare and contrast these with patient perspectives and experiences, in the context of debates about the (de)pharmaceuticalisation of sleep. Data are qualitative in nature, drawn from focus groups with chronic users of sleeping pills and semi-structured interviews with GPs.

We examine the degree to which the views of patients with respect to both aetiology of their sleep problem and prescription of pharmaceuticals converge or diverge with medical discourses on these matters. We discuss the role of so-called lay 'expertise' in the therapeutic management of sleep problems, the perceived value of pharmaceuticals, and the importance of building mutual trust between GPs and patients in the medical encounter.

We argue that in practice, medical views on the value of hypnotics, beliefs about 'deserving' and 'undeserving' patients and corresponding prescribing practices have permeable borders which regularly break down the partitions between these categories, turning GPs into reluctant prescribers of sleeping pills. In the doctor's view, the recognition of lay expertise is thought to enrich medical encounters, give patients a voice of their own and increased responsibility for their healthcare practices. From the patients' perspective, enacting the identity of 'informed patient' is not straightforward or easily accomplished. In this study the boundary between medical expert and patient was still fairly robust. The patient perspective emphasizes a split between lay and expert views on the value of pharmaceuticals versus non-pharmacological therapies in the management of sleep problems, as well as in the assessment of risk of becoming addicted to sleeping pills. Our paper therefore contributes to recent work on the (de) pharmaceuticalisation of society, the changing nature of the doctor-patient relationship in the digital age and lay experiences of chronic illness.

*Politics and Bureaucracy in Poland: Political Patronage in Senior Civil Service Posts Appointing*

An effective, transparent and accountable public administration is one of the key aspects of rule of law. However, public administration in post-communist states is particularly vulnerable to political patronage and cronyism, due to unequal statutes of political and administrative spheres and underdevelopment of professional civil service. Although the aim of public administration reform in Poland was to shape the civil service corps in such a way as to allow an independent, objective, apolitical and competent group of officers selected in open competition to carry out their tasks regardless of any political changes, political parties try to limit the autonomy of civil service and subject it to their own interests by extending their control of personnel policy into the public administration.

The aim of the paper is to assess to what extent the actual relation between politics and administration reflects the principles contained in the consecutive Acts on civil service. The paper concentrates on the policy towards senior posts in civil service, especially directors generals and directors of the departments in ministries, other central institutions and regional offices as these positions are critical to gain direct control over civil service by politicians. Special attention will be dedicated to identifying the practices of subsequent governments aimed at employing political appointees in senior positions in public administration. Such analysis will allow for evaluation of the practical effects of the respective Acts on the professionalization of the Polish civil service as well as to determine the institutional model that serves best the autonomy of Polish public administration.

The paper is based on the results of the research project financed by the Ministry of Science in Poland: the empirical data gathered from a series of in-depth interviews with public officials, press content analysis, expert reports analysis, and analysis of legal framework of civil service functioning.

*Secularizing "Traditional Culture" or Sacralizing "Popular Culture"? Charisma, Community, and Commodification in Contemporary Subcultural Pilgrimage Practices*

As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first glance this seems to be a reversal of the processes of secularization that have intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular *manga* and *anime* stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storyworlds. While some scholars view this as the further commercialization and secularization of "traditional" religio-cultural practices, these practices reveal how both "traditional" and "modern" cultural forms—i.e., religion and the popular culture forms of *anime/manga*—in fact share overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that "anime pilgrimage" reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical sociality and self-advancement. This further calls into question conventional views of distinctions between "traditional" and "popular" cultural forms by revealing how new technologies and pop culture media can be reshaped into *augmenting* and *intensifying* previous cultural practices of pilgrimage, self-advancement, and sociality.

## RC26-456.1

**GAINTY, DENIS\*** (Georgia State University, [dgaity@gsu.edu](mailto:dgaity@gsu.edu))

*High, Lonesome, and Sociotechnical: The Corporealization of American Bluegrass Music in Japan*

In August 2013, the Takarazuka Bluegrass Festival in Japan marked its 42nd year, making it the world's second-longest running bluegrass festival. That bluegrass – a quintessentially American popular folk music from the poverty-stricken, rural highlands of the Southeastern United States – has found such solid purchase in Japan is itself noteworthy. The continuities and reconfigurations that have marked bluegrass's transplantation into Japan speak to larger questions of how and why explicitly rural, volkisch traditions are not only invented but also translated into foreign contexts within the larger process of modern nation/state figurations.

But while bluegrass and American folk music more generally have been studied to varying degrees as markers of (transnational) sociohistorical transformation, the embodied, sociotechnical quality of bluegrass music – and indeed of music – has garnered less attention. A key but understudied component in the performance and consumption of bluegrass, in both America and Japan, is its corporeality – the ways in which human bodies instantiate the ideas, identities, relationships and values assigned through bluegrass music to the actors, human and material, who comprise its sociohistorical cosmos. Central to this analysis is the examination not only of the work of human bodies, but also of the agentive work of non-human actors – specifically, the acoustic instruments whose material qualities work recursively with human agents to produce specific physical attitudes, interactions, and limitations.

In this paper, I show how the embodiment of bluegrass music in Japan offers insight into the sociotechnical mediation of national and local culture, linking the micro-analysis of bodily practice with transnational and transregional movements of goods and ideas. Using ethnographic and historical data and the sociotechnical insights of Bruno Latour and others, I argue that Japanese bluegrass allows performers and consumers to engage explicitly with questions of cultural identity through intimately embodied and networked practices.

*Israel Case Study: Israeli "Social Justice" Protests*

This paper focuses on complex interactions involving offline and online activists, new and mainstream media audiences, during the Israeli "Social Justice" peaceful protests (July 14<sup>th</sup> - October 2011); based, amongst others, on theoretical frameworks as social agency (Bourdieu, 1998), media political economy (Coul-dry, 2010; Mosco, 2009), new media and social change (Downing, 2001; Castells, 2012). Following numerous workers' union strikes in 2011, Israeli citizens desperate of welfare state deterioration, began comprehending the harsh neo-liberal economy mechanisms, and became very angry. On June 14<sup>th</sup> 2011, *Ynet* (a popular online news-media) continuously covered a Facebook call by young orthodox Itzik Alrov, to boycott cottage cheese, a popular basic food, and Facebook quickly gained 100,000 followers (Levin, 2012), who also monitored supermarket prices. A month later, the young film editor, Daphni Leef, opened a Facebook call for

her friends to join a tent protest in Tel-Aviv on "14<sup>th</sup> July", an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protestors -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Shechter, 2012). Public support was 91% (July 2011 Peace Index). Israeli mainstream media - printed, online and electronic - supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activists, journalists, new and mainstream media audiences; through a combined methodology: offline and online ethnography and netnography; in-depth interviews with activists and journalists; and quantitative and qualitative text analyses.

#### *The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area*

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa metropolitan area. Our research questions are: did areas' organizational resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have considerably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establishments for social services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over others. The economic crisis not only undermined the capabilities of the household sector, it also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent variable is a composite measure of social disorganization: crime (homicides), poverty rates, school drop-out rates, and underweight births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent variables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

#### *The Spatial Capital of Urban and Suburban Families: The Effects of Place on Children's Activities and Parental Satisfaction*

Families' life chances are affected by where they live as well as by their financial, social, and cultural capital. That's because their residence affects the likelihood of accessing organizational resources (Wilson, 1987). The latter include employment, education, health care, and food as well as entertainment, religion, and culture. Logan (2012) characterized this "unequal access or exposure by different population groups" spatial inequality.

The concept of spatial capital reconceptualizes spatial inequality in network terms and sheds light on how an area's transportation network can reduce/enhance spatial inequality. This concept focuses attention on the different abilities of households to access diverse elements in the context of the urban design (Marcus, 2010). Families' access to organizational resources is measured using network analytic techniques, i.e., how many supermarkets, doctors' offices, parks, schools, sports clubs, etc. can families reach through the transportation grid in a reasonable amount of time. This will depend on how transportation networks are designed, where establishments are located in the network, the family's location,

and the family's transportation and communication technologies, e.g., cars, bikes, smart phones, GPS devices, etc.

We use data from surveys of families in 2003 and 2013 in the Phoenix-Mesa urbanized area and spatial data that we collected on a variety of establishments that provide services and activities for children for these same years. We hypothesize that the likelihood of families using and evaluating positively establishments that their children patronize will be function of how many establishments are accessible to them through the transportation network. The more choices a family has, the more likely they will take advantage of them and the happier they will be. We test spatial econometric hierarchical models where we model the likelihood of families' use of different establishments and their satisfaction using areal data to define the set of establishments accessible to them.

#### *The Politics of Research on 'popular' Culture in Japan*

At the beginning of the new millennium, Japan, then still the second largest economy in the world, was suffering from a decade of recession and watching as geopolitical interests shifted to east Asian neighbors. At the same time, Japanese games, cartoons and comics were circulating around the world, and business and government leaders rushed to support the creative industries. The subsequent strategy to win the hearts and minds of the youth of the world through mega-popular franchises such as *Pokémon* was dubbed "Cool Japan." While the success of this strategy has been widely debated, and drawn its share of criticism, in June 2013, Japan's Upper House sent out a statement that they were redoubling their Cool Japan efforts, giving the go ahead to the Ministry of Economy, Trade and Industry to earmark ¥50 billion for promoting the cause over the next 20 years. With Tokyo gearing up to host the Olympics in 2020, many expect the charm offensive to gain momentum. However, with increasing interest and investment in branded popular culture, local geek subculture has become an issue of national concern. What is "cool" about Japan, and who decides? How do gamers, comic-book nerds and animation aficionados fit into that image? Is it cool to include such people in projects focused on "Japan?" What sort of research is acceptable, popular and cool within this paradigm? What research is "uncool?" What is the role of the Japan researcher in negotiating all of this during a "crisis" in the field, which is to say declining opportunities for funding and employment? This paper seeks to unpack the politics of popular culture in Japan through the case study of Akihabara, an area in Tokyo that some think is geeky and gross, and others position at the center of Cool Japan.

#### *Missing Bodies? the Visual Landscape of Home and Its Meanings to Solo-Living People*

Not only presence of other bodies, but also the absence of bodies of others has a significant effect on the contemporary experience of domesticity and belonging. In her classical study on home as a tyranny, anthropologist Mary Douglas (1991) addresses solo-living only once, mentioning that conflict between persons is just transformed into conflict of wants within one person. In that sense, the normativity of home in terms of routines created via the relations of its various members is produced by the single member who has to discipline him- or herself. Goffmanesque "backstage" of home becomes a highly important "onstage" via internalized social norms or aesthetics. In our research we focused on home-centred and home-generating practices performed by the occupants themselves, or between the occupants and the materiality of their dwellings and other non-human players (e.g. things, animals). In this paper, we will present the photo essay based both on 1) visual diaries, where photographs and texts were taken and written by participating dwellers focusing on mundane routines and everyday situations (of "doing nothing") as well as on the moments of significant ruptures and changes, and 2) on visual material collected by participating researchers during the research events using go-along ethnography in the dwellings. Both are then interpreted in relation to other written or oral narratives produced within different phases of the research project aiming to understand how the meaning of home is constructed by solo-living men and women, which practices they use to create, maintain, experience and imagine their homes in space and time, and how they position themselves within wider social networks, family and society. We are seeking for more fluid, open and empirically grounded concept of home based not on essentialism and normativity, but rather on performativity and it's becoming-into-being through active bodies, dynamic meanings and mundane aesthetics.

*The Perception of Leisure By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?*

Family, education and work in later life, care for grandchildren as well as the imperative of "active" and "healthy" ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e. "the stress generated within a person when he either cannot comply or has difficulty complying with the expectations of a role or a set of roles" (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project "Role overload: grandparents in the era of active ageing", the perception of various and dynamic roles performed by the elderly will be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available recourses and the interpretation of the grandparent's role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

GALE, NICOLA\* (University of Birmingham, [n.gale@bham.ac.uk](mailto:n.gale@bham.ac.uk))

*Knowing the Body and Embodying Knowledge - the Practice of Complementary and Alternative Medicine*

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of 'embodied knowledge'. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to issues of spatial/bodily boundaries and timescales in practice.

While health professionals of all types have been traditionally been viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counter-balance to the focus on abstract knowledge of the bodies of 'others'.

The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be 'energetic', 'emotional', or 'spiritual' bodies. The 'disease' of biomedicine becomes instead framed as 'dis-ease', an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/bodily boundaries are not necessarily relevant. Touch can be 'energetic' rather than physical, and the focus on the subjective *telling* of illness, means that experience can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of 'embodied knowledge' is vital to our understanding of the knowledge base of healing practices internationally.

*Post-Nationalism or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India*

This paper is a case study on the possibilities of personal transformation through transnational experiences based on the narratives of Australian students and volunteers working in India. It examines the possibilities of change through transnational experiences with a focus on Australia young people and their experiences of India and challenges to commonly held ideas and understandings of the Other. The research is based on a methodology of participants telling personal stories of experiences across national borders. The paper contrasts the many different narratives exploring what contributes to a transformative experience and the circumstances that contribute to what can be identified as post-nationalist, or an ethic of transnationalism. The paper is part of a project supported by the Australia India Council that focuses on the relationship between Australia and India through Australians involved in aid and development projects in India. The project particularly focuses non-Government aid organizations and Australia

students and volunteers who have been visiting and working as volunteers in India over the past 25 years.

*National Educational Systems and Academic Profession: Portuguese and Spanish Cases*

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale's calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the educational policies in higher education.

Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands on professional competences of professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the what is a professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

*The Invisible Spring": Internet and Political Practices in Colombian and Brazilian Mobilization*

When it comes to social movements like the "Arab Spring", Occupy Wall Street and the Indignados in Spain, there is widespread uncertainty about the extent of their international dimensions. But we do know that these movements penetrated borders to gain support from other contexts, where the use of Internet and social networks (especially Facebook) involved the configuration of a particular mode of protest and mobilization. What is the relationship between these events and the mobilizations in other contexts?

Two cases concern us: the MANE (Mesa Amplia Nacional Estudiantil) in Colombia, which deployed an unprecedented student movement in the last 40 years of national history, whose founding charter explicitly refers to the events in Tunisia, Egypt and Spain, and ACAMPA SAMPÁ OCUPA SAMPÁ from the Occupy movement in Sao Paulo, born of the global call to install camps in different cities in October 2011.

This paper shows, in a transnational perspective, how the emergence of new forms of communication in the Latin American context involves a reconfiguration of political action and denotes a new politicized process. The « Invisible Spring » is the metaphor of the origin and deployment of the new movements, their actions against invisibility, and the new online collective actions and protest mobilizations.

This paper will to expose the invisibility notion concerning three dimensions: the international mass media, the political character of these mobilizations, and the connections between these movements and the three international movements (Arab Spring, Indignados, and Occupy). The analysis concerning the Latin American cases presents two foci: the motivations and discourses and the actions and organisational forms.

Overall, the framework is a PhD research project oriented to analyse the transformations of political practices of the young people in Latin America through the use of Internet (Colombia and Brazil cases).

This paper can be presented in Spanish.

*Publicar o Perecer El Desafío Para Una Ética De La Investigación Científica*

El mundo actual se ha caracterizado por grandes avances científicos y tecnológicos y, al mismo tiempo, por una creciente brecha de desigualdad y una crisis que amenaza la sobrevivencia del género humano en la Tierra. En este

contexto, se hace imprescindible que los investigadores mantengan una postura ética manifiesta, entre otros valores, en la búsqueda incansable por la verdad y el trabajo en colaboración, que les permita generar nuevos conocimientos y aplicarlos a los problemas complejos del mundo actual. Contrariamente al espíritu ético que tendría que guiar este quehacer científico, en los últimos años se ha incrementado el plagio académico, como una práctica no-ética de los investigadores. En tanto que esta práctica fraudulenta se ha evidenciado a partir de las publicaciones, el presente trabajo busca analizar este fenómeno en tres niveles. El primero versa sobre la normatividad y políticas institucionales para promover la producción y la evaluación cuantitativas en la promoción de carrera y la obtención de mayores niveles de remuneración. El segundo se centrará en la filosofía de publicar o perecer (*publish or perish philosophy*) y los valores del sistema de producción académica. El tercero busca concretarlo en estudios de caso. Con estos tres niveles de análisis, se propone hacer un acercamiento a este problema de pérdida de valores en la producción académica, así como sus implicaciones en la formación de investigadores y en la generación del conocimiento necesario para la comprensión y la solución a los problemas de nuestro tiempo.

### *Human Well-Being in a Media Multitasking Environment*

The paper discusses the relationship between media multitasking (MM) and human well-being.

Media multitasking (MM) is changing the way people think, talk, learn, socialize and view the world. MM has both cognitive and behavioral consequences on human beings. On the one hand, it drains the brain altering memory, linguistic ability, and learning process and, also, overwhelming humans with a huge amount of potential information, it can lead them to a feeling of being paralyzed and unable to make decisions. On the other hand, being pervasive in people's lives, MM shapes their social interactions creating new "social aliens", and let them experience a weaker capability of being connected with their own self.

Generation gap makes a big difference in the perception of how profoundly MM is affecting human well-being. And in this respect, in an evolutionary framework, does the "digital immigrant" (M. Prensky) original mould risk of disappearing to leave the place to the "digital native" new mould, shaped with new cognitive and behavioral characteristics? Are the digital natives going to create a new meaning for human well-being? Or the digital immigrants will be able to drive to a third model?

The paper reviews the literature on the topic, examines the above issues and, based on some empirical results, proposes some perspectives for the future.

### *The Role of the Communities of Care in Promoting the Social Reintegration of Ex-Offenders: An Account of Restorative Practices in the Philippines*

There is a growing literature on prisons and restorative justice; however, creating social groups as a restorative practice remains underresearched in the field of Sociology. This study argues that the key to successful rehabilitation is in creating communities of care (the media, the government, the business groups, the Church and the family) (Gamo, 2007) who will support and reintegrate the ex-offenders in their re-entry to free society. It employs a local-based model of rehabilitation following the concept of restorative justice – the Care System Model (Gamo, 2007). Furthermore, it utilizes a case study approach wherein data was gathered through semi-structured interviews patterned in a storytelling manner. The findings of the study reveal that: a) reintegration should start with the community acceptance of ex-offenders; b) the Communities of Care (Gamo, 2007) functions as one in addressing the needs of ex-offenders; and c) the programs and policies created for ex-offenders should respond to their needs. This implies that community acceptance and involvement is significant in promoting the reintegration of ex-offenders as a restorative practice. What this research reveals is that there seems to be a weak functioning on the part of the communities of care in terms of carrying out their specific functions. It recommends that further studies on ex-offenders, on recidivists and on the communities of care (Gamo, 2007) should be conducted as an addition to the growing literature existing on Prison Sociology.

### *Inequality in Intergenerational Closure As a Barrier to Social Capital Formation*

Intergenerational closure – a term coined by Coleman (1988) to represent a closed social network of parents and children – is a key marker of social participation, as it serves as a basis for social capital formation. There are no financial barriers to intergenerational closure, so one may have expected to see similar levels across economic and ethnic groups. Yet there may be social barriers, especially in diverse populations where young children's friendships formed in school do not necessarily cross over to relations among their parents. This paper examines economic and ethnic differences in intergenerational closure during the course of first grade. Data come from a large-scale randomized trial in which 52 schools were randomly assigned to a family engagement program intended to boost social capital, or to a control group. The schools are located in two U.S. communities with high proportions of Hispanic immigrants. Comparison of treatment and control schools reveals differences between the "natural" development of social capital in the control schools and social capital formation stimulated by design in the treatment schools, with random assignment minimizing the confounding role of self-selection in social capital formation. Key demographic differences linked to social capital formation include whether family members are English-dominant or Spanish-dominant Latinos, whites, or African Americans, and whether students are eligible to receive free or reduced-price lunch, or not. Data are analyzed with multilevel models appropriate for the cluster-randomized design of the study. Results indicate that families that were most disconnected prior to the intervention experienced the smallest gains from attending a school assigned to the intervention, suggesting that family engagement programs may not be an effective tool for breaking down social barriers to intergenerational closure.

### *The Rise of Privatization in Tertiary Education, and Its Implications for Teaching and Research in Universities*

Increasing privatization in tertiary education is a world-wide phenomenon. In many countries around the world, developed and developing, this takes the form of an expanding private university sector. In the U.S., expanded privatization occurs in the form of sub-baccalaureate for-profit institutions, on-line degree-granting institutions, and the privatization of many functions in public institutions. What do these changes mean for the future of teaching and research in universities? This paper identifies distinctive forms of privatization and discusses the implications of each. An expanded private sector is likely to increase inequality of access to prestigious universities but does not threaten their standing. Moreover, the net effect of privatization on access depends not only on whether families are able to meet tuition demands, but also on whether privatization leads to a general expansion of the tertiary sector, which could increase access overall. Privatization in the form of on-line institutions and for-profit sub-baccalaureate institutions may challenge the ability of universities to maintain their place, but quality distinctions are likely to override the challenges. Privatization within public institutions

constitutes a more insidious challenge and may shift the balance of resources within universities so as to threaten their ability to provide a well-rounded liberal education.

#### *Elections and Territorial Inequalities in Post-Revolutionary Tunisia*

Elections and territorial inequalities in post-revolutionary Tunisia  
 By giving a comfortable advance to the Islamist party of Ennahdha (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the social and socio-territorial bases of major Tunisian parties through combining quantitative analyses at different scales and field surveys in specific localities.

Although most interpretations have focused on the cultural modernist vs. conservative cleavage, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

#### *The Reputation Economy: Knowledge Workers and Freelance Networks*

A decade after Richard Florida's 'creative class' manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determinant element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

#### *Placemaking: Inequality By Accident or By Design*

##### **Placemaking: Inequality by Accident or by Design**

This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the "neighborhood effect" in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines all three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS technology beyond its traditional borders, in part through the popularization of tourism and professional relocation services that make use of maps, labels and index numbers to facilitate the evaluation of cities and neighborhoods in terms of characteristics commonly understood as amenities, opportunities and risks. The assessment of educational systems at the level of schools, walkability within user-determined boundaries, public safety or "dangerousness" on the basis of levels

of exposure to crime, and motor vehicle accidents or pollution are just a few of the indicators to be described.

On the basis of this background review, this paper will shift its focus to the consequences for inequality that are inherent in the uses of spatial analysis as aids to public participation in the planning of neighborhood and community change, especially as they relate to an emphasis on public transportation as a feature of so-called "smart growth" initiatives.

#### *(Mis)Recognition, Ressentiment, and Dualism: Challenges for a New Sittlichkeit*

In this presentation I shall argue that the category of 'recognition' (Hegel, Honneth) and its approach to social justice can be enriched if we address two major issues: a) the first problem posed for any theory of recognition is to forge a theory of social institutions embedding social justice. Following Axel Honneth's recent shift towards the work of Durkheim and Parsons, I shall defend this pattern arguing that a new theory of *Sittlichkeit* is indeed pressing for an adequate approach to social justice through the lens of recognition. Yet, and this is issue (b), Honneth's theory leaves largely unaddressed the issue of *ressentiment*, a powerful index of misrecognition and disrespect. I shall thus attempt to fill this void in Honneth drawing on Max Scheler's configuration of *ressentiment*. It seems that *ressentiment* is pertinent to a theory of just social institutions in many ways. For instance, I shall address Parsons' inclusion of 'sour grapes' pathology in his theory of modern society, extending it to the radicalization of systems theory in Luhmann. Luhmann is important because he locates, perhaps unwittingly, a space in society where *ressentiment* may be cultivated. This is no other than the inelastic binary code which sets a social system's self-definition in motion. Rigid, and systemically coded, dualisms give rise to feelings of *ressentiment* between categories ('left-right', 'progressives'-conservatives', 'public-private', 'pro-globalization-anti-globalization' advocates) and shipwreck important reforms that would mitigate injustice and would improve patterns of intersubjective recognition. Augmenting the category of 'misrecognition' to include the *ressentiment* problematic can help social theorists to theorize better significant empirical findings (e.g. Wilkinson and Pickett, *The Spirit Level*) that bear on the issue of contemporary social institutions and their approach to social justice.

**GANGAS, SPIROS\*** (Deree-the American College of Greece, [sgangas@acg.edu](mailto:sgangas@acg.edu))

#### *Human Rights and Agency: Sociological Opportunities in the Capabilities Approach*

In this article I shall argue that Amartya Sen's capability approach offers a promising renewal of sociological approaches to human rights. Sociology has only recently tilted towards the capabilities approach. I shall suggest that, on the one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program's central categories have a precedent among many social theorists. Seeing this affinity as an opportunity for creative theory-building in sociology, and drawing on sociology's accomplishments, I argue that normative components of Sen's ideas have been prefigured primarily by Parsons and to a lesser extent by Giddens. The capability approach mediates, I shall suggest, the formal aspects of Parsons' idea of 'capacity' with Giddens' idea of 'capability' in the context of the latter's theory of structuration. On the other hand, many theories of agency in sociology are normatively wanting. If configured along the tracks of capabilities, sociological categories, like agency, can signal a progressive problem shift in sociology attentive to human rights, a core component of Sen's research program. Compounded with capabilities, a new notion of agency can offer the appropriate normative justification to the 'public sociology' paradigm which re-introduces normative considerations in sociological discourses. If this proposed reconstruction is plausible, then it can contribute towards regenerating the capabilities approach sociologically, reconfirming its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

#### *The Study of Hindu Woman Problems in Modern Society*

The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes- form women in the village, middle class women in the cities, government women in New Delhi- women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem identified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relationship and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for widowhood, they are related to changing times and the impact of the globalisation.

#### *The Role of NGOs in (de-)Constructing 'Flight' Migration at the Mediterranean Borders*

Since its inception of the 1985 Schengen Agreement, *internal* borders within the Schengen space have been abolished. No doubt that this has bolstered the freedom of human mobility *within* the Schengen borders, which went hand in hand with the southbound, and more recently eastbound, EU enlargement. Observers speak of transnational mobility, commuter/shuttle migration, moving away from the presumed linear nature of migration in the study of *immigration*. But this is just one part of the European migration landscape: the mobility to the southeastern and southern external borders seems no less vibrant yet the entry into these has become severely hardened owing to the ever tightening border control, as widely reported by the media.

However, we still know very little about what the Mediterranean member states' migration regimes have in common. Even lesser analyzed is the role of NGOs in supporting these migrants as well as responding to the media coverage about forced flight from Africa and the Middle East. The aim of this paper is threefold: firstly, we shed light on the practices of NGOs in Southern Europe, particularly focusing on their reaction to, and collaboration with, migration policies at the governmental and EU level. Secondly, we explore the role of meso-level social networks among NGOs in not only supporting migrants but also (un-)making flight migration, by contemplating on the question whether the difference between the "forced" and "voluntary" migration is only a theoretical one. Third, we envisage visualizing our findings through Google Earth. This paper draws on expert interviews and documents collected in our research-based seminar at the University of Bochum.

#### *Info-Communication Culture, Cultural Crisis, Social Media and New Technologies: The Model 'Info-Communication Cultural Management (ICCM)'*

New technologies exert strong pressure on traditional cultural organizations and institutions to digitalize their cultural management and administration structures. In economic crisis, some of the most important and widely debated issues in the areas of digitization of cultural policy are administration of cultural organizations and cultural rights of cultural activities in Info-Communication Landscape (ICL). In order to cope with the recent crisis and to protect cultural policy and cultural management, all countries should collaborate to create and offer a dynamic regulatory mechanism in info-communication globalization. This paper examines and analyses cultural management, social media, new technologies and info-communication culture. It focuses on cultural management, public interest and regulations of digitized cultural products and services. It proposes a new dynamic model for cultural management 'Info-Communication Cultural Management (ICCM)' in cultural and economic crisis.

#### *Management of Cultural Activities in Info-Communication Globalization: The Cultural Management Model "Dynamic Perception of Cultural Activities"*

A new digital revolution is coming, this time not only in management of cultural activities but also in the administration systems of cultural organizations and institutions. Digitization of cultural management and administration will allow cultural managers and administrators to develop and manage real/physical cultural events on demand, wherever and whenever they need them in Info-Communication globalization. This paper examines and analyses the cultural events and activities in recent cultural and economic crisis. It examines cultural management as a very important issue of organising cultural events and activities both locally and globally. It focuses on cloud computing, digitization of cultural activities, cultural strategies and crisis management. It explores digitalisation of cultural administration structures and proposes a new dynamic model, the 'Dynamic Perception of Cultural Activities' (CADP).

#### *Energy-Related Consumption in France: Policy Influence, Socio-Technical Structure and the Role of Practices*

The issue of the public policies related to sustainable consumption changes has been recently raised in France, emphasized by the "Grenelle of the Environment". However, since the 70s, France has faced the matter of behavioural changes in energy consumption. That is why we propose to treat the question of the behavioural changes impelled by the energy policies in France. This analysis will be embedded in the history of the public policies (energy and other domains of consumption) and their effects on the behavioural changes. Nowadays, the energy issue returns in top of the agenda, after having known eclipses at the end of the 70s. It is built in a context of the European energy market deregulation. The resulting policies highlight the importance of the individual behavioural change through the "consumer" representation (energy savings, smart grids, market choice of appliances, supplier choice according to the sources of energy production, etc.). The market tools are privileged, but the French State remains the dominating actor. Within this framework, isn't the notion of the individual behaviour partly rhetoric? Indeed, other upstream factors encourage in a decisive way the levels of households' energy consumption (e.g. offer construction, infrastructure choices, thermal regulation, at the French and European level). Moreover, the succession and the heterogeneity of the policy devices that have partly opposite objectives may lead to conflicts in norms and contradictions in the energy practices. Our analysis will be developed through examples related to "sustainable lifestyles", such as: energy label, low consumption bulbs, carbon tax, choice of the means of transport, waste sorting and water consumption.

#### *Efectos De Las Muertes Por Causas Externas En La Estructura De Población De Venezuela, Años 2001-2011*

Diversos estudios han señalado el aumento de las muertes por causas externas en Venezuela los últimos años, dos de sus principales tipos: accidentes y homicidios, han escalado rápidamente entre las primeras cinco causas de muerte en el país. Este trabajo tiene como objetivo presentar los efectos de las muertes por causas externas en las tasas de crecimiento por edad y en la estructura de población de Venezuela entre los años 2001 y 2011. Para ello, se utiliza los datos de mortalidad publicados por el Ministerio del poder popular para la Salud de la República Bolivariana de Venezuela en los Anuarios de Mortalidad de los años antes mencionados, y los Censos de población y vivienda de los años 2001 y 2011. Para evaluar la incidencia de las muertes por causas externas se obtienen las funciones de mortalidad por causas a través del uso de tablas de mortalidad de múltiples decrementos. Se toma el análisis utilizado por Preston y Horiuchi en 1988 de las tasas de crecimiento por edad, para examinar los cambios en la estructura etaria de la población introducidos como efectos de la ocurrencia de muertes por causas externas, según tipo de causa. De allí, se muestra las diferencias en la estructura de la población para el año 2011 modelando la ausencia de las muertes por causas externas según tipo. Los resultados muestran que entre 2001 y 2011, las cohortes de hombres jóvenes (15 a 34 años de edad) sufrieron el mayor impacto tanto en las tasas de crecimiento como en la estructura, en especial por causas de muertes asociadas al uso de armas de fuego. Mientras que

para las mujeres son las muertes por accidentes de tránsito en todo el período de estudio, lo que causa el mayor impacto.

#### *Ongoing Disaster: Fukushima, Complex Technological Systems and Uncertainties*

Catastrophes such as that which struck Japan early 2011, as a result of the accident in the Fukushima nuclear power plant, the most serious accident ever in the history of nuclear power plants after Chernobyl, demolish claims to extremely small risk probabilities for complex systems and upend the delicate balance between costs and benefits argued by safety experts. The Fukushima disaster demonstrated that in contemporary societies, vulnerabilities and threats are difficult to locate or predict, being both incalculable and impossible to offset. The natural tsunami that ravaged Japan was also a technological tsunami with ecological, social, economic, and political consequences. The Fukushima disaster may be thought of not just as a disaster for Japan, but for the technological order.

Our analysis of the March 11<sup>th</sup> disaster begins with a simple narrative showing how a natural disaster in a country at the forefront of technological development precipitated an accident in a nuclear power plant that in turn led to a chain of calamities at multiple levels. How did we become constructors of a world with such catastrophic potential? Section two responds by considering how the nuclear threat is played down as a result of the euphoric notion that human vulnerability can gradually be overcome by the increasing ability of science, technology and probability analysis to control and predict events. The final section retrieves the idea of "foresightedness" as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technical systems, in order to illuminate our choices and decisions. When faced with calamities and damages that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightedness emerges as a response both rational and virtuous, however difficult.

#### *Fighting Social Injustice in Spanish Cities: Social Innovation Practices Against Housing Evictions As a Response to the Current Housing Crisis*

This paper analyses the aftermath of the bursting of the housing bubble in Spain, which has left thousands of families without homes and indebted for life. In the first of two parts we look at contextually specific interactions between state regulation and market-oriented projects in Spain. This country is a salient case in which an economic recession and a debt crisis follow upon a long period of growth characterized by a housing bubble and a particular urban growth model. In this part we argue that central government has played a key role in framing fiscal incentives for housing ownership, and local and regional administrations have engaged in short-term forms of inter-spatial competition for public and private resources, place marketing and regulatory under-cutting in order to attract investment. In the second part, the paper examines the urban social movement "Platform in support of the evicted" (Plataforma Afectados por la Hipoteca - PAH) that, after starting in Barcelona, has spread to many other cities. The movement has created innovative strategies for housing accessibility and public and private governance in the housing market. These strategies include innovations at the local level and at national and European institutional levels. In this part we argue that social movements like the one we study are socially innovative when they aim at responding to social needs not met by the market and the state institutions. At the same time with their activism they transform the debate in the public sphere while prompting institutions to introduce new governance mechanisms and policy outcomes. The paper is the result of a research conducted under the umbrella of the COST Action IS 1102 (European Union RTD Framework Programme) during 2012 and 2013.

#### *The Construction of "US": The Experience of Love in the Sensible Proximity*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

According to Norbert Elias, the loving relationship between two people is, at the same time, subjective and objective. It is so because the relationship is related to three different yet overlapped dimensions, namely: the experience of love from the 'I' in relation to another person; the experience generated in the 'US' which implies observation and bonding of the loving relation; and the 'THEM' experience regarding the observation, experience and bonding of 'others' with those who are in the loving relationship.

In the first part of the paper, we will develop the "US" dimension of love relationships in heterosexual couples. The aforementioned dimension implies not only a discursive story, but also a story of experiences. Experience here relates to a mutually created process that involves the existence of two or more embodied psychic systems which "grow old together" (Schutz, 1932) and persistently irritate each other (Luhmann, 1984).

The observation of a particular 'US' story is thus made possible through the existence of those conditions. Furthermore, the 'US' story is built up in a continuous present which includes social discourse (power, gender, class), relational moulding or what Goffman studied as 'interaction', and synchrony between what the mind/bodies create whilst together.

In the second part of the paper, we will observe the "US" dimension through the interaction process (Goffmann, 1983) using a finer level of analysis: sensible proximity (Simmel, 1908). Our starting point is that in interaction with others and specifically in the 'sensible proximity', bodies produce *Sinn* which is mutually interpreted (Sabido, 2012). We will develop this through the example of the loving interaction in a heterosexual couple. The presentation will finish with some examples that illustrate this sensible process.

#### *A Different Path for Public Demands and Their Effects on the Processes of Democratization*

En clave de la Teoría de Sistemas de Niklas Luhmann, ésta investigación plantea una explicación acerca del proceso mediante el cual la demanda histórica sobre la democratización de medios en México, retomada en mayo de 2012 por el movimiento #YoSoy132, logró instaurarse en la agenda legislativa para su posterior discusión y aprobación como Reforma de ley en materia de telecomunicaciones en junio de 2013. Esto es: identificar la articulación y evolución de una demanda pública propagada principalmente por Twitter, su consolidación en el ámbito mediático y la evocación a nuevos actores, la formulación de múltiples variantes y su consecuente aprobación e implementación como política pública.

Así, la relación e irritación intersistémica que se pone en análisis permite explicar y asociar la operabilidad de diversos sistemas (político, jurídico, mediático, científico, y los movimientos de protesta), en su participación sobre dicha demanda y como fuentes de influencia y de tensión social a lo largo del proceso de decisión del Estado.

Para ello se realiza un estudio longitudinal de corte cualitativo que incorpora principalmente recursos audiovisuales de YouTube, documentos oficiales alojados en Internet, y notas de periódicos digitales. De esta manera mediante un análisis documental fundamentado en la Teoría de Sistemas, el estudio permite la observación de la interacción sistémica y sus efectos en el aparato estatal al momento de tomar una decisión de vinculación colectiva.

En este sentido, la hipótesis que rige ésta investigación parte del supuesto de que gracias a la viralización y mediatización de las demandas a través de las redes sociales y de los medios masivos de comunicación, a la participación de actores especializados y a la respuesta de un grueso de la población, se aumentó la presión sobre el Estado lo cual dio paso a un acoplamiento estructural orientado por el cúmulo de irritaciones provenientes de su entorno.

#### *Secularization in Mexico City. a Wrong Paradigm?*

The political situation of the world and the complicated relation of the West with Islamic countries have provided evidence that the most significant mistake in the theories of secularization is the conviction that modernization inevitably leads to the loss of the importance of religion. Thus the proposition of Berger (2001) replacing this paradigm with an analysis of the interaction between the forces of the secularization and a counter secularization is pertinent.

In a similar way, it can be said that globalization reminds us that the relationship between religion and politics as established in the Western world, that is to say the passage of the religious to the sphere of the private life, is rather an exception.

Religion in the history of Mexico is a key element in understanding the cultural reality of the country and there exist a collective memory linked to the Catholic Church. However, the first years of this century were an undeniable setback for Catholicism. We can talk about changes in the nature of the religious that opened

new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

##### *Brazilian Long-Term Migrant Women in Japan. Work, Family and Subjectivities*

This paper aims to present the first results of research initiated in January 2013 about Brazilian women migrant in Japan. Japan has accepted Brazilians of Japanese filiation and their spouses as labor force for over twenty years. The Brazilian community in Japan remains the third largest foreign community (population of just over 210,000 in 2012) in that country. If studies of the Brazilian community in Japan is now abundant in both countries, a sensitive analysis of gender relations in migration context is still incipient. Women's role in the migration process is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women, married or single, breaking with the classical view of the history of migrations that has been male centered (Rogerat, 1996; Morokvasic, 2005). Thus, we would like to show women's agency in migration process in Brazilian women's case. What is the objective and the subjective reasons to leave the country? Secondly, once in the country, what are the specific issues that those women face daily as immigrants, in the public and private spheres? How gender arrangement is done in terms of domestic work and child education? How they organize their everyday life as well as their emotional aspects as (foreign) workers, wives and mothers, specially when their residence in the foreign country became durable (contrary to their initial project)? Our analysis will be based mainly on qualitative research conducted with six Brazilian women, of Japanese origin or not, who live in Japan in a long-term period (about twenty years).

#### RC25-450.2

**GARCIA LANDA, LAURA\*** (Universidad Nacional Autónoma de México, [garlanster@gmail.com](mailto:garlanster@gmail.com))

##### *Academic Language Barriers: Professional Stigma or Recognition and Success?*

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic practices that may place both academics and students at stakes with linguistic and extra-linguistic uses of codes unknown to them and their English teachers. This practice surpasses their real conditions of coping with those matters in a short term period, which triggers ill practices that place them in face threatening situations that later may become a barrier for achieving this institutional goal.

Within this context, English holds the status of the language of academic and professional communication. In this sense, it has become a privileged language in the academic and professional realm, where academic production and activities in other languages are stigmatized. We analyze implicit and explicit language policies in macro and micro school practices where language status places individuals in asymmetric relationships, and see how these agents have become critical or not to their state of *alienation*, *commodification* and *consecration*. We also analyze their *cultural trajectories*, *cultural fields* and *cultural capital* in order to see how they resignify their *habitus*.

This paper presents how the position of English as a professional language has brought "natural academic practices" that disfavor researchers, teachers and students in carrying out their daily academic activities and in attaining academic recognition and success and favor those who respect the *doxa* (Bourdieu, 2001).

**GARCIA-RAMOS, TANIA\*** (University of Puerto Rico, [taniagarcia22@hotmail.com](mailto:taniagarcia22@hotmail.com))

##### *Labor Precarization in Puerto Rico: World-System Crisis, State Paradoxes and Resistance Struggles*

In the research conducted from 2008 to 2012: *Labor precarization in Puerto Rico: World-system crisis, state paradoxes and resistance struggles*, I studied labor precarization in Puerto Rico from a world-historical perspective (Wallerstein, 2004).

The methodological approach consisted in the construction of a microhistory (Tomich, 2008) examining the following three space-temporalities: 1) the short term, massive layoffs and resistance struggles in Puerto Rico during 2009, 2) the medium term, the analysis of these layoffs and resistances within the context of the world economic and political crisis, from 1968-72/73 to the present, and 3) the long term, the analysis of the 2009 massive layoffs and resistance struggles within the historical crisis of capitalism.

In the short term, I described how union workers and other groups resisted the massive layoffs of 30,000 workers, a policy implemented by the Government in 2009. This governmental restructuring, intended to alleviate the fiscal deficit, led to an unemployment rate of 16.9% in 2010. Employment rate decreased to 33% in 2011. In the medium term, the massive layoffs and resistance struggles held in 2009 were analyzed in the conjuncture context of the economic, political and social crisis from 1968/1972 to the present (Wallerstein, 2004). Considering the experience of the people and groups who participated in these resistance struggles, six challenges are discussed for unions and other groups. The potency of these and other groups to become anti-systemic movements is discussed. These movements can contribute to create new principles and politics for work and life. These principles and politics will be discussed supporting a new world-system beyond capitalism, the long term temporality presented across the research.

#### RC44-738.3

**GARCIA-RAMOS, TANIA\*** (University of Puerto Rico, [taniagarcia22@hotmail.com](mailto:taniagarcia22@hotmail.com))

##### *Resistance Struggles and Movements in Puerto Rico: Towards a New Politics for Life and Work*

This paper is a product of research conducted between 2008 and 2012. The research centers on the analyses of the resistance struggles in Puerto Rico during 2009 to confront the layoff of 30,000 public employees. As a result of these layoffs, the union movement confronted six challenges. I discuss the potential insurgency of unions and other social movements.

The year 2009, and the first strike at the University of Puerto Rico in 2010, integrated the most active and prolonged struggles in our country for the last decade. In these struggles participated unions, economists, political and religious groups, feminists, students and professors. As in other important struggles, unions were among the most important protagonists.

The objectives of this paper are: 1) Explain two significant events that took place in this period: the peoples' assembly and the one day general work stoppage, 2) Discuss proposals of diverse groups to deal with the crisis, 3) To present a brief historical background of the fragmentation in regards to the local union movement, 4) To evaluate the main challenges and potential insurgency for union and other social movements. Among these challenges are: 1) The continuous dialogue on the meaning of work and the role of workers in this systemic crisis, 2) The importance of diversifying the activities of resistance, 3) Unions and other resistance groups should be aware and oppose the attempt of the state to criminalize their struggle. Finally, the integration of struggles and movements in South Korea, South Africa and Latin-America poses the need of new ways for international alliances between formal and informal workers. These alliances can confront the precarization of labor creating new principles and politics for life and work.

##### *Something Is Changing: Italian Young People Between Religious Indifference and New Form of Believing*

Several studies on youth and religion stress how only a very small proportion of the youth population has anything to do with organized religion. There has been, on the one hand, a growth of interest in alternative forms of spirituality and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario. Are we looking at an Italian version of religious modernity which, on one hand, reflects the typical expectations of living in a pluralistic society and, on the other, forms them within the long tradition of culture and religious socialization which are typical of a country where both Catholicism and church are strong? Or are we looking at, among young people, the emerging of a generation characterized by religious incredulity? In this paper we're going to present findings of a qualitative study carried out with 150 young people aged 18-24, in order to better understand, in the framework of socialization outcomes, what are the key determinants of believing and belonging among young people and what are, in some cases, the main reasons of their taking distance from the religion. The collected interviews allow us to define a typology, defining mainly four kinds of youths according to their religious definition and their religious practice, to their opinion on the Catholic church and to their religious socialization.

**GARIBAY, DAVID\*** (Université d'Auvergne (France), [garibay@udamail.fr](mailto:garibay@udamail.fr))

*Mouvements Sociaux Et Sociétés Civile Dans Les Processus De Démocratisations : Le Cas De Conflits Armés Négociés*

Le processus de négociation de paix actuellement en cours en Colombie entre le gouvernement et les FARC pose le problème de la participation des mouvements sociaux et de la société civile dans des négociations dans lesquelles le passage de la guerre à la paix suppose également une évolution vers des régimes plus démocratiques, par une inclusion de forces jusque là en marge de la politique institutionnelle. Or cette participation est face à un paradoxe : d'une part, elle contribue à légitimer le processus au-delà des parties négociatrices, mais de l'autre sa présence peut altérer des négociations marquées par le secret et la confidentialité. Or en Colombie le processus actuel de négociation est face à une importante mobilisation sociale, avec plusieurs expressions, d'une part des mouvements agraires et paysans, autonomes des guérillas, et de l'autre des collectifs de victimes du conflit armé. Les mobilisations s'adressent au gouvernement mais elles ont aussi un effet sur les guérillas qui négocient. Le cas colombien contemporain sera analysé au regard d'expériences similaires par le passé dans le reste de l'Amérique latine, pour le comparer avec des cas où la mobilisation collective a été écartée du processus de négociation (Salvador) et des cas où au contraire elle a été fortement associée (Guatemala). Cette réflexion visera à réhabiliter le rôle des mobilisations sociales dans les processus des démocratisation, rôle trop longtemps négligé par des approches théoriques centrées sur la négociations entre élites. Il s'agira en particulier de montrer combien ces mobilisations contribuent à élargir le processus de négociation par delà les seuls négociateurs et à fournir à ce processus de changement une légitimité autre que purement électorale.

*Double Estrangement, Embodying a Reflexive Habitus: The Experience Of Minority Group Boys In Three Inner City Primary Schools In Dublin, Ireland*

**Double Estrangement, Embodying a Reflexive Habitus: The experience of minority group boys in three inner city primary schools in Dublin, Republic of Ireland**

This paper introduces the concept of 'double estrangement' which is based within a somatic Bourdieusian framework and draws from DuBois concept of 'double consciousness' and the work of Abdelmalek Sayad. Drawing on a large qualitative dataset I will argue that migrant group boys in Dublins north inner city tend to experience their body image with unease, as somewhat problematic 'shameful bodies', through which they suffer from a break with their embodied selves and a disruption of their internal time as they are pushed between habitual and reflexive action. The dual elements of 'double estrangement' will be outlined, firstly, it will be contended that visible difference and dispositions of the body mark migrant boys out as not belonging and this provokes a tendency for them to feel constantly on display and judged through their bodies. Secondly, I will argue this has the effect of heightening a boy's self-consciousness of their body as an object of value within peer interactions and this reflection estranges them from their habitual embodied being. This paper will conclude by illustrating how double estrangement acts as a form of symbolic violence within the 'child world' of the school, spaces in which the attention of children is on their peers instead of authority figures (Hill 1997). I will argue the development of a 'reflective habitus' or habitual disposition to reflect on one's body, estranges migrant origin boys from the embodied orthodoxy of the child world field and this is used to justify inequalities between boys and disguise racism within encounters.

## RC34-601.6

**GARRATT, LINDSEY\*** (University of Manchester, [garratt@manchester.ac.uk](mailto:garratt@manchester.ac.uk))

*Embodying The Least Adult Role: Reflections On Youth Research*

The aim of this paper is to emphasize the embodied root of reflexivity, fieldwork and intellectual activity within the youth studies field. This paper will begin by arguing that academic research is not a separate form of action, placing the researcher in a position of epistemological privilege, but is an embodied capacity developed through practical activity. The particular importance of this for youth research will be explored through an exploration of qualitative 'least-adult' (Mandell 1988) research with children, which this author engaged in for a longitudinal ethnography, which explored the inter-ethnic relations between primary school children in the academic years of 2007/2008 and 2008/2009. Through a description of the fieldwork process and challenges, conventional notions of reflexivity within youth research will be highlighted and the desirability of reflection in its intellectualist definition will be questioned. Taking Allison James (2000) conten-

tion that any account of children or childhood must be rooted in an embodied perspective, as the process of growing up places the body at the heart of a child's identity, this paper will argue that ethical research with children must acknowledge the somatic process of research or fall into a Cartesian trap that reflective research exists as something other than an embodied manner of being. This paper will conclude by arguing that 'intellectual activity' is ultimately practical and engaged and that reflexivity within the youth studies field is better understood as a 'reflexive habitus' developed through practical activity within the fields of research, academic literature and the embodied linguistic schema of the habitus.

**GARRETON, MANUEL ANTONIO\*** (University of Chile, [magarret@uchile.cl](mailto:magarret@uchile.cl))

*Foundational Dimension of Social Movements in Latin America? : The Case of Chilean Students and Other Mobilizations in Recent Years*

The paper discuss five dimensions of recent mobilizations in LA: democratizing, antineoliberal, citizenship, identitarian and foundational, according to the predominant dimension in the movements. This is done comparing with other mobilizations in the world. The main thesis is that behind the different mobilizations and social movements in recent years, underlies a foundational dimension aiming to reconstruct the relations between State and society broken after globalization, neoliberal reforms, dictatorships and democratization processes. This hypothesis is examined in the Chilean case considering three main aspects: the type of society emerging after the process of democratization that we define as a post pinochetist or post authoritarian society linked to the past by the neo liberal model and the Constitution inherited from the dictatorship, the type of mobilizations developed since 2006 and mainly since 2011 and the window opportunity for new relations between politics and civil society opened by presidential elections in 2013 and possible constitutional processes.

**GARRETT, DANIEL\*** (City University of Hong Kong, [dan.garrett@yahoo.com](mailto:dan.garrett@yahoo.com))

*Cold War 2.0 Visual Conflicts: American Visual Constructions of the Chinese 'cyber Threat'*

Soft power is a contested and volatile resource. Nations cultivate, expend, and exhaust soft power through hegemonic visual struggles within the international order – especially those at odds with the dominant soft power actor, the United States. Embedded within the notion of soft power and soft power conflict is the power of images for conveying political messages and values, and fostering or contesting the construction, (re)presentation, and diffusion of national brands. In recent years, an escalating dynamic of debates and narratives surrounding soft power have rooted over the putative decline of the U.S. and concomitant rise of the People's Republic of China. While simultaneously disputing America's waning, many U.S.-based critics of Chinese soft power moved past traditional China bashing exercises over censorship, democracy, and human rights, and now attempt to explicate away China's post-opening up and reform achievements – key elements of the contemporary Chinese soft power story. Beginning with reputational assaults on Confucius Institutes as 'espionage dens,' its global media expansion as 'propaganda offensive,' and 'peaceful development' model as smokescreen, a loudening denigration of Beijing's economic and technological milestones has emerged from Washington. This *information war*, intended to shape and malign representations of China's brand, is best exemplified in the extraordinary claims of former senior U.S. intelligence, law enforcement, and defense officials in late-2011/early-2012 accusing China of wholesale cyber espionage. Extending into 2013, American broadsides escalated to attacking the very premise of red China's success: 'socialism with Chinese characteristics'; asserting Chinese malfeasance and thievery were at the heart of the 'China miracle,' not any innate superiority of the Chinese system. Though manifested primarily in textual discourses, subversive visual imaginaries of China have been increasingly evident in Washington's efforts to degrade Chinese soft power. This paper examines the production, circulation and reception of these popular culture and political visual confrontations.

*New Dynamics in Collective Bargaining in the Informal Sector: Impressions from India*

Globalisation has led to a numerous critical changes in the lives of the world's working poor. The effects are particularly intense on those engaged in the informal sector in developing countries. Female workers in India's informal sector have been experiencing a dramatic impact of these processes on their work and lives. Some of these changes have also led to new coping mechanisms and survival

strategies. The roles of unionising and collectivisation have therefore changed in the recent years. In many ways, the fragmented nature of the workforce weakens collective strength resulting in rampant violations of their rights. Yet, fragmentation of the workforce leads to new strategies and combinations of forces. This is mainly due to the creative and dynamic responses of those suffering its consequences in developing ways to combat these violations present hope for the local-global labour movement.

My study focuses on the work of a trade union of female workers in Mumbai's informal sector. By way of two cases, one of domestic workers and the other of home-based embellishment workers, I show that organising in the informal sector is in fact possible. More importantly, I point out that while new-age globalisation and traditional conservatism join hands to make the employers and the institutions of the state anti-poor and anti-women, new forms of collective action bringing together different kinds of workers (engaged in various trades and from diverse backgrounds), are creating a space for making space for a dialogue between the poor and with these local and global institutions directly for demanding their rights.

### *Comparing Latin American Migration in Different Urban Settings: Theoretical and Epistemological Issues*

This paper offers an epistemological reflection on comparing Latin American migration in different urban settings. We provide a framework of analysis that is at the same time theoretical and epistemological. Migrants are simultaneously emigrants (thus coming from a certain "society of origin") and immigrants (that are bound by a new set of structural conditions in the host society). Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu) and fields (ibidem.) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound by certain constraints related to migration law of the host society (requirements of stay and work permits, rules of access to citizenship of the host country) and the features of the urban contexts where the migrant settles. Examples of different Latin American migrations in different countries (Spain, Italy, Belgium) will be provided. We conclude the paper with a reflection on the strengths and weaknesses of current research on Latin American migration in cities.

### *Latin American Migrants in Bilingual Cities: A Comparison Between Barcelona and Brussels*

This paper analyzes comparatively the language use of Latin American migrants in two bilingual cities: Barcelona (Spain) and Brussels (Belgium). Both cities share some similarities but also have some differences. Bilingualism in Barcelona is based on two coofficial languages Spanish and Catalan. While Spanish is the official language for all Spain, Catalan it is only the official language in Catalonia (the region). Latin American migrants from most countries (with the notable exception of Brazil) are already Spanish speakers and therefore have little incentives to learn Catalan. However, nationalistic policies in Catalonia and Barcelona encourage use of Catalan and give preference to those who can speak Catalan in the labour market. On the other hand, Brussels is the capital city of a country strongly divided amongst linguistic lines. In Belgium only Brussels is bilingual while the regions of Wallonie (French) and Flanders (Dutch) are monolingual. Migration policies depend on municipality, meaning that in Flemish speaking municipalities Dutch prevails while French is dominant in the French speaking. Latin American migrants in Brussels, native speakers of Spanish or Portuguese (brazilians) do not speak any of the two as mother tongue and have to learn. Choice of language learnt is related to area of settlement and social networks. The paper concludes with a reflection on the features of Latin Americans and the likely outcome of the migrant integration in the two cities.

### *Meanings Of Europe For Ethnic Minorities and Majorities*

What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Serb region of Vojvodina (Serbs and Hungarians, Slovaks), in the Ukrainian region of Kharkiv (Ukrainians and Russians, Belarussians, Jews), and in the Siberian region of Tjumen (Russians and Ukrainians, Caucasians, Tartars). To each sample the attitudes towards Europe and its meanings were requested. The main meanings (through attitudes) of Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a common family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of all these meanings between the macro-regions, between ethnic groups, and between minorities and majorities. The most important difference among the meanings is due to the macro-regions, first of all, and inside each region between minorities and majorities. Besides at the same level of macro-region also the structure of the meaning is very different. For example, the more important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in Vojvodina the first factor is more complex. In the Kharkiv region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea); so as the most important factor (first) is simple for the groups of the Tjumen region, but the structure of the meanings of Europe is composed of West and vague idea.

### *Abeyance Structures for an Environmental Social Movement: The Case of the US Bases Cleanup Campaign in the Philippines*

This paper aims to extend the concept of abeyance structures to the case of the US bases cleanup campaign in the Philippines and US. Abeyance structures refer to various organizational arrangements that absorb the spillover of activists after a social movement declines. In this paper, I outline four routes by which former partners took after the decline of the said campaign. I use in-depth interviews (n=31), secondary data, and internet archives in drawing themes on the routes taken by core activists of the disbanded campaign. I define these routes as follows: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (2) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (3) Route 3 wherein former partners remain in the spirit of the campaign hoping to renew it in the future; and (4) Route 4 wherein a US-based partner-organization structures itself by adopting a transnational environmental justice framework of action, and cultivating an organizational culture to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations to provide for their daily welfare. Other partners, which include mostly nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networking to overcome inequalities among partners.

### *Theory of Engaged Collaboration Across Borders: Alternative Perspective on Transnational Advocacy Networks*

This paper proposes a theory of engaged collaboration across borders to explain the process by which local environmental campaign initiated in a Third World setting transforms into a transnational advocacy network. I use grounded theory as tool for analysis in examining archival documents and interviews (n=31) to understand the experiences of partner-organizations of a transnational advocacy network for the environmental cleanup campaign on the toxic contamination in the former US military bases in the Philippines. To invoke international support, this campaign develops a tactical repertoire which includes networking, information-sharing, participatory and direct action, legal engagement, and engaged collaboration. What I define as "theory of engaged collaboration" emphasizes an alternative route to Keck and Sikkink's (1998) Boomerang pattern and a corollary to Wu's (2005) Double mobilization model. I theorize that the nature of relationships among partner-organizations within transnational advocacy networks can evolve from mere information sharing into a more engaged collaboration based on various dimensions salient to the ongoing processes in the network. The emphasis lies on how domestic NGO organizes a TAN so that external advocates become in-

volved in the lives of the community being advocated on. In the case study, three prominent dimensions of engaged collaboration are present. The technical/legal dimension comprises the strategic decisions on information sharing, policy advocacy, research, and litigation aspects of activism. The ethical dimension covers the moral and affective aspects of the campaign using victimization frame. Finally, the ethnic dimension caters to the collective identity of the campaign anchored on Filipino nationalist identity and the underlying colonial past that created it. Thus, this theory on engaged collaboration enriches the literature because it takes into account how the external advocates deepen their involvement in domestic affairs not only with their partner-organizations and the targeted states, but more importantly with the community of victims.

##### *Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India*

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well known fact that India is mostly an Agrarian country and even today 70% its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevails only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes deferent layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnicity and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalist mode of production coupled with an unstable returns due to change in climatic conditions resulting the farmers entering into debt traps which leads to help less condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of post globalization.

This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

##### *Telangana Movement: A Study of Problems and Prospects*

Telangana movement for separate state hood is historically well known all over the world. One of the reasons for its popularity is that its peasantry revolt with arms during (1946-48) under the Leadership of Communists against the Nizams autocratic rule. However the Telangana region of Hyderabad state was merged in Andhra Pradesh on 1<sup>st</sup> November 1956. But Telangana people wanted to have their own state in view distinct geographical, socio-economic, political and cultural identity. Telangana people were discriminated in every sphere by the Seemandhras. This process has created lot of inequalities and uneven development among the three regions of the state. Telangana natural resources like land, water, forest, mines were extracted unabatedly since the formation of Andhra Pradesh. Against this discrimination and exploitation separate Talangana movement under the leadership of Dr.M.Chenna Reddy was organized in the year 1969. About 400 students and youth were killed during the moment. Due to political betrayal of the parties in the power the moment was subsided. However, in the year 2001 separate Telangana Movement again started under the leadership of K. Chandra Shaker Rao who is a shrewd politician. During the last 12 years of the Movement, about 1000 students and youth sacrificed their lives. In view of the above background this paper mainly aims at to understand the unethical political stands and manipulations of various political parties in the state and at the center in decision making process of the formation of Telangana state. The other objective of the study is to present how people's cause and political aspirations of Telangana region manipulated and marginalized for the selfish ends of Seemandhras.

**GAUDEZ, FLORENT\*** (Grenoble-Alps University, [florent.gaudez@upmf-grenoble.fr](mailto:florent.gaudez@upmf-grenoble.fr))

##### *Literary Cognition and Scientific Fiction Literature As Subject of Knowledge Digressions Around the Pathic VS Epistemic Connection*

This presentation aims to consider on one hand science as narrative, as fiction, and on the other hand literature as production, as knowledge. We will therefore talk here of *literary cognition* and *scientific fiction* by analyzing the confrontation of two areas: literary and scientific (sociological).

The analysis will be organised around four cases (two for each area) :

- For the area of literary fiction :

- On one hand the case of E. A. Poe who consistently stages throughout his whole work the theme of experimental science aiming to make us wonder about the workings of nature ;
- And on the other hand the case of Julio Cortazar (who incidentally translated Poe) who for his part stages the theme of the most everyday aspects of social life, in a neo-fantastic way, aiming to make us question the functioning of this social life.

- For the area of scientific narrative :

- On one hand the case of T.-S. Kuhn who addresses this issue by the introduction of the science of Nature (so called explanatory, to use Weber's distinction) by constructing the concept of *experiment of the thought* ;
- And on the other hand the case of Jean Duvignaud who addresses this issue by the introduction of the science of Culture (so called comprehensive, to use Weber's distinction) by developing the concept of *utopian reconstruction*.

This perspective will allow to show how the narrative thinks, how to write is to argue, is to think. We will thus see that narrative categories function as conceptual categories of discovery, as argumentations, as cognitive categories, literature and science (sociology) each appearing sometimes as creation, sometimes as discovery.

##### *To Embark and/or be Embarked ? Emotion As Element of Method Digressions Around the Sensitive VS Intelligible Connection*

"To move someone around, he has to be emotionally moved." said Régis Deb- ray. Sociology is above all a question of vision, perspective, lighting, angle, depth of field, focus and of course fine tuning. Do we not recurrently talk about the "sociological eye"? This issue is of course also relevant to the sociology of art and it is in this context that the question of *emotion* will be examined here.

Thus, along with John Dewey, we will consider that *aesthetic emotion* is not a form of feeling that exists independently, but an *emotion* that is caused by an expressive material inducing a transformation of the initial feelings. What will interest us here is how *emotions* are then functioning as mediations between the different actors in the process of artistic production.

To this end, the semiotic narrative analysis of a scene of the Wim Wenders film *Der Himmel über Berlin* will be an excuse to draft a reflection on the idea of intellectual risk taking (gamble) drawing the *pathic* dimension into its path. We will speak here of sociological focus method characterizing the socio-anthropological posture. Emotion does not exclude reason and to that extent we therefore cannot afford not to take into account the issue of *emotion* in the *sociological method*.

At the heart of the creation process, *emotion* and the gambling concept will thus enable us to recall that thinking, also in science, is working from a fictional construction of reality (itself fictional construction of the "real ") as an intra-subjective, *empathic* and heuristic process, where *emotion*, omnipresent, must necessarily be taken into account.

#### *Cultural Capital of Young Russian Intellectuals*

The research of young intellectuals takes on special significance in the conditions of Russia's transition to the information-oriented society. Attention concentrates on the cultural characteristics of the observable social group because of the "cultural lag" which takes place in the most part of Russian province cities. The main role in cultural reproduction and translation plays the young university tutors as the most active and mobile group. They were considering as either main subjects of the cultural work in the social space of region. It is necessary to find out their cultural needs and general condition of incorporated cultural capital because of their influence on young people's values and aims.

The empiric base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project "Professional potential of young tutors in Russian province". The analysis contains information about basic components of young academics incorporated capital: leisure structure and the place of cultural practices within, the art forms and styles which prefers the researched group, the perception of province cities' cultural infrastructure, opinions about necessity of higher art education preservation.

The results of research let us tell about hyperrationality in the behavior of young academics, which concentrates on their professional responsibilities and forget about cultural self-development. They constrict their functions to the information translation and don't feel themselves as the active subjects of social changes. The main part of respondents doesn't think of themselves as a "cultural class" and don't regard their lifestyle as different from life of the majority. Unstable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

#### *The Idea of Age-Friendly Cities and Communities As the Answer for Global Trends of Aging Societies*

The aging process is great and unheard of in the past, challenge for governments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life and mobility.

Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create friendly environment for the elderly: social solutions conducive to maintaining an active lifestyle and innovative projects allowing for broad independent.

The answer to this can be the concept of Age-friendly Cities and Communities (AFC) which was conceived in 2005 at the XVIII IAGG World Congress of Gerontology and Geriatrics in Rio de Janeiro. It immediately attracted enthusiastic interest, and in 2010 has transformed into The WHO Global Network of Age-friendly Cities and Communities to foster the exchange of experience and mutual learning between cities and communities worldwide. The Network has identified eight domains of city life that might influence the health and quality of life of older people: outdoor spaces and buildings; transportation; housing; social participation; respect and social inclusion; civic participation and employment; communication and information; and community support and health services. Members of the network must implement a variety of activities in this area. Currently membership spans across 20 countries with a total of 115 cities and communities. The proposed speech will be a presentation of the idea of AFC as a response to the needs of life in aging societies. The theoretical analysis will be supplemented with the presentation of examples of implementation of the AFC in selected European cities to show the variety of actions.

#### *Health Care Reform and Creation of an Excluded Category of Patients*

The will to universalize the French health insurance system at the end of the 90's created a new marginalized category of patients: illegal migrants.

Splitting them from the other insurance holders by the establishment of a special health insurance (Aide Médicale d'État, State Medical Aid), this population was put at the edge of the health system. It led to unequal health practices and increased the difficulties to access health care providers and health insurance. These two levels of barriers have been underlined by the empirical research based on the study of a department in the French public hospital, named PASS (Permanence d'accès aux soins de santé : Department of health care access). The PASS is specialized in taking care of patients without health care insurance which are mainly illegal migrants. Separating the Aide Médicale d'État from the other insurances made possible for the administration and practitioners to have discriminating practices. The administration uses the processing of the applications (delaying them for example), while some practitioners exclude those patients from their practice. These barriers keep a part of this population out of the regular health care system, compelling them to go to special health care providers as the PASS. However, the specialization of health practitioners in those patients generated new practices, which showed the relevance and the complementarity of combined social and medical care, networking, and recognition of the social and cultural determinants of health. This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by public hospitals in France through the analysis of the PASS.

### JS-22.7

**GEERAERT, JÉRÉMY\*** (École Hautes Études Sciences Sociales, [geeraert.j@gmail.com](mailto:geeraert.j@gmail.com))

#### *The Appearance of a Sub-Field of Medicine of Poverty in France*

This paper aims to tell and analyze the processes and historical background which gave rise to a sub-field (in a Bourdieusian understanding) of medicine of poverty in France from the early 1980's to the 2010's. The mobilizations for the health care access of the poorest organized by some actors and groups of the medical field led to the vote of the anti-exclusion bill in 1998 and the creation of the Permanence d'accès aux soins de santé (Department of health care access, PASS) in public hospitals. The PASS raised from the meeting of two different social groups – humanitarian (as Doctors of the world) and sub-groups of dominated medical disciplines in the hospital (as palliative care or infectious diseases) – which have developed this understanding of care since the 1980's. This was a response of the raising barriers to the health care access and the incapability of hospital practices to answer the new problems of a margin of the poorest patients taking place in a social and political context of economical crisis and new poverty. The bill and the PASS were both an institutional acknowledgement of a growing reality of health care practices. It brought a new ethical understanding and practice of health care to modern public hospitals based on an idea of a global patient, multidisciplinary work combining social and medical work, networking, and recognition of the social and cultural determinants of health. However it faces the dominant idea and practices of health care, which rely on evidence-based medicine, technical health care, and profitability. This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by the public hospital in France through the analysis of the PASS.

#### *Inclusion in Society through Religious Orientation? Biographies of Male Students Participating in the 'Gülen Movement' in Germany*

The so-called 'Gülen movement' (Ebaugh 2009), a global network revolving around a Turkish-Islamic preacher, has become increasingly visible inside Germany. Founding private elementary and secondary schools, as well as centers for private coaching, supporting intercultural and interreligious dialogues, and issuing statements such as "Our Jihad is education", the movement acts to render possible the educational success of children of Turkish immigrants. By referring to themselves and their practices as *hizmet* (service), network participants also aim to alter the common view of 'backward Islam', a view perpetuated by popular discourse, and to contribute to a perception of a 'modern' Islam, which can be synthesized with the natural sciences and with globalized multicultural meritocracies. And so, to lead a Muslim life the 'Gülenian' can be understood as a promise to become successful, educated members of society.

In our lecture, we wish to present some reconstructive results of an analysis of biographies of male students who attend a weekly religious *sohbet* (discussion circle) in *hizmet*. By this we wish to discuss how inclusion and exclusion can operate as productive concepts for understanding the students' narratives about becoming members of *hizmet*. Our claim is that participation in the *hizmet* functions not only as a religious orientation, but also plays an important role in resolving crises among young Turkish adults. These crises result from discriminatory discourse in the public sphere in Germany against Turkish migrants and Islam, and from the construction of cultural, religious and ethnic difference in schools and

classrooms. In this sense, becoming a member of *hizmet* also means acquiring specific cultural, social and symbolic capital, which is used in the students' stories to explain their own place in *hizmet* and in society.

**GELIS FILHO, ANTONIO\*** (FGV-EAESP, [antonio.gelis@gmail.com](mailto:antonio.gelis@gmail.com))

### *Geopolitical Southwest? The Decoupling Between Latin America and East Asia In The World-System*

For the last couple of decades, since the collapse of the Soviet Bloc, much of the debate about south-south relations was captured by the idea that there was a "Geopolitical South" which, if heterogeneous from many perspectives, could be envisaged as being composed by countries equally positioned inside the capitalist world-system, as semi-peripheral areas with shared interests in their relations with core countries. In this paper, I challenge such assumption by showing that Latin America and East Asia have drifted apart inside the architecture of the world-system. In order to do that, I present qualitative and quantitative data to sustain three main lines of reasoning.

First, I show that while Latin America has remained basically a provider of commodities and consumers to core areas, East Asia has become a main provider of manufactured products even to those areas situated in the core of the system.

Secondly, I demonstrate how Latin America and East Asia economic relation has changed from a relatively unimportant one to an intense but asymmetric relation with all characteristics of core-semiperiphery relations: while Latin America keeps being mainly a provider of commodities to East Asia, it has also become an importer of Asian manufactured products. Not only that: the amount of foreign direct investment from East Asia to Latin America has been intensely increasing, while investment in the opposite direction is tiny.

Finally, I analyze specific cases inside the geopolitical framework of the world-system that are good examples of how such transformation took place: China-Brazil economic relations, Chinese investment in South America's natural resources and the evolution of the BRICS group.

I conclude by sustaining that the expression "Geopolitical South" must be re-defined, if it is to keep being meaningful. What we have today is a 'Geopolitical Southwest' that is increasingly positioning itself as a 'double semi-periphery'.

### *Towards a Methodology of Visual Analysis on Twitter: the Earthquake in Northern Italy*

The catastrophic event represents a relevant and interesting place of observation of communication practices and narration strategies started by media.

Traditional media represent the catastrophe with almost known strategies – both in the entertainment frame and in order to fulfill their informative role using precise selective criteria – otherwise social media have to be considered as different, if not new, contests of production and circulation of the catastrophic imagery.

It is sure that in this cases visual communication – in other words the production, diffusion and usage of images – has a central role for the symbolic handling of the natural determinism (Durkheim).

From these assumptions, the paper presents the results of a research conducted on a sample of 4257 images uploaded on Twitter during the first day of the earthquake that happened in northern Italy May 20, 2012. On the basis of this analysis, it is proposed a typology of images to sustain a first and general work hypothesis finding that during catastrophic events, the image has not only a *re-fere* function as an evidence of the ambient trauma, nor just a *re-ligo* function as social sharing of drama. The images shared on social networks are answering to the need of reprocessing in a symbolic way the catastrophic trauma, transforming it into an efficient occasion to activate new rituals of socialization and collective sharing.

This research focuses on Twitter peculiarity – as a primarily textual medium and characterized by precise connection dynamics between the users – to detect, by the application of the Social Network Analysis, the *weight* of the circulation of some influent images in order to spot the iconic images and to describe the social networks which explain their emersion and circulation.

## JS-24.1

**GERASYMENKO, GANNA\*** (National Academy of Sciences of Ukraine, [geranna@ukr.net](mailto:geranna@ukr.net))

### *Women's Unaccounted Work and Contribution: A Case of Ukraine*

\* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The need for assessing women's unpaid work and reproductive activity has long been discussed by economists within the context of estimation of a country's economic growth rates, as well as by sociologists within the inequality studies. The world statistical practice has acknowledged that working time budget surveys remain to be the most relevant tool to obtain reliable information on unaccounted work because such surveys allow estimating the ratio of time spent by women and men on labour market employment and on unpaid work in households.

The proposed paper is devoted to presentation of the results of a special sociological survey on assessment of women's unaccounted work realized in Ukraine. The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

A particular emphasis is given to gender assessment of involvement to informal work, which makes a rather important problem in the region of transition economies. The role of prevailing gender stereotypes in reproduction of gender inequality is also analyzed based on data of the national sociological survey, as well as on the results of European Sociological Survey. The latter survey reveals a striking contrast between Ukraine and other countries of Europe in terms of public opinion on social gender roles and norms, in particular those related to women's priorities in harmonizing their work and family obligations.

The paper provides also some analysis of gender policies realized in the country, and subsequent conclusions and recommendations on harmonization of gender disparities in paid/unpaid work balance and general empowerment of women in the country.

### *Liquid Organising and Soft Leadership in the Popular Protest Wave*

In activist and academic discourse it is often claimed that contemporary protest movements, including the Arab Spring, the indignados and Occupy Wall Street are 'leaderless' or 'horizontal' movements (see for example Castells, 2012). However, looking at their internal doings and at their communications it becomes soon evident that far from being leaderless, these movements are characterised by new forms of both personal and collective leadership, in which activist clusters often numbering no more than a dozen people come to acquire much influence in the direction of social movements. What we are witnessing to is thus not the end of leadership, but the emergence of a new form of leadership which attempts to harness the communication ecology of contemporary social movements.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book *Tweets and the Streets* (2012) I describe contemporary leadership as 'soft leadership'. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006). Leadership comes to revolve around community management and facilitation, rather than outright 'direction' of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and 'liquid' practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing social movements at their inception, it also runs the risk of exacerbating contemporary movements' well known tendency towards evanescence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very 'liquidity'.

### *The Squares Movements and the Resurgence of Popular Democracy*

This paper argues that the squares' movements of 2011-12, a protest cycle comprising the indignados in Spain and Greece to Occupy Wall Street in the US and the UK marks a turn in collective action with a renewed majoritarian ambition and the aim to refund democratic institutions. I attempt to capture the nature of this popular identity by contrasting it with the countercultural identity that dominated the anti-globalisation movement. Analysing materials originating from a long term ethnographic research, I identify two fundamental traits of the squares movements, a) majoritarianism and b) emphasis on unity, opposing them to the minoritarianism and emphasis on autonomy of the anti-globalisation movement. The squares movements appeal to the majority of the population rather than to an idealistic minority, calling citizens to embrace a new 'democracy 2.0'. Furthermore, they put much emphasis on unity, in contrast with the emphasis on internal autonomy and diversity of anti-globalisation activists. The article proceeds to gauge the significance of this popular turn and its reflection of the democratic crisis of contemporary societies. I assert that the adoption of a popular identity bespeaks the spread of social grievances amidst the global financial crisis, and the capacity of appeals to resistance to resonate with different sectors of the popula-

tion beyond the activists milieux. Finally, I argue that the squares' movements are best understood as transitional movements, and moments of foundation and social recomposition of a new democratic system beyond the neoliberal corporate state. These movements present many opportunities for the development of a progressive democratic politics, but they are also ridden with deep contradictions, in their proceduralism and the lack of substantive demands beyond democratic demands.

#### *Identities in Transition in a Post-Colonial Context. How HIV/Aids Can Open a Different Way for Sub-Saharan African Women Living in France ?*

In social sciences, it is now trite to say that HIV/Aids reveals relations of power. But what could it mean to argue that the epidemic is the incubator of new social interplays in a post-colonial context ? The way Sub-Saharan African women living in France have become key players to fight HIV, within communitarian associations (prevention and support groups), is an illustrative example of such a question. A socio-ethnographic fieldwork led by direct observations and interviews, from October 2011 to July 2013, invites me to explore this issue through the prism of Intersectionality and Care Theories. Care is understood here as an ethics of Subalterns and a singular political process, following the reflections of J. Toronto (1993).

The subaltern position of those women - as women, migrants, from a post-colonial minority and sometimes HIV-positive - led them to develop an *expertise of complexity* and a model of intervention drawn on an ethics of Care. Their participation to fight HIV in France represents an unprecedented way to position themselves and reverse the multifaceted relations of power they are the object. Thus, this paper will explore how they socially and politically use the traditional categories assigned by the dominant society to transform their subaltern position in this post-colonial context. A special focus will be given to the way they review their subaltern status toward white French women, within a racialized gendered labour market and an excluding access to citizenship. As an example of grounded theory approach, this field research proposes a theoretical opening that let us thinking about the transition of subaltern identities in light of the intertwining of multifaceted inequalities in a post-colonial epidemic context.

#### *Tensions Between Identities and Roles : When Sub-Saharan African Women Living with HIV Become Health Mediators in France*

Between 2000 and 2005, an experimental training program for « new health actors » was lead in France, to improve access to HIV prevention and healthcare for populations in condition of vulnerability. This program trained more than 150 health mediators from the targeted social groups and it included many Sub-Saharan African women living with HIV in France, recruited from communitarian associations. Through their interventions in the Infectious Disease Wards of the Hospitals, the peer health mediators have turned key players in the relationship between patients and professionals.

This paper proposes to explore the specific interactions between HIV-positive health mediators and institutional healthcare professionals, in particular physicians and social workers. This reflection is based on a socio-ethnographic field research led from October 2011 to July 2013, by conducting 18 months of direct observations in HIV communitarian associations and 85 interviews with HIV-positive patients, health mediators, physicians and social workers. The roles that health mediators are asked to play to improve patients' quality of care will be examined. It will highlight the tensions that they experiment between the double identity of being an HIV-positive patient and a healthcare professional. A special attention will be given to their specific position within a set of unbalanced relationships with physicians and social workers. Thus, this paper aims at showing that the professional participation of those *patient-expert* has inexorably improve patients and professionals interactions, by helping reconfigure the hierarchical position of physicians and the states of patienthood. Nevertheless, their intermediary status (between being a patient and an healthcare professional) reveals serious social issues, especially because they are included in an intertwining of unequal power relationships.

MUTZ, MICHAEL (Universität Göttingen)

#### *Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues*

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs' revenues' from different sources have multiplied over the past decades. Today's football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team's success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club's overall market value, the more likely their success. 2) The increasing multinationality of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multinationality can also have positive effects on their performance because players from different countries bring new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team's market value has a very strong (positive) influence on their success rate - indeed, 'money scores goals' as it seems. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of *some* players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from *many* different nationalities - multinationality, then, influences a team's chances of success negatively.

#### *Transnational Linguistic Capital. Explaining Multilingualism and English Proficiency in 27 European Countries*

Since the second half of the twentieth century, the extent, frequency, and speed of exchange and interconnectedness between different nation states and different world regions have increased enormously, a process described in the literature as globalisation. As the world system consists of multiple nation state containers and as most nation states have different official languages participation in globalisation is among other things dependent on people's ability to speak the languages of others. Those who only speak their native language are, in contrast, tied to their home country and can only take slight advantage of the perks of a globalised world. Transnational linguistic capital therefore might become a new measure of social inequality in today's increasingly globalised world.

The question central to our study is to what degree citizens in different countries possess transnational linguistic capital and how to explain the differences in multilingualism both between and within the countries. Using a survey conducted in the 27 member countries of the European Union we analyse the respondents' proficiencies in foreign languages.

We present a general explanatory model for foreign language proficiency, create hypotheses from this model and test them empirically by using multilevel techniques. We find that the size of a country, the prevalence of a respondent's native language, the linguistic difference between one's mother tongue and the foreign language affect foreign language acquisition negatively, whereas a country's level of education has a positive influence. Using Bourdieu's theory of social class, we show that besides other factors a respondent's social class position and the level of education are important micro-level factors that help to increase a person's transnational linguistic capital.

#### *After the Insurgency: Changing Strategies for Countering Political Inequalities in Bangladesh*

To what extent so-called minority populations gain access to decision-making processes in national government structures is one of the crucial questions for understanding the causes and consequences of ethnic conflict. Especially when nation-building processes are determined by the nationalist projects of majority populations, the demand for autonomy has emerged as a strategy of "exit", replacing "voice". This paper argues that the strategies for tackling such political inequalities have changed recently, which goes also to the credit of more efficient transnational and global networks. Based on empirical findings from Bangladesh, it argues that "voice" has become a matter of strategic concession, which has not only caused by shifting power-relations and expressions of solidarity within the region and globally, but which is also related to social transformations within the conflict region itself: the rise of a new generation with quite diverse individual and

collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities: migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new social status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

### *Towards a New Security Culture 2030*

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges?

The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

#### *Theoretical and conceptual framework*

Theoretically we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Bechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren't objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of "security culture" (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

#### *Methodology*

The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

#### *Results*

The results address the above stated questions and will be displayed as statistical numbers and figures.

### *Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead*

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the revalorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transitioning towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.

### *The "Incest-Beast" of Amstetten*

Durkheim has shown that the atonement of crime creates solidarity among those who condemn it. Therefore, crime contributes to sustain the social and moral order, although and because the deed questions them. Nevertheless, there are violent acts that transcend this order in a way that makes it impossible to classify them as acts of "normal violence". Cannibalism, incest and senseless cruelty not only evoke refusal but strong emotions such as disgust and hatred. We want to argue that crime becomes polluting and unclassifiable when it "amalgamates" different kinds of violence – for example imprisonment, incest and cruelty (Jan Philipp Reemtsma termed them "locative", "raptive" and "autotelic" violence). If there is "only" one transgression the crime is more likely to be integrated into society. In this paper we want to address the case of incest committed in Austria in 2009 by Joseph Fritzl. He held his daughter captive for 24 years in a self-made cellar in the house he lived in with his wife, telling her, the daughter had run off to join a religious sect. He abused and raped his daughter thousands of times fathering seven children. Some lived with their mother in the cellar, the others lived with their "grandparents" as Fritzl told his wife, his daughter had left them at their doorstep. The case of the "incest monster" was of international interest. At the end of the conviction in March 2009 Fritzl was found guilty and was sentenced to life imprisonment. He was thought to be both sane and mentally abnormal. In this paper we want to analyze the case of the "Incest-Beast Fritzl" as a deeply polluting act of violence that was scandalized throughout the media. Transcending the notion of "normal violence" by combining various transgressions the crime had to be framed as an extraordinary, monstrous act.

### *Place of Residence and Higher Education Choice*

It is generally assumed that the lower class faces restricted access to higher education and that opportunities of college choice and choice of field of study are restricted for lower class students. Differences of students' choice by place of residence are usually explained by the socioeconomic status of the place of residence.

Studies conducted in Israel examined the effect of living in four types of locations (city, small town, Jewish village and Arab village) on higher education choices. Those locations may be ranked from high SES in the city through small town, Jewish village and finally the lowest SES in the Arab village. Those studies do not treat place of residence as a monolithic entity. They examine students' patterns of college and field of studies choices controlling for individual SES and academic achievements. The hypothesis is that place of residence is not only a geographical attribute but also a social place that influences self-identity and plays a role in students' choice regardless SES or academic abilities.

Findings show that the place of residence has a net effect on students' choices, and it interacts with SES and with academic abilities. This effect is differential. "Successful" students from cities tend to enroll in more prestigious universities and in prestigious fields of study, like medicine and law. Students from Arab villages tend to enroll in less prestigious universities and choose lower status fields of study, like paramedical studies. Students from towns and Jewish villages are similar in their choices. Less "successful" students are less influenced by their residential place.

It is argued that those differences show an influence of residential place as a way of life, and create a 'habitus' based on locality. This 'habitus' lead to differential college and fields of study choice, interacting with academic achievement and SES.

NOORDEGRAAF, MIRKO (Utrecht University)

### *Open Source Professionalism: Changing Forms of Professional Expertise*

Public professionals often complain about their lack of autonomy and the pressures put on their work by 'outsiders', such as managers, politicians, inspectors, clients and the press. They experience red tape, bureaucratic burdens and accountability pressures that curtail them and their service provision. But when professionals are set free and when bureaucratic and managerial standards are eliminated, public professionals might become insecure.

In this paper we show that the problem public professionals face is not standards per se but inappropriate standards - standards that are not meaningful for doing their job, and not legitimate.

We argue that public professionals might take the lead in developing appropriate standards. These can no longer be based on professionals' expert knowledge, including 'evidence based' standards, technical guidelines or strict protocols classical professionals used to develop. Times are changing; the problems professionals are confronted with have become more volatile, uncertain, messy and ambiguous. It seems less possible to handle these problems in a technical manner; problems call for more adaptive approaches. Professionals' expertise as such is no longer sufficient; it needs to be complemented by other types of knowledge from so-called relevant outsiders, i.e. stakeholders.

Public professionals might tap into several sources of stakeholder knowledge, scientific as well as experiential, and deliberately create effective and legitimate professional action. We label this 'open source professionalism'. In this way, public professionals open up their professionalism; with stakeholders (networks) they co-produce meaningful and legitimate standards that help them to deliver valuable and valued public services.

#### *Incomparable Pay-Offs and Rationality - the Parallel Games Approach*

The reason why sometimes people make suboptimal decisions from the point of view of not maximizing wealth has been an interesting question for researchers for a long time now. This question is apparently embedded only in a rational choice theory, but throughout time researchers have given it different answers. From the suggestion that people make suboptimal decisions because their rationality is bounded to their cognitive abilities (Simon, 1965), researchers went on to suggest that suboptimal decisions happen because people are committed to a task with long-term implications (Sen, 1977) and because they tend to be biased by the use of certain judgment heuristics which lead them to make systematic judgement errors (Kahneman and Tversky, 1979; 1981; Kahneman et al., 1982). Later on, scholars noticed that the actor's choice is only suboptimal to the observer, while being perfectly optimal for the actor (Tsebelis, 1988; 1990; Frisch, 2001) because the actor tries to maximize the outcome of multiple situations, some developing in different "arenas" and others developing around the rules and institutions that govern each situation. Our contribution to this body of research proposes that actors make apparently suboptimal decisions because they have to decide between categories of pay-offs which are not comparable. These categories of pay-offs generally appear in parallel games, that is games played at the same time. An ultimatum game experiment constructed to reveal two parallel games and two nested games was undertaken. Results showed that the presence of a relationship exterior to the experimental game determined a suboptimal behaviour in the experimental game as well as in another game. Further analysis revealed that non-monetary pay-offs, pay-offs from obeying rules and the norm of fairness, as well as the perception of other parallel-games unaccounted for in the design of the experiment motivated such sub-optimal behaviour.

EIJBERTS, MELANIE (VU University Amsterdam)

#### *Biographies and The Doubleness Of Inclusion and Exclusion*

Most research on diversity is often showing either exclusion or inclusion practices at work in the integration process. Yet biographical research provides the possibility to see the layerdness that is often involved in the process of societal participation which is rather paradoxical than straightforward. With the term of doubleness we hope to grasp these paradoxical processes in which inclusion and exclusion overlap. In this paper, we explore two paradoxes that show this doubleness: namely the language paradox and the economic integration paradox. Through biographical narratives of women with a migration background we show how mastering the language (language inclusion) could lead to a decrease of sense of belonging (emotional exclusion) when they get access to the national discourse which is negative about migrants. The second, the economic integration paradox, demonstrates that women who were successful to integrate economically (via study and work), felt excluded through everyday negative experiences with others (mainly members of the majority group) in those environments.

This study shows the limitations of a linear conceptualization of the integration process by policy makers (and scholars), assuming that language and economic inclusion would be the crucial step towards social and emotional inclusion. The narratives of women in this study gave us the opportunity to discover how the growing access to society has had an opposite effect on their sense of belonging. This paradox is even more visible for women who are most eager in their quest for inclusion, willing to belong to the society. For them the level of disappointment is even higher when they are able to read and hear about the dominant perception of migrants and thus feel excluded based on their growing level of participation in various levels in society.

#### *Shaping Body By the Food: Perceptions in Chileans and Mexicans Adults*

The incorporation principle is the common belief that the food ingesting by humans transforming the body and identity of the eater, and for this reason, the control of food is central in the control of the self (Fischler, 1996). Using this concept, this work show how people think the food like a way to shaping body and the role given to the individual and environmental factors in the control of this process. From 70 semi-structured interviews in Santiago and Mexico City, I identified that people actually think that food is one of the major factors that shape the body, helping achieve an ideal body or not. The interviewees think that moderation in the intake and consumption of healthy foods produce slender silhouettes; on the contrary, they believe that rich food intakes and consumption of junk food make overweight bodies. I identified two opinions on the individual's ability to control their body through food. On the one hand, who believe that the quality of ingested food depends mainly on the individual and their will because it is the individual who decides what to eat and therefore what kind of body have. On the other hand, are those who believe that individuals are limited in their decisions by factors outside the human being, as the available food supply, the resources and the food culture. The first position was more common among Mexican interviewees, while the second position was more usual among Chileans interviewees.

#### *Energy Cooperation and Security In The Eastern Mediterranean and Its Future Impact To Local Political Conflicts and To EU-Integration and Enlargement*

Due to recent important developments in the energy field in the Eastern Mediterranean over the last few years this region is becoming the focus of a growing geopolitical tectonic shift affecting all neighbouring countries, especially Turkey, Israel, Cyprus and Greece. Important developments are, however, expected not only in the energy field as such which will put the relationship of these countries to the EU on a new track, anyway. Leaving aside merely economic impacts of energy supplies from this region to the EU in the years to come one should state that what is currently going on in this region should be also seen against the background of local political and ethnical conflicts which will greatly affect the EU-integration and enlargement processes as well as the EU Neighbourhood Policy ahead. Existing and future alliances as well as conflict potentials deriving from the energy strategies of all countries concerned in the Eastern Mediterranean region will surely have an important impact on still unsolved political conflicts in the wider region such as the political problem in the still divided island of Cyprus, on the dispute over the Aegean between Turkey and Greece as well as on the long-lasting conflict between Israelis and Palestinians. The proposed paper seeks to analyse what kind of energy strategies in this fragile world region could produce structural inequalities and thus additional conflict lines between states in the region and under which conditions multilateral cooperation could support regional solutions to political and ethnical conflicts thus enhancing economic prosperity in the EU and beyond.

**GIBERT-GALASSI, JORGE\*** (Universidad de Valparaíso, [gibert.jorge@gmail.com](mailto:gibert.jorge@gmail.com))

#### *Scientific Communities and Social Inequalities in Latin America: The Chilean Case*

The presentation summarizes an ongoing research regarding scientific communities in a peripheral emerging country, which includes more than 50 in-depth interviews conducted with leading Chilean scientists and one digital survey results, answered by nearly 350 academic and researchers from three disciplines. The presentation also describes several structures and mechanisms that are related to the market, the government and the university which, in principle, explain what it "means" to be a scientist in an emerging country such as Chile. The analysis of three communities (astronomers, molecular biologists, and sociologists), attempts to uncover the economic, social and cultural reasons for why these function as they do, especially in terms of their different intellectual and social identities. The findings indicate that these structures and mechanisms are very different than before, suggesting that there are new structures and emerging mechanisms - local and global - whose impact is still unknown. The framework of analysis and discussion centers around the idea that there is a utilitarian historical and current relationship between the University and companies, conditioned by the Neoliberal economics revolution, which prevents universities from creating a genuine scientific culture of their own. Finally, the principal sociological vari-

ables that come into play in the changes that are occurring in these communities' current processes are described. These changes include gender, age range, income, values, workplace, and use of financial opportunities to develop scientific research.

#### *Social Relationships in Later Life: The Role of Childhood Circumstances*

There is an established body of research in social epidemiology which links both health and emotional wellbeing to social relationships across the life course and in later life. However, there is surprisingly little evidence on how differences in the nature and quality of these social relationships arise. It is not known, for example, whether existing social gradients in the prevalence of social engagement, social network size or quality mirror gradients in childhood socio-economic status (SES) and/or health.

This paper investigates the long-term impact of childhood conditions on social relationships. We use data from SHARE (the Survey of Health, Aging and Retirement in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining novel objective and subjective measures of current social networks with retrospective life history data on childhood health, cognition, SES and household environment we examine the long-term impact of childhood conditions on social network size, social network satisfaction and emotional closeness in older age.

Using regression techniques, we show that there is a strong but differential association between each aspect of childhood circumstance on social relationships in later life. Therefore we critique the index approach to measuring childhood conditions which gives equal weight to SES, health and social environment over time. We find that emotional closeness mediates the relationship between childhood circumstance and social network satisfaction.

#### *Technique, Instrumental Formal Organization and the Hinge in Exercise Physiology Research*

This presentation outlines results from a 12-month multi-method investigation of how exercise physiology research focused on physiological mechanisms and markers of sport performance is enhanced, curtailed, shaped and ultimately deployed, by broader sociological, political, historical and technological trajectories. In doing so, this presentation follows the theoretical leads of Jacques Ellul, Erving Goffman, and Norbert Elias in briefly reviewing three discrete but connected issues. First, the social and political factors that affect the conduct of lab-based research and how they shape knowledge processes from discovery to development, delivery, and use in the sports world; second, the processes of identification, construction, and resolution of bioethical problems in sport and exercise physiology research; and finally, the ways technologically mediated understandings of people developed in the lab and manifest in sporting endeavours facilitate the emergence and transmission of cultural logics and societal values. Throughout the presentation special attention is paid to the recursive relationship between biology and sociology in order to understand how people and their political, social, and moral potentialities are interwoven into historical trajectories of cultural production and societal organization of their bodies.

#### *The Allies of the Front National: A Sociological Overview of the French Nationalist Groups and Parties*

Since 2002, when the Front National (FN) suddenly entered the final stage of the French, presidential elections, the rise of nationalism, embodied by the rise in the polls of this party, is a concern in France. However, there are many ideologies that join under the Front National label, and they are, in a paradoxical way, not necessarily compatible altogether, and can even be totally opposed: radical Christians, « identitarians », anti-sionists, sovereignists, anti-muslims, conspirationists, a few neo-nazis ...people voting for the FN don't necessarily abide by the same doctrine.

Who are the voters of the Front National and why do they unite, in spite of the large differences that exists between their beliefs and socio-professional categories, is the question to which this communication will try to answer. First, by describing the sociological history of the different groups or categories of voters, and how they came to ally themselves with the FN. Secondly, by analyzing in detail

the communication strategy of the Front National and the external elements that supports it, especially the large Internet nationalist network: websites supporting one ideology or the other, linked between them by affinity, some even violently criticizing each others (for example, identitarians and the anti-sionist groups), but every single of them pointing to the Front National website, creating a galaxy of beliefs where a great number of voters can recognize themselves.

This work will be based on interviews with members of the Front National, but also activists of different groups voting for the FN without subscribing to the current main political line of the party (conspirationists, anti-muslims, anti-sionists, neo-nazis), on periods of observations in events organized by these groups, and on the study of the nationalist internet network, as well as on a large bibliography on social movements, populism and nationalism.

#### *Does Deregulation Help? the Impact of Employment Protection Reforms on Youths' Non-Employment and Temporary Employment Risks in Europe*

Previous comparative research argued that, across Europe, youths face increasing unemployment risks and insecure labour market positions in the course of globalization and related macro-structural changes. Besides macroeconomic conditions rigid employment protection legislation (EPL) has been blamed as the root of youths' employment problems in Europe. Against this background, many European labour markets have reacted with the deregulation of employment protection laws, often targeted at the group of youths. However, doubts on the effectiveness on the EPL reforms occurred. Against this background we investigate whether EPL reforms succeeded in integrating youths into labour markets or whether they were ineffective and just promoted temporary employment as a crucial new social inequality in Europe.

The empirical analyses are based on a pooled cross-sectional design by using yearly micro-data from the European Labour Force Survey for 14 Western and 8 Eastern European countries for the period from 1992 to 2011. This database provides unique large-scaled, standardised micro data. We apply multilevel models with three levels (individual-, country- and time-level) implemented in a two-step estimation procedure to investigate contextual influences on individual age-related temporary employment and non-employment risks. At the macro-level we use cross-national and cross-temporal variation to quantify the impact of EPL reforms under control of other macro-institutional and macro-structural factors. Further, we control for country and time fixed-effects to account for unobserved heterogeneity.

Our analyses reveal heterogeneous inequality trends in youths' temporary employment and non-employment risks in Europe. Moreover, our results cast doubt on the effectiveness of EPL reforms.

#### *Multilevel Data – What to Do? Comparing Random Intercept and Slope Models, Cluster-Robust Standard Errors, and Two-Step Approaches Using Monte-Carlo Simulations*

Social scientists generally rely on three broad modelling strategies to test hypotheses about contextual effects: random intercept and slope (often simply referred to as "multilevel") models, pooled OLS with cluster-robust standard errors, and two-step approaches. Econometric textbooks tell us that while random intercept and slope models are the most efficient estimator, two-step approaches offer robustness in exchange for inefficiency, and cluster-robust standard errors are situated somewhere in between. But how do these trade-offs play out in actual research settings? To address this question, we go beyond previous Monte-Carlo studies by focusing on more realistic set ups with complex data-generating processes. The leading scenario that we investigate is cross-national comparisons, which are characterized by small numbers of contexts, many observations per context and high complexity in terms of marked differences over the contexts.

In particular, we focus on four types of complexity. First, we investigate whether the different approaches are robust to the violation of equality assumptions. In particular, we examine the case where the correlations between level one variables vary across contexts. Second, we show the impact of specifying "simplistic models" that ignore context specific heterogeneity. How well do the different approaches handle unspecified (random) slopes that vary over level two units? Third, we explore the consequences of Normal and Gamma distributed errors

at both levels one and two. Finally, we alter the number of level two units, as any simulation study on hierarchical data should.

We focus on linear models with continuous outcomes and on standard set ups as they are typically implemented in applied research papers. However, we also plan to investigate whether and when more refined versions of the three modelling approaches such as OLS with bootstrapping or multilevel SEM improve their performance.

#### *Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change*

As nation-states are further lowering their climate ambitions in response to the economic crises, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group indicates that the cities combined have about 4700 actions directed at mitigation and adaptation. However, the question remains whether these actions have resulted in different practices within the cities' institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also analyse what dimensions are particularly relevant to these changing practices. The preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice. Yet the changing practices are primarily associated with spatial departments such as transport and spatial development.

#### *Connected Audiences of Politics: Analyzing Twitter Conversation on Beppe Grillo and Five Star Movement Generated during Political TV Talk-Shows*

In the last two decades, characterized by an increasing crisis of traditional forms of politics, talk-shows have placed interesting challenges to the research on contemporary political communication and participation forms. Scholars of the "third age of political communication" have studied the cognitive, evaluative, affective effects of this mix of entertainment and information on the citizens/spectators. Recent analysis considered the increasing symbiotic relationship between political talk-shows and Twitter, by studying the "second-screen" practices in terms of audience participation to the construction of the public debate.

Referring to this approach, our study analyzed Twitter connected audiences of all the Italian political talk-shows (1,077 episodes) on air from September 2012 to April 2013. This period covers significant political events related to the 2013 Italian General Election (24th and 25th February), from the electoral campaign to the Five Star Movement's electoral achievement, and its institutional consequences.

We aimed to understand: how much do "connected audience" of political talk-shows discuss on Twitter around M5S, in the different phases of the "permanent" electoral campaign (RQ1); Is the presence of M5S, Grillo and other representatives as a topic of conversation on Twitter correlated with specific characteristics of the aired episodes (talk-show, audience, phases of the campaign, issues)? (RQ2).

While significantly less frequent than conversations mentioning the right and left coalition, Tweets around M5S were present during the three phases of the campaign. Furthermore, the analysis identified significant amounts of Twitter discussions around M5S generated during the episodes dedicated to specific issues (political backstage, polemics, strategies of the M5S, scandals, anti-politics).

**GILAD, NOGA\*** (University of Haifa, [giladnoga@gmail.com](mailto:giladnoga@gmail.com))

#### *Biographic Self Positioning As Narrated Argumentation*

One of the most inspiring struggles of biographic research regards the issue of 'identity': "how I have become to be who I am today!" (Fischer-Rosenthal, 1995) Scholars have struggled with biographer's putting into words of self experiences that have accumulated along the life history as it has been generated (Rosenthal, 2004). Indeed, Biography is constituted by the interaction between the articulating of the experiencing of "the world out there" (Schutz, 1964), each being so rich deserving a research space of its own. Concentrating upon the initial 'life story' level I follow the inspiring toolkit Labov provided us with (Labov, 1972; 1997; 2003; 2004). His examples challenge our conventional thinking that fundamental difference exists between "narratives" and "arguments". Instead we should consider

'oral narration' to be a specific type of argumentation about highly controversial settings as gendered biographies in transcultural settings.

Based upon his model my analysis shows how biographers, while conducting an external dialogue with their listener; re-positioning themselves over and over again in a hegemonic position in the interaction, are simultaneously preoccupied with an internal dialogue in which they try making sense their own experiencing of themselves in the world. In this way the question: "how have I become to be who I am today?!" gains new and dual meanings.

The transcultural context of the analysis not only extends between the interview interlocutors (secular vs. fundamentalist) but as the narrator is implicitly involved in a project with transcultural construction aspirations, aiming at 'restoring tradition' in a way that would appear as absolutely contemporary to the interviewer. And as the analysis shows, gender plays a crucial role in such a framework not only through the identity of the participants but within the subversive cultural project as a whole.

#### *Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises*

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But only the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representatives of the state attach importance to these powers (corresponding to the "state of emergency").

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons : central governments no longer have resources to support alone public policy in this area. A divorce occurred between formal capacity and actual capacity of the state (in particular during disasters). Second, for political reasons : local authorities (in particular in the major cities) and a part of civil society (in particular firms) want to play a role in defining policies they help to finance. Third for "societal reasons" : disasters can no longer justify the interruption of democracy.

We begin to accept the idea that the state can not be the only or the main actor to manage risks and crises. Reflections on resilience are intended, including by officials, to promote the involvement of other actors in society. But politicians and administrators want both transfer a part of their responsibilities while keeping control of risk and crisis management. There is an ambiguity that local authorities and other actors of civil society help to maintain : if they want to play a more important role, they do not want to assume state responsibilities .

The question central of this paper is to know what are the effects of this ambiguous situation in the effective management of risks and crises (especially from the example of pandemic influenza threats).

### RC01-41.1

**GILBERT, EMILY\*** (University of Toronto, [emily.gilbert@utoronto.ca](mailto:emily.gilbert@utoronto.ca))

#### *How Much Is a Dead Soldier Worth?*

How much is a dead soldier worth? This paper will interrogate the monetary value ascribed to the death of soldiers in the 21<sup>st</sup> century, and the narratives of sacrifice and heroism that infuse military fatalities. Rather than focus on public funerals and burial, I explore the more intimate (yet no less social) acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the 'inadvertent' death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the 'hearts and minds' of the population, and demonstrate the compassion of the international forces. How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated? And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths, of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

#### *The Mercurial Piece of the HIV/AIDS Puzzle: 'Stigma' and HIV/AIDS in South Africa As a Social Scientist's Challenge*

'Stigma' and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emer-

gence of HIV/AIDS. The range of negative responses associated with the epidemic placed 'stigma' on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning of 'stigma' remains ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises.

The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in explaining the HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at 'measuring' stigma and reducing its impact is evidence that 'stigma' exists out there and continues to be a threat to the successful implementation of public health programmes.

**GILINSKIY, YAKOV\*** (Herzen University, [yakov.gilinsky@gmail.com](mailto:yakov.gilinsky@gmail.com))

### *Social and Economic Inequality As Deviantogenic Factor*

There is no only "reason" of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific "weight", "power", value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as "reasons" of crime and others of negative (deviant) acts.

The ever-growing economic polarization of the population in Russia - is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 1:4.5 in 1991 up to 1:15 in 1999 and later up to 1:18.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Ol'kov, I. Skifsky, E. Yuzikhonova. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs, an economic inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Ol'kov, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was also lowest (15,600) and suicide too (39,200). According to research of I. Skifsky (dynamics in 25 years, from 1980 to 2004), the correlation coefficient between homicides and Gini index was the highest 0.9253, between violence crime and Gini index 0.8433.

The catastrophic social and economic inequality serves in Russia as the main factor of deviant manifestations.

## RC29-500.1

**GILINSKIY, YAKOV\*** (Herzen University, [yakov.gilinsky@gmail.com](mailto:yakov.gilinsky@gmail.com))

### *Sociology Of Deviance and Social Control (Deviantology) In Russia*

The criminology, sociology, genetics, cybernetics were forbidden by a Stalin regime. These sciences started reviving only in the period of N. Khrushchev's "thaw".

The first articles on sociology of deviance (Y. Gilinskiy, G. Zdravomyslov) were published in 1971. The early empirical sociological studies of different deviance types were conducted from the 1970th years. It was researches of alcoholism (A. Gabiani, Y. Gilinskiy, B. Levin, A. Nemtsov, G. Zaigraev), prostitution (V. Afanasjev, A. Gabiani, Y. Gilinskiy, E. Pobegailo), suicides (A. Ambrumova, Y. Gilinskiy, N. Proskurnina, L. Smolinskiy), drug abuse (A. Gabiani, L. Keselman, M. Matskevich), crime (A. Sacharov and other).

First textbook "Sociology of Deviant Behaviour" (Y. Gilinskiy & V. Afanasjev) was published in St. Petersburg in 1993, and first monograph "Deviantology: Sociology of crime, narcotism, prostitution, suicide and other deviance" (Y. Gilinskiy) in 2004.

Contemporary sociology of deviance and social control is well developing branch of the Russian sociology. There are most known centers of a deviantology in St. Petersburg, Moscow, Kazan, Tyumen and Krasnodar. The St. Petersburg's Center of a Deviantology has a site (<http://deviantology.spb.ru>), which well-known and visited colleagues of Russia, Ukraine, the Czech Republic, Poland. Deviantology is closely connected with criminology, as sociology of crime. The course "Sociology of Deviance and Social Control" is taught at some universities of Russia.

Russian scientists (V. Afanasjev, Y. Gilinskiy, M. Rusakova and others) took part in work of Research Committee No. 29 (Deviance and Social Control) of International Sociological Association (ISA) on Congresses ISA in Bielefeld (1994), Brisbane (2002), Gothenburg (2010) and on the Sociological Congresses of Russia.

Besides, conferences on sociology of deviance are regularly held in St. Petersburg, Moscow and Krasnodar, and also in Tyumen and Nizhny Novgorod.

The topic of deviance is particularly actual for Russia, where level of violence, alcoholism, suicide is very high.

**GILL-KHAN, CHLOE\*** (The University of South Australia, [Chloe.Gill-Khan@unisa.edu.au](mailto:Chloe.Gill-Khan@unisa.edu.au))

### *Gender Politics, 'virtuous Racism' and Diasporic Political Resistance in Europe*

Gender politics has long been the staple of national discourse surrounding the integration of ex-colonial diasporas in Europe, in particular in Britain and France. If during the 1970s and 1980s the male immigrant father was depicted as patriarchal and oppressive who prevented his female counterparts from integrating into the state, contemporaneous debates in relation to their children perpetuate similar tropes. Male diasporic citizens, now in their third and fourth generations, have come to be seen through pathologised images that place exclusive focus on their supposed dysfunctional gender relations rooted in 'other' cultural practices.

This paper examines how dominant narratives of the patriarchal and redundant migrant and diasporic male rooted in culture depoliticise - and erase - decades-long struggles to carve their rightful places in Britain and France. De-industrialisation, joblessness, extreme right-wing racism and institutional exclusion are silenced as the driving forces for contemporaneous male political resistance (civil riots). Instead, dominant discourses pathologising 'other' cultures divide diasporic men and women, pitting them against one another to legitimise the intervention of the state, a process the French sociologist Nacira Guénif-Souilamas terms 'virtuous racism'. The paper traces the deployment of 'virtuous racism' in Britain and France that serve to reinforce structural inequalities through their precise erasure under the privileging of culture to 'explain' diasporic gender politics.

### *Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar*

#### **Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar**

Michael Gillan and Htwe Htwe Thein

#### **Abstract:**

This paper examines the emergence of open industrial conflict (strikes, various forms of worker protests) in Myanmar (Burma), with special reference to industrial clusters/special economic zones in the urban periphery of Yangon, the nation's largest city. In recent years, Myanmar has shifted towards quasi-democratic governance and this has led to significant change in both external relations (i.e. the suspension of most international trade sanction measures) and internal institutional development. The paper will explain that although worker initiated protest and strike actions in various industries preceded democratic reforms, these changes have enabled more prevalent and open expressions of dissent. Indeed, the growing incidences of conflict, alongside the reformation of institutions and governance, mean that the labour 'problem' has for the first time in contemporary Myanmar come into view as an important area for intervention and management by the State. Arguably, however, the development of mediating labour institutions (law, dispute resolution agencies, trade unions, employer associations) has lagged behind the expression and management of conflict in the industry, leading to ambiguity as to the capacity and role of the state and workers' conceptions of forms of collective association, citizenship and dissent.

Moreover, industry development and forms of labour regulation have emerged not only via shifting relations between the state, capital and labour at a national scale. Geopolitics and international institutional actors (ILO, Global Unions, IN-GOs), forms of supra-national regulation (for instance, the impact of international trade sanctions) multi-scalar production and economic networks (investor and supplier relations) have also played an important role in institutional formation and reformation and the dynamics of industrial conflict.

**GILLEARD, CHRIS\*** (University City London, Brain Sciences, [cgilleard@aol.com](mailto:cgilleard@aol.com))

### *Distinction and Identity in Later Life*

The cultural turn in the social sciences during the 1980s brought new prominence to sources of distinction based on the body, such as disability, gender, race and sexuality. We argue that many of the embodied practices associated with these newly privileged bodily distinctions were further developed, sustained and

extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and 'liberated' what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the 'ageing' of those youth cultures have affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This 'cultural turn' is exemplified in contemporary research into ageing lifestyles, ageing and exercise, ageing and fashion, ageing and sex and more generally the performativities of ageing. Rather than developing a transgressive 'age liberation' movement however, much of this embodying performativity seeks to resist the purchase of 'agedness' on fashioning lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one's adult life.

#### *How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families*

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativized, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arise anew for migration research: *what gives migrants a sense of belonging with others and what relevance can be given to the location where people live?* Migrants and their families do often experience social interweaving relations, which are not bounded to one single national territory, but interact in a multi-local situated context. At the same time the existing boundaries of the nation-states do still influence a lot the mobility and opportunities of individuals.

The proposed paper discusses the ambivalence of social belonging and local/regional attachments under modern conditions of social fluidity and multi-local attachment in social relations. First, the paper starts with the elaboration of the theoretical problem as sketched and explores methodological questions related to that. Second, referring to empirical research on migrant families, the paper analyses family practices in which social and cultural boundaries are negotiated with reference to the places to which family attachments exist. Empirical findings show that there is no social belonging to a community or society without local/regional attachment(s) and it is precisely the new constellation between the social belonging(s) and the local/regional attachment(s) which can be seen at the basis of 'the migrant condition' of human beings. Situating the self and the family in a context of fluidity and constant change entails developing family practices in which belonging can be understood as the ambivalence of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.

### RC20-350.1

**GILLIÉRON, GWENDOLYN\*** (University of Applied Sciences and Arts, [gwendolyn.gillieron@fhnw.ch](mailto:gwendolyn.gillieron@fhnw.ch))

#### *Limits of Complexity? – the Need of a Multilevel Approach in Migration Research*

In the age of migration, cities have become heterogenic places, which strongly influence the life courses of their inhabitants. They define their framework of opportunities in the economic, educational and social fields. As heterogenic places, cities are also a dimension of inequality challenged to integrate the growing diversity of their inhabitants. In an international complementary research project on life strategies of migrant families in different local, regional and national urban contexts, the question of heterogeneity and its possibility for comparison arises. The multilevel approach is applied to different urban and political contexts in Basel (Switzerland), Freiburg (Germany) and Klagenfurt (Austria). The complexity of this research is challenging, because there are not only life strategies of migrant families, which will be researched and internationally compared, but also the relevance of local, regional and national influence on life strategies will be analysed. What is particularly interesting is the question concerning the sort of orientations migrant families develop towards the location they are living in and how they are influenced by local and national factors.

By identifying and discussing the relevant contexts for multilevel analysis in our international research project, the paper will present methodological challenges of multilevel analysis in the international comparison research. While the multilevel framework guarantees intersubjectivity and contributes to avoiding methodological nationalism, it raises the question about the limits of complexity in the international comparative research. Based on the analysis of group discussions

in all three localities, we will show how multilevel research works in practice and discuss difficulties regarding research practice and methodology.

**HOSSEINI, S A HAMED\*** (University of Newcastle, [hamed.hosseini@newcastle.edu.au](mailto:hamed.hosseini@newcastle.edu.au))

#### *Deliberating Alternatives to Capital: A Critical Cosmopolitanist Approach*

Critical analysis of ideological divisions in the broad Global Left, via the historical, ideational and practical roots of these differences is important, for a key reason: it can help us explain the Left's past and present shortcomings and difficulties in creating viable coherent solutions to the multiple crises of the world capitalist system. Through such a critical historical analysis of the Left, we can explore some of the key practical and intellectual dilemmas that have caused divisions; e.g. grand debates or dilemmas such as *reform vs. revolution (strategy)*; *local/national vs. world/global (scale)*; *ecological vs. economic (value-interest)*; *cultural vs. political (identity)*; *individual vs. collective/municipal (autonomy and society)*.

This paper outlines the principles of a new theoretical approach to studying 'transformative ideological visions' and "regenerative social counter-currents" that may significantly influence debate and practice around constructing new radical and democratic alternatives to existing systems of domination and hierarchy embedded in capitalist social relations. When dealing with transformative ideas and practices, a critical account of *cosmopolitanism* can be employed in two ways: (1) as a critical analytical framework, that helps us examine alternative ideologies to the social relations of capital, in terms of their capacity to create historical "moments and conditions" for other alternatives to flourish; and (2) as a normative framework, that can facilitate an accommodative relationship between rival transformative practices and political agendas. Such a critical account of cosmopolitanism requires a 'dialectical mode of criticism' that needs to be *self-reflexively* applied to our understanding of *the cosmopolitan* and its history. Nascent elements of such a critical cosmopolitanism already exist among some synthetic contemporary radical ideologies, such as eco-feminism and radical economic democracy, as well as some forces amongst the global justice movements, including within the World Social Forum, the Occupy movements, and in the recent anti-austerity social movements and popular uprisings.

DEPOY, LIZ (University of Maine)

#### *Design, Undesign and Redesign: Eliminating Embodied Inequality*

Over the past several decades, design and branding efforts for social justice and democracy have exponentially increased. Designers have apprehended and applied market strategies to create products and images to change the world. However, to date, design and branding have not been analyzed to understand and reassign their power in creating, labeling, and affixing differential worth to bodies that are disenfranchised because they are atypical, unruly alters. This vacuum leaves a huge gap in intellectual development and guidance necessary to harness design and image to challenge and diminish social inequities that have prevented local through global social acceptance for the full range of bodies. In this presentation, we argue, and illustrate through a targeted analysis of embodied design, its epistemic and axiological foundations and its praxis that design and branding are tacit yet powerful influences on the creation, reification, and perpetuation of the acceptable human corpus and its opposite. We illustrate how design and its byproducts in advanced capitalist global, national and local environments are significant social influences on determining and reifying embodied worth, internalized and assigned identity of category members, social status, and comparative flourishing of members of diverse social groups. Given this understanding, we conclude with the constructs of undesign and redesign as the power tools to advance symmetry, inclusivity, and equality for diverse bodies.

#### *Towards a Democratic and Emancipatory University: Feminist Popular Extension and New Relations Between University and Society in Brazil*

Popular Extension is a key element for comprehending the relationship between society and universities in Latin America. By making possible a close col-

laboration between universities and social movements, Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice on building a real alternative to the hegemonic models of university and rationality. Recognizing the centrality of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project "Popular Legal Promoters" on coping with gender based violence in the outskirts of Brasília, Brazil. Established jointly by feminist movements, the University of Brasília and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an alternative toward an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

#### *The Contemplative Turn in Sociological Imagination*

In my presentation I will address some epistemological and theoretical aspects related to the integration between sociological and contemplative methods. The latter are social practices originating from the wisdom traditions of human culture, mainly from the religious and spiritual backgrounds. Their recent secularization (going back to the 70s) enables non-experts to achieve specific knowledge skills. The most successful attempt in this translation is currently found in the so called *mindfulness* programs, oriented to integrate the biomedical approach and nurturing the subfield of the so called integrative or behavioural medicine; it has also found a positive reception in psychological therapy. Through the 80s and 90s they constituted a growing bulk of research, recently testified by the birth of the scientific journal *Mindfulness*, not to mention its growing influence in education and management, especially in the literature about learning organizations.

My aim is to focus on the conceptual background in which such kinds of integrative programs can be developed in social sciences, outlining some implications for transformative sociology as well. The core discussion is focused on the re-definition of *experience*, *self* and *action*, taking into account an established tradition of first-person inquiry and narrative research.

From my point of view, the attempt to set up such an integration calls for an enactive approach: *via* introducing an embodied and interactional perspective, it challenges the dominant representational model of knowledge. In this direction, it could also be of help in broadening and reshaping what we intend by change, contributing to a pragmatic "social transformation from within" and alleviate social suffering.

In my intention, this transdisciplinary effort aims to help at disentangling some crucial sociological concerns and contributes to an experiential, post-constructivist model.

#### *Time Saving Account, Capitalization To Improve The Work Life Balance?*

The time saving account was introduced in 1994 in France. At first underutilised, this mechanism allowing the employees to accumulate extra working time on an individual "time account" to be utilised later, became the nodal point of the time-reduction national policy bringing legal working time from 39h to 35h a week in 1998 and 2000. While time reduction was relentlessly pointed as a central cause of French companies loss of competitiveness in regards to international competition, it remained untouched. National Policies focused on giving more flexibility for the companies to respond to the market fluctuations.

After presenting the principles and evolutions of the TSA in the last 20 years in France, this paper aims at presenting the result of a study conducted through in-depth interviews with companies' management, unions and employees of large and medium private and public entities. It focuses on the current use of TSA and on the opportunities to "save" time in order to improve the personal work-life balance.

We will show the close link between economic issues related to the company, the collective bargaining and the individual use of TSA. The fundamental questions rising from this study: is time to be saved as money over the whole working life? How the personal effort should be compensated and accompanied by secu-

arity and redistribution mechanisms? What means working time capitalization for the every day life?

#### *Comparing Employment Policies in a Globalising World: New Challenges and New Methods*

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionally associated with the nation and the nation-state: public problem formulation, public problem resolution and the definition of citizenship both as a form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national settings, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bounds linking those various policy scales (Scarpa 2009, Andersson, Ostrom 2008, Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational or global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

#### *Ignou- Paradigm Shift for Higher Education in India*

##### **IGNOU-Paradigm Shift for Higher Education in India**

India's higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total approximate number of institutions imparting higher education in India is 26,000 whereas it stands at 6,706 in USA and 4,000 in China.

Despite massive expansion, there is mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent.

Open distance learning is one of such strategy which aims at universalization of higher education, to address the barriers of higher education

##### **IGNOU- Indira Gandhi National Open**

The Indira Gandhi National Open University (IGNOU), established by an Act of Parliament in 1985, has continuously striven to build an inclusive knowledge society through inclusive education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reach out to the disadvantaged by offering programmes at affordable costs
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology.

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provide seamless access to sustainable and learner-centric quality education, skill up-gradation and training by using innovative technologies and methodologies and ensuring convergence of existing systems for large-scale human resource development.

IGNOU has been conferred with awards of excellence by Commonwealth of Learning (COL), Canada, several times. Recently, it was listed 12<sup>th</sup> in the webometric ranking of Indian Universities, based on the caliber of its presence on the Internet.

The University is committed to quality in teaching, research and extension activities through ODL system.

*An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?*

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

*The Impacts of Brazil and India's Development Dialog on Poverty Alleviation Policies: Knowledge Sharing and South-South Cooperation*

Since the beginning of the 1990ies a South American approach to Conditional Cash Transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main experiences can be singled out as most significant for their characteristics, range and influence: the Mexican *Oportunidades* and the Brazilian *Bolsa Familia*. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program.

Due to the results of these policies the model has spread beyond the continent and is currently encouraged and financed by the World Bank to alleviate poverty and brake it's generational cycle. The spread of this model of poverty is currently in discussion in many south-south forums around the world like BRICS and IBISA. As part of this current discussion in 2012 the city of New Delhi started a pilot program focused on poverty reduction as a result of the on-going National Debate about Cash Transfer Policies. The Latin American experiences were important base for the Indian discussion and the results exposes challenges to the southern debate and its proposed horizontal dialog.

This article presents the results of a research done in Brazil and India asking what can be perceived by analysing this south-south development dialog. It exposes the challenges and opportunities as well as the different approaches that each society gives to the same set of policies as well as the discourses about poverty and development.

*Questioning Development: Global Integration and the Ecological Efficiency of Well-Being*

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain different countries' carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country's progress toward simultaneous environmental and social sustainability by asking how energy (or ecologically) intensely (or efficiently) a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored for this topic in the sociological literature. Results indicate that varying forms of integration have an impact on states' abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.

*„Migrant Nannies In French and German Households – Insights From a Care Worker's Point Of View“*

"This presentation focuses on migrant nannies working in two European countries: France and Germany. The main interest of this comparative analysis is to evaluate social policies of these two nation states through biographical research with migrant care workers who take care of small children in private households on a regular basis. This is a crucial task as nowadays the industrialized countries are highly interested in finding adequate solutions to their increasing care-deficit. European countries like France and Germany are structurally close and face similar problems such as demographic aging and the pluralization of life and work forms. However, their efforts to guarantee the production of human beings themselves in a globalised and capitalized world differ remarkably. At this juncture, migrant care workers are important key actors, because they represent a significant resource. Therefore it will be interesting to analyze how dimensions of class, but also gender, national belonging and race/ethnicity intersect within their relation to local families. The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work 'realities' of their employers: from a nanny's perception."

RC37-637.6

GLAUSER, ANDREA\* (University of Applied Sciences and Arts, [andrea.glauser@hslu.ch](mailto:andrea.glauser@hslu.ch))

*Photography and Society: Lessons from Susan Sontag*

In recent years, scholars have often criticized the exclusion of art works in current sociological explorations of the arts. In contrast to classical works, foremost of which are those of Georg Simmel, which placed interest on the relationship between a particular art work and society, more recent approaches have primarily focused on art as a social universe, called "art world," or considered it as a specific social "field" or "system." Although these perspectives typically involve theoretical concepts applicable to art works, based on exemplary discussions, the main interest is in systematic theoretical questions or institutional aspects of artistic production rather than particular art works and their social significance.

This paper discusses Susan Sontag's approach to art works and her view on the possibility of gaining knowledge on the social world by analyzing art works. Sontag's approach is particularly interesting as on the one hand, she was highly skeptical of attempts to diagnose contemporary culture and to discuss the social history of ideas "through" art works. On the other hand, particularly in her preoccupation with photography, she offers sociologically illuminating insights on the way photography is historically related to social experiences and modes of observation in society. The main argument of this contribution is that Sontag's perspective is sociologically interesting, particularly because it relates the analysis of particular art works to reflections on the history of the respective medium. Furthermore, it is remarkable that her lack of interest in constructing a general theory on the social aspects of the arts involves a remarkable openness to take particular art works as a starting point for inquiries and to raise a wide variety of questions on social experiences related to art.

*Entre Les Différentes Figures Du Client, Quelle Place Pour Le Travailleur De Première Ligne ? Enquête Auprès De Guichetiers De La Poste Et De Consultants En Intérim*

Aujourd'hui, le client et sa satisfaction apparaissent dans toutes les politiques managériales, du monde industriel jusqu'à celui de l'action sociale, en passant par le secteur marchand où l'injonction managériale du « client-roi » trouve sa voie d'expression première. Dans cette logique de « globalisation » de la relation de service, nous proposons d'étudier deux mondes du service a priori fort différents.

D'une part, le guichetier de la poste est face à une figure du client fortement standardisée (Hanique, 2006), où l'usager cède la place au « client-roi ». Ce renversement des relations de pouvoir accorde une place nouvelle au client, sans donner les moyens aux travailleurs de première ligne de résoudre les contradictions organisationnelles engendrées par cette division sociale du travail (Dujarier, 2006). Le guichetier se trouve alors en tension entre des injonctions paradoxales qu'il ne peut satisfaire, dans des relations de pouvoir légitimées par cette figure du client.

D'autre part, les consultants en intérim coproduisent leurs prestations avec deux « clients-partenaires », l'entreprise et l'intérimaire. C'est dans le double rôle de l'intérimaire, à la fois client et « service » à vendre, que les contradictions organisationnelles trouvent leur source. Cette position de l'entredeux se répercute sur le travailleur de première ligne, dont le rôle se brouille, engendrant de fortes tensions psychiques. L'arbitrage ne porte plus, comme pour le guichetier, sur la place à accorder au client mais sur celle à occuper en tant que travailleur. Pourtant, la violence symbolique reste la même. Et, alors qu'un guichetier « fait carrière » à la poste, le consultant en intérim moyen le reste deux ans.

Nous proposons d'analyser en quoi la figure du client de ces organisations de service permet à la fois d'occulter les relations de pouvoir et d'intérioriser les contraintes organisationnelles à travers l'utilisation d'un certain imaginaire leurrant (Enriquez, 2007).

### *Value Identity of Russian Younger's*

The study on value orientations in Russia has been conducted from the middle of the 1960s when the theoretical works by a psychologist B. G. Anan'ev, sociologists A. G. Zdravomyslov, V. A. Iadov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers' value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Iadov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and "re-comprehension of values" on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds theses defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodical correctness and opportunities for the data comparison remain to be a subject of criticism.

### *The 'Inter-Vey'. Towards the Conversational Survey*

For decades, the dilemma between open-ended and closed-ended response alternatives occupied the methodological debate. Over the years, dominant approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer's behavior. If this methodological decision has been the survey's fortune, making it the methodology most widely used in the social sciences, however it produces a large amount of biases well known in the literature: misunderstanding of the response alternatives by the interviewees, the multiple word meanings of response alternatives due the communicative functions of quantifiers, the invented opinions (or lies) phenomenon, the influence of the response alternatives on formation of the judgment, social desirability effects, the yea-saying and response set phenomena, etc..

In order to remedy these biases an alternative proposal can be designed by re-discovering and adapting two "old" proposals: Likert's technique called "fixed question/free answers" (1940s), and Galtung's (1967) procedure named "open question/closed answer". Both procedures are guided by the same discursive principles: make the interview into a conversation, let the interviewee answer freely in his/her own words, and thus release him/her from the researcher's schemes, making an "interviewee-centered" survey.

These principles have been recently blended in an innovative technique for collecting survey data, which has been named "inter-vey" (Gobo and Mauceri 2014), blending *in-depth* and *survey* interview (or *unstructured* & *structured* interview). "Inter-vey" is based on the idea of the "conversationalizing survey" (Schober and Conrad 1997; Maynard and Schaffer 2002; Gobo 2011).

An experimentation (and a procedural example) of this technique will be presented.

### *Can 'Religion' Provide a Response to Today's Climate Challenges? the Valiability of Environment in the Islamic Republic of Iran*

The very recent report published by the United Nations confirms unsurprisingly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people's everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of

north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it.

Islamic government policies that have been used to deal with at least some of these concerns have not been always been systematic. The Islamic government's disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that 'Islam' informs policy, state-provided education, people's attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. Is 'Islam' really incapable of tackling climate challenges in the context of Iran? A social constructionist approach of 'Islam' will be presented.

### *"The Question I Would Never Have Asked Federer Or Nadal": The Sexualisation Of Sportswomen In British Contemporary Print Media*

The sexualisation of sportswomen was well documented by sport sociologists and feminist media scholars alike in the 1980s and 1990s (Creedon 1994; Lenskyj 1998). However, in the 2000s research claimed that a shift was taking place in sports media. Amidst cries of increasing gender equality in sports coverage, this paper explores whether claims of significant inequality in the form of the sexualisation of sportswomen continues to exist at the end of the first decade of the new millennia. Using five British Sunday newspapers over 24 months (Jan 2008-Dec 2009) this paper attempts to construct a comprehensive categorisation of *how* sportswomen are sexualised by British contemporary print media. The sexualisation of sportswomen is classified into five categories which consider: 1) sexualised bodies in text and images, 2) a specific and singular type of sexuality, 3) stripping and nudity, 4) sexed bodies and sexual partners, and 5) flirting as sexiness.

## RC15-273.4

**GODRIE, BAPTISTE\*** (University of Montreal, [godrie\\_baptiste@yahoo.fr](mailto:godrie_baptiste@yahoo.fr))

### *Shaping the Contour of Psychiatric Intervention. Peer Support's Contribution in the at Home Project, Montreal*

To what extent does the integration of peer support workers (former service users) in mental health services contribute to the renewal of clinical intervention among homeless people with severe mental health illnesses? This presentation is an analysis of the integration of three peer support workers in two intensive case management teams and one assertive community treatment (ACT) team of the *At Home project*, Montreal, Quebec, Canada (2009-2013). This housing first project (also conducted in four other Canadian cities) compares clinical and housing support services to conventional services. An important feature of the project is the participation of service users in the governance and the clinical intervention.

We'll discuss the clinical practices developed within the teams by the peer workers in collaboration with the clinical staff, placing a particular emphasis on two of their contributions : 1) bringing their experience of severe mental illness and their broader experiential knowledge into the understanding of the service users' situation and the thoughtful application of coercive measures, contributing to the improvement of the existing services ; 2) challenging the classical definition of clinical distance with the service users, contributing to the redefinition of the clinical posture in the *At Home project*. These two contributions will open the debate on the professionalization of peer support workers and their ability to shake the professional psychiatric hierarchy and the traditional practices.

The qualitative data was collected during a PhD field work through observation and 40 individual and group interviews conducted during the year 2012 with 25 peer support workers, clinical staff, managers and psychiatrists of the *At Home project* in Montreal.

**GODZIK, MAREN\*** (Fukuoka University, [godzik@fukuoka-u.ac.jp](mailto:godzik@fukuoka-u.ac.jp))

### *Changing Life Course, Changing Housing and the Housing Market*

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social prob-

lems have begun to threaten residential environment there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs, and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

#### *Sequestering Public Housing Policy and Research*

**Sequestering the Poor: Budget reductions and housing policy change in the US and UK**

Public housing in the United States has had a long history of both being pressured for financial solvency as well as for redressing the racial and poverty concentration of its residents. In 2013, a fiscal cut-back of substantial size occurred as the budget "sequester" took effect. In New York, for example, the loss of funding amounted to over \$200million for the year (Chaban; Dawsey). Politically analogous budget cuts have also occurred in Britain as the Conservative government has pursued fiscal restraints over the social rental sector.

This paper will examine the intersection of the various formats of the US-UK fiscal crisis and their impacts on housing policy and related national housing research. A series of major housing research experiments have been recently launched in the US to learn how to better manage with less, while the ground rules of fiscal support for most forms of welfare policies are being eroded. My presentation would be upon the choices and tensions as these policy experiments are developed, in the context of on-going reductions in support for the poor.

#### *Intergenerational Reciprocity – the Idealization of the Interchangeability of Phases of Life*

Among the prominent concepts used for the sociological description of intergenerational relations is the one of reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Gouldner in the perspective of exchange theory, thereby ignoring other traditions of thought. In the course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the "goods" exchanged between generations are not equivalent, that this exchange extends over enormous spans of time, and that donors often are not rewarded by the original recipients. Theorists reacted by introducing additional elements: the double-pole relation was extended to a three-pole relation, time was neutralized in the idea of generalized reciprocity, and models were assembled that allowed the translation of actually incommensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

Drawing from the phenomenological school of thought, the presentation aims at breaking through to the dimension of reciprocity that lies "behind" its behavioral occurrence. Reciprocation as an action generally rests on the cognitive assumption of reciprocity, as described by Alfred Schutz in the so-called general thesis of the reciprocity of perspectives. Applying this fundamental figure of human understanding to the case of intergenerational relations, the *idealization of the interchangeability of phases of life* is being introduced. This figure of thought allows for an account of the interaction between Young and Old which avoids the incompatibilities that exchange theory has unravelled into.

**GOETTLICH, ANDREAS\*** (University of Konstanz, [andreas.goettlich@uni-konstanz.de](mailto:andreas.goettlich@uni-konstanz.de))

#### *Waiting – an Often Neglected Social Phenomenon*

Synchronicity or rather asynchronicity are among the most important research topics of the sociology of time, since the successful synchronization of the diverg-

ing time spheres of individuals and systems is a precondition for the effective functioning of society. And yet, as we all know at first hand, failed processes of synchronization are a daily occurrence. One of their most prominent results is waiting, once defined by Thomas Luckmann as the correlate of "the incongruence of the various temporal dimensions". In the same breath he deplored the vast ignorance displayed by scientific research concerning "this significant phenomenon".

Pretty exactly 40 years after Luckmann's statement, the scientific literature on the topic has expanded, but nevertheless waiting still presents a challenge for sociological theory. Is it to be described as action or rather as inaction? Are processes of waiting to be conceived exclusively as the outcome of unsuccessful synchronization or are they a constitutive part of the procedure of synchronization itself? Is waiting socially dysfunctional or functional?

Considering the existing literature on the phenomenon the presentation does not intend to give answers to these questions, but rather aims at unfolding the spectrum of aspects that have to be taken into account when answering is attempted. It reflects the fundamental difference between "long" and "short" waiting as well as various framing conditions of waiting. Specific attention is given to the aspect of interculturality, thereby criticizing the conception of the so-called FIFO-rule (first in, first served) which plays a big role in studies on waiting lines.

#### *Dying or Living: A Moral Dilemma for Ethical Warriors*

Western countries have developed a romantic vision of soldier's relation to death. In France, the so-called "acceptance of supreme sacrifice" is deeply rooted in both warfare ancient history and the over promotion of physical courage. Dying for France's higher interest is considered as the core of military identity. This has been reinforced by the professionalization of French forces in 1994 which initiated a professional/client relationship between service members and citizens.

With the development of modern remotely controlled weaponry, relation to lethal risks is changing raising concerns among the military about soldiers' identities. If supreme sacrifice remains a holy concept hardly disputable, concerns are growing due to the gap between the idealized holistic way of thinking sacrifice within the military and the common reluctance to warfare casualties of individualistic western societies. The French military is experiencing a clash between the promotion of altruistic death and the promotion of egoistic life, both within and outside the forces.

Debates about the future of the French forces always focus on how to adapt the current format of the military to the new expectations and constraints it faces. I would suggest that this is the wrong way to deal with these issues. I would suggest instead that we should re-think the way we consider the military in regard to our current objectives and constraints, and not according to outdated concepts.

The proposed presentation thus aims at re-thinking the French *pro patria mori* to the light of the current framework in which the French military is used, getting rid of the weight of history and re-assessing our relation to death in warfare. My reflections will be supported by philosophical and sociological considerations about physical courage and the need to get rid of the idea that courage is intrinsically linked to combat.

#### *Fashioning Religious Selves: Middle Class Muslim Women in Post-Apartheid South Africa*

Almost twenty years after the inauguration of a democratic dispensation, South Africa remains caught up in the paradoxical efforts of nation-building. To produce unity out of a racially fractured past, the language of 'social cohesion', 'diversity', and celebration of 'our cultural heritage' (exemplified in the setting aside of Heritage Day) is large on the Government's agenda. Yet signs of the failure of the 'rainbow nation' (and hence of the multicultural project) seem ubiquitous – growing socioeconomic inequalities, rampant government corruption, social unrest and discontent among the poor, as well as arguably unchanging or hardening of racial mistrust and racial separateness. That forms of cultural and religious authenticity arise and are ever more strongly asserted within this climate makes it crucial to ask what they might mean: more specifically for this paper, what does being middle class and Muslim in post-apartheid South Africa mean?

This paper provides some insights into the questions around nationhood and religious subjectivities through an analysis of the historical situatedness of middle class Indian Muslims in South Africa. Some preliminary thoughts will be provided on the ways in which discourses and practices around clothing and 'proper' dress among middle class Indian Muslim women in South Africa construct ways of understanding and placing the self within and/or outside the boundaries of nation and nationhood. Using a combination of literatures – an extensive global literature on Muslim women and dress/ fashion, the literature on Muslims and Indians in South Africa – I will explore how the expression of religious group belonging

through the visibility of the clothed body – relying on connections between the local and the global – ultimately comes to shape the local landscape.

#### *Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class*

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-side focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality.

Social inequality, differentiations in economic, educational and cultural capital elevated through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of new collectivity schemata such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals' different present and future based on their social class.

The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class reproduction model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class.

Within a mature phase of post-consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

#### *Social Movements and Protests in Brazil in 2013-What's New?*

##### **Social movements and protests in Brazil in 2013-what's new?**

The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like feature relations of cooperation and of political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: what the character and sense of the demonstrations, what's the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

#### *Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations*

Most defence organisations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, on missions, in academic settings). Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of 'collaborative work arrangements,' it is indeed an important issue that affects both operational and organizational effectiveness. This presentation will introduce several related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative. Further, results from the Canadian

Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (DND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the DND/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge related to military and operational functioning, as well as upon civilian personnel trained in a variety of occupations and possessing a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

#### *Oh, Didn't Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations*

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational value and is widely regarded as being comprised of four dimensions: procedural, distributive, interpersonal, and informational. *Informational justice* is paramount to the quality of information sharing within an organization, and is fostered by the truthful, timely, and comprehensive sharing of information regarding organizational decisions that affect employees. This type of organizational fairness has been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members' perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee psychological withdrawal. Moreover, meditational analyses indicated that military personnel's perceptions of informational justice were related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice. Implications for information sharing within military organizations are discussed.

#### *Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention*

The recent decade has witnessed remarkable success in various aspects of socioeconomic development in Tropical Africa. However, contrary to the "development is the best contraceptive" expectations, fertility in many countries remains stalled, frequently at very high levels of 5 and more children per woman. We investigate the values and behavior pattern underlying African persistent "pro-natalism" to reveal that some of the best-recognized fertility-inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the rocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal secondary education (with particular attention to enrollment of women in their 20s and early 30s) accompanied by re-introducing family planning campaigns as a development priority.

### *Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis*

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful "velvet" or "color" revolutions in the USSR and Eastern Europe in 1989, or in the Ukraine in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power – Islamists – alongside the secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal regional, ethnic and tribal divisions.

### *Native Languages of the Bering Strait: The Changing Conditions of Interaction and Endangerment*

A characteristic quality of the area under consideration is the variety of distinct groups inhabiting it. If one only counts broad ethnic and linguistic categories, Chukchi, Siberian Yupik (including St. Lawrence Island Yupik), Naukan Yupik, Inupiaq, and, to a lesser degree, Central Alaskan Yupik have to be considered. The native groups in question have always been in close contact, communicating with each other in both native languages, as well as in English, Russian, and pidgins, both locally designed and maritime 'jargon'.

The paper is based on interviews collected by the author in the late 1990s – early 2000s on both sides of the Bering Strait – in Alaskan and Chukotkan communities, as well as on archival sources. The paper presents a diachronic study (from late 19<sup>th</sup> century to the present) of how changing political contexts influenced the prestige of languages in question and their use in interethnic communication at different periods of time. The focus is on individual sociolinguistic perception that comes from the memories collected. At the same time, the analysis takes into account that personal memories are obviously prompted by later political and social events, and sociolinguistic and political boundaries make a projection on a personal language map. In conclusion, an attempt has been made to link socio-political changes to the degree of language endangerment.

### *The Entrepreneurial University: Institutional, Political and Social Factors*

The mission of the public research university is to advance excellence in research, scholarship and creative activities. Within the increasing cutbacks in government spending on science, the university should achieve a greater degree of flexibility to be more prepared to respond to the needs of a knowledge-based society. It means the greater significance to the ways in which the production of scientific knowledge and the technology transfer are organized. We think that the political sociology of science approach can be adequately applied to study the institutional matrix of the entrepreneurial sector of the public research university. We suggest that intertwining of the institutional, political and social factors gives us an opportunity to build a good explanatory model of the development of the research sector of the university. Political factors cover the state policies, programs and initiatives to engage in and support the technology transfer. Institutional factors cover direct steps undertaken by the university officials to guarantee true entrepreneurial activity. And social factors include both the relationship between the university and the public, and the dynamics of aspirations and value orientations within the community of scholars, contract researchers, project managers, technicians and other professionals who actually make theoretical and practical advancements of science a success. The conjunction of such factors involves a broad cast of actors with different goals and of different legacies. So it is not a surprise that such factors can be multidirectional. We think that a careful study of antagonisms inherent in such factors may provide us with good insights into regional science-based economic development. To justify this, some results of a broad study of the entrepreneurial activity and the research sectors of the universities in Western Siberia will be provided.

### *Climate Change and Coastal Adaptation: Planting the Seed for Adaptive Governance in Portugal*

The most recent IPCC report confirms that climate change is very likely to increase coastal risks. This means that all vulnerable coasts will be required to adopt innovative adaptation strategies. In countries such as Portugal, economic austerity may result in reduced funds for rising coastal defence expenditures. Therefore coastal management will have to confront a geomorphological and social process of creative and progressive adaptive governance if future economies and societies are to remain viable and resilient.

Social scientists will be heavily involved in this challenging prospect. This was the experience of a three-year research - CHANGE - Changing Coasts, Changing Climate, Changing Communities (2010-2013). The project used climate scenarios for the coming decades to promote a meaningful dialogue between a range of interested parties and coastal managers regarding possible planning and financing options in three different coastal locations in Portugal.

The research identified a high awareness across the stakeholder spectrum of coastal risks and climate change. But it also discovered a dominant feeling of hopelessness towards future solutions for coastal protection and funding. Furthermore, all previous attempts by coastal managers to engage stakeholders are widely perceived to be failures.

These critical gaps in prognoses, action and communication have been analysed in a set of interactive workshops. Representatives from regional government and municipalities, private companies, universities, fishermen, among others, met together to discuss science and communication; social and economic impacts; public participation; financing and adaptation solutions.

The presence of the team, coupled a detailed public opinion survey at each location, demonstrably raised awareness on coastal change and sowed the seeds for creating an inclusive coastal forum, engaging local stakeholders in the mission of spreading the adaptation message. The research paper will sum up the results of the CHANGE process, aiming to offer a contribution towards new models of adaptive coastal governance.

### *Brain Drain and Academic Mobility*

Emigration of high-skilled professionals from less developed countries to developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries. Skilled emigration has been analyzed according to two contrasting models: the model of the exodus that stresses the idea that more skilled individuals are forced to the exile, allowing them to get a job and a remuneration corresponding to their training; the model of the Diaspora that stresses the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

This research aims to test the comprehensive power of each of these theses referencing to the mobility of highly qualified Portuguese professionals to Europe in the last decade. Portugal is one of the European countries where the drain is more accentuated in the last decade, estimated at 19,5%.

Articulating an extensive research with an in-depth analysis we seek to identify the subjectivity of the direct actors of emigration in some of its main working contexts. We use a mixed strategy which makes use of the questionnaire surveys that aims to characterize the push and pull factors present in the decision to emigrate, as well as the effects of deskilling, reskilling and up-skilling resulting from migration; and, life stories and interviews with focus groups that will draft the life trajectories, the differential effects of socialization on the biographical dispositions and the strategies of improving the educational capital. Using a multiple case methodology we will describe and compare the circumstances, the modalities and the characteristics of the Portuguese student mobility of 1st, 2nd, or 3rd cycle that leads to insert primary or secondary segments of the employment system of the receiving European countries.

*Mobility of High Skilled Professionals: Long-Term and Temporary Trajectories*

The literature review allows us to conclude that the traditional perception of the brain drain has no empirical evidence on the aggregate level, being necessary the understanding of the circumstances and factors that influence the process in each country. This research aims to make a pioneering study of this type in the Portuguese context, still innovating in conceptual and methodological terms: first, refusing the logic of globalizing assumptions of human capital theory, guessing that migration can be caused by factors other than not pay gap by analyzing the set of factors of attraction-repulsion; on the other hand, guessing that the international job system is not a space entirely free and therefore is not only dependent on the free play of supply and demand, is also necessary to observe the biographical trajectories in order to understand the reasons and destinations of migration.

The multiple case studies are intended to test the theoretical hypotheses presented in the literature. Our hypothesis consist in assuming that the different migration flows as well as the contexts, projects, the paths of life and how biographical expectations are constructed and therefore can be understood by the concurrent models. The literature identifies five main theoretical hypotheses with different levels of empirical evidence: a) brain drain; b) beneficial brain drain; c) cross fertilization of elites; d) brain circulation by creating networks; e) latent brain drain due to the mobility training.

Using a multiple case methodology we will describe and compare the circumstances, the modalities and the characteristics of the mobility of two types of migration of high skilled Portuguese individuals in Europe: a) long-term migration to a European country for work in primary or secondary segment of the employment system; b) temporary or commuting mobility through European networks of science, production, services or culture.

*Monopoly on the Use of Force As a Metanarrative: Violent Non-State Actors and Political Repercussions in the Global South*

This study seeks to problematize the concept of state monopoly of force, establishing discussions about the use of violence as a polysemic concept. Accordingly, we seek to examine the actions of non-state actors in the so-called Global South countries, understanding these groups as political actors able to establish political changes in the contexts where they are inserted.

The article will focus on groups in Rio de Janeiro, Brazil, and Tripoli, in Libya. In this sense, it is deeply based in data collected by the authors on field research. Although these assemblages possess distinct characteristics, "Militia" in the Brazilian case and "Neomercenaries" in Libya, the analysis demonstrate similar characteristics, especially on the symbolical reframing of the state monopoly for the use of violence.

The type of control exercised by these groups occurs mainly through the establishment of direct governance in a specific location, particularly by coercion and political power. As a consequence, its performance ultimately emphasize elements that highlight the inefficiency - or the resignificance - of the State since their composition is based on non-state networks that provides financial support and goals and sustained largely by fear and territorial control.

Much of the debate about violent non-state actors is centered in reflections about the threats that such agents might represent for the structures of government authority. In this sense, the growth of non-state actors would necessarily create effects that decreased state capacity and provokes the erosion of the legitimacy of the use of force. However, in the present analysis, we prefer to address the issue through the lens of reframing: the presence such actors actually indicate changes in the state performance and modifications on the symbolic forms legitimate use of violence.

**GOMEZ, MANUEL\*** (Florida International University, [magomez@fiu.edu](mailto:magomez@fiu.edu))

*A Sour Battle in Lago Agrio: The Judicial Protection of the Environment and Indigenous Rights in Ecuador*

Since at least the 1990s, representatives from several Ecuadorean indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessionaries that operated in the Lago Agrio oil field of the Ecuadorean Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US -where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuan battle, however, is an \$18.2 billion judgment issued by an Ecuadorean court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has rekindled an interesting debate on the development of mechanisms for the protection of diffuse rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues insofar they contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.

**GON, EIJI\*** (Chiba University of Commerce, [gon@cuc.ac.jp](mailto:gon@cuc.ac.jp))

*'the Reinvention of the Traditional' in the Post-Traditional Societies — an Essay on Encouragement of 'Dependence'*

The theory of reflexive modernization led by A.Giddens and U.Beck characterizes the present societies as the post-traditional societies where traditions have been taken down thoroughly. They assume that the human relationships defined according to the traditions should be replaced by individuals and the expert systems, both of which are indispensable for the most important theses of the post-traditional societies; choices and decisions. In fact, since 1990s the norms for families, communities and jobs have been disappearing in Japan.

The expert systems as the alternative to the tradition, however, don't fully function. There people are to make 'free' decisions any time, and they are forced to be 'free and independent decision-makers' ambivalently. Individuals can't build the social relationships that used to be mediated by the traditions, especially interdependent relationships. The author argued before that in the present societies individuals refuse 'dependence' which should be inevitable social relationship especially in the old age, and with that refusal they necessarily fail to be independent.

People burdened heavily are now starting to seek for the norm to support their daily lives and the groups to belong; nostalgia for the traditions, rise of exclusive nationalism, sympathy for the cults or any fundamentalistic ideas. We can't dismiss these as reactionary and out of date. These requirements simply show that 'free and independent lives based exclusively on choices and decisions' are impossible. They ask for 'the traditional' as a reference frame of decision-making.

We mustn't let this movement slide into nostalgia. How can we respond to this requirement for 'the reinvention of the traditional'? In this study, we take the argument over 'care' in Japan and discuss the logic that positively encourages 'dependence' on others. Rebuilding new social relationship including 'dependence' might be the first step to 'the reinvention of the traditional' in the post-traditional societies.

*Transnational Articulations of Law and Inequality in Latin America: A Legal Genealogy of Inequality*

Until quite recently, Latin American countries widely assumed that legal discrimination against ethno-racial groups was a practice that took place elsewhere but not in the region. Somehow, the articulations between law and racial inequality remained successfully covered for almost two centuries. By tracing how such articulations could be hidden for so long, this article changes the focus on domestic legislation and offers a legal transnational approach for the analysis of the multi-scale intercrossing of racial discourses through law. It aims to elucidate the chronological and epistemic concurrence between different legal projects of racial stratification operating in different world areas and to expose the crucial role that law played in the racialization of society under colonial rule, and the continuities of such role in contemporary Latin America. For this purpose, I introduce Sérgio Costa's definition of inequality regime. This concept serves to depict transnational interconnectedness between legal texts and to place norms in the center of the analysis of racial inequalities. The concept is also useful for the study of long periods of time, because it allows a focus on regime change (i.e. major shifts in the racial conceptions and legal standards and their effects in terms of ethno-racial inequalities). The first part of the paper introduces the legal trans-

national approach applied to conceptualize 'race' as transregional inequality and the central role of law in this regard. The second part presents some articulations between law and 'race' in Latin America as conditioning ethno-racial discourses, social hierarchies and inequalities during European rule and the most significant continuities of such articulations after independence and in subsequent regime transitions.

#### *Double Troubled-Young People Struggling to Cope with the Conjoined Status of Neet-Youth Homelessness in Times of Austerity*

Despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NEET-Youth homelessness, particularly in times of economic austerity. As such, the NEET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NEET-youth homelessness framework presented herein is that irrespective of the importance of micro -level factors and personal preferences in shaping young people's lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell, et al, 2011).

Importantly, the NEET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant 'silo approach' to understanding both NEETism and youth homelessness separately, despite their acknowledged links (Smith, J. and Ravenhill, M. (2006); Quilgars et al, 2008; Jones, 2009;). This paper posits that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthoods.

#### *Assessing the Influence of Global Inequalities and Public Policies Indicators on Support for State: Insights for Welfare State Sustainability and Democracy Responsiveness*

Public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002).

Contrasting with the comparative welfare state literature, that usually focuses on social indicators' annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators' overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP *Role of Government*, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a "thermostatic" pattern (Wlezen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., help to understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

#### *Assessing the Influence of Global Inequalities and Public Policies Indicators on Support for State: Insights for Welfare State Sustainability and Democracy Responsiveness*

Public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002).

Contrasting with the comparative welfare state literature, that usually focuses on social indicators' annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators' overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP *Role of Government*, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a "thermostatic" pattern (Wlezen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., help to understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

#### *Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues*

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP *Role of Government*, repeated four times since 1985, permits to gauge whether and how statist attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare the global trends across countries and assess the "values convergence" hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space.

Then we use multilevel modeling to look at the evolutions among subpublics; especially among middle classes and "transfer classes", which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the "parallel publics" thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?

*Identidad Nacional, Imaginarios Sobre El Estado Nación y Procesos De Exclusión De Los Migrantes Internacionales*

Argentina ha sido y es un país atravesado por procesos migratorios. De este modo, se fue constituyendo un imaginario social acerca de los aportes y las pérdidas que la llegada de los migrantes significaban para la "identidad nacional".

El presente trabajo analiza de qué modo la presencia de migrantes internacionales supone un desafío a la estructuración de las sociedades organizadas bajo la idea de identidad nacional. Así, la presencia de dichos migrantes es vista como una figura "disruptiva" para el relato nacional, "ficticio", pero no por ello menos efectivo en la "realidad" de la constitución de la "comunidad de nacionales". Interesará abordar la problemática del nacionalismo a partir de comparar las manifestaciones de los argentinos acerca de las migraciones llamadas "tradicionales" (que incluyen a las olas migratorias de fines del siglo XIX y principios del XX) y las "actuales" (desde la segunda mitad del siglo XX a la actualidad.) y los modos como esas representaciones inciden en procesos de exclusión de los grupos de migrantes.

Se indagará sobre las representaciones sociales de los nativos (entendiéndose por ese término: los argentinos) acerca de la cuestión antes señalada, a partir del análisis de entrevistas en profundidad realizadas en el marco de dos Proyectos de Investigación en los cuales participo. El primero, titulado: "Exclusión, control social y diversidad articulando la relación entre el migrante externo y las instituciones educativa y judicial" y el segundo denominado: "Diversidad etno-nacional y construcción de desigualdades en las instituciones escolar y judicial. Un desafío teórico-metodológico en el abordaje de los casos del AMBA y la provincia de Mendoza". Ambos proyectos son dirigidos por Néstor Cohen y tiene su sede de trabajo en el Instituto de Investigaciones Gino Germani de la Facultad de Ciencias Sociales de la Universidad de Buenos Aires.

*Social Capital and Primary Care Professionals' Accomplishment of Management Targets*

It has been argued that fostering cooperation among general practitioners (GPs) and between GPs and other professional groups (e.g., nurses, hospital specialists) contributes to improve performances. A relevant factor influencing such cooperation is the social capital (Inkpen & Tsang, 2005; Reagans & Zuckerman,

2001). We interpret such factor as the informal ties existing within professionals and organization members and instrumental to exploit valuable resources such as information and knowledge.

We aim to provide insight on the influence of socio-demographic and organizational characteristics of GP practices on the social structure of each physician's advice ego-network, and on whether such social relationships lead to performance improvement.

We collected data by means of a questionnaire covering specific aspects of social capital and administered to the GPs of a Local Health Unit (LHU) in Italy. Moreover, we gathered data concerning GPs' logistical arrangements and performance (in terms of meeting targets of appropriate pharmaceutical prescriptions).

Social network analysis was used to measure the composition (degree and closeness), heterogeneity and homophily (Abbasi *et al.*, 2012; McCarty, 2002) of the personal advice networks of respondents (response rate: 58%) and to test, on one hand, whether logistic or demographic characteristics influence such measures, on the other hand, whether such measures (representing proxies of social capital) influence GPs' performance.

The study provides insights on the capabilities hidden in the informal relationships of primary care professionals. In addition, it enhances our understanding of the determinants of GPs' organizational performance, which is both an important issue for policy makers and an intriguing facet of the shift between clinical professionals and management.

*What Happened with Our Plans? Plans and Behaviour of First Time Dual-Earner Couples in Spain*

Most studies show that the arrival of the first child produces a new gender balance within the couple, and frequently initiates long-lasting gender inequalities. This paper investigates how first time parents deal with the reconciliation problem (combining paid and unpaid work), which are the consequences of adopting different reconciliation strategies (use of family policies, informal networks and couples' time) on gender inequalities, and to what extent different strategies are based on individual attitudes and societal constraints in Spain. This study has two peculiarities. The first one is the sample selection. We interview couples which had a fairly egalitarian division of labour when they were expecting the first child, and we interview them again one and a half year later; when most couples have already made the decision to return to paid work. The second one is the historical moment in which the interviews were conducted, marked by a deep economic crisis and a sharp weakening of men's working conditions. The study is based on a sample of 33 egalitarian dual-earner couples interviewed two times firstly in 2011 and secondly in 2013. Results indicate that mothers elaborate more realistic expectations during pregnancy about their chances to combine work and care. Men more often express dissatisfaction with work-life balance and a greater gap between ideals and reality, without really feeling much remorse as they feel that their arrangements are fully justified by their job constrictions and the economic crisis. This study highlights the importance of a good policy design in order to favour gender balance over the life course, even in the worst socio-economic circumstances.

*Male Homicide and Life Expectancy in Mexico*

**Objective.** To determine the impact of homicide on male life expectancy in Mexico and its 32 states during the three-year periods 1998-2000 and 2008-2010 and the weight of the different age groups in years of life expectancy lost (YLEL) due to this cause. **Methods.** Based on official death and population data, abridged tables for male mortality in Mexico as a whole and its states were created for the three-year periods studied. Health-adjusted life expectancy and YLEL for men aged 15 to 75 were calculated by selected causes (homicide, diabetes mellitus, and traffic accidents) and age groups in each three-year period. **Results.** In the years between the 1998-2000 and 2008-2010 periods, YLEL due to homicide increased both nationally and in 19 states. In four states, the YLEL in 2008-2010 exceeded two, with the state of Chihuahua standing out at 5.2 years. In 14 of the 18 states where health-adjusted life expectancy among men declined between the two three-year periods, the YLEL due to homicide increased. From 2008 to 2010, homicides were the leading cause of YLEL among men aged 20-44. YLEL due to homicide among those aged 15-44 increased between the two three-year

periods. **Conclusions.** The increase in the rate of homicidal violence, especially among young people, is impeding an increase in male life expectancy in Mexico. In several states, such as Chihuahua and Durango, this violence appears to be the main reason for the decline in life expectancy among men aged 15 to 75

*Sociedad, Violencia y Demografía En América Latina*

Los cambios sociales y económicos vividos en tiempos recientes por América Latina (democratización política, crecimiento económico, reducción de la pobreza) no han evitado que sigan existiendo notables desigualdades sociales, y que la violencia alcance niveles insospechados décadas atrás. Obviamente esta situación ha influido en la demografía latinoamericana: si bien el aumento de la esperanza de vida y la disminución de los niveles de fecundidad han propiciado un acelerado proceso de envejecimiento poblacional, lo que ha llevado a que la proporción de personas con 60 años y más se haya incrementado sustancialmente, simultáneamente en la mayoría de los países latinoamericanos hay todavía un numeroso grupo de población en las edades más jóvenes, lo que en la práctica genera una coexistencia de demandas sociales que difícilmente han sido satisfechas en las sociedades del continente: la falta de un sistema de seguridad social y de pensiones adecuado -y por ende, la existencia de un amplio número de adultos mayores pobres-, así como la alta mortalidad entre los jóvenes debida a hechos violentos -y su impacto en la esperanza de vida- son prueba de ello. Este trabajo pretende analizar la relación entre cambios sociales y características demográficas en América Latina en las últimas décadas.

*Language Diversity at Work: Guidelines to an Interdisciplinary Approach*

Communication at work is a complex process in which there is much more at stake than information exchange. How can such an element be analyzed in order to understand both its nature and relevance inside organizational culture (Velázquez Valadéz & González Trejo, 2013)? How can we introduce a sociolinguistic perspective to approach it? The answer might conduce to consider firstly a renewed concept regarding language diversity. Namely, it could be conceived as a performance landscape or development arena emerging as a result of dynamic forces affecting the linguistic repertoire. Inside companies, language diversity would enable individuals to perform exchange and balance functions (particular registers and domains) which ultimately represent a place of social significance. The latter would imply, secondly, a new perspective to be introduced into a typical analysis of communication at work in order to analyze speaking events considering the following elements (Hymes, 1974): setting and scene, participants, ends, act sequence, keys, instrumentalities, norms and genre, among others. Such approach would also result from the integration of concepts from the so called Economics of Linguistic Exchanges (Bourdieu, 1985) into what is called "Economics of Language" (Grin, 1996). Investigation in the latter field pay special emphasis on: reasons why some languages must be taught and learned rather than others, level of proficiency in different languages that companies desire in their employees, evaluation of benefits for individual learners or for society of learning and teaching second languages, language policies in education promoted in organizations and their relationship with macro policies (Grin, 2002). Finally, it is the purpose of this contribution to present results from interviews analyzed during the qualitative stage of an investigation conducted in Mexican companies using the concepts and approach described to inquire about the relationship between diverse sociolinguistic functions and positions individuals hold in a company.

*Human Rights and Political Governance. Using the Sociological Theory Tools to Address the Monitoring and Compliance Problem of the Human Rights NORM at the National LEVEL*

The monitoring and compliance with human rights norm in domestic political contexts still is a core research problem in the human rights arena. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to this problem. Political governance is defined in institutional terms as a negotiation structure between state and non-state agents that works as an interface between the domestic political system and regulation processes of the human rights problematic outside this system, mainly at the international level.

I present a case study of a negotiation process between the Colombian government and non-state agents from the system of international cooperation for development, the international human rights system, international NGOs and domestic civil society aimed at the regulation of human rights problematic in Colombia. The outcomes of this negotiation show how a political governance structure can emerge as a change in the political regulation model of this problematic at the national level.

This kind of negotiations entails the participation of plural social agents that act at different scales (national and international), with different interests and power capacity and that must solve a problem of inter-sectorial coordination (state agents and non-state agents) in order to overcome political conflicts and get at some point of agreement with regard to how regulate the problem under consideration. In this research, I used a combination of the structuration theory and the Coleman's macro-micro-macro loop in order to explain how this governance structure emerged as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

*Family and School Effects in the Explanation of Migrant-Native Differentials in Performance and Educational Expectations in Spain*

We examine the effects of school context on educational outlooks and outcomes of the children of immigrants, in comparison with natives in Spain, an under-represented case in the international literature and a fast growing immigration destination in Europe. Using two recent datasets, *2011 Chances Survey* and the *Secondary Schooling Evaluation Survey*, which cluster students across schools, we investigate the factors that contribute to the migrant-native differentials in school performance and the formation of long-term educational expectations, and propose an explanation to migrant optimism. We look at three dependent variables: Performance is here studied from both an [1] objective (test scores) and [2] subjective perspective (estimation by children and their parents of whether their performance allows to reach tertiary education) and [3] the adjusted educational expectations (controlled for prior performance). Our results reveal the different way that school context works for immigrant and native origin children. Although immigrant children themselves understand the constraints that such disadvantage imposes on their future educational careers, immigrant parents seem to hold on to a rather unrealistic position. This parental optimism in turn seems to boost the career expectation of immigrant children independent of school effects. Thus while school context determines the performance of immigrant origin students to a greater extent than those of natives, the opposite is true for expectations. The formation of aspirations is more family-oriented among im-

migrants, and thus more positive, than among natives. Whether the long-term educational careers of immigrant children are as successful as they expect is a matter of how they do cognitively in schools, in which there is a greater role for schools to play.

#### *A New Crisologie after 2008? Crises and Cognitive Autonomy*

This paper is an attempt to address Morin's (1968) plea for a sociology of crisis, focusing particularly on the issues of the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis.

Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narration where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells.

Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek *krino* (to cut, to select, to judge) – narrations do frequently appear, for without a minimum of foreseeability, action is impossible and the future unbearably contingent.

If, precisely at the moment in which narrations are the most unstable we need them ever more urgently, we face a tension where the role of intellectuals becomes fundamental. Already Gramsci had acknowledged this. Furthermore, as Morin had already argued, intellectual reactions to a crisis are in no way readily predictable, for they raise forcefully the issue of the justification of normality. This might even mean the ascent of 'regressive' responses to a crisis – plagued with dualisms – or a newfound sense of complexity.

From this starting is that I attempt to weave together the tension between cognitive autonomy and narration after critical events. I argue that in order to fathom intellectual change and crisis, sociology must meet at least two characteristics: First, it must understand cognitive autonomy as a relational (not absolute) characteristic of intellectual actors and second, it must be particularly attentive to the issue of time in a self-reflecting way; i.e. it must become a "temporalised" sociology.

#### *Think Tanks As Public Intellectuals? Recent Developments in the Sociology of Think Tanks*

This paper's aim is to contribute to the sociological literature on think tanks by drawing insights from the sociology of intellectuals. I first proceed by describing and establishing links between some of the latest contributions stemming from sociology and political science: Tom Medvetz's Bourdieusian framework and Hartwig Pautz's neogramscian approach. From there, a discussion ensues on the potentialities and limits of those perspectives to study intellectual change, independence and stability within think tanks. Herein positioning theory, previously used to study public intellectuals (Baert) becomes relevant, as it highlights the relationship between a public intervention, its context and other actors. In the case of think tanks, it highlights how these organisations must "juggle with" diverse forms of resources and experts within and outside themselves, criss-crossed by institutional and economic constraints. Since within think tanks individuals and institutions are enmeshed in various public debates and connect to a range of people and organisations, alliances are crystallised in the public sphere through the think tank's intellectual reputation (and the form we understand a think tank's intellectual function: based on technocratic expertise, on being a critical voice, etc.). These resources can in turn be mobilised in the form of allegiances and distances, economic constraints and intellectual resources. This reputation thus becomes a think tank's greatest asset, its depository of symbolic capital. A public intervention is therefore an exercise of weaving together the intellectual image of a think tank, "talking", as it were, through its experts in every public intervention and across platforms and publics. This stretches the concept of cognitive autonomy in interesting ways, as organisations themselves generate an image *vis-à-vis* the image of those who talk on its behalf. In order to exemplify this I expose the case of the British think tank "New Economics Foundation".

#### *Beyond Environmentalism: 'living Well' and 'bio-Civilisation' at the UN Rio+20 Summit*

Concepts of 'living well' are re-framing the ways in which global justice movements challenge market globalism. In the 2012 counter-mobilisations against the

United Nations Rio+20 Summit the vision for an alternative future was centred on the idea of a 'bio-civilisation'. The concept was introduced to challenge the idea of a marketised 'Green Economy' as promoted by the UN outcome document - 'The Future We Want'. Against commodification, a bio-civilisation was defined as a paradigmatic social and ecological commons, and was embodied in the alternative World Social Forum document - 'Another Future is Possible'. In the process of countering the UN's free market environmentalism, the bio-civilisation concept was elaborated in some depth, across a range of policy fields, as a form of 'living well'. The paper outlines the political contexts in which the bio-civilisation concept has emerged, and how it has been used to signify a clear break with green neo-liberalism. The paper identifies sources of agency for bio-civilisation, both as a lived practice and as a transformative program.

#### *Researching the Ordinary: The Extraordinary Sociological Research of Pearl Jephcott (1900-1980)*

The lives and works of many sociologists have now been well documented and explored yet even when these biographical accounts are combined with boarder authoritative accounts of the discipline this 'standard history' is by no means a fully complete nor an uncontentious one. There are numerous others who have made, or continue to make, an outstanding contribution to the understanding of social life but who have become lost within the minutia of academic historiographies. As such considerably more needs to be done to examine the history of our discipline and reassess the significant contributions made by 'other' researchers so that we may also reappraise what can be learnt from these ordinary sociologists. In this paper we argue that Pearl Jephcott (1900-1980) is one such researcher whose contribution to sociology, and the sociologies of youth and community in particular, is suitable for reassessment. Her books - *Girls Growing Up* (1942), *Rising Twenty* (1948) *Some Young People* (1954) *Married Women Working* (1962), *A Troubled Area: Notes on Notting Hill* (1964), *Time of One's Own* (1967) and *Homes in High Flats* (1971) – were both formative for many themes within sociology of the 1940s, 1950s and 1960s, as well have having contemporary relevance despite being largely forgotten. Focusing on two books in particular - *Time of One's Own* (1967) and *Homes in High Flats* (1971) and data collected over a ten-year period from various archives and Universities, we discuss (i) Jephcott's sociological practice based on 'reality congruent' theory developed in order that she may cast a lens on the realities of working class life. She wrote richly detailed studies that offered an unsentimental reflection of 'lived realities', of the ordinary, of the mundane, of the quotidian; and(ii) Jephcott's methodological innovation and pluralism in the use of text, image and non-standard data sources that mark her out as being sociologically 'ahead of her time'. Jephcott was an ordinary researcher researching the ordinary but her legacy is anything but ordinary.

#### *Obesity and Gender As Status Characteristics*

For over 30 years, researchers have examined social influence and persuasion using Status Characteristics Theory (Berger and Conner 1974). While research has investigated beauty and attractiveness as status characteristics (e.g., Webster and Driskell 1983), no research to date has investigated obesity as a status characteristic. The current paper reviews the literature on influence and persuasion, demonstrating how they are related to status characteristics. Next, this paper

demonstrates how the effects of both gender and obesity can be explained by considering them as status characteristics which have the potential to create subsequent status beliefs. Finally, the current study reports empirical findings that support obesity as a status characteristic. This study finds an effect for obesity on ratings of diffuse status, and effects for both obesity and gender on ratings of influence and persuasion.

#### *Social Productivity. Advancing a Concept to Think about Contributions of Social Organizations*

The paper deals with *social productivity* as a useful criteria for assessing the contributions of social organizations to civility, solidarity and quality of life.

Commonly social organizations are evaluated with these criteria: a) results, b) the impact of their actions on the world, and c) organizational capabilities.

These criteria focuses on examining contributions in a field rather intangible: values and the quality of social relations. The concept points to a poor explored field, although some notable authors wrote about it.

The social productivity concept points to consequences that are not always deliberately sought, since they are often unintended byproducts of organizations behavior. One important aspect is that the image and action of organizations is broadcasted into the civil sphere and it constitutes a role model, that is, it has an effect of social pedagogy. Another important aspect is that organizations' social performance can sometimes be negative, deteriorating social life.

Social performance can be seen in these dimensions:

1) From the point of view of the objective or performance materiality and concerns to the contributions of the material and social welfare of the stakeholders. This includes the production of benefits, training of participants in joint decision making, the implementation of the decisions and setting and enforcing rules.

2) From the point of view of the factors affecting the formation of sociality, it focus on the relationship with the environment in which the organizations operate and interact, and covers the image projected by the organization, its actions and how all this stuff interacts with other institutions and actors. These are issues which impact on social connectivity, civility, the public sphere, and the construction of the meanings which are shaping society.

#### *The Two First Paradigms of Empirical Social Research in Germany*

Irmela Gorges

Abstract:

The two first paradigms of empirical social research in Germany

Empirical social research in Germany evolved from the necessity to get information about the impact of the industrialization on the social conditions in Germany during the 19<sup>th</sup> century. At the example of the Association for Social Policy, founded in 1872 in Germany, it will be exemplified how the founders of the Association developed a strategy to conduct empirical social research with which they could collect data which they could use to realize their political views of a functioning society. In front of the peak of the industrial revolution, the second generation of members of the Association, among them Max and Alfred Weber, developed a different political view of a future society. As a consequence, they fought for a different strategy to gather empirical data. Because both strategies of empirical social research differed from one another not only with regard to the methods to collect data but also in view of the political goals, i.e. with regard to their epistemology and methodology as well as methods to collect data, it seems to be justified to identify the two approaches to empirical social research as two different paradigms.

#### *The Social Nature of Salt: Competing Perspectives on Salinity in the Mekong Delta*

The Mekong Delta region of southern Vietnam is currently undergoing a massive and far-reaching environmental transformation. As the seas rise and as an increasing volume of fresh water is diverted from the upper reaches of the river, both for hydropower and for irrigation, waterways and soils along the coast have become increasingly saline. Driven by the rising tides, water from the South China Sea now penetrates for dozens of miles inland, up the mouths of the Mekong and its distributaries and into the irrigation canals that crosshatch the delta, posing a mounting threat to rice production and to agricultural livelihoods in the region. This change, however, is not seen by all actors as a negative one; instead, many residents of the region have abandoned rice farming for saltwater aquaculture, turning their rice paddies into saline ponds and cultivating farmed shrimp for international markets.

This paper examines the contentious politics of salinity in the Mekong Delta, paying particular attention to the competing perspectives towards salinization that exist within both the Vietnamese state and in rural communities in salinity-affected areas. Drawing on interviews with Vietnamese officials and reviews of policy documents, I first look at the competing interests - such as export-oriented development and national food security - which drive tensions over salinization at the policy level. I then turn my attention to differing perspectives and attitudes towards salinity at the local level, drawing on focus group interviews and ethnographic observation to examine the reasons - ideational and material - for which some social groups in the Mekong Delta have embraced salinization and salt-water shrimp farming, while others have sought to persist with rice farming even in the face of mounting salinity pressures.

#### *Civil Society and Civic Culture in Modern Russia: Experience of Sociological Diagnostics*

It is hard today to speak of a common and well formed civil society in Russia. Civil society exists, but it is fragmentary and divided across both horizontal and vertical sections of the population. The paper contains the results of sociological researches, including a description of the strengths and weaknesses of Russian civil society and the environment in which it develops, as well as recommendations on strengthening civil society in Russia. The author draws a complex, and in many respects inconsistent, picture. The condition of civil society in Russia is not subject to unequivocal judgments in terms of good or bad. The breadth and variety of the information allows the author to depart from simple, sometimes speculative perceptions about Russian civil society. A sincere interest in civil society can tempt to make too many a priori assumptions, but when the empirical base is rich enough, it is impossible to draw black and white conclusions. The author of the paper felt obliged to inform international audiences not so much about his own points of view as about empirical facts and expert judgments. Certainly, the picture is not complete. As will be shown, the research tools capture different aspects of the development of civil society unevenly. Nevertheless, the data obtained are sufficient to assert with confidence that Russian civil society is in the difficult process of development, and it has considerable, if yet unrealized, potential.

#### *Youth Studies in Russia under the context of globalization*

The paper is concerned with the problem of the Russian youth, with a special emphasis on the history of the theoretical and empirical researches devoted to the youth issues. The authors attempt to provide a comprehensive account on the development of theories on youth in Russia and the thesaurus conception of youth from the early 1920s up to the present time. The research delineates the term thesaurus and its connection with the formation of modern youth's outlook.

The results obtained during analytical work with the literature and empirical data will become the basis for general conclusions and recommendations regarding the development of future research in the area of youth and youth policy. In particular, they determine the main trends in research regarding Russian youth, especially in relation to the so-called «new Russian reality» of the market economy, the institutes of democracy and law-based government (demographic problems in Russia; status of Russian youth in the context of its development; description and sociological analysis of various problems related to it; educational opportunities for young people in Russia; Russian youth identities, etc.). At the same time the paper reveals some certain problems in youth studies, conducted by Russian sociologists under the context of globalization.

One of the central focuses of the research is social and cultural value orientations of the young Russian. The study presents a detailed analysis of impact that traditional Mass Media and information revolution plays in socialization of Russian youth, its generations, its influence on public opinion formation, etc.

#### *Uncertainty As an Asset in Education Policy*

Education policies around the world are responding to increased perceptions of risk by attempting to reduce uncertainty. They are attempting to gain clear information and identify 'guaranteed' solutions by finding out 'what works' to develop policy accordingly. They are setting up clear measures of accountability and transparency. In order to understand states of affairs and identify policy issues,

huge machineries of calculation have been mobilised. Regular surveys are used to track progress and to respond to the first sign of 'decline'. In this sense, we could say that the complexity and uncertainties of the world are transferred to the processes of calculation, which in turn render clear and less uncertain accounts of the world in the form of numbers.

In this paper, I take the notion of 'uncertainty' to the statistical translations of the education world and the attempts made through these translations to erase uncertainty and ambiguity and provide clear, certain accounts. I explore how complex such operations are, and how the uncertainty and complexity of the world constantly challenge and stymie the attempts to tame it. I support my thesis with several empirical examples from my research on the *Programme for International Student Assessment (PISA)* and on *Australia's Education Revolution*. I explore the dilemmas involved in these attempts to contain uncertainty (including through mathematical devices such as calculating 'confidence intervals'), and the ways in which the world exceeds these attempts to contain its uncertainty.

Using Callon et al's (2001) notion of 'acting in an uncertain world', in particular their argument with regard to 'hybrid forums', I argue in this paper that keeping uncertainties alive can have the beneficial effect of bringing more resources and expertise forward and adding new voices into the discussion. Uncertainty can thus be an asset rather than a problem to be solved.

### *Toward a Synergy Society: Beyond Reflexive Modernization*

The purpose of this paper is to consider the reality of synergy society criticizing the theory of reflexive modernization and third way. Though positive welfare oriented third way politics has acquired greater importance in creating active civil society and wealth, it is too Western because reflexive modernization implies the project of political subject concerning the ideal attainment. Synergy is social collaboration beyond borders. It lies in seeking the social well-being accompanied with rethinking process of modern values. The rise of communication sector where consultant, adviser, planner and religion play an important role in empowerment is a characteristic of synergy society. Instead of public sphere, we focus on synergy sphere in which communication media such as the standard of fair trade and eco-label circulate and create the networks of social resonance. This has political, economical and cultural meaning simultaneously. Synergetic modernization is not a progressive project which has political and historical end. It just explores qualitative expansion of well-being continually to overcome baneful influence of utilitarianism and excessive individualism. Then we reevaluate the Japanese semantics of happiness (*shiiawase*) and research the activities of Japanese Buddhism after 311. Arguing the everyday life with suffering and joy, we realize that a contextual succession of accidental meetings build necessarily social relationships which have potential to form the networks of social resonance related to germinating aspects of another modernity beyond the risk society. Synergy society promotes social diversity and well-being against the increasing liquidity. But fragility is unavoidable as resonance contains contingent process. Therefore we conclude that stable social commitment and sustainability are possible when institutional embedding of synergy develops to construct interactive partnerships with synergy networks of well-being.

### *Re-Regulating Reproductive Bargains*

This paper proposes a framework integrating varieties of capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance models and related labor regulations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic models. Without a systematic account of the gender dimensions of employment practices, institutions, and regulations, the varieties of capitalism approach cannot decipher the gendered patterns of nonstandard employment and its variation across countries. National variation in gendering of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargains. A reproductive bargain constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalist countries, including the United States, the United Kingdom, Germany and Japan, typically paired in typologies, and then contextualizing specific country developments reveals a complex picture of the gendered character of nonstandard work in each country. I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of labor and the quality of these arrangements. An examination of the European Union and the

International Labor Organization also suggests that supra-national institutions influence the transfer of regulatory norms. Yet, employment outcomes and workplace practices still largely depend on a country's type of welfare state, coordination mechanisms of employment relations, and varieties of reproductive bargain.

### *Climate Change Policy: The Role of the World's Cities*

The community of nations has struggled in vain to shape a coherent and effective modus operandi to reduce the global emissions of greenhouse gases. Rather than advancing toward the modest emissions reduction targeted by the 1997 Kyoto Protocol, we have witnessed a dramatic increase in global emissions.

Concurrently, climate change policies have devolved to non-governmental actors and to sub-national levels, often with far greater effectiveness. Particularly noteworthy is the role of cities around the world in mitigating and adapting to climate change. Already home to over 50% of the world population and routinely major players in the global economy, the world's cities are primary consumers of energy and other natural resources and account for an estimated 70% of global greenhouse gas emissions – a ratio likely to increase dramatically in the future. Moreover, many of the world's cities are acutely vulnerable to the effects of climate change, such as rising sea levels.

In light of these profound challenges, it is hardly surprising that many cities are vanguards in reducing GHG emissions, increasing energy efficiency, and adapting to the ecological, economic, and social risks of climate change. Hundreds of cities around the world have successfully established and implemented climate action plans with ambitious emission reduction and energy efficiency targets, and many are taking preventive measures to cope with climate change-related risks.

In light of the unparalleled challenges to urban planning and economic, social, and environmental policy posed by climate change, the articulation of a theoretical model that defines the key elements that contribute to the success of climate change policies is of utmost importance. The current study elaborates such a model and tests it empirically by examining several case studies in cities around the world.

### *Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education*

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of "over-education". For the future of potentially "over-educated" societies, evidence on gender differentials is important for education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

**GOULD, MARK\*** (Haverford College, [mgoould@haverford.edu](mailto:mgoould@haverford.edu))

### *Natural Law, Human Rights and Sociological Theory*

Barnett has argued that the requirements of organized social life are the principles of natural law. These laws are "as fixed and unchangeable as the laws which operate in the natural world." For Barnett, the (normative) force of natural law is found in "if-then" propositions. "If you want to achieve Y, then you ought to do Z."

There are three dimensions of sociological theory integral to a natural law argument, which is essential in the formulation of a human rights agenda. Barnett's characterization of the normative force of natural law requires that sociological

theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes equitable social relationships. Here, Barnett's standard for natural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

##### *Multiplexity in Personal Networks: Comparing Three Cohorts of Portuguese*

Personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional interdependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advices and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidants and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has an impact on networks' multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family status. Do different configurations provide different types of interdependencies? Data is drawn from a Portuguese national survey applied to cross-sectional sample of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) in which respondents provided information about their personal networks and mapped the exchanges of emotional support and material goods between them.

##### *Unemployed Youth: South Africa's 'ticking-time bomb' or 'democratic dividend'?*

Young South African's make up 72% of the unemployed. Organized labour's reference to the problem as the 'ticking-time bomb', has become an emblem attached to young people. Political and social comment insists that there is reason for alarm and consternation. Even government planners refer to youth unemployment as 'the greatest threat to social cohesion' and the 'single greatest risk to social stability in South Africa'.

Amidst this dark discourse, government believes that young South Africans may in fact become a 'democratic dividend', rather than present any immediate risk or future threat.

The paper will analyze both claims for their respective merits. It will locate the analysis within an educational and labour market framework. However, given such a framework, there is disagreement about the role of education in preparing young people for the labour market.

##### *The Study of Hindu Woman Problems in Morden Society*

The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes- form women in the village, middle class women in the cities, government women in New Delhi- women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relationship and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for widowhood, they are related to changing times and the impact of the globalisation.

**GOW, MICHAEL\*** (NYU Shanghai, [michaelgow@inbox.com](mailto:michaelgow@inbox.com))

##### *Professing Hegemony: Consensus Building in the Chinese Higher Education Sector*

This paper proposes that the economic, political and social transformation of the People's Republic of China in the post-reform era is an example of 'passive revolution' aimed at pre-empting a revolution from below following the disastrous Cultural Revolution. Building upon deeply-held structural hegemonic beliefs, the leading Communist Party has, especially in the aftermath of Tiananmen, sought to build consensus to a teleological project: the rejuvenation of the Chinese nation.

Moreover, that overarching vision for the rejuvenation of China has proved to be durable and robust, changing at pace with the shifting needs of China in a time of dramatic transformation. It has grown to envelop ideas rooted in China's ancient philosophical traditions as well as more recent historical experience and new concepts designed to characterize the post-reform era.

Utilizing a theoretical framework elaborated from Gramsci's theory of hegemony and Bourdieu's concepts of field, capital and habitus, this paper examines the materialization of national, agential hegemonic projects and the subsequent negotiation of consensus. Focusing on the reform of China's Higher Education sector, the research discerns a process by which the ruling party skillfully articulates its own interests with agents operating in and across different fields of activity. Through the strategic deployment of resources, and the resulting competition over those resources the unintended consequence of which is to propel the Chinese HE sector along a trajectory deemed desirable by the CCP and PRC government, a limited form of hegemony characterized as much by the negation of dissent as by the negotiation of consensus has emerged.

In doing so, this paper views contemporary China as one characterized as much by consensus as coercion; identifies the overarching vision to which consensus is sought, and defines those actors with whom consensus is sought and also the process through which such consensus can be negotiated.

##### *Globalization and New Communication Technology in a North Indian Urban Setting*

The process of globalization in India has brought many changes not only in the sphere of Indian economy but also brought ample scope for the mass media communication to expend its network at global level. The advent of satellite television in the early nineties and new communication technology in the later part of nineties have shape the process of globalization of mass media in Indian subcontinent in a significant manner. Computerization of different private and government organization has not only improved the performance of these organizations but also helped in the growth of service sector in India. The number of internet users and mobile phones has increased tremendously in the recent past. It has enabled fast and uninterrupted communication between the masses located even in remote areas. These new communication technologies are giving rise to new patterns of communication and culture and have great impact of the style of life of their users. The present paper is aimed to understand the social background of the users of new communication technologies and the patterns of mass media exposure as well as patterns of using new communication technology-internet and mobile phone in Ghaziabad town of Uttar Pradesh on purposive sampling (N=240) using and a highly structured interview schedule. It was found that there was a sharp difference in the patterns of using internet and mobile

phone. The use of mobile phone was relatively wider than the accessibility of the internet. The connectivity of mobile phone is spreading cutting across all caste, class and gender categories but internet connectivity is still confined to some selected sections of the mobile users.

**SZAWIEL, TADEUSZ\*** (University of Warsaw, [szawiel@uw.edu.pl](mailto:szawiel@uw.edu.pl))

### *Religion and Church in Times of Social Change*

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the global trend to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers, who remained in open or covert opposition to the system.
2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominational compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WW II). That's why communist authorities had to take into account the "local conditions": the policy towards the church(es) and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.
3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy, able and willing to stand up for their rights, and the democratic government accepted them or even sought their support.
4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.
5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as will society's attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.
6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WVS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on state-church relations and sensitive issues are not represented equally well).

## RC33-582.5

**DURLIK, JANUSZ\*** (Public Opinion Research Center, [j.durlik@cbos.pl](mailto:j.durlik@cbos.pl))

[cbos.pl](mailto:cbos.pl))

### *Social Conditions of Survey Research*

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the "escape from the field of the question" (giving an insignificant answer like "It is difficult to say" or refusal to answer). We attempted to determine whether these responses depend on and how they depend on the questions' issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender and age, education and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

### *The Life Course and Individual Time Styles of Elderly People in Cross-Cultural Perspective*

#### **The life course and individual time styles of elderly people in cross-cultural perspective**

Our contribution presents the conceptual framework as well as preliminary findings from a cross-cultural qualitative study, focusing on *life course-related time perceptions* and *time-related agency of older persons* in Germany and the United States. Both countries are similarly affected by demographic change, but reveal significant differences regarding life course structures and the institutionalization of old age. Our epistemological interest centers on the interaction between the *wealth of everyday time* and *biographical time poverty* in old age. A special focus is set on the relationships between experienced time sovereignty during the life course and the perception of one's own finitude in old age, i.e. the potential tension between a more autonomous disposition of time in daily routines on the one hand and the necessity of handling the limitations and unavailability of one's own lifetime on the other. How do both forms of time management interact with each other – and to what extent does the specific individual time style in old age relate to the internal temporal ordering of the life courses elderly people experienced in younger age? Based on problem-centered interviews including large biographical-narrative parts with retirees from various social milieus and different cohorts, we investigate individual experiences with managing ageing, lifetime and everyday time. A special focus is set on the effects of culture (e.g. regarding the relevance of autonomy values or the societal handling of death and finitude). In doing so, the common self-restriction in ageing research with its still-dominating focus on the cultural "own" is overcome. Simultaneously, we aim at gaining a deeper understanding of the peculiarities of different cultural contexts and their specific impacts on the structure of life courses and individual experiences with time and ageing.

### *Unhappy Souls at Work: Subjective Narrations about Psychosocial Working Stress*

Since the end of the last century new types of work, employment and management have caused substantial changes in contemporary subjectivity. In the meantime, an increasing social consciousness about psychosocial problems caused by working stress can be observed. In public and media discourses, the „diseases of the soul“ are increasingly linked to flexibilized working and living conditions in late capitalism. On the other hand the reality of „the exhausted self“ (Ehrenberg) is questioned – at least in Germany – on the part of psychiatrists and employers' associations. At the same time, the „psychomedicalization of the social“ is gaining significance in almost every area of social reality.

In my research I aim to contrast these complex socio-discursive interpretation schemes with the *subjective knowledge about psychosocial working stress* people develop under flexibilized working conditions. I want to know how *affected individuals themselves* experience and interpret the experience of emotional stress caused by work. By conducting narrative interviews with persons from different working areas (education, health, industrial production, financial services) who have been suffering from incapacity to work due to psychological strain, the interpretive patterns in which this experience is subjectively framed are investigated. The analysis shows how and to what extent psychological vocabulary and interpretation schemes frame subjective interpretations of stressful working experiences – and that they are used in multifaceted and often creative ways, oscillating for example between criticism of working conditions on the one hand and an psychologically „informed“ self-ascription of causes on the other. In my contribution I will explore the types of narration and implicit knowledge individuals concerned by working

stress use in order to re-establish and/or maintain their personal and biographical agency.

#### *Age and Knowledge As Challenging Factors for the Energy Transition in Germany*

The German federal policy for phasing out nuclear power and supporting a shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step by step reorganizing companies. This stability is reflected e.g. in an outstandingly long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel that embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and ecofriendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientations towards stability and security instead of innovation and flexibility. Adopting the neo-institutional concept of legitimacy we investigate which requests for radical or incremental changes are recognized by people in the management of energy companies and which symbolic and cultural resources they deploy to legitimate (unpopular) decisions that affect groups of employees. The main question is, how the required changes are processed through the existing organization and how employment structures and relationships as well as work organization and qualifications become reorganized. Our qualitative data show, that employees become grouped into newly defined categories of those that are seen as being part of the "future" of the company and those that represent the "traditional" identity of energy suppliers as conservative realms of primary sector stability and security – be it in terms of employment or in terms of infrastructure.

#### *Eco-Innovation – a New Paradigm for Latin America?*

Global phenomena of climate change on the one hand and not predictable technological risks of energy supply on the other hand are challenging not only Germany and the European Union but society, politics, science and industry worldwide. The answers to these challenges are very different. Some countries are screening their existing energy concepts and are searching ways of alternative energy, such as legislation on clean technologies, so-called eco-innovation. It is especially this shift to eco-innovation that catches our attention. It is not reserved for energy technologies, sustainable production can also be meant in other industries, such as textile. But in the ongoing of the energy turn policies promoting renewable energies increasingly subsumed the concept (Cooke 2010). In the last decades energy policy lived a process of securitization. The connotation of energy policy with the field of security policy automatically led to a change of steering with rather hierarchical modes of governance. The shift towards innovation policy therefore means not also a reorientation of concepts but also a shift of governance towards multi-level-governance (Kern und Bulkeley 2009) – so far the debate in Europe. How is this concept discussed in Latin America? While the shift towards renewable energy is a quite new debate for Europe, Brazil had already a share of 58,4% of renewables on total energy production in 1970 (Maihold und Müller 2012). Nevertheless compliance to renewable energy not always meant sustainable innovation. How is the concept of eco-innovation discussed in Latin America? And how far can we observe the above described shift? In order to shed first insight on these questions we analyze the innovation plans of Argentina, Brazil and Mexico with focus on the link between ecology, innovation and renewable energies. We use the software Atlas.ti to research the plans with a co-occurrence analysis.

#### *(Dis-)Connected Youth in Bangladesh. De-Mystifying the Digital Generation*

When speaking about the current generation, there is a strong tendency to epitomise them as the "digital generation". While the overall role of communication has already been emphasised in McLuhan's seminal publication on "Understanding Media" (1962) the more recent technical and technological changes of

information technology (IT) have brought these developments to the doorsteps of countries, and their citizens, across the world. At the same time, these technological revolutions went hand in hand with massive internal social divides of those who have the access, and the purchasing capacities, to access and utilise these technologies. This debate, captured as the "digital divide" has given rise to more comprehensive studies about social inclusion and exclusion. The quintessence of these studies is to elaborate on the vast disparities of access to any form of digital media, particularly in (so-called) developing countries.

At the same time, these global developments pose quite a challenge for any government. In terms of national policies, the current Bangladesh government and their "Digital Bangladesh" policy places a strong emphasis on modern Information Technology services. In their Election Manifesto, they point out their past achievements, and argue that these "made it possible for Bangladesh to enter the digital age" (ibid. 2009, 2). In their "Vision 2021" they have epitomised this policy as "Digital Bangladesh". Yet, the Bangladesh Youth Survey "Giving Youth A Voice" provides data that strongly question the success of this policy.

#### *Democracy and Inequality in the Philippines and Latin America: Historical Patterns and Political Values*

This paper explores the case of the Philippines in light of the Latin American democratization experience. Being a catholic country, with Spanish heritage and a recent authoritarian past, the Philippines may provide a 'hoop test' (i.e. a test of necessary conditions) for theories on Latin American politics. Latin America's fragile combination of extreme inequality and democracy is often explained through the reminiscences of an Iberian political culture and through the effects of a statist ideology among elites. These theorized causes are present in the Filipino case as well. Located in Southeast Asia, the Philippines share several cultural and political features with many Latin American countries, such as social and political inequality, patronage and state inefficiency. Despite such problems, the Philippines and most Latin American countries have managed to sustain a democratic routine since the mid-80s. The Philippines and Latin America also face similar challenges, for instance popular dissatisfaction with political elites, high levels of urban violence and also circumscribed political violence. In order to sustain our argument of case similarity, first we compare historical patterns of development in the Philippines and Latin America. Then we compare available survey data on Latin America and the Philippines in order to test whether political values are in fact compatible among them. Our main goal is to evaluate if theories on Latin American politics effectively apply to an external case. If the similarity remains tout court, we may say that the Philippines in fact provides a 'hoop test' for Latin America. If not, the challenge becomes to incorporate findings in our understanding of Latin America and the Philippines.

#### *The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?*

In a classic 1968 paper Merton described the "Matthew Effect" as the tendency among elite scientists to accumulate advantage. Alongside Merton's analyses, Zuckerman and Cole (1975) documented the experiences of women scientists and found women's productivity was routinely eclipsed by men's. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention around the world. Recently, the Council of the Canadian Academies' Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academics.

In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the way in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research grants and publications), career advancement, and awards and honours. As well, we examine how the dynamics of accumulated advantage vary by discipline. Findings based on 60 qualitative interviews show

that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

#### *Investigating Teachers' Decision-Making about the Use of Digital Technology in Kindergarten*

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced Information Communication Technology (ICT) skill sets to meet the demands of global 'knowledge' economies. Political imperatives to introduce digital technology in educational settings have seen the emergence of digital technology educational outcomes within the national early childhood curriculum, *The Early Years Learning Framework for Australia* (2009) and in *Building Waterfalls* (2<sup>nd</sup> edition, 2011) the curriculum framework used by Queensland Crèche and Kindergarten teachers. Although emerging in early childhood curricula in the prior-to-school sector, digital technology is not yet visible as a policy priority with a plan for funding of digital technologies and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountabilities and an absence of early childhood education digital technology policy the question arises, "How do teachers make decisions about the use of digital technology in Kindergarten classroom practice?"

To address my research interest in teacher decision-making about the use of digital technology in Kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Crèche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project "Interacting with knowledge, interacting with people: Web searching in early childhood" (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use of digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

#### *Places and Belongings: "Circular" Conjuality Between Angola and Portugal*

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjuality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, we seek to understand how the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data gathered under my coordination in the ongoing project *Places and belongings: "circular" conjuality between Angola and Portugal (PTDC/AFR/119149/2010)* capture the repercussions of mobility on conjuality as well as the self-perception and representations of those involved of the domestic space – here understood in its physical, affective, and social dimensions. When a conjugal pair separates as a result of the migration of one person, fluid forms of conjuality arise, demanding realignment of gender roles. The "circular" forms of conjuality that are emerging today can also be studied from the point of view of Post-colonialism Theory – seen in the continuities and ruptures in Portugal's colonial imagination, the gender-role building, and the migrations between the two countries. The paper contains a first lecture and analysis of the data already collected in the before mentioned project.

#### *Clouds over Spain: Work and Family in the Age of Austerity*

**Purpose** – This paper aims to contribute to the academic literature in two ways. Firstly, the paper will analyse the impact of the financial crisis on the level of flexibility, autonomy and stress of Spanish employees. Secondly, this study aims to identify if the impact of the economic crisis on the work-family balance differs by sex, educational level, economic sector and regions across Spain.

**Design/methodology/approach** – The article reviews relevant literature in work-family balance. Two databases (2005 Ad-hoc Module on work life balance; 2010 Ad-hoc module on conciliation between working life and family life) were analysed in order to characterise work-family balance before and during the economic recession.

**Findings** – The findings revealed that (a) economic crisis had a negative impact on the control and autonomy that Spaniards had of their jobs, (b) economic crisis diminishes the level of flexibility at work (c) economic crisis had a negative impact on the level of stress among Spanish employees.

**Originality/value** – Despite the explosive growth in the work-family literature, it is no easy to find empirical evidence showing the relationship between financial crisis and work-family balance. Moreover, the case of Spain is very interesting given the very specific circumstances of austerity there.

#### *Invisible Assets: What Working Fathers Learn from Their Families*

Within the work-family balance literature little is known about the benefits and rewards perceived by working fathers in combining their work and family roles. As literature revealed, research on work-family balance has primarily focus on negative outcomes between work and family domain. The conflict perspective is rooted in scarcity theory (Goode, 1960; Marks, 1977), which assumes that human resources of time, energy and attention are finite. Work-family researchers (Barnett, 1998; Greenhaus and Parasuraman, 1999) have called for an approach or theory that examines the positive side of work-family balance.

Greenhaus and Powell (2006) did an effort to fully capture the mechanism of enrichment. During the same year, Carlson et al. (2006) published a work-family enrichment scale, based on Greenhaus and Powell's construct. The recent valid work-family enrichment scale is helping us to examine and determine whether employed parents are gaining knowledge, acquiring skills or having new perspectives in one role that can have a positive impact on the other role. However, neither the theoretical arguments nor the work-family enrichment scale are shedding light on which specific skills, knowledge, resources, values or perspectives are working parents developing or learning in one role that can be transferred in another role and vice versa. Qualitative research methods seem useful for this aim.

Thus, the purpose of this study are, first, to examine if the rewards and benefits perceived by working fathers in occupying both roles fits in the work-family enrichment construct proposed by Greenhaus and Powell (2006), second, to examine if there are differences between the rewards and benefits developed at home and rewards and benefits developed at the workplace; third, to extend the work-family enrichment theory to new samples in Catalonia.

#### *When People Fight By Themselves. Anarchist Practices and Values In Grassroots Groups*

From the early 21st century, protests in Argentina led by the slogan 'They all must go' opened the door to a new cycle of mobilizations, both in Latin America and other places around the world, which were led by social subjects excluded from the analyses and definitions of collective action traditionally centered on the institutional and structural dimension of protest. Recently, increasing attention to the cultural and subjective dimensions in the study of social movements has raised the academic and political visibility of grassroots groups, characterized by a social and self-managed organization and proposals where social discourses and practices of anarchism can be observed.

In this paper we wish to contribute to the comprehension of these experiences by putting forward an analysis of the anti-authoritative and self-managed practices inspired in the ethical values of anarchism, based on a piece of research work regarding movements such as NOTAV and NOMUOS in Italy, los *indignados* in Spain and the insurgency in Oaxaca in Mexico. We aim to highlight that the anarchist values and practices do not arise 'abruptly' or as the 'ultimate' possibility for change after the failure and the cooption carried out by the 'civil society' and leftist organizations, but consist of a cultural and practical repertoire of protest that has always been present in grassroots organizations.

Based on the direct experience of more than twenty years in the anarchist movement in different countries, such as Italy, Spain, UK and Mexico, and also on ethnographic work, we will show that this interconnection between anarchism and grassroots struggles are not new. As for the anarchist subjects who make themselves present in many of these protests, whether local or national, they have always valued the space of daily practice as a room for struggle and social change.

**GRAY, HARRIET\*** (London School Economics & Political Science, [h.r.gray@lse.ac.uk](mailto:h.r.gray@lse.ac.uk))

#### *Domestic Abuse in the British Military Community: Structure, Discourse, and Help-Seeking*

This paper employs a feminist analysis to explore civilian military wives' experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses which construct military culture. Following Stark (2007), I conceptualise domestic abuse not primarily as a crime of assault, but as a gendered pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of "unfreedom" through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities for, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetrated domestic abuse, and military and civilian support workers with experience of supporting either/both of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constructions of the public and private spheres, wives' disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In concluding, I explore the contributions of this work for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21<sup>st</sup> century.

**GRAY, KEVIN\*** (American University of Sharjah, [kgray@aus.edu](mailto:kgray@aus.edu))

### *Systems Theory and the Constitutionalization of International Law*

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann theory to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theorists have drawn on Habermas work to suggest that it is possible to imagine a constitutionalization of international law and legitimization of international institution along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and Dellavalle 2009; Von Bogdandy and Venzke 2011). The broad trend has been to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics – where strong publics are parliaments and other deliberative institutions, and weak publics are those public spheres which influence parliaments and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge theory of law as outlined in *Between Facts and Norms* – law is a 'transformer' which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with law making in the international arena. Luhmann and Teubner's model of law formation does a better job of describing both meaning formation in law (Teubner 1989) and the relationship between various different branches of both public and private international law, and the public sphere (Ladeur 2005; Teubner 1997). I will make reference to the so-called Solange Decisions in making this argument.

### *Religiosity, Spirituality and Happiness In Buddhist Thailand*

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people's attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the Social and Cultural Situation Surveys in 2008 and 2011 were utilized. They are the national representative sample surveys. The sample consisted of 25,950 population in 2008 and 23,670 population in 2011. Based on binary logistic regressions, the results reveal that Thai people were happier. Religiosity and spirituality were associated with happiness statistically significantly after controlling for study year, demographic factors (age, sex and marital status) and socioeconomic factors (education and occupation). Those who always undertook all five precepts and meditated in Buddhist holy days and other important days were more likely to be hap-

pier. Those who expressed their gratitude, gave an opportunity to others before self and donated regularly were more likely to be happier than those who rarely or never did them. The findings suggest that religiosity and spirituality played a vital role in increasing happiness among Thai people during the difficult time.

### *The Self and Identity in Technological Times*

#### Abstract

#### *The self and identity in technological times*

I intend to explore the impact of technology on the formation of the self and identity. The Italian philosopher Umberto Galimberti, in his book *Psyche and Techne* (1999), maintains that it is no longer accurate to speak of alienation. When Marx advanced his concept of alienation in capitalist society man was still a subject who could imagine new horizons. Today, the domination of technology has reached a point where the relationship between man and technology has been reversed: technology is the subject and man is the predicate. In this new situation, it is not correct to speak of alienation but rather of identification with technology. In a world totally generated by technical equipment, according to Galimberti, man is an official of this apparatus and his identity coincides with his function. Thus, man is himself only if he is functional to the other, technology (1999). In the light of Galimberti's thesis, can we still speak of a reflexive identity developed in contemporary society, as the sociologist Antony Giddens does? Furthermore, can we still believe, as the existential philosophers Sartre and De Beauvoir did in the seventies, that identity is a project and coincides with subjectivity? Moreover, what becomes of the self? If identity coincides with function, the self is totally withdrawn, and the difference between interior and external life is suppressed. Naturally, this creates a psychological and sociological pathology that Marcuse denounced when he spoke of the one-dimensional man. Galimberti speaks of the death of the psyche because what is enhanced are the intellectual abilities while emotions are disregarded (1999).

LOW, MARCUS (Treatment Action Campaign)

### *New Forms Of Transnational Organisation On Access To Medicines: The Global Activist Response To The Imatinib (Glivec) Case*

In the late 1990s and early 2000s, global AIDS treatment activism had been characterised by innovative forms of organisation, including the construction of transnational 'networks of influence' (Grebe 2011;2012) incorporating activist networks and broader coalitions comprising national and intergovernmental bureaucrats, scientists, the media, etc. These networks were built and deployed in order to expand access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely demobilised. The recent patent dispute between Novartis and the Indian patent office over the rejected patent application for the cancer drug imatinib (sold as Glivec)—the rejection eventually confirmed by the Indian Supreme Court in 2013—spurred existing activist networks into action for a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade "watchlist" in response). The mobilisation described in this paper illustrates the innovative characteristics of activism on access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organisation that span geographic and sectoral boundaries—representing what Ferguson (2004) might have termed 'horizontal topologies of power'—in order to deploy influence and social power at the global level. The paper further develops the 'networks of influence' theorisation of transnational civil society mobilisation previously described.

**GREEN, DAVID\*** (Nagoya University, [david.green@law.nagoya-u.ac.jp](mailto:david.green@law.nagoya-u.ac.jp))

## Immigration and Public Opinion in Japan: Keys to Fostering Integration

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opposition remains strong in most of the developed world. In the Japanese case, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country. If communities and local policymakers hope to foster integration and improve relations with immigrant communities, this research can provide important clues as to what sort of actions can be taken.

### *Criminal Careers: Discrete or Continuous* CANCELLED

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. This approach represents a set of individual event sequences with a finite number of discrete trajectories. Individuals are typically matched to the trajectory that is most likely, given the distinctive pattern of that individual's sequence. We use hierarchical linear modeling and individual time series techniques to test the assumption that arrest trajectories are meaningfully and usefully classified into a small number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

**GREENBERG, MIRIAM\*** (University of California Santa Cruz, [miriam@ucsc.edu](mailto:miriam@ucsc.edu))

### *"What Is to be Sustained?: Towards a Critical Theory of Urban Sustainability"*

We live in a time when the need for urban sustainability has become a new common sense. We daily witness confirmation of the famous prediction made by Henri Lefebvre that our planet is becoming progressively urbanized, as well as more crisis-prone (Lefebvre, 1970). Urban sustainability appears to many the logical, if not inevitable response. Yet for all its ubiquity and broad acceptance, the concept remains largely uninterrogated. My paper will discuss a theoretical framework for analyzing and advancing a more critical use of the term. I first argue that there are multiple *urban sustainabilities* in circulation and competition today, and that to distinguish amongst them, we must identify the particular urban environment(s) each deems worthy of sustaining—whether non-human environments (including natural habitats and ecosystems); human environments (including social, cultural, and built environments); and/or the competitive environment for capital. Second, using archival, textual, and institutional analysis, I demonstrate how these discourses are rooted in distinct epistemologies, whether "vernacular," "ecological," "justice-oriented," or "market-oriented." I argue that through market-oriented, post-crisis urban redevelopment and green city branding, market-oriented sustainability discourse is becoming dominant. (Greenberg, 2014) Finally, drawing on case-study research from a multi-campus University of California research project I direct, I analyze how such discourse develops and is contested in particular urban-ecological spaces, with a focus on iconic city-regions of Northern California like San Francisco, Berkeley, and Silicon Valley. The birthplace of "ecotopia," "eco-city," "whole earth," and "Google Green," Northern Cali-

fornia has played an outsized role in the proliferation of sustainability discourse since the 1960s, and with this a global "sustainable urban imaginary." Yet through urban redevelopment, this local discourse becomes increasingly market-oriented. Thus now is an opportune time, and Northern California an opportune place, to critically examine longstanding struggles over the question of *what* and *who* is to be sustained.

### *Changing Disadvantage: Creating Space for Chicago's Third Ghetto?*

Chicago has long served as a national policy lab, particularly in regards to urban housing policy. The city's public housing policy over the past 20 years has been particularly intertwined with arguments for national program reforms and devolution. As public housing policy in the United States continues to devolve amidst fiscal austerity and market-driven public private partnerships, the spaces of housing need and assistance have also shifted. Parallel to national linkages with public housing policy, Chicago has long served as an important driver of scholarly work regarding the geography and structure of metropolitan opportunity. As the Chicago Housing Authority's "Plan for Transformation" approaches 14 years of implementation, what impact have its policies of transformation had on shifting structural dimensions of disadvantage in Chicago neighborhoods?

This paper links existing theories of metropolitan opportunity structure with an analysis of the historical shift in spaces of advantage and disadvantage for public housing residents. Using the Chicago Housing Authority's Plan for Transformation as an important inflection point in local housing policy, this paper examines shifts in spaces of advantage and disadvantage for public housing residents in relation to broader shifts in these spaces for unassisted households. This paper contends that while the Plan for Transformation espoused values of racial and economic integration, and the revalorization and stabilization of historical sites of housing assistance via income mixing, that its end effect has largely been one of further disintegration, displacement, and a retrenchment of structural disadvantage for broader swaths of Chicago neighborhoods. By examining the impacts of public housing transformation on the spatial dimensions of structural disadvantage, this paper contributes to a broader understanding of the intersection between policies of housing assistance and the structure of metropolitan opportunity.

### *The Local Construction Of a Human Right To Democracy*

Is the idea of a human right to democracy coherent? Sociologically oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These are empirical studies in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders and their obligation to ensure the practice and defense of that right. If, as it appears, in the Arab Spring there were no domestic institutions or powers obliged to ensure a human right to democracy, could any conceivable foreign institutions or forces be so obliged – and obliged, perhaps, to intervene? Intervention ranges from "soft" forms, such as scholarships for dissidents, to "harder" forms, such as financial support of domestic opposition groups, to conditions on aid packages, to the "hardest form": unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for any given individual in a particular political community, a human right to democracy can impose obligations only on fellow members of that community. The idea of a *universal* human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly include the vernacularization of democracy. Then a human right to democracy would be a local, domestic construction by the participants themselves rather than a foreign import or imposition.

### *What Cognitive Sociology Can Contribute To Human Rights Diffusion*

Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words "from within" already signal a central aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? The answer could have critical implications: conceptually for the sociology of culture; practically for the human rights project. My approach aspires to redeem both possibilities. As theory, it combines cognitive sociology with normative philosophy. With practical intent, it would facilitate human rights diffusion through a new conceptual insight. It construes human rights as a cultural phenomenon and then emphasizes cognitive culture over normative culture as better suited for advancing human rights viewed sociologically: as a culturally parochial social construction. I develop my approach in several steps: (1) I reject essentializing approaches toward culture and instead (2) distinguish cognitive aspects of culture from normative ones. (3) I show how a cognitive approach allows for human rights as rights internal to any given community's culture. I then propose human rights as a learning process in two senses: (4) as a "cognitive community" and (5) as a social system. (6) These steps render human rights, understood in the theoretically least taxing way as merely parochial social constructions, nonetheless spreadable across cultural and political boundaries – through a technique of "cognitive reframing."

**GREGORY, MICHELE\*** (City University of New York, [mrgcpw@earthlink.net](mailto:mrgcpw@earthlink.net))

#### *Body, Sports and Work*

Organizations, from financial institutions, government bodies to hospitals are important spaces for understanding the relationship between sports, bodies and production. This relationship is particularly vital when employers use competitive sports to construct hegemonic masculinities, which sometimes affect workplace opportunities for the disabled, immigrants, working classes and ethnic, racial, gender and sexual minorities. In a recent lawsuit filed by former female employees of Goldman Sachs, one alleged that 'golf', 'push-up contests' and 'other physical pursuits' represented the culture of the trading floor (Lattman 2010, p. B1). Other corporations, such as Morgan Stanley have actually settled gender discrimination lawsuits (\$46 million) and the use of male sports was notable (Anderson 2007, p. C18). These lawsuits illustrate that competitive male sports are used by employers as a form of cultural capital, excluding women and possibly 'others' who have no interest in sports and who do not fit the athletic male model of fitness.

Using empirical case studies, I will apply the concept that I call 'sportwork' to describe and analyse how white collar professionals in non-sport organizations use sport in the workplace to engage in a number of practices, such as symbolic practices, actual practices and exclusionary practices. Sports is not devoid of power and social relations – class, disabled, gender, immigrant status, racial and sexuality (van Ingen, 2003) – therefore the paper will also illustrate how sportwork is used by employees to manage their bodies and how it shapes employees' perceptions of their and others bodies.

#### *On Religion and Hospitality Cultures in Economic Relations*

Recently prominent scholars (as Beckford 2003, Casanova 2004, Habermas 2008) have offered an argument for integrating the sociology of religion into the corpus of sociology and to rethink religion sociologically. This has given rise to questioning the fact that after the European Enlightenment the connection between modern and secular became not only empirical but normatively embedded in social scientific thinking (Davie 2008). How then can this process be reversed? This paper aims at contributing to the debate with an argument for a historical reconstruction of early modern urbanism with particular focus on the role of religion in economic relations. *First*, by going back to the classical sociologists Max Weber and Emile Durkheim to discuss their detour into the study of religion when tracing the pre-contractual conditions for contract-making at the market place. It argues for a second look into the late Durkheim's idea of modernity understood as what Ozouf (cited in Greve 2011) has called a 'transfert de sacralité' – a transfer of sacred identity to new things. This means searching for the sacred force constituted by ritual and drama in the market transaction as well. *Second*, the paper introduces into a historical study of Copenhagen. It addresses the role

of some of the intermediaries in the age of the European trading companies many of whom travelled extensively namely the merchants - with a focus on Port Jews involved in the seafaring and maritime economy (Cesarani 2000). It studies the role of these intermediaries in disseminating the rules of the marketplace from other port cities with direct access to the Atlantic and Indian Ocean. And it takes a closer look into how these rules have structured particular 'spaces of hospitality' in the city of Copenhagen.

#### *On Spaces of Hospitality*

Although specialists in hospitality have worked extensively on hospitality with respect to relations between different nations or between nations and individuals of a different nationality, for instance when they seek asylum, Jacques Derrida preferred to focus instead upon the relationship between the guest and the host. This has provided a much-needed rethinking of how to understand hospitality as a way of relating, as an ethics and as a politics. Within this work, there have often appeared discussions of 'spaces of hospitality', but these spaces have remained largely abstract. This is where this paper comes in: It will re-open discussions of spaces of hospitality with an introduction into an on-going research project that studies the performative, structural and social dynamics of cultural encounters focusing on forms of hospitality that are related to particular sites in the city, namely the market place, the religious sanctuary and places for the performing arts and cultural heritage. For the modern city they are the tightly woven fabric of social reality, and their configuration can make certain cities more hospitable than others, is the leading idea

#### *'the Veiler and the Rapist': Muslim Masculinity and the 'Feminist' French Republic*

In the early 2000s in France an intense and highly emotive public debate took place around a phenomenon called 'les tournantes' – a slang term for gang rapes that were allegedly widespread in *banlieues* (poor housing estates) around Paris. What started as a well-publicised march by women of the *banlieues* under the banner of *Ni Putes Ni Soumises* ('Neither Sluts nor Submissives') protesting sexism and violence soon became entwined with debates about Islam, immigration and the future of the French Republic. This was further aided by another round of 'hijab' laws (first introduced in the late 1980s) in 2004 banning girls from wearing hijabs in French schools and various panics around an increase in radical Islam in the *banlieues*. The image of the young Muslim man as a deviant 'veiler and rapist' became ubiquitous in the French popular imaginary.

France is not the only country to have experienced this problematisation and pathologisation of Muslim masculinities but its particular brand of Republican political rhetoric has affected the ways in which this discourse has been constructed. This paper examines a range of texts (media, cinematic, autobiographical/ testimonial literature), which sought to represent and reflect on *les tournantes*. In doing this, this paper seeks to contextualise the popular debate in France against the backdrop of discourses of French Republican values and the colonial legacies, which continue to haunt France's relationship with its Muslim population.

#### *Facing Secularization and Diversification: The Role of the Catholic Church in Public Institutions in Spain*

Spain, together with Portugal and Italy, is part of a 'family of nations' (Castles, 1993) where the Catholic Church has historically had a monopolistic role in the religious field. However, rapid transformations have displaced the Church from its old hegemony and have drawn a new scenario in Southern European countries. In Spain, the constitutional disestablishment, the detachment of a great part of the population from the traditional Catholic structures and the significant increase in religious diversity have compelled the Church to reconsider its own position, role and strategy within the Spanish society. Two lines of contention delimit this readjustment: the secular/religious divide and the religious monopoly/religious diversity division. In this paper we analyse the effects of the changing religious landscape for the Catholic Church's symbolic and practical role in public institutions. The paper draws upon the fieldwork (interviews and observations) carried

out in public institutions (hospitals and prisons), where religion meets the secular and the old religious monopoly meets religious diversification. The research has been conducted in the framework of the project The accommodation of religious diversity in hospitals and prisons in Spain funded by the National Research Programme of the Spanish Ministry of Economy and Competitiveness.

#### *Educational Accountability, Safety, and Youth*

##### Abstract:

Young people who feel unsafe and disconnected from their neighbourhoods are most likely to engage in violent or unsafe actions, themselves (McMurtry & Curling, 2008). Students designated as 'unsafe' through Ontario's Safe Schools legislation are pushed out of their neighbourhood schools through suspension, expulsion, and proactive relocation processes. In this way, Safe Schools and other institutional processes that are designed to mediate the unsafe behaviour of particular young people also serve to exclude these youth from their neighbourhoods and neighbourhood institutions, increasing the risk that the young person will engage in further violence. During our presentation, we will describe a project that seeks to understand how young people's transitions between programs and between systems (e.g., education and youth criminal justice) influence their own experiences of safety and unsafety and their connections to their neighbourhoods, to community-based organizations, and to mainstream institutions.

Research for this project is being conducted in collaboration with a community hub organization – Promoting Education and Community Health (PEACH). PEACH is located in a designated priority neighbourhood in Toronto. It houses a Safe and Caring Schools program for the Toronto and the Toronto Catholic District School Boards. The research – an institutional ethnography – documents and analyzes inter-institutional accountability processes, policy, and programming that shapes young people's experiences of safety and unsafety in the neighbourhood. Focusing on young people's transitions within and between institutional systems, we aim to generate findings that will be useful to researchers, practitioners, institutional leaders, and policy decision-makers interested in the integration of service delivery for marginalized or "at risk" youth.

**GRIFFITH, LAURA\*** (The University of Oxford, [laurabgriffith@gmail.com](mailto:laurabgriffith@gmail.com))

#### *Finding a Language for Mental Distress: Narrative Accounts of ECT*

Electroconvulsive therapy (ECT) remains one of the most controversial treatments in mental health today. It can cause permanent loss of some personal memories. ECT is often given to people with severe depression who have not responded to other treatments or for people who have responded to ECT treatment previously. Estimates of its effectiveness for those with so-called drug-resistant depression vary from 40-70%. The decision to have ECT is viewed seriously by clinicians and ECT remains one of the most intrusive clinical practices in modern psychiatry. The issue of "capacity" to make a decision is viewed by the medical establishment in the UK as the ability to (a) understand the issues and (b) to weigh them in making a decision. However under the Mental Capacity Act, a doctor can declare that it is in their best interests. Alternatively, they may be detained under a section of the Mental Health Act. If, on the other hand, they are capacitous, then their wish not to have ECT must be respected: they cannot receive ECT, even if they are detained under the Mental Health Act.

However comparatively little qualitative research has been conducted into the decision-making process, experience of ECT or a fuller narrative investigation of the effects of ECT. This paper presents this decision as located in the wider context of someone's feelings about their mental health, their social care and support networks, and their experience of mental health treatment – including their experiences of compulsory care. Through the analysis of the narratives of 30 people who have been offered ECT, and 13 carers, (collected by the Health Experiences Research Group at the University of Oxford) the broad social context of this decision is described and analysed with some surprising results.

#### *Educational Inequalities in the Access to Higher Education at the Intersection of Gender and Migrant Background: Results from Switzerland, Germany and France*

Gender inequalities as well as migrant-related inequalities in education have been profoundly analysed in sociology during the last decades. While gender inequalities were shown to have been reversed during the last decades (Buchmann et al. 2008), youths with a migrant background appeared to generally perform lower in most European educational systems (Heath et al 2008). However if it is controlled for social origin and school performance – and in line with migrants'

higher educational aspirations – many studies reveal increased transitions of migrant youths to the more demanding educational tracks available to them (Jackson et al. 2012).

In spite of these studies, the question of a possible interaction between gender and migrant background has been rarely investigated so far (e.g. Fleischmann und Kristen 2011). Given this lack of research, the paper focuses on such educational inequalities at the intersection of gender and migrant background at the transition to higher education.

In order to formulate the theoretical expectations, we refer to decision theory. At the core of the analysis stands a comparison of Switzerland (datasource: TREE), Germany (HIS-Studienberechtigte 2002) and France (Panel d'élèves du second degré 1995). Multivariate regression models were run in order to investigate the research questions.

Preliminary results indicate increased transition rates to Higher Education for second-generation males from some socially disadvantaged migrant groups for Switzerland and Germany, if controlled for social origin. A deeper analysis for Switzerland thereby also reveals that such advantages are largely driven by the high occupational aspirations these males pursue.

However, the assumption that second-generation females originating from countries characterised by a rather patriarchal culture would encounter disadvantages at the transition to higher education was not backed by the data for none of the countries under consideration.

**GRIGORIEVA, LUDMILA\*** (Krasnoyarsk State Pedagogical Univ, [adonai@bk.ru](mailto:adonai@bk.ru))

#### *Sociologist of Religion: Insider As a Professional Outsider. on Professional Competence and Potential Engagement*

This type of research is about understanding concealed internal meanings of a religious belief and religious action from the viewpoint of Max Weber's interpretive understanding of social action. This method helps to reveal subjective presumptions, incentives and personal foundations for religious belonging and religious service. This research requires specific conditions and specific methods: "ethnographic", "anthropological" and phenomenological methods. Typical sociologists of religion face numerous problems when they study unknown communities as outsiders. The difficulties are about penetrating into a studied group, duration and continuity of staying in a group, the difficulty of understanding the internal worlds of believers, etc.

Contemporary religious communities involve people of every social class, educational level and intellectual abilities. Sociological education per se does not always result in high quality research.

It can be argued that an 'original insider' cannot avoid religious engagement or that they cannot be completely objective, an important rule to observe in any research. The author explains that every society member has a greater or lesser degree of religious engagement caused by their initial attitude to any religion (Max Weber, 'Intellectual Honesty as a Principle of Religious Cognition'). Speaking generally, each of us is 'engaged' by our temperament, nature, experience, beliefs, prejudices, etc. Being objective might be a theoretical objective for any researcher with a bit of self-discipline and an honest attempt to distract from their personality. A 'professional outsider' is not especially different from an 'original insider' in this respect.

The problems might be mitigated if original insiders could become professional outsiders. They could be members of a studied community by birth, education or by conversion and, essentially, they would have the necessary level of intellect, culture and training. The paper discusses some methods of finding, attracting and training such researchers.

#### *Sociology of Corruption*

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of dedifferentiation, a throwback of modernity, because their superior, to functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent of subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy context. The reference to the political culture may be enough to highlight that corruption in everyday life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzler refer to social changes (De-structuralizations), which promote structural level corruption. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to

- ideal-typical, but normative desired logic system . However, as much corruption as related phenomena are widely used as exceptions to a normal social functioning display operations. Another conceptualization is advisable in my view, e.g. of democratic rule of bureaucratic administration and the rule of law, which is not based on the model developed by Webers ideal type of legal authority. Corruption should be to as "normal" even if socially disapproved and criminal sanctioned appearance have been recorded . Having the opportunities explored at the same time, the redefinition of social areas (such as private vs. public ) and system specific logics which provide a better theoretical perspective on gaining corruption.

#### *Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic*

A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and the USA. When the wave arrived to the US the New Yorkers gave to name to the global new repertoire of resistance: occupy movement. Although the events in one place encouraged activists in other places, the content and impact of the new movements was determined by the local political conditions.

It is my argument that despite all the differences and peculiarities of political context and dynamics, there is a common pattern to all movements: the need to occupy the public space in order to be recognized and to talk in the name of the people, the masses or 99%. All mobilizations are resisting the economic damage caused to middle and lower classes by the neo-liberal economic policies. Two main effects of neo-liberal policies gave rise to the occupy movement's new repertoire: the individualism that destroys social solidarity, and the weakening of political parties as the locus of negotiations between civil society and the state.

Occupying the public sphere is an innovative repertoire designed to reconstruct social solidarity and "peoplehood" that have been destroyed by the neo-liberal policies, and to make claims in its name. The paper will compare various the most salient cases of popular mobilization, and the specific political contexts that facilitate the movement, and the different political dynamics they provoke.

#### *Orthodox Christianity and Mixed Religiosity Among Russian University Students*

In the early 90's of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students' mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a 'practicing Orthodox believers' group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level.

To sum it up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents' parents, continues to indirectly influence the religiosity of students in the 2010s.

#### *Obstacles and Opportunities of Self-Employment of Young People in a Modern Society*

In the modern society the elimination of the problem of youth employment become one of the main tasks for every country despite of its level of development and income. It is absolutely clear that developing countries and countries with transition economies have more difficult situation and have less institutionalized conditions for providing enough possibilities for young people. One of the most perspective trend that is considered as a reliable solution to this problem in the world is the self-employment youth.

Though international experience is of great help for some young current and potential entrepreneurs, the extent of its efficiency in countries like Russia is still questionable.

The author suggests a hypothesis that these difficulties can be solved by elimination unnecessary institutional formations and correction of youth policy as a whole. The author had conducted a survey that was aimed at identifying the main obstacles to the creation of youth business. There were surveyed 800 university full-time students aged 18 to 25 years. The results of the study showed the most significant barriers to the startup. For example "unofficial payments at the opening of business" were checked by 46,8 % of respondents, while 59,2 % were concerned about "additional fees to inspection bodies" though there are some ways that make possible to avoid such fees students consider them as something inevitable. This imbalance shows that there are some problems with information support of youth startups while students themselves are not too bothered by this problem (19,2 %). Further analysis of the results showed that some of the essential elements of the current policy of the country are neglected. Author believes that such situation is represented in many regions and countries and offers some recommendations in order to reduce the dysfunctions of current programs for business-active youth.

### *Following the Constitution of an Organizational "Way of Seeing": Intertwining Talk, Body and Materiality in Context*

Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styrhe, 2011), construction (Nicolini, 2007), medicine (Mondada, 2003; Alač, 2008), scientific work (Daston, 2008; Vittereti, 2012; Vertesi, 2012), researchers have shown how the members share a "professional vision" (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational "way of seeing" is interactionally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the multimodal dimension of the interactions (Mondada, 2008). I studied the survey work as a situated activity and an interactional activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property, and, in particular, how specific "practices of seeing" (Styrhe, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective "way of seeing" in organization. In this presentation, I would like to contribute to the discussion of the role of "socio-technical arrangements/agencements" (Callon, 2004; Latour, 2005) in processes of constituting an organizational "way of seeing".

### *Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland*

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people still in obligatory school imagine their future job and how these representations impact their professional aspirations and choices. In particular I wish to explore how two different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of how difficult the studies to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competences, as to parent expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

### *Marathon Running, "Bodies for Others," and Social Class in Post-Communist Estonia*

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twenty-fold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and links the marathon boom to wider socio-economic and value changes in the post-communist setting. The paper pays special attention to the phenomenology of the body in the context of novel ideals of health, welfare, and success in post-communist Estonia. Bourdieu's notion of "bodies for others" is particularly helpful when trying to make sense of the runners' perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. According to Bourdieu, a sport is more likely to be adopted by a social class if it does not contradict that class's relation to the body at its deepest and most unconscious level. The paper demonstrates that subjecting one's body to regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed "optimisation of the self" constitutes a new form of biopolitics that fits with the neoliberal values of efficiency and productivity.

### *Police Organization; Professional Identity and Social Representations in Brazil*

In contemporary Brazilian society, police violence and his involvement in violent forms of conflict resolution are topics relevant to those who are interested in understanding the public security dilemmas. In this sense, this paper aims to analyze how are police forces organized, which relationships are there between this organization, the professional identity and police violence: how police organization and practices are represented by police officers and the effects of these representations for the way they understand their role as responsible to assure law and order. We believe that these representations have developments not only in maintaining law and order but also in ensuring all human rights. We still believe that such practices result from the symbolic universe through which police officers conceive themselves in terms of marks, belongs and identity records.

The paper is based on a survey that was structured using the Theory of Social Representations- TSR. The empirical goal was to obtain, and to compare, the social representations that military and civil Brazilian polices make about their organizations, practices, professional performance and relationships with society. We also compare social representations that police officers create about themselves and the ones they believe society creates about them.

The design of the survey was a sample structured by spatial divisions, hierarchies, roles and sex, comparing both polices: the sample is compounded by 399 questionnaires for the civil police and more 1,181 answered by military police officers, both male and female. Also, we have done interviews and focus groups.

The analysis focuses on motivations for the choice of the profession; the pride of the profession; representations of fear, stress, uncertainty and risk arising from police work; and how all these symbols affects police organization and daily performance.

### *Exploring Residential Mobility As a Spatial Practice Via Qualitative Interviews, Quantitative Survey and Agent Based Modeling*

The paper reports on a collaboration of sociologists and landscape ecologists in understanding future residential patterns in a medium sized shrinking city in Germany. Shrinking cities are an especially interesting case here, because numbers of inner city relocations are in general higher than in other cities (Sturm et al. 2013 for Germany). This is due to housing over-supply with more and cheaper offers being available. Like this, patterns of socio-spatial segregation can alter faster.

In a step-wise design, we included inductive and deductive steps, qualitative and quantitative approaches and finally the construction of an agent-based model to simulate future households residential mobility patterns. Firstly, we explored mobility practices by means of in-depth interviews from which we derived context-appropriate information on the orientations and decision criteria of residents. Here, space is included as the life worlds of interviewees.

Secondly, from these results, we constructed a classic questionnaire survey to achieve representative data on the decision criteria among different social and demographic groups. In this step, administrative spatial boundaries were introduced in order to standardize questionnaire responses. From the survey results, thirdly, we develop rules of behavior of households and simulate their decisions in an agent-based model (ABM) as a method to understand patterns emerging from individual behavior. Thus, ABMs use abstract spatial categories and typologies of spatial practices of agents (households in our case). In ABMs, space can be both an independent variable (thus influencing behaviour) and a dependent variable (if the space is influenced by human actions) In our case, space is an independent variable in that location choice depends on the socio-spatial structures and the images attached to certain places and neighbourhoods, on distances to work-places, social networks, infrastructure access etc. Space is a dependent variable when analyzing collective households migration patterns and the changed patterns of socio-spatial segregation.

## *Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities*

Socio-spatial segregation – the question of the uneven distribution of social groups in urban space – is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in today's cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which lose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other economic restructurings, waves of suburbanization, political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project "Shrink Smart": Leipzig/ Germany, Ostrava/ Czech Republic and Genoa/ Italy. The loss of inhabitants due to far reaching de-industrialization experiences, job migration, suburbanization and steep drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social make up of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, ageing, and socio-spatial inequalities. The results show that even though shrinkage does lead to increased challenges for social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.

### *The Risk of Becoming Neet in Poland*

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life-course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people's transitions towards independent living. Becoming NEET is the risk for a young people and for society.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. I also discuss the consequences of being NEET for young people and for societies. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative data collecting of own research to show the reasons of the decision of the young belonging to NEET of remaining outside the labor market and education and consequences for their fate and the situation in the society.

### *Why Do They Sit at Home? the Neet Youth in Poland in Perspective of UE*

The paper focuses on NEET youth in Poland in the perspective of EU. The NEET is the acronym of the young who are not in education, employment or training and first emerged in the UK in the late 1980s, reflecting an alternative way of categorizing young people following changes in unemployment benefit policies. Now the interest in the NEET group has grown at EU policy level, and NEET-equivalent definitions have been discussed.

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life-course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people's transitions towards independent living.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. The study are based on quantitative data of the Eurostat and Polish Central Statistical Office for the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative

data collecting of own research to show the reasons of the young belonging to NEET for their fate and the decision to remain outside the labor market and education. This part of the analysis concentrate of most significant events in a young Pole's life during the transition from childhood into independent adult life (from education to employment, leaving parental home, family formation, etc.).

**GRUJIC, MARIJA\*** (Goethe University, [marija.grujic@gmail.com](mailto:marija.grujic@gmail.com))

### *The Ambivalence of Memory and History - the Case of Kosovo and Serbia in the Biographies of the Kosovo Serbs*

The main topic of my presentation is how Serbian and Kosovo histories are discussed and negotiated in the biographies of the Kosovo Serbs living in the displacement in Serbia. I am drawing on the biographical interviews collected in Serbia in 2012, and my ongoing doctoral research on the intersectionality of national, gender and religious facets in the social and political realities of the war and belligerent nationalism caused migrations.

In particular, I want to focus on the interrelatedness between political (national) and religious dominant discourses on Kosovo as "Heart of Serbia" or "Serbian Jerusalem" in the biographies of the Kosovo Serbs. Therefore, I am looking into the period after the North Atlantic Treaty Organization (NATO) bombing of Kosovo and Serbia in 1999 (when majority of the Serbian population left Kosovo), and the social and political situating of Kosovo in the Serbian national-religious (Serbian Orthodox) memory practices relevant to this event and the wider understanding of the "Kosovo conflict".

The question of history has emerged in my research as significant topic, and I am currently analyzing its relatedness. First, there is an ambivalence of knowledge(s) and memories on the Kosovo and Serbian histories - both on the individual and collective level, and second that the history of the former Yugoslavian conflicts and therefore "Kosovo conflict" is often *orientalized* and *balkanized*, both in the scholarly work and the media reporting.

My findings are that personal and collective histories are intertwined in the religious and national discourses on the collective (nation, religious community) histories. Moreover, I am arguing that in the case of the wars and conflicts this entanglement becomes more visible and prevailing, leaving the individual almost hidden in the biographies.

### *Who Are Kosovars? Multifaceted Positioning of Internally Displaced Persons (IDPs) from Kosovo in Serbia*

In my paper I discuss the politics of belonging and multifaceted positioning of the internally displaced persons (IDPs) from Kosovo in Serbia and the racialized images of a "Kosovar", as a part of the IDP from Kosovo group, in the Serbian society. Internal displacement in Serbia is not only a political category but as well social - differentiated on the basis of ethnicity, gender, class and housing arrangements. I am drawing on the biographical interviews and participant observation conducted in Serbia in 2012, and a further data analysis of my ongoing doctoral research on the intersectionality of national, gender and religious identities in the contemporary Serbia.

My argument is that the notion of a "Kosovar" carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the "other kind of Serb". In addition, the political community of belonging for the Kosovo Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living as IDPs in Serbia are visible significant referential and differential points as localities of belonging - in terms of language, region and ethnicity. Although, in the studies on social exclusion and boundary-making this could be described as a "classical" examples of the tensions between the "newcomers" and "locals", or "established" and "outsiders" leading to different aspects of Othering and marginalization, in the case of the Kosovo Serbs (IDPs ethnic majority) it is paradoxical. Namely, Kosovo-Serbia displacement/emplacement politics of belonging shows a significant gap in relation to the dominant (right wing) nationalist discourses on Serbians and Serbianhood - describing Kosovo as the most important topoi of the Serbian national history, and Kosovo Serbs portrayed in as a "Serbian martyrs" while Kosovo is a Serbian Jerusalem.

### *Measuring Employment Standards Violations, Erosion and Evasion Using a Telephone Survey*

This paper reports on efforts to develop a telephone survey that measures the overall prevalence of employment standards (ES) violations as well as their

evasion and erosion in low-wage jobs in Ontario, without requiring that respondents have any pre-existing legal knowledge. The result is a survey instrument that is unique in the Canadian context and reflects the concerns of both academic researchers and workers' rights activists. Pilot survey results show that Ontario workers do not necessarily distinguish between ES violations and other workplace grievances and complaints. With careful questionnaire design, it is nevertheless possible to measure the prevalence of ES violations, evasion and erosion. In order to track the effects of ES policies and their implementation, it is crucial to establish baseline measures and standardized reporting tools.

### *Financial Independence of Mothers upon Returning to Work*

Welfare states increasingly foster policies that individualize risks over the life course. This implies that individuals, not primarily families or households, need to be able to support themselves financially throughout adulthood (financial independence). Employment interruptions and career adjustments in favor of child care have short-term and long-term consequences for an individual's ability to maintain economic independence. In this paper we investigate German mothers' financial independence before and after the birth of a child. In particular, we assess how long it takes for mothers to re-attain financial independence after the birth of a child. We also identify individual and group characteristics which speed up the re-attainment of economic independence upon return to employment. Empirically, we focus on employed women in the eastern and western parts of Germany who entered motherhood between 1992 and 2009. We operationalize financial independence in two ways. We first measure how long it takes for mothers until their earnings (re-)approach the minimum living wage ('Existenzminimum'). Second, we estimate the duration until mothers are back on their pre-birth earnings level. We apply event history techniques, using a novel longitudinal register data set (BASID data). Our findings show a deep East-West-divide in the speed with which mothers re-attain financial independence. Within ten years upon starting a family, less than 25% of West German mothers have re-attained their pre-birth earnings. Just about 50% reach the minimum living wage or higher. Eastern German mothers regain financial independence much faster and at higher rates. More than 60% reach their pre-birth earnings within ten years. About 80 percent reach the minimum wage threshold. Our findings are in stark contrast with the general idea that German mothers first reenter employment part time and regain financial independence when children get older. The defining moment for re-attaining financial independence is the moment of returning to work.

### *Higher Education Reforms in Post-Soviet Russias: Problems, Contradictions*

The current stage of social development, which is characterized by objective global trends, marked by significant changes in the economic, political, social spheres of contemporary society. Almost everywhere, also in highly-developed countries the situation shows that together with growing complication of state, social, technical, informative and global problems we observe the decline of competence of elite, specialists. Due to this and other reasons everywhere intensive reforms in the system of higher education are being held. Russia is an important actor in the international arena and it involved in these processes. Russian higher education, in the frame of Bologna Declaration, subjects to reform, transformation, in order to integrate into the European educational space. The field of higher education institutions becomes increasingly hierarchical in post-soviet Russia. Different universities (state and private) give diplomas of different quality. It leads to the problems faced in educational and labor markets. The research focuses on the problems of transformation of higher education in contemporary Russia and its implications for labor and educational markets. The research objectives are to explore students' attitudes to higher education, to explore the demands of students, to explore the demands of labor and educational markets in contemporary Russia. The research methodology combines qualitative and quantitative methods. Depth interviews with experts are applied on purpose to identify central issues of concern to the problems of higher education in modern Russia. Representative sample consists of 1000 students. Students are trained in various specialties. Yekaterinburg is a typical Russian city. It has all types of higher schools. Therefore, the sample is representative. The author uses factorial, structural-functional analyses to investigate these problems.

### *Raising Children Born Aboard in the Country of Origin: A Specific Case of Fostering?*

Based on a six-month long ethnographic study in Senegal, this paper explores the child fostering strategies of Senegalese migrants. Building on data collected in the town district of Yoff (Dakar), I study a specific and relatively understudied form (Grysole, Beauchemin, 2013) of transnational fostering (Kamga, Tillard, 2013) involving children, born in their parents' countries of destination (specifically United States and Italy) and currently living in their parents' country of origin, Senegal. I show how the national institutional contexts, such as the educational and health systems, the immigration policies, in both the parents' countries of origin (Senegal) and the parents' countries of destination (United States, Italy), shape the organization of transnational families (Bryceson, Vuorela, 2002, Mazzucatto, Schans, 2008, Razy, Baby-Collin, 2011). Migrant parents examine the advantages and drawbacks of origin and destination countries, when deciding where their children should be raised. However, these children are also frequently affected by internal mobility (Vandermeersch, 2002) within Senegal in response, amongst other reasons, to parents' work constraints, health issues, family solidarity, and educational choices. I then discuss the differences between various care-giving arrangements (internal and transnational fostering) within the extended families which have been studied.

### *Access to and Perceived Quality of Childcare (and elder care) in Europe*

The reconciliation of work, family and private life has become one of the main challenges for younger and older families in Europe today. Access to affordable and good quality childcare is essential in removing barriers to parent's (especially women's) labour market participation, as is 'ensuring effective access to affordable, quality early childhood education and care for all families that also fits to the increasingly diverse working patterns' (European Commission, 2013). The same applies to elder care, which is an important service in connection with generally longer life spans, population ageing and the increasing labour market activity of women.

Our paper's research was funded and done for the European Foundation of Living and Working Conditions in Dublin (Eurofound) and is based on Eurofound's EQLS3 data set, a European quality of life survey which was run in 2011/12. It investigates perceived access to and perceived quality of childcare and elder (also known as long-term) care services in Europe as a whole and in different EU member states and how the availability of such services is related to (female) labour market participation. In order to investigate the determinants of perceived quality of childcare and elder care services, we use multi-level analysis with grand mean centering (Hox, 2010). The model takes into account not only individual but also country-related factors, thus investigating the impact of age, gender, number of children, household's financial situation, overall life satisfaction, female employment rate, being employed, rural or urban living area, satisfaction with economic situation of one's country, level of corruption, etc.

### *Precariousness in Mexico: Labor Trajectories and Meanings of Work*

In the context of the processes of globalization, productive restructuring and labor flexibility, data from international and national studies on the topic shows that contemporary work features a spread precariousness condition. In order to contribute to the discussion, in this paper we present the main findings of a study about work precariousness in Mexico which is based on the heterogeneity and subjectivity of this phenomenon. In giving account of the diversity and development of work precariousness, we compared the labor situation of workers from three contrasting occupations in different regions of the country: garment workers, call center workers and orchestra musicians. Empirical research was based on a mixed methodology which allowed us reconstructing workers' labor

itineraries through a non-probabilistic survey and qualitative data from in-depth interviews.

The analysis of the work trajectories shows that uncertainty and instability are part of most of these itineraries, with the exception of some groups of garment workers from big transnational factories, technical and professional workers of higher hierarchy in call centers and tenured musicians from the most stable orchestras. While precariousness in garment industry is multidimensional, in the call centers precariousness is mainly based on quality metrics, and among musicians multiactivity is the main feature of this phenomenon. In these conditions the meanings of work are multiple and require from workers constant adaptations along their labor trajectories.

**GUAY, LOUIS\*** (Laval University, [louis.guay@soc.ulaval.ca](mailto:louis.guay@soc.ulaval.ca))

### *Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities*

Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology. A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced, is also important; 5), finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in adaptation to climate and biodiversity change in a selection of large Canadian cities.

### *Conditionality: The Cure Or The Cause? An Exploration Of The Psychosocial Impact Of Cash Transfer Programmes Across Five Settings*

The use of cash transfers within the anti-poverty policy domain has witnessed a 'quiet revolution' across the Global South over the past decade (Barrientos and Hulme, 2008). At the same time, conditionality – the granting of cash transfers or services on the condition that the recipient carries out activities or meets certain behavioural requirements – has been increasingly applied in social assistance programmes in the Global North (Griggs and Bennett, 2010). It is, however, a relatively new strategy to anti-poverty efforts in the Global South. Yet reflecting a contemporary neo-liberal agenda, conditional cash transfers, with some success stories in Latin America, are now being advocated as a policy model for these regions as well (Dornan and Porter, 2012). A comparative, qualitative study across five settings – two in the Global North (Norway, the UK) and three in the South (China, India, and South Korea) – has explored the psychosocial impact of anti-poverty measures aiming to make citizens 'productive'. The measures studied in welfare settings in the Global North have been specifically structured around an 'activation' aim, and those in the Global South have moved away from poverty reduction to a focus on investment in productive citizens (Surender and Walker, 2012). The paper presents findings from a targeted policy analysis and an analysis of interview data with measure recipients in the settings under investigation. Specific focus is placed on the potential for measures to shame or heighten the dignity of measure recipients. It demonstrates how, despite the new possibilities offered by the existence of new transfers, the conditionalities that are attached have the potential to create new spaces for shaming. When claimants are already vulnerable, this may then undermine the efficacy of the measure offered.

### *The Personal Impact of New Activation Possibilities on Social Assistance Claimants in Norway, Austria and Belgium*

Studies of the psychology of poverty report on the psychosocial barriers – including shame and stigma – that may be experienced in tandem with financial instability within the Scandinavian (Angelin, 2009; Jönsson and Starrin, 2000; Underlid, 2005), Austrian (Die Armutskonferenz, 2008; Leibetseder, 2013) and Belgian settings (Raeymaeckers and Dierckx, 2012). While social assistance may mediate shaming and stigmatisation, it may also exacerbate them, undermining the agency of users. Across Europe, a new emphasis on work activation has taken place within the realm of social assistance. New requirements have been added to a previously established set of social contract entitlements (Lødemel and Moreira, forthcoming, 2014). While new activation approaches may heighten the stigma attached to the socially constructed categories surrounding social assistance, Norway, Austria and Belgium are three settings in which the activation landscape for social assistance has resulted in a publicly promoted offer of *more* for the claimant. Norway's approach has been characterised as a best-case scenario for the social assistance claimant and has since the mid-2000s provided those eligible access to programming resembling the human capital development approach more commonly associated with state level unemployment services. In the same period, Belgium has also moved towards active inclusion and tailor-made approaches, as reflected in a pilot project ('Public Centre of Social Welfare') with intensified collaboration between the regional employment agency and social assistance authorities. A 2010 federal and provincial agreement in Austria was to provide claimants with better access to jobcentres, but with local responsibility for activation. Drawing on interview data with social assistance claimants, we explore and contrast the personal impact of the approaches in these three settings. The paper highlights the crucial place of the claimant in the evaluation of activation strategies and offers preliminary conclusions concerning its impact on claimants and suggests several lessons to be learned.

**GUELBEYAZ, ABDURRAHMAN\*** (Osaka University, [gulbeyaz@lang.osaka-u.ac.jp](mailto:gulbeyaz@lang.osaka-u.ac.jp))

### *On the Concept of 'human' and the Aporia of Social Sciences*

It is to be ascertained by way of a simple juxtaposition that the set of concepts "human / human being / humanity / humanness", which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of "human" does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it.

It belongs to a class of concepts that I provisionally call "hoax". A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construction. The concept "human" is the best and truest of this kind. It is the epitome of "hoax". Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtuousness. To top it all, one of the most significant features of "humanness" and human existence consists in the circumstance that the humanness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept "human" is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is damned to always end up in a cul-de-sac of some type of biologism.

Parallel to a radical critique of the central conceptual edifice of the modern social sciences, and, within the framework of a theory of 'modified and extended semiotics', and a qualitatively different mode of knowledge production developed on the basis of this, my paper offers a radically new line of approach to the texture and the mode of operation of human society.

### *Postcolonial Sociology: An Oxymoron or a Border Crossing?*

Since its inception, the division established in the course of securing the disciplinary borders of the sociology field between the populations to be studied by sociologists and those who fell in the "other" group to be studied by anthropologists was taken for granted. Sociologists remained oblivious to the political conditions of possibility of the institutional recognition of their profession that included the labor division between sociology and anthropology. Now that the

descendants of those other populations have become the new citizens of former empires such as France and UK, or Japan, the question of the repatriation in the sociological repertoire of notions such as de/colonization, indigeneity, autochthony, and the coloniality of power and social relations, in terms of gender, race and ethnicity is to be investigated anew. If such endeavor is upheld in various corners of the global discipline sociology has become, in places like France, where a main sociological contribution was made, it remains a contentious topic. From this situated sociological universalism, post/colonial studies remain the outside of the sociological field. Whether one thinks of courses taught in an interdisciplinary perspective or of research funding moving beyond the pale of deliverables, coloniality and its contemporary expressions are unthinkable in a still ethnocentric sociology climate. Acknowledging that the colonial is indeed the past and the outside of sociologized societies and sociological routines, but also their present, may be a first step towards a postcolonial sociology in search of its academic locations and professional habitations. Mapping such an ongoing hi/story may help include, or not, France in a global dialogical field aiming at understanding enduring inequality processes.

#### *Reflecting/Reflexive Surface: An Ethno-Gender Othering Experience*

Practicing sociology as an art of resistance offers an unusual vantage point on what may seem to be the hidden agenda of the sociological duty: locating the other sociologist from within. Beyond empirical and routinized practices, this paper aims at giving an account of oneself as a sociologist at the margin or as a minority sociologist. Recording and narrating various encounters of the othering processes, it will explain and discuss the kind of knowledge built under such guise and the way in which it can add some value to the sociological experience. Undoing the disciplinary process still considered central to the existence of sociology is an intellectual itinerary and a collective platform for change in times of enduring inequalities. Reconciling the individual and intimate, here considered as a reflecting/reflexive surface, with sociology as a discipline will be one of the challenges of this paper, as it is one for sociologists in a common world of uncertain paths to equality.

**GUEORGUEVA, PETIA\*** (New Bulgarian University, [petiagueorgueva@gmail.com](mailto:petiagueorgueva@gmail.com))

#### *Party Members in Bulgaria, Slovakia and Czech Republic*

Political parties in ECE countries are assessed to be unstable, weakly entrenched into the civil society, very much attached to the state (Hafner: 2001) and with low levels of members (Brezan and all.). Political parties in ECE countries are even described as "party with no members" (Cabada: 2013). This is problematic for the political participation, the levels of representativeness and the aggregation and the expression of different civic groups and interests. In general, parties in ECE countries are not implementing formal rules for equal representation of young people, woman and minorities. According to some researches the boundaries between statutes of formal party membership and other forms of activism like sympathizers or citizen's involvement are blurred because the members don't matter. Parties in ECE countries are also pointed as based on clientelistic networks and patronage. The paper proposed aims to analyze party members and party policies and practices to sustain and extend the membership in comparative perspective in the case of Bulgaria, Slovakia and the Czech Republic. The comparison will be focused on:

1. Forms of involvement in the political parties in Bulgaria, Slovakia and the Czech Republic (formal membership, peripheral organizations of youth, woman; and other)
2. Practices of attracting party members in Bulgaria, Slovakia and the Czech Republic: statutes; rules; new innovative techniques
3. The social-economic, age and gender profile of party members of the three countries

The comparison will encompass parliamentary parties represented into the last three parliaments in Bulgaria, Slovakia and the Czech Republic. The main research question is how do political parties in studied countries deal with low membership issues?

#### *Control of the Bodies and Self Expression during Mealtimes in the French Nursing Homes. a Ethnographic Study*

This presentation falls within the framework of my PhD research, which aim to get to a sociological understanding of mealtimes uses in the French nursing homes. I'm studying the social conditions of the daily lunch – when the residents

have to eat together – in spite of physical and cognitive disabilities, eating and moving challenges, and frequent deaths. I question this social practice considering that residents often declare they do not want to live in institution, and do not want to share mealtimes with others. Eating together is a daily rule in all types of nursing homes – public, commercial, or associative. Eating alone is always an exception with a medically justified reason.

From the institutional point-of-view, the shared meal practice is built around the values of the French conviviality, and the institutional appropriation of the French public health discourse on the undernutrition of elderly people.

Thanks to participant observations of mealtimes during four months in two nursing homes, I intend to describe how the social practice of eating together produces forms of social control of the body according to different health restrictions. Depending on the health condition of the elderly people, they face various body management (ex: table placing, type of food service), and various forms of food incorporations (ex: "normal", "all pureed").

I aim to show how the daily practice of eating together often produces typologies of eater's, far away from gender, social and generational conditions of the residents.

In the context of control of the embodied dimension of the selves during mealtimes, I propose to focus attention on forms of deviant behavior of residents as forms of self expression in different social conditions. By way of example, attempted negotiations with the nurses, continuous criticism or refusal to eat will be analyzed with gender and social categories references.

**GUERRA, JOÃO\*** (University of Lisbon, [joao.guerra@ics.ul.pt](mailto:joao.guerra@ics.ul.pt))

#### *Sustainability and Social Equity in Rough Economic Times*

The interest for sustainability issues and the redefinition of social priorities in an ecological scarcity's context (Schnaiberg, 1980) have covered, for better or for worse, their own way in today's societies, and the urgency of change is gaining more and more advocates. Despite this, the holistic view of sustainability – while promoting human welfare and preservation of the natural environment – is becoming a programmatic and cross dominant ideology that has shaped the generality of environmental policies, but its effective implementation has basically been done in an evasive (Adger and Jordan, 2009), superficial (Redclift, 2005), and inconsequential (Lélé, 1991 [2005]; Carter, 2001) manner.

In those rough economic times that we are experiencing in Europe – and despite the inevitable end of the "age of irresponsibility" that assumed infinite resources (Jackson, 2009) – those features tend to worsening and, nevertheless, do not release an engaged, empowered and collective movement able to request and support just, equitable and pro-sustaining measures. Hence, based on the testimony of representatives of Portuguese civil society organizations (focus group, on-line survey, and document analysis) we will try to define i) motivations, ii) interests, and ii) profiles of civil society organizations, taking into account that, despite the rhetoric of holistic sustainability, environmental groups tend to ignore social problems and overestimate ecological ones, while the remaining groups tend to take a reverse position.

#### *Sustainable Adaptation Projects and Initiatives in Portuguese Municipalities*

Governance for sustainability has gained greater public awareness and social significance since the late 1980's (Adger and Jordan, 2009), and it shares basic purposes and characteristics with sustainable adaptation. Consequently, both governance for sustainability and adaptation to climate change often overlap in policy design and implementation (Kemp, Parto and Gibson, 2005).. In the Portuguese case, despite the persistent lack of a concerted national framework and/or reliable funding policies, incontrovertible advance has taken place in recent years. However, these dynamics are still irregular, in reality some misconceptions and unsustainable practices are persistent (Schmidt & Guerra, 2011). Bearing this in mind and in the context of climate change, the overall objective of BASE – Bottom-up Climate Adaptation Strategies for Sustainable Europe, (a FP7 funded project) is to produce knowledge to support decision making on adaptation strategies and pathways, as well as related action programmes across Europe. Based on results from an online survey applied to a representative sample of Portuguese municipalities by the BASE Portuguese team, and framing our analysis within a multi-arena governance framework (Jørgensen, 2012), this paper will discuss the conditions and features of local sustainability initiatives promoted by Portuguese municipalities. We will attempt to diagnose the situation, analysing the features and context of initiatives and projects currently being planned or implemented by municipalities, under the framework of European and national policies for climate change mitigation and adaptation. Moreover, we will try to highlight some relevant features of local communities

(e.g. economic, social, ecological and institutional conditions, as well as their resilience capacity), but also specific characteristics of local initiatives and processes (motivations and objectives, challenges and difficulties; engagement and participation, political will and municipal involvement; partnerships and civil society; information sources and means of dissemination).

#### *(Almost) Four Decades of Punk in Portugal: A Culture Still Young?*

It's been nearly four decades since the emergence of the first punk movement - in the UK and USA - and, since then, the 'movement' has deeply changed at different levels. One key aspect of this transformation of the punk has to do with how it has been globalized and differently appropriated by urban youths from different parts of the world. What were, at the beginning, the key milestones and who were the original Portuguese punk players? How the punk movement allows us to read and understand the evolution and transformation of Portuguese society over the past four decades, in their aspirations, expectations and weaknesses? Why punk still is, until nowadays, a relevant reference point for some Portuguese youths, persisting as a relevant and dynamic urban culture? And, on the other hand, how is it possible to get older in the 'scene' and still claim to be punk? Here, will be deeply analyzed a wide range of interviews conducted with dozens of participants in the Portuguese punk scene, from different generations. This approach focuses on a social theory argument - one that has been delayed, although is a rather relevant one - around the following question: the subculture concept is still heuristic regarding the understanding and explanation of the youth resistance ritual practices or, in the other hand, we are standing before a context of explaining opportunity of the post-subcultural theories as we emerge in a context of change, transience, neo-tribalism, bands and scenes? In times of growing economical and social easing, we discuss here the complex processes of youth identity construction around the punk, that global mediascape. This multifaceted landscape of the musical youth cultures, made of multiple expressions and references, finds meaning in an also plural ontological landscape.

**GUERRA, PAULA\*** (Faculty of Arts University of Porto, [paula.kismif@gmail.com](mailto:paula.kismif@gmail.com))

#### *A Different Kind of Tension: Portuguese Musical Creation and Identity Narratives*

In this paper, we propose a discussion around the relationship between music and society. Considering that the core object of the Sociology of Arts is, at last, the musical oeuvre itself in its derivation of meanings and world visions, we look to analyze of the identity features present in the Portuguese music editions of the years 2011 and 2012. It is important to understand the established relations between music and society: how far music expresses themes, subjects, emotions? How far those themes, subjects and emotions, as well as the social reality, reflect themselves in music? Reckoning music as a social phenomenon, sociology must accept the sound world autonomy, with its own symbols and norms without neglecting the importance of external factors that come in line with it. In this sense, this paper intends to make a plural balance of the sociological reflection on the sounds and "noises" of the musical field. In the recreation of the contexts of discourse and practices production around music, the following dimensions will be concerned: center/periphery, past/contemporaneity, tradition/modernity, unity/diversity, local/global, endogenous/exogenous, heritage/cosmopolitanism, emigration/immigration, power/contestation. This approach will be done through the documental analysis of content coming from approximately 100 phonographic registers within the popular music (pop rock, metal, punk, folk, indie rock, reggae, rap, hip hop).

#### *The Effect of the 2008 War on Estonian Public Confidence in International Organisations: A Mixed Methods Study*

When the so-called 5 Day War between Russia and Georgia occurred in the summer of 2008, the Estonian public reaction was especially passionate. Two major explanations stem from the strong identification of Estonians with the situation of Georgia (post-Soviet state, small country, Russian citizens/speakers on Georgian territory) and the question of existential insecurity (will the EU and NATO guarantee our security in case of necessity?). Using a mixed methods research design, in this study we investigate how the 2008 war between Russia and Georgia affected public confidence in international organisations in Estonia. Data for this

study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, or the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

#### *International Comparisons of Health Systems: Tools of Learning or Tools of Power?*

International comparisons have become unavoidable for anyone who wants to govern health systems, including health organizations and professions. Because medicine can be evidence-based, health policies would logically also be evidence-based. In parallel, since the early sociologists it is believed that comparing is the better way to produce "evidence-based social science". As a consequence, comparing is believed to be the better way to conduct efficient policies to face health systems challenges. But the many and recurrent flaws of these comparisons cast doubt on their actual role and effects. Among the most common deficiencies are the comparability of data, the lack of clear definitions of terms (like "shortage" or "nurses") and the state-centrism of comparisons (while issues are more and more either decentralized or global).

Why thus such a success of international comparisons among health policy-makers? The argument developed in this paper is that behind their technical substrate and their apparent neutrality, international comparisons carry values, interests and power relations. Under the guise of rationalizing and depoliticizing decisions, international comparisons are less a tool of learning than a tool of power. That is probably the fundamental reason for their success. First, comparisons hide that health policies choices are always value-laden. Indeed, comparisons are in themselves "scientific" and thus deliver the "truth". Furthermore, the language through which comparisons are presented (tables, histogram, etc.) create effects of truth. As a consequence comparisons rule out any debate. Moreover, international comparisons create political pressure, not least because this language is easily understandable and particularly well-suited for the mass media.

This gap between the official and unofficial role of international health comparisons can contribute to explain the tension between the apparent convergence and persistence of country-specific arrangements.

My paper will develop all these points on the basis of case studies from Europe, the USA and Asia.

#### *Redefining The Public Space Through Art and Culture Events—The Case Of Bat Yam City In Israel*

I propose to examine the ways in which contested images are inscribed in the public space behind and beyond art events. The city of Bat Yam in Israel was chosen as the location of this study because, in recent years, it has been the municipal policy in Bat Yam to promote diverse cultural enterprises such as the Biennale of Landscape Urbanism, and the street theatre festival that has taken place since 1996 along other art projects. According to the extensive research about the linkage of art and gentrification (Freeman and Braconi, 2004) and in keeping with the social profile of Bat-Yam—a medium-lower class city on the Mediterranean coast south of the Tel Aviv-Yafo metropolis—this policy evidently constitutes an explicit attempt to improve the town's prestige and attract potential new residents and investors. The groups of artists that participate in the municipal projects have a different aim: to empower residents and their identities in the public space and rehabilitate the local multicultural communities. The paper will focus on the strategies used by different actors during the three intensive days of the International Festival of Street Theatre to influence on the public space under the umbrella of top-down art events for the purpose of reinforcing their social aims.

From this perspective, the process at the festival may be viewed as a microcosm or a lab that allows us to examine whether and how the public space and more specifically the linguistic landscape reflects or conceals the conflict between social forces, especially between the municipality, which strives to promote

the economic and social regeneration of the area, and the groups of artists, who propose to empower residents and their identities in the public space and attain the rehabilitation of the actual community.

#### *Trade Unions As "Contested" Legal Intermediaries ? Reflection on British Unions' Legal Mobilisation for Equal Pay Since 1970*

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not develop in a consistent manner over time and across unions though. In the 2000's, unions have been heavily criticized for having consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as "contested organisations" which highlights the disputes both between and within unions as to what constitutes the central trade unions "project". To understand why union legal mobilization for equal pay has been very controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as "contested legal intermediaries". Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations existing between members with different interests, the competing relations between union officials and their base, and the often adverse relations between trade unions and employers. I will also claim that litigation strategies need to be apprehended in their complex and sometimes constrained relationships with other types of legal mobilizations, such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

**GUILLAUME, OLIVIER\*** (EDF R&D, [olivier.guillaume@edf.fr](mailto:olivier.guillaume@edf.fr))

#### *Fishing in River, Confrontations at Risks and Ambiguous Situations*

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denounce the presence of the works modifying the living environment of the local residents (Lolive, 1997), or externalities are denounced as being risks (Chataurenaud and Torny, 1999; Borraz, 2008). But what about cases where the local residents do not denounce the industrial risks and confront themselves with the risks? And what can be their incidence on the risk management?

Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, minimize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1992) and opportunities (Star, 1969) are first useful theories, sometimes the ambiguous role of rules and the political positioning of actors around them, allow to understand better the confrontation of the local residents to the risks.

To develop these points, we shall approach the confrontation of fishermen at the risks generated by the hydroelectric exploitation of rivers. Beginning with a description of rivers (I), the contribution will analyze the reasons bringing fishermen's specific segment to confront with their risks (II). If their limited recognition, their rhetoric of underestimate and their perceptions bring them to trivialize the risks (III), their practices are facilitated by multiple rules which create ambiguous situations (Lot, 2008). They clarify the situations by establishing "cognitive compromises" (Amalberti, on 1996) or by mobilizing "techniques of neutralization" (Sykes and Matza, on 1957) to justify their practices (IV). The ambiguous situations are maintained by the associations of fishermen in order to develop their practice.

#### *Bullying As Social Control: Prejudice and Discrimination Among Children*

This study examines bullying as a form of control, surveillance and punishment of socially deviant behavior among children. This violent practice mobilizes regulation-powered rules that outline the limits and possibilities of what it means to

be a boy or a girl. It is based on data from an exploratory ethnographic research in primary and secondary education schools in Brazil. It is argued that bullying is centered on complex power (gender, social class, race and sex) relations embedded in the broader sociocultural context, and particularly in children's cultures. The bully, along with a group of followers, enforces a prescriptive ideal. His or her performance classifies and naturalizes normality through symbolic aspects that act to produce and socially legitimize the socially established, ideal types. The 'popular' and 'successful' infuse desired attributes, and guide the actions of those who must live in constant fear of isolation and rejection. Noteworthy is the continuous effort by boys and girls towards the visually 'perfect', which is intensified by a celebrity-driven culture and their own exposure on social networks. The processes of identity formation and competition are marked by a differentiation from the abject. The Other is the self's regulating and identity referential. It directly affects subjectivities drifting from guilt to resignation, failure or hope of a future metamorphosis. As an example, there is the figure of the 'whore', who manages sexual regulation, and prompts a demand for prescriptive performances of femininity by the 'good girls'. Thus, the bullying-engendered game of violence segregates children territorially, and affirms and protects dominant identities, affiliations, representations and social roles.

#### *Children's Participation in the Promotion of Their Right to Health: The Specialists' View*

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children's participation in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to information as a prerequisite to participation in the promotion of the right to health; c) the concept of health education as an instrument of information dissemination; and d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the *sine qua non* to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include 'learning by doing', which is centered on the development of personal and social tools. One text alone mentions the importance of the children's awareness and knowledge about their own rights, as well as that of exercising their citizenship.

#### *Household Carers and Gender Inequalities: A Comparative Perspective on Care*

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread beyond the nobility to merchants and farmers' households. In fact, then as now, the recruitment of domestic labor is an important expression of social relations, including *social class* and status, as well as a means of reproducing them. Household services have been understood as a solution to the "Great Transformation" of recent decades that involves ageing of the population, changes in family structure and gender roles, with the masculinisation of women's employment patterns, in a context of shortage of public care services, in-migration and de-industrialization which in turn calls for the development of the services sector. This paper examines policies that encourage (through fiscal policies mainly) the hiring of domestic workers thus has a *political economy* aspect since labor market regulations and welfare state policy legacies will influence responses to socio-demographic changes. It focuses on gender inequality: Domestic workers relieve women from doing this work themselves and avoid gender conflicts over the division of domestic work but can reinforce inequalities amongst women and reproduce gender roles. Finally, domestic work is often performed by *migrants* or minority women from previous migration waves although some activation policies have emphasized the retraining of women native workers. Notwithstanding what is the consequence of household services on the question of global inequality? This paper focuses on political debates relating to domestic work during the last quarter of century and the policy measures adopted, their stated goals and their actual consequences in France, Belgium and at the EU level.

*Understanding the Social, Cultural and Economic Factors That Shape the Acceptance, Use and Resistance to GM Crops: A Comparative Approach*

Although the growth of GM crops has been dramatic, its uptake has not been the smooth transition predicted by its advocates. Unless we examine why GM crops have not been universally accepted as a public good, we will fail to understand the conditions under which „GM crops can help to feed the world“. To answer this question we develop a research programme of fieldwork within and across India, Mexico and Brazil. Our research looks to contribute: (1) to enrich the debate at the level of culture and ontology; (2) to attend to the meanings of GM crops and foods and how they are embedded in practice; and (3) to develop deliberative methodologies to engender a broader set of options for GM policy and agenda setting. The main objective is to highlight the distinctive political, anthropological and cultural dynamics to the debate on GM crops across the 3 countries. Through this research, founded by The John Templeton Foundation, we identified some gaps in the literature: (1) little in-depth research examining the impacts of GM crops on farmers' communities and their culturally-specific farming and related practices: how GM crops have been embedded into everyday life contexts, how benefits and risks have been assessed from diverse cultural perspectives, how they have affected if at all farmers' social situations, practical knowledge, and their engagements with the land and food. (2) little in-depth examination of public perceptions of GM foods, and (3) little attempt to engage farmers (particularly female), citizens, regulators and scientists in deliberation, to assess how and under what conditions GM crops can be developed fully cognizant of social, cultural and spiritual values. In the research we developed a) stakeholder structured interviews; b) stakeholder qualitative questionnaires; 3) Ethnographic fieldwork with farmers and researchers and 4) focus groups with urban consumers.

*Intergenerational Transfers and Solidarity in the Wake of a House-Price Boom: The Case of Norway*

Housing is an important source of households' wealth. Tenure is becoming an important marker of social difference and point of distinction between 'good' and 'poor' housing. In Norway most households has become home owners early rather early in life. However, the house-price boom in the last two decades has changed the conditions and opportunities different cohorts has met to access homeownership and climb the 'housing ladder'. While young households meet a housing market where access to homeownership is steady more troublesome, the increased housing prices amount to substantial housing wealth for older households and a capacity to support their own children's acquisition of a home.

An important question in the paper is how middle aged and elderly Norwegian dispose their growing housing wealth. Do they spend their wealth, do they continue to save or do they help younger family members? Another question is whether new generations of elderly behave in other ways than generations before them. Our main question is whether an explanation based on different attitudes in different generations or an explanation based on life course changes fit our data on how middle aged and elderly people plan to dispose their housing wealth.

The enormous increase of housing wealth is a newer phenomenon than the Scandinavian Welfare State where good housing originally was one of the pillars

but not the vehicle of capital collection as we see today. We will ask how this development in the housing sector and in the system of family wealth affects other aspect of the Scandinavian Model as for instance pensions and policies towards income and wealth distribution. We will also make a short comparison with Sweden, another representative of The Scandinavian Model, with a system of housing tenure where the rate of individual home ownership is much lower than in Norway.

*The Territorial Separated Marriage As a New Reality*

Aim of this research is a one new form of marriage – the territorial separated marriage. Now some part of migrants have two (or more) families: the first is in the motherland and the alternative – on the migration territory. What are the reasons of this situation? How many kinds and species it has? What are the profit and problems men and women have? What about children?

Background of this research is the theory of demographic transition, theory of social stratification and social mobility, analysis of the international labor market and labor migration and the model of balance outlays/income of the generation offered by author, published in the paper of RC33 Eighth International Conference on Social Science Methodology in Sydney, July 2012 (N. P. Guliaeva. Socio-demographic problem of modern society: age structure, migration and labour force). The research method is the analysis of the open (official) statistic data, media data (including Internet source) and the results of investigating activity published by another authors and researching centers.

Results: the territorial separated marriage is a new form of marriage generated by long-time migration. Appearance a new marriage on recipient territory often does not destroyed a first marriage on the motherland. Frequently it is because the migrant has not possibility or necessity removing the first family to the job land. At the same time the job of the working migrant is the main source of income to both families.

It is concluded that the territorial separated marriage is reality. As international migration is growing it is opportunity of the dissemination of this form of the marriage

*The Role of the Court-Reforms in Transforming Azerbaijan Society*

Both in the judicial system and in the minds of the population, there are still problems with the past communist regime in modern Azerbaijan. The conducted survey of the character and the essence of this problem can allow us to identify the ways of improving the judicial system in the country in line with the requirements of a democratic society.

The majority of the surveyed believe that democratic transformation of society cannot be successful and private enterprises cannot develop without legal base and perfect judicial system that are capable of effective protection of private property rights, control after execution of the agreed responsibilities, protection of the rights of economical subjects, foster creation of market relations.

One of the reasons for the judicial power not to be able fully satisfies demand for the services is the fact that this demand is artificially lowered because of the distrust of the population to the judicial system. The other reason that lowers demand for the judicial services is lack of economical growth, which doesn't foster growth of the need in resolution of economical arguments.

It is evident that the surveyed tendency for activation of the commercial activity and successful implementation of the economical reforms will foster increase of demand for the services of the judicial system.

Study of the opinions of enterprise managers, representatives of the general population, judges and employees of the court machinery, analysis of their judgments and proposals allowed to reveal the most relevant problems related to the work of courts and render of the judicial services, to determine the paths for extension of population's and business sector's access to the judicial services, which will help to further improve the judicial system and will become a cause of the more effective implementation of the goals of the judicial reform in Azerbaijan.

*Gender Equality and Family Development in Azerbaijan*

The gender problem in Azerbaijan is in the center of attention of the state and public organizations. In the country important decisions are made and numerous events for the solution of this problem are held.

The main directions of a state policy in this area are implementation of measures on to prevention of cases of gender violence, creation of equal opportuni-

ties for women and men on a labor market, expansion of opportunities for career growth women, appointments them on senior positions.

The state supports strengthening of social protection and protection of mother and children, baby sitting simplification for working parents according to the ratified in the Workers with Family Responsibilities Convention of the International Labour Organization increase in number of kindergartens, and also development of services on to family planning.

For the purpose of realization of noted directions the parliament of Azerbaijan accepted a number of the target documents. The parliament accepted such important documents, as "Strategy of the Azerbaijani families", the National plan of action on gender equality, Children's code and National children's strategy. Along with it, in the country are created institute "Family psychologist", the help and shelter centers for the women who have undergone the household to violence, and also system of monitoring of violence against women, evasion of women from education and early marriages.

#### *Negotiating Narratives in the Discourse of Legitimized Use of Military Force: The Triform Linkage of Action, Institution and Structure*

How can we deal with issues concerning the use of force in international conflicts, for instance debates about *Humanitarian Interventions*, *RtoP*, *Human Security* etc. beyond idealistic and normative prejudgment?

Based on our discourse analytical study this paper illustrates the analysis of international conflicts, which incorporates structure as well as agency by focusing on conflicting narratives within discourse (e.g. sovereignty vs. humanitarianism; humanitarian Interventions vs. *RtoP*). Grounded on the pivotal epistemological hypothesis that the relation between discourse and practice is inextricable and mutual, we argue that this linkage is triform: Discourse consists (1) basically of long-term constitutive beliefs that are (2) due to social trends constantly reinterpreted and modified in (3) the face of interactional events and crises of action, when conflicting norms are negotiated. In this sense 'discourse' is seen as an entirety of correlated speech acts, which are analyzed for institutionally stabilized patterns of structure and rules of action. By combining discourse analysis and grounded theory, we examine speech acts (e.g. minutes of plenary proceedings; UN resolutions, the ICISS-Report) perceived as a form of action and hence as an important part of political practice. We show how strategic narratives, reconstructed from interactional events, get systematized and condensed into strategic culture, thereby part of the discourse. We portray the process of change of hegemonic narratives on the basis of the international discourse in the cases of former Yugoslavia, Democratic Republic of Congo, Sudan and Afghanistan: what grounds of justification concerning the use of force emerge? In what way UNO, NATO and EU differ from each other? Which role plays state-building in the concrete action of international agents compared to other goals?

#### *Leisure and Indian Joint Family System - a Some Case Studies of Hyderabad Karnataka Region*

The study of Indian joint family system and Leisure is assuming importance, especially developing countries of the world in general - India is in particular. The study of Indian family system deserves specially attention, not only because they are born in Indian families but also here the family system differs in material respects from the western family system. The family in India does not consist only of husband, wife, their children but also of uncles, aunts, cousins and grandsons. This system called as joint family or extended family system, is a peculiar characteristics of the Indian social life. A son after marriages does not usually separate himself from the parents but continues to stay with them under the same roof, messing together and holding property in common. The family has joint property and every person has his share in it since the time he is born. The earnings of all the members are put in a common fund out of which family expenses are met. Non-earning members have much share as the earning members. The joint family system is in rural India thus like a socialistic community in which everyone earns according to their capacity also receives according to his needs.

The joint family system provides more leisure, since the work is shared by all members on the bases of age, sex and experience, they get more leisure time and more hands at home can finish off their work with minimum time and provide enough leisure to the members to relax. In this study an attempt had made to analysis and interpret the information collected of some joint family system cases with personal interview of the members of the joint family system in Hyderabad - Karnataka region of India.

#### *Leisure-Disabled Children & Their Welfare Measures: A Study Of Hyderabad Karnataka Region*

The study of leisure disabled children and their welfare measure assuming a importance all over the world especially developing countries of the world in general India is in particular. The children are the most precious asset of any nation & deserve the very best of man kind has to offer. They have not only a right to full health, physically development but also the right to grow to full their potential intellectually, socially, morally, & culturally all efforts and resources mobilized towards the end by any society or country are a necessary and crucial investment. At present 80 % of disabled live in the developing countries where less than 1% received any trained help. Of the 146 million disabled children under the age of 15 years, as many as 106 million are in Asia & Africa. According to senses of 2011 figures, 5.7 million children in India are disabled in which means 1 out of every 4 children suffering from one or the other kind disability. Hence, it is extremely important focus on their urgent needs, allowing such children to lead a reputable & life quality in the society recognizing their leisure rights. The present study is aimed to know about the socioeconomic status and the effective utilization of leisure time & welfare service measures of the disabled children in Hyderabad Karnataka region of India.

This study data has collected on the basis of empirical survey & detailed interview with the respondent interactive method of interpretation is adopted to interpret qualitative as well as quantitative data.

#### *Resistance to Precarity in Knowledge Production. the Case of a Mexican State University*

The precarity of Autonomous Metropolitan University manual, administrative and academic workers was one of the main causes of the SITUAM trade union's strike between February and April 2008, the longest since the university's foundation in Mexico City in 1974. However, the conflict has remained unsolved and it seems that this process will continue to provoke unrest and tension among workers until it is solved, probably after another form of strike or industrial dispute in the near future, especially given the recent 2012 Labour and Education neoliberal structural reforms which have already provoked considerable resistance among state school teachers and university students.

But what exactly is university precarity? What are its main forms? Could it be more effectively combated than through the stalemate trench warfare of the prolonged strike? In an attempt to answer these questions this paper starts from the proposition suggested by the international online discussion list and blog "Edu-factory" that the university has become an increasingly privatized and globalized "factory" for the production and dissemination of knowledge in the most intensive and competitive form possible, increasingly linked to the demands of private enterprise and the "free market", rather than those of society. These developments occur within and are crucial to the ongoing transition from industrial to cognitive capitalism. As the higher education sector is key to the creation of surplus value in cognitive capitalism in which the production and strategic dissemination of knowledge is central, a series of struggles are now being fought against both the privatization and transnationalization of the sector as well as the precarization, flexibilization and casualization of its workforce. Finally, the organization of the production and distribution of knowledge as "commons" instead of fetishized market commodity appears to be the key to thwarting the neoliberalization of the public university.

#### *University Student's Attitudes Towards Affirmative Action Policy: Reflections from India*

The structure of the Indian society is based on the practice of caste hierarchy legitimizes the unequal social status and institutionalized policy of domination and deprivation from the material and ideological resources of the state, society and economy. Since the colonial times the demand for affirmative action policy (popularly known as reservation policy) in education based on caste is a source of ideological conflict between the upper caste and lower castes. The higher educational institutions in general and universities in India in particular have become the centres of battle ground for the advocates and opponents of reservation policy. The objective of the paper is to evaluate the attitudes of the university students on the policy of reservation based on gender, caste, class, tribe, religion, region and physical disability. The sample of the study consists of 500

students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritorious and talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as disabling mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with preservation and suspension of reservation policy within the framework of public policy and development discourse.

#### *Understanding Swedishness and Conceptualizing the Self: The Perspective of Young Women of Middle Eastern Backgrounds Living in Sweden*

Searching for a sense of belonging and defining one's sense of self has become a complex task in this globalized world. The way we define ourselves, for instance along ethnic lines, has consequences for our understandings of others in our everyday lives. This presentation will depart from a project that uses semi-structured qualitative interviews – with 24 young women of Middle Eastern backgrounds aged 15-22 – to explore the ways in which identity can be constructed. The reason why these women's identity is in focus is that they have been the subject of heated debates on honor related violence in the Swedish news media in recent years. Against this backdrop, questions about the implications of being regarded as ethnic 'Others' can be explored. In this presentation, the focus will be on social identity processes and the interplay between self- and public image, with specific regards to ethnic identity. The presentation will draw attention to the way in which understandings of Swedishness play a role in these women's conceptualization of self. These understandings include, among others, assumptions regarding Swedish peers' liberal approach to norms on sexuality and the informants' relation to the Swedish society as a home, yet, not a 'homeland'. As such, the presentation problematizes how sense of belonging and definitions of the self are constructed when identity is contested and negotiated in everyday life settings.

#### *An Emerging Social Movement in China: Frames and Activists in Dog-Rescue Actions*

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China since 2011. It has seen activists in 16 cities taking action on highways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs. In China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform affluence and Western influence? And how has such a movement been able to expand, especially in a social milieu that is generally conservative and authoritarian?

Adopting the lens of frame theory, this research endeavors to answer these questions by inquiring into the participants and organizers of these activities and the frames they share and develop in spearheading their organization and movement. In turn, a critical analysis of the broader social, cultural and economic changes in post-reform China will be carried out.

A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns has been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing have been delivered as well.

#### *Freedom with Constraints: A Journey of Five Mothers from South Asia to the UK*

South Asian comprises of one of the major immigrant groups in the UK since many decades, especially post 1950s. Though the rate of immigration has drastically reduced because of much restrictive immigration policies, the proportion of South Asian population has increased in the UK from 2001 to 2011. In this article, I shall be discussing about the experiences of five South Asian mothers, who have recently (less than five years) migrated from India, Pakistan and Bangladesh to the multicultural society of UK. These mothers were living with their husband and children in a town situated in the north of England. These narratives are based on an empirical case study of five south Asian mothers who had at least one child at the time of migration.

Although each one of the participants had different experiences in each stage of migration and assimilation in the 'British culture', some of the their experiences are shared, perhaps due to relatively similar culture in the home country and rather different one, and mostly perceived as shocking by each one of them. Hence their individual life stories makes a case for the processes of cultural shock, assimilation, elements of hesitation and yet their experience of freedom in the UK. Nonetheless, however constraining the home culture might seem to them, there appeared to be a self – contentious argument of returning and somehow pretending to make spaces for exercising their 'own culture' in the foreign spaces.

#### *Financing Higher Studies - the Relation Between Economic Resources and Choices in Swedish Higher Education*

How do students in higher education finance their studies and how is this related to their choice of place and field of study? This is the portal question for the presentation.

At the same time as the number of students in higher studies has increased vastly in Sweden during the last twenty years, the economic gaps in the society at large have grown. We know from surveys and examinations that the public student loans – introduced in 1965 – are not sufficient for covering all students expenses, but the knowledge of where in the educational landscape and for which groups of students the loans are particularly meagre (or superfluous) is lacking.

In this presentation, we explore the 'economic landscape' of Swedish higher education by first mapping landmark areas, defined by students with different economic situations. We locate both the students with the largest amounts of economic resources (loans, wealth and incomes) and the position of the students with the smallest amounts. How is the public student loan system utilized at these two ends and what function does it seem to serve in the students' total economy? Second, we relate these economic differences to educational differences. Do the largest concentrations of educational resources (grades, results from aptitude tests, and backgrounds in prestigious educational programs) coincide with where we find large economic resources? Theoretically, we relate economic resources to educational resources – both central forms of capital in Bourdieu's sociology – and discuss their relative importance for choices and strategies within higher education.

The presentation utilize a dataset from Statistics Sweden on all students in higher education during the last 20 years, including previous educational investments, present educational choices and their own and their parents' economic and social situation, as well as how they make use of the public study loan system.

*Brotherhood, Masculinity, and Social Capital: Fraternities At The University Of The Philippines Diliman*

The paper is based on the study of college fraternities rooted in traditions of bond and loyalty at the University of the Philippines Diliman (UPD), the country's premier state university campus. Tracing their roots in the early 1900s, UPD fraternities have built a vast network of brotherhood ties connecting various generations of men, from college students to professionals who now occupy leadership positions and status in government, private and corporate sectors in the Philippines. The study looks into the identity formation of young men, including the quest to be part of a trust-based social network to affirm masculinity, survive the competitive challenges or enjoy the adventures presented by college life, and assure paths to social capital and professional status.

The paper discusses how young men gravitate to fraternities for constructive aims such as academic excellence and socio-civic service, on the one hand, and become embroiled in antisocial violent behaviors within their group or in conflict with rival fraternities on the other. Such violence in gang fights and hazing rites has claimed the lives of at least eleven, and injured hundreds of young college men in the history of the university. The concepts social capital, identity and masculinity are utilized to understand the meaning of "brotherhood", the origin and shifts in orientation and behavior of the group and individual members over generations. The study analyzed documents supplied by fraternities, and examined the narratives of fraternity "brods" or members from various generations or cohorts since the 1950s to the present.

**GUTIERREZ RESA, ANTONIO\*** (UNIVERSITY UNED, [antoniogutierrez@der.uned.es](mailto:antoniogutierrez@der.uned.es))

*Immigration Key for Immigrants in Spain 2013*

According to our recent research study/survey, it shows that the inmigrants in Spain 2013 (Romanians 19%, Morrocans 18.8%, Ecuadorians 9.4%, subsaharian Africans 6.3%, Colombians 6.1%, Bolivians 9.4% and those with dual nationality 16.9%) 77.6% of them live in rental housing, 27.3% work in private labour market with temporal contracts and 21.1% with fixed or permanent contracts, while 26% are unemployed although they have worked before. 57% of them have the intention is to stay definitely and in general terms, they are highly satisfied with the services. They are also highly satisfied with their interpersonal relations (88%), with their family life (80%) and at work/studies (63%). Nevertheless, only 44% of them are satisfied with the economic situation. 83.5% consider their cultural contribution as positive and 75.3% consider their economic contribution as positive and 69.8% consider their demographic contribution as positive. 50% of inmigrants surveyed think that they should keep their civil traditions, specially if they can. However, 68% agree that the languages which are majority should be included in the academic curriculum and 37% agree with the headscarfs ban in classrooms. Integration for 78% of the surveyed is a society issue, and those with more difficulties are the Magreb population 36.9%, the subsaharian African countries 13.8% and the Chinese 13%. We conclude with the affirmation that, according to the inmigrants, 50% of them agree that the economic aids should exist for Spaniards and inmigrants independently from their legal or illegal administrative status and for 97% of them, they should have the right to live with their families, 95% think they should collect their unemployment benefits after paying their social security taxes, 80% think they should be able to vote in local/municipal elections and 85% think they should be able to obtain the Spanish nationality.

**GUTIERREZ-MARTINEZ, DANIEL\*** (El Colegio Mexiquense, [dgutierrezcolmex@yahoo.fr](mailto:dgutierrezcolmex@yahoo.fr))

*Aesthetic Barroco As a Performance of Subaltern Cultural Societies: The Sociological Approach*

Debates about originality and the origins of the world have been added by scientific revolutions in physics, biologists and neuroscientists with the multiplication of the universes, new worlds discovered and technological advancements that have changed our everyday lives. Here, the rediscovery of the importance of dreaming, meandering, and others go together with artistic expressions, literature, cultures of remix, games of masks, avatars... These announce a new equilibrium between the visible and the invisible, emotion and abstraction, the physical and the metaphysical. Which *imaginaire* is cause and effect of these mutations? Aesthetic Barroco *imaginaire* as a form of performance has been well analyze in artistic expressions to understand this plurality, but has been a little ignored as a sociological theory. As Weber uses *Beruf* to understand the no-mind action in capitalism, Barroquiam *imaginaire* can be used to understand the way capitalism (development) is expressed in pluri-cultural societies with a subaltern condition. That is why we propose, as a metaphor, to include it in the performance theory to understand plurality in a globalized world; not only to comprehend traditional subaltern cultures (Latin-America, Africa, Asia), but as well, for example, black groups in USA; the suburbs cultures in develop countries, etcetera. Art and empirical sciences, worlds of fashion, architecture, literature are amongst others the witnesses of this plurality. Artifice, simulacrum, dreams, ornamentation, exaggeration, multiplication have themselves become the stuff of the ordinary, part of its structure, its foundation myth. Barroco metaphor permits us to observe the deep meaning trough the "artificial", the reel trough the no real, the truth to the fake in this pluralist and relativist vision of existence. Jazz, blues, Regetton, spicy food, exaggerated manners, ways to talk... are just some examples will be light up to show how social meanings today are showed through superficial symbols.

*The Muslim Religion As a Strength of Ethnic Identity: The Case of Chamuslim in the South of Mexico*

In the early years of the 70's a Muslim Spanish family arrive to the South State of Chiapas and encounter the Tzeltal indigenous ethnic group. The result of this interaction in the last 40 years has been a religious conversion that have been going up to a 600 hundred people and continue to grow (from 800 hundred that exist today in all Mexico). Since then different Muslim divisions have been created differentiating the Tzeltal communities around (at least three different groups). Some sociological religious theories focus a lot in the conversion process, and less into the strength ethnical identity as a main factor to understand what some wrongly named "popular religion". This case will be a great example that the community Identity passes before Ethnical Identity and even religious conversion. Even though a monotheistic institutional religion conversion serve more to maintain and fortify the communal ethnical identity than a spiritual meaning. The key here is that the community identity provide more central meaning that the religion itself.

MOORE, DAHLIA (College of Management)

*Between Ideology and Practice of Child Rearing: Differences Between Men and Women in Two Cultural Contexts*

The third wave of feminism declares that the most important mission in becoming a gender-equal society is to encourage men to take a greater part in the family life, and especially, take greater responsibility toward their children's upbringing and education. Some scholars suggest that this revolution has yet to take place because women still guard their traditional roles and refuse to share them with their spouses.

Our study indicates that although women ideologically declare their wishes for a more supportive and active partner and for a more egalitarian division of household labor and child rearing, when these ideas were turned into practice and examined, we found that men define these practices as far less feminine than women. This tendency appears both for secular men and women and for religious men and women.

Thus, while ideologically, women are more liberal and feminist than men, in practice, they tend to hold a traditional view regarding child rearing daily practices, as they view these practices as feminine.

*Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)*

Muslim Informal Organizations of Tatar Youth in the Republic of Tatarstan (Russia)

The report deals with the revival of Islamic identity in the Republic of Tatarstan which is an ethnic republic within Russia and the Muslim informal organizations of Tatar youth. Sociological research shows that religion is more important for Tatars than for other ethnic groups who traditionally do not profess Islam. There are more believers amongst Tatars who observe religious customs and ceremonies; there are less non-observers and non-believers. As far as religion is concerned, sociologists used to argue that women were more religious than men, older people more than youth, the uneducated more than people with higher education and people from rural areas were more religious than citizens from urban areas. However due to processes of post-modernity the situation have changed and another tendency has become apparent, which is sometimes the reverse. One of these trends is Tatar youth. The research data reveals that desecularization has increasingly affected young people, and their degree of religiosity does not depend on their level of education or place of residence (there is even more rapid Islamization among the educated youth of big cities). A group of strictly observing young Muslims has been pointed out. They are about 5% of all Tatar youth. They are very religious and they confirm it by their behavior. The report focuses on some initiative groups and informal organizations of Muslim young people in Tatarstan cities who are not passive but involved a lot in social life ('Consciousness', 'Altyn Urta', 'Ikhlas', 'SAMI'). They were formed in 2004-11 and gained their activity uniting Muslim students of Tatarstan cities. The report is based on the results of sociological research, 2008-2013 in Tatarstan, Russia. The methods comprise of two surveys by 1500 respondents each and about 80 in-depth interviews.

*Effects of Interview Mode on Self-Reported Well-Being*

This study explores the differential effects of face-to-face interviewing and web-survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g. the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries. Web survey has become a very attractive tool as it allows access to respondents at a lower cost and large numbers relative to traditional surveys that are conducted via phone, mail, or on a face-to-face basis. The WageIndicator is a labor market oriented survey that also includes several subjective well-being indicators. In the first step we contrast the characteristics of samples resulting from different modes. Second, controlling for demographic characteristics, we test the hypothesis that online surveys decrease measurement error in sensitive questions created by the presence of an interviewer (e.g. the underreporting of socially undesirable behavior). We show that mostly in advanced economies respondents tend to report higher subjective well-being levels in the presence of an interviewer, while in developing and former communist countries the presence of an interviewer generates a downward bias in the reported well-being levels. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

**GÜNEL, OZAN\*** (Istanbul University, [ozzygunel@gmail.com](mailto:ozzygunel@gmail.com))

*Changing Identity: Istanbul Clubs during Gezi Protests*

Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. But even 90 percent of Turkey's population see themselves as fan of these 3 big clubs which are also the oldest clubs, these Istanbul clubs have zero class affiliation throughout history. Very crudely Galatasaray represent aristocracy, Fenerbahçe bourgeoisie and Beşiktaş worker class but like we said these assumptions are very crude and can not apply to fans and general public.

At June 2013 Turkey was the headline of all press worldwide. A small peaceful demonstration started with environment concerns turned into a nationwide protest and rebellion against ruling party AKP (Justice and Development Party) and especially its leader Recep Tayyip Erdoğan. While police brutality against peaceful demonstrations triggered the situation it must be realized that there is a building frustration in non-conservative society for the last couple of years. At Gezi

Park protest we can see mostly all political, ideological views developed in Turkey. From communists to nationalist, from Muslims to Atheists, from LGBT to football fans of these 3 biggest clubs. Of course politicization of these fan groups can be described as political awakening of youth after 1980 military coup and turning it into a struggle within their passionate interest.

This paper aims to understand these fans, their change and their demands from authority.

**GYONG, JOHN EMMANUEL\*** (Sociological Association of Nigeria, [gyongemma@yahoo.com](mailto:gyongemma@yahoo.com))

*The Socio-Economic Implications of Kidnapping in Port Harcourt, Nigeria*

Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European continents. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In port Harcourt, the commercial and oil Hub of Nigeria's Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is generally observed to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 household adults was administered questionnaire. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that one, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiator between the victims and the perpetrator of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people's behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.

*Voluntary Commitment in Church-Based Environments As a Chance of Generating Meaning for Adolescents*

In analyzing the religiousness of youth, positions vary between the hypothesis that religiousness has decreased and the hypothesis that there is a specific youth religion. In my paper I will assume that the development of religious identities and convictions depends on social contexts and family environments. My paper elucidates that adolescents generate different religious interpretive patterns in order to position themselves in relation to concepts of life and meaning in societies that are marked by the pluralization of values, the secularization of social relations and the individualization of life styles.

In western Germany, church-related status passages are still part of the norm. With schools being the main educators of Christian beliefs, parents quite often grant their children a free choice in the realm of religiosity. During the time of (their) adolescence, youths not involved with church-activities frequently distance themselves from the churches, which seem to barely offer any relevant answers to questions of meaning and identity formation. However, churches can become attractive by offering space for social commitment provided that it is linked with the characteristics of being voluntary, unrestrained, and discursive. On the basis of group discussions with Catholic youths, I want to show how the participation in a church-based project oriented towards the common good can initiate an involvement with religiosity.

*Knowing 'New' and 'Old' Media: Translating Memories and Body Rhythms Across Generations*

The 'sociology of translation' offers a variety of methodological devices in order to study body rhythms and their changing material-social *Eigenzeiten*. Drawing on the case of a non-profit oriented, community based project in the south of Germany, in which the elderly and young people meet, work together, and practically exchange about usages of 'analogue' and 'digital' media objects, I am going to unpack how knowledge about 'new' and 'old' is being translated and reinterpreted among the two generations. Drawing on ethnographic fieldwork I am going to

show specifically how the implicit dimensions of knowing how to use 'new' and 'old' media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either 'new' or 'old' media and discuss the implications for a memory view on media studies. Second, I will show what happens when the implicit knowledge of using these objects is being translated to the other generation. I will follow how the rhythms of bodies in interaction with their environment change, and how the use is being remembered and reinterpreted. Third, I will discuss the implications of such an intergenerational view on the enactment of social time in each of the generations' body rhythm.

#### *Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations*

Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a 'sociology of translation' and the methodological devices offered by the ontologies of 'urban assemblages', this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconfigurations of body rhythms in the city.

The case will be unfolded in three steps. First, I will focus on specific moments when sensual ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythm analysis as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

#### *In the Name of the Rule of Law and Democracy: Institutional Restructuring of the State and Women's Rights in Iraq*

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women's oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused of trading women's rights for cooperation from the Islamists and reports by foreign governments, the UN and human rights organizations have until recently ignored the deterioration in the status of women and the rise in gender-based violence in Iraq. The tendency within the international community is still to consider culture, underdevelopment or religion as the root cause of women's subordination and to push for "modern" changes in society and law in compliance with a western liberal model of law and gender egalitarianism. This article investigates the nature of negotiations among international actors, governmental authorities and local politics for institutional restructuring and the implications of this international endeavor for women's rights and solidarity in Iraq. The article argues that the implementation of specific social and legal models/reforms based on the norms and systems in western liberal states, targeting disadvantaged groups such as women, in a socially and politically precarious context like Iraq might raise serious problems and contribute to social inequalities and violence if the complexities of local politics of gender are not analytically taken into consideration. The article aims to contribute to activist efforts to enhance women's status in war-affected societies, promote women's solidarity against ethnic polarization and empower women to be active agents in advancing peace and justice in the face of radical transformations taking place in society, economy and politics that are dominated by men at all levels including local, regional, national and international.

KAYA, ZEYNEP (London School of Economics)

#### *Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice*

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g. foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western (neo)liberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethnic reconciliation and implement the rule of law (e.g. Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. "ethnic reconciliation", "youth empowerment" and "social justice" in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

#### *Power Shifts and Transnationalization. a Comparative Study of Long-Term Changes in the Swedish Power Elite, 1990 - 2013*

Based on three surveys with a few thousand decision-makers each in top positions in all areas of Swedish society (in 1990, 2001 and 2013), we analyze changes over a period of more than 20 years in the composition and internal power relations of the power elite. It is to our knowledge the first time that a historically oriented study has been made, where three points in time are studied using the identical research design. Also, it is possible to analyze the entire elite stratum (not just a sample) as it is small enough, while at the same time it is big enough to allow statistical analyses.

Comparisons are made both over time and in social space, that is, between different parts of the field of power, characterized and ruled by different logics and relations. The previous studies have shown systematic differences between fields and also between the genders in various respects. Our paper has three parts: the first part gives an overall perspective of the long-term development and changes, and the second part discusses some important results. The third part discusses methodological problems, emerging especially in connection with the growing transnationalization of fields and of elite groups. With the increase of international ties, migration and the merging of big business as well as of cultural arenas, NGOs, and economic and political cooperation, important power seems to be moving from Sweden as a European periphery to the big financial and industrial centers and cultural arenas. What is a national elite group these days? Also, several sites of power are gender-balanced (or de-gendered) in Sweden. How will the scope, force and hierarchy of the gender-order be affected in the meeting with other gender-orders as part of a transnationalization process?

### *Competition over Expert Authority in the New Field of Human IVF*

Is human IVF (*in vitro* fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question ignited controversy in the 1980s when the term "human IVF" first appeared, creating competition between experts.

This paper focuses on the competition over expert authority between obstetrics and gynecology clinicians (OG clinicians) and embryology (E) scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is "an amalgam of thoughts, a mixture of habits, an assemblage of techniques" (Mol & Berg 1998), not a coherent *prima facie*. The process of mixing and assemblage that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the "dominant professional" (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OG clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise.

Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the *construction* of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

### *Urban Shrinkage As a Travelling Concept*

Urban shrinkage as a phenomenon has globalized during the last years: worldwide, including also the global South, cities have faced population decline and its manifold consequences for urban space, fabric and society. In terms of urban theory, shrinkage as a phenomenon or way of urbanization was disregarded for a long time, or shrinkage was looked at through the lens of urban growth as the basic trend of urbanization: as deviance from the norm, a bad or false development or a temporary appearance to be overcome.

Shrinkage as a concept was used first in the German discourse and got onto the national scientific and public agenda with the extreme population losses of East German cities during the 1990s and early 2000s. Shrinkage got accepted as an international term with the growing number of comparative studies and projects from the mid-2000s onwards.

The concept of shrinkage today faces a twofold challenge: On the one hand, it still struggles for recognition as describing a common pathway of global urbanization. On the other hand, research shows an overwhelming diversity of contexts which challenges the essence of what shrinkage was hitherto be defined as. The recent crises in the US and Europe, however, represent a context where expertise and explanations from shrinking cities might be helpful for the understanding of the current transformations and ruptures.

Set against this background, this paper detects the "travel" of the concept of urban shrinkage across different contexts and scholarly communities. It discusses how the debate on shrinkage internationalized and developed in a conceptual way though "traveling". It also reflects on how cross-national, comparative research contributes to improve the conceptual discourse about shrinkage. As for its empirical examples, the paper draws on several international research projects on shrinking cities from the early 2000s onwards.

**HAASE, SANNE\*** (Aarhus University, [sh@cfa.au.dk](mailto:sh@cfa.au.dk))

### *"Soft" Knowledge As a Threat To Engineering Legitimacy?*

The pertinent role of technology in societal development expands the demands on future engineers to "soft" skills such as intercultural communication and consideration for economic, social and environmental aspects. Therefore, the

engineering profession is in a process of re-examining and re-legitimising their knowledge-base.

In spite of a general agreement on the need for future engineers to be broad thinking and hybrid, the engineering education system has been reluctant to part with traditional knowledge regimes focusing primarily on "hard core" scientific and technical competencies.

An empirical investigation of a year group of engineering students in Denmark finds that a great deal of the professional status and legitimacy of the engineer is based on the symbolic value attributed to the engineering knowledge base. The experience of hardship and endurance in relation to the demanding workload of the science and technology disciplines and a high degree of difficulty of these subjects are seen as "tests of manhood", ritualising the professional initiation.

This anachronistic way of legitimising the profession may bolster the self-confidence of the engineering students making it through to graduation, but it is also likely to be an obstacle to the stated objectives of engineering education systems of attracting more women to the engineering profession and of providing engineering professionals able to address challenges of a dynamic, global society.

### *Self-Selection and Economic Assimilation Of Immigrants: The Case Of Iranian Immigrants Arriving To Three Countries During 1979-1985*

**Self-selection and economic assimilation of immigrants: The case of Iranian immigrants arriving to three countries during 1979-1985**  
**Abstract**

The study is designed to evaluate the impact of the interaction between patterns of immigrants' self-selection and the context of reception at destinations on the economic assimilation of Iranian immigrants who came to the three countries during 1979-85. For that purpose we studied immigrants at the age of 22 or higher upon arrival by utilizing the 5 percent 1990 and 2000 Public Use Microdata files (PUMS) of the US census, the 20 percent demographic samples of the 1983 and 1995 Israeli censuses of population, and the 1990 and 2000 Swedish registers. The results indicate that the "most qualified" immigrants – both on observed and unobserved variables, who left Iran right after the Islamic revolution, arrived in the US. Their positive self-selection led them to reach complete earnings assimilation with natives there. Iranian immigrants who arrived in Israel and Sweden did not achieve full earnings assimilation with natives. Of these two groups, a smaller immigrant-to-native gap in average earnings was found in Sweden, but in the same time Iranian immigrants in Israel were more positively self-selected and showed better assimilation than their counterparts in Sweden. Market structure played a certain role in immigrants' earnings assimilation mainly in Sweden.

### *Repositioning the Racial Gaze: Aboriginal Perspectives on Race, Race Relations and Governance*

In Australia, public debate about recognition of the nation's First Australians through constitutional change has highlighted the need to improve public understanding between Aboriginal peoples and the Euro-Australian mainstream. But the unevenness of race relations has meant Aboriginal perspectives on race relations are not well known. This is an obstacle for reconciliation which, by definition, must be a reciprocal process. It is especially problematic in regions with substantial Aboriginal populations, where their visibility make race relations a matter of everyday experience and discussion.

There has been considerable research on how mainstream Australia views Aboriginal people but little is known about how Aboriginal people view non-Aboriginal people or mainstream institutions. This paper is based on an Australian Research Council project undertaken in partnership with Larrakia Nation Aboriginal Corporation. It aims to reposition the racial gaze by investigating how Aboriginal

peoples in Darwin recognize and understand who is Euro-Australian, who is Aboriginal, and Aboriginal views on Euro-Australian values, priorities and lifestyles. We argue that a necessary ingredient for improving race relations in Australia is for dominant cultures to understand the relative nature of their own cultural attachments. Through interviews, social media and survey with Aboriginal people this research provides a basis for Euro-Australians to discover how they are viewed from the outside. It repositions the normativity of Euro-Australian culture which is a prerequisite for a truly multicultural society.

Aboriginal disengagement from mainstream political and civil law processes and institutions contributes to their social exclusion but the reasons for this distance are not well understood. Through ideas of agency, recognition and resistance we also explore how Aboriginal people view and understand the gap between Western-style governance and traditional Aboriginal approaches to decision-making and the impact this has on patterns of compliance and participation.

#### *Attitudes Towards Patriotic Education and Armed Forces among Slovenian Youth*

Contemporary democratic societies are encountering many demanding challenges such as decreasing political participation in the democratic societal sphere. In most European countries one can detect an almost annual drop in citizens' political participation. Due to the dramatic changes in political, security and societal conditions in Europe in the last decade, today's youth is being brought up in a fundamentally different spirit. In the pursuit of 'creating' more participative citizens for the future, there is debate in Slovenia regarding civic and patriotic education, as well as active citizenship among the youth. Differing opinions may be found on how to realise this education, and what forms and methods should be involved. In general, two different concepts are at odds: a) discipline of patriotic education, introduced in rather limited way into the Slovenian elementary schools in 2009; b) second concept attempts to cultivate a sense of taking responsibility and of the acceptance of democratic culture while simultaneously maintaining a critical stance on the very political system; this concept is traditionally not synced with military tradition, but was introduced into school curricula in 1990s. The proposed paper will analyse attitudes of youth towards patriotic education, and try to ascertain, wheatear the concept of patriotic education is has been able to deliver its goals. When analysing trust of youth towards different institutions of democratic state in the last decade, one finding is relatively high trust of youth in the armed forces and school as an institution on the one side and relatively firm distrust into various political institutions of democratic state. Research question will ask how patriotic education has been accepted by the pupils and teachers and how patriotic education is affecting pupils trust in the armed forced and school as an institution on the one side and distrust various political institutions on the other.

#### *School Alienation, Patriarchal Gender-Role Patterns and The Lower Educational Success Of Boys In Secondary Education. A Mixed-Method Study*

This paper attempts to be an empirically backed contribution to the current debate on gender differences in educational success in favour of girls. As explanatory factors, school alienation and gender-role patterns – together with other crucial factors – are analysed (controlling for social origin). School alienation is characterised by a low attachment to school, low school commitment, a low identification with school and learning and an emotional detachment from academic goals and values (Finn, 1989). Gender-role patterns – and images of masculinity and femininity – are orientations that are assumed to structure attitudes, aims, motivations and, finally, behaviour, and are therefore also relevant for educational success. Analyses are based on a Swiss mixed-method study (standardised survey among 872 eighth-graders, group discussions, class room observations). Results indicate that the gender gap in educational success is caused partly by boys being more alienated from school and preferring patriarchal gender roles. The impacts of these factors on educational success are mediated by school deviance. Further important issues emerging from this analysis are peer attitudes towards school and teaching style; both of them environmental factors which influence school alienation. In particular an authoritative teaching style can largely reduce school alienation.

University College, [moliren@online.no](mailto:moliren@online.no))

#### *Coherence; Art Content & Society*

Some claim considering the content of art is a task for art critics & historians. However, this may be relevant also for sociologists, to reveal information on society. Contemporary art is dominated by conceptual art with a broad range of art expressions, diverging from traditional art. Many consider this tendency to express democracy and art diversity; others regard it as a breakdown of rules claiming it creates art anomy. Durkheim describes how anomy appears in times of crisis. However, he also describes how anomy may appear in times of sudden wealth, which is the case in Norway, which has grown tremendously rich during the last decades. Simultaneously there has been a breakdown of norms in the society, which obviously has created some features of anomy. Additionally the art interest has increased, as well as governmental support to artists, on principals of democracy and freedom of speech. Today Norwegian artists have great freedom to create whatever they like, including controversial political art, such as a Norwegian artist who creates art performances in North Korea with North Korean artists. Although he is criticized by many, as his performances probably requires some connection with North Korean authorities, others defend his performances. According to Benjamin, art criticism is crucial for art development. Although Norwegian media often provide art articles, art criticism is rather weak and art is seldom criticized in a critical way. Norwegians today seems liberal to controversial art, perhaps more than people outside Norway. My PhD-thesis on corporate art and architecture (2011), also reveal that Norwegian art collectors seem more

liberal to controversial art than collectors abroad. This makes me wonder; is it a coherence between art liberalism and features of anomy in a society caused by sudden wealth? May this be reflected in the content of art in the current society?

#### *When Art Becomes an Emotional Burden*

Art influence our emotions, usually positively. However, art may also appear as offending and become a burden. Here I discuss so-called "offending art", defined as; art with improper sexual, violent or blasphemous content. I use empirical examples from my PhD-thesis (2011) and new observations. My thesis reveals different practices for corporations collecting art in four countries, including the USA and Norway. Although related cultures, the policy for collecting art diverges regarding offending art. While most of the American corporations express that they avoid art that can be experienced offending by employees and visitors, the Norwegian corporations are more liberal. Although most art in the Norwegian collections are not offending, they also contain offending artworks that creates emotional reactions among employees, who experience this art as a burden. Due to the emotional impact on employees and visitors corporations have had to remove artworks from public areas, for example a painting regarded blasphemous. An artwork still hanging contains a digital text about sexual abuse and is described by employees as depressing. The employees have got used to it and suppress their emotional reactions. Corporate collectors can easily avoid offending art, as the American collectors in my study. The Norwegian corporations express that they like to show their art interest and support art. They also like to appear as democratic organizations and will probably not risk being accused for censoring art. Sometimes art seems prioritized on the cost of people. This applies also to commissioned art. Some new paintings in a governmental building in Oslo show falling paper and skeletons between flying buildings. Employees experience the artworks as an emotional burden, because they give associations to the terrorist attack on the government buildings in 2011. Seemingly there is a gap between fear of art censorship and consideration to employee emotions worth examining.

#### *Institutional Change through Rational Collective Action*

*The paper seeks to establish an analytical framework for the study of institutional change. Its main components are drawn from sociological systems theory, rational choice and institutional theory. The distinctive theoretical maneuver is assuming that modern, functionally differentiated societies can be analyzed as communities, more or less capable of collective action.*

*The analytical core of the framework is a concept of collective action characterized by the conflict between collective and individual rational lines of action. This subjectively experienced conflict is also a social dilemma because the outcome of an action is codetermined by the choices of other actors. Mutual interdependence creates a particular social dynamic that can be applied to the study of institutional change.*

*We take modern society to consist of several self-referential social systems that operate through unique social media and binary codes. However, we also conceive of modern society in a second sense, as a kind of reflection of society in the first sense, and which regulate or condition the operations of subsystems. A modern society like the Norwegian has developed a vast number of organizations that deal with different aspects of its function systems. To an extent these belong to the political system and are the administrative means to put political decisions into effect. However, to become collectively binding, both political decision-making and its instruments must be anchored in society through rational collective action.*

*A set of concepts, e.g. function problems, rational solidarity, collective power and collective recognition, are introduced to explain how collective action might become a rational choice that transforms societal institutions. Instead of asking what a collective (really) is we believe sociology should create ontologies of the social that enable conceptual solutions to problems encountered in the empirical research.*

### RC35-616.2

**HAGEN, ROAR\*** (UiT The Arctic University of Norway, [roar.hagen@uit.no](mailto:roar.hagen@uit.no))

#### *The Whole of Society and Society as a Whole*

Sociological theories of modern society conceive of some form of horizontal differentiation among spheres, fields, systems, discourses or sectors. The concepts vary, but refer to about the same as the economy, politics, science, art, sports etc. The theories take, however different approaches to the question of how these entities are related to each other. There are three main perspectives.

The tradition emerging from Weber conceives of a modern society consisting only of parts. This view is epitomized in Niklas Luhmann's theory of a modern society characterized by functional differentiation. In the tradition emerging from Durkheim, mutual interdependencies among the subsystems create a social bond of organic solidarity particular to modern society. Society is a community or even collective, because of legitimate institutions, shared social norms and a common culture. In the Marxian tradition the other subsystems are regulated by capital and power, with the market and the bourgeoisie state as the real centers of society. All three perspectives have their merits and can claim empirical confirmation either in a world society of global financial markets, art and science, or nation states as embodiments of solidarity and power.

However, all three perspectives share a common weakness: They are unable to explain how mutual interdependencies among subsystems lead to problems of performance or function that are also problems of collective action, and thus constitute society as a collective regarding its own cohesion or societal integration. The reason for this shortcoming is an ontology of the social based in spatial metaphors which reifies collective phenomena. When this epistemic obstacle is identified, we might create an alternative ontology that enables a new understanding of modern societies as communities or social wholes with varying capacity for collective action on local, regional and global levels.

#### *Renewal of Organizing Strategies for Child Care Workers?: Union Responses to Neoliberal Child Care Reform and Downgraded Care Work in Japan*

Child care work, mostly performed by women, is almost always poorly paid. Unionizing child care workers is an important strategy for securing fair compensation and better working conditions for child care workers. This entails social movement that re-evaluates care work and women's work.

In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments acted as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for publicly run child care centers. With their collective bargaining power as an occupational group and a women's group, organized teachers have also played a critical role in improving working conditions for child care teachers as a whole.

However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reform policies such as the privatization of accredited child care centers, and the deregulation of the work force such as lifting of the limit on the number of part-time teachers per cite. Certified child care teachers employed by local governments, once regarded as secure and decent jobs for women, are disappearing, and child care providers, including certified teachers, are now becoming members of the working poor.

How will unions renew their strategy to organize child care workers? How will teachers respond to lost occupational homogeneity? Furthermore, will the union's survival be compatible with sustainable care provision? The paper describes some of the history of the organization of the child care teachers and their activism, and focuses on and compares the current struggles and functions of two unions: Jichiro, and the Union of Workers of Welfare and Child Care, the craft union for teachers and non-certified teachers affiliated on an individual basis.

#### *Hidden Tapestries of Lived Experiences: The Commodification of Latin American Migrant Workers in Canada*

This paper will explore how the complex lived experiences and plural identities of Latin American agricultural migrant workers participating in Canada's Seasonal Agricultural Worker Program (SAWP) are reduced to very narrow representations in the Canadian racial imaginary. Although our interactions with workers have revealed their lives to be rich tapestries of experience, love, fear, regret, and complex familial ties, popular perceptions of migrant workers remain negatively racialized, gendered and classed. We argue that this suppression of workers' individual histories in the Canadian imaginary is a key component in legitimizing and maintaining the commodification of migrant labour and, by extension, transnational systems of exploitation. In turn, these processes of inscription serve as hidden mechanisms of social and spatial control, shaping the ways that the Canadian public interacts with migrant workers and the degree to which migrants are considered part of the Canadian communities in which they live and work. Motivation for this project was sparked through the relationships we have built with migrants in our work with a grassroots migrant worker support network in the Okanagan Valley, British Columbia. This paper is also informed in part by a 2012 case study

of Mexican migrant workers in Canada's largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

**HAID, CHRISTIAN\*** (Technical University Berlin, [christian.haid@metropolitanstudies.de](mailto:christian.haid@metropolitanstudies.de))

### *"Planning the Unplanned" - Trajectories of Managing the Informal in the Urban North*

This paper will present research on how informal activities and practices in Berlin's public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of receding welfare states, many people's possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin's parks are faced with various regularization strategies in a city that otherwise is known for its "anything goes" attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its "urban pioneers" that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings were mainly perceived as weakness in the new urban development processes. However, today they are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies "planned informality" is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the in/formality dualism and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about the ambiguous role of the city government that on the one hand, embedded in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

### *Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria*

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in depth. This is especially the case for European cross-border commuters. Our paper aims to close this gap by taking the Central European Region (CENTROPE) as an exemplary instance.

Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary bordering on Austria. Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2,550). Empirically, the focus of our paper lies on three research questions: What job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)?

Our results strengthen the hypothesis that human and social capital resources serve as key factors for finding job strategies and successful labor market integration. For example, we can show that far family and friendship ties are more intensely related to job finding than near-family contacts. However, near or far social ties do not influence wages of cross-border commuters. Furthermore, there are substantial gender differences and differences related to previous occupa-

tional status and migration experience in regard to the job searching methods and commuters' wages in Austria. Overall, our results reflect cross-border commuting as a new form of social practice in Europe, and demonstrate the fundamentally unequal opportunity-structure of CENTROPE as a transnational labor market.

### *The Brazilian Second Generation in Japan and Ethnic Community – the Role of Bridge*

This talk aims to examine how the Brazilian second generation residing in Japan wants to contribute to Brazilian community with their bilingual language capital. In Japan there are more than 60 Brazilian schools where Brazilian children can learn Portuguese and in Portuguese. For the Brazilian children who study in Japanese schools, especially in the towns where a lot of Brazilians live there are some Portuguese classes administrated by local governments or non-profit organizations. Some of the informants of this research had studied Portuguese after their entry to Japan at around 10 years old in a supplementary Portuguese language course offered by a Brazilian school and maintain their mother language proficiency. They graduated from Japanese universities and also have high level Japanese proficiency. They have supported their family to survive in Japan as guide and interpreter, chosen jobs, for example, language education, legal work to renew visas and passports, etc., to contribute to Brazilian community, and taught Japanese language to Brazilian children as volunteers. They try to bridge between local community and Brazilian ethnic community in various dimensions and they are aware and proud of the role. We can find the importance and necessity of this role in several original characters of Brazilian community in Japan. The first one is their limited contact with Japanese people in working space and locality. The second is the wide spread Brazilian ethnic business. These two points have related to low level of Japanese language proficiency of Brazilians in Japan. The third is the passage of time. More than 20 years of Brazilian immigration history in Japan made bilingual second generation grown-up. In these days the role of bridge or pipe line between local end ethnic communities constructed by bilingual Brazilians of first generation is being maintained, succeeded and renewed by second generation little by little.

### *Do Egalitarian Couples Have More Sex?*

The German Family Panel (pairfam) is a multidisciplinary survey focusing on partnership and family dynamics. The survey implements a complex study design. In addition to the panel approach, it follows a multi-cohort and multi-actor approach. This means that so-called anchor persons from birth cohorts 1991-93, 1981-83 and 1971-73 are surveyed annually. Furthermore, the anchors' partners, parents and children are also included in the survey. By next year the panel will comprise of five waves. Because pairfam collects yearly information from both partners it is perfectly suited to address partnership topics.

Studies show that partnership characteristics are influenced by distribution of housework, e.g. if the man's share of the housework increases, the woman's partnership satisfaction rises and the risk of divorce diminishes. However, relatively few studies have addressed how housework distribution influences the frequency of sex in domestic partnerships. Kornrich et al. (2012) is a recent exception. They suggest that traditional gender behavior fuels sexual scripts and therefore results in higher sexual frequency. However, the data for their study, collected in the United States, is 20 years old and only focuses on married couples. Further, other studies assume that women exchange sex for housework, resulting in a negative association between women's share of housework and sexual frequency.

So far there is no known study from Germany that deals with this topic. Using pairfam data I can demonstrate that couples with an egalitarian housework distribution have the highest sexual frequency. This correlation exists for traditionally female, as well as for traditionally male housework. Neither sexual scripts, nor exchange seem suitable to explain this correlation. Moreover, I am going to use fixed effects panel regression methods to examine if this correlation also holds true in a longitudinal analysis and to explore the underlying causes of this correlation.

**HALAFOFF, ANNA\*** (Deakin University, [anna.halafoff@deakin.edu.au](mailto:anna.halafoff@deakin.edu.au))

### *Gender, Ordination and Socially Engaged Buddhism in Australia*

While women have played a prominent role in Buddhism in Australia, at least since the 1880s, they have received relatively little scholarly or public attention. These women include prominent nuns, teachers, community leaders, scholars

and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtin and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as 'unconventional', given her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which also generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Brahm and Bhante Sujato have been, and continue to be, at the forefront of promoting gender equity in Buddhism in Australia. This paper examines the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotyping Buddhists, and Buddhism more generally, as passive and pensive, negates Buddhists' commitment to the *Bodhisattva* ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

**HALAWA, MATEUSZ\*** (Polish Academy of Sciences, [mateuszhalawa@gmail.com](mailto:mateuszhalawa@gmail.com))

#### *Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland*

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw households into the currency market, making families de facto carry traders, betting on low LIBOR on the franc and a favorable exchange rate between the Polish zloty and the franc. "Franc people," as they have come to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the "safe haven" of the Swiss franc causing its strong appreciation, the mortgagors in Poland it saw a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: "franc people," or "currency spread generation." Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is "just a veil" to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle of debates about postsocialist transformation, capitalist generation, instabilities of contemporary capitalism, and the legitimacy of speculation. What are the practices of domestic living with multiple currencies engaged through a complex and long-term contract? How do charts, exchange rates, and the LIBOR index become objects of attachment both in intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

**HALD, LENE\*** (KEA Research and Innovation Centre, [lhal@kadm.dk](mailto:lhal@kadm.dk))

#### *Design Experiments As Intervention: How May This be Rendered Visible?*

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multisensory and process based aspects within fashion and identity studies. Furthermore, the paper address how visual, expressive and designerly ways of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual signs: manners of people and material artefacts of culture. (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design's main goals.

Design disciplines (including fashion design) have, throughout their histories, actively engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, critical and social design (Von Busch 2008) - elements that historically have been the core of sociology. This points out some disregarded parallels between visual sociology and the study of fashion, which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visual surface and re-frame these meanings in a visual and designerly manner.

#### *Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards*

Based on a qualitative study of 120 Canadian born and immigrant workers in unionized and non-unionized workplaces, this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to construct levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers' actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the conditions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

### RC40-684.2

**HALL, DEREK\*** (Wilfrid Laurier University, [dehall@wlu.ca](mailto:dehall@wlu.ca))

#### *Where Is Japan in the Global Land Grab Debate?*

Some of the main explanations of the "global land grab" implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world's third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab inventories show few cases originating in Japan, media coverage of Japan's role is scanty, and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in might go relatively unremarked. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSAVANA project in Mozambique) lowers the visibility of Japan's actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan's experience shows that there is much more to "land grabbing" than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

### RC05-108.7

**HALL, JEFFREY\*** (Waseda University, [jeffhall@gmail.com](mailto:jeffhall@gmail.com))

#### *Internet Media and Radical Conservative Activism in Japan: The Battle Against "Anti-Japanese" Enemies*

Focusing on right-wing groups in Japan, this paper addresses how radical conservative activists use internet media to build collective identity and mobilize support for their campaigns. In particular, this paper will examine the online activities of two closely affiliated "grassroots" organizations: *Nihon Bunka Channel Sakura*, an internet broadcaster, and *Ganbare Nippon*, a conservative activist group. Both organizations are involved in a wide range of activist campaigns, such as opposition to "masochistic" history teaching, opposition to voting rights for foreigners, promotion of awareness about "fascist" Chinese foreign policy, and protests against perceived bias in Japanese newspapers and television programs. Through content analysis of the organizations' websites, videos, blog posts, and social media usage, I argue that they have embraced the latest forms of internet communications technology, and are skillfully employing the internet to spread their message. Their online activities have helped create a virtual community of supporters, many of whom also engage in offline forms of activism. In addition, this paper will explore how both organizations encourage the formation of a collective identity that sees Japan as a victim of powerful foreign and domestic "anti-Japanese" entities, and depicts their campaigns a moral struggle for truth and justice.

### RC21-375.2

**HALL, MICHELLE\*** (Queensland University of Technology, [michelle@emplacement.com.au](mailto:michelle@emplacement.com.au))

#### *Throwing Together Experiences of Belonging within Public Space*

This paper examines place-based belonging as a construction of thrown-together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey's (2005) concept of throwntogetherness and Amin's related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through our everyday negotiations of the multiple trajectories of people, objects and symbols, that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unfixed, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based community, to consider how the experience of belonging may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafes, bars, and shopping centres - where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to emplace belonging and create opportunities for diversifying exposure; both of which have the potential to communicate the presence of the community across time and space. In doing so this work seeks to demonstrate the ways that geographic and temporal boundaries of public space are blurred, breached and yet also reinforced, as we throw together place-based experiences of belonging.

### TG07-970.2

**HALL, TOM\*** (Cardiff University, [hallta@cf.ac.uk](mailto:hallta@cf.ac.uk))

#### *City Streets, Dirty People and the Politics of Cleaning*

This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the social (although similarly physical, messy and material) work of 'outreach' and street care. We consider a team of council employees in the city of Cardiff in the UK whose job it is to make repeated tours through the centre of the city, day and night, looking to establish contact with and minister to 'vulnerable' adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside assorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets - picking up litter, emptying the bins and sweeping surfaces clean.

The paper develops two lines of analysis. The first examines the ways in which street cleaners and outreach workers - the latter 'moral' street sweepers, of a sort - employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same dirty, grimy, cluttered, smelly and unsightly places as they do. The paper's second contribution, building on the first, considers the ways in which the expected outcomes required of street cleaners and street carers (outreach workers) are often equated with the appearance and look, and 'feel', of the places and people in, on and with whom they work. This linking of care and upkeep to appearance - as the desired outcome of work that tends to and mends place and people - signals a politics of repair, enacted with 'deviant' groups in frequently dirtied city places.

### RC28-496.4

**HALLDÉN, KARIN\*** (Stockholm University, [karin.hallden@sofi.su.se](mailto:karin.hallden@sofi.su.se))

#### *Gender Differences in Academic Careers in Sweden*

Gender differences to women's disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women's likelihood of becoming professors are smaller compared to men (given PhD obtained in the same year) (Ibid.). Women's greater family responsibilities are often assumed to account for much of the observed labour market gender inequality. Nevertheless, to our knowledge no Swedish study has analyzed the impact of parental leave on academic careers in a systematic way. Hence, the current study uses Swedish register data for all teachers and researchers at Swedish universities and university colleges and matched information on individual and family related characteristics for the time period 1995 to 2011. Event history analysis is employed to analyze the effects of parental leave and temporary parental leave on gender differences in academic careers. The preliminary results show that men have a higher likelihood of becoming professors - which is in line with previous research. However, the gender gap in academic careers gets smaller over time since obtained PhD. Parental leave and temporary parental leave have negative effects on academic careers for both men and women. When studying separately individuals with small children in the household we find that the gender gap in academic careers is significantly larger

for this group compared to the gender gap in academic careers for others academics.

**HALLER, MAX\*** (University of Graz, [max.haller@uni-graz.at](mailto:max.haller@uni-graz.at))

#### *Ethnic Stratification and Income Inequality Around the World*

The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

### RC27-477.1

**HALLER, MAX\*** (University of Graz, [max.haller@uni-graz.at](mailto:max.haller@uni-graz.at))

#### *Sport and Inequality. a Comparative, International Analysis*

Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are other horizontal dimensions more important in determining who is participating in which type of sport and how often? In this presentation these questions will be examined using the 2007 *International Social Survey Programme* (ISSP) on "sport and leisure time". The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as of two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular. Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent a country the lower the relevance of the horizontal dimensions. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

#### *Searching for European Values*

Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100.000 inhabitants) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not in clustered coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching values.

What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogeneous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet?) resulted in a converging of the values of the Europeans. Ideas of multiple or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e.g., Inglehart) seem to be confirmed by such results.

In this paper I focus on European values in 2008 and elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identify one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

*"Why Independent Elderly Prefer to Continue Living in Their Home Even When They Become Frail?"*

Frail old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the Long-Term Care (LTC) Insurance Law).

As a multicultural society, Israel serves as a natural laboratory for identifying similarities and differences between various groups. The present research compared independent Jews and Arabs aged 65+ who live in the community, on various aspects of their preferences for care.

The study included two stages, a quantitative one, in which closed-ended questions were administered to 200 old Jews and Arabs, followed by a qualitative one, in-depth interviewing 20 respondents. The study found that Jews mostly preferred nursing or sheltered homes, whereas Arabs preferred mostly to remain in their homes. However, approximately 40% of both populations preferred "mixed care," staying in their home with a live-in worker or with one of their children.

Three main aspects were identified: a macro-level aspect of social and cultural context (collectivism vs. individualism); a mezzo level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/ home; dignity vs. honor). Although main aspects were in general similar between Jewish and Arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms and the importance of home in late life.

Results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. Providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

*The Disconnexion Between Attitudes to Transport and Policy Choices*

This proposed article explores the following paradox: whilst research on attitudes to transport and travel behaviour in European States often suggests that the negative externalities of the transport system are a significant everyday concern, decision-makers at various levels of government are reluctant to support "anticar" measures that is, binding sustainable transport policies and policy tools such as speed limits, urban tolls or other carbon taxes. This article seeks to further explore this paradox by revisiting the public policy assumption. Political attitudes research, especially that which seeks to identify influences on voting intention, shows that transport is often relegated to a much lower level of priority. Based on successive waves of Eurobarometer surveys, our analysis suggests that attitudes to transport and travel are increasingly shaped by the politics of choice and combination of policy tools. Following the claim made by the so-called policy feedback model, we expect transport policies to shape citizen's attitudes towards institutions, including policies, measured in terms of trust, causal narratives, the punishment of free-ride.

*At Home and Elsewhere: How to Handle Daily Life Growing up with a "Mad Mother" or "Drunk Father"?*

There is a large body of research on children living in families with parental mental illness/substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. The risk and harm perspective is however less suitable to study children as participating agents. There is a gap of knowledge about how these children deal with the different realities of home and away, and at what costs and benefits they adapt to these different contexts. They often have to negotiate between the often secret and shame-laden family context and arenas and situations outside the family. This paper focuses on children and young people's first persons accounts on growing up with parental mental illness or substance abuse by analysing children's own experience. The paper concludes with the suggestion that to grasp these children and young people's lived-experiences the research has to look outside the families front door and include children's activities in school, leisure and community, and focus on the active and challeng-

ing identity work these young people go through in trying to keep their homes together while developing a sense of selves.

*New Risks of Youth Exclusion. Nordic Policy Responses in a European Perspective*

Including youth in the labour market is a major challenge facing many European countries, including the Nordic countries. Since 2007 many European countries have witnessed an increase in the rate of young adults neither in education, training nor employment (NEET) and an increase in the number of young adults registered as 'unemployed'. Despite efforts at adopting counter-offensives to change the negative economic conjuncture through new measures to promote education, training and inclusion in the labour market the rate of inactive young adults has increased the last decade in Europe. Possibly we also see the impact of more long-term trends and structural changes making transitions from school to employment more difficult or variable.

This paper discusses how the Nordic governments have responded to diversity in the youth population and whether country differences in policy measures may account for the differences in unemployment and NEET rates in the Nordic countries. The paper demonstrates that the Nordic countries have responded differently to the concerns about the public expenditures and financial disincentives for the individual to participate in the labour market, the need for an up-to-date and relevant educational and vocational training services and social regulation of the market to ensure an inclusive labour market.

The paper argues that gender, ethnicity and disability represent social categories of high policy relevance for understanding the present challenges to the Nordic welfare states, including their efforts to promote the inclusion of new generations of men and women in the workforce. While the Nordic countries have been at the forefront in adopting policies to promote gender equality the Nordic countries have been more reluctant to adopt policies to ensure equal opportunities independent of disability and ethnic origin. The paper identifies the challenges for the Nordic countries and concludes by identifying the policy lessons for non-Nordic countries.

*Professions and Multilateral Organization: OECD*

Professions and multilateral organizations.

As professions globalize by creating their own international organizations, they also diversify and become more hierarchical. In this paper I focus on how professions are becoming more hierarchical through the support and prestige of multilateral organizations. The case is OECD, whose broad influence makes itself felt also in areas outside its kernel economic activities is in focus. OECD gives status to some experts and professions as the cost of others.

The paper discusses how the OECD/profession - link elevates some parts of the profession to position of authority beyond the status of the general professions due to the status of the solutions and choices of OECD. And on the other hand: Are there certain combination of education, work carriers and professional networks that manage to promote themselves through OECD? If that is the case, what consequences does this have for the professions in general as these professions now become more and more globalized?

The focus is in particular on the economist, accountants, agronomists and environmental science.

*Causal Relationship Between the Feeling of Alienation and Anti-Foreignism in Contemporary Japan*

In the last decade, anti-foreignism has emerged gradually in Japan. Grassroots right-wing organizations such as "Zaitokukai" have held anti-Korean demonstrations repeatedly. Furthermore, we can easily find many postings and articles on the internet which have hostilities toward foreign nationals and left-wings. They claim that the people who have a liberal view on migration and advocate for immigrants are "traitor" to Japan and have intended to damage Japanese national interest. Although only a few people participate in these movements, quite a number of people may share the feeling of intolerance toward vulnerable and minority groups. For example, a national diet member Satsuki Katayama waged a campaign to investigate the recipient of welfare public assistance and expressed

the opinion via twitter that welfare public assistance for foreign residents should be cut off. Why has this trend emerged during recent years in Japan? Who support these speeches of anti-foreignism?

Yasuda (2011) pointed out that the people who support "Zaitokukai" have a feeling of alienation from societies and participate in activities to gain the esteem from others. On the other hand, Higuchi (2012) claimed that "Zaitokukai" have recruited "ordinary" people who have a patriotic feeling through the internet, because there are only a few organizations which fulfill the demand of conservative people. However, these discussions are based only on the qualitative research of "Zaitokukai" members and it is difficult to generalize about characteristics beyond this particular group.

The aim of this presentation is to clarify the relationship between a feeling of alienation and anti-foreignism in Japanese ordinary people. For this purpose, I analyze the data from nationwide surveys conducted in 2009 and 2013 using the method of causal analysis and structural equation modeling.

#### *Late-Alain Touraine's Theory of Modernity, New Subjects and Cultural Movements: Toward Theorizing Social Transformations in Contemporary Asia*

The purpose of this presentation is to theorize social transformations in contemporary Asia from the perspective of late-Touraine's theory. The "compressed modernity" theory (Chang) is often used, which is based on the theory of "radicalization of modernity" (Giddens, Beck) that focuses on the institutional level of modernity. However, the latter is partly criticized by the theories of "multiple modernities" (Arnason) and Touraine, because the cultural orientations characteristic of modernity are embodied in institutions, but not reducible to them. Its founding gesture is a break with the widespread assumptions that there is one main pattern of modernization and modernity.

This presentation explores the insights that emerge from the exploration of Touraine's major works after 1990s that are highly appreciated by the theorists of multiple modernities. Touraine does not justify modernity institutionally and does not anchor it in the market economy, the government administration, or democratic organs. Instead it brings other regions of the world into the debate over modernity.

Touraine maintains that modernity was characterized from the beginning by the two poles of reason and the resisting subject. In a world best defined by multiple process of change, there exist no other means of combining economic strategies and cultural identities than through the individual. It is not the individual as consumer or member of various organizations, and even less as citizen, but the individual as subject, in the desire for individuation, which constitutes the only principle able to mediate between the instrumental world and the world of identity: the collective situations that protect the uniqueness and individuality of individuals called cultural movements.

These conceptualizations can be applied to Asian societies, however to that end it should be developed into institutional analysis based on a new theoretical model from the theories of welfare regime, new social risks, social/cultural movements, and social governance.

#### *Contested Rights of the Cross-National Family: Recent Cases of International Parental Child Abduction Between Japan and the United States*

This paper aims to explore conflicting rights claims of cross-national family members. Based on multinational case studies of recent international parental child abductions involving Japan and the US, it discusses the ways in which the realization of the basic human rights of each party of a cross-national family (father, migrant mother and child) involves fundamental challenges to the achievement of social justice in the absence of a universal legal system. In May 2013, the Japanese Diet passed a bill approving Japan's accession to the *Hague Convention on the Civil Aspects of International Child Abduction*. Signatories to the Convention such as the US had for many years criticized Japan for showing little interest in the increasing number of cases of international parental child abduction by Japanese nationals. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage. In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child's right of access to both parents and violate the Convention rule against unilateral removal of the child from their habitual residence. Japan's accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter. However, in this paper I argue that in order to improve global social justice in rela-

tion to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.

#### *Taking Action for the Recognition of a Lay Expertise over the Body : A Narrative Based Activism ? the Case of Breast Cancer Patients' Organisations*

For thirty years, biomedicine is characterized by the development of clinical, organizational and legal structures that promote the "narrative based medicine". These structures are expected to strengthen the "humanization of care" and the "patient participation in decision-making", but they also inherently contain a risk of strengthening the social control of the patient, especially in cases where these narratives are used to assess the legitimacy of the patient's demand for a medical intervention. According to Memmi (2003), a consequence of the development of the "narrative based medicine" for the therapeutic activism is the focus on issues related to the body, evidenced by the emergence of feminist and LGBTQ movements in the early 1970s and, more recently, the mobilization against the AIDS epidemic and the increase of patients' organisations. Therefore, how to think, in the same analytical framework, the incentives to produce subjective narratives of the body in the privacy of the medical practice and the public claims for recognition of a lay expertise over the body from the patient's organisations? My PHD thesis focuses on the shaping of an experiential expertise in and by the French-Belgian breast cancer patient's organisations, a pathology strongly subject to the incentive to produce narratives because of the impairment to the performative femininity. In this paper, I propose on the one hand, a reflection on the theoretical and methodological challenges that seem to be facing the researcher when (s)he studies the political resistance in this medical context and, on the other hand, based on examples from my fieldwork, an illustration of how these activists frame their critique of the system through their personal awareness of the illness experience, transforming this awareness into a "politicized collective illness identity" (Brown et al. 2004) holding legitimacy from the discursive operation of generalization - from the singularity to the collective experience.

#### *Linking Middle Class to Political Stability in Ghana*

The concept "Middle Class" conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world.

Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960's, 1970s and 1980s. But since the return to democratic rule in 1992, it has steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate.

This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gauge out who these middle class are? What classify them as middle class? To borrow Bourdieu's social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?

#### *La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro*

Los procesos formativos de los doctorandos son heterogéneos, la socialización se deriva de las comunidades a las que pertenecen. La variación en los mecanismos y modalidades se relacionan con los procesos de formación, cognición y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es de un cierto shock con la realidad, dificultad que se va superando según se logre un proceso de enculturación, mediante el cual se adquieren habilidades tácitas de competencia científica a través de ensayo y error hasta lograr la independencia para la publicación (Delamont y Atkinson:2001). El propósito es abonar conocimiento sobre el vínculo de la cadena entre el último año del doctorado y su inserción en la comunidad científica (Laudel y Gläser, 2007) en bioquímica y ciencias sociales porque varían las tareas y las formas en las que publican resultados, aunque tengan en común transitar por procesos cognitivos, formativos y jugar roles en la construcción de sus rutas para convertirse en investigadores. Se parte de que en estos programas de doctorado se tiene, en distintos grados, reconocimiento del campo de conocimiento, consolidación de la disciplina de formación, prestigio institucional y liderazgo del grupo de referencia; factores que aumentan la probabilidad de que sus doctores

devengan en científicos. Se presentan resultados parciales sobre las entrevistas de los egresados de estas disciplinas sobre su participación e integración en las actividades propias de la comunidad científica; se analiza la reconstrucción de sus experiencias en la formación doctoral y las posiciones que ocupan en los ámbitos de inserción laboral que reflejan su formación como científicos; finalmente, se reflexiona sobre el futuro de la socialización para la emergencia del científico.

#### *Risk Perception and Risk Governance in East Asia*

The aim of this paper is to examine salient characteristics of the public perception of risks in Beijing, Seoul, and Tokyo as capital cities of three major countries of East Asia and to explore multiple pathways to reflexive risk governance in East Asia as an important condition for second modern transformation. Based on the 2012 survey data of citizens from Beijing, Seoul, and Tokyo over the issues of risk society, risk governance, the future of East Asia, and second modernity, the authors will show 1) the overall consensus among East Asian citizens about the consequences of modernization and the future development; 2) the commonalities and differences in the public perception of risks in three capital cities; 3) the major factors which may shape a concrete paradigm of risk governance in each country. Reflexive risk governance at issue is second-modern in that state alone can no longer be able to adequately perceive and manage complex risks citizens face today, requiring a partnership though its forms are various. The authors will thus examine the interactive patterns among government, experts, NGOs, and citizens in forming risk governance, drawing particular attention to the evolving procedures in which the bottom-up inputs from citizens and the extent of institutional responsiveness are linked together to produce efficient policy outcomes. The authors will argue that it is necessary for East Asia to delineate and combine two dimensions of risk governance, that is, local and cosmopolitan, depending on the types of risks to be regulated. In so doing, the authors want to demonstrate the overall commonalities of risk governance in East Asia, on the one hand, and specific characteristics involved in each country, on the other.

#### *Transitional Justice and East Asian Community: Two Patterns of Civil Engagement*

This paper deals with two salient patterns of civil engagement in South Korea and China as a collective response, first, to the lack of transitional justice on the part of Japan concerning war crimes committed by its imperial army and its colonial rule and to the difficulties in forming East Asian community in its genuine sense as we can see in European Union. Confronted with, and challenged by, this unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delineate two contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among citizens of East Asian countries rejecting a state-centered and politically motivated nationalist drives. The authors argue that the advance in transitional justice in Japan is an important condition for East Asian community. At the same time, the authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese civilian victims of the war (created by atom bomb, for instance) will enhance the possibility of mutual understanding and solidarity among citizens and eventually overcoming the ghost of the past and establishing East Asian community.

#### *Incorporation of Urban Differences in the Tokyo Metropolitan Complex*

Differences mark an essential element of urbanity. In the case of Tôkyô, differences seem to appear beyond significant income disparity, migrant or ethnic minorities. On the local scale differences create a finely grained, heterogeneous urban condition. This contribution asks, what are the modes and practice leading to an incorporation of these particular social and cultural elements, which give a locality certain irreplaceable urban qualities, into the dominant logics of space production.

I will investigate the process of incorporation by looking at two case studies: Shimokitazawa and Kitamoto. In Shimokitazawa accumulated efforts of citizens

have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in an incremental and bottom-up process have been turned into an attraction for people beyond Shimokitazawa and a mainstream compatible youth culture, whereby the space is being deprived of its experienced dimension. Kitamoto in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tōkyō is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assets, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at the incorporation of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

### *Islamic Environmental Activism in the United States and United Kingdom*

Social Movement theorists have, until recently, accepted after Marx that religion is the 'opiate of the masses' and inherently opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically 'Islamic' environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a concern for social justice. However, their underlying ideology is grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God's representative on earth; the environment as a 'sign' from God in perfect, divinely ordained balance; and the necessity of following Islamic teachings in everyday life. The secular environmental movement and its organizations have heavily influenced IEOs, both in the framing of environmental crises, and in terms of their organizational structure and forms of action. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

[carmel.hannan@ul.ie](mailto:carmel.hannan@ul.ie))

### *Growing up in a One-Parent Family: Families and Child Wellbeing*

#### Background

A large body of international literature has documented that children who grow up living with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The Irish case is particularly interesting given the selective nature of non-marriage.

#### Methods

This article extends the literature in this area by employing propensity score matching using data from the first wave of the *Growing up in Ireland child* cohort study. We compare a range of child and family outcomes between a series of treatment groups (cohabiting parents, never-married one-parent families and step families) and a control group of married biological parents using semi-parametric estimators.

#### Results

Marriage has significant positive effects on child health outcomes, educational scores and psychological wellbeing. Selection effects however account for a non-trivial proportion of the differences in child outcomes at age 9 across families but hidden bias remains an important issue. The main finding is that the socio-economic disadvantages inherent in childbearing outside of marriage account for a non-trivial portion of the effects of family type.

#### Conclusions

The selection argument assessed in this paper maintains that childbearing outside of marriage does not necessarily cause negative consequences for child development. The majority of Irish mothers who give birth outside a traditional married setting come from impoverished backgrounds so that much of the ad-

verse consequences on child development are an artefact of pre-existing socio-economic disadvantages resultant in different lifestyles, including factors such as rates of smoking during pregnancy and lower rates of breastfeeding.

### *Comparing the Governance of Novel Products and Processes of Biotechnology*

The emergence of novel products and processes of biotechnology in medicine, industry and agriculture has been accompanied by promises of healthier, safer and more productive lives and societies. However, biotechnology has also served as cause and catalyst of social controversy about the physical safety and social desirability of novel technologies. Such controversies have put the principles, institutions and instruments of governance, which has conventionally guided the interactions between science and society, under pressure. While researchers in science and technology studies (STS) have done extensive work on the substance and processes of such controversies, they have devoted less effort to link their work to the broader tradition in political science and political sociology, which analyses more general principles and varieties of governance in modern societies.

This paper presents an attempt to start to fill this gap and develop a conceptual framework for comparing and analysing new and emerging modes of governance affiliated with biotechnology in the light of more general approaches to governance. We aim for a framework that can facilitate comparative inquiries and learning across different contexts and applications, e.g. biomedical and agricultural applications, and across different polities and policy domains, e.g. different regional, national and supranational settings.

We introduce five different dimensions of governance, which we discuss with empirical illustrations: 1) the purpose of governance, 2) the drivers of governance change, 3) temporalities of governance, 4) extension of the modes of governance, and 5) sources of acceptance/legitimacy.

### *Punitive Trends in Germany: What Role Does the Media Play?*

In criminology there has been an active discussion about rising punitiveness in the United States and other Western societies (e.g. Garland, Wacquant). The present contribution aims to examine the factors that drive individual punitiveness. Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

This is done in a twofold way. Firstly, we look at patterns of media consumption and punitiveness at the micro level. The empirical analyses are based on three waves of a nationwide representative survey conducted in Germany in the years 2004, 2006 and 2010 by the Criminological Research Institute of Lower Saxony. Secondly, a content analysis of German newspapers assesses the way crime and criminals are represented in the media and to what extent this has changed over time (e.g. if newspapers evoke more empathy for victims). Therefore we analyzed articles on crime of three different types of newspapers (quality press, local press, yellow press) for the years preceeding the surveys (2003, 2005, 2009). This strategy allows examining how trends in punitivity can be explained by changes in individual media consumption patterns and by changes in the quality of media coverage.

The results confirm the impact of the media on punitivity. Other factors on the macro level, for instance trends in the crime rates, which also may drive punitive attitudes will be discussed.

### *From Enclaves to Citadels: A Dynamic and Contested Transformation of Informal Settlements in Urban China*

The economic reforms of the late seventies led to a massive urban expansion in China as villages were swallowed by the urban sprawl. The most striking example is Shenzhen, an area with 300,000 inhabitants grew into a metropolis of 14 million people over a couple of decades. Today only 3 million are formal residents of the city, and the rest of the people without local residency are excluded from subsidized amenities like education, health care and social housing. Most of the people that move into the city find accommodation in one of the 320 villages that have become embedded in the urban fabric. These urban villages provide rough-

ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests social and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led redevelopments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to fall on the same redevelopment path.

#### *Unequal Housing Choices and the Residential Segregation in Urban China*

The growth and transformation of cities in China continue to absorb migrants from both ends of the economic spectrum, giving rise to socially mixed cities. Concurrent is the elevated level of residential segregation owing to new forms of enclave urbanism such as gated communities and urban villages. Factors including historical legacy, land institution and property-led development have contributed to a divided residential pattern at the neighbourhood level, but the divisions are not necessarily as significant at larger spatial units. This paper, by analysing the distribution of both urban population and housing provision in Shenzhen, explicitly unravels the spatial logic of the divided pattern of the population. As expected, migrants and local *hukou* holders are largely segregated by different housing choices; however, due to the relatively even distribution of a vast amount of migrant enclaves, at the sub-district level a rather low degree of segregation is manifest. This residential pattern is salutary as it maintains a spatially equitable setting which enables deprived groups to reside within short catchment areas of jobs and amenities. Nevertheless, urban renewal programmes that target at urban villages and old neighbourhoods are likely to jeopardise the somewhat reasonable composition and distribution of housing choices, aggravating segregation on a large spatial scale.

#### *Left and Right, and Organic and Critical: Understanding the Politics of China's Intellectuals*

In today's China, intellectuals continue to play important roles in social, economic, and political development. Much has been done on the roles of the public intellectuals in China in the reform era (Cheek 2006; Goldman 1994, 1999; Edward Gu and Merle Goldman 2004; Zhidong Hao 2003; Kelly 2006), but the intellectual scene is developing so fast with increasingly clearer demarcations between the left and right that it remains an interesting and daunting challenge to describe more accurately what those roles are and why they matter. This article is one of those efforts towards a better understanding of China's intellectuals and their political roles.

In this article, I will first define the term "intellectuals" and their political positions and roles to play, or their subjectivities, in terms of organic, critical, and professional. Then I will define the left and right intellectuals. Thirdly, I will examine contemporary Chinese intellectuals' political positions. We will find that the left intellectuals are more likely to be organic to the government, and the right intellectuals are more likely to be critical of it. Fourthly, I will emphasize the complexity, subjectivity, and dynamics of intellectual politics in terms of the changeability of their political roles, the organic intellectuals' living for or off politics, and the commonality between the left and right intellectuals. Finally I will speculate on the possible future development of intellectual politics and their implications for China's democratization.

The method of analysis in the paper is typological, i.e., I am categorizing intellectuals into left and right, and organic and critical. The representative texts I am analyzing to substantiate the typologies are mainly from the Internet and the traditional media because this is where the battle between the left (organic) and the right (critical) over the politics of the government is mainly waged.

**HARA, NORIKO\*** (Indiana University, [nhara@indiana.edu](mailto:nhara@indiana.edu))

#### *Contentious Knowledge In Online Environments*

This paper addresses "co-production of knowledge" (Jasanoff, 2004) in the context of social media. With the prevalence of Web 2.0 applications, such as Wikipedia and Twitter, laypeople are more often contributing to knowledge production, which ranges from sharing travel tips to product assessment (e.g., Allen, 2010).

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Gieryn, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in "scientific" knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no "correct" knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates online discussions in regard to Wikipedia entries on the Fukushima Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thiomersal). Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provides an online discussion space for each article. This offers a rich socio-technical milieu for examining how scientific knowledge is negotiated in an open online environment. This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

#### *Understanding Boundaries For Knowledge Sharing In Online Communities*

Online knowledge sharing activities are flourishing with the advent of social media. Websites such as Facebook, Twitter, and Wikipedia facilitate knowledge sharing in online communities that extend beyond the constraints of existing organizational boundaries (Qualman 2011). Since the focus of prior research has generally been limited to knowledge sharing within organizations (e.g., Wang & Noe, 2010), it is imperative to better understand its practice on Web 2.0 platforms and in these online communities (Allen 2010). As Vakkayil (2012) contends, the concept of boundaries is informative for understanding knowledge sharing and creation among heterogeneous users with diverse cultural, organizational, socio-economic and spatial backgrounds. In organizational settings, boundaries, such as physical, cognitive, social, and political (e.g., Carlile, 2004), may privilege certain participants, motivations, and modes of participation. However, these boundaries may function quite differently in Web 2.0 environments outside these organizational settings. Although it becomes easier and faster to share knowledge and collaborate online, few studies have investigated how boundaries and boundary-crossing in Web 2.0 environments affect online collaboration, knowledge sharing, and participation. This paper aims to explore the usefulness of employing existing boundary frameworks to facilitate knowledge sharing and collaboration. To test and modify existing theoretical frameworks of boundaries we analyzed Wikipedia entries about the Japanese nuclear power plant accident triggered by the Tōhoku earthquake in March 2011. This event attracted attention from around the world and is useful for our research because the case involves multiple boundaries and various processes of boundary-crossing. Based on the data and the literature we propose a refined framework for boundaries and boundary-crossing, and by doing so this paper advances our understanding of boundaries for knowledge sharing in online communities and identifies how these boundaries facilitate or hinder equal participation.

#### *Japan As a Shrinking Society: What Is the Condition for Recovering the Replacement Level of Fertility?*

This paper focuses on the phenomenon of shrinking society emerging in Japan and its sociological meanings, such as the possible historical consequence of demographic transition from high birth and death rates to low ones. First, we used the Historical Statistics of Japan (Statistics Bureau and the Director General for Policy Planning of Japan, 2006) and Population Projections for Japan (National Institute of Population and Social Security Research, January 2012) to show the past and future development of the dependency ratio from 1891 to 2100. Second, utilizing the life table population and Net Reproduction Rate (NRR), we observed separately the effects of the increasing life expectancy and declining fertility on the dependency ratio. Finally, we analyzed the historical relations among women's survival rates at reproductive age, the theoretical fertility rate for maintaining the reproductive level (NRR = 1), and the recorded Total Fertility Rate (TFR). Important findings are as follows. (1) The effects of the rising longevity on the dependency ratios were stable until the average life expectancy reached around 70 years. When women's survival rates at reproductive age reached almost the maximum level near 100%, the dependency ratio began to grow swiftly according to the extension of life expectancy. (2) Historical observation showed TFR as adapting to the theoretical level of fertility (NRR = 1) at a certain time lag and corresponding

with women's survival rates at reproductive age. (3) For women, their expanding lifespan and survival rates at reproductive age could have influenced reproductive decision making to minimize the risk of childbearing; even if the theoretical fertility rate meets the reproductive level, women's views may remain unchanged. In Japan, fertility is lower than the replacement level because women's cost-benefit imbalance for childbearing is too high.

#### *Social Capital of Seven Countries/Areas in East Asia: From the Questionnaire Approach*

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about 'social capital' both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawasaki City in Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that 'social capital' might differ from the degree of economic development and urbanization. We define 'social capital' as the index of four components; social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet.

We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but 'social capital' differs in urban and rural areas, families, communities, and so on. This may also suggest that 'social capital' differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis.

We have to carefully treat the outcome of the questionnaire, because the degree of 'social capital' does not imply the superiority or inferiority, nor the positive or negative. The difference of 'social capital' just declares the type of social relationship and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

**HARAGUCHI, YAYOI\*** (Ibaraki University, [yayoih@mx.ibaraki.ac.jp](mailto:yayoih@mx.ibaraki.ac.jp))

#### *Civil Movements in Low-Recognized Disaster Affected Areas*

We discuss how civil movements have developed to protect children from radiation pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as "Affected Areas" by the government, although local residents have sought to gain institutional recognition of the damage due to nuclear accidents. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAA).

It is important to pay attention to LRDAAs in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institutional recognition, residents in LRDAAs have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushima. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislatures, and the government of Japan. We analyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out that the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government's attitude toward citizen groups from oppositional to cooperative.

#### *Toward the Inclusive Resilience for Both Individuals and Community*

This presentation focuses on the different kinds of social conflicts between local people/individuals and the communities/local governments arising in the process of disaster rebuilding. It seems that the cases of Hurricane Katrina and Fukushima Nuclear Power Plant Accidents are so much different, but there are a few similarities between two cases. One of them is contradiction between community resilience and individual resilience.

First, we would like to consider the case, for instance, that the poor and social minority have been excluded in the process of community rebuilding, while community prosperity are achieved to some extent and community resiliency increases in the aftermath of disaster.

The city of New Orleans after Hurricane Katrina could be considered to be one of these cases. Since Hurricane Katrina, the city of New Orleans has been seemingly better off in attracting new industry and younger generation, although it lost its overall population than 2005. Over the same period, the population of African Americans is decreased the most among other racial and ethnic populations. Under New Urbanism, the role of public sector in education system, the medical and welfare services, and housing services have been drastically decreased or extinct.

In case of Fukushima, the local governments seem to have a strong and inherent demand of restoring the community as soon as possible, while some families, especially those with small children, may choose not to return with concern of health risk due to radioactive contamination. The more families choose to stay outside the hometown for their own safety, the less resilient the community will be. Contradiction between community resilience and individual resilience could happen in both natural disasters and technological disasters. We will discuss two cases in depth at the presentation.

#### *Conspiracists' Longings for a Pure Science*

##### Conspiracists' Longings for a Pure Science

Conspiracy theories have in recent decades become a popular and widespread cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a commonality can be found in the challenge they pose to the epistemic authority of science. The social sciences have, however, simply conceived of conspiracy theories as bad science, making a parody out of the respectable scientific tradition, but in their moral condemnations these scholars leave unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch "conspiracy milieu" to explore what conspiracy theorists claim about science, scientists and the knowledge they produce. On the most abstract level is modern science critiqued for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge scientific experts produce which in practice is not living up to its a-social ideal of objectivity and disinterestedness. The last strand of critiques then centers around the powerful social position scientific experts have established in relation to outsiders that subordinate laymen and protect their in-group. In sum, what these critiques articulate is a (particular) public understanding of science. Despite a strong critique of science, conspiracy theorists are not *against* science, but hold a rather ambivalent position: science is at once sacralized for its intentions but profaned for its manifestations. I conclude by showing how these critiques resonate with both with pre- and post-modern scientific understandings of science, and argue how the frailty of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary western conspiracy theories.

#### *Strategy and Identity in the "Conspiracy Milieu"*

##### Strategy and Identity in the "Conspiracy Milieu"

Conspiracy theories have in recent decades become a popular cultural phenomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of "conspiracy theorists" in rather aberrant terms: they are paranoid believers of an outdated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who these people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch "conspiracy milieu" to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a commonality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these

changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order, practices therefore take place on the barricades. The mediators at last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

#### *Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work*

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work (Rosso, Dekas & Wrzesniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work.

The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations. Four distinct types of ascription of meaning emerged from the data: 1) reference to basic identification with work, 2) reference to meaningful aspects of work, 3) reference to the purpose of work for a greater good, 4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

#### *Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society*

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the "good life" and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyles include "Lifestyles of Health and Sustainability" (LOHAS) and "Lifestyles of Voluntary Simplicity" (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that those involved with these new lifestyle models may also have a notably different orientation to work.

We investigate the understanding of work held and articulated by members of these new lifestyle groups. We reconstruct the understanding of work using the responses from four narrative interviews, two from representatives of the LOHAS lifestyle and two from the LOVOS, collected in Germany in 2012 and 2013. These four cases are a selection from a larger sample of 21 job-changers who described for us their employment biographies. The central analytical categories of the research are health, sustainability, work-life balance, and simplicity. Our results show that the understanding of work as expressed by these new lifestyle representatives deviate strongly from common understandings of "normal work" or "organizational careers." The respondents report that it's very important that their work mirrors their broader values on the dimensions of self-sufficiency, deciding for themselves rather than being driven by outside forces and demands, health-consciousness, and meaningfulness.

**HARDY, JANE\*** (University of Hertfordshire, [j.a.hardy@herts.ac.uk](mailto:j.a.hardy@herts.ac.uk))

#### *China in the Global Division of Labour: Contradictions and Class Relations*

By examining the contradictions in China's model of growth and the shifting dynamics of its place in the global division of labour, the aim of this paper is to understand the tensions in the class relations that underpin the Chinese 'success story'. It will provide the contextual underpinnings necessary for understanding the environment in which increasingly repressive Chinese labour is located. The paper will argue that China's integration with global capitalism and global circuits of capital, particularly from the early 1990s, has been a major source of its meteoric growth, but has also sharply increased its economic vulnerability as manifested in its exposure during the 2008 crisis. High rates of growth, driven by unprecedented accumulation that outstrips private consumption, has increased China's reliance on exports, particularly to the core capitalist economies of the United States and the European Union. Reflecting fears that this scale of accumulation is not sustainable, the government's 12<sup>th</sup> Five Year Plan (2011 to 2015) called for slower growth and rebalancing from investment to consumption, in part at least through higher wages. Such an approach, however, presents a threat to China's comparative advantage based on low wages and super-exploitation. Some regions and sectors are already under strain and production has moved within China or to other cheaper economies. In addition, the combined and uneven nature of China's development, sectorally and regionally, underpins the fractured interests of the ruling class. Finally, the presentation will point to the massive infusion of finance used to 'soften' the outcome of the global crisis that has produced property bubbles, which are further fuelling inequality and discontent.

**HARGREAVES, STUART\*** (The Chinese University of Hong Kong, [stuart.hargreaves@cuhk.edu.hk](mailto:stuart.hargreaves@cuhk.edu.hk))

#### *Geo-Immersive Technologies & the Male Gaze*

Geo-immersive technologies are a set of nascent services that digitally record public spaces and then make the imagery accessible to anyone with an Internet connection. The best known is perhaps Google's StreetView service. This paper argues that by transmitting images of public spaces to anonymous groups of billions, far removed both spatially and temporally from the site of the initial public behaviour, these technologies form a new kind of public street surveillance.

This paper shows that certain images captured by such technologies are increasingly harvested by anonymous users, who seek out photographs they find notable and re-share them. Such 'notable' images frequently include images of topless women, or women sunbathing, or women merely dressed in a fashion the anonymous crowd feels is worthy of comment. This paper argues that geo-immersive surveillance thereby replicates the male gaze in a manner that has adverse impacts for the claims of a range of equity-seeking groups, particularly but not exclusively women.

In most jurisdictions, such photography is nonetheless largely unregulated. Individuals are typically treated as having no reasonable expectation of privacy while in public and thus are granted no legal recourse to prevent such "street photography" or seek ex post facto remedy. At the same time, Google and other service providers make no efforts to enforce copyright over the imagery they publish, and thus certain photographs tend to rapidly go 'viral', increasing their potential to create harm.

This paper suggests that this situation demands regulatory change. The balance between privacy claims in public and legitimate claims for freedom of expression through 'street photography' must be better struck in a way that acknowledges the differing ways in which surveillance is experienced by different groups, who may be more susceptible to surveillance-related harms.

**AKERBLOM, ANNIKA** (Malmö University)

#### *Academic Discourse Meets Praxis Discourse in Group Tutoring*

The aim of this study is to explore the meeting of academic and praxis discourses in group tutoring of undergraduate's thesis. The point of departure is that the quality of the theses, at undergraduate and master level, at the teacher education programs has been questioned by The Swedish National Agency for Higher Education (2006). The main critic concerns lack of academic qualities, such as failing theoretical awareness, weak analysis, normativity and lack of critical writing and thinking. The teacher education program is, however, primarily defined as a professional training program meaning that students to a large extent are focusing on the practical aspects of the profession. Two differing discourses can thus be identified, and this contradiction is explored by investigating the difference between students' and the supervisor's perceptions of the purpose of the thesis writing. The results from the analysis, of the transcribed extracts of

verbal interaction, show that the *academic code* is used mainly by the tutor and the *praxis code* by the students. The study focuses on the meeting between these codes/discourses in relation to supervision and is inspired by the code theory of Basil Bernstein, where "codes" are used to describe regulative principles, realized through different possibilities of selection and combination (Atkinson, 1985). Language is also used as a means to understand social relationships, structures and processes. It is noticeable that, within these codes, the same expressions were used to great extent, but with different meanings and in different contexts.

### RC53-850.3

**HARJU, ANNE\*** (Malmö University, [anne.harju@mah.se](mailto:anne.harju@mah.se))

#### *Children's Reproduction of Power Relations in the City*

This study investigates power relations in a small city in southern Sweden. It is a city where there have been radical social changes in the population structure due to a major inflow of immigrants. The social situation can best be described as filled with tension between different groups. In relation to the tension there is a strong and dominant narrative about "us" and "them", relating to the categories "Swedes" and "immigrants". The study has two aims in relation to this narrative. One is to explore how it is used to reproduce power relations in the city. The second aim is to investigate how children actively use and reformulate the narrative and the power relations within it.

The point of departure is the assumption that human beings are embedded in figurations (families, social class, ethnic groups, nations etc.) containing different power ratios that are transferred from one generation to another (Elias 2009). Socialization is thus central in the transmission of power ratios, as children acquire adult standards of behavior and social norms. However, children are from, childhood sociology's point of view, also active agents involved in creating and influencing their own and others' lives, which implies that socialization is not equal to adaptation and internalization, but also to children's negotiation, sharing and creation of culture (Allison, Jenks and Prout 1998, Corsaro 2005). In the study the children's contribution to reproduction and reformulation, in relation to the narrative of "us" and "them", is in line with William Corsaro's (2005) concept of interpretative reproduction. The term *interpretative* captures children's participation in their own unique peer cultures by creatively taking information from the adult world to address their own peer concerns, while the term *reproduction* captures the idea that children not only internalize society and culture, but actively contribute to cultural production and change.

#### *Educational Institutions As Mating Markets*

Educational institutions are important settings in which future partners meet and where inequalities in the current and next generation formed. Yet there is little research on educational institutions as mating markets, partly due to limitations with existing data. In this study, we use population register data to follow the educational histories of an entire birth cohort of Swedes, born in 1970. We are able to identify the educational institutions the members of this cohort attended, and assess whether their partners overlapped in these institutions. We focus on high schools (Gymnasium) and universities. As the outcome, we focus on first births and analyze assortative mating through the characteristics of the parents. We estimate which share of our cohort members overlapped with ("met") their partner in high school or university and use contextual level information on the structure and social compositions of the high schools and universities attended to analyze the probability of meeting one's partner in these institutions, and on the probability of assortative mating according to age, ethnicity, and class background. Our preliminary results suggest that up to 40 % of tertiary educationally homogamous couples have met in university, and that the social and demographic compositions of both high schools and universities shape meeting chances and mating along demographic and social lines.

#### *Newspaper Messages about Public and Private Health-Care Services in Australia: The Entrenchment of Unequal Choice*

Media representations of health care can perpetuate stereotypes about public and private systems that unequally shape consumers' perceptions and enactment of health-care choice. For instance, recent research about Australians' (dis) trust of public and private health care suggests that participants' concerns about

long public hospital waiting lists echo prominent media messages, which might in turn contribute to the fact that one in two Australians supplement Medicare (the universal public health insurance scheme) with private insurance. As part of a larger study about health-care choice, we seek to understand ways in which the media represent both public and private health services, and their role in structuring different 'choice' pathways through Australia's health-care maze.

This paper presents results from an analysis of newspaper reporting of public and private health care. The sample consists of newspaper articles and letters dealing with public and private health services, private insurance and Medicare from 'broadsheet' and 'tabloid' newspapers in three Australian states (2011-13). These texts were coded for positive, negative and neutral messages about public and private care and examined for representations of choice, trust and responsibility. In line with the theoretical framework for our study, we also focused on articles that presented different aspects of 'health-care capital' – economic, social, cultural, symbolic or geographic – as influencing consumers' capacity for health-care choice. The analysis reveals variation by state, newspaper, and over time.

We found that articles in the populist tabloid papers are dominated by negative, frightening messages about the "crisis" in public health systems and, to a lesser extent, the threat of rising costs of private health insurance. The 'quality' broadsheets present more balanced accounts, with articles typically combining positive, negative and neutral messages. Media representations thus contribute to the differential structuring of health-care choice, potentially compromising quality of care and exacerbating inequality.

**HARMAN, VICKI\*** (Royal Holloway University of London,

[v.harman@rhul.ac.uk](mailto:v.harman@rhul.ac.uk))

#### *Ballroom and Latin American Dancing, Gender and Emotions*

Ballroom and Latin American dancing has a long history and is practised across generations. It also has distinctive roles for men and women, traditionally with the man leading (setting the timing and deciding the figures to be danced) and the woman following (performing the figures indicated by her partner). Drawing on ethnographic research at dancing competitions in England, this paper considers the manifestation of emotions in Ballroom and Latin American dancing. It argues that competitive Ballroom dancing can be regarded as a form of serious leisure where a complex mix of emotions are experienced, including excitement, anticipation, disappointment and reconciliation. Significantly, for its participants Ballroom dancing offers both 'thrills' (sharply exciting, memorable events) and 'flow' (see Stebbins, 2008). At the same time, the management of emotions can be seen as key to success. The paper considers emotions at Ballroom dancing competitions and the extent to which their manifestation is linked with gender.

#### *Doing and Displaying Families through the Preparation of Children's Lunchboxes*

This paper analyses family life and social change from the perspective of parents and their daily routines of preparing lunchboxes for their children. In this study lunchboxes are understood as an artefact linking together discourses and practices of doing and displaying families, marketplace and government discourses of feeding children and broader issues of care and surveillance in private and public settings. At a time when the roles of men and women are experiencing considerable change, this paper explores family life and gender roles by considering who is responsible for preparing children's lunchboxes, how they feel about it and how this daily practice connects with workplace considerations. Drawing on photo-elicitation interviews and focus groups with British parents with children aged between nine and eleven years old, we explore majority and minority experiences in order to contribute a greater understanding of how traditional and non-traditional families negotiate family display through children's lunchboxes.

#### *Researching Racism: Reflections on Different Methodological Approaches to Recording People's Experiences of Racism*

This paper combines two contrasting and complementing methodologies to explore young people's experiences of racism in everyday life. The paper will reflect on how the use of qualitative and quantitative methods can lead us to different understandings of experienced racism. The first method uses ethnography and non-structured interviews which do not directly ask respondents to talk about their experiences of racism. The second method examines data from the

Understanding Society (UK) survey, which records people's responses to specific questions about their own and others' experiences of racism.

What emerged is that in the qualitative project, participants found it difficult to name racism and denied that quite explicit forms of racism they had experienced was 'really' racism. In the survey, respondents recorded widespread racism which they and/or people they knew had experienced. This paper considers some of the implications of these apparently divergent findings. The use of ready-structured questions is helpful in alerting us to the persisting prevalence of racism. This is facilitated when survey respondents are not actively encouraged to reflect on the personal and are able to externalize their experiences. The qualitative study on the other hand highlights how confronting racism can be difficult. The paper argues the process of interview can in itself help reveal a great deal about the nature of different forms of racism. The paper also indicates that this has worrying implications for the ways in which racism can be resisted in everyday life when it can be so difficult to talk about.

**HARRIKARI, TIMO\*** (University of Helsinki, [timo.harrikari@helsinki.fi](mailto:timo.harrikari@helsinki.fi))

#### *Securitizing Childhood – Childhood and Youth in Finnish Crime Prevention Programmes*

Several international analyses of criminal justice and social policy have revealed an increased focus on children and young people during the past decades. One of the key characteristics of the recent interest has been a new concerned tone, even with signs of moral panic. This type of public interest originates from the turn of social policy in the US and UK in the 1970s and 1980s, leading to a punitive turn in youth crime policy, to the rise of the risk agenda and, in general, to the intensification of formal social control towards children, young people and families with children.

The described transformation has expanded into a wide-scale international phenomenon, albeit one that varies from one state to another. The developments have also touched the Nordic welfare states. Consequently, the presentation addresses the issue of how children and young people are constructed and governed in Finland's crime prevention and securitizing programmes and projects. The analysed data consists of abstracts and appraisals of 88 local securitizing programs.

The results of the analysis suggest that, in many ways, the programmes reflect a post-recession situation in Finnish society. Children and young people are dominantly positioned as 'risks' or as 'exposed to risks' and the goals and means of the programmes are connected with intensifying their control. The results suggest that the status of security speech and crime prevention technologies within the entity of governing childhood and youth require critical consideration.

The presentation is based on the article published in *Youth Justice* in April 2013.

**HARRINGTON, BROOKE\*** (Copenhagen Business School, [bh.dbp@cbs.dk](mailto:bh.dbp@cbs.dk))

#### *Governing Global Capital: Professions and Regional Competition In Offshore Finance*

How do professions affect the configuration of political economies worldwide? This study addresses the question through interviews with members of a new trans-national profession—wealth management—whose innovations are reshaping the balance of power in global finance. Wealth managers specialize in helping elites avoid taxes and other forms of regulation. The study documents how the means through which they achieve this objective—shifting billions in private capital wealth between Asia, Africa, India and Europe—and how this affects the balance of regional economic power. Drawing from an institutionalist perspective, the paper examines three ways in which wealth managers, both individually and through their professional society, influence regional competition for power and wealth: 1) by finding loopholes in existing policies that limit the global flow of capital; 2) by lobbying national and international policy-making bodies to advance the interests of the profession and its wealthy clients; and 3) by writing the fiscal legislation of some jurisdictions. Through these mechanisms, the profession has reconfigured political and economic power trans-nationally, shifting the world's financial center of gravity eastward, from traditional centers like Zurich and London, to Singapore, Johannesburg and the island of Mauritius in the Indian Ocean.

**HARRIS, CRAIG\*** (Michigan State University, [harrisc@msu.edu](mailto:harrisc@msu.edu))

#### *Alternative Food Networks in Monterrey Mexico*

The agri-food system in Monterrey, Mexico is structured by three segments. One segment consists of the "traditional" Mexican diet of corn, beans, rice, chicken and pork. For residents of Monterrey, these foodstuffs are usually purchased at local *mercaditos* from local vendors who have acquired the foods from long supply chains. The second segment consists of the rapidly growing middle class and upper class. They purchase their foods at national and transnational supermarkets, and they tend to consume a more international middle class diet. The third segment is an emerging alternative food network that emphasizes locally produced foods, distinctive traditional foods, heirloom varieties of vegetables, organic farming, and artisanal food production. This segment attracts both middle class and upper class shoppers, who find these foods in health food stores, niche shops, and periodic alternative food markets. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one's consumption from the transnational agri-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

#### *Family Structure Models and Nonmarital Childbearing in the Transition to Adulthood*

Nonmarital childbearing is now a common fertility event during the transition to adulthood in the America. Current estimates indicate more than forty percent of births occur to unmarried women in the U.S., however, the image of a single, unmarried mother raising a child on her own is no longer accurate. This paper uses national data from Add Health to document the relationship contexts (cohabitation, dating relationship, no relationship) in which nonmarital first births occur and model the environmental influences of family structure on nonmarital first births that women aged 24-32 have experienced by 2008-09. We focus particularly on collective socialization effects of family structure models during adolescence by exploiting Add Health's unique design to measure family structure in the multiple social contexts of adolescent life, including the family, peer group, school, and neighborhood. We analyze both traditional (prevalence of two-parent families) and contemporary (prevalence of single-parent families) family structure models in these multiple social contexts during adolescence on subsequent nonmarital childbearing and the circumstances of nonmarital first births. Controlling for other economic and policy-relevant determinants of nonmarital childbearing and socioeconomic confounding factors, we find robust and significant effects of family structure models in the multiple contexts of adolescents' lives on subsequent nonmarital childbearing that are independent and additive. When the prevalence of two-parent families is low or the prevalence of single-parent families is high, young adults face higher risks of nonmarital childbearing, and these risks are additive across the family, peer group, and school or neighborhood context.

#### *Before and Beyond Neoliberalism: The Development Of Precarity and The Emerging Alternative*

In this paper we contend that, to understand what might exist *beyond* neoliberalism, we need to rethink processes of capitalist development *before* neoliberalism. We make two arguments.

First, for poorer countries, processes of commodification which are highlighted as evidence of neoliberalism often predate the neoliberal era. Third World development policies tended to make social and economic life *more* precarious as a corollary to capital accumulation, *before* neoliberalism as an ideology took hold.

Second, intense theoretical focus on neoliberalism obscures a recent shift in the global South towards a tendential and tangible de-commodification of social

life. In fact, during the height of what is widely accepted as the period of neoliberal triumph in many countries across the global South, the relationship between work, land, and welfare has begun to transform in ways that look quite different from what the dominant paradigm leads us to expect.

The most salient examples today are state-led social protection programs which have been implemented across the former Third World. For those who lament that the post-2008 crisis has produced no Polanyian double movement, we argue that these state-driven social assistance policies are precisely such a mechanism. These emerged not out of technocratic fixes from above but often out of political and social struggles from below. The rise and spread of these programs are not only in stark contrast to popular conceptions of a neoliberal reinforcement, but are specifically targeted at social strata whose precarity has been largely generated by developmental policies which *predated* the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of social protection policies over the past two decades in the global South, and qualitative comparisons of these programs in the BICS – Brazil, India, China and South Africa – as evidence of our argument.

[kevanharris@gmail.com](mailto:kevanharris@gmail.com))

### *Two, Three, Many Middle Classes: Theorizing Middle Class Power From a Global Perspective*

Analyses of the post-2008 global wave of social protest have generally celebrated the rise of educated middle classes as a driver of historical change as eagerly as Marxists once hailed the destiny of the industrial proletariat. In the global South, middle classes are analyzed as both object and subject: the goal of economic growth is a middle-class society and the middle class is assumed to be the most suitable base for political development. Yet public discussion about the middle class occurs with a set of implicit assumptions which underpin this sort of teleological talk, many of which derive from the application of late 19th-early 20th century sociological theory to the 21st century world economy. As an intervention in contemporary debates over class and protest, in this paper I reconstruct the concept of the middle class for the purpose of analyzing the current political economy of middle-income countries. To do so, I historicize middle class formation by separating out secular and cyclical characteristics of class formation on a world-historical scale over the past several centuries. I argue that a key secular process of the history of capitalism is the production of "middling" classes, yet these classes themselves are transformed along with the capitalist world economy. Social theory has tended to reify a particular instance of this process, the rise of the 19th century European bourgeoisie to state power, as a general theory of class formation. This Whiggish story is arguably the main cause of confusion within the debate over the post-2008 global protest wave. To analyze what is actually new about the "new middle class" of the late 20th and early 21st centuries for the global South, I create a typology of four ideal-type middle classes and identify their social position and structural power vis-à-vis the state and economy.

[dh Harvey@holycross.edu](mailto:dh Harvey@holycross.edu))

### *"disaster Capitalism", Regular Capitalism, and the Search for a Big Mac: Undermining Assumptions of 'What Is to be Done' for Marginalized Communities in the Aftermath of Disasters."*

In the aftermath of Hurricane Katrina and the federal levee failures the EPA declared 100% of the homes in the Lower Ninth Ward uninhabitable. Nearly five years later there was no police or fire station, no continuously operating health clinic, no grocery store, no community center, and one school where before there had been seven. While academics and the diaspora were worried about the Disneyfication of New Orleans, residents of the Lower Ninth Ward were dealing with what Harvey (2013) has called "secondary violences"—social policies that have resulted in the hyper-marginalization of the community. In the midst of this abandonment non-profits and volunteers have sought to fill the void left by the State. These non-profits have been staffed mainly by non-residents who have brought ideas on rebuilding sustainable communities and environmental justice, and who have been weary of what Klein (2007) has called "disaster capitalism"—which involves, in part, corporations (with the aid of government) using the "shock and awe" of the social disruption to seize taken-for-granted rights and raid the public sphere. Rather than embracing the social justice mission of many visitors and volunteers, residents simply want their neighborhood back. In many instances these ideas and efforts have been rejected as urban experimentation. Rather than a green-grocer residents want a Wal-Mart. Many have opposed projects like rebuilding roads with permeable concrete, the installation of solar panels, farmer's markets, and the widespread use of vacated lots for guerilla gardening. This paper, based on thirteen months of field-work in the Lower Ninth Ward, looks at the problems of rebuilding marginalized communities through volunteer labor in the aftermath of disasters. Ultimately, I suggest that those problems result in a process of misrecognition whereby rebuilding efforts stall.

### *"Where'd All You White People Come from": Alienation through Aid in the Aftermath of Hurricane Katrina and the Federal Levee Failures*

In the immediate aftermath of Hurricane Katrina and the federal levee failures, Michael Brown, then director of FEMA, explained on national television that the reason for the disastrous relief effort was that "we are seeing people we didn't know exist[ed]". Thus while most who watched those disgraceful days unfold on television in late August realized, that race and alienated consciousness instructed the short-term response to Katrina, less well known has been how the two have constructed relations and rebuilding in the long-term. The economic and political abandonment of New Orleans's most marginalized communities resulted in an outpouring of support from civic groups, religious organizations, and non-profits. Much of this aid, while well intentioned, nonetheless reproduced conditions that lead to structural and symbolic racism. The result has been a curious form of double alienation. White volunteers (who comprise the overwhelming majority of volunteers) come with historic and stereotypical assumptions of "the ghetto" and black communities. They discount and alienate residents by assuming that the community was long "broken" and that they (and not the black residents) can fix it. They often feel alienated from residents who do not want or seem to question their "aid". Residents, on the other hand, feel alienated as their lay knowledge is devalued over expert knowledge. Their community and ways of doing things have become a "problem". Furthermore, they do not understand why it took one of the worst disasters in American history for whites to care about them and their neighborhood. In this paper, based on thirteen months of field work in the Lower Ninth Ward, I explore the causes and outcomes of this double alienation and present policy recommendations for overcoming alienation in future disastrous situations.

### *The Widening Disparity of Cities and Shrinking Districts in Japan: An Environmental Justice Perspective*

In this paper, I describe the widening disparity and class stratification among cities in Japan. Specific focus is placed on impoverished and shrinking districts such as *Kamagasaki* in Osaka and *San'ya* in Tokyo, where numerous poor day laborers and homeless people live and work. Niklas Luhmann pointed out that impoverished districts were spatially isolated and excluded on multiple levels from more prosperous areas. In addition, residents in these areas are often burdened with higher levels of environmental risks than are residents of more prosperous areas. Environmental justice or equity (the fair distribution of environmental benefits and burdens) initiatives therefore focus on these problems.

In this presentation, the historical background leading to the creation of these areas is explored. In addition, potential linkages between numerous factors, such as population decline, residents' average life expectancies, tuberculosis risks, income levels, crime rates, and land prices in these areas, are evaluated. To highlight linkages, multiple data sets that have been issued by the Japanese government as well as real-estate agents are cross-compared. In terms of the land price factor, a hedonic approach is followed, which incorporates local environmental factors by using a geographic information system (GIS). This approach allows for the incorporation of road traffic noise as a variable indicating the quality of the local environment.

### *Thinking on the Recovering Process from the 3.11 Tsunami Disaster*

This paper discusses problems in the recovering process in the tsunami devastated area, based on a case study in a fishermen's village, Minami Sanriku Town. It is one of the most severely devastated towns on 3.11, 2011. The huge three tsunami waves of 15.5 meters high left 824 people dead or missing, 4.6% of the whole population. Almost all of all buildings, shops and houses were swept away and turned into rubble and wreckage. Suddenly the central area of this town vanished. The usual very beautiful, peaceful and quiet bay suddenly turned into the awful tsunami waves and destroyed the town.

The speed and pace of the recovering process is very slow due to the loss of effective political leadership and the very bureaucratic, rigid reactions and sectionalism of the national bureaucrats. After clearing up rubble and wreckage, there is nothing except vacant ground. A large amount of money

is only bringing public works of long lines of a huge coastal levee like the Great Wall. Despite being a fishermen's village, new life will start away from the ocean and with no ocean view.

Among residents, there are a lot of clashes of interests. Within a household, we can find a generational gap between the retired elderly with a pension and the younger generation who seeks a job and is raising children. While the former wants to stay within the village, the latter hopes to move out of the village, to an inland area more convenient for getting higher income, shopping, transportation and education. The town forecasts the population aging rate of over the 65 years elderly will increase to 38% in the year of 2033, from 28% before the tsunami attack. The population will decrease to less than 13,000 from 17,000. How can we support the recovering process?

### *Comparison of the "Examination Hell" (JP) and "Testing Wars" (US)*

Comparison of the *Examination Hell* and the *Testing Wars* is the comparison of Japanese school examination and American school testing, mainly in the late 19<sup>th</sup> century.

Specifically, for Japanese examination, I will explain how Japanese elementary school examination had been composed during the very short years of the beginning of Meiji Era; from 1868 to about 1879. It seems to inherit the ethos of being official from the feudal ages when only some portions of the Samurai Class (ruling class) executed examinations for the sake of encouraging prudent students of the Samurai. However, it got the new "shape" or "form" from Western school examination information. Judging from the remaining foreign books of those ages, it is likely to say they came mainly from America. After Western information, Japanese examination got many rule books as well as guide books.

For American testing, William Reese's *Testing Wars in the Public Schools: A Forgotten History* (2013), tells us many about how testing in 19 century American public schools had flourished under the influence of Europe. The years, from 1868 to about 1879, when the information about the testing of this country came to Japan and utilized much, were such era that standardized testing was almost conquering all States, regardless of the good will to improve teaching by using statistics and testing; days of testing's side effects.

My comparison would be made on both examinations' (testings') procedure of implementation, process of execution, standards for scoring, logic and ways of its utilization, and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people's understanding of assessment and evaluation of both culture differ.

### *The Non-Nationalized Narrative of Two Korean School Graduates*

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean schools (*chosengakko*) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been identified with North Korea, and Korean school students are exposed to the outside prejudice that they are "brainwashed, anti-Japanese children."

In this paper, based on an interview about whether it was appropriate to exclude Korean schools from the waiver program, I present the complicated realities of an insider's life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation *zainichi* Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviewer is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as "the occasion to put my life in order," I could hear these insider's life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewees' reasons and experiences are different from each other, the opinions they arrive at in this interview are similar:

- 1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school.
- 2) Neither interviewee entirely denies the value of Korean school itself.
- 3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one other? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (*i.e.* North Korean) framework.

### *The Discursive Construction and Performance of Gendered Identity on Social Media*

This article looks at the construction and performance of gendered identity through the medium of social media. Data was collected from a sub-section of Facebook webpages belonging to the Slut Walk movement. Our analysis suggests that gender is constructed through the subjects' participation in the 'post-feminist masquerade' – through which their gendered identity is defined in relation to a hegemonic masculine ideal. This situates the network of sites within a post-feminist context, characterised by the ambivalent and appropriative treatment of feminism. Acts of resistance are framed as individual, momentary ruptures of Judith Butler's heterosexual matrix of 'cultural intelligibility'. The online context of these ruptures is found to vest a creative potential, by removing the constraints of time and location, indicating that the impact of these ruptures may extend beyond its immediate environment.

### *What Explains the Rise of Ethnic Minority Tensions in China?*

In the past few years there has been a rise of flash ethnic violence in the relatively developed areas of China such as Beijing and Shanghai, to the far-reaching Western provinces of Xinjiang and Tibet. While the state's response to ethnic unrest oscillates between 'soft' (e.g. funding ethno-cultural activities) and 'hard' (e.g. increasing security mechanisms) policies, this paper suggests that this strategy will do little to address the underlying causes behind ethnic minority tensions in the long-term. Instead, it will argue that the most culpable factor behind current ethnic tensions are socio-economically rooted: Minorities are increasingly experiencing 'ethnic penalties' in the labour market, whereby their comparable educational attainment and training, akin to the majority ethnic group, Hans, do not match similar labour market outcomes. While intuitively, overt discrimination insofar as one's physical appearance or linguistic abilities, and first generation migrant status, are often cited as prevailing reasons to explain this 'penalty', the findings presented in this paper will suggest that explanatory factors such as an individual's social network, a firm's working culture, and social trust in a community are equally important considerations. Moreover, the interactive role of non-cognitive skills in minority labour acquisition will be discussed. Finally, the

paper will consider the policy implications of these findings for ethnic minority management, and the lessons learned for other multi-ethnic jurisdictions.

#### *Cooperation In Marine Governance: The Case Of Eutrophication and Over-Fishing In The Baltic Sea*

Over-fishing and eutrophication caused by agricultural nutrient run-off comprise two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure in Elinor Ostrom's work on design principles, arguing that a selection of these principles fruitfully can be scaled up to serve as analytical tools at the international level. The principles of *conflict resolution mechanisms, nested enterprises and monitoring* are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute *hard cases* in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nestedness is often incomplete, that is, the intuitional fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

#### *The Co-Construction of Identity As 'Japanese Women Living Abroad' in Interview Narratives*

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere representation of past events, but should be understood as a process of co-construction influenced by the social norms of their new/previous communities.

In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bamberg 1997, De Fina 2003, De Fina, Shiffrin and Bamberg 2006 and others), analytical methods of small stories (Bamberg 2004, Georgakopoulou 2007) and multimodality (Goodwin 1981, Heath 1986, McNeil 1992, 2005, Kataoka 2011).

Analysis of the data shows how co-construction is manifested in linguistic and other semiotic resources - final particles, supportive giving/ receiving verbs, nodding, laughter, dysfluency, overlapping, gesture, eye gaze, and so on - appearing in interview narratives. This presentation will reveal that 1) how the narrative message can be conveyed by not only language, but also other semiotic resources, 2) the participants of the conversation put much value on collaboratively constructing their mutual identities in the 'here and now' situation, rather than the contents of their storytelling, 3) they inevitably encounter aspects of internal conflict derived from the need to represent their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

**HATA, MIKAKO\*** (Hanazono University, [hata.mikako@gmail.com](mailto:hata.mikako@gmail.com))

#### *Reading Comics with Ears*

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopoeia, emanata, and even gutters convey meanings non-verbally. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page.

Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made speech translation of comics catering for visually challenged people. Although translating images to voice information has been already practiced on speech

translation of films, in comics-to-speech translation it is necessary to bring not only characters' behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, while others have never seen pages and want comics as entertainment-oriented stories, in other words they are not so interested in the visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works. The focal points of this paper are both on translators' experiences of reproducing comics with oral language and on readers' experiences of reading comics with ears. This paper describes how comics communicate with readers without using images, via translators' modest intervention, and examines what for people read comics.

#### *Reflections on the New Patterns of Exclusion within the Working Class: Exclusion As "Omission" and the Struggle of Homebased Workers Union in Turkey*

Homebased work, one of the most expanding work forms in the context of globalisation, has been one of the most invisible forms of work in the world including Turkey. This invisibility can be related to its women concentration in the male dominant world of existing organisations and systematic negligence of the second. This is why homebased workers, like other informal workers, have found ways of organising themselves. So, these new agents with different aims and scope, and consequently organising strategies, have entered to the fields of social movements and formal social policy.

This development has not only an important effect on the field of social movements and public social policy, also marks a significant transformation in the patterns of exclusion: a shift from mere exclusion to an 'inclusive' one, at least in Turkey. In the past, exclusion was mainly in the form of almost complete denial of the existence of homebased work and these workers, now their acceptance as full workers does not make a sense in the decision making processes of social policy or in the context of social movements. Almost every concrete instances, they are forgotten to be invited to involve in. This negligence can also have several forms: to forget they are workers, union is not a charity association, they are not experts working for it... In some instances, when they make corrections, they are oftenly treated as 'hysterical', over-emotional women expressing anger improperly.

This paper describes these new patterns and takes the "omission", as the most common form of exclusion in the case of homebased workers' organising in Turkey. By exploring the perspective of the representatives of social movements/ organisations who omit systematically, and then, by discussion of these data with union members, aims to contribute the exploration of grounds of solidarity and action.

**HAUG, CHRISTOPH\*** (University of Gothenburg, [haug@gu.se](mailto:haug@gu.se))

#### *"We Want to Report about Everything!" How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation*

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partners are obliged to deliver before they receive the next slice of funding.

The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways, allowing donors to appropriate the credits for the work done by the recipients of their funds.

Based on a case study from donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of grievances. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to "report about everything", meaning: not only what the donor wants to hear. Attempts of "telling the whole story", including grievances outside the scope of the donor's program, are interpreted as expressions of dissent aimed towards the construction of a dialogic relationship between donors and recipients. It is discussed whether this is possible within or alongside with RBM, or whether dialogue based on local experiences implies a rejection of the RBM framework.

**RC48-791.2****HAUG, CHRISTOPH\*** (University of Gothenburg, [haug@gu.se](mailto:haug@gu.se))*Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence without Silencing?*

This paper starts from the observation that most of the literature on decision-making is ensnared in methodological individualism: at least in the western world, it seems that a decision can only be understood as the outcome of an individual act or an aggregate thereof (voting). Nevertheless, genuinely collective practices of decision-making (consensus) are widespread across institutional and cultural settings, but the collective dimension of these is inadequately understood, leading to confusion between unanimity (everyone agrees) and consensus (no one disagrees). Both researchers and practitioners of decision-making have largely avoided this issue, so that empirical studies often remain unclear about how exactly a decision was made, and decision-making groups sometimes find themselves in the paradoxical situation of disagreeing whether they have reached consensus or not.

Based on participant observation of numerous meetings among global justice activists using the consensus principle, this study seeks to untangle some of the conceptual confusion through a detailed interactional analysis of meetings as communicative events. Focusing on the final stage of the decision-making process, the paper identifies four types of consensus: imposed, acclaimed, hasty, and considerate. Drawing on previous findings from conversation analysis, it is argued that although they all observe the absence of voiced disagreement, they differ significantly in how this absence is constructed interactionally. Therefore, what appears to be the same mode of decision-making – consensus – should be treated as different modes, both by researchers and practitioners.

The paper concludes by discussing the consequences of this analysis for radical democracy and anti-hegemonic practice, wondering whether it is possible to produce silence without silencing.

**RC54-872.1****HAUGE KATAN, LINA\*** (University of Copenhagen, [lhk@soc.ku.dk](mailto:lhk@soc.ku.dk))**BAARTS, CHARLOTTE\*** (University of Copenhagen, [cba@soc.ku.dk](mailto:cba@soc.ku.dk))*Towards a Post-Hermeneutic Phenomenology*

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be interpreted in order to lay bare an underlying and absolute meaning. Thus we tend to subject the multitudinousness of lived experiences to different kinds of selection and reduction implied by that production of knowledge aiming to render the world in clarity.

Nevertheless, the blurriness of emotive and physical reactions to the world can be said to be due not to their impreciseness but rather to their richness in nuance and complexity. Hence, they may be much precise vehicles of meaning not in spite of but on account of their indistinctness.

In this paper we ask what epistemological potentials might be revealed if we explore our lived experiences in their own right rather than try to explicate them and make them conclusive. Based on empirical research of our own, we turn our interest towards the possibilities of understanding bodily reactions during the process of research as being informative in themselves and discuss possibilities for transposing them into scientific writings that likewise invites a reading not only with the intellect but also with the senses. We propose an approach to both the making and communication of knowledge, which could be called post-hermeneutic – a phenomenology not aiming at fixation of identified significance, but at a knowing that includes and even takes advantage of the fluctuating and manifold ways we experience the world when we move in it instead of stopping to make analysis.

**JS-77.7****HAURAY, BORIS\*** (INSERM / EHESS, [hauray@ehess.fr](mailto:hauray@ehess.fr))**DALGALARRONDO, SÉBASTIEN** (CNRS/EHESS/IRIS)*Hormone Decline and Aging: Sociology of a Medical Promise*

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine's hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the myth of the fountain of youth, for thousands of years and in a great many civilisations. This idea emerges regularly in the public and scientific space, from the early 20<sup>th</sup> Century attempts to transplant animal glands in order to restore the vitality of people's youthful state to the forecasts made about "regenerative"

medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have even intensified and become more structured, with the development of so-called "anti-aging" medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body's functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible "youth pill".

In this presentation we will first examine the construction of DHEA's anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, its impact on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

**RC18-320.2****HAY, COLIN\*** (Sciences Po, Paris, [colin.hay@sciencespo.fr](mailto:colin.hay@sciencespo.fr))**FAUCHER, FLORENCE\*** (Sciences Po, Paris, [florence.faucher@sciencespo.fr](mailto:florence.faucher@sciencespo.fr))*Voting As Symbolic Practice: Comparing Electoral Rituals in France and Britain*

Voting is a symbolic practice. Yet as political scientists focus increasingly either on the outcomes of elections or on citizens' motivations to vote in the first place – typically by building models of the former on assumptions made about the latter – we tend to forget the symbolic significance of the practice itself and the meaning and impact it has on the participants. In this paper we seek to restore a focus on this symbolic dimension, exploring some of the differences between the ritualisation of democracy through an analysis of voting rituals in France and Britain. We explore what citizens do when they vote and the extent to which these actions reflect and contribute to construct particular visions of the polity and the place of citizens within it. In particular we pay attention to how the voter's choice is constructed as either something that can be performed and hence displayed publicly or as irredeemably secret and private. We consider how such typically taken-for-granted practices help us to understand how politics have been constituted and reproduced on the basis of divergent assumptions about the boundaries of the public and the private.

**RC32-554.7****HAYASHI, KAORI\*** (University of Tokyo, [hayashik@iii.u-tokyo.ac.jp](mailto:hayashik@iii.u-tokyo.ac.jp))**KITADE, MAKIE** (Tokai Gakuen University)*Company Brand Vs. Professionalism: The Marginalization of Women in TV Newsrooms in Japan*

This paper analyzes Japanese media elites from a gender perspective in order to identify why male domination stubbornly persists even in a working environment where institutional arrangements all seem to support women, such as paid maternity leave and an equal payment agreement. We argue that the pervasive domination of corporate culture, rather than journalistic professionalism, is the source of the persistent marginalization of women in the media sector.

A growing number of women have entered the world of corporate journalism in Japan since the late 80s after the implementation of the Equal Employment Opportunity Law in 1986, but the ratio of women in senior management positions still remains at the lowest level among advanced industrial countries, according to a survey by the International Women's Media Foundation in 2010.

Having conducted in-depth interviews on the social/educational background, professional career and life course of 21 senior news editors ranging from their late 40s to late 50s at leading TV stations in Japan, we identified clear differences between the genders in their understandings of the role of professionalism and the brands of the companies to which they belong. Female journalists tend to rely more on meritocratic professionalism based upon individual skills and achievements in moving up the corporate ladder, whereas their male counterparts feel their success largely owes to informal networks and prestigious corporate brands to which they belong.

Although gender studies has emphasized the masculine nature of the conception of professionalism, and the sociology of work has revealed the self-centered ideology underlying professionalization in many occupations, we contend that playing down the role of professionals and professionalism imposes a substantial brake on change in terms of gender equality within an occupation.

*The 'Gap-Filling' Role of Civil Society Organisations for an Ageing Population in a Global Context: A Comparative Study of Three Welfare States - Japan, Britain and Sweden*

Across the globe, societies face pressing challenges to address the needs of their rapidly ageing populations against a background of austerity. This is particularly true of Japan, Britain and Sweden, all ageing and established welfare states, where each government has attempted to expand and diversify public care services. This is reflected in their respective new and reformed public care systems. However, none of these countries' systems has succeeded in meeting all care needs, and recent austerity and budget cuts have exposed further difficulties. Accordingly each government has been painstakingly exploring new and cost-effective methods of providing care. Specifically, there has been optimism that civil society organisations might step in and fill the gaps left by public provision.

This paper, drawing on empirical research involving detailed interviews and participant observation, will examine and compare successful and innovative models of civil society organisations that have developed 'gap-filling' services for older people in Japan, Britain and Sweden. Key findings concerning each model will be considered briefly within their national context, highlighting nation-specific features. Analysis of models at a national level will then be placed in a transnational and comparative perspective, underscoring best practice benchmarks together with the challenges encountered by organisations. For instance, while the standardised and universalist Japanese model mobilises traditional quasi-governmental community resources, the British model emphasises partnership working and recognises innovation and professionalism, and Sweden's model is characterised by localism and sensitivity towards the employment of 'conventional' labour, with volunteers being discouraged. In conclusion, this paper will discuss suggestions for future care policy making and possible refinement of the care market, potentially transcending national boundaries. It will also consider how experiences and best practice from the models examined here could be utilised in other countries to pursue evidence-based sustainable care policies and promote civil society.

**HAYES, JAN\*** (Australian National University,  
[jan.hayes@anu.edu.au](mailto:jan.hayes@anu.edu.au))

*Integrity Management and Fantasy Planning: The San Bruno Pipeline Rupture*

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno, near San Francisco, California. The resultant fire burned for two days. Eight people died, and thirty eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using document analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke's work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than functional, role in this organization. 'Knowing' about the system was grounded in elaborate algorithms and graphs purported to show risk was declining, and yet this analysis was only tenuously linked to the actual level of danger. In an environment of cost cutting, expensive inspection work was tailored simply to meet available budgets. Small failures were repaired and then dismissed from the collective memory so that valuable opportunities for learning in this uncertain environment were ignored.

This professional disposition on the part of the expert engineers was embedded in a broader organisational context. The paper further argues that senior management decisions about cost cutting were divorced from the real world impact as a result of the historical restructuring of the domestic gas industry overall and the low status of relevant industry expertise at senior management levels. We conclude that this 'organizational accident' provides important lessons for all organisations relying on technical expertise to prevent low frequency, but high consequence events.

MASLEN, SARAH (The Australian National University)

*Knowing Stories That Matter: Learning for Effective Safety Decision Making*

Ongoing safe operation of complex, tightly coupled technologies such as hydrocarbon production and transportation, air traffic control and nuclear power generation depends on effective decision making by those in key positions. Safety studies often focus on the extent to which actions of operational personnel in

particular are dictated by procedures or rules and hence reinforce the need for compliance to ensure the best outcomes. This paper directs attention to a different area – the judgements made by experts in the cases that are not covered by rules and, in particular, the key role of stories and storytelling.

This ethnographic research draws on literature related to high reliability theory, organisational learning and naturalistic decision making to examine how experts working in diverse critical contexts use stories to share and make sense of their own experiences. It argues that these stories are vital to effective decision making as a result of both the general and specific lessons that they embody. Our analysis shows that experts use stories as parables to nurture their safety imagination. Stories are also embedded in work practices to support decision making in the moment. Finally, stories are strongly linked to organisational learning for experts and their less experienced colleagues.

We argue that the increased focus on incident reporting systems in hazardous industries, which is driven at least in part by a consideration of organisational learning, could be improved to better facilitate story-based learning. Finally, we report early findings of our current research regarding how best to integrate story-based learning with other formal systems for professional development and reporting.

**HAYES, MATTHEW\*** (St. Thomas University, [mhayes@stu.co](mailto:mhayes@stu.co))

*Racial Gringuidad and the Ethnic Identities of North American Lifestyle Migrants in Ecuador*

This paper explores the position of the "Gringo" in the racial order of Ecuador. The paper is based on 69 qualitative interviews conducted in 2011, 2012 and 2013 with lifestyle migrants from North America now residing permanently in Ecuador. They are supplemented with ethnographic field notes. North Americans in Ecuador are particularly concerned about their ethnic identity there, and describe their growing community in racialized terms, as Gringo. I posit that the "Gringo" is a racial category, and while it does not carry the same negative connotations in Ecuador that it does elsewhere in Latin America, it refers to a particular phenotype, often also marked by cultural symbols, such as clothing. The paper discusses what racial *gringuidad* supposedly means for North American lifestyle migrants in the Ecuadorian context. These narratives tell us more about the lifestyle migrants themselves than about the real meaning attached to their apparent physical differences. The paper then identifies strategies or practices that lifestyle migrants in Ecuador have adopted in the face of their Gringo identity, or 'Gringuidad.' First, some North Americans have begun to police the behaviour of the North American community in a bid to optimize Ecuadorian perceptions of "Gringos," reinforcing their racialized self-identity rather than deconstructing it. The second strategy consists of individual attempts to further integrate into Ecuadorian society, particularly by learning Spanish. These practices illustrate a fantasy of ethnic mobility. Yet, even as integration promises to diminish "Gringoness," the Ecuadorian "Other" with whom lifestyle migrants desire to integrate is raced and classed in the Ecuadorian social order, thus potentially reproducing existing inequalities. The paper explores the intersection of North American racialization in the context of Ecuador, where the meaning of race is often quite different.

**HAYS, CASSIE\*** (Gettysburg College, [chays@gettysburg.edu](mailto:chays@gettysburg.edu))

*Violent Natures: From Coercive Conservation to Climate Change in Africa*

Since the colonial era, African natures—both external landscapes and internal human dispositions—have been constructed as violent via the parallel ideologies of wildlife conservation and climate change. Both address the human impact on, responsibility for, and stewardship of the environment through the lens of violent natures. During the colonial era in East Africa, 'natives' were relegated to specific areas, their lands usurped for white settlement and the conservation of dangerous wildlife. Today, conservationists continue to violently evict residents of East and Southern Africa from apparently precarious landscapes. In colonial and contemporary conservation, both 'native' and nature appear unruly and potentially violent. Under the ideology of climate change, as well, poor, non-white populations usually bear the brunt of catastrophic natural (or unnatural) disasters at the same time that they are blamed for contributing to the underlying environmental causes of such events. African environments and peoples are therefore constructed as inherently violent and in need of external intervention via the rhetoric of both conservation and climate change.

Each system of thought employs science and technology to cast the poverty-stricken, racialized 'other' in the role of the enlightened noble conservationist; evil instigator of anti-conservationist or climate change-inducing practices; or victim of the violent environments engendered by conservation and climate change. These roles depend, at a basic theoretical level, on the characterization of 'native,' nature, or both 'native' and nature, as violent. "Violent Natures" thus explores the racialization of nature by connecting the parallel stories of conservation and climate change in Africa.

**HAZAMA, ITSUHIRO\*** (Nagasaki University, [hazama@nagasaki-u.ac.jp](mailto:hazama@nagasaki-u.ac.jp))

*The Peace-Seeking Body in East African Pastoral Society*

When approaching anthropologically to emergence of the new disease in the way that goes beyond a dichotomy between nature and culture, the phenomenological body, which enables to attach significance to experience, is often assumed. While its silent power of representation can be explicated, the social and political power is removed from consideration. To illuminate the bodily power in toto, the paper describes the process of embodiment of political violence with reference to local medicine and the subsistence activity for healing patients. The Karimojong, Dodoth and Jie in northeastern Uganda and the Turkana in northwestern Kenya live in the dry savanna, keeping cattle, goats and sheep. Their living setting, the Uganda-Kenya international boundary, is trans-local-national multi-layered space, where armed violent conflict has occurred endlessly in the wake of the spread of automatic rifles and forcible pacification. Political violence separates herders' bodies as grounds of cultural existence from particular place and time and creates new classification, and then each body becomes the antagonistic referent. Since 2000s' disarmament policy in the area, the epidemic chronic disease (called as *ngikerep*) has been generalized. It has variety of symptoms that represent headache, nausea, nightmare, insensitivity to pain, confusional state and people like returned soldiers, killers, and survivors suffer from it. Its cause is identified based on symptoms and life story narrated by the patient and family. Methods of treatment comprise of music and kinetic therapy, dialogue with a healer, and looking after the pastoral animal herd. To cope with *ngikerep* is to unlearn the culture of violence. People think peace only can heal the disease, and so it may relate to the peace-seeking body which underlies medium- to long-term peace-building.

**HE, CHUANQI\*** (China Center for Modernization Research, [hechuanqi@263.net](mailto:hechuanqi@263.net))

*"Religion, Culture and Cultural Modernization"*

So far there is no general consensus on the definition of religion, culture and cultural modernization. And here religion has been regarded as a socio-cultural phenomenon and refers to an organized system of beliefs, ceremonies, and rules used to worship God or the supernatural power, culture refers to the complex of knowledge, institution and ideas that can impact and explain human lifestyles, and cultural modernization is an expression of the modernization phenomenon in the cultural sphere. Cultural sphere includes fields related to the creation, production, distribution, provision, conservation and consumption of cultures.

Modernization has been a worldwide phenomenon and a profound change of human civilizations since the 18th century. It includes not only the great change and transformation from traditional to modern politics, economy, society and culture, but also all human development and the rational protection of the natural environment at present, and meanwhile cultural diversity and religions exist across space and time.

In the process of world modernization, what happen for religions and cultures? Does secularization takes place anywhere? Does tradition disappear? Does modern cultures divided from traditional cultures totally? This paper will discuss the changes and relationships among them since 18<sup>th</sup> century.

## RC40-685.6

**HE, SHUZHEN\*** (Tohoku University, [aronhasi@yahoo.co.jp](mailto:aronhasi@yahoo.co.jp))

*From Community to Network: A Case Study in Rural Inner Mongolia in Modernization*

Inner Mongolia has 118.3 km<sup>2</sup> of land, 12.3% of whole China. 70% of its area are grassland and its main industry is livestock farming. In this area where nomadism has had a history of more than 2000 years, settled breeding has arisen in 1980s, and cattle shed dairy in 2000s.

The aim of this report is to clarify, 1) how the prohibition of grazing, adopted as grassland protection policy in 2003, has changed the pastoralists' lives and community, in other words 2) how the prohibition, that included restriction of grazing, restriction of rest grazing, and restriction of rotation grazing, divided the pastoralists' response to the prohibition in these each restrictions, and 3) how their response reconstructed their local community.

Through a case study in some life histories of women pastoralists this report concludes that their lives have been differentiated as a milk supplier, a cheese producer, and a consumer of cheese, even on the same ground of stock farming, and that there a new network of diversified inter-dependent subjects has arisen in place of a community of homogeneous independent pastoralists.

## RC11-203.3

**HEAP, JOSEPHINE\*** (Stockholm University, [josephine.heap@ki.se](mailto:josephine.heap@ki.se))

*Multiple Disadvantage in Midlife and Old Age - Exploring the Associations*

To experience multiple disadvantage – the simultaneous occurrence of disadvantages such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life.

Previous research has established that individuals' health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life is a time when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in mid-life and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no problems in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

**HEARN, JEFF\*** (Örebro University, [jeff.hearn@oru.se](mailto:jeff.hearn@oru.se))

*Autoethnography, Theorizing and Transnational Movements and Moments*

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interrogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland ('Autobiography, nation, postcolonialism and gender', *Irish Journal of Sociology*, 2005). The second focuses on changing relations to children, family and household ('The personal is work is political is theoretical: continuities and discontinuities in (pro)feminism, Women's Studies, men and my selves', *NORA*, 2008). The third concerns changing relations to transnationalisations, transdisciplinary and transinstitutional developments ('Opening up material-discursive (trans)-forms of life ... politically, theoretically, institutionally, personally', in M. Wojtaszek and E. Just (eds.) *Quilting Stories: Essays in Honor of Elzbieta H. Oleksy*, 2012). And the fourth highlights the relations of men, intersectionality, organizations and profeminism in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (*Equality, Diversity and Inclusion*, 2014).

In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limitations; critical positionality of members of superordinate groups; the problematisation of the male "I" ('Contradictory male/masculine/men's "I"s: the unwriting of men, and the concept of gex', *Revista Canaria de Estudios Ingleses*, 2013); and the relation of body and writing ('Writing as intimate friends ... how does writing profeminist research become methodologically challenging?', in M. Livholts (ed.) *Emergent Writing Methodologies in Feminist Studies*, Routledge, 2011).

*Interrogating Violence Against Women and State Violence Policy through Gendered Intersectionalities and Intersectional Gender: Local, National and Transnational Contexts*

This paper arises from collective work within the 5-year Swedish Research Council project, "Feminist Theorizings of Intersectionality, Transversal Dialogues

and New Synergies", organised within GEXcel Collegium for Advanced Transdisciplinary Gender Studies (Örebro-Karlstad-Linköping Universities), with specific focus on violence seen as inequalities (Hearn, *Sociological Review*, 2012; *Current Sociology*, 2013). The larger project examines intersectionality in gender studies, in relation and dialogue with the diverse, sometimes conflictual, theoretical and political positions in feminist debates (Walby, Armstrong, Strid, 2012; Strid et al. *Social Politics*, forthcoming). The project is designed against this background of rich, diverse feminist traditions for theorizing of intersectionality, and informed by tensions between these traditions. This paper takes up this challenge in terms of violence, especially violence against women, and state policy thereon, addressing the place of violence in contemporary state regulation and intersectional gender relations. The paper examines the complex, situated and spatial relationship between theorizing on violence against women and state policy on such violence (Hearn and McKie, *Policy & Politics*, 2008; *Violence Against Women*, 2010). This focus continues feminist traditions on multiple linkages between practice, politics, policy and theory, in local, national and transnational contexts. More specifically, drawing on extensive comparative European data at local, national and transnational, it explores the concepts of gendered intersectionalities and intersectional gender by examining how multiple inequalities, long been prominent in feminist activism and intervention on violence, are made (in)visible and conceptualized in state gender-based violence policy and debates. Attention is paid especially to tendencies to degendering strategies in violence research and state policy. A key aim of the paper is to investigate how analysis can be a starting point for assessing if, how and to what extent the inclusion of multiple inequalities could increase the quality of policy, for both reducing and stopping violence, and assisting those subject to violence.

#### *Gender Equality or Religious Freedom? Testing Competing Rights in the Canadian Polygamy Trial*

Constitutional provisions protecting fundamental human rights are central features of liberal democracies. However, tensions exist between the construction of rights as universal principles and their application in a fragmented political world. For example, the right to be free from discrimination based on creed or gender may be at odds with each other or with other rights, laws, and practices. The Canadian *Charter of Rights and Freedoms* of 1982 guarantees freedom of conscience and religion and the right to equal protection and benefit of the law without discrimination based on race, national or ethnic origin, color, religion, sex, age or mental or physical disability. The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concerning autonomy, cultural integrity, and religious freedom are pitted against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia embarked on an unprecedented reference case to test whether Canada's prohibition against polygamy is consistent with the freedoms guaranteed by the Canadian *Charter of Rights and Freedoms*. A central concern is whether polygamy perpetuates inherent harm to women, children, and society. In contrast, arguments were made that some women freely choose to enter into polygamous relationships, and that criminalizing this family form offends their right to religious freedom. In 2011, Justice Bauman ruled that, although the law violates the religious freedom of fundamentalist Mormons, the potential harm caused by polygamy outweighs this concern. Thus, in the name of protecting women from harm, women who practice polygamy as part of their religious commitment are made criminal under the law. This paper examines the treatment of competing rights and societal values in the BC Supreme Court case that pits an individual's right to act on "sincerely held beliefs" against the equality rights guarantee in Canada's Charter.

[mheath@mcmaster.ca](mailto:mheath@mcmaster.ca))

#### *Precarious Wives: Social Exclusion, 'Décohabitation,' and the Mobility/Immobility of African Polygamous Women in France*

Migrants commonly constitute a vulnerable group due to the fact that they are not citizens of the country in which they live. Moreover, when a migrant enters another country illegally, or enters legally and subsequently loses legal immigration status, her or his susceptibility to exploitation increases. The instability of migrant status is further complicated when immigrants participate in undesirable or illegal practices in the host country. France has a particularly complicated history of migration that involves immigrants predominantly from Gambia, Mali, Mauritania, and Senegal. During the period following World War II, immigration to France significantly increased due to the shortage of male workers. Under the family reunification immigration policy that took effect in 1974, France permitted the immigration of polygynous families. In 1993, it passed the *Loi Pasqua*, which altered the immigration law so that only one spouse per immigrant would be issued a visa. The law has had negative consequences for polygamous families, as

it requires multiple spouses to divorce and "décohabit" (physically separate their households) or face deportation. Women living in polygamy in France are particularly vulnerable. They may choose to bear numerous children to increase their monthly family allowances and to avoid deportation as guaranteed under the post-1993 legal framework. Yet, many are forced to live in undesirable situations where children and secondary wives inhabit small apartments because a husband can only support the first wife and children in social housing. Drawing from in-depth interviews with women living in polygamy in France, this paper examines the ways that the legal and policy framework shapes the mobility of African polygamous wives. It uncovers the strategies these women employ to manage their precarious immigration status in France.

**HECHT, GABRIELLE\*** (University of Michigan,  
[hechtg@umich.edu](mailto:hechtg@umich.edu))

#### *Global Atomic Inequalities: Marginal Work in the Nuclear Sector*

This paper takes the aftermath of the Fukushima accidents as the starting point for an exploration of work and workers commonly considered marginal to nuclear systems. The paper seeks to make visible labor that – by virtue of its unexciting nature or (apparently) peripheral location – often remains hidden in our accounts of technoscientific work: ordinary maintenance, African mining.

It begins with the contract workers hired to "clean up" the Fukushima melt-downs, then move back in time and across oceans, to consider the subcontractors hired to conduct ordinary reactor maintenance and refueling in Japan, France, and elsewhere. Maintenance is the unseen, decidedly unspectacular work essential to keep any technological assemblage working—work so invisible and unglamorous that most scholars avoid studying it, preferring instead to focus on acts of creation and construction. Yet without these workers, sociotechnical systems could not function: they may be socially marginal, but they are technopolitically central to the production of nuclear power (and all other industries).

In nuclear and other systems, subcontracting has consequences for occupational health, as well as for transnational knowledge production (about the effects of low-level radiation exposure in the nuclear case). Contemplating these consequences, in turn, takes us to another apparently peripheral part of the global nuclear industry: uranium production. After a quick comparative consideration of knowledge production about the dangers of radon exposure in mines, the paper discusses uranium mining in Gabon. It examines labor and occupational hazards there, including the efforts of Gabonese mineworkers to make themselves and their illnesses visible on the global technoscientific stage.

CAUSEY, CHARLES (University of Washington)

#### *Social Order and the Genesis of Rebellion: Mutiny in the Royal Navy, 1740-1820*

The possibility of rebellion is a check – sometimes the only check – on authoritarian rule. Although mutinies in which crews seized control of their vessels are rare events, they occurred throughout the age of sail. To explain the occurrence of this form of high-risk collective action, this paper provides a theory which holds that shipboard grievances – related to material deprivation, poor governance, and the inadequate provision of health and welfare – are the principal causes of mutiny. Yet such grievances can only lead to rebellion when obstacles to collective action can be overcome. Whereas seamen usually could count on an ample supply of informal organization, their ability to engage in collective action was increased by factors that facilitated coordination and provided a critical mass of ringleaders. Using a unique database drawn from extensive archival information about Royal Navy voyages from 1740 to 1820, this study employs the case-control method and random-forest classification to show why shipboard social order shifts, sometimes tipping crew members toward the high risks of mutiny. The findings have implications for the role of grievances in generating rebellion and the attainment of legitimate social order.

#### *International Networks of Banks and Industry Revisted: The Financial Crisis*

What impact did the financial and economic crisis that swept the Western world have on the international network of the corporate elite? Has corporate

governance become more national or have transnational networks been robust? Here we take a first step in answering this question. We see the financial crisis as a test case for the cohesion of the transnational capitalist class (TNC). If business interests are coordinated and the TNC is resilient, we expect that the business community remains stable in times of economic downturn. A decline of the transnational business community however may indicate a fragmented elite that cannot uphold its cohesion when the financial sector is in trouble.

We investigate this issue by comparing the networks of interlocking directorates among the 176 largest corporations in the world economy in 2006 and 2013: just before the crisis unfolded and present day. We place this in the empirical context of the corporate networks in 1970, 1976 and 1996 as collected by Carroll and Fennema (2002)

**HEEMSKERK, EELKE\*** (University of Amsterdam,  
[e.m.heemsker@uva.nl](mailto:e.m.heemsker@uva.nl))

### *The Global Corporate Elite Uncovered*

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arenas where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi polar architecture of the global corporate elite. Applying state-of-the-art tools and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directors between a set of 100.000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

### *Processes of Success Among Students in Gender Segregated VET - Qualification and Social Inclusion*

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeship, 'leaks' a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for higher education upon completion. Thus, what may be perceived as educational 'success' according to the individual and national higher education attainment goals, may be seen as 'failure' according to policy aims regarding high quality vocational skill formation at the upper secondary level.

Theoretically, gender has been shown to be of importance for the development of identity as a learner, for failure and success in school, particularly for boys but also for girls. The key objective of this project will be to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which supports or hinders the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.

[a.w.hegnes@ub.uio.no](mailto:a.w.hegnes@ub.uio.no))

### *Dimensions, Practices and Dynamics in Cultural Adaptation Work: An Example from Norway*

My paper concerns the movement of an idea and a legal system. The idea is that a product's quality can be determined by where it comes from. The legal system is known as Geographical Indications and enables protection under law of product designations for foodstuffs with a special geographical origin, tradition

or characteristics. In 2002 a system for GIs (Protected designations) was set up in Norway modelled on corresponding systems in the EU.

I develop a grounded conceptual framework to understand the implementation, administration and the use of protected designations in Norway. I emphasize that the movement of ideas and legal systems is dependent on actors' adaptation practices. More specifically I describe this as Cultural Adaptation Work (CAW). My analysis shows that the actors' work with adaptations of *meaning*, *social organization* and *materiality*, during implementation, administration and use of the Norwegian scheme is important. They occur because opinions, forms of cooperation and products in Norway and Norwegian food culture do not always coincide with the food-cultural conditions which the EU scheme was founded.

To identify, describe, and understand how the implementation, administration and the use of Protected designations is worked out I elaborate on the concepts of *translation*, *reorganization* and *transformation*, giving them a special meaning. In this regard *translation* refers to adaptations of meaning, *reorganization* refers to adaptations of social relations and *transformation* refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW.

I conclude that CAW takes place in the interplay between people's translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.

**HEIBERGER, RAPHAEL\*** (Otto-Friedrich University Bamberg,  
[raphael-heiko.heiberger@uni-bamberg.de](mailto:raphael-heiko.heiberger@uni-bamberg.de))

### *The Social Construction Of Prices – The Impact Of Culture, Networks and Institutional Rules On Stock Quotations*

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the embeddedness of trading in culturally constrained frames of meaning, corporation networks and institutionalized rules. Economic sociology is well aware of such social forces. Still, sociological investigation of price formation lacks both theoretical integration and empirical evidence for how different types of market conditions interact and influence prices.

Taking sociological field theory as a starting point I combine three independent strings of price formation explanations, considering the simultaneous influence and interaction of institutional regulations, network positions and cultural frames. Empirically, I test this field theory of financial markets by comparing the setting of US and German stock prices. First, the historical tradition of financial markets and the longitudinal development of macroeconomic structures are discussed. Secondly, I investigate correlation networks of stock listed companies using social network analysis. I am particularly interested in the shifts occurring in the network ecology after the financial crisis and the subsequent changes in each systems' stability. Finally, the change of stock repurchase laws in Germany in 1998 delivers an 'experimental' setting for different types of rule based information trading before and after the legislation reform. Applying Event Study methods the short- and longterm influence of repurchase plans in the US and Germany is compared.

Different patterns of stock price volatility are revealed, depending on culture, networks and rules. Briefly summarized, stock valuations depend on the cultural understanding of households invest money (market vs. bank based investments), on the network topology of stock markets (centralized vs. decentralized), and on the national peculiarities of firms, that foster (USA) or impede (Germany) the implementation and success of repurchase plans.

**PALME, JOAKIM** (University of Uppsala)

### *Rethinking Child Welfare Policy*

Studies on children's welfare have been pursued in a separate strand from the welfare state literature in general. Welfare state theory has been blind to children as actors and research on children's participation has neglected welfare state theory. This should warrant us to rethink and reformulate the concept of child welfare. The point of departure is the concept of welfare as formulated in the context of the Swedish levels of living surveys, which suggests that a multidimensional resource perspective has to be combined with recognition of humans as actors. We argue that this also applies to children's welfare: Children's right to voice makes up a constitutive part of the concept of child welfare. Sweden offers an interesting case in point for identifying gaps in the approaches to children's welfare: Sweden has been described as a forerunner in children's rights, being the first nation in the world to ban corporal punishment. Sweden was moreover one of the first countries to sign the UN Convention of the Rights of the Child. This notwithstanding, studies on children's participation in Sweden indicate that implementation encounter many challenges. The paper examines, as a first step, the Swedish legislation with regard to *vulnerable* children's right to voice. We find that vulnerable children's right to voice in proceedings that directly concern them is

surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as 'beings' and 'becomings' by recognizing that it may be necessary to invest in children's education and child care but that this is not sufficient as long as we do not consider children's rights to voice.

##### *Hunting the Northern Lights*

This work in process explores gendered landscapes imbuing the increased use of 'hunt', 'hunters' and 'hunting' in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest with Finnmark Reiseliv's (county DMO) winter project in 2002. The evolution of the last decade's hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedie and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfler, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relationship to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former even today is mainly a masculine pursuit which requires preparation and good physical strengths the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008). **HEIMTUN, BENTE\*** (UiT - The Arctic University of Norway,  
[bente.heimtun@uit.no](mailto:bente.heimtun@uit.no))

##### *Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway*

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as skiing and northern lights hunts. These tourists emphasise the pureness and freshness of the winter climate as well as a fascination for winter lights during the day and night. Other tourists dislike being cold on holiday and would only travel to warmer climates. Some of these tourists live in winter destinations and know how to deal with a cold climate. Others do not. In particular disinterest in winter activities, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

**HEIN, PATRICK\*** (Meiji University, [p\\_heinjp@yahoo.co.jp](mailto:p_heinjp@yahoo.co.jp))

##### *The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation*

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

Subtitle: The case of the truth commission in South Africa, the international Khmer Rouge tribunal and the Comfort Women's War Crimes Tribunal in Tokyo (2000).

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the indictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem Hannah Arendt mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the wit-

ness account of the Auschwitz survivor Alfred Oppenheimer who gave a testimony at the Eichmann trial.

The paper refers to other reconciliation attempts such as the truth commission in South Africa or the Comfort Women issue in Korea and Japan and seeks to identify conditions that make future reconciliation possible.

The example of the comfort women in Japan shows that witness testimonies alone cannot lead to positive change and reconciliation as long as there is no recognition of wrongdoing and guilty behavior in the first place. In other words witness accounts can only be effective and fulfill their purpose if there is an opposite (either an individual or a political body) who acknowledges his wrongdoing. In the case of the Eichmann trial and the South African truth commission the perpetrators were physically present whereas in the case of the comfort women nobody has assumed responsibility.

[anu.heinonen@helsinki.fi](mailto:anu.heinonen@helsinki.fi))

##### *From Traditional Religiosity to Religious Diversity - Youth and Religion in Post-Soviet Latvia*

Traditionally Latvia has been described as a Lutheran country with a Catholic Latgale region in the South Eastern part of the country. During the Soviet period between 1940 and 1990 religion was in a marginal, and only after the collapse of the Soviet Union the revival of the religious life became possible. Now, twenty years after the new independence, there are three main denominations (Lutheran, Catholic and Orthodox) and several minority religions making the religious field pluralistic. According to youth researchers, young people in the Western and Eastern Europe today are increasingly similar. Important difference among the youth in the West and the East is economic resources which is causing obligatory cohabitation in the family of origin which is influencing more widely attitudes of young people. The qualitative and quantitative data that has been collected among the university students in 1999 and 2010/2011 in the city of Riga will answer to the question what is the role of religion for emerging adults in a post-soviet society. The paper examines youth and different dimensions of religion (e.g. belief, practice, affiliation) and what are the differences among the attitudes of young people with ethnically different backgrounds in the country where approximately 40 % of inhabitants belong to the so called "Russian speaking minority". How do young people, born in the end of 1970s and 1980s, themselves see the role of family and other traditional authorities in religious socialization? The study belongs to the field of sociology of religion and to the youth study because it explores the changing attitudes and religiosity of young people in one of the post-soviet societies.

**HEINRICH, PATRICK\*** (Dokkyo University, [pah1@dokkyo.ac.jp](mailto:pah1@dokkyo.ac.jp))

##### *Shimakutuba - Adapting the Ryukyuan Languages for the 21st Century*

Language endangerment is often not the result of repressing language use but of repressing language adaptation. The way endangered languages are characterized is not neutral but include ideologies constructing these languages as static, marginal and obsolete. Due to such repression, endangered languages indeed often become static, marginal and reflect habits and knowledge of a past society. Revitalizing languages involves the modernisation of endangered languages in terms of language corpus and styles. Before that the static ideological view of endangered languages needs to be challenged. Language ideological clarification about the role and function of the endangered language in the present-day world must be delineated. It must be done so convincingly as to ensure that such reframing aligns as many people as possible to the task of language revitalization. This paper discusses this process on the case of the Ryukyuan languages which are spoken in the extreme southwest of the Japanese Archipelago. These severely endangered languages are currently witnessing a spectral reappraisal. As an effect, the task of ideological clarification is being pursued. This is urgently needed, because the Ryukyuan languages have huge lexical gaps, lack styles for public debate or for writing specific genres. They also maintain social varieties characteristic of its past use in a feudal society. Its large number of regional dialects, 750 in total, also reflect boundaries of community which no longer exist today. Dialect levelling is rampant. Mixing of formal and informal styles, and of high and common social varieties is also frequent in the language use of those seeking to revitalize Ryukyuan languages. In the view of criticism on their language use, they seek to adopt ideologies and use of Ryukyuan to present-day uses. This presentation draws on observations in the field and on interviews with language activists, researchers and prefectural authorities.

*Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?*

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they can contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleeter, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to 'teach for social justice', equipping them with the necessary skills during their training, and retaining them in schools are important tasks for policy makers and teacher educators.

This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants' perceptions of teaching, learning and second-level education in Ireland.

Researching teacher candidates' diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mis-match between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993; Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students).

Issues related to equity *in* and equity *through* teacher education admission (Child et al., 2011), access and widening participation policies will be explored with the aim of opening up important debates about what types of teachers are needed in today's schools and how policy makers and teacher educators can assure that the most committed and suitable individuals are attracted to and can enter ITE programmes.

*Distinction Practices and Socialization Of "Native" and "Foreign" Elites In Mexico*

The paper summarizes the results of an empirical research project on "native" and "foreign" elites in Mexico in a comparative perspective. The focus is set on the elites' different attitudes, socialization and distinction practices (in particular "completeness" versus "synecdochism"). Furthermore, the relations and interactions between „native“ Mexican elites and „foreign“ expatriate elites in Mexico are taken into account.

Similar to other 'emerging market' countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helú being the richest business man in the world.

Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign – bringing to Mexico their own foreign top-managers (expatriates), cultures and distinction practices. The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed.

It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards synecdochism.

*The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics*

**The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics**

The use of noncontingent incentives constitutes a well-established technique in order to reduce both item- and unit-nonresponse in self-administered surveys. While the current state of research clearly indicates that monetary incentives included in the initial mailing should be the method of choice, the use of nonmonetary incentives might be more appropriate in at least two situations: Depending on the study area, various regulations on data protection or budget restrictions might prohibit researchers from sending multiple follow-up reminders as sug-

gested in Dillmans' Total Design Method (TDM). Current research indicates that low-value nonmonetary incentives can serve as a substitute for the absence of follow-up mailings to a certain degree. Secondly, the use of monetary incentives might be disadvantageous in interaction with certain survey-topics (e.g. topics that correspond to reciprocity, morality or other social desirable norms as well as intimate questions) and might even turn out to provoke reactance on the respondent's side.

The contribution renders the adequacy of nonmonetary incentives under these two conditions and presents the results of an experimental designed study. Within a German sample of 4000 target respondents, who received a survey on "Morality and Conscience in modern life", the initial mailing of a ball pen showed significant effects on the following criteria:

- Response rate (unit-and item-non response) and response-speed
- Sample-composition
- Data Quality (Elaborateness of answers to open-ended questions and Reduction of Acquiescence Response Patterns)

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash- or money-related incentives in certain contexts.

*Intra-State Conflicts In Activation Reforms: Authority Delegation and Bureaucratic Centralization In The "Privatized" Implementation Of Welfare-To-Work In Israel*

Based on the Israeli case, this article highlights the role of intra-state conflicts between bureaucratic actors in the politics that surround the reform of the governance of public employment services and the ways in which these conflicts have shaped not only the reform process, but also the institutional makeup of the reform itself. We analyze the politics that surrounded proposals to change the governance of long-term unemployment in Israel (1997-2004) and shaped the institutional makeup of the reform (2004-2010). We highlight how intractable conflicts between state agencies— the Ministry of Finance (MoF) and the Israeli Employment Service (IES)— brought about the delegation of administrative authority to private agents as a strategy that enhanced the autonomy of the MoF and its bureaucratic control over the management and implementation of a workfare program that targets the long-term unemployed who are entitled to social assistance benefits. We suggest that the delegation of administrative authority to private agents in no way represented a rolling back of the power of state agents, or a transition to a "regulatory" or "steering" state. On the contrary, we argue that this delegation of authority actually enabled state agents to strengthen their intervention in the routine management of the program, bringing about a process of bureaucratic re-centralization. We conclude that the initiation of 'partnerships' with private agents does not necessarily signal a transition to a steering state or towards a collaborative mode of governance, but may also function as a strategy through which certain state agents seek to impose their projects, thereby marginalizing alternative or competing conceptions of the role of the state in society.

*The Renewable Energy Expansion and Its Effects on Vocational Education and Training and the Labour Market in Germany*

In Germany, the sector of renewable energies (RE) is currently experiencing enormous growth. Besides first estimations about the type of the expansion, energy mix, resulting demand for workers and new requirements for firms, the effect of the RE sector's growth on the job structure and on skill requirements has not been sufficiently examined.

Our proposal exemplifies results from an ongoing research project. Theoretically and empirically the study is based on a combination of three frameworks. We need to examine requirements on the level of the working place: Firms will have to structure their working places according to new requirements. Being able to describe occupational content and its links to new qualification demands will put us in a position to examine a) what the new requirements for firms and employees are and b) what their effect on the occupational structure is.

The first reference framework draws on work by Prediger and others (c.f. Prediger/Swaney 2004) who developed dimensions – namely „people vs. things“ and „data vs. ideas“ – which are used to describe certain aspects of occupational contents and for graphing occupations. The second is the requirements on knowledge work by Volkholz and Köchling (2001), where the working population is partitioned according to the type of knowledge work of their employment,

ranging from qualified workers to task flexible and innovative workers. The third reference framework is the task-approach by Autor and others (2003) about the share of routineness of occupations, which is an enhancement of the "Skill-Biased Technological Change" approach.

Questions we address empirically (analyzing primary data of surveys of employees and firms) include:

- What is the extent of RE on the labour market?
- What characterizes jobs in RE?
- Are there unequal chances for working in RE as opposed to other occupations?

#### *Uncertain Transitions: Changing Attitudes, Values and Lifestyles of Young Finns*

This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project "The changing lifestyles and values of temporary employed young people in the different labour markets of Finland" analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporary unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on theories of values with the bioecological model of human development through life-course (Bronfenbrenner, 1995) the paper discusses about the impact of uncertain transitions on coping with shifts between dependency and independency as a result of prolonged transitions (c.f. Du Bois & Stauber 2005, "yo-yo transition").

#### *Leaders' Enhancement of Leader-Member Exchange (LMX) Relationships: An Examination of Leaders' Cognitive Support and Knowledge Resources in Research Group*

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers' perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigate the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM): Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

#### *Leaving the Parental Home and the Material Conditions of Entering Adult Life*

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnett, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars have insisted on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain auton-

omy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyses are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into consideration other concomitant life-events and information about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents' household is correlated with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

#### *Mediating Mental Distress in Young People: The Role of Popular UK Media in Challenging Stigma*

Most mental-health needs in young people are unmet, even in high income countries and 'stigma associated with mental disorder is a key challenge' (Patel et al, 2007). Media representations are considered to play a key role in fuelling stigma though this is not a new problem. Mental illness and prejudice has a trajectory which predates modern media and is deeply ingrained culturally (Signorielli, 1993). This paper draws on semi structured interviews with programme makers and source organisations as well as thematic content analysis to explore messages concerning young people in mental distress. What role might popular media play in helping to challenge or perpetuate stigma? Are there unique opportunities created by popular television that challenge prevailing representations of young people in distress? How do source organisations work with programme makers to create positive collaborations? What are the associated opportunities and pitfalls? Is there evidence that such representations can change attitudes and beliefs?

This paper builds on studies that have identified connections between media coverage and public beliefs about mental health (Philo 1993). The negative coverage of mental health is considered to bear significant responsibility for fuelling public prejudice and misconceptions (Wahl, 2003). Acute conditions such as schizophrenia are associated with particular stigma and the media stereotyping of those affected by such diagnoses is considered to have significant repercussions for their social network. Charities and other organisations have explicitly targeted popular prime time drama in a range of successful health campaigns and there is evidence that young people are receptive to 'public' issue messages within popular media formats (see Henderson, 2007). This paper examines the role of primetime UK entertainment in shaping public understandings of risk and suggests that populist depictions of young people in mental distress can challenge prevailing perceptions of those affected and represent their experience in unique ways.

#### *'What's in a Gauge?' an Assessment of Self-Reported Measures of Informal Activities*

The relationship between different measures of informal activities is at best unpredictable. In theory, if one estimated the same reality, the outcome of different measures should point in the same direction. That remains unclear in the case of informal activities. This paper assesses self-reported survey measures of informal activities. If surveys measure informal activities in a reliable way, the possible applications are extensive. In comparison to national level macro-economic estimates, their potential is much bigger.

One source of bias in surveys is the respondents' propensity to answer sensitive questions in a socially desirable way. This problem would be limited to the impact of the error terms on the condition that the bias were randomly and evenly distributed throughout the population. One possible consequential issue in questionnaire based measures of informal activities, however, is that the social desirability bias may be associated with certain group characteristics. In this contribution we will investigate the indication that the prevalence of the social desirability bias in a given population is positively associated with experiences with repressive government interventions. The lack of rule of law or of basic individual rights should influence the willingness to honestly disclose past illegitimate actions such as tax evasion off-the-books work by respondents.

Indeed, the disturbing fact is that the gap between macro-economic and survey based estimates of informal activities seems to be bigger in former communist regimes in Central Europe or repressive right wing governments. This paper tests the prediction that the social desirability bias in self-reported survey measures of informal economic activities depends on this institutional history. Based on the second round of the ESS, this thesis is tested with the help of comparison with other forms of (economic) deviance, the impact of generations to the social desirability bias and direct measures of negative attitudes toward informal activities.

#### *Creativity As Anti-Alienation: Towards a Sociology of Artistic Labor*

Based on qualitative research in the fields of the visual arts and design we aim to show that the actors in those realms experience the non-alienating qualities of their work even under current conditions of an intensified economisation of the "aesthetic" sphere. The idea and the activity of "creative labour" thus may still serve as an ideal for a Critical Theory of alienation. We propose that this view is legitimated by the self-reflexive stance of this type of activity on the one hand and the self-proclaimed distance to economic logics in the mode of production on the other hand. For example, some artists we interviewed who were quite aware of the commercial dimension of their own activities proclaimed anti-economic zones and un-commercial times in their creative process. The autonomy attributed to the idea of creativity and the practice of creative work thus seems to allow for a relative and at least temporal distance to economic calculations and its potentially alienating effects.

This is a surprising result because it runs against two major trends in contemporary European sociology: First, against the impetus to interpret the discourse on creativity mainly in its complicity with neoliberalism (for example following the sociology of critique of Boltanski/Chiapello or proponents of Governmentality Studies such as Thomas Osborne or Ulrich Broeckling), and secondly, against the perceived need to focus on issues of marketization resp. financialization and economic speculations in the analysis of all areas of social life (according to Michael Sandel and others). While both trends can hardly be ignored, the 'liberating' effect and the 'personal' meaning of creative work for the actors themselves however seems to be relatively stable. This is an argument in favour of the classical "artistic" critique of capitalism that is sometimes under a meta-critical attack in recent sociological research.

**HENNING, CHRISTOPH\*** (University of St. Gallen, Switzerland, [christoph.henning@unisg.ch](mailto:christoph.henning@unisg.ch))

#### *Reification, Money, and Wage Labour: A Defense of the Classical Theory*

**Reification, Money, and Wage Labour: A Defense of the Classical Theory**  
Reification is not a new topic, neither in Sociology nor in Social Philosophy: Authors such as Berger/Luckmann, Hannah Arendt and Helmut Plessner, or G.W.F. Hegel have described it already. Astonishingly, however, when Axel Honneth 're-constructed' this concept from the angle of his normative theory of recognition in 2005, he did not include the 'classic' factors of reification: money and wage labour, in his new version of the theory. This lead, or so I will argue, to a re-idealisation of the concept which had more in common with Hegel than it had with the classical Critical theory that used this term in a Marxist understanding.

Against this moralization and de-economisation of the term, this paper argues for a re-economised theory of reification. The starting point for an alternative reconstruction, however, is not *History and Class Consciousness*, but the political economy of Karl Marx himself, who already used the term in an interesting way (e.g. in VI. III of *Capital*). The paper will first develop and defend a sociological interpretation of Marx's *Parise manuscripts* (1844) and *Capital* (1867), where Marx identifies the mechanisms of a monetarized economy and a production based on wage labour as the main drivers of a capitalistic 'reification' of social relations. In a second step I will apply this reformulated classical theory of reification to today's globalized and flexibilized economy. I would like to suggest that conceptually the 'classic' tradition of Critical theory still has a lot to offer for an analysis of contemporary capitalism.

### RC36-619.3

**HENRICKS, KASEY\*** (Loyola University Chicago, [khenricks@abfn.org](mailto:khenricks@abfn.org))

#### *No Taxation without Discrimination: The Racial Interconnectedness of the Three-Fifths Clause, Taxation, and Alienation*

"No taxation without representation!" These iconic words of tax rebels like the "Sons of Liberty" marked the birth of a new nation. Yet when they became formally codified under law, neither can be fully understood without reference to race. In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and enfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not "no taxation without representation" but "no taxation without discrimination."

### RC21-373.3

**HENRIZI, ANNIKA\*** (University of Marburg, [annika.henrizi@gmail.com](mailto:annika.henrizi@gmail.com))

#### *Youth Protests in Baghdad: Acting in Intertwined Realities*

##### **Youth protests in Baghdad: Acting in intertwined realities**

Analysis of new forms of urban protest cultures that arose during the so-called Arab Spring have mostly overlooked recent developments in Iraq. Yet - inspired through other countries in the region - Youth in Baghdad do engage and position themselves in urban spaces as well as in digital social networks and challenge sectarianism, political developments and frictions within Iraqi society. The paper argues that these symbolic and physical spaces are not to be regarded as dichotomous but rather as two aspects of relational space. The evolving digital platforms (e.g. Facebook, Twitter, Blogs) have created new spaces and ways of acting and networking that would have hardly been possible otherwise due to the on-going violence and worsening security situation. Drawing on interviews and chats with involved actors the paper explores which new possibilities arise from technological opportunities of networking and organizing and how the self-representation and performances of actors is digital and urban spaces are linked from a theoretical view as well as from the actors' own perspective. Furthermore it aims to discuss how these processes of positioning shape public spaces and can be seen as new instruments of power.

#### *From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization. An Approach Based on the Study of Female Seasonal Agricultural Workers in Chile*

##### **From Promise to Reality: Equal Opportunities and Real Capabilities of Women in the Era of Globalization. An Approach Based on the Study of Female Seasonal Agricultural Workers in Chile.**

After years of numerous worldwide strategies and policies, implemented by different public, private, national, and transnational actors, who want to install a gender and equal opportunities approach for women, what is the final assessment of these practices? What true empowerment and what real capabilities have been achieved by these different actions? Are there any significant transformations that we can identify in these attempts?

Some interesting answers to these questions can be found in the case of female seasonal agricultural workers. After going through a process of proletarianization and insertion into, by definition, precarious and unstable work, numerous changes have affected their social, economic, cultural and domestic environment. These include access to a consumer society, participation in new networking and the sharing of responsibilities in the family area. But in a context of great inequality and precariousness, how can we talk about empowerment and capability?

This ethnographic study carried out in Limari Province in Chile, provides some answers to those questions. It analyzes how the situation has changed for women, tracks progress in gender equality, and explains to what extent the current situation both comes close to and moves away from the desired development project.

### RC09-170.5

**HERAN, TAMARA\*** (École Hautes Études Sciences Sociales, [tamaraheran@gmail.com](mailto:tamaraheran@gmail.com))

## *Purposes and Rationalities in a Globalized and Multicultural World. a Study of the Agricultural Sector in Chile*

### **Purposes and Rationalities in a Globalized and Multicultural World. A Study of the Agricultural Sector in Chile.**

While competitiveness, productivity, and profitability are a company's goals; and income maximization, individual benefit, and increasing economic power seem to be a manager's goals, what are a worker's goals beyond the solution of his/her basic needs? In a culturally diverse context where globalization appears to guide the different actors, what are the different purposes they pursue? What kinds of rationalities and what cultural peculiarities do we identify in a world where interconnection and the imposition of transnational patterns are becoming more important?

This proposal discusses the multiple rationalities that mobilize social actors, in a context of major inequalities, using an ethnographic approach carried out in Limarí Province, Chile, with seasonal agricultural workers. Numerous development strategies designed to increase productivity and economic growth have been introduced, meaning that the local society has had to deal with big transformations, in the economic, social, environmental and cultural spheres. The arrival of national and transnational companies to give value to the agricultural sector, with foreign managers who do not know the local culture, has put the agricultural sector in conflict. Productivity, competitiveness, efficiency and economic development are not concepts shared by all the actors.

The research based on this case study, combines with the study of social, cultural and economic transformations, such as the confrontation and diversity of the different actors' representations, purposes and rationalities, triggered by development strategies.

[tamarhe@openu.ac.il](mailto:tamarhe@openu.ac.il))

### *Dissatisfied But Not Enough – Israeli Protest Of Summer 2011*

In the Summer of 2011, between the first major eruption of protests in Tahrir Square and the emergence of the American Occupy Wall Street movement, Israel experienced a massive protest wave. However, unlike Egypt and the US, at that time Israel did not experience unusual political, social or economic difficulties. In fact, by most objective parameters, this was a relatively calm period. Yet the protest gained unprecedented attention and participation.

Based on social movements political process theories and public opinion data collected in the framework of the monthly Peace Index and the annual Israeli Democracy Index run by the author, the paper will examine the reasons for the unexpected momentum of this protest campaign; and analyze the public assessment of the 2011 protest ex post facto.

The main argument here is that the 2011 protest popularity on the one hand and its negligible results on the other are two sides of the same coin. Dissatisfied with the government performance and motivated by their perceived political inefficacy and simultaneously fascinated by the political and social transformative ideas, rhetoric and activities of the Arab and Western protest campaigns of the time, the Israeli masses filled the streets of Tel Aviv from July to September 2011. However, the data suggests that the protestors were not "hungry" for substantial social, economic and political changes. In fact, they had national (Jewish) and (middle) class vested interests in the maintenance of the socio-political status-quo, as was manifested later in the 2013 parliamentary elections. Because of this duality, significant political dissatisfaction together with strong motivation to maintain the socio-political superstructure, despite certain similarities, unlike the Tahrir and Occupy struggles, the Israeli 2011 protest did not and could not have produced a clear transformative agenda or action plan.

### *Colleagues and Quests For Immortality*

Achievement in the professions is situated relationally. Work comes to constitute contribution only by the judgments of colleagues. This is paradigmatically the case in science and scholarship, a realm understood to be imbued by charismatic authority, where colleagues not only sanction behavior but also serve as a conduit by which others are immortalized for their contributions. Normatively, it would stand to reason that colleagues would be held in high regard; the work of science, and the lives of scientists and scholars, depend on them. The present work, however, examines empirically how incumbents value colleagues in actuality. Taking academia as a site for analysis, the present work investigates one aspect of the social significance of colleagues by asking how scientists might desire being remembered by them. The study is thus centered on two social-psychological concerns: the importance, if any, that incumbents assign to colleagues and the specific attribution to colleagues of how incumbents would like to be regarded. Data come from in-depth, face-to-face interviews with 60 scientists at a variety of points in their careers and employed at a range of types of universities.

The results reveal a highly circumscribed set of ways—just eight in number—that scientists wish to be remembered. Ways of remembrance cluster on professional versus personal grounds, which constitute a contest in the politics of reputation and commemoration. In addition, responses vary by departmental tier, age, and productivity. The discussion exposes social codes of scientists, which, while purportedly unequal and contradictory, are used to project a transcendent route to remembrance, nestled in the context of work values, norms, and perceptions. Anticipation of the self in memoriam is argued to constitute a principal means by which people socially construct status.

The paper is fully written and complete. The presentation will discuss its major points.

### *Internationalization of Knowledge Work in Argentina: The Case of 'Global Professors'*

Globalization has changed the world in many aspects relevant for professionals and 'knowledge workers', such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of 'symbolic analysts' and other 'knowledge workers', who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for 'knowledge workers' and for cross-border higher education, and subsequently, this may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a 'global professors' in 21<sup>st</sup> century. A growing number of professors are working in different countries but without moving; moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing Argentina.

### *Sociología DEL Trabajo Y Desigualdad: Nuevos Desafíos Globales - Labor Sociology and Inequality: New Global Challenges*

En 1995 reflexionamos sobre la Sociología del Trabajo y sus paradigmas disciplinarios, afirmando que había que superar el reduccionismo economicista. Tanto por la necesidad de incluir otras perspectivas, como por las dificultades que suponía dar cuenta de las nuevas realidades de las transformaciones post-fordistas en el capitalismo globalizado.

En 2012 actualizamos la descripción y análisis histórico de los procesos sociales de trabajo, ampliándolos a escala global y relacionándolos con el desarrollo del moderno sistema mundial.

Es el propósito de este trabajo continuar el esfuerzo para superar el *mainstream* de la Sociología del Trabajo, con miradas euro céntricas que consideraban como modelo de trabajador al obrero industrial asalariado, lo que ya era insuficiente para dar cuenta del mundo laboral de los "Años Dorados", fuera de los países centrales.

Esto implica la necesidad de abarcar en el análisis un espectro más amplio y diverso de categorías del trabajo, y la elasticidad permanente que supone la existencia de población "supernumeraria" en diferentes momentos y locaciones como, por ejemplo, ahora en la Unión Europea.

La crisis a la que hoy se enfrenta la Humanidad, ya no sólo es económica sino sistémica: involucrando los recursos planetarios disponibles, alterados y extinguidos.

Esto supone, para la sociología laboral, la necesidad de renovación para comprender el sistema dominante capitalista (procesos financieros y tecnológicos, poderes globales); la racionalidad y metabolismo del sistema; la baja respuesta global e identitaria de los colectivos sindicales tradicionales; el avance de las fuerzas productivas, su concentración y sus contradicciones; los nuevos movimientos y expresiones heterogéneas de los trabajadores y; por último, la necesidad de contar con metodologías colaborativas.

Para ello, se abordarán elementos de las nuevas corrientes del pensamiento crítico y de las realidades del trabajo hoy para dar cuenta de cómo afectan a la división del trabajo global y a los trabajadores.

*Globalizing the Classroom: Innovative Approach to National and International Learning*

This essay examines an innovative approach to teaching globalization and assesses a course on *Globalization, Social Justice and Human Rights* co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, politics, environments, and human societies are experiencing great connections across the globe, the educational system continues to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of student work is to interact on-line with students on other campuses, including undertaking collaborative group work across borders. A shared core syllabus can be modified by institution to satisfy local needs. We examine the following: the logistics of this course; the obstacles and possibilities in its implementation, including the use of technology; the role of language and communication, and; mechanisms for adapting faculty participants' needs to local curricular guidelines. We also address the benefits of the course for students, such as exposure to a greater diversity of worldviews and pedagogical approaches; the development of teamwork skills, including developing a flexible mind frame; accepting and accommodating diverse educational needs/approaches, and; promoting interdisciplinary communication and collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic calendars, facilitating transnational group service learning projects, and the greater time demands required to coordinate and monitor students' online interactions. Our objective is to contribute to improving and innovating approaches to teaching globalization.

*Transnational Labor Collaboration: Mexican Union's Perspectives and Experiences*

The study of transnational collaboration in social movements has a long tradition, yet a focus on labor union solidarity across borders is rather recent and, surprisingly, there is very little cross continental fertilization among scholars. In this study I seek to bring together scholarship from the Americas and Europe as I seek to understand the experience Mexican labor unions have had with transnational labor collaboration. I contribute to our understanding of transnational labor collaboration by viewing it from the perspective and experience of unions in the South. Through interviews with 27 leaders of 16 unions, both corporatist and independent unions, I offer a broader picture of the factors that influence transnational labor collaboration. Unlike previous US scholarship, I do not only study independent unions, but also corporatist ones. Rather than select the enticing cases, I use a sample of various kinds of unions in Mexico, and explore what is their experience and view of transnational labor collaboration. This approach allows me to reveal more complexities in our understanding of transnational labor collaboration. Supporting earlier findings, I identify internal, external, structural, and economic factors influencing the possibility and shape of collaboration. However, I pay closer attention to ideological factors than has previously been done. This research also permits me to explore the difference between corporatist and independent unions' transnational relations and the way national-level disagreements among unions and intra-union tensions play out at the international level.

*Aesthetic Proximity and Performance Among "Hatsune Miku" Cosplayers in Japan*

"Cosplay" is an activity popular among Japanese youth where somebody dresses-up, in the most of the cases, as a fictional character. I focus on those *cosplay* based on the character named "Hatsune Miku", a voice synthesizer presented as a female fictional character developed by "Crypton Future Media", under the concept of a "virtual idol". This synthesizer uses the "vocaloid" technology developed by Yamaha Corporation and is used to "sing" the songs produced by her users. However, unlike many other popular characters, Hatsune Miku is characterized by her lack of a narrative. Nevertheless, instead of lose "reality" because of this "lack", is precisely thanks to this characteristic that she has the versatility of appear in many media (mainly User Generated Media) and be used freely in many different ways, becoming a perfect icon of the "Participatory Culture", as imagined by H. Jenkins (2006). The particular kind of reality that supports her success as a "virtual idol" can be described following the "character-kyara" theory proposed by G. Ito (2005). In my study I analyze the role of this kind of reality among Miku's fans in Japan, departing from Ito's theory of "Kyara". However, while Ito's theory is centered on iconic futures of Japanese comic books (manga), I will adapt his theory into a wider use of the "Kyara", and particularly its performative use in the *cosplay*. For this aim, I will move from the textual iconicity focused by Ito, towards the idea of "aesthetic proximity" as proposed by Sandvoss (2005a, 2005b) in the study of fan affectivity, and therefore, focusing not on the "visual" but on the "aesthetic" dimension of popular culture. As a result, my aim is to present an example of how character's "reality" is built through social practice in the particular case of contemporary Japanese *cosplay* culture.

*La Industria De La Migración En Los Flujos De Trabajadores Temporales Legales De México a Estados Unidos*

La producción de la migración internacional, ya sea como movimiento colectivo o acto individual, no solo es resultado de las grandes desigualdades económicas entre países. La migración también requiere de intermediarios que ponen en juego saberes e infraestructuras que vinculan efectiva y eficientemente a empleadores, por un lado, y trabajadores, por el otro. Definimos a este conjunto de intermediarios como la industria de la migración. Aunque es comúnmente asociada con las migraciones indocumentadas, la industria de la migración también está presente en los flujos autorizados por el estado, sean éstos permanentes o temporales. En este trabajo analizamos el papel que la industria de la migración juega en la organización del flujo de trabajadores mexicanos a los Estados Unidos, bajo el programa de visas temporales H2. Si bien el programa de visas H2 es un programa del gobierno norteamericano creado para suministrar trabajadores de baja calificación a la agricultura y otras industrias intensivas de mano de obra, el manejo práctico de dicho programa está en manos privadas. La administración práctica de este programa inicia con un conjunto de agencias estadounidenses que certifican, a nombre de los empleadores, la "escasez" de mano de obra en determinada industria y región de la Unión Americana. Estas mismas agencias colaboran con contratistas mexicanos y norteamericanos para anunciar, seleccionar y reclutar a los trabajadores que habrán de tramitar sus visas H2 en el Consulado de los Estados Unidos en Monterrey, México. Esta ciudad es el epicentro de la industria de la migración que maneja programa H2. En este trabajo analizamos a los actores que la conforman, sus saberes y articulaciones: reclutadores, transportistas, hoteleros y tramitadores de documentos.

*The Industry of Migrant Mobility: Bastard Institutions and Infrastructures in the Eastern and Western Migratory Corridors of the U.S.-Mexico Border*

The international migration scholarship has paid little attention to the actors, institutions and infrastructures that facilitate migrant mobility. In this paper, we use the concept of migration industry as "bastard institution" and "infrastructure" to analyze migrant mobility in two corridors of the United States-Mexico border: the Monterrey-Texas or eastern corridor and the Tijuana-California or western corridor. Coined by sociologist Everett Hughes, bastard institutions are chronic deviations from established institutions, which provide alternative distribution channels of goods and services. The migration industry can be conceptualized as a bastard institution in that such industry and its actors provide alternatives to state sanctioned mobility across international borders. We also conceptualize the migration industry as infrastructure, that is, as institutionalized means which facilitate migrant mobility. How did a migration industry of migrant mobility emerge

in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

### *Thinking through Worker Responses to Globalisation – What's Geography Got to Do with It?*

Everywhere we go, it seems, we hear about globalisation. And, if we are associated with a labour movement in any way, we often hear a corollary to this globalisation talk – 'workers must organise globally!', 'unions must internationalise!', and many similar such statements. Certainly, I don't want to suggest here that these are not important elements in a vibrant labour politics that seeks to confront the untrammelled power of global capital. There are growing numbers of labour unions who are merging across international borders as a way to gain leverage in the global economy. But what I do want to suggest is that responses to the activities of global capital are more complicated than a simple 'we need to globalise' response. And part of what complicates this is questions of geography.

In this paper, then, I will detail some of the geographical approaches that a group of self-styled "Labour geographers" have developed to think through issues of worker power to show how the way in which the geography of capitalism is made is both reflective of capital-labour conflicts but also constitutive thereof. In particular, I will focus upon two claims which, when viewed through a geographical lens, are more problematic than at first perceived, these being: 1) the claim that workers must organise at the same geographical scale as capital if they are to have any purchase upon the world economy (i.e., globally); and 2) that transnational organising by workers is necessarily progressive. Such geographical perspectives provide a means to think about world order and political praxis in a more nuanced manner. Researching how different places are geographically connected, then, is a central starting point to developing effective and progressive strategy in an increasingly networked global economy.

### *Is There a Field of Art in Russia?*

A popular opinion among the international and Russian art communities is that Russian art collectors—often thought of as *nouveaux riches*—have no taste. Contemporary Russian art is also poorly received by both, and frequently dismissed as derivative of western art. And Russian art world insiders often complain that because of a lack of education, the general Russian public does not understand or appreciate contemporary art. Yet Russia has long had a rich cultural history with emphasis on appreciating the arts and is home to world-famous museums. Further, Russia's tumultuous transition from socialism to capitalism would suggest there is ample inspiration for creating original art instead of aping the West. What accounts for this divergence between the potentiality of Russian art and the reality as claimed by its players?

Looking toward Bourdieu, one could say that there has been a failure to create a field of art in Russia. After ten months of fieldwork in Moscow, I found that while some conditions are in place, ultimately the field of art has not fully developed. Despite the Soviet Union's collapse over 20 years ago, its effects have left an enduring mark on the landscape of contemporary art today. I argue that this past has created barriers to creating a field of art in post-Soviet Russia, such as a lack of institutional support (including government censorship), a negative view of the past, dependence on the West for ideals about the art world, and a belief that art market is the index of collective success

### *The Logics of Bureaucratic Appointments and the Construction of the New Ecuadorian Migration Policy*

This paper explores the logics of bureaucratic appointments during the first five years of the Ecuadorian president Rafael Correa's administration (2007-2011) through the case study of recruitments in different levels of bureaucracy in one of the government's new emblematic institutions – the National Secretariat for Migrants. With this case study, we aim to better understand the relations between bureaucratic appointments within the Secretariat and the process of designing and implementing the new Ecuadorian migration policy.

By introducing a typology of actors that traces their *careers* (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees' affiliation to Correa's party, Alianza Pais, but also on their involvement in the social movement organizations mobilized for the migrants' cause.

Relying on this *tableau* of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of *capitals* (Bourdieu, 1972, 2004), practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the restructuring of the bureaucratic field during the Correa administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

### *Consequences of Newer Media of Communication within Economy As a System*

In order to understand the future of economy as a social system, my research revises a theory of media from the general perspective of communication and retraces the first accounts of generalized symbolic media in the form of money, payments and today's nexus of exchange, as initially described by Marx<sup>[1]</sup> and later by Adorno. Second, the piece studies how monetary economy includes risk within its internal operations in front of an increasingly complex environment. The third part of the paper describes the epistemological transformations that are required. In effect, the current development of autonomous systems asks for different methodologies and epistemological perspectives in order to observe and decrypt the new landscape arising from the way in which society has evolved.

Increased reflexivity within system's production (Luhmann, 1995) has important consequences in respect to the communication flow in society. What are those consequences? Willke (Willke, 2007:14)<sup>[2]</sup> envisages the market within a variety of mechanisms to ensure coordination and cooperation. Nevertheless, disembodied media of communication may have erosive effects upon previous modalities of coordination and cooperation. In what extent the recent developments of derivatives and newer media of communication within economy renew Marxist perspectives of reification?

Concluding, a comparative analysis of the communicative power of distinct media of communication must be part of economics. This supposes an enlargement of communication as a field in order to comprehend the distinct systemic varieties of communication at stake, the diverse semantic and praxical purposes that they serve, and the possibility of overlapping communications that create further risk.

[1] The concept of nexus of exchange is found in Marx, Karl. (1858). Second Draft of Critique of Political Economy. MECW Volume 29, pp. 430-507.

### *Functional Differentiation and Communication Problems*

This research deals with the necessity of a transformation of the dominant paradigm for observing society. It builds from N. Luhmann theory of social systems. The problem is dealt with using cybernetic theories of social communication that are used to advance selected case analyses.

I first deal with the fragmented state of scientific production, which I explain as a side-result of functional differentiation. I describe this as a case of incomplete rationality that has consequences for the level of human agents and for the level of systems' communications.

I then postulate that structural changes force any serious social epistemology to include the notion of functional differentiation, in order to account for newer epistemic forms of agency such as organizations that exist at a level of praxeological equality with human beings.

The situation of newer epistemic forms has profound consequences for all the concerned levels. On the one hand, in respect to the level of direct human agency, the fact of emergent modalities of agents forces a reconsideration of the romanticised perspectives of agency (Collins, 1992). Anthropocentric perspectives are refuted by those newer epistemic forms, jeopardizing the former centrality of the human subject in the making of society. On the other hand, in respect to the side of techno-systems and their increasing reflexive features, a reconsideration of

traditional concepts of cognition is urgent. Understanding emergence takes then a central role.

The implications of my research are 1. A decentring of the anthropic perspective to understanding complex social communication. 2. A revision of determinist views to ascertain conflicts in social systems' communications. 3. My research offers a practical approach to maximize the possibilities that direct human agency has to circumvent stabilized communications in social systems. Finally, the piece offers new venues to understand the relationship between human agency and systemic stability.

#### *Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School*

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of 'Australian' national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropublics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethico-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric.

Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insight into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting 'flavour of the month' political and institutional discourses.

#### *Politicization of the Youth in Germany – Two Case-Studies about Protest Movements*

In this paper I want to explore the criminalization and politicization of young left-radicals (anti-germans) through the use of biographical methods. I found a connection to migrants that became graffiti-artists and gang-members in the 1990s in Frankfurt am Main, because of their experience of racism and disregard in the German host society. After the German reunification a new form of politicization took place as well as on the political left side of society as on the side of migrants. The attacks on the home for people seeking asylum in Rostock, Mölln and Hoyerswerda led to other aspects of politicization that will be discussed. Both groups felt affected by this situation. In the session I would like to present two cases. The first one is about the approach of an anti-german activist. The second one deals with a former gang-member from the 90s. Both cases are based on narrative interviews and participant observation for example the ways of acting in demonstrations.

**HERTOGHS, MAJA\*** (PhD Student, [hertoghs@fsw.eur.nl](mailto:hertoghs@fsw.eur.nl))

#### *Shaping National Borders and Imagining National Belonging through the Professional Practices of Asylum*

This paper is part of an ongoing ethnographic study of the Dutch asylum process. I explore how competing professional practices of 'the asylum procedure' shape a specific kind of (national) border-performance and works to produce images of national belonging.

Non-Western migrants pose a dilemma for 'nation states' leading to a manifold of control measurements and monitoring strategies. In part this dilemma is dealt with in and through an asylum procedure that incorporates both the compassionate promise to protect 'authentic refugees' and repress a complexity of differently classified non-Western migrants. In this spatio-temporal asylum process the asylum applicant resides in a liminal manifold of interaction, in which professional negotiations and visualizations of 'deservingness' unfold between legal represen-

tatives of asylum applicants and well-trained IND officers representing the state. Such asylum practices can be understood as particular ways of performing the border (cf. Green, 2010). While, often, national borders are taken for granted as stable, fixed and as an ever-present reality, a national border is dynamically made and unmade, present or non-present. The presence and making of the border partly relies on that which stirs it; while non-western immigrants incite a strict and well-developed border regime, such borders radically disappear when flows of capital are of concern (cf. Appadurai & Holston).

Through the 'problem' of asylum and non-Western immigration the national border is made into a (liminal) space of separation; in various detention or 'application' buildings 'asylum seekers' are classified (separated) as either 'good' or 'bogus' and, accordingly, labeled as (un)deserving to enter the 'sovereign' domain of the 'national community'. As such, the border-performances of the asylum procedure shape specific and diverging relationships between 'the national self' and 'the immigrant other'. These professionalized border practices, consequently, produce and visualize images of national belonging.

#### *Civil Marriage in Africa: Rights of Women, or Rights over Women?*

Although matrimonial procedures in sub-Saharan Africa are highly complex, civil marriage is often a minority practice in this region. It is being increasingly promoted, however, notably in policies to advance women's rights, since legal marriage enables each partner to assert his or her rights, if necessary through the courts. But why are women opposed to this practice in different populations? Is civil marriage always a factor of progress for women? To what extent does it challenge the traditional leeway of women to manage their conjugal life, for instance to dissolve their union? Are the rights associated with civil marriage always more profitable to women than the flexibility of the "de facto" marriage? Are these rights consistent with local reality or do they correspond more to principles with no real practical application? We will examine these questions on an empirical basis, using a small-scale and longitudinal research in rural Mali, implemented in 1987-9 and updated every 5 years (the last in 2009-10). Quantitative data come from an exhaustive life event history survey that was carried out in two villages (1,750 inhabitants in 2009). Qualitative data include a corpus of individual interviews (65) on the family interactions experienced at different periods of life, and 7 interviews on marriage legalization (6 with focus groups + 1 with the judge in charge of divorce and family affairs). In line with women's perceptions that civil marriage is a brake to marital rupture, quantitative results confirm that divorce is rare in case of legal marriage, while it is common (about 25% of rupture among women's first marriage) otherwise. The paper will show that legal marriage can increase gender inequalities by making it more difficult for women to dissolve a union, while failing to provide them with rights that are suited to local realities.

**HERTZOG, ANNE\*** (University of Cergy-Pontoise, [hertzog.anne@wanadoo.fr](mailto:hertzog.anne@wanadoo.fr))

#### *The "Art" of Occupying the City : Contestations and Resistance through Creative Activism in an French Suburb*

The "Art" of occupying the city : contestations and resistance through creative activism in an French suburb

Recent urban renewal policies in France have led to a reactivation of "urban activism" rooted in the "urban struggle" of the early 1970s (Castells, 1973) and the rise of "new social movements" (Touraine, 1978), while knowing deep changes in the light of new concerns (Ion, 1997). Through the analysis of a local organization of inhabitants promoting the use of art in the public space in a suburban town affected by urban regeneration, we can question these renewed registers and the modalities of action chosen by inhabitants who challenge and intend to participate actively in the transformations of their material surrounding, in a context of changing decision-making process in French urban planning. We will see how, through use of art in urban activism, between performance and informality, it is the City "given back" to its inhabitants which is staged and defined as a counter model to the contemporary "planned and imposed" town. Through the collective production of a new urban aesthetic, a new relationship with the city is suggested, based on renewed values and sensitive approaches, as well as an "alternative" urban design and landscape. We will also show how the creative act, as a collective process, appears more important than the art piece itself, as it allows social relationships defined like a new kind of urban "togetherness". However, far from being inclusive, this "activism" (Lemoine et Ouardi, 2010) can also work like an "entre soi", and thus, in a more exclusive way, involve a spatial and social "distinction" process (in the bourdieusian sense). This communication will, thus, insist on the ambivalence characterizing collective action and belonging through use of art in urban mobilizations.

**RC30-511.2****HERVE, BRUNO\*** (EHESS (Paris), [bh.herve@gmail.com](mailto:bh.herve@gmail.com))*Le Paternalisme Recyclé. Le Cas D'un Projet Minier Au Pérou*

Le paternalisme comme système total régissant la relation entre employeur et salarié a vu son essor à l'aube de l'industrialisation et du travail salarié en Europe. A travers ses différentes caractéristiques et ses différents usages, (encadrement de la population marginale, outil de fidélisation et de discipline, univers clos, outil de contrôle politique et social permettant de faire écran à l'Etat et aux luttes sociales), ce système demeure au travers de relations plus complexes et d'acteurs nouveaux.

Nous observons ce système de domination au Pérou, où certaines entreprises minières ont un contrôle non seulement sur leurs salariés, mais sur l'ensemble de la population avoisinant le projet minier. Nous voulons étudier la relation entre l'entreprise minière Suisse Xstrata, et la communauté paysanne de Fuerabamba au Pérou. Installée depuis 2005 sur le territoire communal, l'entreprise développe des stratégies d'adhésion à son modèle, notamment à travers le système de Responsabilité Sociale.

Le paternalisme n'est pas, ici, uniquement la prise en charge des employés par l'entreprise. Ce système intègre tous les habitants de la communauté (fidélisation, dépendance, distraction, suivi « social », *sponsoring*, etc.) pour le bon déroulement de son projet.

Ainsi, l'entreprise remplace l'Etat, crée son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et des ateliers, (ré)invente des traditions et des concours de danses traditionnelles, promeut le développement dans la communauté et s'impose comme l'entité légitime pour prêcher la bonne parole aux paysans.

L'entreprise minière semble ainsi recycler des systèmes anciens de subordination, rappelant les relations entre Indiens et métis dans les *haciendas* durant plusieurs siècles, ou les relations de subordination des travailleurs miniers à l'aube du XXe siècle.

Nous tâcherons donc de disséquer ce complexe rapport de domination où, *a priori*, chacun semble y trouver plus ou moins son compte.

**RC05-110.7****HERVIK, PETER\*** (Aalborg University, [hervik@cgs.aau.dk](mailto:hervik@cgs.aau.dk))*The Nexus of Scandinavian Exclusionary Thinking and the Naturalization of Difference*

Studies of European political party programs, social movements, news media coverage, scores of books, and social media networks have embraced a negative dialogue towards migrants, whose identities are increasingly seen as incompatible with "Western" values and presenting a major challenge to the democracy. Sponsors of these public discourse support anti-migration and oppositionary stances to "migrant sympathizers", who are often represented as traitors or cowards. They also fuel a process where xenophobia and zero-tolerance have become naturalized and morally accepted ways to respond to the non-Western migrants. But how do people reason on these issues in everyday interaction and during interviews? The aim of this paper is to discuss how negativity against migrants in Scandinavia is related to negative beliefs towards "multiculturalism", "feminism", and "liberals" (left-wingers) in Scandinavian popular reasoning about difference. While there is much research about different forms of exclusionary beliefs separately and against specific collectivities, there is little scientific knowledge about how one belief co-exists with another as figures in reasoning. We approach this coexistence as a "nexus of exclusionary beliefs" with its blurred relations, inherent contradictions, and taken for granted assumptions. Through interactive methods that include a variety of qualitative interviews and participant observation followed by analysis of online social media and web news commenting, we seek to understand the cultural logics of this contemporary Scandinavian reasoning about difference, and if successful we can supply some input to the discussion whether the anti-beliefs are related by diffusion, analogy, correlation, or competition.

STIER, HAYA (Tel Aviv University)

*Family Matters: The Effect of Demographic Changes in Family Patterns on Rising Income Inequality*

The purpose of the proposed study is to investigate the impact changes in family patterns have on the rise in income inequality. Our study focuses on changes in family patterns in Israel during the last decades and their relations to the rise in income inequality across Israeli households. Specifically, the research will focus on changes in women's labor force participation, and changes in educational homogeneity and how they affected income inequality. During the last decades income inequality rose dramatically in Israel. At the same time, women improved their educational attainment and labor force participation, similar to what is

found in other industrialized countries. Using data from the Israeli census of 1983 and 2008, we present a decomposition of the Theil Index in order to explore the relative "contribution" of the increase in women's labor force participation and changes in assortative mating.

Our preliminary results indicate that the widening inequality was by and large a result of widening inequalities within the different types of households (based on education). This might indicate that educational assortative mating alone cannot explain the increase in inequality and should be, therefore, studied in tandem with the actual work patterns of women in households with different levels of spouses' education. The period under question witnessed a rise in women's labor force participation (Kimhi, 2012). While most households in Israel are composed of two earners there is still a substantial variation among them in their earner composition, with some having two full-time earners, while in others one spouse (or both) work on a part-time basis, and still others have only one provider. The effect of women's employment on inequality seems of great importance, since their pattern of work is more varied than that of men.

**RC38-651.5****HERZOG, HANNA\*** (Tel Aviv University, [hherzog@post.tau.ac.il](mailto:hherzog@post.tau.ac.il))*Present Absentees: Internal Refugeeism As Location and Identity in the Second and Third Generations of Palestinian Women Citizens of Israel*

I explore the emergence and significance of the identity of "internal refugees": the identity of Palestinian citizens of Israel who were expelled from their localities in 1948 and, though remaining within the state of Israel's borders, were denied the right to return there, and were forced to reside in other places. The analysis is based on 15 biographical narratives of women who are second and third generations of internal refugees who were born in the host localities.

The theoretical and empirical claim is that refugeeism as location and as identity is a liminal arena that both enables an examination of women's experience and offers another viewpoint for understanding Jewish and Palestinian societies as well as women's experiences. My argument is twofold: first, women's multi-faceted marginal location within both Jewish society and their own society enables them to challenge both societies.

Second, internal refugee status for the second and third generations of Palestinian society in Israel, has become a category of identity alongside national, ethnic, religious and gendered categories. It is an identity category through which existential experiences are interpreted, and a collective, familial and personal history is constituted. Like national, ethnic, and gendered identity, this category is also subject to constant negotiations and contestation over its boundaries and meaning, but is unique in its location. From the woman refugee's position somewhere/nowhere, women are able to develop a strong political critique towards their own society (Palestinian within Israel, in the Occupied Territories, in the Diaspora) and toward Jewish society.

HERZOG, ZE'EV (Tel Aviv University)*Re-Membering the Past: Biblical Archaeology Between Secularization and Religionization*

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both "religion" and "the secular" are not universal nor essentialist entities, but rather contingent dimensions of social life that are embedded in time, place, and changing historical circumstances. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monotheistic religions was disrupted by the secular school of biblical criticism that flourished in Germany from the mid-19th century and challenged the historicity of the biblical narrative.

A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavating sites mentioned in the Old Testament and thereby testifying to the historicity of the biblical events. This approach was enthusiastically adopted by secular Israeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion.

Since the 1990s, the pendulum has swung toward a critical view of the archaeological data. Secular scientific archaeology rejected the shackles of religion and national concerns.

Nonetheless, since the 2000s, national religious perspectives that dominate Israeli politics have again been filtering into the archaeological discourse by attempting to revive traditional biblical interpretation.

#### *Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area*

Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research aims at answering the following question: how can vulnerable coastal areas make a transition towards areas that are more resilient and better prepared to cope with unexpected ecological, social and economic changes in the future? In this paper the concepts of tourism, complex social-ecological systems, resilience and planning will be illustrated by the case of the Dutch Wadden area, which is one of the largest tidal wetlands in the world and was enlisted as UNESCO World Heritage in 2009.

This paper will be organized in three parts. First, we will examine the concept of tourism and indicate where the academic gaps and shortcomings regarding tourism in vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Ballesteros, 2011) and to find ways to develop and protect at the same time.

Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable areas through different scales. Planning is important and has to be done carefully, since tourism can be a tool for regional development, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

#### *Military Children: The Effects of Deployment during Operations Iraqi and Enduring Freedom on Children's Psychosocial Well-Being*

More than half of military personnel have children and nearly 2 million children are affected by the war in Afghanistan and recently terminated war in Iraq (Quigley 2009). Not only are members faced with the demanding obligations of the military, children are also challenged by the disruptions and stress of military life. Family disruptions are never an easy transition for any child. For those children whose parents served in Iraq and/or currently serving in Afghanistan, family disruptions may have a significant impact in their lives. This study is investigating the psychosocial well-being of children with a parent deployed in Iraq/Afghanistan,

location categorized as hostile zones, with the psychosocial well-being of children with a parent deployed elsewhere.

#### *Participatory Democracy and Socialism: How to Extend Participatory Democracy from the Political to the Economic Sphere*

The economic and political shortcomings of representative democracy have led many to search for alternative, more direct and participatory forms of democracy. This has led, in particular, to local-level experimentation with popular control over political decision-making, via institutions such as participatory budgeting, a practice giving citizens control over local budget decisions that has spread to more than a thousand cities worldwide. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical Left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony. These characteristics are: internal democracy; links to popular movements; a prefigurative commitment to democratic socialism; and links to/autonomy from the national state. This argument is illustrated by examining participatory control over political and economic decision-making in Torres, which has been called "Venezuela's first socialist city".

#### TG03-938.4

**HETLAND, GABRIEL\*** (UC Berkeley Dept of Sociology, [ghetland@berkeley.edu](mailto:ghetland@berkeley.edu))

#### *Reclaiming Democracy: Popular Participation of the Left and Right in Venezuela and Bolivia*

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to foment socialist revolution. But the World Bank has also championed PB. And while PB has most often been initiated by Left parties, there are a number of cases of PB in cities controlled by centrist and rightwing parties. For the most part, scholars have failed to grapple with the question of "rightwing participation", and most scholars argue that participatory reforms, such as PB, can only succeed when a Left party is in power at the local level. Through a nested, cross-/sub-national comparison, based on 19 months of ethnographic research, my dissertation interrogates this assumption by looking at participatory budgeting in cities run by the Left and Right in Venezuela and Bolivia. I expected to find more success in my two Left cases. Surprisingly, I found robust participation in my Left and Right Venezuelan cases but limited participation in my Left and Right Bolivian cases. I was also surprised to find greater success in my Venezuelan cases given the greater strength and autonomy of social movements in Bolivia compared to Venezuela and the distinct trajectories through which Hugo Chávez and Evo Morales rose to prominence (Chávez through a failed military coup and Morales through social movements). I argue that these unexpected findings can only be explained by examining the relationship between local and national politics in Venezuela and Bolivia.

#### RC19-337.7

**HETTIGE, SIRI\*** (University of Colombo, Sri Lanka, [hettigesiri@gmail.com](mailto:hettigesiri@gmail.com))

#### *From Social Democracy to New Nationalist Populism*

Sri Lanka emerged as an incipient social democracy following independence. Progressive labor legislation, social protection for public and private sector workers, free health and education, etc. led to a steady improvement in social conditions in the country. Though some of these gains remain largely intact, economic liberalization over the last three decades has changed the socio-economic landscape in an unprecedented manner.

Increasing public debts, both domestic and foreign, a widening trade gap, continuing devaluation of the local currency and the stagnant state revenue leave little room for significant state interventions in the area of social policy. Whatever measures that have been attempted have already been abandoned due to financial unsustainability. While a minority of employed people continue to enjoy some form of social protection, the vast majority engaged in informal economic activities remain exposed to the vagaries of the market in terms of both earning an income as well as meeting their basic needs, let alone the prospect for a future devoid of poverty and neglect.

It is against the above background that the dominant public discourse spearheaded by the state itself has shifted from social democracy to nationalist populism. While the former emphasized the role of the state as one guaranteeing the

social rights of citizens, the latter highlights the protective role. Even though the war ended in 2009, public discourse continues to be dominated by security issues. Persisting ethnic tensions in the country feed into the dominant discourse, relegating social policy issues to the background.

##### *Issues in School to Work Transition in Sri Lanka*

The transition from school to work has become more complex in recent years due to both the changes in the education system as well as the dynamics within the labor market. This paper, first provides an overview of the above changes based on secondary data drawn from various institutions and then examines how young people in Sri Lanka fit into both the education system and the labor market in the light of data drawn from the national youth survey of Sri Lanka conducted in 2009 under the direction of the author.

As is evident from the survey data, the desire on the part of the youth in general for securing educational credentials remains strong, though the opting out of education at secondary level is also increasing, particularly among male children. This tendency appears to be related to labor market dynamics as well as poor prospects for employment among youth with higher levels of education. Domestic labor shortages and increasing overseas employment opportunities for people with low levels of educational attainment persuade young people to leave school early. The paper discusses the implications of the above for skill formation in a country that strive to achieve a higher level of economic development in the years to come.

##### *Statistical Methods and Network Simulation: The Role of Limited Information in Edge Formation*

Snijders et. al. (2009, 2013) have contributed to an approach integrating agent based models and empirical network data in which instead of empirical data "validating" the simulation, the simulation estimates the empirical parameters. One assumption is that agents have information about the other actors in the network, i.e. that any two agents could potentially form a tie. This assumption means that the model is limited to modeling relatively small empirical networks. Another potential solution is to consider how information about potential matches might be limited. In a loosely related area, Bearmann et. al. (2004) looked at the potential generating mechanisms of a specific type of social network: sexual histories. They found that limiting potential matches (excluding those closest in one's network) generated social networks that closely matched empirical data.

We use agent based simulations to consider the effects of assuming full versus limited information in evolving social networks. First, we limit information in a network's evolution based on the existing network, partitioning the list of potential new friends between those within one's local network (e.g. 3-step acquaintances) and a small sample of strangers. We test whether limiting information about potential matches generates more realistic graphs in terms of the average path length, clustering, edge distribution, and connectivity, as community size increases. The question of limited information is then extended to sexual history networks, again, partitioning potential matches into those in one's local network and a small sample of the general population. The evolution of social networks is based on an exponential graph models while the sexual histories implement a Gale Shapely Matching Algorithm, as seen in the literature on the stable matching problem.

##### *Global Academic Participation: Opportunities and Threats*

A recent Japan initiative, "Global 30 Project for Establishing Core Universities for Internationalization," aims to recruit 300,000 additional students from outside Japan by 2020 to study in English, and to send more Japanese students overseas, mainly to English-speaking areas. These and other developments are a response to decreasing numbers of Japanese students studying abroad, and demographic shifts domestically.

Gradol (2007), presenting a comprehensive survey of global trends involving English Language education (ELE), outlines a strong economic correlation with language learning. This economic imperative has influenced some Japanese companies to operate in English – such as Uniqlo and Rakuten – and require higher English proficiency from a number of their workforce. This indicates a change in attitudes to the professional use of English in the workplace, but may not be matched

by institutions of higher education in Japan. Yamagami & Tollefson (2011) report that globalization forces can offer opportunities and threats for global non-native speakers of English.

A higher educational approach promoting awareness and skills necessary to be global, are keys to gaining access to predominantly English academic discourse. Such access can lead to the sharing of common life goals and more specific participatory mechanisms across national boundaries and cultures. The promotion of both global awareness and skills, based on Steiner's three-tiered model of social life development, involves discipline-specific information exchanges and knowledge-sharing, specific genres, highly specialized terminology, and a high level of expertise (Swales, 1990).

Content and language integrated communication learning or CLICL, prioritizing academic literacies and discipline-specific content, provides learners with knowledge, skills, and life values enabling them to be mobile in local and global workplaces, including academia. Our paper provides an account of CLICL, which balances academic literacies and discipline-specific knowledge, skills, and values. We outline the practicalities that nurture CLICL, or lead to its rejection.

##### *The Changing Significance of Social Class in Later Life*

During the 1980s the concept of class constituted a fundamental touchstone of social gerontology. This was especially true within the political economy approach to ageing, however with the development within many different societies of a 'late' phase of modernity this concern was overshadowed by an engagement with other stratification orders. This has had the consequence of leaving class analysis "surprisingly underdeveloped". Although the field does at times focus on the class background of older people, the arbitrary implementation of Marxist or Weberian standpoints informs us only of the extent that older persons conform to middle-aged norms rather than shedding light either on the unique character of class relations in later life. Moreover, tracing the class position of older people back to the breadwinners' final occupation does not really account the reality of older people's connection to class. This 'modernist' strategy contains crucial analytical and empirical lacunae. For instance, whilst it may have been valid in the past when most individuals died either before or soon after statutory retirement age, nowadays retirement generally signals the start of a 'third age' phase of life. Moreover, instead of an 'add and stir' approach to class where age is 'added on' to conventional models, there is a need for researchers to explicitly view people as 'older' men and 'older' women when they are addressing the linkages between ageing and class. This presentation will introduce the key themes of power identity and lifestyle as they connect to class in later life and assess the extent to which social class is a useful category in studying old age.

##### *How Can the Public Service Improve the Uncertain Transition of Youth into Adulthood? a Case Study of Educational Support Centers in Japan*

In Japan, the uncertain transition into adulthood for some young people is recognized as the problem of *futoko*: a term that refers to youths who have been absent from their school for over 30 days in a single year. A person with experience of *futoko* tends to have difficulty in advancing to a higher education or obtaining a job, and may become isolated from society. *Futoko* shares similarity with *hikikomori*, as both refer to a youth's withdrawal from the public sphere. In contrast to *hikikomori*, however, *futoko* youths are formally registered in school, and the educational administration agency therefore attempts to become involved with them.

This paper examines the governmental service for *futoko* adolescents, with the aim to clarify the factors constricting the transition of this age group to school or work. We focus on the Educational Support Centers (ESC) program, which is the most extensive and longest-running policy of Japanese Ministry of Education for *futoko* juveniles. *Futoko* has been a topic of interest for many Japanese sociologists, however ESCs have received little attention to date. Using interview data from instructors of ESCs in four cities, we examine how the staffs approach *futoko* youths.

The major findings are summarized below. First, although instructors find young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths' private lives because of limited authority. Second, as the background of lacking social skills, young people are often plagued by familial problems or economic difficulties that make it harder for instructors to improve their situations.

This study demonstrates that governmental support makes the phenomenon of uncertain transition into adulthood more visible, but it confronts the dilemma of how (and to what extent) the public service can intervene in the private problems that underlie *futoko*.

*Civil-Military Gap in Japan: Comparing the 2004 and 2013 Surveys*  
 -- CANCELLED

This paper compares two surveys conducted by the authors in 2004 and 2013 which looks at the possible "civil-military gap" in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gap between the officers and civilian elite, while there were signs of gap with the general public, (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the "civil-military gap."

*Contested Spaces. Informality, Dwelling and Spatial Governance in Berlin*

This paper examines the intersections between informality and the governance of place in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law.

In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday lives of their inhabitants. Here, the urban is seen as "a site that is not just inhabited but produced through that inhabiting" (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Bayat's (1997, 2000) notion of 'quiet encroachment', which describes the quotidian and longsome advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: 'Schrebergärten' (best translated as allotment gardens), camp sites and 'Wagenburgen' (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalization, I set out to explore, if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of encroachment. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their uses, their practices similarly weaken their positions within the city.

*The Rules That Govern Peoplex Lives: Informality in Tallinn, Bafatá and Berlin*

Urban research has long related informality to a lack of state capacity or a failure of institutions. This assumption not only lacks attention to the heterogeneous logics and relations through which informality is produced by multiple actors in- and outside of the state, it has also created a dividing line between states. Whereas some states are understood to manage urban development through a coherently functioning state apparatus, others presumably fail to regulate.

To unmake and reframe such understandings this paper offers a theoretical exploration into the ways in which informality is infused in contemporary urban development in both the north and the south. Based on a comparison of three case studies in Tallinn (Estonia), Berlin (Germany) and Bafatá (Guinea-Bissau), our line of argumentation focuses on the ways in which local state agencies are entan-

gled in the workings of informality. Drawing on these cases, we suggest that if we seek to account for the similarities and differences in the informalization of cities across the globe we need to reconsider the role of states. First, state institutions shape urban development through everyday negotiations, legal incoherencies and regulatory ambiguities. Second, people's lives are not only governed by the state, but also by alternative forms of rule and institutions that exist beyond the state. It follows that allegedly informal processes can similarly be understood as a form of formality, while what appears as formal might work through multiple informal relations. Our comparison, then, aims to work towards an understanding of informality that is more attuned to the multiple roles adopted by different actors involved in urban processes and the power relations that are mobilized in this process.

[christian.hilgert@uni-bielefeld.de](mailto:christian.hilgert@uni-bielefeld.de))

*Species out of Place – Investigating the Visual Framing of an Ecological Problem*

*Invasive species* designate a recently emerged category of ecological risks: *alien* plants and animals, introduced by human agency, causing extinctions of *native* species and also diverse economic, aesthetic and human health problems. This phenomenon gained much scientific, political and economic attention. It motivated people worldwide to participate in a vast array of organized attempts to preserve and restore local environments.

My paper investigates the *frames* (Goffman, Gansson) that constitute this *ecological claim* (Hannigan). Basically it reveals a construction of nature as differentiated in well-ordered, stable, and homogenous units (ecosystems, ecological communities). I argue that specific visual frames are crucial in establishing the problem formula in question by integrating the realms of science, media and political action. Exhibitions, flyers, documentary films, websites and databanks use maps, photographs, graphics, icons and numbers to display environments as relatively homogenous spaces, which enable clear-cut distinctions of inside and outside (native/alien). Thus specific species become perceivable as *invaders* and understandable as phenomena of disorder (*biological pollution*). Furthermore visual references of horror and science-fiction stories (aliens, zombies, monsters, mutants) relate factual and technical information metaphorically to more emotional realms of experience and popular imagination. By this means these forms of ecological communication (Luhmann) encourage state actors and civil society to fight against certain species.

The imagery of dangerous aliens strongly resembles notions of political conservatism, romanticism and xenophobia. Hence it aligns with certain cultural critiques of the disintegrative forces of globalization. As national, ethnic and other perceived primordial identities are feared to dissolve, so is nature. But if undoing globalization is inconceivable, and society and nature have to be understood as inseparably entangled (Latour), don't we have to confront this nostalgic ecology of small-scale orders with a need to originate positive representations of our globalizing environments, as recent postulates of *cosmopolitanism* (Beck, Heise) suggest?

*Language and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg*

This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely termed 'xenophobic attacks' – the status of African migrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of 'otherization' within the metropolitan boundaries of the "City of Johannesburg." We begin with a GIS-based study of speakers designated "other" in the 2011 census; focusing particular attention on the distribution of foreign others at neighbourhood (sub-place) level. This section provides the backdrop to a more focused study of Zimbabwean migrants, drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu's "economy of social practice" as an analytical framework, we show how each neighbourhood is a social universe of struggle that is inscribed with its own internal logic and relational matrix of recognition, and how language repertoires are adapted to fit these matrices. We discuss these patterns critically, and relate them to the wider "field of power", a complex sociolinguistic economy that belies the post-1996 Constitutional enshrinement of eleven official languages.

*A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England*

The paper compares and contrasts three English, rural villages, each with different local or natural resources that have informed their social histories: one geographic proximity to Southern UK cities (for commuting purposes); another offering a heritage site (several buildings and ruins of historical note) and; finally one with geographic characteristics that brought a large-scale industry temporarily to the village, but only to depart with similar rapidity.

Through an approach using comparison and contrast, the paper considers the impact of these individual circumstances for each village before and after (in the modern-day context). It draws upon a portfolio of evidence including macro contextualizing background information and also ethnographic research datasets. This seeks to capture an insider perspective, whilst recognizing villages contain different social class groups and are not immune to global influences.

It then questions the sustainability of each of these periods of boom and bust. What implications does each model hold for their respective village? Who benefits from each of these three differing circumstances – local, regional or national (or even global) interest groups? What lessons can be learned from local adaptability and resilience? The paper finally seeks to comment on the theoretical model best suited to capturing the complexity of rural villages. Are you defined by where you live, as some sociologists have recently argued? Or does there remain something sociologically significant about the social situation as grounded by the local level? This attempts to place economic trends and changing circumstances as experienced and also informed by local, community-level social actors.

*What Facilitates Moving from Urban Cities to Rural Depopulated Villages?: "I-Turn" Phenomenon in Ayabe City, Kyoto Prefecture, Japan*

The Japanese countryside is suffering from severe aging. Due to the lack of job opportunities, many young people migrate from their home villages, leaving the elders in difficult living environments. Moreover, according to government reports, 423 villages will be deserted within the next 10 years due to the decline in population. However, nowadays in Japan, some people living in urban cities are willing to move their residence to those depopulated village. This movement is so called "I-turn" phenomenon. In this report, I use data from my fieldwork, which includes a case study and social surveys of Shigasato town, Ayabe city, and Kyoto prefecture in Japan. Shigasato (1,444 people live in here) town has warmly invited about 40 families in the last 10 years. Almost 10% of their population is "I-turn" residents from other urban cities in this town. What kind of social factor fascinates these "rural-oriented" people in Japan? Answering from my studies, 2 factors are accountable. First, Shigasato Town has plenty of "bridging" social capital (Putnam 2000). Shigasato's local neighborhood association called "KODAKARA-Net" hold various events of cultural exchange with other cities, and they introduce their vacant houses for "rural-oriented" people. Second, Ayabe city is located in Kyoto city's neighborhood. It enables residents of Shigasato town to run various side jobs besides keeping farm. As is often the case with "I-turned" people abandon their rural lives due to the lack of job opportunities, this case avoid the problem. These social and geographical factors have strong influence for people who intend to "I-turn" in urban cities, and those points makes different Shigasato's case from other east Asian rural villages.

*It Takes Two to Tango: Dutch Majority Group Evaluations of Muslim Political Acculturation*

Explanations of the degree to which ethnic minorities are included in a national political system typically concern either the institutional build-up of a nation (e.g. electoral systems, seats in parliament reserved for ethnic minorities), or characteristics of individual minority members (e.g. gender, education, social capital, political orientation). While these explanations are very valuable, they ignore the pivotal role played by the ethnic majority group. After all, minority groups and their individual members become politically active in the face of constraints presented by the political system – a system that is shaped by the rule of the dominant majority group. In other words: it takes two to tango. Drawing from Berry's seminal work on cultural acculturation (Berry, 1997), we formulated different ways in which minority members can acculturate politically (e.g. integrate, assimilate, or separate). Employing representative samples of Dutch majority members (N=802

and N=928) we then conducted two vignette studies in which Muslims, the most prominent minority group in the Netherlands, were the target group. In addition, we considered the roles of perceived threat and perceived political unreliability. The results showed that minority groups' acculturation strategy indeed affects majority group's attitudes. Furthermore, evaluations of Muslim political participation are contingent on the level of perceived threat and political unreliability. The results are, however, not in line with expectations one would derive from cultural acculturation, indicating that the struggle for minority representation in the political domain might differ in important ways from everyday ethnic relations.

*Labor Market Exit of Older Low-Skilled Workers: German Firms' Practices*

Recent pension reforms in EU countries display two main trends: 1) early retirement pathways are closed and standard retirement age is increased; 2) the contribution-benefit link is strengthened, mainly by calculating pensions on the basis of lifetime earnings. Both developments endanger the adequacy of old-age pensions of low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In the paper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an "early retirement culture". The first part describes and analyzes the pension reform trends and the employment situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms' strategies and workers' preferences have (already) adapted to shifting institutional frameworks. This part is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to "normal" exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Further findings suggest that firms have indeed modified their behavior towards older low-skilled workers and have become more responsive to their needs, i.e. the quest to stay on in the job longer in order to prevent pension cuts. Those workers who actually made it until standard retirement age are often eager to return to their former employer to increase their public pension by working temporarily or part-time.

*Sovereign Debt Crisis and Pension Reforms in European Countries*

The „Great Recession“ and sovereign debt crises in several EU countries in the wake of the 2008 financial market crisis have triggered drastic reforms of old-age security systems. They aim at ensuring the financial viability of public pension schemes in the short and long run and/or at realizing notions of intergenerational fairness. Most urgent, however, was regaining room for fiscal manoeuvre and obtaining financial aid from supranational organizations (IMF, EU). These pension reforms differ from previous changes with regard to the magnitude and the political process. (1) They were large, causing a substantial and immediate impact on the on the living conditions of present and future retirees and, sometimes, changed the hitherto pursued policy direction. (2) The post-2008 reforms passed swiftly the legislative process and are implemented with a short time lag. Hence, they can be considered as "rapid policy changes". The paper analyses pension reforms in eight crisis-shaken EU countries: Greece, Hungary, Ireland, Italy, Latvia, Portugal, Romania, and Spain. It looks into the reform contents and the circumstances which led to the respective changes or facilitated them. It is shown that the challenges these countries were (or still are) confronted with allowed or enforced alterations which would not have been feasible otherwise or which would not have been initiated by the respective governments in view of the political consequences. Moreover, cross-national comparison reveals similarities and differences and also sheds light on the social consequences that are already visible today.

### *How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the 'Post-Oslo' Period*

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. In academic literature on Palestine, it has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family resp. clan ('hamullah'). In large parts research focused on the effects of female integration into 'committee work' and the increased familial authority of young Palestinian males (Peteet 1994). The period after the so-called Oslo peace process (roughly after 1995) and the various transformations it entailed for Palestinian society, however, have caught much less attention in research on the Palestinian family. Based on biographical case reconstructions and participant observation we want to discuss if the societal conditions in 'post-Oslo' Palestine have altered the interplay between participation in resistance against the Israeli occupation and the construction of manhood and family relations. Therefore we show the effects that the interplay of involvement in 'resistance activities' and family relations yields for the biographical trajectories (Schütze 2006) of young Palestinian males. Looking at the relations of family members from a biographical perspective allows us to reconstruct the changing relevance of family relations in the course of a lifetime as well as the intertwining of family relations with other biographical spheres of action. Our paper is based on fieldwork in the West Bank which is part of our PhD-projects as well as a larger Israeli-Palestinian-German research project funded by the German Research Foundation (DFG) and supervised by Prof. Gabriele Rosenthal, University of Göttingen.

### *Women's Experience of Maternal Morbidity - a Global Meta Ethnography*

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared 'human' experiences, regardless of inequalities in economies, healthcare resources and the social capital of women in different settings.

Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy.

Studies of near miss maternal morbidity, where a woman needs urgent life saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

#### **Methods:**

Qualitative interview studies of near-miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

#### **Findings:**

There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low vary greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the 'social capital' of women in different contexts impact on the long-term emotional and physical impact of these experiences?

#### **Conclusion:**

This presentation will explore what can we learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

### *ESA The Position Of The Female Gender In The Political Space. An Analytical Biography Access To The Study Of East German Female Politicians Career Chances*

This abstract aimed to determine the career opportunities of East German female politicians for the processes of their social and mind-making. The biographical analytical way was selected, because this method does not exclude the "elocal" perspective of the female subject in politics and also distinguishes between the different levels of politics. In this regard my research confirmed that "gender" has got a crucial influence on the East Germany politicians careers, especially, when it is cooperation with other categories of difference such as "generation" for "family". That is why influence of the collapse of the GDR and the follow-

ing transformation processes had crucial influence on career opportunities of East German female politicians be considered. To that extent, the research aiming to show how "gender" and "gender differences" in politics are constructed. These consequences for their political careers and the political culture will be demonstrated, too. It will also demonstrate, how "gender identity" is constructed in the field of politics. The abilities which are essential for successful career oans if women in politics are discussed. Another focus is paid the specific advantages and disadvantages female politicians have got because of their "gendered" role. Besides, it will be shown if and in which way female politicians will be accepted by the male competitions and by the society. Last but not least the consequences of these subjects for the political culture at the present time are also discussed.

### *Movement for Justice in Labour and Environment - Post Fukushima Labour with Exposure to Radiation*

This paper focuses on labour with exposure to radiation in post-accident Fukushima. Radiation related labour includes all the work in and outside the troubled Fukushima Dai-ichi nuclear power plant as well as vast amount of decontamination work around the region. Network calling for justice in working conditions and health conditions of workers in radioactive labour has been set up and is undertaking various activities such as: helping workers in radioactive labour find and join unions and fight for better working conditions, gathering and disseminating information on radioactive labour, and exchanging information with staff members of Ministry of Health, Labour and Welfare, Ministry of Economic Trade and Industry, asking for reform in various policies, and lobbying diet members and their staffers on this issue. This movement takes place at the crosspoint of labour movement and environmental movement and thus has many implications for these two movements and their collaboration and theoretical studies of them. This paper will address the main issues regarding radioactive labour in post-accident Fukushima and try to introduce theoretical perspectives.

### *Restructuring Vegetable Oil Supply and Demand in Asia: The Impact of Trade Liberalization Facilitating Increase of Fat Supply Among Asian Nations While Jeopardizing Their Domestic Production*

This research examines strategy shift in vegetable oil sector among global transnational corporations, focusing on Asian TNCs like Japanese *sogo-shosha* and food industry, together with related trade liberalization and deregulation policies of Asian countries in the Corporate Food Regime (McMichael, 2005). These shifts are assumed to be increasing Asian countries' dependency on global vegetable oil, which can jeopardize their food security as the global oil supply increasingly depend on only two crops, oil palm and soybean, produced in the limited number of countries. The shifts also can jeopardize public health of the Asian population

by increasing availability of oils and fats in the nations' diet as a forerunner of nutrition transition.

Asian countries have rapidly increased vegetable oil supply in last few decades. China and India transformed from mostly self-sufficient countries of vegetable oils into the global leading importers by rapidly increasing imports of palm oil, and of soybean in case of China, since the mid-1990s. Thailand and South Korea have increased their vegetable oil supply, mainly with palm oil and soybean oil, after the financial crash in 1997. Japan liberated its vegetable oil supply decades ago and reduced its self-sufficiency rate as low as 2%. More significantly, recent neoliberal trade liberalization, especially direct foreign investment and corporatization, are suspected to be facilitating (re)structuring of the supply chains of vegetable oils with development of food industry based on imported vegetable oil and oil crops, like building large-scale oilseed crushing facilities or developing instant noodle industry in China. The increased availability of oils and fats, and the concurrent change in diet toward higher-fat, lower-carbohydrate, more processed food, can jeopardize the public health among Asian nations. This research investigates the structural changes in vegetable oil supply and demand in Asia, in order to secure food and health of the population.

### *Legitimacy or Legitimation?*

After years of Great East Japan Earthquake, day and day, disparities in restoration among the condition similar regions are seen as social problem. In this study, we explore the limitation of this schematic way of making problem, through the process-oriented research of local governments' decision-making concerning their restorations. Certainly, restoration disparities among regions are verified statistically, for instance, numerical difference of population recovery rate. Furthermore, the popularly supported national policies have been made to target restoration disparities among regions. However, each of region or its local government has been permitted to decide distinctive plan or style of restoration. After the Second World War, Japanese local government is not just bound by national law but also become to be allowed to pursue its autonomy. Additionally, this degree of allowance of local autonomy has increased with successive fiscal crisis of national government. In fact, through our follow-up survey of the decision-making process of several similar damaged regions, we reveal the restoration disparities among regions could be seen as the result of distinctive determination of each local government. As we attempt to identify the "distinctiveness" of determination of local government, in this research we pay attention to the different ways of restoration financing between condition similar local governments. The results show differentiation of financing: from dependence just on local tax revenue and national subsidy to but also on donation from residents, corporations and foundations and financial assistance of international NGOs and so on. In accordance with pluralization of sources of fund for restoration, local governments have been required the plural logics of persuasion or conviction of several stakeholders with varying interests. Based on this research, we could call the restoration difference among regions not as disparities subject to given single "legitimacy" but divergence arisen from "legitimations" of distinctive local governments.

### *Theoretical Considerations of Recent Studies of Japanese Immigration to Brazil*

The paper considers that the migrant, even prior to becoming an emigrant, was transforming within his own country and within his own community/society of origin, due to his dreams, desires, and utopias, into an atopos, that is, an atopic being, without place. Among the various ethnic groups that migrated, including Japanese, those who belonged to so-called "complex genetic stock", due to their cultural singularities that differentiated them from the supposed community/society standard accepted as nationally prevalent, faced prejudice, acts of intolerance and "racism", in which "myths" and "historic facts" were mobilized to justify the violent actions of people, of social group, and of the receiving State itself. However, how does one remain Japanese after living outside Japan for many years? When, with the passage of time, is a new place (topos) constructed in Brazil with a complex web of family relations and professional activity? When are the children socialized and educated through schools, according to the Brazilian standards of being, feeling, thinking, and acting. In this context the school appears as an unquestionable value for Brazilian Japanese descent, is an essential instrument for social and economic ascension, and is the place where the rules of civility and Brazilian active citizenship are acquired.

### *Does the Great East Japan Earthquake Influence the Migration Patterns of Filipino Nurses to Japan? – Study on the Mental Health of Filipino Nurses to Japan*

The disaster caused by the Great East Japan Earthquake influence foreign residents in Japan. A mass exodus of foreigners was observed especially in the first few months after the earthquake for fear of being exposed to long-lasting radiological contamination cause by the accident of Fukushima Nuclear Power Plant. Nevertheless, there were Filipino nurses, who entered Japan to work at hospitals across the country, only two months after the earthquake.

This study aim to find the predictors of the mental health status of the 3<sup>rd</sup> batch Filipino nurses coming to Japan, under the Japan-Philippines Economic Partnership Agreements. A four-page questionnaire, including GHQ (General Health Questionnaire), socio-demographic status, motivation to go to Japan, degree of knowledge about Japan, language skill, satisfaction for pre-departure training and impact of The Great East Japan Earthquake, was developed and distributed to all candidates who attended the pre-departure orientation organized by Philippine Overseas Employment Administration in May, 2011.

The multi-linear-regression model ( $R^2 = .535$ ,  $p < .001$ ) indicated that the strongest factor to indicate GHQ score was satisfaction for pre-departure training ( $\beta = .370$ ,  $p < .01$ ), followed by motivation to go to Japan ( $\beta = -.351$ ,  $p < .01$ ), but impact of the earthquake did not show a significant correlation to GHQ score.

One can assume that Filipino nurses' migration was derived by their motivation based on their economic needs. On the other hand, the degree of impact of the earthquake did not influence their migration patterns.

### *Migration of Foreign Nurses to Japan Under the Economic Partnership Agreement: Trends and Challenges through Sociological Perspective*

Over 400 Indonesian nurses and 300 Filipino nurses entered to Japan under the Japan-Indonesia Economic Partnership Agreement (hereafter 'JI-EPA') and Japan-Philippines Economic Partnership Agreement hereafter 'JP-EPA') in past six years. This is the first case for Japanese government to officially receive foreign nurses to Japanese hospitals. Under these agreements, Indonesian and Filipino nurses can work as a registered nurse in Japan, after they pass the national examination for registered nurses in Japanese language, within three years after their entry to Japan. However, the recent phenomenon indicates that many implementations on this program should be made. The number of applicants as nurses and as hospitals for this program has been shallowed, and many criticisms on the programs have been discussed in both sending and receiving countries. One of the criticisms is based on the absence of the governance of the nurses, including Japanese and foreign nurses, of the programs. In this presentation, the JI-EPA and JP-EPA programs are analyzed through quantitative and qualitative analysis which author and her co-researchers have been working for since 2007. Throughout the study, some suggestions will be made to contribute the cross national movement of health professionals in Asian countries.

### *Construction of the Environmental Problems: Biblio-Metric Analyses of the "Tragedy of the Commons"*

"The Tragedy of the Commons" is frequently cited as a model to explain how resources with open access are destined to deplete as a result of rational individual's actions. The original neo-Marxist message of the metaphor however, has been largely forgotten. This paper explores how the frame of "environmental issues" has changed over the years by tracing the citation trends of the original paper written by Hardin in 1968. The data used in the analyses are the 4,330 bibliographic records that cited Hardin's article identified in the Web of Knowledge. The results show an exponential increase in the number of citations especially after the 1990s. The scope of disciplines related to environmental studies also expanded after the year 2000. The proliferation and popularization of the metaphor indicate the decoupling of population problems through the changes in the frame of environmental discourse that synchronized with the trends in global environmental politics.

**HIRAOKA, KOICHI\*** (Ochanomizu University, [hiraoka.koichi@ocha.ac.jp](mailto:hiraoka.koichi@ocha.ac.jp))

### *Need for a Comprehensive Reform of Old-Age Security in Japan*

The 2004 pension reform in Japan introduced a mechanism to reduce the level of benefits corresponding to the decrease in the working population and the

increase in average life expectancy, in addition to the scheduled rise in pension premiums. While these measures are expected to improve the financial sustainability of the pension system, they are also likely to aggravate the problems of inequality and poverty among the elderly. Concerns over this issue have led to policy discussions on the need for a minimum guarantee in pension benefits. The coalition government formed in 2009 and led by the Democratic Party of Japan developed a plan to introduce a minimum pension scheme, but the plan was not implemented. In light of these policy developments, this study explores the possibilities for a comprehensive but more targeted reform of old-age security to address inequality and poverty among the elderly.

First, this study analyzes citizens' attitudes toward the pension system using national survey data. The data show that citizens tend to have high expectations of the social security system.

This study then examines the historical and institutional factors behind the problem of inequality and poverty among the elderly in Japan. It is argued here that a minimum pension scheme might not provide a feasible solution, and a comprehensive but more targeted reform of the different branches of social security system is needed.

Lastly, this study analyzes the employment situations of middle-aged and older workers. It is suggested that improvements in the employment policies for these workers should be prioritized, given their high work ethic and the financial difficulties of the public pension system.

#### *Emploi Domestique Et Travail Du Care Dans Une Perspective Comparative*

L'objectif de cette communication est de présenter les résultats d'une recherche en collaboration, réalisé au Brésil par Nadya Araujo Guimarães et Helena Hirata et en France et au Japon par Helena Hirata. Cette recherche porte sur les employées domestiques et les travailleuses du « care » et a une double dimension : un volet quantitatif et un volet qualitatif, d'une part, et un double terrain, les aides à domicile pour les personnes âgées d'une part, et les « care workers » dans les institutions hébergeant des personnes âgées dépendantes (EHPAD, en France, ILPI au Brésil, Tokubetsu Yogo Rojin Home, au Japon)

Dans cette communication sera présenté l'apport des volets quantitatif et qualitatif dans la recherche au Brésil pour discuter dans quelle mesure ils contribuent à éclairer les questions complexes relatives à la catégorisation de ces emplois. Il s'agit d'avancer dans cette catégorisation en examinant notamment la « zone grise » entre emploi domestique et métiers du care. Pour l'aspect de comparaison internationale, nous nous limiterons au volet qualitatif, puisque nous ne disposons des données chiffrées comparables pour les autres deux pays, et aux aides à domicile, laissant de côté le matériau relatif au travail du care dans les institutions, sur lequel nous avons déjà des publications. La manière dont les aides à domicile perçoivent et déclinent leur identité professionnelle sera le fil conducteur de cette deuxième partie de la communication. En conclusion, nous présenterons des pistes de travail pour approfondir l'analyse de l'évolution de l'emploi domestique et des métiers du care dans des contextes sociaux contrastés à partir de l'hypothèse que les différences dans la conjoncture socio-économique et institutionnelle de ces pays ont des implications sur la division sexuelle du travail et des professions, ainsi que sur les processus d'acquisition des qualifications et le rapport subjectif au travail et au métier.

#### *Contradiction and Resistance in the Production of Space in Downtown Sao Paulo: Urban Vision on the Collectors of Recyclable Materials*

In last decades, real estate production turned into a main capitalist way of reproduction under global financial dynamics. For urban space this means impoverishment of a city notion. For social mobilization that seeks for the reduction of social inequalities it leads to a perception of insignificance of small victories, even with a high level form of organization. In this way, the urban vision over society by philosopher Henri Lefebvre, not just makes clear the role of the urban for capitalism, but also gives us elements of reflection for social mobilization practices by an observation of urban social practices. That is what is shown by an urban vision on the case of resistance of recyclable materials collectors in downtown São Paulo.

#### *Housing Policy and Gentrification: Conflicts and Contradictions in the Inner City of Sao Paulo*

During the last decades, Neil Smith is developing a conceptual framework linking neoliberal urbanism and gentrification. In his works, the increasing role of the state as an agent of the market is underlined. Also, according to Smith, in a context of globalization and financial capital, the gentrification is thoroughly generalized as an urban strategy (Smith, 2002). This paper aims to discussing the concept and the elements of gentrification in cities of emerging economies, using as an empirical case the inner city of Sao Paulo, Brazil. Since the nineties, the central area of Sao Paulo is being subject of several urban interventions, varying from the promotion of new cultural facilities to the redevelopment of several blocks as a key to increase population in the historical neighborhoods. The most recent intervention presented is using the housing policy as an instrument to promote gentrification, by removing several buildings, today occupied by poor families that were once attracted by low rent prices, in order to make room to new developments to address the housing needs of the emerging medium class. The conflicts and contradictions that are arising from these projects are meaningful and give us strong elements to deepen the political terms of the Smith's concept of gentrification, coloring it with the characteristics of the Brazilian uneven urban development.

#### *Housing and Social Re-Stratification*

This article looks at transformations in the role of housing in social stratification. During the 'golden age' with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the 'global age', new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly been becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

## Reshaping the Housing System in the Context of Japan's Post-Growth Society

Many mature economies are now entering the 'post-growth' era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards 'post-growth societies', where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-ageing population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-price volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar 'golden age' of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, the welfare state and urban transformations. With entering the 'global age', however, the 'post-growth' social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping 'post-growth societies'.

## Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has been evaluated and compared with many other countries and has been located with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been changes in the labor conditions that have created uncertainty. In our research project: *Professional Ethics for Professors* and especially from the open question: *which are the five necessary actions to prepare teachers about professional values?* we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of team work and personal relations and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

## Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in) security politics in Japan and East Asia, and could therefore be an introduction to the session.

With its rapid economic growth, East Asia is widely recognised as one of the most important regions in the world economy. Despite its significance in the globalised agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region's heavy dependence on food imports has become too significant to be disregarded. According to FAOSTAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural imports in 2010. This situation is unsustainable not only for regional economies but also for the world food economy in the era of "the end of cheap food". A heightened sense of "food crisis", especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our "food security concerns" are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

In this paper, the development of policies and discourses on food (in)security will be critically analysed as a underlying basis for further empirical studies with a perspective for social mobilisation of food sovereignty in the region.

## Policing and Autonomy of Community: Comparative Study of Japan and Indonesia

The objective of this presentation is to clarify the character of community policing in Japan and Indonesia from the viewpoint of the autonomy of community and my filed research. This presentation will be divided into three parts.

First I will examine some discussions and theories regarding the community policing, where we will see that the autonomy of community is needed to manage the way of policing practiced in community in the case of the US. Then, I will clarify the crisis of the autonomy of community with special attention to a discrimination among communities. It has been produced by the development of suburban area and individualized auto-mobility in the US.

Secondly, we will turn to the case of Japan, and I will cover weakening roll of Japanese neighborhood organizations and activation of policing by the central government. The government tries to apply "broken window theory" and discourse of tradition of mutual help on community. Through the cases, I will identify the difference and similarity with the social condition of the US and clarify difficulty of the autonomy of community in Japan.

In the third part, we will look at the community policing of Indonesia in the decentralization era and evaluate a mixture between local security and tourism for community development in Bali. The police has tried to apply the community policing in order to reestablish new structure of the police and grasp vigilante groups since the collapse of centralized policy. However, in the case of Sanur area in Bali, we will see a success of the community policing with new image of tourism. Finally, through the analysis, I will clarify the advantage of the community development through the mixture of policing and other creative activities.

## Burmese Refugees and Ethnic Business in Japan

While Japan is said to be the country which has one of the strictest control for refugees and asylum seekers, Japanese government accept some refugees, especially from Burma. After receiving the asylum, some of Burmese run a small business in their community. How do Burmese become a refugee entrepreneur? How do they run a small business? This presentation aims to explore the factors which foster the refugee entrepreneur from the view point of the opportunity structure theory. This presentation is based on the field work data carried out in Tokyo, Japan from 2004 to present. The data consists of interviews with Burmese refugees, refugee advocacy NGOs, Government agency, and other related personnel. Based on the opportunity structure theory, there are some types of Burmese small businesses. One type is a small business serving an ethnic community's needs. With the help of their colleagues, they mobilized various ethnic resources: capital, labour and skills. Other type is small business serving an open market. They try to attract non-Burmese customers in their shops. However, their businesses are not stable because of the small size of their ethnic market and the intense competition of the service industry. Following the presentation, I will discuss the economic integration of refugees in the future.

## The Communion without Boundaries and Sakae Osugi's Anarchism

The purpose of this paper is to investigate the political ideals of Sakae Osugi. Osugi argued that it was possible to establish a "society of mutual aid" based on the principle of "expansion of life". In his view, the hierarchy meant fixing the boundary and every boundary was an expression and exercise of power. That explains why anarchism is a perpetual movement which attempts to transcend every boundary forming the hierarchy. Osugi aimed at a free and diversified federal society where life is expanded. Osugi's influence stemmed from his articulation of the basic concerns of his generation. That generation confronted difficulties of a different order from those faced by the Meiji leadership. Osugi was attracted to the problem presented by the emerging masses: how could they be incorporated into society? His reply to this question was "mutual aid". This paper focuses on the relation between both notions of freedom and society and analyzes it throwing a light on the principle of "expansion of life" in Osugi's anarchism. Similarly to his contemporaries, it might be helpful to enquire into that principle, in a way that is beneficial to the relation between freedom and society.

**RC34-597.2****HJORT, JENS\*** (University of Oslo, [j.l.hjort@sosgeo.uio.no](mailto:j.l.hjort@sosgeo.uio.no))*The Determinants of Intrinsic and Extrinsic Work Motivation Among US and Norwegian High School Students*

This paper investigates the work motivations of American and Norwegian high school students. It centers on types of motivation that are widely defined as either intrinsic or extrinsic to the work itself. The distinction, which has a long history in the empirical study of work values, aims to separate the motivational force of self-development through work from that of obtaining external rewards as a result of work. The paper draws on prior studies of young Americans' work motivations, and attempts to build bridges to cross-national research, which has primarily been preoccupied with the work values of adults. The paper thus aims to pave the way for more comprehensive cross-national research on young people's work motivations. While scholars have disagreed as to whether intrinsic and extrinsic values should be treated separately or as opposite poles on a common continuum, the paper underlines the benefits of not committing exclusively to one understanding, and giving both their due in empirical examination. A key benefit of this approach is that it tackles acquiescence bias, a surmountable challenge when conducting cross-national comparison of rating-based survey data. Regression analyses reveal that national context, gender and ethnicity greatly impact intrinsic and extrinsic work motivations. In the Norwegian context, intermediate variables (grades, part-time work, and particularly high school program) are also strongly linked with work motivations. Conversely, no significant effects of parental education are found in either context, signaling a break with earlier studies.

**JS-23.4****HO, K.C.\*** (National University of Singapore, [sochokc@nus.edu.sg](mailto:sochokc@nus.edu.sg))*A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring*

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring  
K.C. Ho (Sociology, NUS)

East Asia countries are late comers in international education, league tables and world class university formation. This entry was marked by a fundamental restructuring of the university system, particularly top national universities whose traditional role has been the training of the nation's elite.

My paper discusses Singapore's restructuring experience and its consequences in terms of its search for international talent for professors and students, its focus on basic research rather than applied or policy research, and its increasingly ambiguous relationship with society and community. Drawing from a professorial survey of the country's two largest comprehensive universities, the paper discusses impact of the internationalization drive and its connections to Singapore's global city-state status, its implications of being unhinged from its traditional societal roots from a variety of disciplines: science and engineering, medicine, and business and management, and the reactions of different societal and community groups to this shift.

**RC21-380.5****HO, K.C.\*** (National University of Singapore, [sochokc@nus.edu.sg](mailto:sochokc@nus.edu.sg))*The Place of Community Practices in City Heritage Projects*

The fast transforming city is faced with a systematic tension, the necessity of city building and redevelopment and yet the need for this to be respectful of the different ways of life in the city.

My paper examines two heritage projects, Pomahakan in Bangkok, Thailand and Kampong Glam in Singapore. Both sites represent contrasting ways in which local communities have been alienated from wider city-based efforts branding heritage. Set in a planned Rattanakosin historical park of old Bangkok, Pomahakan represents a case of how local heritage and ways of life are fighting for recognition and preservation alongside the royalist and religious heritage being represented in the Rattanakosin Project. Kampong Glam project, in contrast, has retained the local community icon, the Sultan Mosque as the jewel of the ethnic Arab-Muslim quarter, but is stripped of its residential and community elements. The result is a vernacular physical form, redressed to play a larger role as tourist attraction and entertainment district.

Ultimately, successful projects require an understanding of how activities get sedimented, layered and connected, how places develop identity and meaning, and how policies should combine with market and community to create the attractive diverse spaces, transforming the city into what Lofland calls "a garden of earthly delights", comprising of the kind of places we love and want to go back to.

**RC07-137.6****HO, PETULA SIK-YING\*** (HKU, [psyho@hku.hk](mailto:psyho@hku.hk))*Erotic Justice and Self-Realisation: The New Politics of Chinese Women*

This paper addresses Chinese women's self conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid, and diffused than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between currents inside and the world spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013).

In its yearnings and anticipations, however, eros meets the "political economy of life chances" which are not equal. Indeed, people in their movements, emotions, and desires are themselves made in terms of the discourses and unequal differences, of the past, present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the fields of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a politics of iconogenesis using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

**JS-24.3****HO, PETULA SIK-YING\*** (HKU, [psyho@hku.hk](mailto:psyho@hku.hk))  
**JACKSON, STEVI** (University of York)*Women Negotiating Work and Family Responsibilities in Hong Kong and Britain: Rethinking Modernity, Individualization and Intimacy*

Drawing on comparative qualitative research conducted in Hong Kong and Britain, this paper contests western theorists' ideas on the consequences of modernity for women's orientations to work and family. Our data derive from life history interviews and focus groups with young women and their mothers in both locations and reveal both similarities and differences in the effects of social change on the two generations. The differences cannot be attributed to the pace or duration of modernization, nor are they wholly consistent with the changes that might be predicted by Giddens' (1992) 'transformation of intimacy thesis' or Beck and Beck Gernsheim's (2002) individualization thesis. While the Hong Kong women are more committed to family than their British counterparts (cf Chang and Song 2010; Jackson and Ho 2013), in particular in terms of obligations to close kin, they are also far more career oriented. Conversely, the British women seem much more individualistic, sometimes hedonistic, in their personal lifestyle choices, but they are far more willing to sacrifice career to motherhood than those in Hong Kong. Hong Kong women are much more strategic in pursuing economic opportunities, evident especially in pressure on daughters to succeed, in terms of advancing the family as a whole. This is in keeping with the idea of Asian instrumental/utilitarian familism (Lau 1978; Chang 2003; Chang and Song 2010). Young British women are encouraged by their families to succeed, but this is more often thought of in terms of individual advancement and personal fulfilment. These differences are not only cultural, we argue, but also a result of material conditions of life in each location and the ways in which gender intersects with other inequalities in local contexts, creating differential opportunities and barriers to reconciling family and work under late modern conditions.

**TG04-958.3****HO, SANA\*** (Seoul National University, [sanaho@gmail.com](mailto:sanaho@gmail.com))*Nationality of Food: Food Safety As National Crisis and Nationalistic Ideology in South Korea*

This paper examines food safety issues as national crisis and nationalistic ideology in South Korea. Food safety issues are one of the major issues at stake in South Korea recently. The import of US beef and potential threaten from mad cow diseases had caused one of the biggest protests in Korean modern history in 2008. The risk of agricultural products imported from China is almost the daily topic on mass media. The uncertainty of possible radiated fish from Japan after 311 Fukushima incidents arouse panic around family tables. Food safety is a topic that touches people's nerves in everyday life.

In this paper, I will analyze the discourses and regulations regarding original places of food productions. My argument is that although food safety is a reasonable issue to worry about, yet in South Korea it is rather a political/nationalistic issue. An agricultural movement called *shintobuli* in late 1980s had successfully

built up an ideology that only domestic food is reliable and good for Korean people's body and health, no matter how those foods are produced. Regulations to enforce labeling the origins of food production enhance Korean national identity and sentiment towards their domestic products as well as nation. Fear penetrates when evolving foreign food products. Crisis of food safety thus is not only an issue about health and well beings but rather an issue in political arena. It shows the anxiety and senses of threatens when South Koreans have to face other powerful countries around them such as US, China and Japan. Safety only exists inside the door. Nationality is thus not only essential for people, but also for food.

#### *Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternative Sociotechnical Network of Assisted Reproductive Technologies*

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only "married" (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligibility criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between severe legal restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbians in Taiwan how did they negotiate to get access of ART in spite of the legal restriction. First, the author find self-insemination is not well diffused and used in Taiwan like the United States and some other western countries, and it's due to different feminism movement context and the predominant feminism antinatalism discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) women to fulfill physician's moral concern, while some physician's consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marriage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found how lesbians in Taiwan negotiate and navigate their way to embody their proactive desire in existing medical system, their reproduction practices challenges the original ARTs intend. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

**HERCOWITZ-AMIR, ADI** (University of Haifa)

#### *Attitudes Of The Israeli Public Towards Asylum Seekers: Humanitarianism and Its Consequences For Exclusionist Attitudes*

This study focuses on the role of humanitarian convictions in shaping exclusionist attitudes towards asylum seekers in Israel. It provides first empirical evidence regarding public views on asylum seekers, the most recent non-Jewish migrant group to this country. Data for this study is based on a survey conducted during the spring of 2013 among a representative sample (N=500) of the adult Jewish population in Israel.

Our interest in public views towards asylum seekers does not derive merely from the innovative empirical potential they hold, but rather from the theoretical questions such views bring to the fore. Previous studies indicate that the Israeli public consistently opposes the granting of social, civil, and economic rights to non-Jewish migrants. These exclusionist attitudes are mostly guided by a sense of national as well as socio-economic threat associated with the need to maintain both personal and group well-being. Although asylum seekers may invoke similar threats, we expect attitudes towards them to be based in addition on other psycho-social mechanisms associated primarily with notions of universal liberal values and human rights.

The association of asylum seekers in Israel with a human rights discourse is not intuitive. In fact, policy makers have initiated a public campaign delegitimizing their refugee claims and questioning this association, presenting asylum seekers as "infiltrators", illegal labor migrants, and even terrorists. This study tests whether the link between humanitarian convictions and attitudes towards asylum seekers in Israel is maintained also in the presence of this politicized public campaign as well as other contextual factors, like the ethno-national emphasis in Israel's membership conceptualization. The findings confirm that humanitarian values play a role in the formation of exclusionist attitudes. Specifically, while perceived threat decreases respondents' willingness to grant rights to asylum seekers, humanitarian values partially mediate this relationship.

### RC31-524.5

**HOCHMAN, OSHRAT\*** (Ruppin Academic Centre,  
[osh Rath@ruppin.ac.il](mailto:osh Rath@ruppin.ac.il))

#### *Infiltration Into The Country, Infiltration Into The Mind? Framing Of Asylum Seekers In Israel and Its Consequences For Attitudes Towards Them*

In January 2012, the Israeli parliament passed an amendment to the infiltration prevention law, originally passed in the 1950s as part of Israel's defense policy against security threats. The new amendment expanded the infiltration prevention law to treat any person who did not enter the country through border terminals as an 'infiltrator' entering Israel illegally. The context for the amended law was the large incoming flow of asylum seekers entering Israel between 2006 and 2012; the new law provided the Israeli state with legal means to systematically deprive them of their basic rights for asylum. While the official 'infiltrator' terminology is relatively new, the term 'Infiltrators' has been used by policy makers to describe asylum seekers already before 2008. Thus, the association of African asylum seekers with national threats is, by now, embedded in the Israeli public discourse. This study investigates whether framing asylum seekers as infiltrators motioned not only exclusionary policy measures, but also public support of such measures.

This study is the first to investigate the consequences of Israel's policy towards asylum seekers. Specifically, the study asks whether framing asylum seekers in Israel as posing demographic and security threats encouraged the formation of negative public attitudes towards them, and public willingness to support policies implying a withdrawal from liberal values like individual freedoms, and human rights. The study also asks whether such a withdrawal is more characteristic of specific groups within the Israeli Jewish population which are typically presenting more negative attitudes towards foreigners, or if it represents a more general tendency among the Jewish majority in Israel.

**BOTERMAN, WILLEM R.** (University of Amsterdam)

#### *Starting from Unequal Positions: Patterns of Young Households Starting on the Amsterdam Housing Market*

This paper takes a broad perspective regarding the success with which young people can leave their parental home and become an independent household in Amsterdam. High demand pressures on the local housing market and the financial crisis are seen to place constraints on the accessibility for young households. Nevertheless, paradoxically, especially the influx of young households currently contributes to Amsterdam's population growth. However – and most importantly to this paper – previous research suggest that inequalities between different starter groups have grown. These inequalities are often transferred from one generation to the next. Using longitudinal individual register data this paper looks at patterns of inequality between young households with different backgrounds as they make their first steps as independent households. Especially their parental background is of importance to this analysis.

Our data suggests that the number of starter households with wealthy parents and following university education entering the Amsterdam housing market is growing, whereas disadvantaged starter groups are increasingly excluded. We will analyze how socioeconomic and parental backgrounds influence young households entrance on the Amsterdam housing market. Included elements are the age of nest-leaving, tenure type they move into, the type of household they form, and the chance of moving back to their parental home after a brief period of independent living ('boomerang kids').

Processes of gentrification have made most of Amsterdam's inner-ring neighbourhoods more expensive and difficult to enter. This results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that starters with wealthy parents move to the most expensive neighbourhoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

#### *Global Retail and Local Mobilizations: Walmart Employees Facing Organizational Restructuring*

Cette communication s'appuie sur l'analyse des mutations discrètes du travail, de l'emploi et du syndicalisme au sein et autour des magasins Wal-Mart, aux États-Unis. Alors que le distributeur connaît d'importantes transformations techniques et organisationnelles, on assiste à une montée de la critique qui nous invite à

interroger conjointement la nature des mutations du travail en magasin et les registres d'action et de contestation dans une multinationale des services dont la main d'œuvre est essentiellement peu rémunérée, féminine, immigrée et pas ou peu diplômée. S'appuyant sur une série d'entretiens réalisés auprès des salariés des magasins, activistes et syndicalistes du secteur ainsi que sur des observations *in situ* de réunion et manifestations menées par ces derniers, cette communication souligne les dimensions organisationnelles et institutionnelles de la difficile émergence des formes de contestation dans une firme qui en un demi siècle est parvenue à tenir en échec les tentatives de syndicalisation de sa main d'œuvre.

This presentation is based on the analysis of "discrete" mutations of work, employment and trade unionism in and around the US Wal-Mart stores. While the corporation is experiencing significant technical and organizational transformations, the rise of criticism invites us to question both the nature of mutations of work in stores and the protest records in a global service firm whose workforce is mainly made up of low paid immigrant women, holding jobs that do not require a particular degree. This communication is based on a series of interviews with employees and union activists as well as on *in situ* observations of meetings and walkouts organized by unions and associations. Through a diachronic approach, it emphasizes the organizational and institutional dimensions of the difficult but ongoing emergence of protests in a firm that, in half a century, has come to thwart all attempts at unionization of its workforce.

#### RC44-735.4

**HOCQUELET, MATHIEU\*** (École Hautes Études Sciences Sociales, [mathocquelet@aol.com](mailto:mathocquelet@aol.com))

#### *Our Walmart: Global Retail Versus Local Mobilizations*

This communication is based on the diachronic analysis of the "discrete" mutations of work, employment and trade unionism that occurred in and around the US Walmart Supercenter stores since the end of the twentieth century. While the corporation is experiencing significant technical and organizational transformations, the rise of criticism invites us to question both the nature of mutations of work in stores and the action and protest records in a global service firm whose workforce is mainly made up of low paid immigrant women, holding jobs that do not require a particular degree. This communication is based on a series of interviews with employees and union activists as well as on *in situ* observations of meetings and walkouts organized by unions and associations conducted between 2010 and 2013 around Chicago, Los Angeles and Miami. This approach emphasizes the organizational and institutional dimensions of the difficult but ongoing emergence of wide protests in a global firm that in half a century has come to thwart all attempts at unionization of its workforce.

#### *Managing the Difference Engine: A Cybernetic Analysis of Discrimination*

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, must be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetics, Bateson's models for schismogenesis and for schizogenesis will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Philology tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multiculturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine's account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot's theory of fractals will be drawn on, as will theories of artificial life.

#### *Social Networks and Strengthening the Participation in Brazil: "Projeto Vidas Paralelas" Experience*

"Projeto Vidas Paralelas" – PVP aims to reveal and give visibility to daily life, culture and work from different social groups, from the perspective of the subjects involved, by means of training processes in digital culture and articulation of social networks to strengthen social participation in the construction of public policies, health promotion and culture. It is a proposal for strengthening the social movements and struggle processes through audiovisual training and use of new media as tools of expression, critical thinking and social organization. The project arises from a demand of workers for expanding the visibility of conditions and work processes experienced in the contemporary context and strengthening social participation. These demands were raised by activists of social movements and delegates of the Third Brazilian Conference on Occupational Health held in 2005. Thus, "Projeto Vidas Paralelas" – PVP is articulated and built with all the Brazilian Union Centers and social movements related to occupational health. Between 2008 and 2010 the project was implemented in twenty-one (21) Brazilian states, in a partnership between "Rede Escola Continental em Saúde do Trabalhador", University of Brasília, Brazilian Ministry of Culture and Ministry of Health. In 2010 indigenous students demanded the formation of "Projeto Vidas Paralelas Indígena" – PVPI, and in 2012, the process for the construction of "Projeto Vidas Paralelas Campo". Currently, "Projeto Vidas Paralelas" – PVP is a social network that articulates the major social movements in Brazil, related to urban and rural workers, indigenous and "quilombola" communities. This study aims to share the experience on their theoretical and methodological proposal, as well as socialize the progress and challenges regarding the implementation of the strengthening of social participation through social networks.

#### *Do RRT and the Crosswise Model Produce Valid Measurements of Sensitive Items? An Online Validation Study*

Social desirability and the fear of negative consequences often deter a considerable share of survey respondents from truthfully responding to sensitive items such as own norm violations (e.g., nonvoting, tax evasion, cheating). As a consequence, the prevalence of norm violations is underestimated and results are inaccurate. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) or the Crosswise Model (Tian et al. 2007), a new variation of the RRT, are intended to mitigate this problem by providing complete concealment of respondents' answers.

However, it is far from clear whether these indirect techniques generally produce more valid measurements than standard direct questioning (DQ). Furthermore, most systematic evaluations so far compare a particular method's resulting prevalence estimates of sensitive behavior with DQ estimates under the "more-is-better"-assumption and lack a known true value for validation. Under the "more-is-better"-assumption higher prevalence estimates are interpreted as more valid estimates. So, it cannot be ruled out that higher prevalence estimates are a methodological artifact and not the result of a technique's superior validity. Whether or not a particular sensitive question technique truly produces more valid measurements can only be answered for certain with validation studies. But the possibilities to carry out validation studies are rare and the topics' range very restricted.

Therefore, we designed an online experiment which allows for the in-depth validation of any sensitive question technique. Inspired by Fischbacher and Heus's (2008) widely used cheating dice game we developed two dice games where respondents had an incentive to violate a norm, i.e., they could illegitimately claim a bonus payment. After the game, respondents were surveyed about their personal norm adherence, i.e., whether they cheated or not. We used different sensitive question techniques to survey this sensitive item. Resulting prevalence estimates were then validated with the true observed behavior.

#### *Institutional Ethnography for Oppressed People*

The especially oppressed people in modern society are the people with communicative, mental or social disabilities stemming from brain injuries, developmental disorders and mental illness such as schizophrenia. These people are in many ways marginalized in modern society where social and communicative skills are highly valued and sometimes requisite for achieving a position on the labor market as well as getting into social networks of modern urban subcultures. Being in such a position often makes them ultimately dependent on welfare institutions where they have difficulties in expressing their needs and demands for social relations, daily activities and means for personal development.

Since 1997 the author has been involved in several investigations into the institutional landscape for these people following the ambitions of an applied institutional ethnography. That means that our point of departure was the life-world of these people and their efforts to get a coherent everyday life and a basis for personal development. With this reference we judged the total structure of insti-

tutions they were confronted with and the powerful relations and social processes behind these institutions and out of the horizon of their experiences. When mapping these relations between life-world, professional interventions and the regulatory forces behind (discourses, norms, jurisdictions etc.) we often succeeded in uncovering processes that had been unnoticed by users, professionals and the people in charge.

This paper will summarize the methodological challenges for institutional ethnography when entering the life-world and institutional structures for people in especially oppressed situations. To deal with the situation of these people challenges our tradition and changes slightly the elements in our research designs. Among the regulatory principles that gain more importance and weight in this field are discourses ranging from pedagogical theories over diagnostic systems and the concept of evidence to governmentalities.

#### *The Emergence of the European Research Council As Supranational Funding Institution*

Structural transformations in the European Union's funding policy of the last decades have led to the historical emergence of a genuinely supranational funding institution, the European Research Council (ERC). Conceptually oriented towards an institutional approach of the sociology of science, and methodically led by extensive documentary analyses, we empirically analyze historical evidence for the opportunity structure, social mechanisms and effects of European research funding as part of the history of the ERC as an institution. Analytically, we draw a distinction between the following levels of investigation: Firstly, the structural relationship of national and supranational dimensions of the European research policy is located at the heart of a historical interest in Europeanization processes in science. While the ERC as supranational organization can be seen as intermediate in relation to the European Commission and the international scientific community, the transnational organization structurally builds on and reflects historical predecessors at level of national science systems as well. Secondly, we try to clarify in which way we deal with integration or rather disintegrative stratification of European research, reflected in cultural objectives of funding programs such as "transnational cooperation" and "scientific excellence", and researchers' socially structured opportunities, ambiguities, and potential conflicts to realize these objectives. Thirdly, seen from a dynamic perspective, we investigate how and to what extent European funding policy's goals have historically changed and been subject to self-perpetuating processes with unintended effects feeding back towards the social structure of European, and global, science as well.

#### *Flexible Work Practices, Workplace-Related Policies and Individual Strategies for Reconciling Eldercare and Paid Employment. Findings from the European Carers@Work Project*

Faced with a historically unprecedented process of demographic ageing many European societies extended the working lives of older workers, with the side-effect that working carers have to juggle the conflicting demands of employment and care-giving even longer. This does not only impinge on working carers' well-being and ability to continue providing care, it also affects European enterprises' capacity to generate growth which increasingly rely on ageing workforces.

The focus of this paper will be a cross-national comparison of flexible work practices and other workplace-related company policies aimed at enabling working carers to reconcile both conflicting roles in four different European welfare states – Germany, Italy, Poland, and the UK – based on expert interviews with human resource managers and 240 semi-structured interviews with working carers in the four countries. It is analyzed to what extent these company-based measures are path-dependent according to the respective welfare state / care regimes, which resulted in diverging degrees of state intervention and support and, subsequently, varying levels of company-based policies. However, a key finding of the research was a trend towards converging individual reconciliation strategies in the four countries. Finally, varying degrees of gender inequality in the provision of care will be examined.

#### *Experiencing It like a "Gogo": Intergenerational Relationships in South Africa*

"Gogo" is the Zulu word (from "ugogo") for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and pervasive poverty. An estimated 1,2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers' contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complex and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grandmotherhood in Mpumalanga, South Africa towards a deeper understanding of such intergenerational relationships. The main findings relate to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

#### *Promoting Intangible Cultural Heritage Protection Through Research: An Analysis Of The Impact Of Academic Discourse On Local Protection and Tourism Practices In China*

This study traces the impact of the Chinese academic discourse on intangible cultural heritage on government and tourism practices in the PRC at the subnational level. Since the concept of intangible cultural heritage (ICH) entered the Chinese academic discourse in 2003, the academic elite has actively promoted the development and protection of intangible cultural heritage nationally through the publication and circulation of research. While their influence on the drafting process of the "Intangible Cultural Heritage Law" has been acknowledged, hitherto little research has been conducted on their impact on local governmental policies, protection strategies and tourist promotion activities. This paper therefore aims at filling this research gap by conducting a comparative historical text analysis of Chinese academic journals from 2003 to 2013 in order to assess how academic discourse affects local government strategies for the branding of intangible cultural heritage. Comparing various selected cases, the paper will examine how scholars support local governments by reinventing and framing local traditions according to ICH discourse, promoting them for ICH nomination and attributing tourist values. Furthermore, it will explore how successful local government practices and management models of ICH protection are disseminated within epistemic communities of scholars, ICH experts and local administrators. The findings not only shed light on the impact of Chinese academic discourse on specific local practices of ICH protection but also point to common protection strategies ready for adoption in other localities.

#### *High Aims, Low Outcome: Implementing Gender Equality in Japan*

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan to date. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012.

This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses, how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectures, an outlook of policy change during the DPJ government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of gender equality in Japanese prefectures as well as on a paper on the impact of the DPJ government in the field of gender equality policies (both published 2013).

[c.m.holdsworth@keele.ac.uk](mailto:c.m.holdsworth@keele.ac.uk))

*Alcohol, the Body and Gender in Later Life*

Alcohol consumption in later life has emerged as a public health concern in many advanced economies in recent years associated with an observed increase in alcohol consumption among the elderly. The dominate public health message has centred on the need to moderate drinking in later life due to the direct and indirect impact that alcohol has on frailty in later life. This paper challenges the assumption that increased alcohol is associated with functional as well as social decline, but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and class-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on quantitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

*Youth Leisure As Job Training and the Pursuit of Distinctiveness*

In 2009 a group of students at the University of California, Santa Cruz who self-styled themselves as the 'Research and Destroy Collective' issued a *Communiqué from an absent future* denouncing how demands on young to perform and be active rather than liberating, were stifling their futures, and that 'even leisure is a form of job training'. This paper responds to this rally cry to map out how young people are increasingly engaging in leisure pursuits in advanced economies in order to enhance their CVs. I will consider how leisure activities, which may include travel, sport, hobbies, volunteering and membership of organisations, are increasingly seen as ways of standing out from the crowd and demarcating oneself as distinctive. While these quest for uniqueness is not a particularly new quality of youth transitions, in the paper I argue that it is taking on new forms as the desire to acquire experience capital is increasingly tied up with securing young people's futures. In an era of high youth unemployment in advanced economies and increasingly global precariousness for youth employment, young people are increasingly expected to be responsible for their own futures through the acquisition of skills and training both within and outside of formal education. The paper will also explore how the continual refinement and uptake of e-technologies, not just social media but also through the role out of eportfolios, enhances young people's capacity to articulate experiences and record what they have done. The paper draws on detailed empirical research with different cohorts of young people in English Higher Education over the last ten years.

**HOLKERI, EMMA\*** (University of Turku, [emma.holkeri@utu.fi](mailto:emma.holkeri@utu.fi))  
**NÄSI, MATTI** (University of Turku)

*Crime Consumption and Online Hate Communities*

The starting point of the paper is in cultural criminologist Mike Presdee's notion on crime and violence as commodities. According to this idea, not only the criminals, but also the police, the media and the citizens all participate in the creation of crime and consumption affects the creation of identities. Furthermore, previous studies show that violent perpetrators refer to shared cultural products (e.g. music, films) in order to actualise their existing violent thoughts, fantasies and ideologies. The idea of this paper is to observe the intertwined processes of committing, producing and consuming crimes in the context of online hate communities. The hypothesis following from Presdee's argumentation is that the consumption process is vital for the identity construction of the hate group members.

The paper merges cultural criminology with the sociology of consumption, and methodologically quantitative with qualitative methods. Firstly, the paper analyses online content consumption, offering information about the most popular sites and the most read news online. Our assumption is that crime is at the top three categories. Secondly, a sample of a comprehensive online survey data consisting of 15-18-year old Finnish Facebook-users (n=723), collected in the spring of 2013, is used to describe how many young people face disturbing and hateful material online. Thirdly, examples of online hate groups are selected for a more detailed examination from the existing online hate communities glorifying severe violence. Fourthly, the sites of the selected community are analysed qualitatively to identify the processes of consuming crimes and constructing identities.

**HOLLA, SYLVIA\*** (PhD candidate Sociology & Anthropology,  
[s.m.holla@uva.nl](mailto:s.m.holla@uva.nl))

*Embodiment of Beauty, Enactment of Self*

The paper presented entails a sociological study of how beauty is defined within the transnational field of fashion modeling. Based on ethnographic and interview data - collected in the modelling industries of Amsterdam, Paris and Warsaw - this presentation aims to illustrate what male and female models *do with their bodies* in order to attain professional beauty standards and how they integrate these body practices into their everyday lives. Models' share several clearly defined professional demands with regard to their bodies, but go about achieving them in various ways. However, virtually all models are engaged in physical exercise and surveillance of food and drink intake. These practices are limiting, for they have a restrictive effect on models' everyday life routines. On the other hand, these practices are constitutive to a models' self. Models are not just corporeally involved in their profession: their entire daily lives are profoundly affected and directed by the professional mandates of becoming and staying beautiful. Models' ultimate bodily involvement in the professional production of beauty makes for the negotiation of self to become a necessity for most models: they frame their own body practices as in need for legitimating, as these practices are constitutive not only to their professional, but to their 'entire embodied selves'. Clearly, in fashion modeling, labor, body and self are intertwined in an exceptionally radical way. Modeling as a profession should therefore not be categorized as simply a form of aesthetic labor (Entwistle & Wissinger 2006). Models' entire day-to-day life rhythm, their social surroundings and everything they drink and eat, are geared towards the aesthetic pursuit of becoming and staying beautiful. I therefore go as far to argue that fashion models are the *ultimate embodied selves*.

**HOLLEMAN, HANNAH\*** (Amherst College,  
[hannah.holleman@gmail.com](mailto:hannah.holleman@gmail.com))

*Supply-Side Economics and Demand-Side Planning: U.S. Southwest Water Challenges, the Case of Oklahoma*

In 2013 the U.S. government categorized all 77 counties in Oklahoma a disaster area due to persistent drought conditions. While 597 counties nationally were included in the declaration, Oklahoma, Kansas, and western Texas were hardest hit. Years before this, scientists' projections of anthropogenic climate change showed "widespread agreement" that in the Southwest "the levels of aridity seen in the 1950s multiyear drought, or the 1930s Dust Bowl, become the new climatology by mid-century: a perpetual drought." However, such information is not the basis of ecological and economic planning in the Southwest.

I examine the development of the Comprehensive Water Plan recently adopted by the state of Oklahoma to demonstrate how planning in the region continues to operate on an undemocratic and "demand-side" basis. With disastrous consequences, the OCWP offers no real plan for long-term change subject to science or the democratic process. Rather, politicians demonstrate their commitment to historical modes of development in the region while downplaying the costs and publicly encouraging skepticism of scientific projections. Drawing on Michał Kalecki's distinction between "monopoly-capitalist" and democratic planning and exploring the historical turn identified by Forster Ndujisi towards "demand-side" (in ecological terms) planning, I offer a theoretical approach to understanding the limitations of the dominant mode of planning for addressing such long-term anthropogenic ecological crises. I argue that the official designation of drought-stricken counties as facing "disaster," has short-term implications and is therefore misleading. This region must be recognized as facing an historical transition, in need of genuinely democratic, and ecological or real "supply-side," economic planning to avoid some of the worst ecological and social outcomes. To end, I offer suggestions based on current, localized attempts at planning outside of the dominant framework, for alternative approaches that, if forced by movements to the state level, or beyond, could help reverse current trends.

## RC50-811.2

**HOLLINSHEAD, KEITH\*** (University of Bedfordshire: England,  
[khdeva@bopenworld.com](mailto:khdeva@bopenworld.com))

*Tourism Studies and Conceptual Unsettling: The Decolonisation Of The Bleached Field*

Each discipline / domain should regularly examine its effectivities regarding the representation and making of the socio-historical world. In inspecting the so-called global provocations of tourism, this presentation advances the view that the increasing dominion of tourism / Tourism Studies over matters of culture, heritage, and nature has not only been carried out according to *eurocentric* canons, but has been bolstered by theoretically feudal forms of knowing. It thereby calls for a concerted decolonisation of Tourism Studies --- that is, for a conceptual cleansing of the field to clearly identify and confront the hegemonic agency and

authority of the industry over colonised places / spaces and over histories / contemporaneities.

The presentation therefore will principally question:

**-1 = Which priority areas of concern in international tourism should be decolonised, if any?**

**-2 = What would / should / could the decolonisation of Tourism Studies principally entail, or mainly consist of?**

**-3 = Who should be involved in the so-called decolonised 'cleansing' of Tourism Studies?**

**-4 = How would the decolonisation of tourism be substantiated educationally (in the schooling of practitioners and researchers who currently drive international tourism)?**

The main supposition undergirding this paper is that the decolonisation of the so-called *bleached realm of tourism* (after Pfaelzer's term "bleached" field / "bleached" understandings) would involve considerable *conceptual unsettlement* for many of those who work in Tourism Studies / Tourism Management. Much of the required re-oriented understanding would indeed be *corrective* (as the industry's internal and collaborative sinews of oppression are identified). Hence a more fluid acumen is demanded vis-a-vis the field's "improved conversation with the world" (after Bauman), where the productive / compossible genius latent within it can be positively used much more strategically and frequently for distant / removed / colonised populations *in their own found interests*.

### RC50-811.5

**HOLLINSHEAD, KEITH\*** (University of Bedfordshire: England,  
[khdeva@btpopenworld.com](mailto:khdeva@btpopenworld.com))

#### *Tourism Studies and The Contagions Of Conformity: The Wilful Contagions Of Our Own Backyard*

In 2011, Heffernan produced *Wilful Blindness*, a text inspecting "why we [in our institutions] ignore the obvious, at our peril" as she examined the structures of both our brains and our institutions to see why we --- within our instrumentalities / corporations / organisations --- act with such sustained blindness and such deliberate indifference to what outsiders deem to be very large, important, or crucial matters. Thus, Heffernan's "security of institutional connivance and organisational silence" will be distilled to generate discussion amongst RC50 delegates to critique what forms of groupthink blindnesses / wilful ignorances / under-recognised abnegations might indeed characterise 'Tourism Studies' / as a *disciplining* institution.

In this Heffernanian light, Tourism Studies will be dissected to reveal (from the presenter's own working experience in Europe, Australasia, North America, and Asia) the sorts of structural blindnesses that have cultivated regular forms of *group derangement* within the field. In offering just three of these areas of *mutually reinforcing* (and, sadly, *restrictive*) conformity, Tourism Studies will be posited as a domain that:

\* is *intrinsically interdisciplinary*, yet offers so few bona fide interdisciplinary / multidisciplinary / transdisciplinary investigations;

\* fundamentally deals with the image of places and spaces, yet rarely codifies any such mix of *symbolic* (or *representational*) impacts as it coterminously plays habitual homage to long-established economic, cultural, social, political, and environmental impacts;

\* is seemingly a *creative industry* which selects, produces, and projects 'differences' about peoples / places / pasts, yet which has only the poorest of connections with other lead creative / inscriptive industries such as film / the media / the arts.

In summary, RC50 delegates will be asked to reflect (i) upon the the field's conceivable 'purlblind addiction to received procedure'; and, (ii) upon their own individual willing subservience to such forms of unquestioned / unthought praxis.

### RC04-98.5

**HOLM, GUNILLA\*** (University of Helsinki,  
[gunilla.holm@helsinki.fi](mailto:gunilla.holm@helsinki.fi))

#### *Marginalizing of Students Despite Official Preventive Efforts*

##### **Marginalizing of students despite official preventive efforts**

Finland has a reputation of providing a good and just education for all students independent of ability and background. However, even in this kind of educational system there are students who are marginalized. We focus here on the relationship between laws and official documents regarding issues concerning social justice issues and, on the other hand, discriminatory practices. We lean on a discourse analysis of the rhetorical policy level including the national curriculum. This analysis is compared to empirical findings about students' experiences regarding social justice issues.

There are some remarkable socio-cultural differences in Finnish schools. For example, the gender differences in literacy are the largest in Finland of all the OECD countries. Childhood poverty is increasing in Finland and the gap between the poor and the wealthy is increasing. This has serious implications for teachers and teaching, but in our study we found that teacher education students do not consider social class important for their future work.

In Finland the Roma children have not done very well in school. The national curriculum is very supportive of Roma children but the reality is different. The indigenous Sami population is also doing less well than the majority Finnish students. Students with immigrant background are a risk group with regard to bullying and discrimination.

The group most vulnerable in school is the students with disabilities or long-term illnesses. Of this group about two-thirds have found themselves treated in hostile ways or excluded from the group.

Hence, even in a system that at the policy level officially strive for equality and equity, the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for students' welfare and achievement.

### WG03-922.3

**HOLM, GUNILLA\*** (University of Helsinki,  
[gunilla.holm@helsinki.fi](mailto:gunilla.holm@helsinki.fi))

#### *Photography As a Research Method in Exploring Bilingual Teenagers' Language Minority Group Identifications*

Using participatory photography as a research method is underutilized in sociological youth studies. Young people today are comfortable using photographs for communication. Visual research methods are increasing in overall importance, but especially the analysis and interpretation of visual data have not changed much in the last decades. Hence, the focus in this paper is on analysis and interpretation of photographs taken by 15-year old students in the comprehensive school in Finland. The importance of the researcher's language minority habitus in interpretation is explored in relation to the habitus of the language minority students.

The teenagers all belong to the Swedish speaking minority group in Finland. The purpose of this study is to explore how the Swedish language minority students position themselves with regard to belonging to the Finland-Swedish group by using photography as well as interviews as the data collection methods. In particular we were interested in exploring how photographs and interviews complement each other. Of particular interest are the teenagers' identifications with and their views of the Finland-Swedish language minority group.

The study is part of a larger multi-sited ethnography and in this paper we focus on the photographs taken by students in four schools and 62 interviews and 22 photo elicitation interviews.

We found that the photographs and the interviews complemented each other by bringing up different issues. The interviews focused mostly on the language itself as a key identification while the photographs were metaphorical and brought up aspects more difficult to verbalize. The photographs expressed the habitus of being a Finland-Swede. There were photographs expressing the loneliness of being a minority member, the harassment, the sense of belonging as well as the comfort in the minority networks, traditions and culture.

#### *Producing Inequality: How Welfare Institutions Influence and Shape Cancer Experiences – Comparisons Between German and Japanese Patient Narratives*

This paper aims to understand the influence of welfare institutions on illness experiences, particularly health insurance and income compensation policies, by comparing narrative interviews with breast- and prostate cancer patients in Germany (n=90 for both cancers) and Japan (n=97 for both cancers). Both countries have a comprehensive social security system. Using the data collected for the project Database of Individual Patient Experiences (DIPEX), two levels of comparison will be sought: 1) country, and 2) disease type, resulting in four analytic groups. Due to language constraints, cross-national comparisons will be based on the analysis within each country is complete with regards to the study question: How do health insurance systems and income compensation policies such as sick leave and disability benefits affect the experience of having cancer?

Preliminary findings show that in both countries breast cancer patients who are generally younger and thus still in the workforce tend to express financial concerns more than prostate cancer patients. However, the impact of financial pressure is more apparent in Japan where out-of-pocket copayments are higher and the terms for sick leave are less favorable to employees, affecting patients' treatment decisions and the timing of return to work. For German patients who

are eligible for early retirement and disability benefits, the diagnosis in many cases does not present financial disaster. However, receiving disability benefits led to stigmatization through the bureaucratic mechanism in place. Subsequently women discussed feelings of shame and worthlessness induced by bureaucratic mechanisms.

The present study will be one of the first studies in which international comparisons on qualitative interview materials that have been collected in different languages and by different interviewers are analyzed within the same research framework. Thus the paper presents important findings on production of inequality in high-income countries, and provides a new methodology for cross-cultural secondary analysis.

[pabloholmes@gmail.com](mailto:pabloholmes@gmail.com))

#### *Social Inequalities in Latin American Social Thought: Beyond Culturalism and Class Theory*

Since its origins in the nineteenth century, Latin American social theory has been primarily concerned with the unequal position of the region in the world society. The "Latin American condition" has been largely explained with reference to its "cultural singularity" vis-a-vis "developed societies". In the last two decades, following a broader critique of developmental theories, there has been strong criticism of cultural explanations for global, regional and national inequalities in the region. In Brazil, some theoretical attempts have attracted attention. The first one, formulated in the beginning of the nineties, argued that structural forms of extreme social exclusion from modern social systems like law, politics, economy and education would have striking consequences for the institutional reproduction of these systems in the region. Accordingly, there would emerge a small sector of a socially over-integrated population, which would be in the position of using legal and political institutions for its advantage. Simultaneously, a broader sector of under-integrated population would have only an insignificant meaning for institutional operations, remaining thus excluded and being used to reproduce unequal social structures. Another well-known approach has drawn on many elements of this formulation, insisting, however, on classical categories of class theory to explain the social reproduction of inequality.
